Biology (Graduate)

Associate Dean of Biology
Edward Hawrot

Associate Dean of Graduate and Postdoctoral Studies
Elizabeth O. Harrington

Graduate Biological Sciences Education

The Division of Biology and Medicine offers multiple programs of advanced graduate study leading to the degrees of A.M., Sc.M., and Ph.D. These programs are thematically based: Biotechnology; Molecular Biology, Cell Biology, and Biochemistry; Molecular Pharmacology and Physiology; Pathobiology; Ecology and Evolutionary Biology; Computational Molecular Biology; Neuroscience; and Biomedical Engineering.

The research network at Brown features advanced facilities situated on campus and at partner institutions which encourages discovery and innovation with state-of-the-art equipment and resources including: Genomics Core (http://www.brown.edu/Research/CGP/core/equipment) and Proteomics Facility (http://biomed.brown.edu/epscor_proteomics), Bioimaging facility (http://www.brown.edu/Facilities/Leduc_Bioimaging_Facility), Mouse Transgenic and Knockout Core (http://www.brown.edu/Departments/Molecular_Biology/transgenic), Animal Care Facilities (http://biomed.brown.edu/ancare), Plant Environmental Center (http://www.brown.edu/academics/ecology-and-evolutionary-biology/plant-environmental-center), Water Flume (http://www.brown.edu/Departments/EEB/research/morphology.html), RI BioBank (http://biomed.brown.edu/rhode-island-biobank), Molecular Pathology Core (https://www.brown.edu/research/projects/suprefund/cores/core-d), Computational Biology Core (https://www.brown.edu/academics/computational-molecular-biology/home). More information about the Division's Research Facilities can be found here: http://biomed.brown.edu/research/facilities.

Students entering graduate programs generally have appropriate preparatory course work as well as significant research experience. Courses are chosen with the advice of program counselors, and may include, in addition to divisional offerings, courses offered by other university departments. As a part of the doctoral training most students will be required to participate in the teaching of one or more courses related to the program.

For further information on Graduate Study in the Biological Sciences at Brown, please visit the Office of Graduate and Postdoctoral Studies website: http://biomed.brown.edu/grad-postdoc/

Biotechnology Graduate Program

The Biotechnology graduate program offers the Master of Arts (A.M.), Master of Science (Sc.M.), and Doctor of Philosophy (Ph.D.) degrees and is designed for students interested in a range of topics related to the field of biotechnology including drug & gene delivery, drug discovery, and cell therapy.

The educational objectives of the program are to promote an understanding of: 1) the designs and materials used in novel cell and drug delivery systems; 2) the molecular, cellular and animal sciences of drug discovery & drug development; and 3) the development and testing of cell-based therapies for the treatment of diseases. We also offer courses on the business and management of biotechnology. Active areas of research include: bioadhesive drug delivery systems, mesenchymal stem cells, alternatives to animal testing, nerve guidance channels, cartilage regeneration, cardiac arrhythmias, micro-vesicles, anti-microbials, insulin regulation, neuroactive & neuroprotective agents and cell delivery & encapsulation strategies.

For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-biotechnology-0

Ecology and Evolutionary Biology Graduate Program

The graduate program in Ecology and Evolutionary Biology is intended for highly qualified students who plan to pursue a career that includes research or teaching in ecology and/or evolutionary biology. Individual programs are designed to meet each student's needs and interests while providing a strong background in ecology, evolutionary biology and related disciplines. All students are expected to attain proficiency in ecological and evolutionary theory, quantitative research methods, statistical analysis, writing, and oral presentation. Depending on the student's interests, they may be expected to demonstrate proficiency in other areas such as functional morphology or genetics and genomics. This proficiency may be attained through coursework, seminars, independent reading, and laboratory and field programs. The Ecology and Evolutionary Biology program offers a Doctor of Philosophy (Ph.D.) degree as well as a 5th year Master of Science (Sc.M.) degree for students who would like to continue the research they started as an undergraduate at Brown. The Master of Science degree is also available for participants in Brown’s Open Graduate Education Program.

For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-ecology-and-evolutionary-biology

Pathobiology Graduate Program

The graduate program in Pathobiology is an interdisciplinary and interdepartmental program devoted to biomedical research into the mechanisms of human diseases. The program offers a Doctor of Philosophy (Ph.D.) degree as well as a 5th year Master of Arts (A.M.) degree. The four major research and teaching thematic areas are: I) Environmental Pathology, II) Immunology & Infectious Diseases, III) Aging, and IV) Cancer biology. Training may be obtained in the areas of immunopathology, pulmonary pathology, chemical pathology, environmental and viral carcinogenesis, cancer biology, toxicologic pathology, extracellular matrix biology, hepatology, aging, and infectious diseases.

For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-pathobiology

Molecular Biology, Cell Biology, and Biochemistry Graduate Program

The graduate program in Molecular Biology, Cell biology, and Biochemistry (MCB) is intended for highly qualified students who plan to pursue a career that includes research in biology or medical sciences. The MCB Program offers a Doctor of Philosophy (Ph.D.) degree as well as 5th Year Master of Arts (A.M.) and Master of Science (Sc.M.) degrees. The program is interdisciplinary, focusing on molecular and cellular aspects of developmental and cell biology, genetics, genomics and gene expression, aging, signal transduction, oncogenesis, immunology, biochemistry, structural biology, proteomics, cell signaling, molecular modeling, DNA/ RNA protein interactions, epigenetics, and virology.

For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-molecular-biology-cell-biology-and-biochemistry

Molecular Pharmacology and Physiology Graduate Program

The graduate program in Molecular Pharmacology and Physiology offers advanced training appropriate for academic and research careers in the fields of biology and medical sciences that include: 1) neuropharmacology, neurophysiology and neural circuit function; 2) receptor and ion channel pharmacology, physiology and signal transduction; 3) structures and interactions of biological molecules and their roles in disease; 4) translational and clinical applications of pharmacology & physiology; 5) chemical biology, biophysics and their...
applications; and 6) cancer biology and therapeutics. Programs of study and research are developed individually in consultation with the student’s advisor and advisory committee and are designed to ensure expertise in the student’s principal field. The Molecular Pharmacology & Physiology Program offers a Doctor of Philosophy (Ph.D.) degree, as well as a 5-Year Master of Science (Sc.M.) degree for students who would like to continue the research they started as undergraduates at Brown.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-molecular-pharmacology-and-physiology

Biomedical Engineering Graduate Program

The Biomedical Engineering (BME) program provides cutting-edge, interdisciplinary, graduate-level education at the interface of engineering, biology, and medicine. The program features an interdisciplinary approach in three, complementary research areas: I) Mechanobiology, II) Neuroengineering, and III) Regenerative Engineering. Research in these areas is advancing the understanding of fundamental problems in engineering, biology, and medicine, while developing new therapies to improve the quality of life for people with medical problems. The program is distinguished by its quantitative rigor and strong collaborative connections among academic science, clinical medicine, and industry. The BME graduate program is designed for students with backgrounds in engineering, physics, or applied mathematics that seek additional education and training in the biological sciences.

The Biomedical Engineering program offers both the Master of Science (Sc.M) degree and the Doctor of Philosophy (Ph.D) degree.

For more information on admission, please visit: http://www.brown.edu/academics/gradschool/programs/biomedical-engineering

For more information on program requirements, please visit: https://www.brown.edu/academics/biomedical-engineering/academics/graduate-program

Courses

This course covers various aspects of structural and functional biology from primary to quaternary structure and deals with the 3D structure of proteins and nucleic acids and 3D structure determination. Course will be a mixture of lecture and class discussion/presentations. Students typically have taken an advanced undergraduate-level course in biology or biochemistry. Advanced undergraduates with permission. Enrollment limited to 20 students.

BIOL 2000C. Molecular Recognition and Signaling in Self and Non-self Interactions.
This course will cover cell signaling mechanisms that allow discrimination between self and non-self interactions in various biological contexts. Self/non-self signaling pathways from several model systems will be examined and their relevance to development and defense will be considered. Topics will include signaling in intra- and inter-species reproductive interactions, signaling in the establishment of symbioses, signaling upon predator attack, signaling in pathogen interactions, and co-evolution of pathogenic and resistance effectors. After one introductory lecture/discussion session led by the instructors, the remaining meetings will be student led and will focus on current primary literature. Open to advanced undergraduates with appropriate coursework.

BIOL 2000D. Current Topics in Molecular, Cellular, Developmental Biology and Biochemistry.
Protein synthesis is a fundamental cellular process mediated by ribosomes. This course will focus on progress in understanding: ribosome structure and function, ribosome biogenesis and export, quality control, ribosome degradation, and interface of ribosomes with other cellular pathways. Students will present research publications on a given topic and lead a discussion examining the experimental approach and findings of each publication. Enrollment limited to 20. Intended for graduates and advanced undergraduates with instructor permission.

A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of “system-wide” approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Enrollment limited to 20 graduate students. Advanced undergraduates with appropriate course preparation and permission from instructor.

BIOL 2010. Quantitative Approaches to Biology.
Graduate level introduction to quantitative and computational methods in modern biology. Topics include Programming, Modeling, Algorithms, Bioinformatics, Applied Statistics, Structural Biology, Molecular Dynamics, Enzyme Kinetics, and Population and Quantitative Human Genetics. Preference is given to graduate students in Molecular Biology, Cell Biology and Biochemistry and Molecular Pharmacology, Physiology, and Biotechnology. Limited to 20 students. Instructor permission required.

The course will introduce students to the rapidly developing field of molecular ecology, emphasizing its importance for conservation biology. Students will explore key principles in evolutionary ecology based on readings, lectures, and discussions. Participants will also gain practical experience with ecological, genomic, and computational methods in the lab. This course is intended for advanced undergraduate and graduate students. Suggested prerequisites include Principles of Ecology (0420); Evolutionary Biology (0480) or Genetics (0470); the Lab Techniques Workshop for Biology Students provided by MDL; or similar with permission. Students will obtain permission from the professor to enroll.

This course, taken the second semester, goes in depth into the numerous strategies in biotechnology. Significant differences in the strategies of small companies versus large companies, and device companies versus drug companies will be discussed with ample use of biotechnology case studies. At the end of this course, the successful student will: Understand the process of managerial decision making in the pharma/biotech industry
Understand the basic principles of Decision Science, the application of quantitative analysis (modeling) to inform managerial decision making
Gain exposure to basic frameworks and tools used by management consultants to define strategic options

This course provides a comprehensive overview of the primary functional roles and steps involved in developing and commercializing a novel technology/scientific breakthrough within the biotechnology industry. This course is particularly suitable for students interested in pursuing a career within a biotechnology company, or for those interested in developing an in-depth knowledge of how the science of biotechnology becomes real world products. Pre Requisites: Foundations of Living Systems (BIOL0020), Principles of Physiology (BIOL0080), and Principles of Economics (ECON1110)/equivalent or instructor’s permission is required.

BIOL 2030. Foundations for Advanced Study in the Life Sciences.
A double-credit graduate course on multidisciplinary experimental approaches to biological questions. Focusing on primary literature, lectures and discussions cover the mechanisms and regulation of basic cellular processes involving nucleic acids (synthesis, structure, maintenance and transmission) and proteins (synthesis, maturation, function) and their integration into more complex circuits (signaling, organelle biogenesis and inheritance, cell cycle control). Required for PhD students in the MCB Graduate Program; all others must obtain instructor permission. Enrollment is limited to graduate students.
BIOL 2040. Ultrastructure/Bioimaging. This course examines microscopy and image analysis in the life sciences. Theoretical and practical aspects of microscopy will be discussed. Students will obtain hands-on experience with electron microscopy, light microscopy, fluorescence microscopy, and confocal microscopy. Students will learn to display images in 3D. For graduate students and advanced undergraduates. Instructor permission required.

BIOL 2050. Biology of the Eukaryotic Cell. (Undergraduate students should register for BIOL 1050.)
Fall BIOL2050 S01 15798 TTh 1:00-2:20(08) (K. Miller)
Fall BIOL2050 C01 15799 Arranged (K. Miller)

BIOL 2075. Evaluation of Health Information Systems. This course covers the field of evaluation of health information systems (HIS) in a range of roles and environments, in the US and worldwide. It includes topics in health information system (HIS) design and deployment, healthcare workflow, quantitative and qualitative evaluation methods and socio-technical environment for HIS. Emphasis is given to understanding the range of evaluation questions that can be asked, identifying the key stakeholders, understanding available evaluation techniques, and designing rigorous but achievable studies. Examples will include Open Source systems, medical Apps, and economic evaluation, the role of evaluation frameworks and theories, and notable HIS successes and failures.

BIOL 2089. The Importance of Intellectual Property in Biotechnology. This course delves into the various roles of intellectual property in biotechnology. In addition to providing a solid foundation in the fundamentals of intellectual property, the course will use case studies in biotechnology to explore in depth the interplay between specific scientific breakthroughs and intellectual property. An understanding of the science of biotechnology is critical for advanced understanding of the value and possibilities of biotechnology intellectual property.

BIOL 2100. Drug and Gene Delivery. Topics in drug delivery systems including history of the field, advantages of controlled release technology, stabilization and release of proteins, fabrication methods, regulatory considerations, economic aspects, patents and intellectual property rights, and more. Prepares students for research in industry and academia, and offers information for consultants in the field. Expected: BIOL 1090; CHEM 0350, 0360.

BIOL 2117. Human Physiology. For Brown-Pfizer Master of arts Program students. Provides an introduction to basic human physiological concepts along with more advanced coverage of selected systems. We'll start with topics of diffusion, cell physiology and the basis of cell membrane potential and then cover the nervous, endocrine, musculoskeletal, cardiovascular, respiratory, renal and gastrointestinal systems. We'll focus on normal human physiology and at times incorporate discussions of exercise physiology, pathophysiology, and specific physiologic scenarios to build toward the goal of understanding complex integration of function between cells, tissues and organ systems. Readings will consist of textbook chapters along with primary literature covering selected topics.

BIOL 2121. The Biochemistry of Signaling and Regulation from Prokaryotes to Eukaryotes. Proteins are the engines of life. Determining how they function from a biophysical and biochemical perspective enables us to understand how they work and how we can direct and alter their activities. Proteins participate in cellular signaling pathways that are important regulators of cellular function and are often misregulated in disease. This course introduces various aspects of biochemistry involved in the analysis of cellular signaling pathways that regulate disease. Open to 12 graduate students and advanced undergraduates. Prerequisite: Students must have taken several advanced undergraduate-level courses in biology.

BIOL 2125. Bioinformatics for Evidence to Improve the Discovery, Development and Use of Medicines. This course explores evidence used in decisions for discovery, development and use of medicines. Goals are i) learn issues and decision criteria for stakeholders in biomedical innovation, ii) understand challenges and emerging opportunities to improve the evidence used to make decisions over the life of a therapeutic, iii) apply this learning to develop a novel call for proposals for multi-stakeholder projects that integrate molecular and clinical knowledge for improving discovery, development and/or use of medicines for Parkinson’s disease or pancreatic cancer. Preference is given to graduate students in MPPB, Biotechnology and BME. Other qualified students may enroll with instructor's permission.

BIOL 2130. Techniques in Molecular and Cell Science. This course provides hands-on laboratory training in state-of-the-art techniques in molecular and cellular sciences, and reinforces this training with didactic lectures that stress key principles, the quantitative approach and the most exciting applications of these technologies in the context of current research. Areas covered include cell culture, tissue engineering, DNA cloning, gene therapy, quantitative assays, microscopy and image analysis.

Enrollment is limited to 12; written permission required. Permission will be granted after the first class. Students MUST register for the lecture section and a lab.

BIOL 2135. Pharmacokinetics and Drug Design. Consists of the absorption, distribution, metabolism, and elimination of drugs. These factors, including dosage, determine the concentration of drugs at its sites of action, and intensity of effects. Will examine models describing the relationship between plasma drug concentrations and therapeutic drug effect. Will acquire biologic sampling techniques, analytic methods for measurement of drugs and metabolites, and procedures facilitating data used in designing drugs and dosage regimens. Prerequisite: BIOL 0800 or equivalent. Enrollment limited to 20. Preference given to graduate students in Biotechnology and BME, especially Masters students. Graduate students (PhD and ScM) from other programs enroll if permission of instructor is granted.

BIOL 2140. Principles in Experimental Surgery. An introduction to the principles and practice of surgery, sterile technique, anesthesia, and laboratory animal care. Intended to provide highly supervised, hands-on experience in techniques for humane handling and surgical management of experimental animal subjects. Emphasizes surgical technique, anesthesia technique, and laboratory animal medicine. Prerequisite: BIOL 0800. Limited to five (5) Graduate students only. Instructor permission required. Students MUST register for the lecture section and the lab.

BIOL 2145. Molecular Targets of Drug Discovery. This course emphasizes the role of cell physiology in the identification of drug targets and the development of novel drugs. Specific protein drug targets such as G-protein coupled receptors will be examined in detail from identifying a target to development of drugs for that target and the physiological consequences. Prerequisite: BIOL 0800. Enrollment limited to 20. Preference is given to graduate students in Biotechnology and BME, especially Masters students. Graduate students from other programs may enroll if permission of the instructor is granted.

Spr BIOL2145 S01 24481 T 10:00-12:20 (D. Harrigan)

BIOL 2150. Scientific Communication. Focused on the effective dissemination of scientific information in the molecular biosciences. Students will develop the skills necessary to effectively communicate scientific ideas, experiments, and results relating to their PhD dissertation projects through activities common to the profession including writing a grant proposal and presenting research work orally. Each of the activities will be dissected into key components and developed through interactive discussions and peer review. Required for most second-year PhD students in the MCB Graduate Program. Other qualified students may enroll with instructor's permission.

Fall BIOL2150 S01 15800 W 2:00-5:30 (J. Bender)
Fall BIOL2150 S02 15802 W 2:00-5:30 (S. Ramachandran)
BIOL 2156. Special Topics in Biotechnology Writing.
This course is open to Biotechnology Masters students not involved in lab-based research. Students choose from a list of topics and faculty mentors in the field of biotechnology. Teams conduct in-depth research and writing, with the goal of producing a final report and presentation equivalent to a professional consultant’s report. Students meet weekly with mentor to monitor progress. Prerequisite: BIOL 2080 and 1120; CHEM 0350/0360 or equivalent. Enrollment limited to 20 students. Instructor permission required. Course is offered in both, Semester 1 and 2, and may be repeated once for credit.
Spr BIOL2156 S01 24485 Arranged (E. Mathiowitz)

This course will cover principles and practical applications of important analytical tools used in the field of Biotechnology. Topics covered include spectroscopy, chromatography, and physical and chemical methods of characterization of a variety of molecules used for therapeutic applications. The molecules will range in size from traditional drugs with molecular weights of less than 1000, peptides and proteins as well as SiRNA and industrial polymers. This course is suitable for students intending on pursuing a career in biomedical research in academia or industry. Prerequisites: BIOL 0280, BIOL 1120, CHEM 0350/0360, or equivalent course. Enrollment limited to 20 Masters students in Biotechnology and BME.
Spr BIOL2160 S01 24488 M 10:00-11:30 (J. Schell)

BIOL 2170. Molecular Pharmacology and Physiology.
Fundamental concepts in pharmacology and physiology from the cellular/molecular level to organ systems. Required of first-year graduate students in Molecular Pharmacology and Physiology.
Fall BIOL2170 S01 15838 MWF 10:00-11:30 (D. Horrigan)

Experiential Learning in Industry is restricted to biomedical engineering (BME) Sc.M. and biotechnology (Biotech) Sc.M. students, permission also required. The course is an extended in-depth learning experience in an industry environment related to the discipline of BME and Biotech. Industry environments include: medical device, pharmaceutical or biotechnology and industries that provide BME and Biotech relevant services to the aforementioned companies including patent law, licensing, regulatory and consulting. Students will pursue Experiential Learning in Industry during one summer plus one semester or during two semesters for which they will receive credit towards their degree. This course is restricted to BME and Biotech Masters students only. Students must have successfully completed the first year of the BME Masters Program. Slots are limited so permission is required.
Fall BIOL2180 S01 15839 Arranged (J. Morgan)
Spr BIOL2180 S01 24487 Arranged (J. Morgan)

BIOL 2190. MPP Professional Development Seminar.
Professional development seminar required of all first year graduate students in the Molecular Pharmacology and Physiology Graduate Program, and open to graduate students in other programs. Topics include grants and funding, effective oral presentation skills, alternative careers in science, and others. All students will be required to present a research seminar during the scheduled class time.
Instructor permission required for graduate students outside the Molecular Pharmacology and Physiology Graduate Program. Not intended for undergraduate students.
Fall BIOL2190 S01 15840 M 12:00-1:30 (D. Horrigan)

BIOL 2200A. Molecular Biology and Chemistry.
A critical evaluation of contemporary research in biochemistry, molecular biology, and structural biology. Intensive reading and discussion of the current literature, critical analysis, and student presentations in seminars. Advanced undergraduates with permission. Enrollment limited to 20.

BIOL 2200B. Post–Transcriptional Regulations of Gene Expression.
Enrollment limited to 20.

BIOL 2200C. Current Topics in Molecular Biology: Cellular Quality Control Mechanisms.
Protein synthesis is a fundamental cellular process that is dependent upon the rapid and accurate synthesis of ten to twenty thousand ribosomes per generation to carry out the equally rapid and accurate synthesis of protein. Progress in understanding Ribosome structure and function, Ribosome evolution, Ribosome biogenesis and coordination of cell growth with cell division will be explored using the current literature with weekly student seminars and a final research proposal.

BIOL 2222B. Current Topics in Functional Genomics.
A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of “system-wide” approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Students typically have taken an advanced undergraduate-level course in biology.
Spr BIOL2222B S01 24906 Arranged (W. Fairbrother)

BIOL 2230. Biomedical Engineering and Biotechnology Seminar.
Biomedical engineering and biotechnology are interdisciplinary fields that incorporate progress in biomedical sciences, the physical sciences, and engineering. To achieve success in these fields requires facility with interdisciplinary oral communication – this is the specific and practical focus of this course. Each week, students will give research presentations and receive feedback from the audience to help improve their public speaking skills.
Fall BIOL2230 S01 15841 T 4:30-7:00 (E. Darling)

BIOL 2240. Biomedical Engineering and Biotechnology Seminar.
See Biomedical Engineering and Biotechnology Seminar (BIOL 2230) for course description.
Spr BIOL2240 S01 24488 T 4:30-7:10 (J. Morgan)

Blood serves many critical functions including respiratory gas transport, hemostasis and host defense. Plasma and cellular components of blood, their functional mechanisms, pathophysiologic consequences when deficient and current treatments will be reviewed. Finally, development of blood component substitutive therapeutics (blood substitutes) based on protein and cellular engineering technologies (biotherapeutics) will be discussed. Open to Graduates students and Juniors and Seniors who meet the pre-requisites BIOL 0800 and BIOL 0280 or with instructor's permission.
Fall BIOL2245 S01 15844 MW 10:30-11:50 (H. Kim)
Biology (Graduate)  5

The objective of this course is to present drugs in the context of the
diseases they are used to treat. A list of the Common medically prescribed
drugs will be discussed in terms of their fundamental modes of action and
clinical importance. Pertinent background biochemistry, physiology, and
pathology is provided, e.g., the electrophysiology of the heart is discussed as
a background to anti-arrhythmic drugs. Course is relevant for students
interested in medicine journalism, law, government, precollege teaching,
biochemical research, and pharmacy. Expected: background in physiology.
For graduate students ONLY register for Biol 2260 (enrollment limit 15);
all others Biol 1260.

(Undergraduate students should register for Biol 1270.)

Fall Biol2270 S01 15803 TTh 2:30-3:50(03) (A. Salomon)

Biol 2290A. Mechanisms of Virus Entry, Replication, and
Pathogenesis.

This course will focus on the interactions between viruses and host
cells that contribute to invasion, manipulation of viral and cellular gene
expression, and manipulation of the host's response to infection. We will
address interactions between viruses infecting humans, as well as those
of plants, fungi, and bacteria. Students will be evaluated on their ability to
critically analyze data in published manuscripts, including presentations
of primary papers, classroom discussion, and completion of a research
proposal. Expected: at least two of the following: Biol 1050, 1270, 1520,
1540, 1560. Advanced undergraduates with permission of the instructor.

Biol 2290B. Mechanisms of Protein Synthesis and Impact on Human
Disease.

This course will examine mechanisms central to the regulation of protein
synthesis in both prokaryotes and eukaryotes. Targeting protein synthesis
through ribosomes is a proven drug target commonly used to treat many
infectious diseases. The regulation of protein synthesis in eukaryotes is
critical for myriad human conditions including aging and cancer, including
the recently discovered role of microRNAs. This course will explore the
common and unique mechanisms of regulation of protein synthesis
between prokaryotes and eukaryotes and the importance of understanding
these mechanisms for human health. For graduate students and advanced
undergraduates with permission.

Biol 2290C. Neuronal Signaling meets the RNA World.
The concept of one gene, one protein is nowhere more violated than in
protein encoding genes expressed in the nervous system. We will
cover a variety of post-transcriptional processing events which serve to
generate protein diversity in the nervous system including alternative
splicing, trans-splicing, and RNA editing. We will also address non-coding
RNAs and their roles, in particular, in regulating nervous system function.
Since it is clear that nervous system complexity is not a function of gene
number across large phylogenetic distances, the course will be aimed at
instilling a greater understanding of how the regulation of shared "toolkit"
genes results in organismal complexity. Advanced undergraduates with
permission of the instructor.

Biol 2290D. Small RNA Regulation of Germ Cells and Development.
Enrollment limited to 20.

Biol 2290E. Signal Transduction.
This seminar course will provide a broad introduction to basic mechanisms
of cell signaling from the extracellular environment to the nucleus of a
cell, and to the mechanisms that regulate signal transmission. Topics of
discussion will include: processing and modification of signaling
molecules; signal recognition/ligand binding; co-receptors and receptor
trafficking; intracellular relays; transduction to the nucleus; regulation
of signal intensity and duration; feedback controls. Signal transduction
pathways from several model systems will be examined and their
relevance to development and disease will be considered. Senior
undergraduates with permission of the instructors. Enrollment limited to
20.

Biol 2290F. Biomolecular Interactions: Health, Disease, and Drug
Design.
Interactions between the molecules of life-proteins. RNA, DNA, membrane
components-underlie all functions necessary for life. This course focuses on
how nature controls these interactions, how these interactions can go
awry in disease, and how we can learn the rules of these interactions to
design drugs to treat disease. Students will review the physical basis
of molecular interactions, learn classic and state-of-the-art high-resolution
and high-throughput tools used to measure interaction, and survey the
experimental and computational strategies to harness these interactions
using a case study in rational drug design. Prerequisite: Introductory
Biochemistry. Enrollment limited to 20; instructor permission.
Fall Biol2230 S01 15846 M 3:00-5:30(05) (N. Fawzi)

Covers the molecular and cellular events of development from fertilized
egg to adult. Genetic basis of body form, cell fate specification and
differentiation, processes controlling morphogenesis, growth, stem cells
and regeneration are examined. Differential gene regulation, intercellular
signaling and evolutionary conversation are central to discussion of
mechanisms governing developmental processes. Additional topics:
developmental plasticity, impact of epigenetic and environmental factors,
and basis of disease gleaned from developmental biology research. Live
embryos complement and reinforce concepts covered in class. Expected:
Biol 0200 (or equivalent), and one course in genetics, embryology, cell
biology or molecular biology. Enrollment limited to 36. (Undergraduate
students register for Biol 1310.)

Spr Biol2310 S01 24766 MW 8:30-9:50(02) (K. Wharton)

Biol 2320E. Genetic Control of Cell Fate Decisions.
A cell's fate is acquired in a process whereby largely uncommitted
progenitor cells are instructed down a commitment path that ultimately
results in a specific cell type with distinct molecular and physiological
properties. This process is critical for the establishment of all cell types
and tissues and is poised to be a critical topic in cell-based therapeutic
strategies. We will investigate the intrinsic and extrinsic mechanisms that
manifest at the genetic level to impart cell fate decisions on progenitors.
Advanced undergraduates with permission of the instructor.

Biol 2340. Neurogenetics and Disease.
Genetic mutations provides a powerful approach to dissect complex
biologic problems. We will focus on fascinating discoveries from "forward
genetic" studies – moving from nervous system phenotype to genetic
mutation discovery. There will be an emphasis of neurologic disease
phenotypes and the use of novel genomic methods to elucidate the
central molecular and cellular causes for these conditions. The course
will emphasize the use of "reverse genetics" – engineered mutations
in model systems – to dissect nervous system function and disease
mechanisms. Disorders to be covered include autism, intellectual
disability, schizophrenia, epilepsy. Enrollment limited to 20. Instructor
permission required.

Biol 2350. The Biology of Aging.
Studying the mechanisms underlying the process of aging promises to
be one of the next frontiers in biomedical science. Understanding the
biology of aging is important for the long-term possibility of increasing life
span, and for the immediate benefits it will have on age-related diseases.
As demographics of industrialized countries have changed, age-related
diseases such as cancer/cardiovascular/stroke, osteoporosis/arthritis/
Alzheimer's have assumed epidemic proportions. Understanding the
aging process is a pre-requisite for designing interventions for treatment.
Focus is on examining the biology of aging through the examination of
a molecular/cellular/genetic and demographic nature. Suggested
prerequisites: Biol 0200, 0280, 0470, 0800. Enrollment limited to 20.
Advanced undergraduates with permission of instructor.
Spr Biol2350 S01 24453 Th 2:00-3:20 (J. Sedivy)
BIOL 2430. Topics in Ecology and Evolutionary Biology. Current literature in ecology, behavior, and evolutionary biology is discussed in seminar format. Topics and instructors change each semester. Representative topics have included: structuring of communities, biomechanics, coevolution, quantitative genetics, life history strategies, and units of selection. Expected: courses in advanced ecology and genetics.

Fall BIOL2430 S01 15758 Arranged (D. Rand)
Fall BIOL2430 S02 17278 Arranged (T. Kartzinel)

BIOL 2440. Topics in Ecology and Evolutionary Biology. See Topics In Ecology And Evolutionary Biology (BIOL 2430) for course description.

Spr BIOL2440 S01 24416 Arranged (D. Rand)

BIOL 2528. Innovation and Commercialization in Medical Devices, Diagnostics, and Therapeutics

This course provides a comprehensive overview of concepts and steps involved in developing and commercializing novel technology/scientific breakthroughs for medical devices, diagnostics and wearables. This course is particularly suitable for students interested in pursuing a career within a medical device segment, or creating innovation-based companies, as well as for those interested in developing an in-depth knowledge of evolution of medical devices from research concepts to products in the market.

Spr BIOL2528 S01 24489 Th 9:30-12:00 (M. Analoui)

BIOL 2540. Molecular Genetics

Even in this era when whole genome DNA sequencing has become routine, there are still thousands of eukaryotic genes with unknown functions. Genetic screens for mutations that alter pathways of interest remain the premier approach to understanding gene function in the context of the organism. In Molecular Genetics students will learn the key concepts involved in designing and interpreting genetic screens using the powerful tools available in model animal, plant, and fungal organisms. Students will also learn how to understand and analyze results presented in the primary scientific literature. Furthermore, students will gain an appreciation of how the field of genetics has changed through discoveries and technological advances made over the past 50 years. Undergraduate students should register for BIOL 1540.

Spr BIOL2540 S01 24454 TTh 2:30-3:50(11) (J. Bender)

BIOL 2545. Human Genetics and Genomics.

This course will exemplify the power of genetically informed approaches to understanding human biology. It is designed for advanced undergraduate students and graduate students; prerequisites include BIOL0470 or equivalent. The course is based in lectures, reading material (textbook and primary literature), and in-class discussions. Course topics include: medical genetics and genomics; methods to study human genotypes and related phenotypes; industry-related topics; and ethical and societal implications of genome science. It will benefit students with career interests in basic science, medicine, biotechnology, or science policy. Enrollment is limited to 20 students; selection will be based on seniority, prerequisites, and registration order.

Spr BIOL2545 S01 24455 TTh 9:00-10:20(01) (E. Morrow)

BIOL 2560. Advanced Virology.

The emphasis of this course will be on understanding the molecular mechanisms of viral pathogenesis. It will begin with a general introduction to the field of virology, a basic review of the immune response to viruses, and then focus primarily on the molecular biology of specific viruses that are associated with clinical human disease. Lectures will be based on the current literature and provide historical context. Students will become familiar with primary literature and produce their own original research proposal by the end of the semester.

Fall BIOL2560 S01 15700 MWF 9:00-9:50(01) (A. Jamieson)

BIOL 2595. Artificial Intelligence in Biomedicine.

This course will teach the fundamental theory and methods of artificial intelligence (AI) alongside their application to the biomedical domain. It will give a representative overview of traditional methods as well as modern developments in the areas of (deep) machine learning, natural language processing and information retrieval. The course is designed to be accessible to non-computer science audiences and will not require extensive prior programming experience. The course will be accompanied by practical assignments applying the discussed techniques in a biomedical context. Understanding of formal theoretical knowledge will be assessed in a final exam.

Spr BIOL2595 S01 24393 TTh 9:00-10:20(01) (C. Eckhoff)

BIOL 2640A. Viral Immunology.

Viral Immunology is an advanced topics course in Microbiology and Immunology which will be focused on viral immunology. Weekly meetings will cover different issues concerning defense against viral infections and pathology related to viral infection, with focus on viral-host interactions. Topics will be selected to present either important basic concepts in the context of immune responses and/or major challenges in controlling viral infections. Recent advances in understanding virus-host interactions, host responses to viruses, cytokine regulation of immune responses or cytokine-mediated pathology during viral infections will be emphasized.

The organizational meeting is set for Wednesday Jan 23 at 2:30PM in this 6th floor conference room (BMC 605). There is also a requirement for a previous immunology course.

Spr BIOL2640A S01 24353 Arranged (C. Biron)

BIOL 2640B. Microbial Pathogenesis.

Examines microbial pathogens and the underlying mechanisms by which infectious organisms cause disease. Bacterial, fungal, protozoal and viral pathogens will be studied using tools of modern biology. Also examined are the host's immune responses to infection and disease. Areas covered include mechanisms of pathogen internationalization and survival, immune responses, signal transduction and pathobiology. Expected: BIOL 0510, 0530, or 1550.

BIOL 2640C. The Immune System.

Introduction to the experimental and theoretical foundations of immunology and the function of the mammalian immune system. Focuses on concepts, landmark experiments and recent advances. Topics include innate and adaptive immunity; structure/function of antibody molecules and T cell receptors; and regulation of immune responses through cellular interactions. Application of concepts to medically significant issues (vaccines, transplantation, hypersensitivity, autoimmunity, cancer, immunodeficiency) is discussed. Interpretative analysis of experimental data is emphasized. Activities include written assignments that analyze a hypothetical immune system and a final paper addressing an immunological topic of the student's choosing. For Pfizer students only.

BIOL 2850. Introduction to Research in Pathobiology.

Introduces incoming pathobiology graduate students with research opportunities in the laboratories of program faculty. Consists of seminars with individual faculty members in the graduate program in pathobiology. Required background reading of recent papers lead to a discussion of current research in the faculty member's laboratory. Additional discussions include safety and ethical issues in research. Open only to first-year graduate students in the program in pathobiology.

BIOL 2860. Molecular Mechanisms of Disease.

BIOL 2860 is designed for graduate students and focuses on the underlying causes of human disease. The course will explore the mechanistic basis of phenylketonuria, thalidomide toxicity, and cystic fibrosis. Students should have a solid background in the life sciences with an understanding of the fundamental principles of molecular biology, genetics, biochemistry, and cell biology. Emphasis will be placed on the development of presentation skills and research design. Readings will be assigned from Robbins Basic Pathology 10th Edition (2018), Junqueira’s Basic Histology Text & Atlas 14th Edition (2016), primary literature, and reviews. Both textbooks are available online through the library website.

Fall BIOL2860 S01 15840 MWF 1:30-3:00(07) (T. Bartnikas)
BIOL 2865. Toxicology.
Toxicology is the science that describes the adverse biological effects of exogenous chemical and physical stressors, including environmental, industrial, and agricultural chemicals and pharmaceuticals. This course will introduce the principal biological processes that determine an organism’s response to a toxicant, including absorption, distribution through a biological system, metabolism, elimination, and effects at the site(s) of action. We will discuss modern challenges in toxicology, such as assessing toxicity of mixtures and testing some of the thousands of untested chemicals in commerce. The material will be presented in lecture and student-led discussions, with readings from the toxicology literature. Suggested prerequisites include BIOL 0280 (biochemistry), CHEM 0350 (organic chemistry), and BIOL 800 (principles of physiology); or BIOL 1820 (Environmental Health and Disease) or BIOL 2860 (Molecular Mechanisms of Disease); or instructor approval.

BIOL 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

BIOL 2980. Graduate Independent Study.
Independent study projects at the graduate level. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

BIOL 2985. Graduate Seminar.
Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

BIOL 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

BIOL 2995. Thesis.
Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.
