This bulletin is intended to provide only general information concerning Brown University and is not in any manner contractually binding. The information contained herein is subject to revision and change at any time.

EQUAL OPPORTUNITY AND NONDISCRIMINATION

Brown University does not discriminate on the basis of sex, race, color, religion, age, disability, status as a veteran, national or ethnic origin, or sexual orientation in the administration of its educational policies, admission policies, scholarship and loan programs, or other school-administered programs.

CORRESPONDENCE

The general mailing address for the University is Brown University, Providence, Rhode Island 02912. Correspondence sent to that address may be expected to reach the proper department, but, in order to avoid delay, information and inquiries concerning the items below should be addressed as noted. Addresses for other offices are available on the World Wide Web at www.brown.edu.

Brown University is an internationally known for its dynamic undergraduate curriculum, implemented by faculty vote in 1969. Undergraduates must pass 30 courses and complete the requirements for a concentration, or major, in order to receive a bachelor's degree. The curriculum does not require distribution or core courses outside the concentration. More than 2,000 undergraduate courses support just under 80 concentrations, many of them interdisciplinary, and a wide variety of independent studies. At the heart of the Brown curriculum are three basic principles: that students are active participants in learning; that acquiring analytical and critical skills is as important as mastering factual knowledge; and that learning requires opportunities for experimentation and cross-disciplinary synthesis. The Graduate School at Brown is a national leader in the creation and dissemination of new knowledge. In 2003, Brown celebrated the centennial of the Graduate Department, formally established in 1903 to confer advanced degrees. The Warren Alpert Medical School, which awarded its first M.D. degrees in 1975, is renowned for innovation in medical education and for its programs in family medicine and primary care. The Warren Alpert Medical School now enrolls some 400 students, most of whom are accepted through Brown’s unique Program in Liberal Medical Education (PLME), which combines undergraduate study with professional studies in medicine.

Beginning in 2002, fortified by vigorous leadership, prudent planning, and new ideas, the University launched an exciting program for academic enrichment to enlarge its faculty by 100 members over the next five to ten years, improve support for graduate students, and invest in libraries, information technology, and academic facilities. As part of this extensive program of improvements, the University instituted a need-blind undergraduate admission process to ensure all worthy applicants access to the University, regardless of their ability to pay.

Brown University is accredited by the New England Association of Schools and Colleges. In addition, the Warren Alpert Medical School is accredited by the Liaison Committee on Medical Education. The School of Engineering has received accreditation from the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology for its bachelor of science programs in civil, chemical, electrical, materials, and mechanical engineering.

**Academic Freedom**

Consonant with Brown’s tradition concerning academic freedom, the faculty and Corporation, in 1966, adopted the following statement of principles:

Academic freedom is essential to the function of education and to the pursuit of scholarship in universities.

Therefore, Brown University, mindful of its historic commitment to scholarship and to the free exchange of ideas, affirms that faculty and students alike shall enjoy full freedom in their teaching, learning, and research.

Brown University also affirms that faculty and students shall have freedom of religious belief, of speech, of press, of association and assembly, and of political activity inside and outside the University, the right to petition the authorities, public and university, to invite speakers of their choice to the campus, and that students and faculty as such should not be required to take any oath not required of other citizens. The time, place, and manner of exercising these rights on campus shall be subject to reasonable regulation only to prevent interference with the normal functions of the University.

**Nondiscrimination Policy**

Brown University does not discriminate on the basis of sex, race, color, religion, age, disability, status as a veteran, national or ethnic origin, sexual orientation, gender identity or gender expression, in administration of its educational policies, admissions policies, scholarship and loan programs, or other school-administered programs. For further information on Brown’s Nondiscrimination policy as it relates to Title IX please visit: https://www.brown.edu/about/administration/title-ix/policy

**The Family Educational Rights and Privacy Act of 1974**

The Family Educational Rights and Privacy Act of 1974 (P.L. 93–380) extends to a student the right of access to his or her education records maintained at the University. Education records are those records maintained by or for Brown University that directly relate to an individual who is or has been in attendance (enrolled) at Brown University and for whom Brown maintains educational records. Information and notification as to the type of record; the accessibility of and policies for maintaining, reviewing and expunging the record; and the procedure for inspecting, reviewing, obtaining copies of, or challenging the record are established and promulgated by the appropriate executive officers. Further information may be obtained on the Office of the Registrar’s website (http://www.brown.edu/about/administration/registrar/student-information-rightsferpa). For the University’s complete definition of directory information and disclosure please visit https://www.brown.edu/about/administration/student-life/student-conduct/policies-regulations/family-educational-rights-and-privacy-act-ferpa

**IMAGE USE**

Brown University often captures photographic images and video of campus life, events, ceremonies, and other activities to advance the mission of the institution.

The University is not prohibited from capturing and using student images through photography or video for University purposes unless a student has requested that the University maintain the confidentiality of that student’s directory information, per FERPA. By enrolling at Brown University, students not requesting directory withholding authorize the use and reproduction by the University, or parties authorized by the University, of any photographs taken while at Brown without compensation.

Faculty, staff, visitors to campus, and participants in University-sponsored events beyond campus also may have their images captured for news or promotional purposes.

All photographic prints and digital image and video files shall constitute Brown University property and be used to advance the University's educational objectives.
Leadership

The Corporation

Officers

- Christina Paxson, President
- Samuel M. Mencoff, Chancellor
- Alison S. Ressler, Vice Chancellor
- Donald C. Hood, Secretary
- Theresia Gouw, Treasurer

Board of Fellows

Leadership

• Roger D. Williams
• Donna C. E. Williamson
• Karen B. Winnick
• James R. Winoker
• William P. Wood
• Daniel Yankelovich
• Bruce D. Yeutter

Officers of the Administration

• Christina Paxson, President
• Richard M. Locke, Provost
• Todd G. Andrews, Vice President for Alumni Relations
• Andrew G. Campbell, Dean of the Graduate School
• Russell C. Carey, Executive Vice President for Planning and Policy
• Liza Cariaga-Lo, Vice President for Academic Development, Diversity and Inclusion
• Barbara D. Chernow, Executive Vice President for Finance and Administration
• Cass Cliatt, Vice President for Communications
• Karen Davis, Vice President for Human Resources
• Elizabeth Doherty, Senior Associate Provost
• Joseph L. Dowling III, Vice President and Chief Investment Officer
• Jack A. Elias, Dean of Medicine and Biological Sciences
• Eric S. Estes, Vice President for Campus Life and Student Services
• Lindsay J. Graham, Vice President for Finance and Chief Financial Officer
• Donald A. Hasseltine, Vice President for Development
• John W. Hayes, Director of Athletics and Recreation
• Harriette Hemmasi, University Librarian
• Lawrence E. Larson, Dean of Engineering
• Beverly E. Ledbetter, Vice President and General Counsel
• Stephen M. Maiorisi, Vice President for Facilities Management
• Maud S. Mandel, Dean of the College
• Ronald D. Margolin, Vice President for International Advancement
• Kevin McLaughlin, Dean of the Faculty
• Joseph S. Meisel, Deputy Provost
• Ravi Pendse, Vice President for Computing and Information Services and Chief Information Officer
• Logan Powell, Dean of College Admission
• Kimberly O. Roskiewicz, Assistant to the President
• David Savitz, Vice President for Research
• Karen H. Sibley, Vice President for Strategic Initiatives/Dean, School of Professional Studies
• Edward S. Steinfield, Howard R. Sweater Director of the Thomas J. Watson Jr. Institute for International and Public Affairs
• James Tilton Jr., Director of Financial Aid
• Patricia Watson, Senior Vice President for University Advancement
• Terrie Wetle, Dean of the School of Public Health

Officers Emeriti

• Vartan Gregorian, President Emeritus
• Ruth J. Simmons, President Emerita
This information is provided by the Office of the Dean of the Faculty and is current as of August 2016 for appointments scheduled to be effective for the 2016-17 Academic Year.

Roy K. Aaron
Professor of Orthopaedics; Professor of Molecular Pharmacology, Physiology and Biotechnology
Christopher A. Abadi
Clinical Assistant Professor of Medicine
Siddique Akbar Abbasi
Assistant Professor of Medicine
Cristina Abbona-Sneider
Senior Lecturer in Italian Studies
Brian G. Abbott
Associate Professor of Medicine (Clinical)
J. Dawn Abbott
Associate Professor of Medicine
Ruhul Abid
Assistant Professor of Surgery (Research)
Mona M. K. Abo-Zena
Visiting Assistant Professor of Education
Dan Abramovich
Professor of Mathematics
Ana M. Abrantes
Associate Professor of Psychiatry and Human Behavior (Research)
Nico Abrunzo
Clinical Instructor in Pediatrics
J. Gary Abuelo
Associate Professor of Medicine
Anna Acidera
Clinical Instructor in Medicine
Felicia Nimue Ackerman
Professor of Philosophy
Cathleen M. Adams
Assistant Professor of Psychiatry and Human Behavior (Clinical)
Charles A. Adams
Associate Professor of Surgery (Trauma)
Marilyn Jager Adams
Visiting Scholar in Cognitive, Linguistic and Psychological Sciences
Eli Y. Adashi
Professor of Medical Science
Oludurotimi O. Adetunji
Adjunct Assistant Professor of Physics
Natalie A. Adler
Visiting Assistant Professor of Comparative Literature
Ruth Adler Ben Yehuda
Senior Lecturer in Judaic Studies
Alyn L. Adrain
Clinical Assistant Professor of Medicine
Kim Adrian
Visiting Lecturer in English
Gunjan Aeron
Clinical Instructor in Diagnostic Imaging
Kallash C. Agarwal
Professor Emeritus of Medical Science (Research)
Purva Agarwal
Assistant Professor of Medicine (Clinical)
Saurabh Agarwal
Assistant Professor of Diagnostic Imaging (Clinical)
Tanya Ali
Assistant Professor of Medicine (Clinical)

Jason M. Aliotta
Assistant Professor of Medicine

Geoffrey Allen
Associate Professor of Pediatrics (Clinical)

James P. Allen
Charles Edwin Wilbour Professor of Egyptology

Rebecca H. Allen
Associate Professor of Medical Science; Associate Professor of Obstetrics and Gynecology

Susan Heuck Allen
Visiting Scholar in Classics

Susan Masterson Allen
Professor Emerita of Health Services, Policy and Practice

Onesimo T. Almeida
Professor of Portuguese and Brazilian Studies

Eric J. Alper
Professor of Medicine (Clinical)

Mazen O. Al-Qadi
Assistant Professor of Medicine (Clinical)

Ahmad Al-Raqqad
Clinical Assistant Professor of Medicine

Maan Al Sahoui
Visiting Assistant Professor of French Studies

Mark A. Altabet
Adjunct Professor of Earth, Environmental and Planetary Sciences

Elizabeth L. Altenhein
Clinical Assistant Professor of Surgery

Rachel Altura
Adjunct Associate Professor of Pediatrics

Leticia Alvarado
Assistant Professor of American Studies

Ruben Alvero
Professor of Obstetrics and Gynecology

Brian K. Alveros
Associate Professor of Pediatrics; Associate Professor of Medical Science

Joyce A. Alves
Adjunct Assistant Professor of Family Medicine

Fernando Amanatidou
Senior Lecturer in Classics; Senior Lecturer in Language Studies

Sriraviya Anandan
Associate Professor of Cognitive, Linguistic and Psychological Sciences

Gowri Anandarakar
Professor of Family Medicine (Clinical); Professor of Medical Science (Clinical)

Scott H. AnderBois
Assistant Professor of Cognitive, Linguistic and Psychological Sciences

Joseph F. Amaral
Professor Emeritus of Surgery

Linda Amaral Zettler
Associate Professor of Earth, Environmental and Planetary Sciences (MBL)

Kathryn L. Amatangelo
Adjunct Assistant Professor of Ecology and Evolutionary Biology

Meredith Amaya-Hodges
Clinical Assistant Professor of Psychiatry and Human Behavior

Ali Amin
Assistant Professor of Pathology and Laboratory Medicine

Kim S. Amin
Clinical Assistant Professor of Medicine

Seema Amin
Clinical Assistant Professor of Medicine

Elinor Amit
Assistant Professor of Cognitive, Linguistic and Psychological Sciences (Research)

Jose Amor Y. Vazquez
Professor Emeritus of Hispanic Studies

Dima Amso
Associate Professor of Cognitive, Linguistic and Psychological Sciences

Angela C. Anderson
Adjunct Professor of Psychiatry and Human Behavior

Andrew W. Mellon Professor of Humanities and English

Visiting Scholar in History

Dima Amso
Associate Professor of Pediatrics (Clinical); Associate Professor of Emergency Medicine (Clinical)

Douglas D. Anderson
Professor Emeritus of Anthropology

James A. Anderson
Professor of Cognitive, Linguistic and Psychological Sciences

Kristin L. Anderson
Assistant Professor of Pediatrics (Clinical); Assistant Professor of Medicine (Clinical)

Claire Andrade-Watkin
Visiting Scholar in Slavery and Justice

Peter R. Andreas
John Hay Professor of International Studies

Oleg Andreev
Adjunct Professor of Radiation Oncology

Margaret Marshall Andrews
Visiting Assistant Professor of Archaeology and the Ancient World

Diane J. Angell
Professor Emerita of Obstetrics and Gynecology (Clinical)

Georgia M. Angell
Research Associate in International and Public Affairs

Marla Cathleen Angermeier
Clinical Assistant Professor of Dermatology

Sarah Anis
Clinical Instructor in Surgery (Ophthalmology)

Luc Anselin
Visiting Professor of Sociology

David C. Anthony
Associate Professor of Family Medicine

Douglas Anthony
Professor of Pathology and Laboratory Medicine; Professor of Neurology

Jennifer L. Anthony
Clinical Assistant Professor of Psychiatry and Human Behavior

Valentin Antoci
Assistant Professor of Orthopaedics

Michael P. Antosh
Adjunct Assistant Professor of Brain and Neural Systems

Iraj Anvar
Visiting Lecturer in Language Studies

Michelle Stozek Anvar
Assistant Professor of Medicine (Clinical)

Tarik B. Aougab
Tamarkin Assistant Professor of Mathematics
Timothy R. Apodaca
Adjunct Associate Professor of Behavioral and Social Sciences

Rex W. Appenfeller
Clinical Assistant Professor of Medicine

Patricia Arant
Professor Emerita of Slavic Languages

Denise M. Arcand
Clinical Assistant Professor of Family Medicine

Reginald Archambault
Professor Emeritus of Education

Richard C. Archambault
Clinical Assistant Professor of Psychiatry and Human Behavior

Andrea E. Arena
Clinical Assistant Professor of Family Medicine

Richard A. Arenberg
Visiting Lecturer in Political Science

Sarah A. Arias
Assistant Professor of Psychiatry and Human Behavior (Research)

Irina Arkhipova
Associate Professor of Molecular Biology, Cell Biology and Biochemistry (MBL)

Michael F. Armey
Assistant Professor of Psychiatry and Human Behavior (Research)

Paul B. Armstrong
Professor of English

Kenneth A. Arndt
Adjunct Professor of Dermatology

Mary B. Arnold
Associate Professor Emerita of Pediatrics

Mary-Kim Arnold
Visiting Lecturer in English

Herbert D. Aronow
Assistant Professor of Medicine

Nomy Arpaly
Professor of Philosophy

James A. Arrighi
Professor of Medicine; Professor of Diagnostic Imaging; Professor of Medical Science

Brett Arron
Clinical Assistant Professor of Surgery (Anesthesiology)

Andrew W. Artenstein
Adjunct Professor of Medicine; Adjunct Professor of Health Services, Policy and Practice

Karuppiah Arunachalam
Clinical Instructor in Medicine

Wael Asaad
Assistant Professor of Neurosurgery; Assistant Professor of Neurosurgery

Kotaro Asadachi
Visiting Scholar in History

David Ashley
Assistant Professor of Family Medicine (Clinical)

Daniel K. Asiedu
Clinical Instructor in Medicine

Kathleen Askland
Adjunct Assistant Professor of Psychiatry and Human Behavior

Karen E. Aspy
Assistant Professor of Medicine (Clinical)

Nicholas Asselin
Assistant Professor of Emergency Medicine (Clinical)

Elizabeth R. Aston
Assistant Professor of Behavioral and Social Sciences (Research)

Bassam I. Aswad
Assistant Professor of Pathology and Laboratory Medicine (Clinical)

Michael K. Atalay
Associate Professor of Diagnostic Imaging; Associate Professor of Medicine

Ayman Attia Alla
Clinical Assistant Professor of Medicine

Naureen Attiullah
Clinical Assistant Professor of Psychiatry and Human Behavior

John B. Atwood
Senior Fellow in International and Public Affairs

Walter J. Atwood
Professor of Medical Science

Jeannine Audet
Clinical Assistant Professor of Pediatrics

Gerard Augusto
Gerard Visiting Associate Professor of International and Public Affairs and Africana Studies

Jeffrey Austerlitz
Assistant Professor of Medicine (Clinical)

Gregory James Austin
Clinical Assistant Professor of Family Medicine

Alfred Ayala
Professor of Surgery (Research) (Trauma)

Maroun Azar
Assistant Professor of Medicine

Ariella Azoulay
Professor of Comparative Literature and Modern Culture and Media

Timothy Babineau
Professor of Surgery (Clinical)

Michelle R. Bach-Coulibaly
Senior Lecturer in Theatre Arts and Performance Studies

James M. Badger
Clinical Assistant Professor of Psychiatry and Human Behavior

David Badre
Associate Professor of Cognitive, Linguistic and Psychological Sciences

R. Bahar
Professor of Computer Science

Robert L. Bahr
Clinical Assistant Professor of Surgery (Ophthalmology)

David B. Baier
Adjunct Associate Professor of Ecology and Evolutionary Biology

Rosa R. Baier
Associate Professor of the Practice in Health Services, Policy and Practice

Genie L. Bailey
Clinical Associate Professor of Psychiatry and Human Behavior

Kevin E. Baill
Clinical Assistant Professor of Psychiatry and Human Behavior

Grayson L. Baird
Assistant Professor of Diagnostic Imaging (Research)

James C. Baird
Professor Emeritus of Chemistry

Janette Baird
Associate Professor of Emergency Medicine (Research)

Muhammad Bajwa
Clinical Instructor in Medicine

James Marshall Baker
Professor Emeritus of Music

Nathan A. Baker
Visiting Professor of Applied Mathematics

Richard E. Baker
Clinical Assistant Professor of Surgery
Sasha H. Bakhru
Adjunct Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology

Ercan Balci
Senior Lecturer in Language Studies

Ethan M. Balk
Associate Professor of Health Services, Policy and Practice (Research)

Thomas F. Banchoff
Professor Emeritus of Mathematics

Christina A. Bandera
Assistant Professor of Surgery (Clinical)

Priya Banerjee
Clinical Assistant Professor of Pathology and Laboratory Medicine

Santanu Banerjee
Visiting Scientist in Physics

Mohammad Banki
Clinical Assistant Professor of Surgery

Priya Bansal
Adjunct Instructor in Medicine

James Barbeau
Associate Professor of Pathology and Laboratory Medicine (Clinical)

Marilyn M. Barbour
Adjunct Associate Professor of Medicine

Barbara E. Barker
Associate Professor Emerita of Pathology and Laboratory Medicine

Keith Richard Bartolomei
Clinical Assistant Professor of Pathology and Laboratory Medicine

Kevin G. Bath
Assistant Professor of Cognitive, Linguistic and Psychological Sciences

Leonardo Batista
Clinical Assistant Professor of Psychiatry and Human Behavior

Kenri L. Batra
Clinical Assistant Professor of Medicine

Cynthia Battle
Associate Professor of Psychiatry and Human Behavior (Research)

Benjamin Bauer
Clinical Assistant Professor of Family Medicine

Beth W. Bauer
Senior Lecturer Emerita in Hispanic Studies

Cici X. C. Bauer
Assistant Professor of Biostatistics

Carol L. Baum
Assistant Professor of Pediatrics (Clinical)

George P. Bayliss
Associate Professor of Medicine

Alexander T. Bazilevskiy
Visiting Professor of Earth, Environmental and Planetary Sciences

Samuel I. Beale
Professor Emeritus of Biology

Mark F. Bear
Adjunct Professor of Brain and Neural Systems

Francesca L. Beaudoin
Assistant Professor of Emergency Medicine

Robert Beck
Clinical Assistant Professor of Family Medicine

Bruce M. Becker
Professor of Emergency Medicine; Professor of Behavioral and Social Sciences

Sara J. Becker
Assistant Professor of Behavioral and Social Sciences (Research); Assistant Professor of Psychiatry and Human Behavior (Research)

Martin Joseph Beckmann
Professor Emeritus of Economics

Curt G. Beckwith
Associate Professor of Medicine

Jose Behar
Professor Emeritus of Medicine

Solmaz Behzadi
Clinical Assistant Professor of Family Medicine

M. David Beitle
Clinical Assistant Professor of Obstetrics and Gynecology

Michael D. Beland
Associate Professor of Diagnostic Imaging

Peter A. Belenky
Assistant Professor of Molecular Microbiology and Immunology

Elisabeth G. Bell
Visiting Scholar in Literary Arts

Christina Bellanti
Clinical Assistant Professor of Psychiatry and Human Behavior

Natalia Belosloudtseva
Clinical Assistant Professor of Medicine

Mohamed Arezki Adel Belouchrani
Visiting Professor of Engineering

Irene Belsky
Clinical Assistant Professor of Family Medicine

G. Jesse Bender
Associate Professor of Pediatrics

Judith L. Bender
Professor of Biology
Philip Benedict
Visiting Scholar in History

Gabriele Benelli
Senior Research Associate in Physics

Kristen Benito
Assistant Professor of Psychiatry and Human Behavior (Research)

David J. Bennett
Visiting Scholar in Philosophy

Richard J. Bennett
Professor of Biology

Reda Bensmaia
University Professor Emeritus of French Studies and Comparative Literature

Judith D. Bentkover
Professor of the Practice in Health Services, Policy and Practice

Jacques Benun
Clinical Associate Professor of Pediatrics

Scott E. Benzuly
Clinical Assistant Professor of Surgery (Anesthesiology)

Nathan Barry Beraha
Clinical Assistant Professor of Pediatrics

Aaron V. Berard
Visiting Scholar in Cognitive, Linguistic and Psychological Sciences

Stephen Berenson
Professor of the Practice in Theatre Arts and Performance Studies

J. Roderic Beresford
Professor of Engineering

Geoffrey H. Berg
Clinical Instructor in Medicine

Arnaldo Berges
Clinical Assistant Professor of Psychiatry and Human Behavior

Kristina Berglund
Assistant Professor of Medicine (Clinical)

Seth F. Berkley
Adjunct Professor of Medicine

Linda J. Berman
Clinical Assistant Professor of Family Medicine

Nathaniel A. Berman
Rahel Varnhagen Professor of International Affairs, Law, and Modern Culture (Research)

Douglas B. Bernon
Clinical Assistant Professor of Psychiatry and Human Behavior

Scott David Berns
Clinical Professor of Pediatrics; Clinical Professor of Health Services, Policy and Practice

Wesley H. Bernskoetter
Adjunct Associate Professor of Chemistry

Paul Bernstein
Clinical Instructor in Neurosurgery

Susan Bernstein
Professor of Comparative Literature; Professor of German Studies

David M. Berson
Sidney A. Fox and Dorothea Doctors Fox Professor of Ophthalmology and Visual Science

Arthur A. Bert
Clinical Professor of Surgery (Anesthesiology)

Richard G. Bertini
Clinical Assistant Professor Emeritus of Orthopaedics

Jonathan M. Bertman
Clinical Assistant Professor of Family Medicine

Mark D. Bertness
Robert P. Brown Professor of Biology

Richard W. Besdine
David S. Greer, M.D., Professor of Geriatric Medicine

Sarah A. Besky
Charles Evans Hughes 1881 Assistant Professor of Anthropology and International and Public Affairs

Laurel D. Bestock
Associate Professor of Archaeology and the Ancient World and Egyptology and Assyriology

Jack R. Bevivino
Clinical Assistant Professor of Surgery

Timothy R. T. Bewes
Professor of English

Christina A. Beyer
Assistant Professor of Medicine (Clinical)

Harikrishna Bhatt
Assistant Professor of Medicine (Clinical)

Reena A. Bhatt
Clinical Assistant Professor of Surgery (Plastic Surgery)

Shaobin Bian
Visiting Scholar in Philosophy

Piero Biancani
Professor Emeritus of Medicine (Research)

David Bica
Clinical Assistant Professor of Family Medicine

Roberta Bickford
Professor Emerita of History of Art and Architecture

L. Cinnamon Bidwell
Adjunct Assistant Professor of Psychiatry and Human Behavior

Katie Brooks Biello
Assistant Professor of Behavioral and Social Sciences (Research); Assistant Professor of Epidemiology (Research)

Lucien J. E. Bienenstock
Associate Professor of Applied Mathematics and Neuroscience

Rosemarie Bigsby
Clinical Professor of Pediatrics; Clinical Professor of Psychiatry and Human Behavior

Bahar Bilgen
Assistant Professor of Orthopaedics (Research)

Courtney C. Bilodeau
Assistant Professor of Medicine (Clinical)

William D. Binder
Associate Professor of Emergency Medicine (Clinical)

Carsten Binnig
Adjunct Associate Professor of Computer Science (Research)

Briannan E. Bintz
Adjunct Instructor in Pathology and Laboratory Medicine

Christine Anne Biron
Chemistry and Biochemistry Professor

Esther Elizabeth Brintzenhoff Professor of Medical Science

Daniel J. Bisaccio
Lecturer in Education

Kenneth D. Bishop
Assistant Professor of Medicine (Clinical)

Frederic E. Bishopp
Professor Emeritus of Applied Mathematics

Daniel C. I. Bjorkegren
Assistant Professor of Economics

Michael J. Black
Adjunct Professor of Computer Science

Karen Blackmer
Clinical Assistant Professor of Family Medicine
Robert A. Blair  
Joukowsky Family Assistant Professor of Political Science and International Studies

Brian S. Blais  
Adjunct Professor of Brain and Neural Systems

Dawna A. Blake  
Clinical Assistant Professor of Medicine

Karyn K. Blane  
Clinical Associate Professor of Psychiatry and Human Behavior

Brad D. Blankenhorn  
Assistant Professor of Orthopaedics

Mutlu Konuk Blasing  
Professor of English

Joaquin Blaum  
Assistant Professor of Economics

Andrew S. Blazar  
Clinical Professor Emeritus of Obstetrics and Gynecology

Thomas A. Bledsoe  
Clinical Associate Professor of Medicine

Cynthia Bliss  
Clinical Instructor in Pediatrics

Joseph M. Bliss  
Associate Professor of Pediatrics

Thomas F. Bliss  
Clinical Assistant Professor of Orthopaedics

Erika L. Bloom  
Assistant Professor of Psychiatry and Human Behavior (Research); Assistant Professor of Medicine (Research)

Donald S. Blough  
Professor Emeritus of Psychology

Andrew S. Blum  
Professor of Neurology

Christina Alexandra Blum  
Assistant Professor of Neurology (Clinical)

Roger B. Blumberg  
Adjunct Lecturer in Computer Science

Janet A. Blume  
Associate Professor of Engineering

Sheila E. Blumstein  
Albert D. Mead Professor of Cognitive, Linguistic and Psychological Sciences

Michael F. Blundin  
Assistant Professor of Medicine (Clinical)

Mark M. Blyth  
Eastman Professor of Political Economy

April Bobenchik  
Assistant Professor of Pathology and Laboratory Medicine

Pamela Bochiechio  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Beth C. Bock  
Professor of Psychiatry and Human Behavior (Research); Professor of Behavioral and Social Sciences (Research)

John P. Bodel  
W. Duncan MacMillan II Professor of Classics

Sheenagh M. Bodkin  
Clinical Assistant Professor of Medicine

Deborah Boedeker  
Professor Emerita of Classics

John R. Boekamp  
Clinical Associate Professor of Psychiatry and Human Behavior

Kim Boekelheide  
Professor of Medical Science

Daniela Boerescu  
Clinical Assistant Professor of Psychiatry and Human Behavior

Julie Boergers  
Associate Professor of Psychiatry and Human Behavior (Clinical); Associate Professor of Pediatrics (Clinical)

Dilek A. Boga  
Visiting Scientist in Chemistry

Theodore Bogosian  
Visiting Assistant Professor of the Practice of Humanities

Barrymore A. Bogues  
Asa Messer Professor of Humanities and Critical Theory

Christina L. Boisseau  
Assistant Professor of Psychiatry and Human Behavior (Research)

Robert J. Boland  
Adjunct Professor of Psychiatry and Human Behavior

Dale S. Bond  
Associate Professor of Psychiatry and Human Behavior (Research)

Sheila Bonde  
Professor of History of Art and Architecture; Professor of Archaeology and the Ancient World

Charlotte M. Boney  
Adjunct Professor of Pediatrics

Alice E. Bonitati  
Associate Professor of Medicine (Clinical)

M. Christopher Borden  
Clinical Assistant Professor of Psychiatry and Human Behavior

Christopher T. Born  
Intrepid Heroes Professor of Orthopedic Surgery

Belinda Borrelli  
Adjunct Professor of Psychiatry and Human Behavior

David A. Borton  
Assistant Professor of Engineering

David A. Boruchoff  
Visiting Scholar in Hispanic Studies

Michel-Andre R. Bossy  
Professor Emeritus of French Studies

Andrew G. Bostom  
Associate Professor of Medicine

Leslie A. Bostrom  
Professor of Visual Art

Paul J. Boteho  
Clinical Assistant Professor of Surgery (Ophthalmology)

Richard A. Boucher  
Senior Fellow in International and Public Affairs

Ghada Bourjeily  
Associate Professor of Medicine

David B. Bouslough  
Associate Professor of Emergency Medicine (Clinical)

Constantine Boussalis  
Adjunct Professor of International and Public Affairs

Lawrence P. Bowen  
Clinical Assistant Professor of Surgery (Plastic Surgery)

Wayne D. Bowen  
Upjohn Professor of Pharmacology

Allan Francis Bower  
Professor of Engineering

Lisa D. Bowie  
Clinical Assistant Professor of Family Medicine

Kathleen Cote Bowling  
Clinical Associate Professor of Obstetrics and Gynecology

Giselle A. Corre  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Dominic Corrigan  
Clinical Associate Professor of Medicine  
R. William Corwin  
Clinical Assistant Professor of Medicine  
Christopher J. Cosgrove  
Clinical Assistant Professor of Medicine  
Joseph A. Costa  
Clinical Assistant Professor of Family Medicine  
Geanina O. Costea  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Ellen M. Costello  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Philippe Cote  
Clinical Assistant Professor of Family Medicine  
Richard A. Cotterio  
Clinical Associate Professor of Medicine  
Travis Cotton  
Clinical Assistant Professor of Surgery  
Karen L. K. Coulombe  
Assistant Professor of Engineering; Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology  
Donald R. Coustan  
Professor of Obstetrics and Gynecology  
Maria Coutinho  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Shiavax Cowasji  
Clinical Assistant Professor of Medicine  
Hugh P. Cowdin  
Clinical Assistant Professor of Surgery (Anesthesiology)  
Mara G. Coyle  
Professor of Pediatrics (Clinical)  
Thomas F. Crain  
Assistant Professor of Medicine (Clinical)  
Robert Crausman  
Clinical Professor of Medicine  
Constance M. Crawford  
Adjunct Lecturer in Theatre Arts and Performance Studies  
Norbert J. Craybas  
Clinical Assistant Professor of Surgery  
Robberty J. Creton  
Associate Professor of Medical Science (Research)  
Rebecca J. Crichton  
Clinical Assistant Professor of Obstetrics and Gynecology  
Joseph Crisco  
Henry F. Lippitt Professor of Orthopedics  
Patricia A. Cristofaro  
Clinical Assistant Professor of Medicine (Clinical)  
John J. Cronan  
Charles and Elfriede Collis-Frances Weeden Gibson Professor of Diagnostic Imaging in the Warren Alpert Medical School  
Beth Cronin  
Clinical Assistant Professor of Obstetrics and Gynecology  
William C. Crossgrove  
Professor Emeritus of German Studies and Comparative Literature  
James P. Crowley  
Professor Emeritus of Medicine  
Laina E. Crowthers  
Clinical Assistant Professor of Obstetrics and Gynecology  
Marjorie L. Crozier  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Scott J. Cruikshank  
Associate Professor of Neuroscience (Research)  
Antonio P. Cruz  
Clinical Assistant Professor of Dermatology  
Aristides Cruz  
Assistant Professor of Orthopaedics  
Catherine A. Cummings  
Clinical Associate Professor of Emergency Medicine  
Francis J. Cummings  
Adjunct Associate Professor of Medicine  
Michael L. Cummings  
Clinical Assistant Professor of Pediatrics
Cheston B. Cunha  
Assistant Professor of Medicine (Clinical)

Wilfredo Curioso  
Clinical Assistant Professor of Medicine

David Curley  
Assistant Professor of Emergency Medicine

Clinical Assistant Professor of Surgery (Ophthalmology)

Alicia Curtin  
Assistant Professor of Family Medicine (Clinical)

Lewis Perry Curtis Jr  
Professor Emeritus of History

Anne Cushing-Brescia  
Clinical Assistant Professor of Medicine

Marlene Cutitar  
Clinical Assistant Professor of Surgery

David Cutts  
Professor of Physics

Susan Cu-Uvin  
Professor of Obstetrics and Gynecology; Professor of Health Services, Policy and Practice; Professor of Medicine

Vaclav Cvrcek  
Visiting Scholar in Slavic Studies

Michele G. Cyr  
Professor of Medicine; Professor of Medical Science

Stephanie Jo Czech  
Clinical Assistant Professor of Psychiatry and Human Behavior

Adam J. Czynski  
Assistant Professor of Pediatrics (Clinical)

Constantine Michael Dafermos  
Alumni-Alumnae University Professor of Applied Mathematics

Erika D'Agata  
Associate Professor of Medicine

Issa J. Dahabreh  
Assistant Professor of Epidemiology; Assistant Professor of Health Services, Policy and Practice

Albert E. Dahlgren  
Professor Emeritus of Medical Science

Lori Dadiello  
Assistant Professor of Neurology (Research); Assistant Professor of Health Services, Policy and Practice (Research)

Craig Daigle  
Visiting Scholar in History

Karen Daigle  
Clinical Associate Professor of Pediatrics

Tanya Dailey  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Arthur D. Daily  
Clinical Associate Professor Emeritus of Dermatology

Deepan Dalal  
Assistant Professor of Medicine (Clinical)

Pedro Dal Bo  
Associate Professor of Economics

Jean Marie Daley  
Assistant Professor of Medicine (Research)

Kristy L. Dalrymple Gaudiano  
Assistant Professor of Psychiatry and Human Behavior (Research)

Colleen A. Dalton  
Assistant Professor of Earth, Environmental and Planetary Sciences

Suzanne C. Dambek  
Clinical Instructor in Obstetrics and Gynecology

Daniel J. D'Amico  
Lecturer in Economics

Nitin S. Damle  
Clinical Assistant Professor of Medicine

Anh-Tai Vinh Dang  
Clinical Assistant Professor of Obstetrics and Gynecology

Sarah E. dAngelo  
Assistant Professor of Theatre Arts and Performance Studies

Alan H. Daniels  
Assistant Professor of Orthopaedics

Jerry Delmar Daniels  
Associate Professor Emeritus of Engineering

Colleen K. Danie  
Preliminary Research Associate in Theatre Arts and Performance Studies

Kwame Dapaah-Afriyie  
Clinical Associate Professor of Medicine

Eric M. Darling  
Associate Professor of Medical Science; Associate Professor of Engineering; Associate Professor of Orthopaedics

Manuel F. Dasilva  
Assistant Professor of Orthopaedics

Georgios D. Daskalopoulo  
Professor of Mathematics

Anita Daulatzai  
Louise Lamphere Visiting Assistant Professor of Anthropology and Gender Studies

R. Davenport  
Adjunct Associate Professor of Neuroscience

Kristopher Davignon  
Clinical Assistant Professor of Surgery (Anesthesiology)

Denise L. Davis  
Lecturer in Gender Studies

Jacob H. Davis  
Visiting Assistant Professor of Religious Studies

Jennifer D. Davis  
Associate Professor of Psychiatry and Human Behavior (Clinical)

Lawrence M. Davis  
Assistant Professor of Diagnostic Imaging (Clinical)

Philip J. Davis  
Professor Emeritus of Applied Mathematics

Robert Paul Davis  
Professor Emeritus of Medical Sciences

Sarah M. Davis  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Stephen W. Davis  
Clinical Associate Professor of Family Medicine

Michelle Rose Dawson  
Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology

Susan Day  
Associate Professor of Pediatrics (Clinical)

T. Eugene Day  
Adjunct Assistant Professor of Emergency Medicine

Alexandra M. Deaconescu  
Assistant Professor of Molecular Biology, Cell Biology and Biochemistry

Cornelia Dean  
Distinguished Visiting Lecturer in Environmental Studies

Thomas L. Dean  
Adjunct Professor of Computer Science

Maria De Angelis  
Senior Lecturer Emerita in Italian Studies
Lynne deBenedette  
Senior Lecturer in Slavic Studies

Carol L. DeBoer-Langworthy  
Lecturer in English

Jeri B. Debrohun  
Associate Professor of Classics

Geoffroy De Clippel  
Associate Professor of Economics

Linda Deegan  
Professor of Ecology and Evolutionary Biology (MBL)

Julio Cesar Defillo  
Assistant Professor of Medicine (Clinical)

Silvia Degli Esposti  
Associate Professor of Medicine (Clinical)

Catherine Degood  
Adjunct Assistant Professor of Family Medicine

Christopher L. de Graffenried  
Assistant Professor of Molecular Microbiology and Immunology

Maria Paz de Hoz Garcia Bellido  
Visiting Scholar in Classics

Laura Deihl  
Clinical Assistant Professor of Psychiatry and Human Behavior

Suzanne M. De La Monte  
Professor of Pathology and Laboratory Medicine; Professor of Neurosurgery

Cornelius F. Delaney  
Visiting Scholar in Philosophy

Sarah Delaney  
Associate Professor of Chemistry

Danny L. DeLange  
Teaching Associate in Music

Sara Delaporta  
Clinical Instructor in Family Medicine

Bonderman Assistant Professor of the Practice of Literary Arts

Ronald A. DeLellis  
Professor Emeritus of Pathology and Laboratory Medicine

Paul V. Del Guercio  
Clinical Assistant Professor of Family Medicine

Francine A. D'Elia  
Clinical Assistant Professor of Psychiatry and Human Behavior

Ian P. Dell'Antonio  
Professor of Physics

Thomas D. Della Torre  
Clinical Assistant Professor of Family Medicine

Alison DeLong  
Associate Professor of Biology

Jaime L. Del Razo  
Adjunct Assistant Professor of Education

Anthony M. DeLuise  
Clinical Assistant Professor of Family Medicine

Kathryn E. Demos  
Assistant Professor of Psychiatry and Human Behavior (Research)

Bathsheba Demuth  
Assistant Professor of History

Bradley D. DeNardo  
Assistant Professor of Pediatrics

Timothy Denison  
Adjunct Assistant Professor of Engineering

Penelope Hill Denney  
Professor of Pediatrics

Phyllis A. Dennery  
Sylvia Kay Hassenfeld Professor of Pediatrics

Allen M. Dennison  
Clinical Assistant Professor of Medicine

Jane Mackenzie Dennison  
Clinical Assistant Professor of Pediatrics

Lisa R. Denny  
Clinical Assistant Professor of Family Medicine

David Denofrio  
Adjunct Associate Professor of Medicine

Thomas D. Denucci  
Clinical Associate Professor of Medicine

Nicola F. Denzey  
Visiting Associate Professor of Religious Studies

Sean C. L. Deoni  
Adjunct Assistant Professor of Engineering

Monique E. DePaep  
Professor of Pathology and Laboratory Medicine

Vera A. De Palo  
Associate Professor of Medicine

Jacqueline DePasse  
Clinical Instructor in Medicine

Judith Depue  
Clinical Professor Emerita of Psychiatry and Human Behavior

Leo Depuydt  
Professor of Egyptology and Assyriology

Edward Dere  
Assistant Professor of Surgery (Research)(Urology); Assistant Professor of Pathology and Laboratory Medicine (Research)

Nathanial P. DesRosiers  
Visiting Associate Professor of Religious Studies

Allan Mark Deutsch  
Clinical Associate Professor Emeritus of Diagnostic Imaging

Ashok Raj Devkota  
Clinical Instructor in Medicine

Paula Deyoung  
Clinical Instructor in Obstetrics and Gynecology

Giulio G. Diamante  
Clinical Assistant Professor of Surgery (Ophthalmology)

Joseph Anthony Diaz  
Associate Professor of Medicine; Associate Professor of Medical Science

Joseph Di Benedetto  
Clinical Assistant Professor of Medicine

Lisa DiCarlo  
Lecturer in Sociology

Margaret A. Dicarlo  
Clinical Assistant Professor of Psychiatry and Human Behavior

John Bartlett Dickey  
Assistant Professor of Medicine (Clinical)

Daniel P. Dickstein  
Associate Professor of Psychiatry and Human Behavior; Associate Professor of Diagnostic Imaging; Associate Professor of Pediatrics

Susan Dickstein  
Associate Professor of Psychiatry and Human Behavior; Associate Professor of Pediatrics

Elizabeth R. Didie  
Clinical Associate Professor of Psychiatry and Human Behavior

Gerald J. Diebold  
Professor of Chemistry

Dinusha W. Dietrich  
Clinical Assistant Professor of Pediatrics
Wendell S. Dietrich  
Professor Emeritus of Religious Studies and Judaic Studies

Amy Bach Dilello  
Clinical Assistant Professor of Psychiatry and Human Behavior

Ann Dill  
Professor Emerita of Sociology

Christopher Dimarco  
Assistant Professor of Dermatology (Clinical)

Joseph Dimase  
Clinical Assistant Professor Emeritus of Medicine

John Diorio  
Clinical Assistant Professor of Obstetrics and Gynecology

Paul A. Disilvestro  
Professor of Obstetrics and Gynecology

Stephen Dizio  
Clinical Assistant Professor of Psychiatry and Human Behavior

Beata E. Dizoglio  
Clinical Assistant Professor of Obstetrics and Gynecology

Curtis Doberstein  
Professor of Neurosurgery (Clinical)

Vladimir Dobrushkin  
Visiting Professor of Applied Mathematics

Robert J. Dobrzynski  
Clinical Assistant Professor of Medicine

Kelly Dobson  
Assistant Professor of Modern Culture and Media

Kimberly A. Dodd  
Assistant Professor of Medicine (Clinical)

Thomas W. Doeppner  
Associate Professor of Computer Science (Research)

Jimmie D. Doll  
Adjunct Professor of Medical Science

Lisa Ruth Domagalski  
Clinical Assistant Professor of Obstetrics and Gynecology

Fulvio Domini  
Professor of Cognitive, Linguistic and Psychological Sciences

John E. Donahue  
Associate Professor of Pathology and Laboratory Medicine; Associate Professor of Neurology

John P. Donahue  
Clinical Assistant Professor of Surgery (Ophthalmology)

Abigail Donaldson  
Assistant Professor of Pediatrics

David Donaldson  
Clinical Assistant Professor of Medicine

Deidre L. Donaldson  
Adjunct Assistant Professor of Psychiatry and Human Behavior

Kerri L. Donaldson Hanna  
Visiting Scientist in Earth, Environmental and Planetary Sciences

Lindsay E. Donat  
Clinical Assistant Professor of Obstetrics and Gynecology

Walter E. Donat  
Clinical Associate Professor of Medicine

Linda L. Donegan  
Assistant Professor of Diagnostic Imaging (Clinical)

Hongjie Dong  
Associate Professor of Applied Mathematics

Xiaogun Dong  
Adjunct Assistant Professor of Medicine

Kathleen R. Donise  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

John P. Donoghue  
Henry Merritt Wriston Professor of Neuroscience

Elizabeth A. Doneky  
Adjunct Instructor in Visual Art

Alexei A. Dooovshovskoy  
Teaching Associate in Music

Miquel Dorca  
Visiting Lecturer in Physics

Gary S. Dorfman  
Professor Emeritus of Diagnostic Imaging

David M. Dosa  
Associate Professor of Health Services, Policy and Practice; Associate Professor of Medicine

Edmund T. Dosremedios  
Clinical Assistant Professor of Orthopaedics

Lara Dotson-Renta  
Visiting Scholar in Middle East Studies

Beshara B. Doumani  
Joukowsky Family Professor of Modern Middle East History

Jeffrey Dover  
Adjunct Associate Professor of Dermatology

Robert M. Dowben  
Adjunct Professor Emeritus of Molecular Pharmacology, Physiology and Biotechnology

Joseph L. Dowling Jr  
Clinical Associate Professor Emeritus of Surgery

Hilary L. Doyle  
Adjunct Instructor in Visual Art

Richard J. Doyle  
Clinical Assistant Professor of Medical Science; Clinical Assistant Professor of Family Medicine

Thomas J. Doyle  
Assistant Professor of Medicine (Clinical)

James Dreier  
Professor of Philosophy

Thomas Drew  
Clinical Associate Professor Emeritus of Medicine

Vickie R. Driver  
Professor of Orthopaedics (Clinical)

Aaron Mark Drucker  
Assistant Professor of Dermatology (Research)

Emily Drumsta  
Assistant Professor of Comparative Literature

Viren A. D'Sa  
Associate Professor of Pediatrics (Clinical)

Fenghui Duan  
Assistant Professor of Biostatistics (Clinical)

Kristina M. Duarte  
Assistant Professor of Comparative Literature

Patrycja Dubielecka-Szczerba  
Assistant Professor of Medicine (Research)

Joseph F. Ducharme  
Clinical Assistant Professor of Surgery (Ophthalmology)

Samuel Dudley  
Ruth and Paul Levinger Professor of Cardiology
Brian E. Duff  
Clinical Associate Professor of Surgery (Otolaryngology)

Christine M. Duffy  
Associate Professor of Medicine (Clinical)

Susan Duffy  
Associate Professor of Emergency Medicine; Associate Professor of Pediatrics

Luba Dumenco  
Assistant Professor of Medical Science (Clinical); Assistant Professor of Pathology and Laboratory Medicine (Clinical)

Dorothy M. Dumont  
Assistant Professor of the Practice in Epidemiology

Nancy R. Dunbar  
Senior Lecturer Emeritus in Theatre Arts and Performance Studies

Annmarie Duncan  
Associate Professor of Surgery (Clinical)

Casey Dunn  
Associate Professor of Biology

Shira I. Dunsiger  
Assistant Professor of Behavioral and Social Sciences (Research)

George J. Du Pont  
Clinical Assistant Professor of Surgery (Oral & Maxillofacial Surgery)

Paul G. Dupuis  
IBM Professor of Applied Mathematics

Damian E. Dupuy  
Professor of Diagnostic Imaging

Frank Durand  
Professor Emeritus of Hispanic Studies

Laura Green Durand  
Professor Emerita of French Studies

Kevin M. Dushay  
Associate Professor of Medicine (Clinical)

Richard L. Dvorin  
Clinical Assistant Professor of Pediatrics

Lance D. Dworkin  
Professor of Medicine

Kristin H. Dwyer  
Assistant Professor of Emergency Medicine

Candace L. Dyer  
Clinical Assistant Professor of Surgery

Robert K. Dyer  
Clinical Assistant Professor of Dermatology

Anani Dzidzienyo  
Associate Professor of Africana Studies; Associate Professor of Portuguese and Brazilian Studies

J. Donald Easton  
Professor Emeritus of Neurology

Charles B. Eaton  
Professor of Family Medicine; Professor of Epidemiology

Erica Eaton  
Assistant Professor of Psychiatry and Human Behavior

Craig P. Eberson  
Associate Professor of Orthopaedics

Sue E. Eckert  
Senior Fellow in International and Public Affairs

Timothy H. Edgar  
Senior Fellow in International and Public Affairs

Laura M. Edmonds  
Assistant Professor of Medicine (Clinical)

David Edmonson  
Assistant Professor of Surgery (Clinical); Assistant Professor of Obstetrics and Gynecology (Clinical)

Lee Edstrom  
Professor of Surgery

Erika J. Edwards  
Associate Professor of Ecology and Evolutionary Biology

Guy W. H. Edwards  
Visiting Scientist in Environment and Society

Wendy Edwards  
Professor of Visual Art

James F. Egan  
Professor of English

Renee Ross Eger  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Gauli B. Eggertsson  
Professor of Economics

Thomas K. Egglin  
Associate Professor of Diagnostic Imaging

David Egilman  
Clinical Professor of Family Medicine

Erik T. Ehn  
Professor of Theatre Arts and Performance Studies

Michael G. Ehrlich  
Vincent Zecchino, MD Professor of Orthopaedic Surgery

Afshin Ehsan  
Associate Professor of Surgery (Clinical)(Cardiothoracic Surgery)

Charles Eil  
Clinical Associate Professor of Medicine

Jane L. Eisen  
Adjunct Professor of Psychiatry and Human Behavior

Staci R. Eisenberg  
Assistant Professor of Pediatrics; Assistant Professor of Medicine

Yul D. Ejnes  
Clinical Associate Professor of Medicine

Charles Elbaum  
Professor Emeritus of Physics

Christopher Elco  
Assistant Professor of Pathology and Laboratory Medicine; Assistant Professor of Dermatology

Ibrahim Elgabry  
Clinical Instructor in Medicine

Lana G. Elhalabi  
Clinical Assistant Professor of Psychiatry and Human Behavior

Sahal Elnhamassy  
Clinical Assistant Professor of Medicine

Courtney Beard Elias  
Adjunct Instructor in Psychiatry and Human Behavior

Jack A. Elias  
Frank L. Day Professor of Biology

Jonathan Elion  
Clinical Associate Professor of Medicine

Sadie Elisseou  
Assistant Professor of Medicine (Clinical)

Peter M. Eller  
Clinical Assistant Professor of Medicine

David J. Ellerby  
Visiting Associate Professor of Engineering

Claudia Elliott  
Senior Lecturer in International and Public Affairs

Gregory C. Elliott  
Professor of Sociology

Tina M. Ellis  
Clinical Instructor in Surgery (Anesthesiology)
Charlene Ellsworth  
Assistant Professor of Medicine (Clinical)

Ani Eloyan  
Assistant Professor of Biostatistics

Fadya El Rayess  
Assistant Professor of Family Medicine (Clinical)

Martin Elson  
Clinical Assistant Professor of Surgery

Nina R. Emery  
Assistant Professor of Philosophy

Rinchen-Tzo Emgushov  
Clinical Instructor in Medicine

John S. Emigh  
Professor Emeritus of Theatre Arts and Performance Studies and English

Robert P. Emlen  
Senior Lecturer in American Studies

Christine M. Emmick  
Clinical Assistant Professor of Surgery

Timothy M. Empkie  
Clinical Associate Professor of Family Medicine

Joseph J. England  
Clinical Assistant Professor of Family Medicine

Christian Enss  
Visiting Professor of Physics

Esther Entin  
Clinical Associate Professor of Family Medicine

Yoash R. Enzer  
Clinical Associate Professor of Surgery; Clinical Associate Professor of Dermatology

Jeanette I. Epstein  
Adjunct Lecturer in Education

Lynn C. Epstein  
Clinical Professor Emerita of Psychiatry and Human Behavior and Clinical Professor Emerita of Behavioral and Social Sciences

Mel H. Epstein  
Professor Emeritus of Neurosurgery

Nathan B. Epstein  
Professor Emeritus of Psychiatry and Human Behavior

Gary P. Epstein-Lubow  
Assistant Professor of Psychiatry and Human Behavior; Assistant Professor of Health Services, Policy and Practice; Assistant Professor of Medical Science

Allan Erickson  
Associate Professor Emeritus of Medicine

Shannon Marie Erisman  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Matthew A. Esposito  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Cynthia Esteban  
Clinical Assistant Professor of Pediatrics

David Estlund  
Lombardo Family Professor of the Humanities

Elkin O. Estrada  
Clinical Assistant Professor of Medicine

David Ettenson  
Clinical Associate Professor of Medicine

Peter T. Evangelista  
Associate Professor of Diagnostic Imaging (Clinical)

Andrew R. Evans  
Assistant Professor of Orthopaedics

Peter B. Evans  
Senior Fellow in International and Public Affairs

David Ettensohn  
Clinical Associate Professor of Family Medicine

Joyce E. Ewing  
Clinical Associate Professor of Orthopaedics

Nina R. Fasoli  
Clinical Associate Professor of Dermatology

Susan Fasoli  
Clinical Assistant Professor of Dermatology

Visiting Scientist in Engineering

Caleb I. Fassett  
Visiting Scientist in Earth, Environmental and Planetary Sciences

Loren D. Fast  
Associate Professor of Medicine (Research)

Paja L. Faudree  
Associate Professor of Anthropology

Carol J. Faulkner  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Anne Fausto-Sterling  
Professor Emerita of Biology

Nicolas Lux Fawzi  
Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology
Mariam Fayek  
Assistant Professor of Medicine (Clinical)  

Deirdre M. Fearon  
Associate Professor of Emergency Medicine (Clinical); Associate Professor of Pediatrics (Clinical)  

Jeffrey Feden  
Associate Professor of Emergency Medicine (Clinical)  

Seth Feder  
Clinical Assistant Professor of Dermatology  

Corey R. Fehnel  
Assistant Professor of Neurology; Assistant Professor of Neurosurgery  

Leslie Ann Feil  
Clinical Assistant Professor of Psychiatry and Human Behavior  

Lloyd R. Feit  
Associate Professor of Pediatrics  

Martin E. Felder  
Clinical Professor Emeritus of Surgery  

Michael F. Felder  
Clinical Assistant Professor of Family Medicine; Clinical Assistant Professor of Pediatrics  

Allan Maurice Feldman  
Professor Emeritus of Economics  

Dmitri Feldman  
Associate Professor of Physics  

Martin P. Feldman  
Clinical Instructor Emeritus in Surgery  

Walter S. Feldman  
John Hay Professor Emeritus of Bibliography and Professor Emeritus of Visual Art  

Oriel FeldmanHall  
Assistant Professor of Cognitive, Linguistic and Psychological Sciences  

Edward R. Feller  
Clinical Professor of Health Services, Policy and Practice; Clinical Professor of Medicine  

Pedro F. Felzenszwalb  
Professor of Engineering  

Jun Feng  
Assistant Professor of Surgery (Research)  

Zhanlian Feng  
Adjunct Assistant Professor of Health Services, Policy and Practice  

Fabrizio Fenghi  
Assistant Professor of Slavic Studies  

Mary L. Fennell  
Professor of Sociology; Professor of Health Services, Policy and Practice  

Mary Anne Fenton  
Clinical Associate Professor of Medicine  

Gustavo E. Fernandes  
Assistant Professor of Engineering (Research)  

Roquinaldo Ferreira  
Vasco da Gama University Professor of Portuguese History  

Marcolino Ferretti  
Clinical Assistant Professor of Pediatrics  

Fred F. Ferri  
Clinical Professor of Health Services, Policy and Practice  

Sarah J. Fessler  
Clinical Assistant Professor of Family Medicine  

Elena Kristie Festa  
Lecturer in Cognitive, Linguistic and Psychological Sciences  

Masako Ueda Fidler  
Professor of Slavic Studies  

Vlastimil Fidler  
Visiting Associate Professor of Chemistry  

Alison E. Field  
Professor of Epidemiology; Professor of Pediatrics  

Thalia L. Field  
Professor of Literary Arts  

Argelina C. Figueiredo  
Visiting Professor of Political Science  

Anna Filip  
Assistant Professor of Family Medicine (Clinical)  

John W. Finigan  
Clinical Assistant Professor of Pediatrics  

Lois Finkel  
Teaching Associate in Music  

Arkady Finn  
Assistant Professor of Medicine (Clinical)  

Bruce E. Fischer  
Clinical Instructor in Medicine  

Joshua E. Fischer  
Clinical Assistant Professor of Medicine  

Karen M. Fischer  
Professor of Earth, Environmental and Planetary Sciences  

Staci A. Fischer  
Associate Professor of Medicine  

Linford D. Fisher  
Associate Professor of History  

Whitney Charles Fisher  
Assistant Professor of Emergency Medicine (Clinical)  

Richard Fishman  
Professor of Visual Art  

Kathryn Fisler  
Adjunct Professor of Computer Science  

James L. Fitzgerald  
St. Purander Das Distinguished Professor of Classics  

Walter D. Fitzhugh  
Clinical Assistant Professor of Psychiatry and Human Behavior  

Patricia Jeanne Flanagan  
Professor of Pediatrics  

Timothy P. Flanigan  
Professor of Medicine; Professor of Health Services, Policy and Practice  

B. Allen Flaxman  
Clinical Professor Emeritus of Dermatology  

Richard D. Fleeter  
Adjunct Associate Professor of Engineering  

Braden C. Fleming  
Lucy Lippitt Professor of Orthopedics  

Wendell H. Fleming  
University Professor Emeritus, Professor Emeritus of Applied Mathematics and Mathematics  

Kathryn Fleming-Ives  
Adjunct Assistant Professor of Psychiatry and Human Behavior  

Steven Charles Flood  
Clinical Assistant Professor of Family Medicine  

Andrea E. Flores  
Assistant Professor of Education  

Ellen Flynn  
Clinical Assistant Professor of Psychiatry and Human Behavior; Clinical Assistant Professor of Medicine  

Mary M. Flynn  
Associate Professor of Medicine (Clinical)  

Pamela S. P. Foa  
Senior Fellow in Gender Studies  

John L. Foggle  
Associate Professor of Emergency Medicine (Clinical)
Stephen Merriam Foley  
Associate Professor of Comparative Literature; Associate Professor of English  
Rodrigo Fonseca  
Assistant Professor of Computer Science  
Carolina Fonseca-Valencia  
Clinical Assistant Professor of Medicine  
Lynne A. Fontaine  
Adjunct Professor of Pediatrics  
Michelle M. Forcier  
Associate Professor of Pediatrics (Clinical)  
Sara R. Ford  
Associate Professor of Pediatrics (Clinical)  
Edwin N. Forman  
Professor Emeritus of Pediatrics  
Laura Forman  
Clinical Instructor in Emergency Medicine  
Charles W. Formara  
Professor Emeritus of Classics  
Julie Forrest  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Donald W. Forsyth  
James Manning Professor of Earth, Environmental, and Planetary Science  
Glenn G. Fort  
Clinical Associate Professor of Medicine  
David J. Fortunato  
Clinical Associate Professor of Medicine  
Andrew D. Foster  
Professor of Economics  
Rachel L. Fowler  
Assistant Professor of Emergency Medicine (Clinical)  
Gregory A. Fox  
Clinical Assistant Professor of Pediatrics  
Baylor Fox-Kemper  
Associate Professor of Earth, Environmental and Planetary Sciences  
Keith Fragoza  
Clinical Assistant Professor of Surgery  
Laura L. Frakey  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Caren L. Francione  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Greta Francis  
Associate Professor of Psychiatry and Human Behavior  
Christian Franck  
Assistant Professor of Engineering  
Jennifer A. Franck  
Lecturer in Engineering  
Grandou Thierry Francois  
Visiting Scientist in Physics  
Caroline B. Frank  
Visiting Assistant Professor of American Studies  
Heather M. Frank  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Michael J. Frank  
Professor of Cognitive, Linguistic and Psychological Sciences  
Steven Frank  
Clinical Assistant Professor of Family Medicine  
Rachel S. Franklin  
Associate Professor of Population Studies (Research)  
Elisabeth A. Frazier  
Assistant Professor of Psychiatry and Human Behavior (Research)  
Arthur Frazzano  
Clinical Associate Professor Emeritus of Family Medicine  
Lisa M. Freda  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Linn F. Freedman  
Adjunct Professor of the Practice in Computer Science  
Hannah Freed-Thall  
Assistant Professor of Comparative Literature  
Chas W. Freeman  
Senior Fellow in International and Public Affairs  
Jennifer B. Freeman  
Associate Professor of Psychiatry and Human Behavior (Research)  
Nancy J. Freeman  
Clinical Associate Professor of Medicine  
Sarah Freeman  
Assistant Professor of Medicine (Clinical)  
Walter F. Freiberger  
Professor Emeritus of Applied Mathematics  
Richard N. Freiman  
Associate Professor of Medical Science  
Katharine French  
Assistant Professor of Medicine (Clinical)  
Lambert B. Freund  
Professor Emeritus of Engineering  
Scott A. Frickel  
Associate Professor of Sociology and Environment and Society  
David L. Fried  
Clinical Assistant Professor of Medicine  
Herbert M. Fried  
Professor Emeritus of Physics  
Rachel M. Friedberg  
Senior Lecturer in Economics  
Catherine Friedman  
Assistant Professor of Psychiatry and Human Behavior (Clinical)  
Jennifer F. Friedman  
Professor of Epidemiology; Professor of Pediatrics  
John N. Friedman  
Associate Professor of Economics and International and Public Affairs  
Joseph H. Friedman  
Professor of Neurology  
Michael A. Friedman  
Clinical Associate Professor of Psychiatry and Human Behavior; Clinical Associate Professor of Neurology  
Karen Friend  
Adjunct Associate Professor of Psychiatry and Human Behavior  
Gary N. Frishman  
Professor of Obstetrics and Gynecology  
Gregory K. Fritz  
Professor of Psychiatry and Human Behavior  
John A. Froehlich  
Associate Professor of Orthopaedics (Clinical)  
Lina M. Fruzzetti  
Professor of Anthropology  
Guosheng Fu  
Prager Assistant Professor of Applied Mathematics  
Cara Fuchs  
Assistant Professor of Psychiatry and Human Behavior (Research)  
Helen Fuchs  
Assistant Professor of Medicine (Research)  
Ana Tuya Fulton  
Associate Professor of Medicine (Clinical); Associate Professor of Psychiatry and Human Behavior (Clinical)
Christopher M. Furey
Assistant Professor of Family Medicine (Clinical)
Karen L. Furie
Samuel I. Kennison, M.D., and Bertha S. Kennison Professor of Clinical Neuroscience
Martin Furman
Clinical Associate Professor of Psychiatry and Human Behavior
Elizabeth Fussell
Associate Professor of Population Studies (Research)
Darlene Gabeau
Adjunct Assistant Professor of Obstetrics and Gynecology
Yves M. Gabellini
Visiting Scientist in Physics
Joseph R. Gaeta
Clinical Assistant Professor Emeritus of Medicine
Alan D. Gaines
Clinical Assistant Professor of Pediatrics
Barbara Miller Gaines
Clinical Instructor in Pediatrics
Jeffrey Gaines
Clinical Instructor in Emergency Medicine
Sarah A. Gaines
Associate Professor of Emergency Medicine (Clinical)
Melissa M. Gaitanis
Associate Professor of Medicine (Clinical)
Richard J. Gaitskell
Hazard Professor of Physics
Omar Galarraga
Assistant Professor of Health Services, Policy and Practice
Heather Gale
Assistant Professor of Diagnostic Imaging (Clinical)
Phillip Galligan
Visiting Scholar in Philosophy
Anthony L. Gallo
Clinical Assistant Professor of Psychiatry and Human Behavior
Katharina M. Galor
Visiting Scholar in Judaic Studies
Oded Galor
Herbert H. Goldberger Professor of Economics
Elizabeth A. Gamble
Clinical Assistant Professor of Obstetrics and Gynecology
Dibber E. Gamsiz
Assistant Professor of Pathology and Laboratory Medicine
Claire D. Ganal
Assistant Professor of Pediatrics (Clinical)
Forrest Gander
Adele Kellenberg Seaver ’49 Professor of Creative Writing
Leela Gandhi
John Hawkes Professor of the Humanities and English
Senthil Kumar Ganesan
Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology (Research)
Michele R. Gange
Clinical Assistant Professor of Obstetrics and Gynecology
Prema Ganjoo
Clinical Associate Professor of Medicine
Theresa C. Ganz
Assistant Professor of Visual Art
Huajian Gao
Walter H. Annenberg Professor of Engineering
Yan Gao
Visiting Scientist in Chemistry
Michele A. Garazi
Clinical Instructor in Medicine
Abbe L. Garcia
Associate Professor of Psychiatry and Human Behavior (Clinical)
Dioscarts Garcia
Instructor in Orthopaedics (Research); Instructor in Molecular Pharmacology, Physiology and Biotechnology (Research)
Maria Garcia Lopez
Visiting Scholar in Hispanic Studies
Maria Luisa Garcia-Moliner
Associate Professor of Pathology and Laboratory Medicine (Clinical)
Nicolas Garcia Trillos
Prager Assistant Professor of Applied Mathematics
Martin F. Gardiner
Adjunct Assistant Professor of Education (Research)
Marcus Gardley
Assistant Professor of Theatre Arts and Performance Studies
Adrian Gardner
Adjunct Assistant Professor of Medicine
Rebekah L. Gardner
Associate Professor of Medicine
Ilana F. Gareen
Associate Professor of Epidemiology (Research)
Veenu Garewal
Clinical Instructor in Medicine
Andrew B. Garland
Teaching Associate in Music
Joseph Garland
Assistant Professor of Medicine (Clinical)
Sarah Garnaat
Assistant Professor of Psychiatry and Human Behavior (Research)
Ana C. Garnecho
Assistant Professor of Pediatrics (Clinical)
John F. Garofano
Visiting Scholar in International and Public Affairs
Aris C. Garro
Associate Professor of Emergency Medicine; Associate Professor of Pediatrics
Eric J. Gartman
Assistant Professor of Medicine
Generoso G. Gascon
Professor Emeritus of Neurology and Professor Emeritus of Pediatrics
Jennifer S. Gass
Associate Professor of Surgery; Associate Professor of Obstetrics and Gynecology
Sylvester James Gates
Visiting Professor of Physics
Stephen M. Gatesy
Professor of Biology; Professor of Medical Science
Constantine A. Gatsonis
Henry Ledyard Goddard University Professor of Biostatistics
Brandon A. Gaudiano
Associate Professor of Psychiatry and Human Behavior (Research)
Gretchen V. Gee
Assistant Professor of Molecular Biology, Cell Biology and Biochemistry (Research)
Joseph D. Geiser
Senior Research Associate in Chemistry
Joanna D. Geller
Adjunct Assistant Professor of Education
Arthur I. Geltr\u00e2
Clinical Associate Professor of Surgery (Ophthalmology)
Brown University

John A. Gelzhiser  
Clinical Assistant Professor of Medicine  
Stuart Geman  
James Manning Professor of Applied Mathematics  
Seth Gemme  
Assistant Professor of Emergency Medicine (Clinical)  
Mychal Gendron  
Teaching Associate in Music  
Bethany J. Gentlesco  
Associate Professor of Medicine (Clinical); Associate Professor of Medical Science (Clinical)  
Olakunle George  
Associate Professor of English; Associate Professor of Africana Studies  
Paul George  
Associate Professor of Family Medicine; Associate Professor of Medical Science  
Susan A. Gerbi  
George D. Eggleston Professor of Biochemistry  
Thomas Germano  
Clinical Associate Professor of Emergency Medicine  
Jonathan Gershon  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Mohmmad H. Ghatee  
Visiting Scholar in Engineering  
Medeva Ghee  
Assistant Professor of the Practice in Behavioral and Social Sciences  
Elisa Giardina Papa  
Visiting Assistant Professor of Modern Culture and Media  
Frantz J. Gibbs  
Associate Professor of Emergency Medicine (Clinical)  
Anne Giblin  
Professor of Ecology and Evolutionary Biology (MBL)  
Sharon E. Gibson  
Clinical Associate Professor of Surgery (Otolaryngology)  
Basilis Gidas  
Professor of Applied Mathematics  
Donald B. Giddon  
Clinical Professor Emeritus of Behavioral and Social Sciences  
Arnoldas Giedrimas  
Assistant Professor of Medicine (Clinical)  
Jeanette G. Giedrimas  
Assistant Professor of Medicine  
David R. Gifford  
Clinical Associate Professor of Medicine; Clinical Associate Professor of Health Services, Policy and Practice  
Holly C. Gil  
Assistant Professor of Diagnostic Imaging (Clinical)  
Beth Gilbert-Bono  
Visiting Scholar in Engineering  
James M. Gilchrist  
Adjunct Professor of Neurology  
Bruno J. Gilletti  
Professor Emeritus of Geological Sciences  
Mary Louise G. Gill  
David Benedict Professor of Classics and Philosophy  
Peter S. Gill  
Clinical Assistant Professor of Surgery  
Fizza S. Gillani  
Assistant Professor of Medicine (Research)  
Malini C. Gillen  
Clinical Assistant Professor of Pediatrics  
Peter Joseph Gillen  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Richard G. Gillerman  
Clinical Assistant Professor of Surgery (Anesthesiology)  
Kelvin D. Gillman  
Clinical Instructor in Pediatrics  
Ronald M. Gilman  
Clinical Assistant Professor of Medicine  
Michael F. Gilson  
Clinical Associate Professor of Medicine  
Athina Giovannis  
Clinical Assistant Professor of Family Medicine  
Jonathan David Gitlin  
Professor of Molecular Biology, Cell Biology and Biochemistry (MBL)  
Courtney N. Gleason  
Assistant Professor of Orthopaedics (Clinical)  
Arvin S. Glicksman  
Professor Emeritus of Medical Science  
Maurice Glicksman  
University Professor Emeritus and Professor Emeritus of Engineering and Physics  
Stephen E. Glinick  
Clinical Associate Professor of Dermatology  
Mary Gluck  
Professor of History; Professor of Judaic Studies  
Lauren A. Goddard  
Clinical Instructor in Family Medicine  
Reginald Y. Gohh  
Associate Professor of Medicine  
Ziya L. Gokaslan  
Professor of Neurosurgery  
Jessica Gokee La Rose  
Adjunct Assistant Professor of Psychiatry and Human Behavior  
Adam J. Golaski  
Visiting Lecturer in English  
Richard L. Gold  
Associate Professor of Diagnostic Imaging (Clinical)  
Amy P. Goldberg  
Associate Professor of Pediatrics (Clinical)  
Arnold C. Goldberg  
Adjunct Associate Professor of Family Medicine  
Elizabeth M. Goldberg  
Assistant Professor of Emergency Medicine  
Laura B. Goldberg  
Assistant Professor of Medicine  
Richard J. Goldberg  
Professor of Psychiatry and Human Behavior  
Alla Goldburt  
Clinical Assistant Professor of Family Medicine  
William Arthur Golden  
Clinical Assistant Professor of Medicine  
Amy Goldfarb  
Clinical Instructor in Medicine  
Eric Goldlust  
Assistant Professor of Emergency Medicine  
Debra L. Goldman  
Clinical Assistant Professor of Obstetrics and Gynecology  
Roberta E. Goldman  
Clinical Professor of Family Medicine  
Calvin Goldscheider  
Professor Emeritus of Sociology and Ungerleider Professor Emeritus of Judaic Studies
Frances K. Goldscheider  
University Professor Emerita and Professor Emerita of Sociology

Andrea Goldsmith  
Assistant Professor of Psychiatry and Human Behavior (Research)

Claude Franklin Goldsmith  
Assistant Professor of Engineering

Lisa J. Goldstein  
Clinical Assistant Professor of Pathology and Laboratory Medicine

Michael G. Goldstein  
Adjunct Professor of Psychiatry and Human Behavior

Sidney Goldstein  
Professor Emeritus of Sociology

Dragan Golijanin  
Associate Professor of Surgery (Urology)

Sanda A. Golopentia  
Professor Emerita of French Studies

Natalia Golova  
Assistant Professor of Pediatrics (Clinical)

Vladimir Golstein  
Associate Professor of Slavic Studies

Spencer Golub  
Professor of Theatre Arts and Performance Studies; Professor of Comparative Literature; Professor of Slavic Studies

Eva M. Gomez Garcia  
Lecturer in Hispanic Studies

Rujun Gong  
Associate Professor of Medicine (Research)

Katherine R. Goodman  
Professor Emerita of German Studies

Thomas G. Goodwillie  
Professor of Mathematics

Emily Goodwin  
Clinical Instructor in Surgery (Anesthesiology)

Matthew S. Goodwin  
Adjunct Assistant Professor of Psychiatry and Human Behavior

Carmen Goojha  
Clinical Instructor in Family Medicine

Dana A. Gooley  
Associate Professor of Music

Geetha Gopalakrishnan  
Associate Professor of Medicine

Alan L. Gordon  
Clinical Associate Professor of Psychiatry and Human Behavior

Catherine M. Gordon  
Adjunct Professor of Pediatrics

Deborah Gordon  
Senior Fellow in International and Public Affairs

Leslie B. Gordon  
Professor of Pediatrics (Research)

Norman M. Gordon  
Clinical Associate Professor of Neurology

Paul C. Gordon  
Associate Professor of Medicine (Clinical)

Arlene E. Gorton  
Professor Emerita of Education

George E. Goslow Jr  
Professor Emeritus of Biology

Carin A. Got  
Clinical Instructor in Surgery (Anesthesiology)

Christopher J. Got  
Assistant Professor of Orthopaedics

David M. Gottesman  
Clinical Assistant Professor of Psychiatry and Human Behavior

Alma Gottlieb  
Visiting Scholar in Anthropology

Michael Gottlieb  
Clinical Instructor in Obstetrics and Gynecology

Sigal Gottlieb  
Visiting Professor of Applied Mathematics

Brett W. Goudie  
Assistant Professor of Pediatrics (Clinical)

Philip Gould  
Nicholas Brown Professor of Oratory and Belles Lettres and Isreal J. Kapstein Professor of English

Richard Allan Gould  
Professor Emeritus of Anthropology

Alexander H. Gourevitch  
Assistant Professor of Political Science

Barbara Gourlay  
Lecturer in Language Studies

Vinay Goyal  
Clinical Assistant Professor of Family Medicine

Pedro Gozalo  
Associate Professor of Health Services, Policy and Practice (Research)

Dina Gozman  
Assistant Professor of Emergency Medicine (Clinical)

Janet Grace  
Professor of Psychiatry and Human Behavior (Clinical)

Michael Grady  
Adjunct Assistant Professor of the Practice in Education

Rod A. Gragg  
Clinical Associate Professor of Psychiatry and Human Behavior

Cornelius O. Granai  
Professor of Obstetrics and Gynecology

Enzo Granato  
Visiting Scientist in Physics

David J. Grand  
Associate Professor of Diagnostic Imaging

Susan W. Graseck  
Senior Fellow in International Studies

Stephen Richards Graubard  
Professor Emeritus of History

Stefan Gravenstein  
Adjunct Professor of Medicine; Adjunct Professor of Health Services, Policy and Practice

Theresa A. Graves  
Assistant Professor of Surgery (Clinical)

Robyn A. Gray  
Clinical Assistant Professor of Obstetrics and Gynecology

Andrew Green  
Associate Professor of Orthopaedics

James N. Green  
Carlos Manuel de Cespedes Professor of Modern Latin American History

Traci C. Green  
Associate Professor of Emergency Medicine (Research); Associate Professor of Epidemiology (Research)

Benjamin D. Greenberg  
Professor of Psychiatry and Human Behavior

David M. Greenberg  
Clinical Assistant Professor of Surgery

Paul B. Greenberg  
Professor of Surgery (Ophthalmology)
Samantha Noel Greenberg  
Clinical Instructor in Family Medicine

Samuel H. Greenblatt  
Professor Emeritus of Neurosurgery

A. Gerson Greenburg  
Professor Emeritus of Surgery

Jack Greene  
Adjunct Professor of History

Shawn Greenlee  
Visiting Associate Professor of Music

Neil R. Greenspan  
Clinical Associate Professor of Medicine

Amy R. Greenwald  
Associate Professor of Computer Science

Nicole E. Greenwood  
Clinical Assistant Professor of Family Medicine

Stephen H. Gregory  
Associate Professor of Medicine (Research)

Angela Grenander-Raufi  
Clinical Assistant Professor of Pediatrics

Mark W. Greve  
Clinical Associate Professor of Emergency Medicine

Jerome B. Grieder  
Professor Emeritus of East Asian Studies and History

Robert T. Griffith  
Clinical Associate Professor of Pediatrics

Rogers C. Griffith  
Associate Professor of Pathology and Laboratory Medicine

Iulia C. Grillo  
Clinical Assistant Professor of Medicine

Ricky Grisson  
Assistant Professor of Pathology and Laboratory Medicine

Jan C. Groblewski  
Assistant Professor of Surgery (Clinical)(Otolaryngology); Assistant Professor of Pediatrics

L. Peter Gromet  
Professor Emeritus of Geological Sciences

Nicholas Grumbach  
Clinical Assistant Professor of Medicine; Clinical Assistant Professor of Pediatrics

Philip A. Gruppuso  
Professor of Pediatrics; Professor of Medical Science; Professor of Molecular Biology, Cell Biology and Biochemistry (Research)

Yingjie Guan  
Assistant Professor of Orthopaedics (Research)

Pradeep R. Guduru  
Professor Emeritus of Geological Sciences

James R. Rice Professor of Engineering

Nicholas Guerina  
Clinical Assistant Professor of Pediatrics

Frederick G. Guggenheim  
Clinical Professor of Psychiatry and Human Behavior

Barbara J. Guillette  
Clinical Instructor in Surgery (Otolaryngology)

Thomas J. Guilmette  
Adjunct Associate Professor of Psychiatry and Human Behavior

Joan Gujarati  
Lecturer in Education

Fusun Gundogan  
Associate Professor of Pathology and Laboratory Medicine

Yan Guo  
Professor of Applied Mathematics

Gaurav Gupta  
Clinical Assistant Professor of Surgery (Ophthalmology)

Geetika Gupta  
Assistant Professor of Medicine (Clinical)

Preeti Gupta  
Assistant Professor of Neurology (Clinical); Assistant Professor of Medical Science (Clinical)

Volkan M. Gurel  
Adjunct Assistant Professor of Pathology and Laboratory Medicine

Matthew Guterl  
Professor of Africana Studies and American Studies

Kate M. Guthrie  
Associate Professor of Psychiatry and Human Behavior (Research); Associate Professor of Behavioral and Social Sciences (Research)

Tracey Guthrie  
Associate Professor of Psychiatry and Human Behavior (Clinical); Associate Professor of Medical Science (Clinical)

Joshua D. Gutman  
Clinical Assistant Professor of Family Medicine

Ned H. Gutman  
Clinical Assistant Professor of Medicine

Roee Gutman  
Assistant Professor of Biostatistics

Matthew C. Gutmann  
Professor of Anthropology

Paul D. Guyer  
Jonathan Nelson Professor of Philosophy

Johnny Guzman  
Associate Professor of Applied Mathematics

Levis M. Guzman  
Clinical Instructor in Medicine

Hyun Ju Ha  
Visiting Lecturer in East Asian Studies

Richard Alan Haas  
Associate Professor of Diagnostic Imaging (Clinical); Associate Professor of Neurosurgery (Clinical)

Carolina L. Haass-Koffler  
Assistant Professor of Psychiatry and Human Behavior (Research)

Karen Marie Haberstroh  
Adjunct Lecturer in Engineering

Fadlallah G. Habr  
Associate Professor of Medicine (Clinical)

Jason B. Hack  
Professor of Emergency Medicine

Robert B. Hackey  
Adjunct Professor of International and Public Affairs

James E. Haddow  
Professor of Pathology and Laboratory Medicine (Research)

Wendy S. Hadley  
Assistant Professor of Psychiatry and Human Behavior (Research)

Sarah E. Hagedorn  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Chi-Ming Hai  
Professor of Medical Science

Philip Haines  
Assistant Professor of Medicine

Aditi V. Hajinire  
Clinical Assistant Professor of Psychiatry and Human Behavior

Sheila A. Haley  
Assistant Professor of Molecular Biology, Cell Biology and Biochemistry (Research)
Amy R. Halt  
Clinical Assistant Professor of Psychiatry and Human Behavior

Mohamad Hamdi  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Sherine F. Hamdy  
Associate Professor of Anthropology

Yannis Hamilakis  
Joukowsky Family Professor of Archaeology and Professor of Modern Greek Studies

Geoffrey R. Hamilton  
Clinical Assistant Professor of Medicine

Teresita Hamilton  
Clinical Assistant Professor of Family Medicine

Francoise N. Hamlin  
Associate Professor of Africana Studies and History

Brittany Star Hampton  
Associate Professor of Obstetrics and Gynecology; Associate Professor of Medical Science

Sajeev Handa  
Clinical Assistant Professor of Medicine; Clinical Assistant Professor of Neurology

Johanna M. Hanink  
Associate Professor of Classics

L. Corey Hanley  
Assistant Professor of Pathology and Laboratory Medicine (Clinical)

Roger T. Hanlon  
Professor of Ecology and Evolutionary Biology (MBL)

Cynthia M. Hanna  
Clinical Assistant Professor of Obstetrics and Gynecology

Katrine Hansen  
Associate Professor of Pathology and Laboratory Medicine

Edward Hardy  
Visiting Lecturer in English

Erica J. Hardy  
Assistant Professor of Medicine (Clinical)

Vincent M. Harisaran  
Assistant Professor of Surgery (Clinical)(Urology)

I. M. Harjito  
Teaching Associate in Music

Karen M. Harnett  
Adjunct Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology

Thomas J. Haronian  
Clinical Associate Professor of Emergency Medicine

Daniel Harp  
Teaching Associate in Music

James S. Harper  
Associate Professor of Pathology and Laboratory Medicine (Clinical)

Colin Harrington  
Professor of Psychiatry and Human Behavior (Clinical); Professor of Medical Science (Clinical); Professor of Medicine (Clinical)

David T. Harrington  
Professor of Surgery

Elizabeth O. Harrington  
Professor of Medicine (Research)

Bruno Harris  
Professor Emeritus of Mathematics

Timothy J. G. Harris  
Munro, Goodwin, Wilkinson Professor of European History

Abigail D. Harrison  
Assistant Professor of Behavioral and Social Sciences (Research)

Emily C. Harrison  
Clinical Assistant Professor of Family Medicine

Matthew T. Harrison  
Associate Professor of Applied Mathematics

Terry E. Harrison-Goldman  
Clinical Assistant Professor of Psychiatry and Human Behavior

Pamela A. Harrop  
Clinical Assistant Professor of Medicine

Jason D. Harry  
Associate Professor of the Practice in Engineering

Anne C. Hart  
Professor of Neuroscience

Jesse Hart  
Assistant Professor of Pathology and Laboratory Medicine

Jo-Anne Hart  
Adjunct Professor of International and Public Affairs

Katherine Hart  
Clinical Instructor in Pediatrics

Stephanie Hartselle  
Clinical Assistant Professor of Psychiatry and Human Behavior

Susan Ashbrook Harvey  
Willard Prescott and Annie McClelland Smith Professor of History and Religion

Joseph I. Harwell  
Clinical Associate Professor of Medicine; Clinical Associate Professor of Pediatrics

Sadaf Hashmi  
Clinical Assistant Professor of Psychiatry and Human Behavior

Brendan E. Hassett  
Professor of Mathematics

Justine Hastings  
Professor of Economics and International and Public Affairs

Meredith K. Hastings  
Associate Professor of Environment and Society and Earth, Environmental and Planetary Sciences

Beverly Haviland  
Senior Lecturer in American Studies

Katheleen Hawes  
Adjunct Assistant Professor of Pediatrics

Edward Hawrot  
Alva O. Way University Professor of Medical Science

Tawfik F. Hawwa  
Clinical Associate Professor of Obstetrics and Gynecology

Roman A. Hayda  
Associate Professor of Orthopaedics

Brian C. Hayden  
Adjunct Professor of Cognitive, Linguistic and Psychological Sciences

Alexander J. Haynes  
Lecturer in Theatre Arts and Performance Studies

Kenneth Haynes  
Professor of Comparative Literature; Professor of Classics

Anthony Richard Hayward  
Adjunct Professor of Pediatrics

Barrett Hazeltine  
Professor Emeritus of Engineering

Chuan Hua He  
Assistant Professor of Molecular Microbiology and Immunology (Research)

Jimian He  
Adjunct Professor of Medicine

Jingtong He  
Visiting Scholar in Economics
Mai He
Assistant Professor of Pathology and Laboratory Medicine

James W. Head
Louis and Elizabeth Scherck Distinguished Professor of the Geological Sciences

Eugene H. Healey
Clinical Assistant Professor Emeritus of Surgery

Terrance T. Healey
Assistant Professor of Diagnostic Imaging

Dwight B. Heath
Professor Emeritus of Anthropology

Richard Heck
Professor of Philosophy

Daiithi J. Heffernan
Assistant Professor of Surgery

Robert C. Heffron
Clinical Assistant Professor of Family Medicine

William C. Heindel
Professor of Cognitive, Linguistic and Psychological Sciences

Ulrich Heintz
Professor of Physics

Dwayne Heitmiller
Clinical Assistant Professor of Psychiatry and Human Behavior

Stephen L. Helfand
Professor of Biology

Patrick G. Heller
Lyn Crost Professor of Social Sciences

David L. Henann
Assistant Professor of Engineering

J. Vernon Henderson
Professor Emeritus of Population Studies

Lara A. Henderson
Adjunct Instructor in Visual Art

Karen Henninger
Teaching Associate in Music

Paget Henry
Professor of Africana Studies and Sociology

Christine V. Herbert
Clinical Assistant Professor of Medicine

Timothy D. Herbert
Henry L. Doherty Professor of Oceanography

David Herec
Clinical Assistant Professor of Medicine

Thaddeus W. Herliczek
Assistant Professor of Diagnostic Imaging

Maurice P. Herlihy
An Wang Professor of Computer Science

Brendan Hermaly
Visiting Scientist in Earth, Environmental and Planetary Sciences

Arnold Herman
Clinical Associate Professor of Surgery

Debra S. Herman
Clinical Assistant Professor of Psychiatry and Human Behavior

John F. Hermance
Professor Emeritus of Geological Sciences

Lynn Hernandez
Assistant Professor of Behavioral and Social Sciences (Research); Assistant Professor of Psychiatry and Human Behavior (Research)

Jennifer Herren
Clinical Assistant Professor of Psychiatry and Human Behavior

Melvin Hershkovitz
Clinical Assistant Professor Emeritus of Medicine

Rachel Herz
Adjunct Assistant Professor of Psychiatry and Human Behavior

Suzanne R. Herzberg
Clinical Assistant Professor of Family Medicine

Michael Herzlinger
Assistant Professor of Pediatrics (Clinical)

Kathleen M. Hess
Senior Lecturer in Chemistry

Lynn Hess
Clinical Assistant Professor of Psychiatry and Human Behavior

Paul C. Hess
Professor Emeritus of Geological Sciences

Timothy C. Hett
Lecturer in Theatre Arts and Performance Studies

Linda Heuman
Visiting Scholar in Religious Studies

Peter Heywood
Professor of Biology

Renee Hickey
Assistant Professor of Neurology (Clinical)

Lauri A. Hicks
Adjunct Assistant Professor of Medicine

H. William Higgins
Assistant Professor of Dermatology

Ellen B. Hight
Clinical Assistant Professor of Family Medicine

Nathaniel G. Hilger
Assistant Professor of Economics

Christopher S. Hill
William Herbert Perry Faunce Professor of Philosophy

Ross Hilliard
Assistant Professor of Medicine (Clinical)

Mary M. Hillstrom
Assistant Professor of Diagnostic Imaging (Clinical)

Nadine T. Himelfarb
Assistant Professor of Emergency Medicine (Clinical)

Susan Himes
Clinical Assistant Professor of Psychiatry and Human Behavior

Sachiko Hiramatsu
Visiting Lecturer in East Asian Studies

Howard S. Hirsch
Clinical Assistant Professor of Orthopaedics

Daniel A. Hirschman
Assistant Professor of Sociology

Laurence M. Hirshberg
Clinical Assistant Professor of Psychiatry and Human Behavior

Greg Hirth
Professor of Earth, Environmental and Planetary Sciences

Kathleen C. Hittner
Clinical Professor Emerita of Surgery (Anesthesiology)

Douglas C. Hixon
Professor Emeritus of Pathology and Laboratory Medicine (Research) and Professor Emeritus of Medicine (Research)

Lynn T. Ho
Clinical Assistant Professor of Family Medicine

John Hobbie
Professor of Ecology and Evolutionary Biology (MBL)

Leigh R. Hochberg
Professor of Engineering

Laurie Hoffman
Clinical Assistant Professor of Pediatrics
Diane Hoffman-Kim  
Associate Professor of Medical Science; Associate Professor of Engineering

Jeffrey Hoffstein  
Professor of Mathematics

Robert J. Hofmann  
Clinical Assistant Professor of Surgery (Ophthalmology)

Philip Hofmeister  
Visiting Professor of Cognitive, Linguistic and Psychological Sciences

Dawn B. Hogan  
Assistant Professor of Family Medicine (Clinical)

Dennis Hogan  
Robert E. Turner Distinguished Professor of Population Studies, Emeritus

Erin Hogan  
Clinical Assistant Professor of Medicine

Joseph W. Hogan  
Professor of Biostatistics

Leigh Anne Hohlstein  
Clinical Assistant Professor of Psychiatry and Human Behavior

Horacio B. Hojman  
Clinical Associate Professor of Psychiatry and Human Behavior

Jamie Hollenbeck  
Clinical Assistant Professor of Psychiatry and Human Behavior

Karen A. Holler  
Clinical Associate Professor of Psychiatry and Human Behavior

Peter Amberg Hollmann  
Clinical Assistant Professor of Family Medicine

Marida C. Hollos  
Professor Emerita of Anthropology

R. Ross Holloway  
Elisha Benjamin Andrews Professor Emeritus and Professor Emeritus of Central Mediterranean Archaeology

Justin A. Holmer  
Associate Professor of Mathematics

Andrew W. Holowinsky  
Associate Professor Emeritus of Molecular Biology, Cell Biology and Biochemistry

Darren Holowka  
Clinical Assistant Professor of Psychiatry and Human Behavior

Jesse M. Holstein  
Teaching Associate in Music

Bonnie H. Honig  
Nancy Duke Lewis Professor of Modern Culture and Media and Political Science

Cathleen S. Hood  
Clinical Assistant Professor of Family Medicine

Melinda Hooton  
Associate Professor of Medicine (Clinical)

Elizabeth M. Hoover  
Manning Assistant Professor of American Studies

Philip Terrence Hopmann  
Professor Emeritus of Political Science

Frederic G. Hoppin Jr  
Professor Emeritus of Physiology and Professor Emeritus of Medicine

John F. X. Horan  
Clinical Assistant Professor of Family Medicine

Marko Horb  
Associate Professor of Molecular Biology, Cell Biology and Biochemistry (MBL)

Andrew R. Hordes  
Clinical Associate Professor of Medicine

Ryo Hori  
Visiting Scholar in Economics

Jeffrey D. Horowitz  
Clinical Instructor in Medicine

Karyn J. Horowitz  
Clinical Associate Professor of Psychiatry and Human Behavior

Diana M. Horrigan  
Lecturer in Molecular Pharmacology, Physiology and Biotechnology

Harold Milton Horwitz  
Clinical Associate Professor of Medicine

Saori Hoshi  
Visiting Lecturer in East Asian Studies

Jennifer J. Hosmer  
Clinical Assistant Professor of Obstetrics and Gynecology

Adriana M. Hosu  
Clinical Instructor in Medicine

Christopher D. Houck  
Associate Professor of Psychiatry and Human Behavior (Research); Associate Professor of Pediatrics (Research)

Patricia L. Houlik  
Adjunct Lecturer in Education

E. Andres Houseman  
Adjunct Associate Professor of Epidemiology

Stephen D. Houston  
Dupee Family Professor of Social Science

Joanna E. Howard  
Assistant Professor of the Practice of Literary Arts

Margaret M. Howard  
Professor of Psychiatry and Human Behavior (Clinical); Professor of Medicine (Clinical)

Chanelle J. Howe  
Assistant Professor of Epidemiology

Peter W. Howitt  
Professor Emeritus of Economics

James P. Hoye  
Clinical Assistant Professor of Family Medicine

Kelly L. Hoye  
Clinical Assistant Professor of Family Medicine

Din-Yu Hsieh  
Professor Emeritus of Applied Mathematics

Lung-Hua Hu  
Senior Lecturer in East Asian Studies

Susie Lee Hu  
Associate Professor of Medicine (Clinical); Associate Professor of Medical Science (Clinical)

Ying Huai  
Visiting Scholar in Engineering

Austin Huang  
Adjunct Assistant Professor of Medicine

Chiung-Kuei Huang  
Assistant Professor of Medicine (Research)

Jeff Huang  
Assistant Professor of Computer Science

Yen-Tsing Huang  
Assistant Professor of Biostatistics; Assistant Professor of Epidemiology

Yongsong Huang  
Professor of Earth, Environmental and Planetary Sciences

Jia-Lin Huang Hsieh  
Visiting Lecturer in East Asian Studies

Christian Huber  
Assistant Professor of Earth, Environmental and Planetary Sciences
Robert H. Janigian  
Clinical Assistant Professor of Surgery (Ophthalmology)

Christine Marie Janis  
Professor of Biology

Matthew D. Jankowich  
Assistant Professor of Medicine

John H. Jannotti  
Adjunct Assistant Professor of Computer Science

Sandra Japuntich  
Assistant Professor of Medicine (Research)

Beata Jarosiewicz  
Assistant Professor of Neuroscience (Research)

Katherine Alexandra Jarrell  
Clinical Instructor in Family Medicine

Alexander Jaworski  
Assistant Professor of Neuroscience

Bryan S. Jay  
Clinical Assistant Professor of Diagnostic Imaging

Gregory D. Jay  
Professor of Emergency Medicine; Professor of Medicine; Professor of Engineering (Research)

Robert Ravenelle Jay  
Professor Emeritus of Anthropology

Mahesh V. Jayaraman  
Associate Professor of Diagnostic Imaging; Associate Professor of Neurology; Associate Professor of Neurosurgery

Chathuraka T. Jayasuriya  
Assistant Professor of Orthopaedics (Research)

Tarek Jazaerly  
Clinical Assistant Professor of Pathology and Laboratory Medicine

Thomas W. Jean  
Assistant Professor of Medicine (Clinical)

Julie A. Jefferson  
Assistant Professor of the Practice in Epidemiology

Elissa Jelalian  
Associate Professor of Psychiatry and Human Behavior; Associate Professor of Pediatrics

Nathaniel J. Jelinek  
Clinical Assistant Professor of Dermatology

Derek Randall Jenkins  
Assistant Professor of Orthopaedics

Melissa A. Jenkins  
Clinical Assistant Professor of Psychiatry and Human Behavior

Ernestine G. Jennings  
Assistant Professor of Psychiatry and Human Behavior (Research)

Kathyrne Jennings  
Teaching Associate in Music

Ilse M. Jenouri  
Clinical Associate Professor of Emergency Medicine

Carol J. Jensen  
Clinical Assistant Professor of Psychiatry and Human Behavior

Euy-Myoung Jeong  
Assistant Professor of Medicine (Research)

Jennifer Jeremiah  
Associate Professor of Medicine (Clinical)

Beth A. Jerseki  
Assistant Professor of Psychiatry and Human Behavior (Research)

Antal Jevicki  
Professor of Physics

Sharon Mullane Jezard  
Clinical Assistant Professor of Family Medicine

Bong Sook Jhun  
Instructor in Medicine (Research)

Yongwen Jiang  
Assistant Professor of the Practice in Epidemiology

Tong Jiao  
Senior Research Associate in Engineering

Gaurav Jindal  
Assistant Professor of Diagnostic Imaging (Clinical)

Linda Jiorle-Nagy  
Teaching Associate in Music

Louis Frederick Jodry  
Senior Lecturer in Music

Gerwald Jogl  
Associate Professor of Biology

Conrad E. Johanson  
Professor Emeritus of Neurosurgery

Alexandria V. Johnson  
Adjunct Assistant Professor of Earth, Environmental and Planetary Sciences (Research)

Benjamin Johnson  
Clinical Assistant Professor of Psychiatry and Human Behavior

Brandon C. Johnson  
Assistant Professor of Earth, Environmental and Planetary Sciences

Christine Johnson  
Clinical Assistant Professor of Family Medicine

Eileen G. Johnson  
Clinical Assistant Professor of Psychiatry and Human Behavior

Gary D. Johnson  
Associate Professor of Neurology (Clinical)

Jennifer E. Johnson  
Assistant Professor of History; Adjunct Associate Professor of Psychiatry and Human Behavior

Lenworth N. Johnson  
Professor of Surgery (Ophthalmology)

Mark A. Johnson  
Associate Professor of Biology

Mathew Johnson  
Professor of the Practice in Sociology

Michael P. Johnson  
Clinical Assistant Professor of Medicine

Robert G. M. Johnston  
Clinical Associate Professor of Psychiatry and Human Behavior

Ferdinand Jones  
Professor Emeritus of Psychology

Peter J. A. Jones  
Visiting Scholar in Gender Studies

Rich Jones  
Associate Professor of Psychiatry and Human Behavior; Associate Professor of Neurology

Stephanie R. Jones  
Associate Professor of Neuroscience (Research)

Thomas O. Jones  
Professor of the Practice in Theatre Arts and Performance Studies

Hannes Jonsson  
Adjunct Professor of Chemistry

David Josephson  
Professor Emeritus of Music

Djuro Josic  
Adjunct Professor of Medicine (Research)

Martha S. Joukowsky  
Professor Emerita of Archaeology and the Ancient World
Donald R. Joyce  
Clinical Assistant Professor of Radiation Oncology

Lynne Joyitch  
Professor of Modern Culture and Media

Anmari Jurczak  
Clinical Assistant Professor of Obstetrics and Gynecology

Amr Kader  
Clinical Instructor in Obstetrics and Gynecology

Pelin Kadercan  
Visiting Scholar in Middle East Studies

David Kadmon  
Clinical Assistant Professor of Family Medicine

Carl Kaestle  
University Professor Emeritus of Education, History and Public Policy

Samuel Kagan  
Clinical Assistant Professor of Family Medicine

Christopher W. Kahler  
Professor of Behavioral and Social Sciences

Charles B. Kahn  
Clinical Professor Emeritus of Medicine

Coppelia Kahn  
Professor Emerita of English

Jeremy A. Kahn  
Professor of Mathematics

Sewell I. Kahn  
Clinical Assistant Professor Emeritus of Medicine

Eva Kallin  
Associate Professor Emerita of Mathematics

Brett D. Kalmowitz  
Clinical Assistant Professor of Medicine

Amber Kalenstein  
Clinical Assistant Professor of Psychiatry and Human Behavior

Aziza Azadali Kamani  
Clinical Assistant Professor of Medicine

Seny Kamara  
Associate Professor of Computer Science

Achyut Kamat  
Clinical Associate Professor of Emergency Medicine

Shuba Kamath  
Assistant Professor of Pediatrics (Clinical)

Agnes B. Kane  
Professor of Medical Science

Joshua S. Kane  
Clinical Assistant Professor of Psychiatry and Human Behavior

Min-Jong Kang  
Adjunct Assistant Professor of Molecular Microbiology and Immunology

Rami Kantor  
Associate Professor of Medicine

Barbara T. Kao  
Clinical Assistant Professor of Pediatrics

Hung-Teh Kao  
Associate Professor of Psychiatry and Human Behavior (Research)

David Kaplan  
Clinical Assistant Professor of Emergency Medicine

Stephen R. Kaplan  
Clinical Professor Emeritus of Medicine

Nicolaos Kapouleas  
Professor of Mathematics

Peter Karczmar  
Clinical Assistant Professor of Medicine

Nad Karim  
Assistant Professor of Emergency Medicine

Kabita Karki  
Clinical Instructor in Medicine

Sture Karl Fredrik Karlsson  
Professor Emeritus of Engineering

George E. Karniadakis  
Charles Pitts Robinson and John Palmer Barstow Professor of Applied Mathematics

Caroline Anne Karp  
Senior Lecturer in Environmental Studies

Vania Kasper  
Assistant Professor of Pediatrics (Clinical)

May M. Kassem  
Assistant Professor of Diagnostic Imaging (Clinical)

Julie Katarincic  
Associate Professor of Orthopaedics

Robert W. Kates  
University Professor Emeritus

Devin Tetsuo Kato  
Assistant Professor of Emergency Medicine (Clinical)

Daniel J. Katz  
Lecturer in Mathematics

Emily R. Katz  
Assistant Professor of Psychiatry and Human Behavior (Clinical); Assistant Professor of Pediatrics (Clinical)

Tamar Katz  
Associate Professor of English; Associate Professor of Urban Studies

Gary M. Katzman  
Clinical Assistant Professor of Medicine

Julie Kauer  
Professor of Medical Science; Professor of Neuroscience

Donald G. Kaufman  
Clinical Assistant Professor Emeritus of Medicine

Joel M. Kaufman  
Clinical Professor of Neurology

Matthew Kaufman  
Visiting Scientist in Engineering

Craig Kaufmann  
Clinical Assistant Professor of Psychiatry and Human Behavior

Kara Kaun  
Robert and Nancy Carney Assistant Professor of Neuroscience

John C. Kawakoa  
Assistant Professor of Dermatology

William E. Kaye  
Professor Emeritus of Surgery and Professor Emeritus of Medicine

William Keach  
Professor of English

Alexis Kearney  
Assistant Professor of Emergency Medicine (Clinical)

Edward Keating  
Clinical Associate Professor of Medicine; Clinical Associate Professor of Medical Science

Adrienne J. Keene  
Assistant Professor of American Studies

W. Scott Kelgwin  
Clinical Assistant Professor of Family Medicine

Akilah J. Keita  
Manning Assistant Professor of Behavioral and Social Science
Gabor I. Keitner  
Professor of Psychiatry and Human Behavior

David Keller  
Adjunct Associate Professor of Family Medicine

Martin B. Keller  
Professor Emeritus of Psychiatry and Human Behavior

James R. Kellner  
Peggy and Henry D. Sharpe Assistant Professor of Environmental Studies

Colleen R. Kelly  
Assistant Professor of Medicine

Megan M. Kelly  
Adjunct Assistant Professor of Psychiatry and Human Behavior

Susan M. Kelly  
Clinical Associate Professor of Psychiatry and Human Behavior

Karl T. Kelsey  
Professor of Epidemiology; Professor of Pathology and Laboratory Medicine

Vasileios Kemerlis  
Assistant Professor of Computer Science

Kathleen Kemp  
Assistant Professor of Psychiatry and Human Behavior (Research)

Christine A. Kennedy  
Clinical Assistant Professor of Family Medicine

Michael D. Kennedy  
Professor of Sociology

Richard W. Kenyon  
William R. Kenan, Jr. University Professor of Mathematics

Karen L. Kerman  
Associate Professor of Neurology (Clinical); Associate Professor of Pediatrics (Clinical)

Arthur B. Kern  
Clinical Professor Emeritus of Dermatology

Eric Scott Kerns  
Assistant Professor of Medicine (Clinical)

Catherine Kerr  
Assistant Professor of Family Medicine (Research); Assistant Professor of Medicine (Research)

David I. Kertzer  
Professor of Pediatrics

Paul R. Dupee, Jr. University Professor of Social Science

Youenn Yves J. Kervennic  
Senior Lecturer in French Studies

Martin J. Kerzer  
Clinical Assistant Professor of Family Medicine

Haneesh Kesari  
Assistant Professor of Engineering

Noubar Kessarian  
Associate Professor of Pathology and Laboratory Medicine (Clinical)

Anita Susan Kestin  
Clinical Assistant Professor of Family Medicine

Martin Keszler  
Professor of Pediatrics

Mary Keszler  
Assistant Professor of Pediatrics (Clinical)

Nancy Khalek  
Associate Professor of Religious Studies

Hanan I. Khalil  
Assistant Professor of Diagnostic Imaging (Clinical)

Jacques Khalip  
Associate Professor of English

Unab I. Khan  
Associate Professor of Pediatrics (Clinical)

Pervez A. Khatib  
Clinical Assistant Professor of Family Medicine

Razib Khourd  
Clinical Assistant Professor of Medicine

Hussain Khawaja  
Assistant Professor of Medicine (Clinical)

Elias Khawam  
Clinical Instructor in Medicine

Tareq Kheirbek  
Assistant Professor of Surgery (Clinical)

Nabil Y. Khoury  
Professor Emeritus of Obstetrics and Gynecology

Humera Khurshid  
Assistant Professor of Medicine (Clinical)

Nancy E. Kidd  
Teaching Associate in Music

Stephen E. Kidd  
Robert Gale Noyes Assistant Professor of Classics

Douglas P. Kiel  
Adjunct Professor of Epidemiology

Louise Sadler Kiessling  
Professor Emerita of Pediatrics and Professor Emerita of Family Medicine

Daniel Kim  
Associate Professor of English and American Studies

Eunsook Kim  
Associate Professor of Chemistry

Hyun K. Kim  
Assistant Professor of the Practice in Epidemiology

Jaegwon Kim  
William Herbert Perry Faunce Professor of Philosophy Emeritus

Jin Ho Kim  
Senior Research Associate in Engineering

Kerri Kim  
Clinical Assistant Professor of Psychiatry and Human Behavior

Kyu Kwang Kim  
Assistant Professor of Obstetrics and Gynecology (Research)

Kyung-Suk Kim  
Professor of Engineering

Miriam Kim  
Associate Professor of Medicine (Research)

Seick Kim  
Visiting Scholar in Applied Mathematics

Seunghyun Kim  
Associate Professor of Engineering (Research)

Benjamin B. Kimia  
Professor of Engineering

Boyd P. King  
Clinical Associate Professor Emeritus of Medicine

Dawn King  
Lecturer in Environment and Society

Angus I. Kingdon  
Barrett Hazeltine University Professor of Entrepreneurship and Organizational Studies

Timothy Kinsella  
Professor of Radiation Oncology

Stephen A. Kinzer  
Senior Fellow in International and Public Affairs

Elizabeth D. Kirk  
Professor Emerita of English

Malcolm M. Kirk  
Clinical Assistant Professor of Medicine
Jennifer E. Kittler  
Clinical Assistant Professor of Psychiatry and Human Behavior

David L. Kitzes  
Clinical Associate Professor of Medicine

Dale Keith Klatzker  
Clinical Assistant Professor of Psychiatry and Human Behavior

Christopher Ryan Klaus  
Clinical Assistant Professor of Family Medicine

Erika Klein  
Clinical Assistant Professor of Obstetrics and Gynecology

Michael D. Klein  
Clinical Assistant Professor of Family Medicine

Philip Klein  
Professor of Computer Science

Marc Patrick Brag Klemp  
Visiting Assistant Professor of Population Studies

Anna K. Klepikov  
Visiting Lecturer in Theatre Arts and Performance Studies

Julius William Kling  
Professor Emeritus of Psychology

Peta Klinge  
Professor of Neurosurgery

James R. Klinger  
Professor of Medicine

Adam Klipfel  
Clinical Assistant Professor of Surgery

Cindy E. Klipfel  
Clinical Assistant Professor of Pediatrics

Margaret G. Klitze  
Clinical Assistant Professor of Psychiatry and Human Behavior

Caroline J. Klivans  
Lecturer in Applied Mathematics and Computer Science

Eva Klonowski  
Clinical Assistant Professor of Family Medicine

Thomas W. Kniesche  
Associate Professor of German Studies

Brian G. Knight  
Professor of Economics

George B. Knight  
Adjunct Assistant Professor of Pathology and Laboratory Medicine

Robert E. Knisley  
Clinical Associate Professor Emeritus of Medicine

Paul M. Knopf  
Charles A. and Helen B. Stuart Professor Emeritus of Medical Science

Valerie S. Knopik  
Professor of Psychiatry and Human Behavior (Research); Professor of Behavioral and Social Sciences (Research)

Lee Kobayashi  
Associate Professor of Emergency Medicine

Gertrud M. Koch  
Visiting Professor of Modern Culture and Media

Khalid I. Kodi  
Adjunct Instructor in Visual Art

Susan L. Koelliker  
Assistant Professor of Diagnostic Imaging (Clinical)

Robert Kohn  
Professor of Psychiatry and Human Behavior

Daphne Koinis-Mitchell  
Associate Professor of Psychiatry and Human Behavior (Research); Associate Professor of Pediatrics (Research)

Erna M. Kojic  
Associate Professor of Medicine

Aravind Kokkirala  
Instructor in Medicine (Clinical)

Tolga N. Kokturk  
Clinical Assistant Professor of Obstetrics and Gynecology

Uma Kolli  
Clinical Assistant Professor of Family Medicine

R. James Kones  
Clinical Assistant Professor of Surgery

Jeff G. Konin  
Adjunct Professor of Family Medicine

Venkata Rajesh Konjeti  
Clinical Instructor in Medicine

David Konstan  
John Rowe Workman Distinguished Professor Emeritus of Classics and Professor Emeritus of Comparative Literature

Patrick Koo  
Assistant Professor of Medicine (Clinical)

Matthew A. Kopp  
Clinical Associate Professor of Emergency Medicine

Nicole Korbly  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Gideon Koren  
Associate Professor of Medicine

Kristie J. Koski  
Adjunct Assistant Professor of Chemistry

Stefan G. Kostadinov  
Assistant Professor of Pathology and Laboratory Medicine (Clinical)

J. Michael Kosterlitz  
Harrison E. Farnsworth Professor of Physics

Renu O. Kothari  
Clinical Assistant Professor of Psychiatry and Human Behavior

Ashok K. Kouli  
Senior Lecturer in Language Studies

Savvas M. Kouassiappas  
Associate Professor of Physics

Nicola M. Kouttab  
Adjunct Associate Professor of Pathology and Laboratory Medicine (Research)

Liliya Koyfman  
Clinical Assistant Professor of Psychiatry and Human Behavior

Altug Koymen  
Clinical Assistant Professor of Obstetrics and Gynecology

Margaret K. Kozel  
Assistant Professor of Pediatrics (Clinical)

Ross S. Kraemer  
Professor Emerita of Religious Studies

Matthew A. Kraft  
Assistant Professor of Education; Assistant Professor of Economics

Thomas A. Krahn  
Clinical Assistant Professor of Medicine

Naomi R. Kramer  
Clinical Assistant Professor of Medicine

Peter D. Kramer  
Clinical Professor Emeritus of Psychiatry and Human Behavior

Tim Klas Kraska  
Assistant Professor of Computer Science

Sharon R. Krause  
Royce Family Professor of Teaching Excellence

Virginia A. Krause  
Professor of French Studies
Shepard Krech III  
Professor Emeritus of Anthropology

Jill A. Kreiling  
Assistant Professor of Molecular Biology, Cell Biology and Biochemistry (Research)

Andrea Kretzschmar  
Clinical Assistant Professor of Psychiatry and Human Behavior

Shriram Krishnamurthi  
Professor of Computer Science

Kay Dian Kriz  
Professor Emerita of History of Art and Architecture

Peter K. Kriz  
Assistant Professor of Orthopaedics (Clinical); Assistant Professor of Pediatrics (Clinical)

George Kroumpouzos  
Clinical Associate Professor of Dermatology

Joachim Israel Krueger  
Professor of Cognitive, Linguistic and Psychological Sciences

Magdalena Krzystolik  
Adjunct Associate Professor of Surgery (Ophthalmology)

Jill S. Kuhnheim  
Visiting Professor of Hispanic Studies

Indrek Kulaots  
Lecturer in Engineering

Sharvan K. Kumar  
Professor of Engineering

Benjamin S. Kunsberg  
Prager Assistant Professor of Applied Mathematics

Caroline C. Kuo  
Assistant Professor of Behavioral and Social Sciences (Research)

Sylvia Kuo  
Lecturer in Economics

Marina Kuperman-Beade  
Clinical Assistant Professor of Dermatology

Arlet G. Kurkchubasche  
Professor of Surgery (Clinical); Professor of Pediatrics (Clinical)

Jayne A. Kurkjian-Siegel  
Clinical Assistant Professor of Psychiatry and Human Behavior

Kathleen Mary Kurowski  
Assistant Professor of Cognitive, Linguistic and Psychological Sciences (Research)

Jonathan David Kurtis  
Professor of Pathology and Laboratory Medicine

Harold J. Kushner  
Professor Emeritus of Applied Mathematics and Engineering and L. Herbert Ballou University Professor Emeritus

James A. Kuzy  
Joukowsky Family Assistant Professor of English

Daniel K. Kwan  
Clinical Assistant Professor of Surgery

Awewura Kwara  
Associate Professor of Medicine

Rosalind E. Ladd  
Visiting Scholar in Philosophy

John V. Ladetto  
Clinical Assistant Professor of Medicine

Donna M. Lafontaine  
Clinical Associate Professor of Obstetrics and Gynecology

W. Curt Lafrance  
Associate Professor of Psychiatry and Human Behavior; Associate Professor of Neurology

Linda L. LaGasse  
Associate Professor of Pediatrics (Research); Associate Professor of Psychiatry and Human Behavior (Research)

David H. Laidlaw  
Professor of Computer Science

Andrew Laird  
John Rowe Workman Distinguished Professor of Classics and Humanities

Farah L. Laibwala  
Research Associate in Engineering

Chandan N. Lakhiani  
Assistant Professor of Pediatrics (Clinical)

Ashley Lakin  
Assistant Professor of Family Medicine (Clinical)

Edward V. Lally  
Professor of Medicine

Kate Marie Lally  
Assistant Professor of Medicine (Clinical)

Michelle A. Lally  
Associate Professor of Medicine; Associate Professor of Health Services, Policy and Practice

Wai Yeung Lam  
Tamarkin Assistant Professor of Mathematics

Alexis Nicole Lamb  
Clinical Assistant Professor of Psychiatry and Human Behavior

Jennifer L. Lambe  
Assistant Professor of History

Robert H. Lambe  
Clinical Assistant Professor of Family Medicine

Jennifer F. Lambert  
Clinical Assistant Professor of Psychiatry and Human Behavior

Robert E. Lambiase  
Associate Professor of Diagnostic Imaging

Jon K. Lambrecht  
Clinical Assistant Professor of Medicine

Chad E. Lamendola  
Clinical Assistant Professor of Family Medicine

Anthony Lancaster  
Herbert H. Goldberger Professor Emeritus of Economics

Jane L. Lancaster  
Visiting Scholar in History

Carol Landau  
Clinical Professor of Psychiatry and Human Behavior; Clinical Professor of Medicine

Lesley Landau  
Clinical Assistant Professor of Medical Science

Eileen F. Landay  
Visiting Scholar in Education

Alan Landman  
Associate Professor of Mathematics

George P. Landow  
Professor Emeritus of English

Shoshana M. Landow  
Clinical Assistant Professor of Dermatology

Greg Landsberg  
Thomas J. Watson, Sr. Professor of Science

Arthur Landy  
University Professor Emeritus of Medical Science

Thomas P. Lang  
Clinical Assistant Professor of Surgery (Ophthalmology)

Elizabeth Lange  
Clinical Associate Professor of Pediatrics
Thilo Sascha Lange  
Adjunct Assistant Professor of Molecular Biology, Cell Biology and Biochemistry (Research)  
Robert E. Lanou  
Professor Emeritus of Physics  
Candace S. Lapidus  
Assistant Professor of Medical Science (Clinical)  
Louis R. Lapierre  
Assistant Professor of Molecular Biology, Cell Biology and Biochemistry  
Kerry L. Laplante  
Adjunct Professor of Medicine  
Rafael La Porta  
Visiting Professor of Economics  
Elizabeth A. Lapoosa  
Clinical Associate Professor of Pathology and Laboratory Medicine  
Abbot Laptook  
Professor of Pediatrics  
Rebecca Laptook  
Assistant Professor of Psychiatry and Human Behavior (Clinical); Assistant Professor of Pediatrics (Clinical)  
Jerome M. Larkin  
Associate Professor of Medicine (Clinical)  
W. D. Lamore  
W. Duncan MacMillan Family Professor of the Humanities  
Erica N. Larschan  
Richard and Edna Salomon Assistant Professor of Molecular Biology, Cell Biology and Biochemistry  
Lawrence E. Larson  
Professor of Engineering  
Lucia Larson  
Associate Professor of Medicine  
Margaret Larkey  
Adjunct Associate Professor of Medicine  
Syed A. Latif  
Professor of Pathology and Laboratory Medicine (Clinical)  
David Lattimore  
Professor Emeritus of East Asian Studies  
Joseph Lau  
Professor Emeritus of Health Services, Policy and Practice  
Scott D. Lauermann  
Clinical Assistant Professor of Family Medicine  
Joseph R. Lauro  
Assistant Professor of Emergency Medicine (Clinical)  
Nabil M. Lawandy  
Professor of Engineering (Research)  
Ronald G. Lawler  
Professor Emeritus of Chemistry  
Alexis Lawrence  
Assistant Professor of Emergency Medicine (Clinical)  
Charles Lawrence  
Professor of Applied Mathematics  
Kira T. Lawrence  
Adjunct Associate Professor of Earth, Environmental and Planetary Sciences  
W. Dwayne Lawrence  
Professor of Pathology and Laboratory Medicine  
Jodi L. Layton  
Assistant Professor of Medicine  
Bruce A. Lazarus  
Adjunct Assistant Professor of Family Medicine  
Elizabeth Lazarus  
Associate Professor of Diagnostic Imaging  
Tricia M. Leahey  
Adjunct Assistant Professor of Psychiatry and Human Behavior  
Brian W. LeBlanc  
Instructor in Neurosurgery (Research)  
Beatrice E. Lechner  
Assistant Professor of Pediatrics  
Benjamin Lederer  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Athena Ka Wing Lee  
Assistant Professor of Psychiatry and Human Behavior (Clinical)  
Catherine Lee  
Assistant Professor of Psychiatry and Human Behavior (Clinical)  
Changmin Lee  
Assistant Professor of Molecular Microbiology and Immunology (Research)  
Chun Geun Lee  
Professor of Molecular Microbiology and Immunology (Research)  
George Lee  
Clinical Assistant Professor of Medicine  
Han-Kyu Lee  
Assistant Professor of Neurology (Research)  
Hye Seung Lee  
Visiting Lecturer in East Asian Studies  
Irene M. Lee  
Clinical Assistant Professor of Surgery (Ophthalmology)  
Jonathan K. Lee  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Jonghwan Lee  
Assistant Professor of Engineering  
Joonhee Lee  
Senior Research Associate in Engineering  
Jung-Eun Lee  
Assistant Professor of Earth, Environmental and Planetary Sciences  
Kachiu Lee  
Assistant Professor of Dermatology (Clinical)  
Lawrence W. Lee  
Clinical Assistant Professor of Family Medicine  
Robert George Lee  
Associate Professor of American Studies  
Sung-Hee Rhim Lee  
Clinical Assistant Professor of Obstetrics and Gynecology  
Yun J. Lee  
Clinical Assistant Professor of Pediatrics  
Michelle J. Lefebvre  
Clinical Assistant Professor of Pediatrics  
Craig T. Lefort  
Assistant Professor of Surgery (Research)  
Robert Legare  
Associate Professor of Obstetrics and Gynecology (Clinical); Associate Professor of Medicine (Clinical)  
Mark P. Legolvan  
Associate Professor of Pathology and Laboratory Medicine (Clinical)  
Jessaca B. Leinaweaver  
Associate Professor of Anthropology  
Philip E. Leis  
Professor Emeritus of Anthropology  
Kimberly A. Leite-Morris  
Adjunct Assistant Professor of Behavioral and Social Sciences  
Mary D. Lekas  
Clinical Professor Emerita of Surgery  
Natalie E. Leland  
Adjunct Assistant Professor of Health Services, Policy and Practice
Neal S. Leleiko  
Professor of Pediatrics  

Gaia Lembi  
Visiting Assistant Professor of Judaic Studies (Research)  

Kara Lynne Leonard  
Assistant Professor of Radiation Oncology  

Louis A. Leone  
Professor Emeritus of Medicine  

Michael J. Lepore  
Adjunct Assistant Professor of Health Services, Policy and Practice  

Benjamin S. Lerner  
Visiting Scholar in Computer Science  

Leonard H. Lesko  
Charles Edwin Wilbour Professor of Egyptology  

Andrew Burgess Leslie  
Assistant Professor of Ecology and Evolutionary Biology  

Barry M. Lester  
Professor of Psychiatry and Human Behavior; Professor of Pediatrics  

Mary R. Leuchak  
Visiting Lecturer in Language Studies  

Emily A. Leveen  
Assistant Professor of Medicine (Clinical)  

Hilary L. Levey Friedman  
Visiting Assistant Professor of American Studies  

Frank S. Levin  
Professor Emeritus of Physics  

William A. Levin  
Clinical Associate Professor of Medicine  

Daniel J. Levine  
Clinical Associate Professor of Medicine  

Laura Levine  
Clinical Assistant Professor of Psychiatry and Human Behavior; Clinical Assistant Professor of Medical Science  

Scott M. Levine  
Assistant Professor of Diagnostic Imaging (Clinical)  

Todd P. Levine  
Clinical Assistant Professor of Psychiatry and Human Behavior  

Andrew T. Levinson  
Assistant Professor of Medicine (Clinical)  

Paul David Levinson  
Associate Professor of Medicine  

Anthony D. Levitas  
Visiting Senior Fellow in International and Public Affairs  

Alexander Levitsky  
Professor of Slavic Studies  

Carol S. Levitt  
Adjunct Assistant Professor of Family Medicine  

Dore J. Levy  
Professor of Comparative Literature; Professor of East Asian Studies  

Jennifer S. Levy  
Clinical Assistant Professor of Family Medicine  

Mitchell M. Levy  
Professor of Medicine  

Sarah Simone Levy  
Clinical Assistant Professor of Surgery (Ophthalmology)  

William J. Lewander  
Professor of Emergency Medicine; Professor of Pediatrics  

Carol T. Lewis  
Associate Professor of Pediatrics (Clinical)  

David C. Lewis  
Professor Emeritus of Medicine and Professor Emeritus of Behavioral and Social Sciences  

Patsy P. Lewis  
Visiting Professor of International and Public Affairs  

Thomas A. Lewis  
Professor of Religious Studies  

Victoria Leytin  
Associate Professor of Emergency Medicine (Clinical)  

Defu Li  
Visiting Scholar in Education  

Jin Li  
Professor of Education  

Ji Su Li  
Associate Professor of Medicine (Research)  

Ming Li  
Assistant Professor of Medicine (Research)  

Rencheng Li  
Visiting Scholar in Earth, Environmental and Planetary Sciences  

Wen-Qing Li  
Assistant Professor of Dermatology; Assistant Professor of Epidemiology  

Xuejin Li  
Assistant Professor of Applied Mathematics (Research)  

Zhuoqing Li  
Adjunct Associate Professor of East Asian Studies  

Olin Dehui Liang  
Assistant Professor of Medicine (Research); Assistant Professor of Orthopaedics (Research)  

Yan Liang  
Professor of Earth, Environmental and Planetary Sciences  

N. Libbey  
Clinical Associate Professor of Pathology and Laboratory Medicine  

Jonah M. Licht  
Clinical Assistant Professor of Medicine  

Rashmi Shetty Licht  
Clinical Assistant Professor of Surgery (Urology)  

Warren E. Licht  
Clinical Assistant Professor of Medicine  

Stephen Lichtenbaum  
Roland George Dwight Richardson University Professor of Mathematics  

Kristin N. Lichtenberg  
Clinical Assistant Professor of Family Medicine  

David P. Lichtenstein  
Clinical Assistant Professor of Psychiatry and Human Behavior  

Diana Elliott Lidofsky  
Clinical Assistant Professor of Psychiatry and Human Behavior  

Sheldon Lidofsky  
Clinical Assistant Professor of Medicine  

Paul B. Lieberman  
Professor of Psychiatry and Human Behavior (Clinical)  

Philip Lieberman  
George Hazard Crooker University Professor Emeritus  

Otto Liebmann  
Associate Professor of Emergency Medicine  

Stacey P. Lievens  
Clinical Assistant Professor of Obstetrics and Gynecology  

Joseph T. Lifrak  
Clinical Assistant Professor of Family Medicine  

Jason Lillis  
Assistant Professor of Psychiatry and Human Behavior (Research)  

Julie C. Lima  
Investigator in Health Services, Policy and Practice
Richard S. Limbird
Clinical Assistant Professor of Orthopaedics
David J. Lin
Visiting Scientist in Engineering
James G. Linakis
Professor of Emergency Medicine; Professor of Pediatrics
Evelyn Lincoln
Professor of History of Art and Architecture; Professor of Italian Studies
Jared R. Lindahl
Visiting Assistant Professor of Humanities (Research)
Monica Linden
Lecturer in Neurosciences
David G. Lindquist
Associate Professor of Emergency Medicine (Clinical)
David P. Lindstrom
Professor of Sociology
Collin M. Lines
Adjunct Assistant Professor of Emergency Medicine
Xinsheng Sean Ling
Professor of Physics
Crystal D. Linkletter
Adjunct Assistant Professor of Biostatistics
James Lippincott
Clinical Assistant Professor of Family Medicine
Melanie J. Lippmann
Assistant Professor of Emergency Medicine (Clinical)
Diane Lipscombe
Professor of Neuroscience
Lewis P. Lipsitt
Professor Emeritus of Psychology
Robert Burr Litchfield
Professor Emeritus of History
Nancy T. Littell
Clinical Assistant Professor of Medicine
Michael L. Littman
Professor of Computer Science
Peter Littrup
Professor of Diagnostic Imaging
Hong Liu
Assistant Professor of Medicine (Research)
Joseph T. C. Liu
Professor of Engineering
Man Liu
Assistant Professor of Medicine (Research)
Mao-Mei Liu
Visiting Scholar in Population Studies
Paul Liu
Professor of Surgery (Plastic Surgery)
Richard Liu
Assistant Professor of Psychiatry and Human Behavior (Research)
Shuangqian Liu
Visiting Scholar in Applied Mathematics
Simin Liu
Professor of Epidemiology
Tao Liu
Associate Professor of Biostatistics (Research)
Wei Liu
Visiting Assistant Professor of Applied Mathematics
Zhihong Liu
Adjunct Professor of Medicine
David J. Livingston
Adjunct Associate Professor of Molecular Pharmacology, Physiology and Biotechnology
Roald J. Liado
Clinical Assistant Professor of Family Medicine
Albert C. Lo
Adjunct Associate Professor of Neurology
Debra J. Lobato
Professor of Psychiatry and Human Behavior (Clinical); Professor of Pediatrics (Clinical)
Richard M. Locke
Assistant Professor of Political Science and International and Public Affairs
Gregory R. Lockhart
Associate Professor of Emergency Medicine (Clinical); Associate Professor of Pediatrics (Clinical)
John Logan
Professor of Sociology
Joanne L. Lomas-Neira
Assistant Professor of Surgery (Research)
Kristin Lombardi
Assistant Professor of Pediatrics (Clinical)
Michele M. Lomme
Associate Professor of Pathology and Laboratory Medicine (Clinical)
Cynthia L. Loncar
Assistant Professor of Pediatrics (Research); Assistant Professor of Psychiatry and Human Behavior (Research)
Richard Long
Adjunct Associate Professor of Family Medicine
Richard H. Longabaugh
Professor Emeritus of Psychiatry and Human Behavior (Research)
John R. Lonks
Associate Professor of Medicine; Associate Professor of Medical Science
Antonio Orlando de Oliveira Dourado Lopes
Visiting Scholar in Classics
Salvatore J. Loporchio
Clinical Assistant Professor of Surgery (Ophthalmology)
Mary L. Lopresti
Assistant Professor of Medicine (Clinical)
Phyllis T. Losikoff
Assistant Professor of Pediatrics (Clinical)
Eric B. Loucks
Assistant Professor of Epidemiology
Maranatha E. Lougheed
Clinical Assistant Professor of Family Medicine
Sydney Louis
Professor Emeritus of Neurology
Ana P. Lourenco
Associate Professor of Diagnostic Imaging
Glenn C. Loury
Merton P. Stoltz Professor of Social Sciences
Steve Bernard Louvet
Clinical Instructor in Family Medicine
Frederick R. Love
Professor Emeritus of German Studies
Christine M. Low
Assistant Professor of Psychiatry and Human Behavior (Clinical); Assistant Professor of Pediatrics (Clinical)
David Lowe
Professor of Physics
Elizabeth A. Lowenhaupt
Assistant Professor of Psychiatry and Human Behavior (Clinical); Assistant Professor of Medical Science (Clinical)
Bing Lu
Adjunct Associate Professor of Family Medicine

Qing Lu
Associate Professor of Medicine (Research)

Shaolei Lu
Assistant Professor of Pathology and Laboratory Medicine

Steven D. Lubar
Professor of American Studies; Professor of History; Professor of History of Art and Architecture

Jonathan D. Lubin
Professor Emeritus of Mathematics and Engineering

Phillip R. Lucas
Clinical Associate Professor of Orthopaedics

Arnold M. Ludwig
Adjunct Professor of Psychiatry and Human Behavior

Melissa Ludwig
Clinical Assistant Professor of Psychiatry and Human Behavior

Stephanie N. Lueckel
Assistant Professor of Surgery (Clinical)

Katarina Lukatela
Clinical Assistant Professor of Psychiatry and Human Behavior

Francois I. Luk
Professor of Surgery; Professor of Obstetrics and Gynecology; Professor of Pediatrics

Gary K. Lundstrom
Clinical Instructor in Diagnostic Imaging

Xi Luo
Assistant Professor of Biostatistics

Mark Lurie
Associate Professor of Epidemiology

Enkeleida Lushi
Senior Research Associate in Engineering

Krista Lussier
Clinical Assistant Professor of Psychiatry and Human Behavior

Catherine A. Lutz
Thomas J. Watson, Jr. Family Professor of International Studies

Kerri Luzzo
Clinical Instructor in Family Medicine

Matthew J. Lyddon
Adjunct Lecturer in International and Public Affairs

Amanda Lynch
Sloan Lindemann and George Lindemann, Jr. Distinguished Professor of Environmental Studies

Mary E. Lyster
Clinical Assistant Professor of Family Medicine

Anna A. Lysianskaya
Professor of Computer Science

Bing Ma
Assistant Professor of Molecular Microbiology and Immunology (Research)

Celia P. MacDonnell
Adjunct Associate Professor of Family Medicine

James A. MacGlashan
Adjunct Assistant Professor of Computer Science (Research)

Jason T. Machan
Associate Professor of Orthopaedics (Research); Associate Professor of Surgery (Research)

Joanna V. Maclean
Clinical Assistant Professor of Psychiatry and Human Behavior; Clinical Assistant Professor of Medicine

Yvon Jean Maday
Visiting Professor of Applied Mathematics

Tracy E. Madsen
Assistant Professor of Emergency Medicine

Susanna R. Magee
Associate Professor of Family Medicine

Henry G. Magendantz
Clinical Associate Professor Emeritus of Obstetrics and Gynecology

Molly Magill
Associate Professor of Behavioral and Social Sciences (Research)

James O. Maher
Clinical Assistant Professor of Orthopaedics

Martha B. Mainiero
Professor of Diagnostic Imaging

Subhankar Maitra
Clinical Instructor in Medicine

Marta B. Majczak
Clinical Assistant Professor of Psychiatry and Human Behavior

Francois I. Luks
Professor of Surgery; Professor of Obstetrics and Gynecology; Professor of Pediatrics

Gary K. Lundstrom
Clinical Instructor in Diagnostic Imaging

Xi Luo
Assistant Professor of Biostatistics

Mark Lurie
Associate Professor of Epidemiology

Enkeleida Lushi
Senior Research Associate in Engineering

Krista Lussier
Clinical Assistant Professor of Psychiatry and Human Behavior

Catherine A. Lutz
Thomas J. Watson, Jr. Family Professor of International Studies

Kerri Luzzo
Clinical Instructor in Family Medicine

Matthew J. Lyddon
Adjunct Lecturer in International and Public Affairs

Amanda Lynch
Sloan Lindemann and George Lindemann, Jr. Distinguished Professor of Environmental Studies

Mary E. Lyster
Clinical Assistant Professor of Family Medicine

Anna A. Lysianskaya
Professor of Computer Science

Bing Ma
Assistant Professor of Molecular Microbiology and Immunology (Research)

Celia P. MacDonnell
Adjunct Associate Professor of Family Medicine

James A. MacGlashan
Adjunct Assistant Professor of Computer Science (Research)

Jason T. Machan
Associate Professor of Orthopaedics (Research); Associate Professor of Surgery (Research)

Joanna V. Maclean
Clinical Assistant Professor of Psychiatry and Human Behavior; Clinical Assistant Professor of Medicine

Yvon Jean Maday
Visiting Professor of Applied Mathematics

Tracy E. Madsen
Assistant Professor of Emergency Medicine

Susanna R. Magee
Associate Professor of Family Medicine

Henry G. Magendantz
Clinical Associate Professor Emeritus of Obstetrics and Gynecology

Molly Magill
Associate Professor of Behavioral and Social Sciences (Research)

James O. Maher
Clinical Assistant Professor of Orthopaedics

Martha B. Mainiero
Professor of Diagnostic Imaging

Subhankar Maitra
Clinical Instructor in Medicine

Marta B. Majczak
Clinical Assistant Professor of Psychiatry and Human Behavior

Francois I. Luks
Professor of Surgery; Professor of Obstetrics and Gynecology; Professor of Pediatrics

Gary K. Lundstrom
Clinical Instructor in Diagnostic Imaging

Xi Luo
Assistant Professor of Biostatistics

Mark Lurie
Associate Professor of Epidemiology

Enkeleida Lushi
Senior Research Associate in Engineering

Krista Lussier
Clinical Assistant Professor of Psychiatry and Human Behavior

Catherine A. Lutz
Thomas J. Watson, Jr. Family Professor of International Studies

Kerri Luzzo
Clinical Instructor in Family Medicine

Matthew J. Lyddon
Adjunct Lecturer in International and Public Affairs

Amanda Lynch
Sloan Lindemann and George Lindemann, Jr. Distinguished Professor of Environmental Studies

Mary E. Lyster
Clinical Assistant Professor of Family Medicine

Anna A. Lysianskaya
Professor of Computer Science

Bing Ma
Assistant Professor of Molecular Microbiology and Immunology (Research)

Celia P. MacDonnell
Adjunct Associate Professor of Family Medicine

James A. MacGlashan
Adjunct Assistant Professor of Computer Science (Research)

Jason T. Machan
Associate Professor of Orthopaedics (Research); Associate Professor of Surgery (Research)

Joanna V. Maclean
Clinical Assistant Professor of Psychiatry and Human Behavior; Clinical Assistant Professor of Medicine

Yvon Jean Maday
Visiting Professor of Applied Mathematics
Jessica C. Manyan  
Assistant Professor of Family Medicine (Clinical)

Ginger L. Manzo  
Clinical Assistant Professor of Psychiatry and Human Behavior

Pierre R. Manzo  
Clinical Assistant Professor of Family Medicine

Kamran Manzoor  
Assistant Professor of Medicine (Clinical)

Abigail Marcaccio  
Assistant Professor of Psychiatry and Human Behavior (Research)

Beth G. Marcaccio  
Clinical Assistant Professor of Obstetrics and Gynecology

Edward J. Marcaccio  
Associate Professor of Surgery (Clinical)

John R. Marcaccio  
Clinical Assistant Professor Emeritus of Surgery (Urology)

Vincent F. Marcaccio  
Clinical Instructor in Medicine

Kristine Marceau  
Assistant Professor of Behavioral and Social Sciences (Research)

David A. Marcoux  
Clinical Assistant Professor of Medicine

Peter S. Margolis  
Clinical Assistant Professor of Medicine

Louis J. Marino  
Clinical Associate Professor of Psychiatry and Human Behavior

Humphrey J. Maris  
Professor Emeritus of Physics

Hon Fong Louie Mark  
Clinical Professor Emerita of Pediatrics

David Mark Welch  
Associate Professor of Molecular Biology, Cell Biology and Biochemistry (MBL)

Donald J. Marsh  
Frank L. Day Professor Emeritus of Biology

Richard L. Marsh  
Adjunct Professor of Ecology and Evolutionary Biology

Brandon David Lewis Marshall  
Assistant Professor of Epidemiology

John Marshall  
Professor of Medical Science

Lowry Marshall  
Professor Emerita of Theatre Arts and Performance Studies

Robert J. Marshall  
Clinical Associate Professor of Health Services, Policy and Practice

John Bradley Marston  
Professor of Physics

Stephen D. Marth  
Adjunct Lecturer in Italian Studies

Courtney J. Martin  
Assistant Professor of History of Art and Architecture

Douglas W. Martin  
Assistant Professor of Medicine (Clinical)

Edward W. Martin  
Associate Professor of Medicine (Clinical)

Saul A. Martin  
Clinical Assistant Professor Emeritus of Psychiatry and Human Behavior

Monica M. Martinez  
Stanley J. Bernstein '65 P'02 Assistant Professor of American Studies

Ronald L. Martinez  
Professor of Italian Studies

Felipe I. Martinez-Pinzon  
Assistant Professor of Hispanic Studies

Daniel Toby Marwil  
Clinical Instructor in Pediatrics

Catalina de los Angeles Mas Florit  
Visiting Scholar in Archaeology and the Ancient World

Andrew Maslow  
Clinical Professor of Surgery (Anesthesiology)

Carole Maso  
Professor of Literary Arts

Katherine A. Mason  
Assistant Professor of Anthropology

Michelle N. Mason  
Visiting Associate Professor of Philosophy

Paul Mason  
Teaching Associate in Music

Judith Elizabeth Masseur  
Adjunct Lecturer in Education

Lauren Massingham  
Assistant Professor of Pediatrics

Thais P. Matheus  
Assistant Professor of Obstetrics and Gynecology

Donnah Mathews  
Assistant Professor of Medicine (Clinical)

Robert C. Mathiesen  
Professor Emeritus of Slavic Languages

Edith Mathiowitz  
Professor of Medical Science; Professor of Engineering

Christopher M. Matkovic  
Clinical Assistant Professor of Psychiatry and Human Behavior

Andres Matoso  
Assistant Professor of Pathology and Laboratory Medicine

Kristen Matheson  
Associate Professor of Obstetrics and Gynecology

Anastasios Matzavinos  
Assistant Professor of Applied Mathematics

Jennifer L. Maude  
Clinical Instructor in Medicine

Martin R. Maxey  
Professor of Applied Mathematics; Professor of Engineering

Kenneth Hugh Mayer  
Adjunct Professor of Medicine; Adjunct Professor of Epidemiology

Roger Mayer  
Professor Emeritus of Modern Culture and Media and Visual Art

Elizabeth Mayhall  
Clinical Instructor in Obstetrics and Gynecology

William W. Mayo-Smith  
Professor of Diagnostic Imaging

Peter J. Mazza  
Associate Professor of Surgery (Clinical)

Marta Mazza  
Clinical Assistant Professor of Family Medicine

Kristina McAteer  
Assistant Professor of Emergency Medicine

Jeanne McCaffrey  
Associate Professor of Psychiatry and Human Behavior (Research)

Kathleen M. McCarten  
Professor Emerita of Pediatrics (Clinical) and Professor Emerita of Diagnostic Imaging (Clinical)
James R. McCartney
Associate Professor Emeritus of Psychiatry and Human Behavior

Thomas McCauley
Clinical Assistant Professor of Surgery (Ophthalmology)

James L. McClain
Professor of History

Katherine Donovan McCleary
Clinical Assistant Professor of Family Medicine

Adam M. McCloskey
Assistant Professor of Economics

Donald E. McClure
Professor Emeritus of Applied Mathematics

Kevin W. McConeghy
Research Associate in Health Services, Policy and Practice

David W. McConville
Clinical Assistant Professor of Psychiatry and Human Behavior

F. Dennis McCool
Professor of Medicine

Charles E. McCoy
Clinical Associate Professor of Medicine

Rose McDermott
David and Marianna Fisher University Professor of International Relations

Charles J. McDonald
Professor Emeritus of Medical Science

Emily McDonald
Assistant Professor of Pediatrics (Research)

Scott Edward McDonald
Clinical Assistant Professor of Psychiatry and Human Behavior

Stefan McDonough
Adjunct Professor of Molecular Pharmacology, Physiology and Biotechnology

Rebecca R. McEachern
Clinical Assistant Professor of Pediatrics

Brian McElheny
Professor of the Practice in Theatre Arts and Performance Studies

Matthew Richards McGarrell
Senior Lecturer in Music

Kelly Ann McGarry
Associate Professor of Medicine

Stephen T. McGarvey
Professor of Epidemiology

John E. McGeary
Assistant Professor of Psychiatry and Human Behavior

Karen L. McGoldrick
Clinical Assistant Professor of Obstetrics and Gynecology

John McGonigle
Clinical Assistant Professor of Family Medicine

Edward D. McGoogan
Clinical Associate Professor of Pediatrics, Clinical Associate Professor of Family Medicine

Elisabeth C. McGowan
Clinical Assistant Professor of Obstetrics and Gynecology

John McHose
Clinical Assistant Professor of Psychiatry and Human Behavior

Elizabeth C. McGowan
Assistant Professor of Pediatrics

Andrew P. McGrath
Clinical Instructor in Pediatrics

Alyson J. McGregor
Associate Professor of Emergency Medicine

Patrick J. McHugh
Professor of the Practice in Engineering

James T. McIwain
Sidney A. Fox and Dorothea Doctors Fox Professor Emeritus of Ophthalmology and Visual Science

Kevin M. McKay
Clinical Assistant Professor of Psychiatry and Human Behavior

George R. McKendall
Associate Professor of Medicine

Michael McKeown
Professor of Medical Science

Robin L. McKinney
Assistant Professor of Pediatrics (Clinical)

Erin McKnight
Instructor in Medicine (Clinical)

Kevin McLaughlin
George Hazard Crooker University Professor of English

Nicole McLaughlin
Assistant Professor of Psychiatry and Human Behavior (Research)

Suzanne McLaughlin
Assistant Professor of Pediatrics and Medicine

Rebecca McLean
Clinical Assistant Professor of Psychiatry and Human Behavior

Megan D. McMahon
Clinical Assistant Professor of Obstetrics and Gynecology

Paul N. McMillan
Clinical Associate Professor Emeritus of Pathology and Laboratory Medicine

Lynn McNicoll
Associate Professor of Medicine (Clinical)

Laura H. McPeake
Assistant Professor of Emergency Medicine (Clinical)

William H. McQuade
Adjunct Assistant Professor of Family Medicine

Elizabeth L. McQuaid
Professor of Psychiatry and Human Behavior (Research); Professor of Pediatrics (Research)

Robert G. McRae
Clinical Assistant Professor of Surgery (Otolaryngology)

Ryan A. McTaggart
Assistant Professor of Diagnostic Imaging (Clinical)

Richard Alan Meckel
Professor of American Studies

Antone A. Medeiros
Professor Emeritus of Medicine

Carroll A. Medeiros
Clinical Assistant Professor of Obstetrics and Gynecology

Ildiko Medve
Clinical Assistant Professor of Medicine

Brian W. E. Meeks
Professor of Africana Studies

Anthony E. Mega
Associate Professor of Medicine (Clinical); Associate Professor of Surgery (Clinical)(Urology)

Neil R. Mehrotra
Assistant Professor of Economics

Niharika D. Mehta
Associate Professor of Medicine (Clinical); Associate Professor of Obstetrics and Gynecology (Clinical)

Barbara J. Meier
Senior Lecturer in Computer Science

Joseph Meisel
Adjunct Associate Professor of History

Francisco Amado Mejia Ortiz
Adjunct Professor of Medicine

Jerry Melillo
Professor of Ecology and Evolutionary Biology (MBL)
Michelle L. Mellion
Assistant Professor of Neurology

Michael J. Mello
Professor of Emergency Medicine; Professor of Health Services, Policy and Practice; Professor of Medical Science

A. Sattar N. Memon
Clinical Associate Professor Emeritus of Medicine

Erica Mena
Visiting Lecturer in Literary Arts

Lisa M. Menard-Manlove
Clinical Assistant Professor of Family Medicine

Ulrike Mende
Professor of Medicine

Manuela M. Mendes
Clinical Assistant Professor of Family Medicine

Kristina C. Mencicino
Andrew W. Mellon Assistant Professor of Humanities

Rajind Mendis
Assistant Professor of Engineering (Research)

Xiangling Meng
Visiting Scientist in Chemistry

Olga Maria Mengin
Assistant Professor of Diagnostic Imaging (Clinical)

Govind Menon
Professor of Applied Mathematics

Judith S. Mercer
Adjunct Professor of Pediatrics

Nishant Merchant
Clinical Assistant Professor of Surgery

Roland C. Merchant
Associate Professor of Emergency Medicine; Associate Professor of Epidemiology

Derek Merck
Assistant Professor of Diagnostic Imaging (Research); Assistant Professor of Engineering (Research)

Lisa H. Merck
Assistant Professor of Emergency Medicine; Assistant Professor of Diagnostic Imaging

Basma Merhi
Assistant Professor of Medicine (Clinical)

Robert D. Meringolo
Clinical Associate Professor of Medicine

Leonard A. Merrim
Professor of Medicine

Stephen T. Mernoff
Associate Professor of Neurology (Clinical)

Alisa J. Merollí
Clinical Assistant Professor of Medicine

Priscilla Merriam
Assistant Professor of Medicine (Clinical)

Jennifer E. Merrill
Assistant Professor of Behavioral and Social Sciences (Research)

Stephanie Merrim
Professor of Comparative Literature; Professor of Hispanic Studies

Christopher H. Merritt
Assistant Professor of Emergency Medicine

Brian Mertes
Clinical Professor of Theatre Arts and Performance Studies

John A. Mertus
Assistant Professor of Cognitive, Linguistic and Psychological Sciences (Research)

Geralyn M. L. Messerlian
Professor of Pathology and Laboratory Medicine; Professor of Obstetrics and Gynecology

Dino Messina
Assistant Professor of Medicine (Clinical)

Keith A. Metzger
Adjunct Associate Professor of Ecology and Evolutionary Biology

Markus Meuwly
Adjunct Professor of Chemistry

David R. Meyer
Professor Emeritus of Sociology and Urban Studies

Pascal Michaillat
Assistant Professor of Economics

Stelios Michalopoulos
Associate Professor of Economics

Jacqueline Michaud
Clinical Instructor in Medicine

Ian Michelow
Assistant Professor of Pediatrics

Ralph P. Miech
Associate Professor Emeritus of Medical Science

Michael E. Migliori
Clinical Professor of Surgery (Ophthalmology)

Stephen J. Migliori
Assistant Professor of Surgery (Clinical)

Jeffrey P. Migneault
Adjunct Assistant Professor of Family Medicine

Lisa M. Mignone
Assistant Professor of Classics

Maria D. Mileno
Associate Professor of Medicine

Edward A. Miller
Adjunct Professor of Health Services, Policy and Practice

E. Miller
Clinical Assistant Professor of Surgery (Urology)

Ivan W. Miller
Professor of Psychiatry and Human Behavior

Janice S. Miller
Clinical Assistant Professor of Family Medicine

Kenneth Raymond Miller
Professor of Biology

Kennon S. Miller
Assistant Professor of Surgery (Clinical)(Urology)

Kimberly V. Miller
Clinical Assistant Professor of Surgery (Ophthalmology)

Kiri M. Miller
Associate Professor of Music

Margaret Miller
Associate Professor of Medicine

Marsha Miller
Clinical Assistant Professor of Family Medicine

Nicholas L. Miller
Dean's Assistant Professor of Nuclear Security and Policy

Ralph E. Miliken
Assistant Professor of Earth, Environmental and Planetary Sciences

Richard P. Millman
Professor of Medicine; Professor of Pediatrics

Matthew J. Mimiaga
Professor of Behavioral and Social Sciences; Professor of Epidemiology; Professor of Psychiatry and Human Behavior

Taro Minami
Assistant Professor of Medicine (Clinical)
Faculty

Diane E. Minasian
Clinical Assistant Professor of Family Medicine

Martin M. Miner
Clinical Associate Professor of Family Medicine; Clinical Associate Professor of Surgery (Urology)

Thomas J. Miner
Associate Professor of Surgery

Jane Miniutti
Clinical Assistant Professor of Family Medicine

Mary Minn
Clinical Instructor in Surgery (Anesthesiology)

Robert Miranda
Associate Professor of Psychiatry and Human Behavior (Research)

John P. Miskovsky
Clinical Assistant Professor of Medicine

Cristina L. Mitchell
Clinical Assistant Professor of Family Medicine

Vesna F. Mitrovic
Associate Professor of Physics

Sriakshmi Mitta
Assistant Professor of Medicine (Clinical)

Sreemati Mitter
Kutayba Alghanim Assistant Professor of Middle Eastern History and International and Public Affairs

Daniel M. Mittelman
Professor of Engineering

Josef Mittelmann
Adjunct Lecturer in Engineering

Tarik Moataz
Research Associate in Computer Science

John Modell
Professor Emeritus of Education and Sociology

Poonam Modha
Clinical Assistant Professor of Psychiatry and Human Behavior

Michael A. Moffat
Clinical Instructor in Pediatrics; Clinical Instructor in Medical Science

Jeffrey S. Moffit
Adjunct Assistant Professor of Pathology and Laboratory Medicine

Susan L. Moffitt
Associate Professor of Political Science and International and Public Affairs

Ethan Moitra
Assistant Professor of Psychiatry and Human Behavior (Research)

Anthony Molho
Professor Emeritus of History

Joyce E. Monac
Clinical Assistant Professor of Pediatrics

Sean F. Monaghan
Clinical Assistant Professor of Surgery

Barbara Monahan
Senior Lecturer Emerita in Slavic Languages

Jack M. Monchik
Clinical Professor of Surgery (Endocrine Surgery)

Keith O. Monchik
Clinical Assistant Professor of Family Medicine

Mollie A. Monnig
Assistant Professor of Behavioral and Social Sciences (Research)

Michael Monsour
Clinical Assistant Professor of Medicine

Terri L. Montague
Assistant Professor of Medicine (Clinical)

George Monteiro
Professor Emeritus of English

Kristina A. Monforte
Assistant Professor of Medical Science

Lois A. Monti
Professor Emerita of Behavioral and Social Sciences

James E. Monti
Clinical Associate Professor of Emergency Medicine

Peter M. Monti
Donald G. Millar Distinguished Professor of Alcohol and Addiction Studies

Christine E. Montross
Assistant Professor of Psychiatry and Human Behavior; Assistant Professor of Medical Science

Carmen V. Monzon
Assistant Professor of Psychiatry and Human Behavior; Clinical Assistant Professor of Medicine

Christopher I. Moore
Professor of Neuroscience

Kym Moore
Associate Professor of Theatre Arts and Performance Studies

Finnian M. Moore-Gerety
Visiting Assistant Professor of Religious Studies

Debra J. Moorhead
Assistant Professor of Family Medicine (Clinical)

Shany Mor
Postdoctoral Research Associate in Political Theory

Vincent Mor
Florence Pirce Grant University Professor

John H. Moran
Clinical Associate Professor of Pediatrics

Doriana F. Morar
Clinical Assistant Professor of Psychiatry and Human Behavior

Christopher J. Morath
Adjunct Assistant Professor of Physics

Rebecca Sherrill More
Visiting Scholar in History

Carla C. Moreira
Clinical Assistant Professor of Surgery

James L. Morgan
Professor of Cognitive, Linguistic and Psychological Sciences

Jeffrey R. Morgan
Professor of Medical Science; Professor of Engineering

Theresa Morgan
Clinical Assistant Professor of Psychiatry and Human Behavior

Richard V. Morgera
Clinical Assistant Professor of Family Medicine

William J. Morocco
Clinical Instructor in Pediatrics

James A. Morone
John Hazen White Professor of Public Policy

David J. Morris
Professor Emeritus of Pathology and Laboratory Medicine

Alan R. Morrison
Assistant Professor of Medicine

Dina Morrissey
Assistant Professor of Emergency Medicine (Research)

Paul E. Morrissey
Associate Professor of Surgery
Eric M. Morrow  
Associate Professor of Biology; Associate Professor of Psychiatry and Human Behavior

Douglass H. Morse  
Hermon Bumpus Professor Emeritus of Biology

Theodore F. Morse  
Professor Emeritus of Engineering

John Rollin Morton  
Clinical Assistant Professor of Family Medicine

Jeffrey C. Moser  
Assistant Professor of History of Art and Architecture

James R. Moses  
Lecturer in Music

Karni Moshal  
Instructor in Medicine (Research)

Steven F. Moss  
Professor of Medicine

Albert S. Most  
Professor of Medicine

Ourida Mostefai  
Professor of French Studies and Comparative Literature

Samir G. Moubayed  
Clinical Associate Professor Emeritus of Obstetrics and Gynecology

Jonathan S. Movson  
Assistant Professor of Diagnostic Imaging (Clinical)

Kimberly L. Mowry  
Robin Chermers Neustein Professor of Biomedicine

Susannah L. Mozley  
Clinical Assistant Professor of Psychiatry and Human Behavior

Mark C. Muetterties  
Clinical Instructor in Emergency Medicine

Jennie J. Muglia  
Associate Professor of Dermatology (Clinical)

Elias I. Muhanna  
Manning Assistant Professor of Comparative Literature

Nadia Mujahid  
Assistant Professor of Medicine (Clinical)

Jon A. Mukand  
Clinical Assistant Professor of Orthopaedics

Tracy K. Mullare  
Adjunct Assistant Professor of Psychiatry and Human Behavior

Jeffrey M. Muller  
Professor of History of Art and Architecture

David Mumford  
Professor Emeritus of Applied Mathematics

Christopher S. Muratore  
Associate Professor of Surgery; Associate Professor of Pediatrics

Brian L. Murphy  
Clinical Associate Professor of Diagnostic Imaging

Donald R. Murphy  
Clinical Assistant Professor of Family Medicine

Emily E. Murphy  
Clinical Assistant Professor of Psychiatry and Human Behavior

James G. Murphy  
Adjunct Associate Professor of Psychiatry and Human Behavior

John A. Murphy  
Clinical Assistant Professor Emeritus of Obstetrics and Gynecology

John B. Murphy  
Professor of Medicine; Professor of Family Medicine

John F. Murphy  
Adjunct Instructor in Medicine

Judy I. Murphy  
Assistant Professor of Medicine (Clinical)

Marjorie A. Murphy  
Professor of Surgery (Clinical)(Ophthalmology)

Timothy P. Murphy  
Professor of Diagnostic Imaging

Anne L. Murray  
Clinical Assistant Professor of Obstetrics and Gynecology

David W. Murray  
Lecturer in Earth, Environmental and Planetary Sciences

Martha Murray  
Adjunct Associate Professor of Orthopaedics

Rolland D. Murray  
Associate Professor of English

Jayasimha N. Murthy  
Assistant Professor of Pathology and Laboratory Medicine (Clinical)

Sandra J. Musial  
Clinical Assistant Professor of Pediatrics

John F. Mustard  
Professor of Earth, Environmental and Planetary Sciences; Professor of Environmental Studies

Tracey L. Myatt  
Clinical Assistant Professor of Pediatrics

Deborah L. Myers  
Clinical Assistant Professor of Obstetrics and Gynecology

James R. Myers  
Clinical Associate Professor of Medicine

Wade Myers  
Professor of Psychiatry and Human Behavior

Aye Myint-u  
Clinical Assistant Professor of Psychiatry and Human Behavior

Eleftherios E. Mylonakis  
Dean's Professor of Medical Science

Paul T. Myoda  
Associate Professor of Visual Art

Drayton Nabers  
Associate Professor of English

Jennifer Judd Nadeau  
Clinical Assistant Professor of Medicine

Ahmed Nadeem  
Clinical Assistant Professor of Psychiatry and Human Behavior

Mark E. Nadel  
Visiting Scientist in Computer Science

Yehia Mazen Naga  
Clinical Assistant Professor of Medicine

Drew Nagle  
Assistant Professor of Medicine (Clinical)

Paul E. Nahme  
Dorot Assistant Professor of Judaic Studies

Aman Nanda  
Associate Professor of Medicine

Namrata Nandakumar  
Clinical Instructor in Surgery (Ophthalmology)

Deepa Nankani  
Assistant Professor of Medicine (Clinical)

Anthony M. Napoli  
Associate Professor of Emergency Medicine

Meenakshi Narain  
Professor of Physics

Justin M. Nash  
Professor of Family Medicine; Professor of Psychiatry and Human Behavior
Christopher Shawn Nasin
Clinical Assistant Professor of Family Medicine

Marjorie Nasin
Clinical Assistant Professor of Pediatrics

Carolynn Joy Nassar
Assistant Professor of Medicine (Clinical)

Jack Nassau
Clinical Associate Professor of Psychiatry and Human Behavior

Maria M. Nastasescu
Tamarkin Assistant Professor of Mathematics

Eric T. Nathan
Assistant Professor of Music

Andrew T. Nathanson
Clinical Professor of Emergency Medicine

Gerard Nau
Associate Professor of Medicine (Clinical)

Rebecca A. Nedostup
Associate Professor of History

Christopher Neill
Associate Professor of Ecology and Evolutionary Biology (MBL)

Marguerite A. Neill
Associate Professor of Medicine

Ezequiel Neimark
Associate Professor of Pediatrics (Clinical)

Kimberly M. Nelson
Assistant Professor of Psychiatry and Human Behavior (Research)

Peter Gale Nelson
Senior Lecturer in Literary Arts

Ron J. Nelson
Professor Emeritus of Music

Nicola Neretti
Assistant Professor of Biology

Dawn K. Nero
Clinical Assistant Professor of Psychiatry and Human Behavior

Predrag V. Neskovic
Adjunct Associate Professor of Brain and Neural Systems

Elizabeth M. Nestor
Clinical Professor of Emergency Medicine

Charles E. Neu
Professor Emeritus of History

David P. Neumann
Assistant Professor of Diagnostic Imaging (Clinical)

Dietrich Neumann
Professor of History of Art and Architecture; Professor of Italian Studies; Professor of Urban Studies

Tatiana Neumann
Research Associate in Political Science

Laura S. Nevel
Clinical Assistant Professor of Obstetrics and Gynecology

Christine Nevins-Herbert
Assistant Professor of Medicine (Clinical)

Chad P. Nevola
Clinical Assistant Professor of Pediatrics

Rebecca Newland
Assistant Professor of Psychiatry and Human Behavior (Research)

Karen A. Newman
Owen F. Walker '33 Professor of Humanities and Professor of Comparative Literature

Michael Newstein
Adjunct Assistant Professor of Medicine

Christopher Newton
Clinical Assistant Professor of Surgery (Ophthalmology)

Karen Y. Ng
Clinical Assistant Professor of Family Medicine

Thomas Ng
Associate Professor of Surgery (Cardiothoracic Surgery)

Van T. Nguyen
Assistant Professor of Diagnostic Imaging (Clinical)

Guy R. Nicastri
Clinical Associate Professor of Surgery; Clinical Associate Professor of Family Medicine

Linda Nici
Professor of Medicine (Clinical)

Douglas R. Nickle
Associate Professor of History

Andrea V. Rosenthal Professor of History of Art and Architecture

Heather M. Niemeier
Adjunct Assistant Professor of Psychiatry and Human Behavior (Research)

Pura Nieto Hernandez
Senior Lecturer in Classics

Peter T. Nigri
Clinical Assistant Professor of Surgery (Otology)

Eduardo A. Nilini
Professor Emeritus of Molecular Biology, Cell Biology and Biochemistry (Research) and Professor Emeritus of Medicine (Research)

John D. Nisbet
Clinical Assistant Professor of Obstetrics and Gynecology

Christian Parcher Nixon
Assistant Professor of Pathology and Laboratory Medicine

Arthur W. Noel
Clinical Assistant Professor of Diagnostic Imaging

Julia E. Noguchi
Assistant Professor of Medical Science (Clinical)

Thomas E. Noonan
Adjunct Instructor in Medicine

Caroline M. Nordlund
Lecturer in International and Public Affairs

Georg Noren
Professor Emeritus of Neurosurgery

Andriy Norets
Associate Professor of Economics

Maureen Nosal
Adjunct Lecturer in Education

Amanda Noska
Associate Professor of Medicine

Richard B. Noto
Associate Professor of Family Medicine

Adel M. Nour
Assistant Professor of Diagnostic Imaging (Clinical)

Judith Nudelman
Clinical Associate Professor of Family Medicine

Kara Nugent
Assistant Professor of Medicine (Clinical)

Nicole R. Nugent
Associate Professor of Psychiatry and Human Behavior (Research); Associate Professor of Pediatrics (Research)

Tara E. Nummedal
Associate Professor of History; Associate Professor of Italian Studies

Amy S. Nunn
Associate Professor of Behavioral and Social Sciences; Associate Professor of Medicine
Arto V. Numikko  
L. Herbert Ballou University Professor of Engineering

Elena Oancea  
Associate Professor of Medical Science

Dina N. Obeid  
Visiting Scientist in Physics

John W. O’Bell  
Associate Professor of Medicine (Clinical)

Martin K. Obeng  
Teaching Associate in Music

Lindsay Oberman  
Assistant Professor of Psychiatry and Human Behavior (Research)

James A. O’Brien  
Associate Professor of Obstetrics and Gynecology (Clinical)

Jill A. O’Brien  
Clinical Instructor in Medicine

Xian Marie O’Brien  
Instructor in Surgery (Research)

Bonnie O’Connor  
Professor Emerita of Pediatrics (Clinical)

Katja Odening  
Adjunct Assistant Professor of Medicine

Patricia M. Ogera  
Clinical Assistant Professor of Pathology and Laboratory Medicine

William Oh  
Professor Emeritus of Pediatrics

Sylvia Kay Hassenfeld Professor Emeritus of Pediatrics  
Clinical Assistant Professor of Family Medicine

Kathleen A. O’Heelan  
Clinical Associate Professor of Pediatrics

Richard K. Ohnmacht  
Clinical Associate Professor of Pediatrics

Michal Oklot  
Associate Professor of Slavic Studies

Nnenna Okpara  
Assistant Professor of Medicine (Clinical)

Anthony J. Oldcorn  
Professor Emeritus of Italian Studies

Rudolf Oldenbourg  
Professor of Physics (MBL)

Nicklas B. E. Oldenburg  
Clinical Associate Professor of Radiation Oncology

G. Richard Olds  
Adjunct Professor of Medicine

Jeanne M. Oliva  
Clinical Assistant Professor of Medicine

Alvaro Olivares  
Clinical Assistant Professor of Psychiatry and Human Behavior

Graham J. Oliver  
Professor of Classics; Professor of History

Karen Oliver  
Clinical Associate Professor of Psychiatry and Human Behavior

Susan P. Oliverio  
Assistant Professor of Medicine (Clinical)

Adam Olszewski  
Assistant Professor of Medicine

Saul Olyan  
Samuel Ungerleider, Jr. Professor of Judaic Studies

Kevan Michael O’Neill  
Assistant Professor of Surgery (Clinical)

Warren Ong  
Clinical Assistant Professor of Psychiatry and Human Behavior

Steven M. Opal  
Professor of Medicine

Achini Oopathalage  
Visiting Scientist in Engineering

Don Operario  
Professor of Behavioral and Social Sciences

Adi Ophir  
Visiting Professor of Humanities and Middle East Studies

Zsolt Orban  
Assistant Professor of Medicine (Clinical)

Lindsay M. Orchowski  
Assistant Professor of Psychiatry and Human Behavior (Research)

Michael Orlov  
Professor of Medicine (Clinical)

Marion E. Orr  
Frederick Lippitt Professor of Public Policy

Jay M. Orson  
Clinical Associate Professor Emeritus of Pediatrics

Ed P. Osborn  
Professor of Hispanic Studies

Roberto Ortiz  
Clinical Assistant Professor of Medicine; Clinical Assistant Professor of Pathology and Laboratory Medicine

Itohan I. Osayimwese  
Assistant Professor of History of Art and Architecture

Karen Oliver  
Professor Emeritus of Medicine

Brian R. Ott  
Professor of Neurology

Joyce Ou  
Assistant Professor of Pathology and Laboratory Medicine

Jin O-Uchi  
Assistant Professor of Medicine

Frank L. Overy  
Associate Professor of Emergency Medicine; Associate Professor of Pediatrics

Brett Douglas Owens  
Professor of Orthopaedics

Emily A. Owens  
Assistant Professor of History

Jayanti J. Owens  
Mary Teft and John Hazen White, Sr. Assistant Professor of International and Public Affairs and Sociology

Adetokunbo A. Oyelese  
Assistant Professor of Neurosurgery (Clinical)

Calvin E. Oyer  
Clinical Associate Professor Emeritus of Pathology and Laboratory Medicine

Pranav Oza  
Instructor in Medicine (Clinical)
Margaret Paccione-Dyszlewski
Clinical Assistant Professor of Psychiatry and Human Behavior

Jan Mateusz Pacewicz
Assistant Professor of Urban Studies and Sociology

Cristina A. Pacheco
Clinical Assistant Professor of Family Medicine

Maria F. Pacheco
Adjunct Assistant Professor of Portuguese and Brazilian Studies

Domenico Pacifici
Associate Professor of Engineering

James F. Padbury
William and Mary Oh - William and Elsa Zopfi Professor of Pediatrics for Perinatal Research

Sanjay Padhi
Adjunct Associate Professor of Physics

Rafael E. Padilla
Clinical Assistant Professor of Surgery (Anesthesiology)

Nitin P. Padture
Professor of Engineering

Lyman A. Page
Clinical Professor Emeritus of Pediatrics

Rebecca Page
Professor of Biology

Talbot Page
Professor Emeritus of Economics and Environmental Studies

David C. Paine
Professor of Engineering

Anjali Palav
Clinical Assistant Professor of Psychiatry and Human Behavior

Bernardo Palazzi
Assistant Professor of the Practice in Computer Science

Frank Paletta
Clinical Assistant Professor of Surgery (Oral & Maxillofacial Surgery)

Suzanne M. Palinski
Assistant Professor of Pediatrics (Clinical)

Adam D. Pallant
Associate Professor of Pediatrics (Clinical)

Christopher D. Palmer
Clinical Instructor in Medicine

Rohan Palmer
Assistant Professor of Psychiatry and Human Behavior (Research)

Lynne M. Palmisciano
Assistant Professor of Emergency Medicine (Clinical); Assistant Professor of Pediatrics (Clinical)

G. Tayhas R. Palmore
Professor of Engineering; Professor of Chemistry

Glenn E. Palomaki
Professor of Pathology and Laboratory Medicine (Research)

Mark A. Palumbo
Professor of Orthopaedics

Bai-Chuan Pan
Professor Emeritus of Medicine (Research)

Orestis A. Panagiotou
Assistant Professor of Health Services, Policy and Practice (Research)

Heather Panaro
Clinical Assistant Professor of Surgery (Anesthesiology)

Stephen V. Panaro
Clinical Assistant Professor of Surgery (Anesthesiology)

Sonali Pandya
Clinical Instructor in Surgery

Shuping Pang
Visiting Scholar in Engineering

Atlin Pani
Clinical Instructor in Surgery (Ophthalmology)

Efstratios Papaioannou
Associate Professor of Classics

George D. Papandonatos
Associate Professor of Biostatistics (Research)

Rebecca K. Papas
Assistant Professor of Psychiatry and Human Behavior (Research)

John P. Papay
Assistant Professor of Education

Martin R. Papazian
Clinical Assistant Professor of Surgery (Otolaryngology)

Stacey Pappas
Assistant Professor of Family Medicine

Cherie Paquette
Assistant Professor of Pathology and Laboratory Medicine

Stephanie Parade
Assistant Professor of Psychiatry and Human Behavior (Research)

Michael A. Paradiso
Sidney A. Fox and Dorothea Doctors Fox Professor of Ophthalmology and Visual Science

Laura C. Parajon
Adjunct Instructor in Family Medicine

Gyan Pareek
Associate Professor of Surgery (Urology)

Alfred F. Parisi
Professor Emeritus of Medicine

Tae Woo Park
Assistant Professor of Medicine; Assistant Professor of Psychiatry and Human Behavior

Benjamin W. Parker
Assistant Professor of English

Donna R. Parker
Associate Professor of Family Medicine (Research); Associate Professor of Epidemiology (Research)

Naomi Parker
Adjunct Lecturer in Portuguese and Brazilian Studies

Robert K. Parker
Clinical Instructor in Surgery

Stephen Parman
Associate Professor of Earth, Environmental and Planetary Sciences

Edgar M. Parmentier
Professor of Earth, Environmental and Planetary Sciences

Robert A. Partridge
Adjunct Associate Professor of Emergency Medicine

John R. Parziale
Clinical Associate Professor of Orthopaedics

James T. Pascaldes
Clinical Assistant Professor of Orthopaedics

George Pasquarello
Clinical Assistant Professor of Family Medicine

Eric M. Patashnik
Julis-Rabinowitz Professor of Public Policy, Professor of Political Science

Dhiren Patel
Clinical Instructor in Family Medicine

Khyati Patel
Clinical Assistant Professor of Medicine

Nimesh R. Patel
Assistant Professor of Pathology and Laboratory Medicine
Samir M. Patel  
Clinical Assistant Professor of Psychiatry and Human Behavior

Robert L. Patrick  
Associate Professor of Medical Science

James T. Patterson  
Ford Foundation Professor Emeritus and Professor Emeritus of History

Robert B. Patterson  
Clinical Professor of Surgery

William R. Patterson  
Senior Lecturer in Engineering

Alfred A. Paul  
Clinical Instructor in Surgery (Ophthalmology)

Mark Raymond Paulos  
Clinical Assistant Professor of Medicine

Benoit J. Pausader  
Associate Professor of Mathematics

Adam R. Pautz  
Professor of Philosophy

Christina Paxson  
Professor of Economics and International and Public Affairs

E. Scott Paxton  
Assistant Professor of Orthopaedics

Gillian E. Pearis  
Clinical Assistant Professor of Psychiatry and Human Behavior

Deborah N. Pearlman  
Associate Professor of the Practice in Epidemiology

Teri B. Pearlstein  
Professor of Psychiatry and Human Behavior; Professor of Medicine

David W. Pearson  
Clinical Assistant Professor Emeritus of Psychiatry and Human Behavior

Robert A. Pelcovits  
Professor of Physics

Ravindra Pendse  
Professor of the Practice of Engineering and Computer Science

Andrew A. Peterson  
Assistant Professor of Engineering

Heidi H. Peterson  
Clinical Assistant Professor of Family Medicine

Wolfgang Peti  
Professor of Medical Science; Professor of Chemistry

Robert A. Petteruti  
Adjunct Lecturer in Engineering

Steven F. Petteruti  
Adjunct Lecturer in Engineering

John A. Pezzullo  
Associate Professor of Diagnostic Imaging (Clinical)

Nathan K. Pflueger  
Tamarkin Assistant Professor of Mathematics

Noah S. Philip  
Assistant Professor of Psychiatry and Human Behavior

Bruce A. Phillips  
Clinical Assistant Professor of Psychiatry and Human Behavior

Katharine A. Phillips  
Professor of Psychiatry and Human Behavior

Paul Schuyler Phillips  
Senior Lecturer in Music

Maureen Phipps  
Chace-Joukowsky Professor of Obstetrics and Gynecology

Chanika Phornphutkul  
Associate Professor of Pediatrics

Marcelle L. Piccolello  
Assistant Professor of Diagnostic Imaging (Clinical)

Carle M. Pieters  
Professor Emerita of Earth, Environmental and Planetary Sciences

M. Halit Pinar  
Professor of Pathology and Laboratory Medicine

Jessica Pineda  
Clinical Instructor in Family Medicine

Francine Pingitore  
Assistant Professor of Pediatrics (Clinical); Assistant Professor of Psychiatry and Human Behavior (Clinical)

Victor A. Pinkes  
Clinical Assistant Professor of Emergency Medicine

Megan Pinkston-Camp  
Assistant Professor of Psychiatry and Human Behavior (Research)

Anthony Pinto  
Adjunct Assistant Professor of Psychiatry and Human Behavior

Michael J. Piore  
Senior Fellow in International and Public Affairs

Stefan R. Piperov  
Assistant Professor of Physics (Research)

Jill Catherine Pipher  
Elisha Benjamin Andrews Professor of Mathematics

Paul A. Pirraglia  
Associate Professor of Medicine

Irene Piryatinsky  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Latha R. Pisharodi  
Associate Professor of Pathology and Laboratory Medicine (Clinical)

Mark M. Pitt  
Professor Emeritus of Economics

Martha A. Pizzarello  
Clinical Assistant Professor of Obstetrics and Gynecology

Peter A. Pizzarello  
Clinical Assistant Professor of Family Medicine
Matthew J. Plante  
Clinical Assistant Professor of Family Medicine

Wendy A. Plante  
Clinical Associate Professor of Psychiatry and Human Behavior

Gabriel J. Pleasants  
Clinical Instructor in Family Medicine

Kevin M. Plouffe  
Teaching Associate in Music

Barry A. Plummer  
Clinical Associate Professor of Psychiatry and Human Behavior

Jonathan C. Pofer  
Assistant Professor of Physics

Alan D. Podis  
Clinical Assistant Professor of Surgery (Urology)

Jose R. Polanco  
Clinical Assistant Professor of Medicine

Jeffrey S. Poland  
Visiting Professor of Science and Technology Studies

Lee Alexander Polikoff  
Assistant Professor of Pediatrics (Clinical)

Ethan M. Pollock  
Associate Professor of History; Associate Professor of Slavic Studies

David S. Pomerantz  
Clinical Assistant Professor of Dermatology

Michael A. Pomerantz  
Clinical Assistant Professor of Medicine

Carol Jean Poore  
Professor Emerita of German Studies

Athena Poppas  
Associate Professor of Medicine

Aurora E. Pop-Vicas  
Assistant Professor of Medicine (Clinical)

Stephen Porder  
Associate Professor of Ecology and Evolutionary Biology and Environment and Society

David C. Portelli  
Clinical Associate Professor of Emergency Medicine

Barbara Porton  
Assistant Professor of Psychiatry and Human Behavior (Research)

Roy M. Poses  
Clinical Associate Professor of Medicine

Michael T. Poshkus  
Clinical Assistant Professor of Medicine

Anton Post  
Professor of Ecology and Evolutionary Biology (MBL)

Daniel F. Potter  
Adjunct Associate Professor of Computer Science

Ornella Judith Potter  
Clinical Assistant Professor of Psychiatry and Human Behavior

Ron Pottvin  
Adjunct Lecturer in Humanities

Colleen A. Powers  
Clinical Instructor in Pediatrics

Donya A. Powers  
Clinical Associate Professor of Family Medicine

Marylin M. Powers  
Clinical Assistant Professor of Obstetrics and Gynecology

Thomas R. Powers  
Professor of Engineering; Professor of Physics

Raymond O. Powrie  
Professor of Medicine; Professor of Obstetrics and Gynecology

Shankar Kasinadhuni Prasad  
Lecturer in International and Public Affairs

Joshua Preiss  
Visiting Associate Professor of Political Theory

Warren L. Prell  
Henry L. Doherty Professor Emeritus of Oceanography

Jane Preotele  
Assistant Professor of Emergency Medicine (Clinical)

Franco Preparata  
An Wang Professor Emeritus of Computer Science

Amanda B. Pressman  
Assistant Professor of Medicine (Clinical)

Robert W. Preucel  
Professor of Anthropology

Ann Back Price  
Clinical Assistant Professor of Psychiatry and Human Behavior

Lawrence H. Price  
Professor of Psychiatry and Human Behavior

Michael J. Price  
Associate Professor of Radiation Oncology (Clinical)

Vctor E. Pricolo  
Clinical Professor of Medical Science

Jennifer M. Primack  
Assistant Professor of Psychiatry and Human Behavior (Research)

Ethan A. Prince  
Assistant Professor of Diagnostic Imaging

Barry M. Prizant  
Adjunct Professor of Theatre Arts and Performance Studies

Lawrence Proano  
Clinical Professor of Emergency Medicine

Romano Prodi  
Adjunct Professor of International and Public Affairs

Kittichai Promrat  
Associate Professor of Medicine

Jason A. Protass  
Assistant Professor of Religious Studies

Sherri Provencal  
Clinical Assistant Professor of Psychiatry and Human Behavior

Joseph Michael Pucci  
Professor of Classics; Professor of Comparative Literature

Albert J. Puerini  
Clinical Assistant Professor of Family Medicine

Michael C. J. Putnam  
Professor Emeritus of Classics

Louis Putterman  
Professor of Economics

Sharath Puttichanda  
Clinical Assistant Professor of Psychiatry and Human Behavior

Zhenchao Qian  
Professor of Sociology

Yang Qiu  
Visiting Scholar in Engineering

C. Brandon Qualls  
Clinical Assistant Professor of Psychiatry and Human Behavior

Simonne C. Quamina  
Adjunct Lecturer in Visual Art

M. Ruhul Quddus  
Professor of Pathology and Laboratory Medicine

Matthew I. Quesenberry  
Assistant Professor of Medicine
Steven K. Reich  
Assistant Professor of Pediatrics (Clinical)

Kimberly S. Reichel  
Postdoctoral Research Associate in Engineering

Ravit Reichman  
Associate Professor of English

Jonathan S. Reichner  
Professor of Surgery (Research)

Matthew C. Reilly  
Visiting Assistant Professor of Slavery and Justice

Lawrence E. Reinstein  
Adjunct Professor of Radiation Oncology

Shmuel Reis  
Adjunct Professor of Family Medicine

Steven P. Reiss  
Professor of Computer Science

Amy G. Remensnyder  
Royce Family Professor of Teaching Excellence

Thomas Renaud  
Assistant Professor of Pediatrics

Eric M. Renault  
C.V. Starr Professor of Commerce, Organizations and Entrepreneurship

Joseph F. Renzulli  
Associate Professor of Surgery (Urology)

Barbara M. Reo  
Lecturer in Theatre Arts and Performance Studies

Yana K. Reshetnyak  
Adjunct Professor of Radiation Oncology

Murray Resnick  
Professor of Pathology and Laboratory Medicine

Linda J. Resnik  
Professor of Health Services, Policy and Practice (Research)

Andrew Reszitnyk  
Visiting Scholar in English

Joel W. Revill  
Adjunct Assistant Professor of History

Lindsey J. Reynolds  
Assistant Professor of Population Studies (Research)

Thomas Reznik  
Assistant Professor of Medicine (Clinical)

Geoffrey W. Ribbans  
Professor Emeritus of Hispanic Studies

Iole Ribizzi-Akhtar  
Clinical Assistant Professor of Medicine

Anthony R. Ricci  
Clinical Instructor in Medicine

Ronald R. H. Ricco  
Clinical Assistant Professor of Family Medicine

Jana S. Rice  
Clinical Assistant Professor of Diagnostic Imaging

Louis B. Rice  
Joukowsky Family Professor of Medicine

Harlan G. Rich  
Associate Professor of Medicine; Associate Professor of Medical Science

Josiah D. Rich  
Professor of Medicine; Professor of Epidemiology

Norman Robert Rich  
Professor Emeritus of History

Joan L. Richards  
Professor of History

Peter Damian Richardson  
Professor Emeritus of Engineering and Physiology

Katherine Richman  
Assistant Professor of Medicine (Clinical)

Marc H. Richman  
Professor Emeritus of Engineering

Gerhard H. Richter  
Professor of German Studies; Professor of Comparative Literature

Michelle L. Rickerby  
Clinical Professor of Psychiatry and Human Behavior

Kenneth C. Rickler  
Clinical Associate Professor of Psychiatry and Human Behavior; Clinical Associate Professor of Neurology

Mark S. Ridlen  
Associate Professor of Diagnostic Imaging (Clinical)

John Riedel  
Clinical Assistant Professor of Emergency Medicine

Anne L. Rieger  
Visiting Scholar in Chemistry

Lukas B. Rieppel  
David and Michelle Ebersman Assistant Professor of History

Alison J. Riese  
Assistant Professor of Pediatrics; Assistant Professor of Medical Science

Jeffrey S. Riese  
Assistant Professor of Pediatrics (Clinical)

Abdalla Rifaï  
Associate Professor Emeritus of Pathology and Laboratory Medicine

Jharendra Rijal  
Instructor in Medicine (Clinical)

Timothy B. Riker  
Lecturer in Language Studies

Mark A. Ringiewicz  
Clinical Assistant Professor of Family Medicine

Matteo Riondato  
Visiting Scholar in Computer Science

William M. Risen Jr  
Professor Emeritus of Chemistry

Patricia M. Risica  
Assistant Professor of Behavioral and Social Sciences; Assistant Professor of Epidemiology

Robert Risica  
Clinical Assistant Professor of Surgery (Otolaryngology)

Dannie C. Ritchie  
Adjunct Assistant Professor of Family Medicine

Dale A. Ritter  
Senior Lecturer in Biology

Massimo Riva  
Royce Family Professor of Teaching Excellence and Professor of Italian Studies

Mark J. Rivard  
Adjunct Professor of Radiation Oncology

David Rivera  
Clinical Assistant Professor of Surgery (Ophthalmology)

Jorge Rivera  
Clinical Assistant Professor of Surgery (Ophthalmology)

Maricruz Rivera-Hernandez  
Investigator in Health Services, Policy and Practice

Tina Rizack  
Assistant Professor of Medicine (Clinical); Assistant Professor of Obstetrics and Gynecology (Clinical)

Syed A. Rizvi  
Associate Professor of Neurology (Clinical)
Christie J. Rizzo
Adjunct Associate Professor of Psychiatry and Human Behavior

Philip R. Rizzuto
Clinical Associate Professor of Surgery (Ophthalmology)

Brandy Roane
Adjunct Assistant Professor of Psychiatry and Human Behavior

Jeffrey Robbins
Visiting Assistant Professor of the Practice in Political Science

Karen Robbins
Assistant Professor of Pediatrics

Zoe A. Roben
Adjunct Lecturer in Education

Barbara H. Roberts
Clinical Associate Professor of Medicine

Debra L. Roberts
Clinical Assistant Professor of Family Medicine

J. Timmons Roberts
Ittleson Professor of Environmental Studies

Thomas Roberts
Professor of Ecology and Evolutionary Biology

Alexander P. Robertson
Clinical Assistant Professor of Orthopaedics

James F. Robertson
Clinical Assistant Professor of Medicine

Henry J. Robidoux
Clinical Associate Professor Emeritus of Surgery

Sinai Robins
Visiting Associate Professor of Mathematics

Jerome R. Robinson
Assistant Professor of Chemistry

Leslie Robinson-Bostom
Professor of Dermatology

Katina M. Robison
Assistant Professor of Obstetrics and Gynecology

Marcia B. Robitaille
Clinical Assistant Professor of Emergency Medicine

Seth E. Rockman
Associate Professor of History

Randy Rockney
Professor of Pediatrics; Professor of Family Medicine; Professor of Medical Science

Karim Roder
Assistant Professor of Medicine (Research)

Daniel A. Rodriguez
Assistant Professor of History

Jael Rodriguez
Assistant Professor of Medicine (Clinical)

Marina Rodriguez
Clinical Instructor in Medicine

Pablo Rodriguez
Clinical Associate Professor of Obstetrics and Gynecology

Ralph E. Rodriguez
Associate Professor of American Studies; Associate Professor of English

Jamison E. Rogers
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Jeffrey M. Rogg
Associate Professor of Diagnostic Imaging

Tanya Rogo
Assistant Professor of Pediatrics (Clinical)

Thomas E. Rohrer
Adjunct Associate Professor of Dermatology

Alexander Roiterchin
Visiting Assistant Professor of Applied Mathematics

Rachel Rojanski
Senior Lecturer in Judaic Studies and Adjunct Professor of History

Felipe A. Rojas Silva
Assistant Professor of Archaeology and the Ancient World; Assistant Professor of Egyptology and Assyriology

Thomas D. Romeo
Clinical Assistant Professor Emeritus of Health Services, Policy and Practice

Ellen Frances Rooney
Professor of Modern Culture and Media and English

Dario R. Roque
Assistant Professor of Obstetrics and Gynecology

Christopher Rose
Professor of Engineering

Gary Rose
Adjunct Professor of Health Services, Policy and Practice

Tricia Rose
Chancellor’s Professor of Africana Studies

Karen J. Rosen
Clinical Assistant Professor of Psychiatry and Human Behavior

Michael I. Rosen
Professor Emeritus of Mathematics

Philip Rosen
Professor of Modern Culture and Media

Rochelle K. Rosen
Assistant Professor of Behavioral and Social Sciences (Research)

Wilma S. F. Rosen
Clinical Assistant Professor Emerita of Psychiatry and Human Behavior

Jerrold N. Rosenberg
Clinical Assistant Professor of Orthopaedics

Karen Rosene Montella
Professor of Medicine

Cynthia Rosengard
Associate Professor of Behavioral and Social Sciences (Research); Associate Professor of Medicine (Research)

Jacob Karl Rosenstein
Assistant Professor of Engineering

Samantha R. Rosenthal
Research Associate in Epidemiology

Andrew Rosenzweig
Clinical Assistant Professor of Psychiatry and Human Behavior

Christoph Rose-Petruck
Professor of Chemistry

David M. Rosler
Senior Research Associate in Engineering

Albert M. Ross
Clinical Associate Professor of Pediatrics

Kathryn Ross
Instructor in Psychiatry and Human Behavior (Research)

Robert R. Ross
Assistant Professor of the Practice of Visual Art
Fred A. Rotenberg  
Assistant Professor of Surgery (Clinical)(Anesthesiology)

Harold D. Roth  
Professor of Religious Studies and East Asian Studies

Julie L. Roth  
Assistant Professor of Neurology; Assistant Professor of Medical Science

Leslie A. Roth  
Assistant Professor of Surgery

Steven C. Roth  
Clinical Assistant Professor of Family Medicine

Frank G. Rothman  
Professor of Biology

Lynn Rothschild  
Adjunct Professor of Molecular Biology, Cell Biology and Biochemistry

Boris Rotman  
Professor Emeritus of Medical Science

Kathleen M. Rotondo  
Associate Professor of Pediatrics (Clinical)

Steven C. Rougas  
Assistant Professor of Emergency Medicine; Assistant Professor of Medical Science

Sharon I. Rounds  
Professor of Medicine; Professor of Pathology and Laboratory Medicine

Stephen N. Rous  
Clinical Professor Emeritus of Surgery

Dwight J. Rouse  
Professor of Obstetrics and Gynecology; Professor of Epidemiology

Joseph W. Rovin  
Professor of Music

Brenda N. Roy  
Adjunct Assistant Professor of Obstetrics and Gynecology

G. Dean Roye  
Associate Professor of Surgery (Clinical)

Kareen Rozen  
Associate Professor of Economics

Boris L. Rozovsky  
Ford Foundation Professor of Applied Mathematics

Brenda M. Rubenstein  
Assistant Professor of Chemistry

Amity Ruben  
Assistant Professor of Family Medicine (Clinical)

Patricia E. Rubertone  
Professor of Anthropology

Lee Rubin  
Assistant Professor of Orthopaedics

Lowell J. Rubin  
Clinical Assistant Professor of Psychiatry and Human Behavior

Fedor M. Rudakov  
Adjunct Assistant Professor of Chemistry

Susan A. Rudders  
Assistant Professor of Pediatrics

James L. Rudolph  
Associate Professor of Medicine; Associate Professor of Health Services, Policy and Practice

Marilyn Ruechemeyer  
Adjunct Professor of International and Public Affairs

Richard J. Ruggieri  
Clinical Assistant Professor of Medicine

Charles M. Ruhl  
Clinical Assistant Professor of Surgery (Otolaryngology)

Renee B. Rulin  
Clinical Assistant Professor of Family Medicine

Laura Ruoff  
Clinical Assistant Professor of Psychiatry and Human Behavior

James M. Russell  
Associate Professor of Earth, Environmental and Planetary Sciences

Lorna B. Russell  
Clinical Assistant Professor of Medicine

Philip Christian Russell  
Clinical Assistant Professor of Psychiatry and Human Behavior

Raymond Richard Russell  
Associate Professor of Medicine

Geoffrey R. Russom  
Professor Emeritus of English

Patricia M. Russo-Magno  
Clinical Assistant Professor of Medicine

Sandra Russo-Rodriguez  
Lecturer in Philosophy

Malcolm J. Rutherford  
Professor Emeritus of Geological Sciences

William A. Dyer, Jr. Assistant Professor of Humanities

J. Mark Ryan  
Clinical Assistant Professor of Medicine

Beth A. Ryder  
Assistant Professor of Surgery; Assistant Professor of Medical Science

Krysta H. Ryzewski  
Visiting Scholar in Archaeology and the Ancient World

Carl Saab  
Associate Professor of Neurosurgery (Research); Associate Professor of Neuroscience (Research)

Ali Saad  
Assistant Professor of Neurology

Alberto Saal  
Professor of Earth, Environmental and Planetary Sciences

Ammar Saati  
Clinical Instructor in Medicine

Walid S. Saber  
Clinical Assistant Professor of Medicine

Kenneth S. Sacks  
Professor of History, Classics

Ara Sadanianetz  
Clinical Associate Professor of Medicine

Noha Sadek  
Clinical Assistant Professor of Psychiatry and Human Behavior (Clinical)

Gregory Sadovnikoff  
Clinical Assistant Professor of Family Medicine

Neil F. Safer  
Associate Professor of History

Howard Safran  
Professor of Medicine

Georgios Sagkriotis  
Visiting Scholar in Physiology

Poulomi Saha  
Visiting Scholar in Gender Studies

Christoph Anthony Sahar  
Clinical Assistant Professor of Family Medicine

Reza F. Saidi  
Assistant Professor of Surgery

Caitlin Saint-Aubin  
Clinical Assistant Professor of Obstetrics and Gynecology
Yuya Sakai  
Visiting Scientist in Earth, Environmental and Planetary Sciences

Bachir Sakr  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Jessica R. Salak  
Clinical Assistant Professor of Obstetrics and Gynecology

Gisele I. Saliba  
Clinical Assistant Professor of Medicine

Amy Lynn Salisbury  
Associate Professor of Pediatrics (Research); Associate Professor of Psychiatry and Human Behavior (Research)

Matthew T. Salisbury  
Clinical Assistant Professor of Family Medicine

Philip Salko  
Clinical Assistant Professor of Family Medicine

Elena Salmoirago-Blotcher  
Assistant Professor of Medicine (Research); Assistant Professor of Epidemiology (Research)

Arthur R. Salomon  
Associate Professor of Biology; Associate Professor of Chemistry

Jason Salter  
Clinical Assistant Professor of Family Medicine

Matthew G. Salter  
Clinical Instructor in Surgery (Anesthesiology)

David A. Sam  
Clinical Assistant Professor of Family Medicine

Fadi Samaan  
Clinical Instructor in Medicine

Sundareshan T. Sambandam  
Clinical Assistant Professor of Medicine

Juan Sanchez-Esteban  
Associate Professor of Pediatrics

Jennifer A. Sanders  
Assistant Professor of Pediatrics (Research); Assistant Professor of Pathology and Laboratory Medicine (Research)

Bjorn Sandstede  
Professor of Applied Mathematics

Jerome Sanes  
Professor of Neuroscience

Ronald Sanfilippo  
Teaching Associate in Music

Paul E. Sapir  
Clinical Assistant Professor Emeritus of Psychiatry and Human Behavior

Sajid Saraf  
Assistant Professor of Medicine (Clinical); Assistant Professor of Medical Science (Clinical)

Matthew Dana Sarasin  
Clinical Instructor in Emergency Medicine

Amamah Sardar  
Research Associate in International and Public Affairs

Sylvester Sarfraz  
Instructor in Medicine (Clinical)

Assaf Sarid  
Visiting Scholar in Economics

Neil Sarkar  
Associate Professor of Medical Science; Associate Professor of Health Services, Policy and Practice

Andrea Sartori  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Yuka Sasaki  
Associate Professor of Cognitive, Linguistic and Psychological Sciences (Research)

Michael L. Satlow  
Professor of Judaic Studies and Religious Studies

Mitsushige Sato  
Visiting Scholar in American Studies

Anja Sautmann  
Assistant Professor of Economics

John E. Savage  
An Wang Professor of Computer Science

Daniel L. Savitt  
Associate Professor of Emergency Medicine

David A. Savitz  
Professor of Epidemiology; Professor of Obstetrics and Gynecology

Janine T. Anderson Sawada  
Professor of Religious Studies and East Asian Studies

Dov F. Sax  
Associate Professor of Ecology and Evolutionary Biology and Environmental Studies

Zabe R. Sayeed  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Adele C. Scafuro  
Professor of Classics

Albert A. Scappaticci  
Assistant Professor of Diagnostic Imaging (Clinical)

Thomas J. Scaramella  
Clinical Assistant Professor Emeritus of Psychiatry and Human Behavior

Monica J. Schaberg  
Clinical Assistant Professor Emerita of Pediatrics

Frank John Schaberg Jr  
Associate Professor Emeritus of Surgery (Clinical)

Jay S. Schachne  
Clinical Assistant Professor of Medicine

Kate J. Schapira  
Lecturer in English

Janel G. Schartel  
Clinical Assistant Professor of Psychiatry and Human Behavior

Joshua B. Schechter  
Clinical Assistant Professor of Surgery

Margaret Scheffler  
Assistant Professor of Pediatrics (Clinical)

Jacquelyn Youssef Schell  
Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology (Research)

Susanne Schennach  
Professor of Economics

Barbara Schepps  
Professor Emerita of Diagnostic Imaging (Clinical)

Andrew K. Scherer  
Associate Professor of Anthropology

Thomas G. Schestag  
Professor of German Studies

Hayley N. Schielbel  
Postdoctoral Research Associate in Environment and Society

Stephen F. Schiff  
Associate Professor of Surgery (Clinical)(Urology)

Fred Jay Schiffman  
Sigal Family Professor of Humanistic Medicine

Jonathan R. Schiller  
Assistant Professor of Orthopaedics

Wendy J. Schiller  
Professor of Political Science; Professor of International and Public Affairs
Lauren K. Schlanger  
Assistant Professor of Medicine (Clinical)  
Justin Schleifer  
Associate Professor of Psychiatry and Human Behavior (Clinical)  
Mark Schleinitz  
Associate Professor of Medicine  
Christopher H. Schmid  
Professor of Biostatistics  
Scott T. Schmidt  
Clinical Assistant Professor of Surgery (Plastic Surgery)  
Richard Schmitt  
Professor Emeritus of Philosophy  
Franklin Schneider  
Clinical Instructor in Medicine  
Heidi Schneider  
Clinical Assistant Professor of Family Medicine  
Rebecca Schneider  
Professor of Theatre Arts and Performance Studies; Professor of History of Art and Architecture  
Ronald Schneider  
Clinical Assistant Professor of Dermatology  
Robert Scholes  
Andrew W. Mellon Professor Emeritus of Humanities  
Christoph Schorl  
Assistant Professor of Biology (Research)  
Teresa L. Schraeder  
Adjunct Assistant Professor of Family Medicine  
Andrew M. Schrank  
Olive C. Watson Professor of Sociology and International and Public Affairs  
David Schreiber  
Clinical Instructor in Medicine  
Nidia A. Schuhmacher  
Senior Lecturer in Hispanic Studies  
Howard E. Schulman  
Clinical Assistant Professor of Medicine  
Gretchen Schultz  
Professor of French Studies  
Peter H. Schultz  
Professor Emeritus of Geological Sciences  
Anne M. Schulz  
Visiting Scholar in History of Art and Architecture  
Francisco Schunk  
Visiting Scientist in Chemistry  
Mark Barry Schupack  
Professor Emeritus of Economics  
Eric B. Schwam  
Clinical Assistant Professor of Emergency Medicine  
Carl Schwartz  
Assistant Professor of Surgery (Clinical)(Anesthesiology)  
James M. Schwartz  
Clinical Assistant Professor of Family Medicine  
Richard E. Schwartz  
Chancellor's Professor  
Robert Schwartz  
Professor Emeritus of Pediatrics  
Stanley Schwartz  
Assistant Professor of Pathology and Laboratory Medicine (Clinical)  
Stuart T. Schwartz  
Clinical Associate Professor of Medicine  
Jack L. Schwartzwald  
Clinical Assistant Professor of Medicine  
Robert H. Schwengel  
Clinical Assistant Professor of Medicine  
Francis H. Scola  
Clinical Professor Emeritus of Diagnostic Imaging  
David R. Scott  
Visiting Professor of Earth, Environmental and Planetary Sciences  
H. Denman Scott  
Professor Emeritus of Health Services, Policy and Practice and Professor Emeritus of Medicine  
Jeffrey R. Scott  
Adjunct Associate Professor of Molecular Pharmacology, Physiology and Biotechnology  
Mark F. Scott  
Clinical Assistant Professor of Obstetrics and Gynecology  
Stephen M. Scott  
Clinical Assistant Professor of Medicine  
Lori Scott-Sheldon  
Associate Professor of Psychiatry and Human Behavior (Research); Associate Professor of Behavioral and Social Sciences (Research)  
Ivona Sediva  
Assistant Professor of Pediatrics (Clinical)  
John M. Sedivy  
Hermon C. Bumpus Professor of Biology  
George M. Seidel  
Professor Emeritus of Physics  
Ronald Seifer  
Professor of Psychiatry and Human Behavior  
Lewis C. Seifert  
Professor of French Studies  
Robert O. Self  
Mary Ann Lippitt Professor of American History  
Gregg J. Selke  
Clinical Assistant Professor of Psychiatry and Human Behavior  
Peter Sell  
Clinical Assistant Professor of Family Medicine  
Frank W. Selike  
Karl E. Carlson, MD and Gloria A. Karlson Professor of Cardiothoracic Surgery  
Jason K. Sello  
Associate Professor of Chemistry  
Theresa Senn  
Adjunct Associate Professor of Psychiatry and Human Behavior  
Thomas E. Sepe  
Clinical Associate Professor of Medicine  
Roberto Serrano  
Harrison S. Kravis University Professor of Economics  
Thomas R. Serre  
Manning Assistant Professor of Cognitive, Linguistic, and Psychological Sciences  
Jigme M. Sethi  
Associate Professor of Medicine  
Vijay Sethuraman  
Visiting Assistant Professor of Engineering  
Kurush Setna  
Clinical Assistant Professor of Medicine  
Christopher Takakazu Seto  
Associate Professor of Chemistry  
Robert J. Settipane  
Clinical Assistant Professor of Pediatrics  
Russell Settipane  
Clinical Associate Professor of Medicine
Linda C. Shafer  
Adjunct Assistant Professor of Psychiatry and Human Behavior

Timothy D. Shafman  
Adjunct Assistant Professor of Obstetrics and Gynecology

Catherine E. Shafts  
Clinical Instructor in Family Medicine

Nishant R. Shah  
Assistant Professor of Health Services, Policy and Practice; Assistant Professor of Medicine

Nishit Shah  
Clinical Professor of Medicine

Bahram Shah-Hosseini  
Clinical Assistant Professor of Obstetrics and Gynecology

Reza Shah-Hosseini  
Clinical Associate Professor Emeritus of Obstetrics and Gynecology

Thomas K. Shahinian  
Clinical Associate Professor of Surgery

Linda B. Shalon  
Associate Professor of Pediatrics (Clinical)

Robert M. Shalvoy  
Assistant Professor of Orthopaedics

Peter R. Shank  
Professor Emeritus of Medical Science

Bradley A. Shapiro  
Clinical Assistant Professor of Diagnostic Imaging

Gerald M. Shapiro  
Professor Emeritus of Music

Jason M. Shapiro  
Assistant Professor of Pediatrics (Clinical); Assistant Professor of Medicine (Clinical)

Jesse M. Shapiro  
George S. and Nancy B. Parker Professor of Economics

Michael Shapiro  
Professor Emeritus of Slavic Languages

Barry L. Sharaf  
Associate Professor of Medicine

Sairah Sharif  
Assistant Professor of Medicine (Clinical)

Uzma Sharif  
Associate Professor of Neurology (Clinical); Associate Professor of Pediatrics (Clinical)

Katherine M. Sharkey  
Associate Professor of Medicine; Associate Professor of Psychiatry and Human Behavior

Kapil Sharma  
Clinical Instructor in Medicine

Satish C. Sharma  
Professor of Medicine

Surendra Sharma  
Professor of Pediatrics (Research); Professor of Pathology and Laboratory Medicine (Research)

Jane R. Sharp  
Clinical Assistant Professor of Obstetrics and Gynecology

Parviz Shavandy  
Clinical Instructor in Medicine

Judith Gibbs Shaw  
Clinical Assistant Professor of Pediatrics

Sunil K. Shaw  
Assistant Professor of Pediatrics (Research)

Laura Shawhughes  
Assistant Professor of Medicine (Clinical)

Barry S. Shea  
Assistant Professor of Medicine

Lisa B. Shea  
Clinical Associate Professor of Psychiatry and Human Behavior

M. Tracie Shea  
Professor of Psychiatry and Human Behavior

Edward P. Sheehan  
Clinical Assistant Professor of Psychiatry and Human Behavior

Thomas Sheeran  
Clinical Assistant Professor of Psychiatry and Human Behavior

Michael F. Sheff  
Associate Professor Emeritus of Pathology and Laboratory Medicine (Research)

David Sheinberg  
Professor of Neuroscience

Stephen J. Sheinkopf  
Assistant Professor of Psychiatry and Human Behavior (Research); Assistant Professor of Pediatrics (Research)

Brian W. Sheldon  
Professor of Engineering

Douglas G. Shemin  
Associate Professor of Medicine

Amitai Shenhav  
Assistant Professor of Cognitive, Linguistic and Psychological Sciences

Stephanie A. Shepard-Umaschi  
Assistant Professor of Psychiatry and Human Behavior (Research)

Rachel Shepherd  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Bryan E. Shepp  
Professor Emeritus of Psychology and Cognitive and Linguistic Sciences

Consuelo Sherba  
Teaching Associate in Music

Charles B. Sherman  
Clinical Associate Professor of Medicine

Perry M. W. Sherouse  
Visiting Lecturer in Anthropology

Yeuan-Ming Sheu  
Visiting Scientist in Physics

Naoko Shibusawa  
Associate Professor of History; Associate Professor of American Studies

Elena Shih  
Assistant Professor of American Studies

Victor H. Shin  
Assistant Professor of Medicine (Clinical)

Cullen Shipman  
Clinical Assistant Professor of Family Medicine

Theresa I. Shireman  
Professor of Health Services, Policy and Practice

Susan Short  
Professor of Sociology

Harel Z. Shouval  
Adjunct Associate Professor of Brain and Neural Systems

Rajesh Shrestha  
Clinical Instructor in Medicine

Chi-Wang Shu  
Stowell University Professor of Applied Mathematics

Priscilla Shube  
Clinical Assistant Professor of Family Medicine
Anita Shukla
Assistant Professor of Engineering; Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology
Nicholas J. Sibrava
Adjunct Assistant Professor of Psychiatry and Human Behavior
Afreen Siddiqui
Clinical Assistant Professor of Surgery (Anesthesiology)
Nicole Siegert
Assistant Professor of Family Medicine (Clinical)
Santina L. Siena
Clinical Assistant Professor Emerita of Obstetrics and Gynecology
Mark Sigman
Krishnamurthi Family Professor of Urology
Matthew S. Siket
Assistant Professor of Emergency Medicine
William M. Sikov
Associate Professor of Medicine (Clinical); Associate Professor of Obstetrics and Gynecology (Clinical)
Brian Silver
Professor of Neurology
Hilary Silver
Professor of Sociology and Urban Studies
Michael A. Silver
Clinical Assistant Professor of Psychiatry and Human Behavior
Rebecca B. Silver
Assistant Professor of Psychiatry and Human Behavior (Research); Assistant Professor of Pediatrics (Research)
Fredric Joel Silverblatt
Professor Emeritus of Medicine
Harvey Fox Silverman
Professor of Engineering
John Michael Silverman
Professor Emeritus of Modern Culture and Media
Joseph H. Silverman
Royce Family Professor of Teaching Excellence and Professor of Mathematics
Jared A. Silverstein
Assistant Professor of Pediatrics (Clinical)
Joanne M. Silvia
Clinical Assistant Professor of Family Medicine
Leonor Simas-Almeida
Senior Lecturer in Portuguese and Brazilian Studies
Louis R. Simeone
Clinical Assistant Professor of Orthopaedics
Andrea Megela Simmons
Professor of Cognitive, Linguistic and Psychological Sciences
James A. Simmons
Professor of Biology
Rachel Ann Simmons
Clinical Assistant Professor of Psychiatry and Human Behavior
Warren Simmons
Senior Fellow in Annenberg Institute; Adjunct Professor of Education
William S. Simmons
Professor of Anthropology
Meera Varma Simoes
Clinical Assistant Professor of Obstetrics and Gynecology
Peter R. Simon
Clinical Associate Professor of Epidemiology
Don B. Singer
Professor Emeritus of Pathology and Laboratory Medicine
Arun Singh
Clinical Professor Emeritus of Surgery
Bhrigupati Singh
Assistant Professor of Anthropology
Kamaljeet Singh
Assistant Professor of Pathology and Laboratory Medicine
Prenna Singh
Mahatma Gandhi Assistant Professor of Political Science and International Studies
Rakesh K. Singh
Adjunct Associate Professor of Obstetrics and Gynecology
Einar Siqueland
Professor Emeritus of Psychology
Alan D. Siroti
Professor of Psychiatry and Human Behavior (Clinical)
Lawrence Sirovich
Professor Emeritus of Applied Mathematics
Michael Sisitsky
Assistant Professor of Obstetrics and Gynecology (Clinical)
Latha Sivaprasad
Assistant Professor of Obstetrics and Gynecology
Boris Skurkovich
Clinical Professor of Pediatrics
Sydney A. Skybetter
Lecturer in Theatre Arts and Performance Studies
Jeffrey M. Slaiby
Assistant Professor of Surgery (Clinical)
Shahrzad Ehdavand Slater
Assistant Professor of Pathology and Laboratory Medicine
John G. Slattery
Clinical Assistant Professor of Family Medicine
Steven A. Sloman
Professor of Cognitive, Linguistic and Psychological Sciences
Ada Smilbegovic
Assistant Professor of English
Martin L. Smick
Adjunct Instructor in Visual Art
Karen Smigel
Clinical Assistant Professor of Family Medicine
Michael A. Smit
Assistant Professor of Pediatrics
Daniel J. Smith
Royce Family Professor of Teaching Excellence
Jessica L. Smith
Associate Professor of Teaching Excellence
Joel Smith
Assistant Professor of Molecular Biology, Cell Biology and Biochemistry (MBL)
Katherine F. Smith
Assistant Professor of Ecology and Evolutionary Biology (Research)
Kerry Smith
Associate Professor of History
Matthew Joseph Smith
Clinical Assistant Professor of Family Medicine
Peter S. Smith
Professor Emeritus of Pediatrics

Faculty

Darius R. Stachurski
Assistant Professor of Pathology and Laboratory Medicine (Clinical)

Shaina L. Stacy
Research Associate in Epidemiology

Jensy Stafford
Assistant Professor of Medicine (Clinical); Assistant Professor of Family Medicine (Clinical)

Todd S. Stafford
Assistant Professor of Surgery (Clinical)

Michael L. Stanchina
Clinical Assistant Professor of Medicine

Donald L. Stanford
Adjunct Professor of Computer Science

Christina Stanley
Clinical Assistant Professor of Pathology and Laboratory Medicine

Lawrence K. Stanley
Senior Lecturer in English

Cassandra A. Stanton
Adjunct Assistant Professor of Psychiatry and Human Behavior

Laura Stanton
Clinical Assistant Professor of Psychiatry and Human Behavior

Barton L. St. Armand
Professor Emeritus of English and American Studies

Kara Stavros
Assistant Professor of Neurology (Clinical)

Pamela Steadman-Wood
Clinical Assistant Professor of Psychiatry and Human Behavior

Brett S. Stecker
Clinical Assistant Professor of Family Medicine

Dale W. Steele
Associate Professor of Emergency Medicine; Associate Professor of Health Services, Policy and Practice; Associate Professor of Pediatrics

John M. Steele
Professor of Egyptology and Assyriology

Tracy L. Steffes
Associate Professor of Education and History

Barry S. Stein
Professor Emeritus of Surgery

Derek M. Stein
Associate Professor of Physics and Engineering

John J. Stein
Senior Lecturer in Neuroscience

Lynda Stein
Adjunct Professor of Psychiatry and Human Behavior

Michael D. Stein
Professor of Medicine; Professor of Health Services, Policy and Practice

Steven H. Stein
Clinical Assistant Professor of Family Medicine

Mark F. Steinbach
Senior Lecturer in Music

Meredithe Steinbach
Professor of Literary Arts

Michael P. Steinberg
Barnaby Conrad and Mary Critchfield Keeney Professor of History

Solomon Steiner
Adjunct Professor of Molecular Pharmacology, Physiology and Biotechnology

Edward S. Steinfeld
Dean's Professor of China Studies

Margaret M. Steinhoff
Professor of Pathology and Laboratory Medicine

Gregory J. Steinmetz
Clinical Assistant Professor of Family Medicine

Charles Leigh Stengel
Clinical Instructor in Emergency Medicine

Andrew H. Stephen
Assistant Professor of Surgery (Trauma)

Bonnie E. Stephens
Adjunct Assistant Professor of Pediatrics

Robin Lisa Stern
Clinical Assistant Professor of Psychiatry and Human Behavior

Edward S. Sternick
Professor Emeritus of Radiation Oncology

Ryan Stevenson
Assistant Professor of Medicine (Clinical)

Angela Stewart
Clinical Assistant Professor of Psychiatry and Human Behavior

Babette Taylor Stewart
Lecturer Emerita in Medical Science

Michael H. Stewart
Lecturer in English

Suzanne Stewart-Steinberg
Professor of Italian Studies and Comparative Literature

Gregory Steiner
Clinical Assistant Professor of Psychiatry and Human Behavior

Taylor J. Stilson
Teaching Associate in Music

Philip H. Stockwell
Assistant Professor of Medicine (Clinical)

William M. Stone
Clinical Associate Professor of Medicine

Barbara S. Stonestreet
Professor of Pediatrics

Edward G. Stopa
Professor of Pathology and Laboratory Medicine; Professor of Neurosurgery

John A. Stoukides
Clinical Assistant Professor of Medicine

Robert L. Stout
Adjunct Professor of Psychiatry and Human Behavior

Stanley K. Stowers
Professor Emeritus of Religious Studies

Julie A. Strandberg
Senior Lecturer in Theatre Arts and Performance Studies

Richard Mark Stratt
Newport Rogers Professor of Chemistry

Walter A. Strauss
L. Herbert Ballou University Professor of Mathematics and Applied Mathematics

Rochelle S. Striener
Clinical Associate Professor of Medicine

David R. Strong
Adjunct Assistant Professor of Psychiatry and Human Behavior

Laura Stroud
Associate Professor of Psychiatry and Human Behavior (Research); Associate Professor of Behavioral and Social Sciences (Research)

Gregory L. Stuart
Adjunct Professor of Psychiatry and Human Behavior

Ashley R. Stuckey
Assistant Professor of Obstetrics and Gynecology; Assistant Professor of Medical Science

Edward J. Stulik
Clinical Assistant Professor of Medicine
Newell Maynard Stultz
Professor Emeritus of Political Science

Mariah Stump
Assistant Professor of Medicine (Clinical)

Lisa-Marie Sturla
Assistant Professor of Pathology and Laboratory Medicine (Research); Assistant Professor of Neurology (Research)

Chau-Hsing Su
Professor Emeritus of Applied Mathematics

Mariah Stump
Clinical Assistant Professor of Psychiatry and Human Behavior

Rose Rosengard Subotnik
Professor Emerita of Music

Mark C. Suchman
Professor of Sociology

Erik B. Sudderth
Associate Professor of Computer Science

J. William Suggs
Professor Emeritus of Chemistry

Edward Suh
Clinical Instructor in Surgery (Anesthesiology)

Adam J. Sullivan
Assistant Professor of Biostatistics

Elizabeth Loring Sullivan
Clinical Instructor in Obstetrics and Gynecology

Francis M. Sullivan
Clinical Associate Professor of Emergency Medicine

Frank W. Sullivan
Clinical Associate Professor Emeritus of Psychiatry and Human Behavior

James C. Sullivan
Clinical Assistant Professor of Medicine

James K. Sullivan
Clinical Associate Professor of Psychiatry and Human Behavior

Mary C. Sullivan
Adjunct Professor of Pediatrics

Patrick Sullivan
Assistant Professor of Emergency Medicine (Clinical)

Patrick K. Sullivan
Associate Professor of Surgery

Rachel A. Sullivan
Assistant Professor of Surgery (Clinical)(Plastic Surgery)

Eleanor M. Summerhill
Associate Professor of Medicine

Margaret A. Sun
Clinical Assistant Professor of Family Medicine

Shouheng Sun
Vernon K. Krieble Professor of Chemistry

Selim Suner
Professor of Emergency Medicine; Professor of Engineering; Professor of Surgery

C. James Sung
Professor of Pathology and Laboratory Medicine

Vivian W. Sung
Associate Professor of Obstetrics and Gynecology

Ghulam M. Surti
Clinical Associate Professor of Psychiatry and Human Behavior

Jacques G. Susset
Clinical Professor Emeritus of Surgery (Urology)

Elizabeth M. Sutton
Assistant Professor of Emergency Medicine (Clinical); Assistant Professor of Medical Science (Clinical)

Eric Suuberg
C.V. Starr Professor of Technology Entrepreneurship

Sylvester C. Sviokla
Clinical Instructor in Medicine

Sharon M. Swartz
Professor of Biology; Professor of Engineering

Lisa Michelle Swartz Topor
Assistant Professor of Pediatrics (Clinical)

Joseph D. Sweeney
Professor of Pathology and Laboratory Medicine; Professor of Medicine

Lynn A. Sweeney
Assistant Professor of Emergency Medicine (Clinical)

Patrick J. Sweeney
Professor Emeritus of Obstetrics and Gynecology

Lawrence H. Sweet
Adjunct Professor of Psychiatry and Human Behavior

Jeanne W. Swen
Clinical Instructor in Family Medicine

Leigh Cole Swensens
Professor of Literary Arts

David W. Swenson
Assistant Professor of Diagnostic Imaging (Clinical)

Robert M. Swift
Professor of Psychiatry and Human Behavior

Alison Swigart
Clinical Assistant Professor of Psychiatry and Human Behavior

Jeffrey B. Syme
Clinical Assistant Professor of Family Medicine

Erica M. Szabados
Clinical Assistant Professor of Neurology

Joanne P. Szczygiel
Assistant Professor of Medicine

Joanna Szmydynger-Chodobska
Assistant Professor of Emergency Medicine (Research)

Trevor J. Szymanski
Clinical Instructor in Surgery (Anesthesiology)

Ramin Tabaddor
Clinical Assistant Professor of Family Medicine

Angela M. Taber
Assistant Professor of Medicine (Clinical); Assistant Professor of Medical Science (Clinical)

Pedro F. Tactacan
Clinical Assistant Professor of Psychiatry and Human Behavior

Hiroshi Tajima
Lecturer in East Asian Studies

Ross Taliano
Assistant Professor of Pathology and Laboratory Medicine

Roberto Tamassia
Plastech Professor of Computer Science

Dominick Tammaro
Associate Professor of Medicine

Chung-I Tan
Clinical Assistant Professor of Psychiatry and Human Behavior

Jay X. Tang
Professor of Physics; Professor of Engineering

Jianwu Tang
Assistant Professor of Earth, Environmental and Planetary Sciences (MBL)

Jie Tang
Associate Professor of Medicine (Clinical)
Faculty

Jin Bo Tang
Adjunct Professor of Surgery (Plastic Surgery)

Xiaoli Tang
Assistant Professor of Medicine (Research)

Zyao Tang
Visiting Scientist in Chemistry

Barbara I. Tannenbaum
Senior Lecturer in Theatre Arts and Performance Studies

Nina Tannenwald
Senior Lecturer in Political Science

Umadevi Tantravahi
Associate Professor of Pathology and Laboratory Medicine (Clinical)

Leigh Tarentino
Associate Professor of Visual Art

David Targin
Adjunct Associate Professor of Physics

Gerald M. Tarnoff
Clinical Assistant Professor of Psychiatry and Human Behavior

Leila Tarokh
Adjunct Assistant Professor of Psychiatry and Human Behavior

John M. Tarro
Clinical Assistant Professor of Surgery (Otolaryngology)

Linda S. Tartell
Clinical Associate Professor of Pediatrics

Karen T. Tashima
Professor of Medicine

Marc Tatar
Professor of Biology

Charlene A. Tate
Clinical Associate Professor of Neurology

Katherine Tate
Professor of Political Science

Gabriel Taubin
Associate Professor of Engineering; Associate Professor of Computer Science

Tracey Taveira
Adjunct Professor of Medicine

Elizabeth Taylor
Senior Lecturer in English

Julie S. Taylor
Adjunct Professor of Family Medicine

Lynn E. Taylor
Assistant Professor of Medicine

Kurt Teichert
Senior Lecturer in Environmental Studies

Gladys H. Telang
Associate Professor of Dermatology

Albert Edward Telfeian
Associate Professor of Neurosurgery (Clinical)

Adam J. Teller
Associate Professor of History; Associate Professor of Judaic Studies

Stefanie A. Tellex
Assistant Professor of Computer Science

Tahir Tellioglu
Clinical Assistant Professor of Psychiatry and Human Behavior

Richard M. Terek
Professor of Orthopaedics

Dmitry Terentyev
Assistant Professor of Medicine (Research)

Joseph Terlato
Clinical Assistant Professor of Medicine

Elmo Terry-Morgan
Associate Professor of Africana Studies and Theatre Arts and Performance Studies

Christopher Tessier
Assistant Professor of Medicine (Clinical)

Paul Franz Testa
Visiting Assistant Professor of Political Science

Tracy O'Leary Tevyaw
Clinical Associate Professor of Psychiatry and Human Behavior

Geetika Tewary
Instructor in Medicine (Clinical)

Jinen Thakkar
Clinical Instructor in Medicine

Christopher G. Thanos
Adjunct Assistant Professor of Pathology and Laboratory Medicine

Simone Thavaseelan
Assistant Professor of Surgery (Clinical)(Urology)

Walter R. Thayer Jr
Professor Emeritus of Medical Science

Anthony G. Thomas
Clinical Assistant Professor of Medicine

Edward S. Thomas
Clinical Assistant Professor of Medicine

Graham Thomas
Associate Professor of Psychiatry and Human Behavior (Research)

Kali S. Thomas
Assistant Professor of Health Services, Policy and Practice

Sarah L. Thomas
Clinical Assistant Professor of Emergency Medicine

Valerie A. Thomas
Clinical Assistant Professor of Medicine

Alysha D. Thompson
Clinical Assistant Professor of Psychiatry and Human Behavior

Marcella R. Thompson
Adjunct Assistant Professor of Pathology and Laboratory Medicine

Nancy L. Thompson
Professor Emerita of Pathology and Laboratory Medicine (Research) and Professor Emerita of Medicine (Research)

William Thompson
Visiting Assistant Professor of Applied Mathematics

Leslie Thorton
Professor of Modern Culture and Media

Steven Threlkeld
Adjunct Assistant Professor of Pediatrics

Sarah Thurman
Clinical Assistant Professor of Radiation Oncology

Jennifer Tidey
Professor of Psychiatry and Human Behavior (Research); Professor of Behavioral and Social Sciences (Research)

David Robbins Tien
Clinical Associate Professor of Surgery (Ophthalmology)

Peter L. Tikemeier
Adjunct Professor of Medicine

Keri Tilman
Clinical Instructor in Emergency Medicine

Robert Tilton
Clinical Assistant Professor of Psychiatry and Human Behavior

Alvaro M. Tinajero
Clinical Assistant Professor of Epidemiology
Jeff T. Titon
Professor Emeritus of Music
King W. To
Clinical Professor of Surgery (Ophthalmology)
Cristina Toba
Clinical Assistant Professor of Psychiatry and Human Behavior
Sarah A. Tobin
Adjunct Assistant Professor of Anthropology
Elizabeth Tobin-Tyler
Assistant Professor of Family Medicine; Assistant Professor of Health Services, Policy and Practice
Lyudmil Todorov
Clinical Assistant Professor of Family Medicine
Meltem Toksoz
Adjunct Instructor in Middle East Studies
Elizabeth Toll
Clinical Associate Professor of Pediatrics; Clinical Associate Professor of Medicine
Khachig Tololyan
Visiting Professor of Modern Culture and Media
Marina Tolou-Shams
Adjunct Associate Professor of Psychiatry and Human Behavior
John O. Tomasi
Romeo Elton Professor of Natural Theology
Edward S. Tomassi
Teaching Associate in Music
Andrew J. Tompkins
Clinical Instructor in Surgery (Urology)
Iris L. Tong
Assistant Professor of Medicine
Shuping Tong
Professor of Medicine (Research)
Beth A. Toolan
Clinical Assistant Professor of Pediatrics
Gerald J. Toomer
Professor Emeritus of History of Mathematics and Classics
Philip A. Torgan
Clinical Associate Professor Emeritus of Medicine
Francine Touzzard Romo
Assistant Professor of Medicine (Clinical)
Gregory J. Towne
Assistant Professor of Surgery (Clinical)(Anesthesiology)
Nicholas William Townsend
Professor Emeritus of Anthropology
Peter G. Trafford
Professor Emeritus of Orthopaedics
Tanya B. C. Tran
Clinical Assistant Professor of Psychiatry and Human Behavior
Christine L. Trask
Clinical Assistant Professor of Psychiatry and Human Behavior
Diana O. Treaba
Associate Professor of Pathology and Laboratory Medicine
Mark Treat
Assistant Professor of the Practice in Health Services, Policy and Practice
Sergei R. Treil
Professor of Mathematics
Geoffrey Tremont
Associate Professor of Psychiatry and Human Behavior
Andrew S. Triebwasser
Assistant Professor of Surgery (Clinical)(Anesthesiology)
Scott A. Triedman
Clinical Assistant Professor of Radiation Oncology
Thomas Trikalinos
Associate Professor of Health Services, Policy and Practice
Katherine C. Trimble
Adjunct Lecturer in Sociology
Anubhav Tripathi
Professor of Engineering; Professor of Molecular Pharmacology, Physiology and Biotechnology
Amal N. Trivedi
Associate Professor of Health Services, Policy and Practice; Associate Professor of Medicine
Caroline A. Troise
Clinical Assistant Professor of Medicine
Wilson Truccolo
Pablo J. Salame '88 Goldman Sachs Assistant Professor of Computational Neuroscience
Margaret Tryforos
Assistant Professor of Family Medicine (Clinical)
Devin Tsai
Clinical Instructor in Emergency Medicine
Erica R. Tsai
Clinical Associate Professor of Psychiatry and Human Behavior
Hsin-I Tseng
Lecturer in East Asian Studies
Yi-Tang Tseng
Associate Professor of Pediatrics (Research)
William G. Tsiaras
Clinical Professor of Surgery (Ophthalmology)
Robert J. Tubbs
Associate Professor of Emergency Medicine
Joseph R. Tucci
Adjunct Professor of Medicine
Christopher Joshua Tucker
David S. Josephson Assistant Professor of Music
Gregory S. Tucker
Professor of Physics
Melissa Tukey
Assistant Professor of Medicine (Clinical)
Jan Tullis
Professor Emeritus of Geological Sciences
Terry E. Tullis
Professor Emeritus of Geological Sciences
Glenn A. Tung
Professor of Diagnostic Imaging
Allan R. Tunkel
Professor of Medicine; Professor of Medical Science
Frances Turcotte-Benedict
Assistant Professor of Emergency Medicine
Matthew A. Turner
Professor of Economics
Mark Turshen
Clinical Instructor in Family Medicine
Jean E. Twomey
Assistant Professor of Psychiatry and Human Behavior (Research); Assistant Professor of Pediatrics (Research)
Barbara Tylena
Clinical Professor of Psychiatry and Human Behavior
John H. Tyler
Professor of Education; Professor of Economics
Audrey R. Tyrka
Professor of Psychiatry and Human Behavior
Holly Tytell
Clinical Assistant Professor of Psychiatry and Human Behavior
Golfo Tzilos
Adjunct Assistant Professor of Psychiatry and Human Behavior
Lisa A. Uebelacker
Associate Professor of Psychiatry and Human Behavior (Research)
Lori A. Underhill
Assistant Professor of Pediatrics (Research)
Jody Ann Underwood
Clinical Associate Professor of Psychiatry and Human Behavior
William S. Unger
Clinical Assistant Professor of Psychiatry and Human Behavior
Jessica L. Unick
Assistant Professor of Psychiatry and Human Behavior (Research)
Chika Unigwe
Bonnerman Assistant Professor of the Practice of Literary Arts
Eliezer Upfal
Rush C. Hawkins University Professor of Computer Science
Jonathan D. Uri
Clinical Assistant Professor of Surgery (Anesthesiology)
Alan M. Usas
Adjunct Professor of Computer Science
Anny Ushева
Adjunct Associate Professor of Surgery (Cardiothoracic Surgery)
Wilson F. Utter
Clinical Associate Professor Emeritus of Pediatrics
Alper Uzun
Assistant Professor of Pediatrics (Research)
Daniel Vaca
Assistant Professor of Religious Studies
Constantine Vafidis
Clinical Instructor in Family Medicine
Shipra Vaishnava
Assistant Professor of Molecular Microbiology and Immunology
Jamshed Vakhria
Clinical Assistant Professor of Surgery
Jonathan Valente
Associate Professor of Emergency Medicine; Associate Professor of Pediatrics
Luiz Fernando Valente
Professor of Comparative Literature; Professor of Portuguese and Brazilian Studies
Paul A. Valiant
Assistant Professor of Computer Science
James M. Valles
Professor of Physics
James L. Van Cleve
Adjunct Professor of Philosophy
Andries van Dam
Thomas J. Watson Jr. University Professor of Technology and Education
Jacob Vandenberg
Assistant Professor of Behavioral and Social Sciences (Research); Assistant Professor of Medicine (Research)
Herman H. Vandenberg
Professor Emeritus of Pathology and Laboratory Medicine and Professor Emeritus of Molecular Pharmacology, Physiology and Biotechnology
Axel van de Walle
Associate Professor of Engineering
Fabio Vandin
Adjunct Associate Professor of Computer Science (Research)
Peter van Dommelen
Joukowski Family Professor of Archaeology and Professor of Anthropology
Erin Vanscoyoc
Clinical Assistant Professor of Pediatrics
Andre van Tonder
Visiting Scientist in Physics
Mascha van ’t Wout
Assistant Professor of Psychiatry and Human Behavior (Research)
Parker VanValkenburgh
Assistant Professor of Anthropology
Marcia W. Vanvleet
Associate Professor of Pediatrics (Clinical)
Leah K. Vanwey
Professor of Environment and Society and Sociology
Mercedes Vaquero
Professor of Hispanic Studies
Laura A. M. Vares
Visiting Scholar in Anthropology
Sara Vargas
Assistant Professor of Psychiatry and Human Behavior (Research)
Carlos E. Vargas-Irwin
Assistant Professor of Neuroscience (Research)
Ashutosh Varshney
Sol Goldman Professor of International Studies and Political Science
Charles A. Vaslet
Assistant Professor of Pathology and Laboratory Medicine (Research)
Rosalind M. Vaz
Professor Emerita of Pediatrics (Clinical)
Nico Vehse
Assistant Professor of Pediatrics
Siri Veland
Assistant Professor of Environment and Society (Research)
Robert Y. Velasco
Assistant Professor of Medicine (Clinical)
Erwin Y. Velasquez-Kho
Clinical Instructor in Medicine
Corey E. Ventetulo
Assistant Professor of Medicine; Assistant Professor of Health Services, Policy and Practice
Wendy Verhoek-Oftedahl
Assistant Professor of the Practice in Epidemiology
Alice-Lee Vestner
Assistant Professor of Psychiatry and Human Behavior (Clinical); Assistant Professor of Medical Science (Clinical)
Michael P. Vezeridis
Professor of Surgery
Todd D. Viccione
Clinical Instructor in Medicine
Nelson H. Vieira
University Professor of Portuguese and Brazilian Studies and Professor of Judaic Studies
Marguerite B. Vigliani
Clinical Professor of Obstetrics and Gynecology
Marco Antonio Villela
Senior Research Associate in Engineering
Rendueles Villalba
Clinical Associate Professor of Psychiatry and Human Behavior
Eduardo J. Villanueva
Adjunct Instructor in Visual Art
Christina S. Villarreal
Lecturer in Education
Anna L. Villavicencio
Clinical Assistant Professor of Psychiatry and Human Behavior
Meera Sushila Viswanathan
Associate Professor Emerita of East Asian Studies

John S. Vitelli
Clinical Assistant Professor of Medicine

Sivamainthan Vithiananthan
Associate Professor of Surgery (Clinical)

Gwenn M. Vittimberga
Clinical Assistant Professor of Dermatology

Patrick M. Vivier
Royce Family Associate Professor of Teaching Excellence and Associate Professor of Health Services, Policy and Practice

Petia M. Vlahovska
Associate Professor of Engineering

Benjamin S. Vogel
Clinical Assistant Professor of Obstetrics and Gynecology

Paula A. Vogel
Professor at Large

Marc Vogl
Visiting Assistant Professor of the Practice of Public Humanities

Lidia A. Vognar
Assistant Professor of Medicine (Clinical)

Betty R. Vohr
Professor of Pediatrics

Rajiv Vohra
Ford Foundation Professor of Economics

Anastasia Volovich
Professor of Physics

Annette E. Von Dem Bussche
Assistant Professor of Pathology and Laboratory Medicine (Research)

Michael Vorenberg
Associate Professor of History

Matthew D. Vrees
Clinical Assistant Professor of Surgery

Roxanne Vrees
Assistant Professor of Obstetrics and Gynecology

Jonathan K. Waage
Professor Emeritus of Biology

Rajan Wadhawan
Adjunct Associate Professor of Pediatrics

Safa F. Wagdi
Clinical Assistant Professor of Surgery (Ophthalmology)

Simon Waghchoure
Clinical Instructor in Medicine

Hedy S. Wald
Clinical Associate Professor of Family Medicine

Bernard K. Waldrop
Brooke Russell Astor Emeritus Professor of the Humanities

Rosmarie S. Waldrop
Visiting Scholar in Literary Arts

Drew C. Walker
Lecturer in Gender Studies

Homer F. Walker
Visiting Professor of Applied Mathematics

Joanna Walker
Assistant Professor of Dermatology (Clinical)

Michael T. Wallach
Associate Professor of Diagnostic Imaging (Clinical); Associate Professor of Pediatrics (Clinical)

Kimberly A. Waller
Instructor in Orthopaedics (Research)

Edward G. Walsh
Assistant Professor of Neuroscience (Research)

Eric Ferguson Walsh
Clinical Assistant Professor of Orthopaedics

Joseph B. Walsh
Visiting Scholar in Earth, Environmental and Planetary Sciences

Anne S. Walters
Clinical Associate Professor of Psychiatry and Human Behavior

Michael R. Walther
Clinical Assistant Professor of Psychiatry and Human Behavior

Jack R. Wands
Jeffrey and Kimberley Greenberg - Artemis and Martha Joukowsky Professor of Gastroenterology

Hui Wang
Associate Professor of Applied Mathematics

Hye-Sook Wang
Associate Professor of East Asian Studies

Lai-Sheng Wang
Senior Lecturer in Chemistry

Lu Wang
Assistant Professor of Music

Shunping Wang
Associate Professor of Obstetrics and Gynecology (Clinical)

Xiaolian Wang
Assistant Professor of Surgery (Research)(Plastic Surgery)

Yang Wang
Senior Lecturer in East Asian Studies

Yihong Wang
Assistant Professor of Pathology and Laboratory Medicine

Deborah A. Wanke
Adjunct Professor of Medicine

Harold R. Ward
Professor Emeritus of Chemistry and Environmental Studies

Nicholas S. Ward
Associate Professor of Medicine

Robert Ward
Assistant Professor of Diagnostic Imaging (Clinical)

Robert P. Ward
Visiting Lecturer in English

Kay B. Warren
Charles C. Tillinghast, Jr. '32 Professor of International Studies

Otis U. Warren
Assistant Professor of Emergency Medicine (Clinical)

William H. Warren
Chancellor's Professor

Sarita S. Warrier
Assistant Professor of Medicine; Assistant Professor of Medical Science

Marvin S. Wasser
Clinical Assistant Professor of Pediatrics

Takeo Watanabe
Fred M. Seed Professor of Cognitive and Linguistic Sciences

Richard Waterhouse
Adjunct Lecturer in Theatre Arts and Performance Studies

Samuel S. Watson
Tamarkin Assistant Professor of Mathematics
Delma-Jean Watts  
Assistant Professor of Pediatrics (Clinical)

David E. Wazer  
Professor of Radiation Oncology

Ashley E. Webb  
Assistant Professor of Molecular Biology, Cell Biology and Biochemistry; Assistant Professor of Neurology

Banice M. Webber  
Clinical Associate Professor Emeritus of Radiation Oncology

Thompson Webb III  
Professor Emeritus of Geological Sciences

Peter M. Weber  
Professor of Chemistry

Myles Webster  
Clinical Instructor in Pediatrics; Clinical Instructor in Medical Science

Elizabeth A. Weed  
Visiting Scholar in Gender Studies

Peter Wegner  
Professor Emeritus of Computer Science

Lei Wei  
Associate Professor of Orthopaedics (Research)

Marilyn Weigner  
Clinical Associate Professor of Medicine

David N. Weil  
James and Meryl Tisch Professor of Economics

Jerome H. Weiner  
Professor Emeritus of Engineering and Physics

Susan D. Weinman  
Clinical Assistant Professor of Psychiatry and Human Behavior

Daniel M. Weinreich  
Associate Professor of Ecology and Evolutionary Biology

Ann C. Weinstein  
Adjunct Lecturer in German Studies

Arnold Louis Weinstein  
Edna and Richard Salomon Distinguished Professor of Comparative Literature

Debbie Weinstein  
Assistant Professor of American Studies

Lauren M. Weinstock  
Associate Professor of Psychiatry and Human Behavior (Research)

Margaret M. Weir  
Professor of International and Public Affairs and Political Science

Marjorie E. Weishaar  
Clinical Professor of Psychiatry and Human Behavior

Arnold-Peter Weiss  
Professor of Orthopaedics

Joseph Benjamin Weiss  
Associate Professor of Medicine (Clinical)

Rebecca B. Weitz-Shapiro  
Associate Professor of Political Science

Jennifer Greene Welch  
Assistant Professor of Pediatrics

Leslie Welch  
Associate Professor of Cognitive, Linguistic and Psychological Sciences

Raymond H. Welch  
Clinical Assistant Professor of Dermatology

Gregory A. Wellenius  
Associate Professor of Epidemiology

Ryan J. Welter  
Clinical Assistant Professor of Family Medicine

Joel K. Weltman  
Clinical Professor Emeritus of Medicine

Jane Wen  
Clinical Instructor in Medicine

Sicheng Wen  
Assistant Professor of Medicine (Research)

Katharine D. Wenstrom  
Professor of Obstetrics and Gynecology

Susan J. Wenzel  
Adjunct Assistant Professor of Psychiatry and Human Behavior

John Wermer  
Professor Emeritus of Mathematics

Erika Werner  
Assistant Professor of Obstetrics and Gynecology

Lee V. Wesner  
Clinical Assistant Professor of Surgery (Anesthesiology)

Gary M. Wessel  
Professor of Biology

Conrad W. Wesselhoeft Jr  
Professor Emeritus of Surgery (Clinical)

Robert J. Westlake  
Professor Emeritus of Psychiatry and Human Behavior

Judith B. Westrick  
Clinical Assistant Professor of Pediatrics

Terri T. Wette  
Professor of Health Services, Policy and Practice

Patrick Weyer  
Clinical Assistant Professor of Medicine

Gary G. Wharton  
Clinical Assistant Professor of Obstetrics and Gynecology

Kristi A. Wharton  
Professor of Biology

Carol A. Wheeler  
Associate Professor of Obstetrics and Gynecology (Clinical)

Elizabeth Wheeler  
Clinical Assistant Professor of Psychiatry and Human Behavior

William M. Whelihan  
Clinical Associate Professor of Psychiatry and Human Behavior

Emily M. White  
Clinical Assistant Professor of Obstetrics and Gynecology

Jordan White  
Assistant Professor of Family Medicine; Assistant Professor of Medical Science

Michael White  
Robert E. Turner Distinguished Professor of Population Studies

Russell E. White  
Clinical Professor of Surgery

Lauren Whiteley  
Assistant Professor of Psychiatry and Human Behavior (Research)

Timothy J. Whitfield  
Assistant Professor of Ecology and Evolutionary Biology (Research)

Esther K. Whitfield  
Associate Professor of Comparative Literature; Associate Professor of Hispanic Studies

Annie J. Wiart  
Senior Lecturer in French Studies

John Edgar Wideman  
Asa Messer Professor Emeritus of Africana Studies and Literary Arts

Klaus M. Widmayer  
Tamarkin Assistant Professor of Mathematics

Edward L. Widmer  
Visiting Scholar in History
Doreen L. Wiggins  
Clinical Assistant Professor of Surgery; Clinical Assistant Professor of Obstetrics and Gynecology

Bethany J. Wilcox  
Instructor in Orthopaedics (Research)

Caroline S. Wilkel  
Clinical Assistant Professor of Dermatology

Joanne E. Wilkinson  
Adjunct Assistant Professor of Family Medicine

David M. Williams  
Associate Professor of Behavioral and Social Sciences; Associate Professor of Psychiatry and Human Behavior

Kenneth Williams  
Associate Professor of Emergency Medicine (Clinical)

Lea Everard Williams  
Professor Emeritus of History

Robert R. Williams  
Clinical Associate Professor of Obstetrics and Gynecology

Paul Gregory Willard  
Professor of Chemistry; Chair in Chemistry

 Andre C. Willis  
Willard Prescott and Annie McClelland Smith Professor of History and Religion

Matthew D. Willis  
Assistant Professor of Psychiatry and Human Behavior (Clinical)

David R. Wills  
Professor of French Studies

Hale E. Wills  
Assistant Professor of Surgery

Ira B. Wilson  
Professor of Health Services, Policy and Practice; Professor of Medicine

Jeffrey M. Wilson  
Clinical Assistant Professor of Family Medicine

Julie M. Wilson  
Clinical Assistant Professor of Psychiatry and Human Behavior

Lionel Wilson  
Visiting Scientist in Earth, Environmental and Planetary Sciences

Ulrica Wilson  
Visiting Assistant Professor of Mathematics

Inge Crosman Wimmers  
Professor Emerita of French Studies

John P. Wincze  
Clinical Professor of Psychiatry and Human Behavior

Edward Wing  
Professor of Medical Science

Rena R. Wing  
Professor of Psychiatry and Human Behavior

Robyn Wing  
Assistant Professor of Emergency Medicine

Rudolf M. Winkes  
Professor Emeritus of History of Art and Architecture

Marion F. Winkler  
Associate Professor of Surgery

Todd E. Winkler  
Professor of Music

Katherine A. Winterstein  
Teaching Associate in Music

Sandra M. Wiseman  
Senior Research Associate in Earth, Environmental and Planetary Sciences

Sabrina M. Witherby  
Assistant Professor of Medicine (Clinical)

Jon D. Witman  
Professor of Biology

Edward G. Wittels  
Associate Professor of Medicine; Associate Professor of Medical Science

Kyle J. Wohlrab  
Assistant Professor of Obstetrics and Gynecology (Clinical)

Aaron Wold  
Professor Emeritus of Chemistry

Patricia N. Wold  
Clinical Assistant Professor Emerita of Psychiatry and Human Behavior

Michael Wolfe  
Clinical Assistant Professor of Psychiatry and Human Behavior

Jennifer C. Wolff  
Assistant Professor of Psychiatry and Human Behavior (Research)

Arthur W. Y. Wong  
Clinical Instructor in Surgery (Urology)

Ian Y. Wong  
Assistant Professor of Engineering; Assistant Professor of Molecular Pharmacology, Physiology and Biotechnology

Kenneth K. Wong  
Walter and Leonore Annenberg Professor fo Education Policy

Gordon S. Wood  
Professor Emeritus of History

Susan S. Wood  
Teaching Associate in Music

Harold A. Woodcome  
Clinical Associate Professor of Surgery (Ophthalmology)

Margaret S. Wool  
Clinical Associate Professor of Family Medicine; Clinical Associate Professor of Behavioral and Social Sciences

Karen L. Woolfali-Quinn  
Associate Professor of Medicine (Clinical)

Hugh Woolverton  
Clinical Assistant Professor of Family Medicine

Billy R. Wooten  
Professor Emeritus of Psychology

Michael S. Worden  
Assistant Professor of Neuroscience (Research)

Tyler B. Wray  
Assistant Professor of Behavioral and Social Sciences (Research)

James J. Wrenn  
Professor Emeritus of East Asian Studies

David B. Wright  
Adjunct Assistant Professor of Health Services, Policy and Practice

Jack C. Wright  
Associate Professor of Cognitive, Linguistic and Psychological Sciences

Diana Ying Wu  
Assistant Professor of Medicine

Hannah Wei Wu  
Assistant Professor of Pediatrics (Research)

Kun-Ta Wu  
Visiting Scientist in Engineering

Pei-Chi Wu  
Assistant Professor of Pediatrics (Clinical)

Tony C. Wu  
Clinical Associate Professor of Medicine

Wen-Chih Wu  
Associate Professor of Medicine; Associate Professor of Epidemiology

Yilun Wu  
Tamarkin Assistant Professor of Mathematics

Zhijin J. Wu  
Associate Professor of Biostatistics
Donna M. Wulff
Professor Emerita of Religious Studies

Joseph Wyllie
Clinical Assistant Professor of Medicine

Gang Xiao
Professor of Physics; Professor of Engineering

An Xie
Assistant Professor of Medicine (Research)

Jinjun Xiong
Assistant Professor of Pathology and Laboratory Medicine

Haiyan Xu
Associate Professor of Epidemiology (Research)

Jingming Xu
Charles C. Tillinghast, Jr. ’32 University Professor of Engineering

Israel Yaar
Associate Professor Emeritus of Neurology

Shadi Yaghi
Assistant Professor of Neurology

Evgeny Yakirevich
Associate Professor of Pathology and Laboratory Medicine

Ali Yalcindag
Associate Professor of Pediatrics (Clinical)

Kikuko Yamashita
Associate Professor of East Asian Studies

Joseph Yammine
Assistant Professor of Medicine (Clinical)

Wentian Yang
Associate Professor of Medicine; Associate Professor of Orthopaedics

Ronald A. Yankee
Professor Emeritus of Medicine

Hongwei Yao
Associate Professor of Molecular Biology, Cell Biology and Biochemistry (Research)

Kosuke Yasukawa
Clinical Instructor in Medicine

Yvette E. Yatchmink
Associate Professor of Pediatrics (Clinical)

Patricia Ybarra
Associate Professor of Theatre Arts and Performance Studies

Yangzi Ye
Visiting Lecturer in East Asian Studies

Shirley Yen
Associate Professor of Psychiatry and Human Behavior (Research)

Peter M. Yeracaris
Adjunct Assistant Professor of Family Medicine

James P. Yess
Clinical Assistant Professor of Medicine

See-Chen Ying
Professor of Physics

Agustin Yip
Clinical Assistant Professor of Psychiatry and Human Behavior; Clinical Assistant Professor of Health Services, Policy and Practice

David C. Yoburn
Clinical Associate Professor of Medicine

Don C. Yoo
Associate Professor of Diagnostic Imaging (Clinical)

Yuta Yoshimoto
Visiting Scholar in Applied Mathematics

Carolyn Te Young
Clinical Assistant Professor of Pathology and Laboratory Medicine

Mark Young
Clinical Assistant Professor of Family Medicine

Chao Yu
Visiting Scientist in Chemistry

Hongchuan Yu
Instructor in Orthopaedics (Research)

Richard A. Yund
Professor Emeritus of Geological Sciences

Najam A. Zaidi
Clinical Assistant Professor of Medicine

Ahmed S. Zaki
Adjunct Lecturer in Engineering

Kate M. Zaluski
Associate Professor of Obstetrics and Gynecology (Clinical)

Vazira F-Y Zamindar
Associate Professor of History

Dominick Zangari
Clinical Assistant Professor of Surgery (Ophthalmology)

Alijev Zhai
Associate Professor of Applied Mathematics (Research)

Raymond P. Zarleno
Clinical Assistant Professor of Pediatrics

Alexander Zaslavsky
Professor of Engineering; Professor of Physics

Stanley B. Zdonik
Professor of Computer Science

Kimberly A. Zeller
Clinical Assistant Professor of Family Medicine

Catherine Zerner
Professor Emerita of History of Art and Architecture

Mark Zervas
Adjunct Assistant Professor of Molecular Biology, Cell Biology and Biochemistry

Natalie A. Zervas
Assistant Professor of Psychiatry and Human Behavior (Clinical)

Naihai Zhai
Visiting Scholar in English

Cunxian Zhai
Associate Professor of Pathology and Laboratory Medicine

Jiyong Zhang
Instructor in Pediatrics (Research)

Peng Zhang
Assistant Professor of Medicine (Research)

Songhua Zhang
Assistant Professor of Medicine (Research)

Zheng Zhang
Assistant Professor of Biostatistics (Research)

Tongzhang Zheng
Professor of Epidemiology

Anatoly Zhiltzovich
Professor of Medical Science

Anyu Zhou
Assistant Professor of Medicine (Research)

Fujun Zhou
Visiting Scholar in Applied Mathematics

Yang Zhou
Assistant Professor of Molecular Microbiology and Immunology (Research)

YuanYuan Zhou
Assistant Professor of Engineering (Research)

Huijie Zhu
Visiting Lecturer in East Asian Studies

Shougang Zhuang
Professor of Medicine (Research)
Rashid Zia
Associate Professor of Engineering; Associate Professor of Physics
James W. Ziegler
Associate Professor of Pediatrics (Clinical)
J. Nicholas Ziegler
Professor of International and Public Affairs (Research)
Beth Anne Zielinski-Habershaw
Senior Lecturer in Molecular Pharmacology, Physiology and Biotechnology
Richard J. Zienowicz
Associate Professor of Surgery (Plastic Surgery)
Sally Zierler
Professor Emerita of Epidemiology
Stanley Zimmering
Professor Emeritus of Biology
Anita L. Zimmerman
Professor of Medical Science
Mark Zimmerman
Professor of Psychiatry and Human Behavior
Bernard Zimmermann
Adjunct Associate Professor of Medicine
Matthew B. Zimmt
Professor of Chemistry
Brian Zink
Frances Weeden Gibson-Edward A. Inannuccilli, MD, Professor of Emergency Medicine
Stephen H. Zinner
Adjunct Professor of Medicine
David Amato Zinno
Teaching Associate in Music
Samuel Zipp
Associate Professor of American Studies and Urban Studies
Jeanne Ziter
Clinical Assistant Professor of Pediatrics
Hassan Ziud
Clinical Instructor in Medicine
Caron Zlotnick
Professor of Psychiatry and Human Behavior; Professor of Medicine; Professor of Obstetrics and Gynecology
Mark Robert Zonfrillo
Associate Professor of Emergency Medicine; Associate Professor of Pediatrics
Andrew R. Zullo
Investigator in Health Services, Policy and Practice
Janet C. Zweig
Adjunct Assistant Professor of Public Humanities
William H. Zywiak
Adjunct Associate Professor of Psychiatry and Human Behavior
General Regulations

General academic requirements

Undergraduate degrees:

Information regarding general academic degree requirements are listed under 'The College' section of the University Bulletin as well as on the respective websites of the Office of the Registrar (http://www.brown.edu/about/administration/registrar/degree-guidelines-0/college) and the Dean of the College (http://brown.edu/Administration/Dean_of_the_College/degree).

Advanced degrees:

Information regarding Advanced degree requirements for specific academic programs are listed on the Graduate School (http://www.brown.edu/academics/degree-granting) website. Information regarding general and overall guidelines for advanced degrees are also listed on the Office of the Registrar (http://www.brown.edu/about/administration/registrar/degree-guidelines-0/graduate-school) website.

Enrollment and course registration

Instructions about enrollment will be sent via e-mail prior to the opening of each semester to all students. To complete enrollment, all requirements of the pertinent administrative offices of the University must be met, including registration for courses, payment of accounts, and arrangements for housing as appropriate. Fees will be charged for failure to meet established deadlines. All students must complete enrollment in order to be eligible to remain at the University.

Students are urged to note carefully the instructions provided at registration in order to assure eligibility for enrollment, proper registration in courses, and to avoid unnecessary payment of Late Registration and Change of Course fees. All registration materials and/or processes are considered official university documents. Any falsification of signatures or other tampering with such forms/processes constitutes a violation of the Academic Code.

All registration-related deadlines for each semester are listed in the 'Academic Calendar' section of the Bulletin and also on the Office of the Registrar website as well as answers to common registration-related questions.

For the full text on the Academic Regulations and Instructions for Registration, see the Registrar’s Office web site at:

http://www.brown.edu/about/administration/registrar/course-enrollment/registration

For a tutorial on registration, see:

https://wiki.brown.edu/confluence/display/CISDOC/Screencasts

To access the most up-to-date course information including credit bearing summer session offerings (*The course information in the PDF versions of the University Bulletin and Course Announcement Bulletin is current as of February 2019.*), see:

http://selfservice.brown.edu/menu and select 'Brown Course Search'

Course Credit

The semester course is the unit of credit. This is defined as a course taken for the duration of one semester and, for purposes of evaluation, may be considered the approximate equivalent of four semester hours.

Course Numbering

Courses numbered 0001-0999 are strictly for Undergraduate credit (Graduate students may enroll in such courses with the permission of the instructor and the Graduate School.)

Courses numbered between 1000-1999 are for both Undergraduate and Graduate credit depending on the level of the student’s degree program.

Courses numbered between 2000-2999 are for Graduate credit (Undergraduate students may in enroll in such courses and may be applied towards their Undergraduate degree requirements by permission of the instructor.)

Courses numbered above 3000 are strictly for credit in the Alpert Medical School. Certain MD level courses may be taken for credit for Undergraduate students enrolled in the PLME program, but such courses do not count towards quantity, concentration, or Latin honors requirements for the Baccalaureate degree.

Maximum Course Load and Auditing

No student enrolled in The College or the Graduate School may enroll for more than five Brown credits in a semester. A degree candidate paying full tuition (4 or more enrollment units per semester) is enrolled in less than five academic credits may be permitted to audit (see below section on auditing) additional course(s). At no time may a student be registered for more than 5 credits/courses including audits.

Enrollment Without Academic Credit

Auditing. An auditor is a student who is registered in a course without earning academic credit upon successful completion under the following conditions: (1) the student must be properly registered for it; (2) the student must pay the usual course fee except as indicated in the next paragraph; (3) the student is entitled to all instruction in the course, including conferences, the criticism of papers, tests, and examinations.

Any student registered on a full-time basis may be permitted to audit additional courses in any semester without charge. The total number of course registrations, including audits, may not exceed five credits.

Non-degree or student paying less than four enrollment units of tuition may choose to audit if they so choose, but the student does so with the understanding that they will pay the equivalent rate as if registered for academic credit.

With the concurrence of the instructor, the fact that a course has been audited shall be entered on the permanent record of any student electing this privilege. The status of a course in which a student has registered may not be changed from audit to credit after the fourth week of classes or from credit to audit after midsemester.

Vagabonding. A "vagabond" is a student who, with the permission of the instructor involved, visits a given course occasionally or regularly without payment of fee. It is understood that such a student shall be entitled to participate in classes and activities, including discussions, conferences, and papers, only at the pleasure of the instructor.

Attendance, Grading, Examinations

Attendance

It is in the interest of every student to attend all sessions of the classes in which registered, and each student has an obligation to contribute to the academic performance of all by full participation in the work of each class; however, within such limits as are necessary for the general welfare, a student benefits also from exercising discretion and assuming responsibility for his or her educational progress.

Accordingly, unless the instructor imposes attendance requirements, students are not limited with respect to the number of absences from a course. When, in the instructor’s opinion, a student is abusing the privilege of voluntary attendance, the appropriate dean’s office should be notified so that appropriate action may be taken.

A student is always fully responsible for any course work missed because of absences and will be assigned failing grades in final examinations missed without excuse from the dean’s office.

No student organization shall make any appointment for undergraduates which conflicts with college exercises unless permission has been obtained from the dean.

Grading System

At the end of each semester final grades are given in semester courses. In all courses, except those designated by the instructor as Mandatory Satisfactory/No Credit, a student may, in consultation with the advisor, elect to be graded on a basis of either Satisfactory/No Credit or A, B, C/
No Credit. A student must for every course taken indicate by the end of the fourth week of the semester which basis for grading is elected. Any student regularly enrolled in a course, no matter whether for A, B, C/No Credit or for Satisfactory/No Credit, may request from the instructor a more detailed written evaluation of his or her work. (See Course Performance Report below.) Such supplemental evaluations are intended primarily for the information of the student and do not replace departmental evaluations.

No Credit. This grade is given when courses are not satisfactorily completed. The notation No Credit, and the description of the course in which it is given, are not entered on the official academic transcript.

1. Courses may be designated to be graded on a Mandatory Satisfactory/No Credit basis for all students enrolled on the initiative of the instructor. The designation of a course by an instructor to be graded S/NC only must be announced no later than the first day of classes and entails the responsibility for providing Course Performance Report forms to all students who request them. An asterisk shall accompany the listing on the transcript of any course that has been designated by the instructor to be graded on the basis of S/NC only, with an appropriate explanation of the symbol provided.

2. In exceptional circumstances, a course may be left incomplete (except for a regularly scheduled final examination—see paragraph 3 below), with the instructor's consent. In such cases, a grade of INC will be assigned provided that the student has filed a request for extension of time to complete the work of the course and the instructor has consented to such a request. Unless an earlier date is specified by the instructor, grades of INC must be made up as follows: for Semester I, by midterm of Semester II; for Semester II or the for-credit 7 week Summer Session, by the first day of Fall semester. Extensions beyond semester in which the course left incomplete was taken may be granted by the instructor who will indicate this in writing to the registrar. A course not completed by the designated time will be assigned a grade of NC unless the instructor indicates that sufficient work has been completed to justify course credit by submitting, as appropriate, a grade change from INC to A, B, C, or S. A grade of NC assigned in accordance with these procedures may be changed subsequently, but no later than one calendar year after the end of the semester in which the course was taken.

3. If a student is absent from a regularly scheduled final examination for a course, the instructor should submit either an INC or an NC. If the absence from the examination is excused by the dean, the student will be permitted to take a Special Examination and the original grade will be made into an ABS temporarily. The Special Examination will be administered by the Office of the Registrar in accordance with the provisions in the Faculty Rules for such examinations, unless other arrangements are agreed to by the instructor and the student, and communicated to the registrar. If the absence from the final examination is not excused by the dean, the student will receive no credit for the course.

Year Courses: A year course is one in which both halves must be passed in order to get credit for the entire year. The grade at the end of the first semester is normally a temporary one. Neither semester may be elected independently without special permission. The final grade submitted at the end of the course covers the work of the entire year and is recorded as the final grade for both semesters. It is normally expected that the second half of a year course will be completed in the second semester of the same academic year in which the first half was taken. If the second half of the year course is not completed at the end of that academic year, the grade for the first semester will become a No Credit. If the student completes the second part of the year course during a later academic year, he or she may need to notify the Registrar's Office, in order to reactivating the first part of the course.

In registering for the second half of a year course, students must register for credit if the first half was taken for credit. Similarly, if registered for audit in the first half, the second half of the course registration must also be as an audit. Exceptions must be approved by both the academic department and the Committee on Academic Standing.

Repeating Courses: Unless a course is explicitly approved by either the College Curriculum Council or Graduate Council as being able to be repeated for credit. Once course credit has been earned with an initial passing grade A, B, C, or Satisfactory (S) or through Transfer Credit it cannot be officially registered for again for in an effort to improve one's initial grade.

Grade Requirements for Advanced Degrees: A minimum grade of either Satisfactory or C in a 1000 or 2000 level course carries credit toward all advanced degrees. Individual departments may, subject to the approval of the Graduate Council, set higher grade requirements.

Advanced degree candidates may be required to register in courses primarily for undergraduates (numbered 1–999); these courses do not carry advanced degree credit. On occasion, however, and with approval of the student's department and the dean, a student may register for such a course with extra work for advanced degree credit. This course then has the same standing as a 1000-level course and an EX is noted on the transcript. This provision for extra work does not apply to courses of the level of 1–999 taken for graduate credit by students in MD program.

Course Performance Reports: Students, regardless of grade option selected, may request the instructor to complete a Course Performance Report. This request should be by the deadline specified in the Academic Calendar for the semester in which the course is being completed. The instructor may decline to complete such a form if it is believed he or she has inadequate information to do so. Particular consideration should be given to requests from students for whom the course is part of their concentration program or the course is taken on the S/NC basis. Copies of Course Performance Reports will be made available to: (1) the student, (2) the dean's office, and (3) the student's concentration advisor. While not part of the official record, Course Performance Reports may be sent out of the University at the student's request along with an official Brown University academic transcript. In such cases, the student must provide copies of such CPRs to be enclosed at the time the transcript is initially requested.

Transcripts: Requests for transcripts must be made either in writing by completing a Transcript Order Form, or electronically. For further information please visit the Office of the Registrar's website (http://www.brown.edu/about/administration/registrar/academic-transcript-requests). Transcripts will be issued only if all financial obligations to the University have been met.

An official transcript consists of a copy of the permanent record listing courses passed and grades received. A statement is added to all transcripts explaining the grading system and indicating that the student may elect to include other material with the official transcript. The student should choose this material in consultation with his or her advisor. The University will mail this material in one envelope along with the official transcript.

Examinations

A final, written examination (at the end of each semester) shall be given in each course numbereded under 2000 unless the instructor of a particular course decides to use some other mode of final evaluation. If the written examination is not to be used, the mode of final evaluation which is to be used shall be made known to the students in the course no later than midterm and, in addition, the department and the registrar shall be informed.

Final Examination Schedule: A pre-defined period at the close of each semester is provided for final examinations for those courses for which such an examination is scheduled. Two examination periods are scheduled for each day. The examination group is determined by, in most cases, the offering time associated with the course (indicated by the figure in parentheses) and also as displayed on Banner Web. The schedule for 2016-2017 is as follows:

<table>

</tr>
<tr>
<td>Dec. 17 Sat</td>
</tr>
</tbody>
</table>
Exam Excuses: The Office of the Dean of the College is solely responsible for determining whether a student's absence from a final examination is excused. To ensure equitable treatment of all students, students are excused from exams only for family or medical emergencies or for religious reasons. Please note that students' travel plans are never an excuse for missing a final exam. Faculty wishing to grant a student an exam excuse may contact the appropriate academic deans authorized to grant exam excuses. In emergency situations, students who are unable to contact their professors must contact the Office of the Dean of the College, which will determine whether or not an exam excuse is warranted. Course instructors are notified of exam excuses granted by the Dean of the College Office.

Consistent with Brown's policy on nondiscrimination, students who are unable to take a final examination due to religious observance may arrange to take their final at an alternate time. Consultation is required with the course instructor, the Chaplain's Office, and the Office of the Registrar, and the arrangements must be made by mid-semester. Students may obtain more information and an application for rescheduling a final due to religious observance from the Registrar's Office.

Make-up exams for approved exam excuses are administered by the Registrar in the second week of the subsequent fall or spring term. The Registrar's Office informs students by email of the date, time, and location of make-up exams.

Placement and Achievement Tests in Foreign Languages. Placement tests in the foreign languages are given during Orientation Program in the fall and during the first week of classes in each semester.

All students, before taking college courses in a foreign language in which they have presented entrance credit, must take either a placement test at Brown University or, preferably, a College Board Language Achievement Test in secondary school. Students with outstanding performance on these tests, or on the Advanced Placement Tests of the College Entrance Examination Board, may be admitted to advanced courses without the usual course prerequisites.

Student Code of Conduct

Academic Code Violations

All cases of academic dishonesty among undergraduates, graduate, or medical students, as defined in the Academic Code at Brown University, shall be referred to the dean of the College, Graduate School, or Medical School, or his or her designated representative. A student accused of such an offense shall be notified in writing as soon as possible of the specific charge or charges against him or her before his or her case is considered. The student shall be given the opportunity of a hearing before the designated representative of the dean of the College, Graduate School, or Medical School, and two members of the faculty, at which all relevant facts may be presented. A student shall have the right to appeal any decision to the dean of the College, Graduate School, or Medical School within five business days after receipt of the official letter outlining the case and the decision reached. For definitions of offenses against the Academic Code, procedures, policies, and a list of penalties, see the pamphlet issued by the Office of the Dean of the College, Principles of the Brown University Community: The Academic Code and Non-Academic Disciplinary System.

Nonacademic Discipline

Brown strives to sustain a learning environment that supports individual exploration. Central to this effort are the four primary Principles of the Brown University Community: individual integrity, respect for others, respect for University resources, and respect for the values of teaching, learning and scholarship. Our community believes that adherence to these principles supports the overall academic mission of the University. Violations of these principles will be handled through the procedures governing the Academic Code and the Non-Academic Disciplinary Procedures. These procedures are designed to address behaviors that impede the educational activity of the University or that infringe upon the rights of others.

Non-academic disciplinary cases are administered by the Office of Student Life, the Peer Community Standards Board, and the University Disciplinary Council. Specific hearing procedures can be found online at www.brown.edu/randr. Printed copies of the Non-Academic Disciplinary Procedures are available from the Office of Student Life.
### Academic Calendar

#### Summer 2016
- **April 1 - 21, 2016** Fri. - Thurs. Pre-registration for Summer courses.
- **April 22 - May 2, 2016** Fri. - Mon. Summer registration closed for Fall registration (online via Banner for continuing students).
- **May 3 - June 29, 2016** Tues. - Wed. Late registration period for Summer courses.
- **June 26, 2016** Sun. Residence halls open.
- **June 27, 2016** Mon. Summer Session begins.
- **June 29, 2016** Wed. Last day to change courses. (All students MUST be in their registered courses by Thursday, June 30.)
- **July 4, 2016** Mon. Independence Day holiday. No University exercises.
- **July 12, 2016** Tues. Last day to change grade options.
- **Aug 6 - 9, 2016** Sat. - Tues. Reading period.
- **August 9, 2016** Tues. Last day to drop a course. Last day to initiate a Course Performance Report via ASK.
- **Aug 10 - Aug 12, 2016** Wed. - Fri. Final examination period.
- **August 12, 2016** Fri. Summer Session ends.
- **August 13, 2016** Sat. Residence halls close.

#### Fall 2016
- **Aug. 1, 2016** Mon. Last day for payment of charges.
- **Sept. 2, 2016** Fri. Beginning of Graduate School Orientation.
- **Sept. 3, 2016** Sat. Beginning of College Orientation.
- **Sept. 6, 2016** Tues. Opening Convocation at 4:00 p.m. Registration of new students for the first semester (7:00 pm to midnight).
- **Sept. 7, 2016** Wed. Classes of the first semester begin. Web registration begins at 8:00 a.m.
- **Sept. 8, 2016** Thurs. First day of RISD Fall Session.
- **Sept. 15, 2016** Thurs. Last day to register for a Fall RISD course without a fee or change a grade option for a Fall RISD course - (5:00 p.m. deadline).
- **Sept. 20, 2016** Tues. Last day to add a course without a fee. (5:00 p.m. deadline.) The web will be taken down for approximately one hour. Once relaunched, all course adds require Instructor override and will be charged late fee of $15 per course.
- **Oct. 4, 2016** Tues. Last day to add a course (includes late fee), change from audit to credit, or change a grade option declaration (5:00 p.m. deadline).
- **Oct. 11, 2016** Tues. Date by which sophomores entering their 5th semester must file their concentration declaration forms via ASK to avoid having a No Concentration hold placed against their Banner registration (5:00 pm deadline).

#### Winter 2017
- **Oct. 5 - Oct. 18, 2016** Wed. - Tue. Registration for Wintersession courses.
- **Oct. 19 - Nov 8, 2016** Fri. - Mon. Wintersession registration closed for Spring registration.
- **Nov. 9 - Nov. 14, 2016** Wed. - Mon. Late registration period for Wintersession courses with late fee (5:00 p.m. deadline).
- **December 15, 2016** Thurs. Wintersession tuition due.

</table>
Admission

In order to receive information about admission to the undergraduate college, please visit our website to register online: www.brown.edu/Admission/Admission. Requests for applications for admission to undergraduate study should be addressed to:

- College Admission Office
- Brown University
- Box 1876
- Providence, Rhode Island 02912
- (401) 863-2378

The application deadline for the regular admission process is January 1 of the year of desired entrance to Brown. An early plan is available for students who wish to receive December notification. Early Decision candidates must apply as early in the fall of the senior year of high school as possible but in any case by November 1.

Subject Requirements

Brown’s commitment to fostering a liberal education assumes that a candidate for admission will profit most from pursuing a comprehensive college preparatory program. A strong background in English (both literature and writing), foreign languages, mathematics, science, and history will enable students to benefit from the intellectual opportunities offered by Brown University. Brown considers the programs listed below to be a desirable secondary school preparation.

- **English**—four years with significant emphasis on writing, continued through the senior year;
- **Mathematics**—at least three years of college preparatory mathematics, preferably continued through the senior year;
- **Foreign Language**—at least three years, preferably continued through the senior year;
- **Laboratory Science**—at least two years of laboratory science above the freshman-year level. Prospective science or engineering students should take both physics and chemistry, and as advanced a level of mathematics as possible;
- **History**—at least two years, including American History;
- **The Arts**—at least one year of study in music or art;
- **Elective Subjects**—at least one year of elective academic subjects;
- **Information Technology**—facility with computers is recommended for all applicants.

Exceptions may be made. The Board of Admission encourages the growth of innovative programs and welcomes applications from students of varying educational backgrounds who have shown outstanding intellectual promise. Exceptionally able students who are well-prepared to enter college before completion of secondary school may also be admitted, although such cases are unusual.

College Entrance Examination Board Tests

Each applicant must take the Scholastic Assessment Test (SAT Reasoning Test) and any two SAT Subject Tests of the College Entrance Examination Board no later than January of the senior year. Scores for the examinations administered through the American College Testing Program (the ACT) may be submitted in lieu of those of the College Board; the ACT with the Writing Test will serve as a substitute for the SAT requirements. It is the responsibility of each candidate to take the appropriate tests and to see that they are officially reported to the Board of Admission at The College by January 1 (or the January administration of the tests). A final decision on the application cannot be made until official scores have been received.

Advanced Placement Examinations

Brown participates in the Advanced Placement Program of the College Entrance Examination Board. The program’s aims are “to give able students challenging educational experiences in school, and to increase for these able students the opportunity to take advanced work in college.” Students enrolled in secondary schools participating in this program may take the appropriate examinations given in May and have the scores sent to the Office of the Dean of the College. Course credit and/or placement is determined by the appropriate academic department of Brown University, which may review the examination booklets and other materials. Policies on credit and/or placement vary from department to department. Students will be notified of such credit upon matriculation at Brown. Subjects in which course credit may be granted include American history, biology, European history, French, German, Latin, mathematics, physics, and Spanish.

Advanced Placement credits may not be applied to the minimum 30 courses needed to earn a Brown degree.

Advanced Standing for Work Done Prior to Entrance

Freshmen who have taken college courses at an accredited institution prior to matriculation at Brown may be considered for some advanced standing. Further, freshmen who have received certification under various international educational systems may also be considered for some advanced standing. Questions concerning course credit and advanced standing should be addressed to the Office of the Dean of the College.

Course Credit and Advanced Standing

By the end of their fifth semester, students must declare to the Office of the Dean of the College whether or not they wish to use their A.P. and/or international examination credit to accelerate their graduation. To use credit for acceleration, students may request one semester of Advanced Standing (and enrollment credit) for 3–6 course credits or two semesters of Advanced Standing (and enrollment credit) for 7–10 course credits. Students not requesting Advanced Standing (and enrollment credit) from the registrar by this deadline may not do so subsequently, except by petitioning the Committee on Academic Standing.

Transfer Admission from Other Colleges

Only a limited number of transfer students can be accepted each year. A maximum of two years of study elsewhere is transferable; extension (in most cases) and correspondence courses are not transferable, nor are courses outside the realm of defined academic disciplines (nursing, radio electronics and/or broadcasting, or business administration, to name a few). Students who wish to be considered as transfer candidates should write or call The College Admission Office for additional information, application forms, and procedures.

Special and Visiting Students

Each year, a number of students enrolled at other colleges spend a semester or a year as “visitors” at Brown to pursue course work (toward credit at their own college) not offered at their own institution. Other students are accepted on a non-matriculated basis for a limited number of courses and are classified as special students.

Resumed Education Program

The Resumed Undergraduate Education (RUE) Program is a small, highly competitive program ideal for students who interrupted or delayed their formal education due to family commitments, financial concerns, health issues, military service, employment opportunities, or simply a compelling need to explore other paths. Applicants must have earned a high school diploma or equivalent and have been out of high school for six or more years by the time of proposed enrollment at Brown.

Interested people should write to:

The Resumed Undergraduate Education Program
The College Admission Office, Box 1876
Brown University, Providence, Rhode Island 02912 or call (401) 863-2378.
Requirements for Baccalaureate Degrees

Baccalaureate Degree Programs

At Brown, two baccalaureate degrees are awarded—the Bachelor of Arts (A.B.) and the Bachelor of Science (Sc.B.). The degree awarded is determined by a student’s chosen concentration program. All Brown undergraduates must complete the requirements for either an A.B. or a Sc.B. in order to earn the baccalaureate degree at Brown. The Sc.B. degree recognizes a science concentration that demonstrates both breadth and depth in science beyond the minimum required for the A.B. degree in the same field. An Sc.B. program normally follows these guidelines:

1. The concentration program, with the exception of Engineering, shall require no more than ten courses in any one department. The total number of concentration courses required shall not exceed twenty (twenty-one for Engineering).
2. At least one semester course of independent study, research, or design in the concentration discipline must be included.
3. Additional electives must be chosen to meet the quantity requirement for all baccalaureate degrees. In cases where the student may successfully complete the Sc.B. degree on the basis of one concentration as well as an additional concentration associated with an A.B. degree, only one degree (Bachelor of Science) is awarded upon graduation. "See below for requirements associated with combined degrees.

Degrees with Distinction

Baccalaureate degrees may be awarded with distinction (magna cum laude) to those students whose percentage of quality grades — grades of ‘A’ or ‘S with Distinction’ -- in courses taken at Brown puts them in the top 20% of the entire undergraduate graduating class. The Registrar will provide an opportunity for students to indicate that they do not wish to be considered for a degree with distinction.

Quantity and Progress Requirements

In order to graduate with a Brown baccalaureate degree, a student must successfully complete at least 30 courses (equivalent to 120 semester hours), 15 of which must be taken at Brown. A maximum of 4 summer courses may be applied toward this requirement. Approved study at another institution may also count toward the 30-course degree requirement. The standard semester course load at Brown is four courses. Full-time students are permitted to enroll in a maximum of five courses in a given semester; students may take three courses in a semester as long as doing so will not bring them below the level of good academic standing. A student may not enroll in fewer than three courses in any semester without written permission from a designated academic dean. Resumed Undergraduate Education students may study on either a part-time or full-time basis.

Residence Requirement

With the exception of students admitted to the Resumed Undergraduate Education (RUE) Program, every candidate for a baccalaureate degree must be in residence at Brown for at least four semesters as a full-time student. Credits from Brown Exchange programs, Brown Approved Alternative Study Abroad programs, and the Brown Summer School do not apply to the residency requirement. Students in the RUE Program must be in residence for the equivalent of four full-time semesters. RUE students may study on either a part-time or full-time basis. Every student must spend sufficient time in concentration studies to permit faculty evaluation of his or her concentration.

Writing Requirement

Learning to write well is a developmental process that occurs over time. Brown students are therefore required to work on their writing at least twice: once in their first two years of study, and a second time as juniors or seniors. Students must complete an approved writing course at Brown in their first two years of study. Exceptions are made for transfer students, who may meet this part of the requirement with an appropriate course from their prior institution.

As juniors and seniors, all students must demonstrate that they have worked on their writing a second time in a course they have taken at Brown. Students may take another approved writing course to meet this part of the requirement, or if approved by the concentration, they may upload a substantial piece of writing developed within the concentration. Writing completed in courses taken away from Brown will not meet Part 2 of the writing requirement. Learn more about the University Writing Requirement (https://www.brown.edu/academics/college/degree/curriculum/writing-requirement).

Concentration Requirement

An academic concentration is the focal point for a student’s undergraduate educational experience at Brown. It is an in-depth study centering on a discipline or disciplines, a problem or a theme, or a broad question. Concentrations aid intellectual development by encouraging conceptual and methodological study on a sophisticated level. A concentration may coincide in some ways with specific prerequisite training for professional goals, but professional training is not the central aspect of the concentration process. Rather, the concentration is designed to foster students’ command of an area of knowledge and ability to use a concentration’s concepts and methods in a coherent manner.

Brown offers standard concentrations that lead to either the Sc.B. or the A.B. degree. In keeping with the philosophy of the open curriculum, students may design an independent concentration if independent concentration offerings do not match their interests. Independent concentration proposals are sponsored by at least one faculty member and must be reviewed and approved by a subcommittee of the College Curriculum Council.

A listing of departmental and interdepartmental concentration programs that are currently available may be found at: http://www.brown.edu/academics/college/concentrations/. The programs have been approved and are subject to periodic review by the College Curriculum Council. Guidelines for preparing an independent concentration proposal are on the Dean of the College website.

All students must request, in writing, admission to a concentration program no later than the middle of their fourth semester, before pre-registering for semester five (usually spring semester of sophomore year). The written proposal should outline the student’s major objectives in choosing the concentration, while also listing the specific courses to be taken. This proposal functions as a kind of contract, and is signed jointly by the student and the concentration advisor for the relevant department or program. Once the contract has been signed, the departmental concentration advisor becomes the student’s advisor for the remainder of his or her time at Brown.

Students may complete as many as three concentrations during a regular four-year program; Brown does not offer minors. A student who satisfactorily completes more than one concentration program may have that fact indicated on his or her permanent record. In order to accomplish this, the student must have filed a declaration form for each concentration by the end of the pre-registration period in the student’s seventh semester. Sponsorship and authorization of each concentration program shall follow the usual procedures.

No student will be permitted to register for his or her fifth semester unless a declaration of concentration has been filed. Students failing to complete registration on time because of the failure to file a concentration declaration will be subject to the same action taken by the University for all cases of late registration (see Financial Information (p. 733)).

Honors in the Concentration: Students whose work in the field of concentration has demonstrated superior quality and culminated in an honors thesis of distinction are awarded departmental honors at Commencement. The designation “Honors” is included on the student's transcript and diploma. No distinctions are made among quality levels of honors work. Students considering honors work should consult their departmental, interdepartmental, or independent concentration advisor.

Recommendations for honors are due in early May preceding Commencement. Brown does not grant honors retroactively. Therefore, students who consider taking a grade of Incomplete in a thesis...
Enrollment Requirement

By decision of the Corporation, prior to the awarding of a baccalaureate degree each student is required to accumulate eight semesters, or 32 units, of enrollment credit. The eight-semester enrollment requirement is separate from and in addition to any other degree requirements. A semester of enrollment credit can be earned by studying full-time at Brown for a semester, by transferring in a full semester’s worth of work from an approved program of study at another institution, from certain Advanced Placement (AP) exams, and from some international certification programs such as the British A-Levels and the International Baccalaureate. Summer school courses do not count toward the enrollment requirement unless students successfully complete four summer courses at Brown. (See section below on Tuition Regulations Relating to Brown Summer Session Courses.)

Requirements for Combined Degree Programs

Combined A.B./Sc.B. Degree

Students who wish to earn a combined A.B. and Sc.B. degree may do so in a five-year program in which work for both degrees proceeds concurrently. Students who elect this five-year plan will usually arrange their programs of study so that they may change to either degree candidacy alone prior to the fourth year.

Requirements for this degree program are as follows:

• Declaration of intent. A formal application approved by the appropriate dean must be filed with the Registrar no later than the student’s fifth semester of study.

• Satisfactory completion of the Sc.B. requirements for a standard concentration program in the life sciences, physical sciences or mathematics, or an approved independent Sc.B. program spanning one or more of these areas.

• Satisfactory completion of the A.B. requirements for a standard or independent concentration in the humanities or social sciences.

• A minimum of 38 courses passed. Transfer credits are awarded according to the University’s standard rules and regulations.

• At least three years in residence.

• Ten semesters, or 40 units, of enrollment credit. At least six of the ten semesters must be completed in residence at Brown. The ten-semester enrollment requirement is separate from and in addition to any other degree requirements. A semester of enrollment credit can be earned by studying full-time at Brown for a semester, by transferring in a full semester’s worth of work from an approved program of study at another institution, from certain Advanced Placement (AP) exams, and from some international certification programs such as the British A-Levels and the International Baccalaureate. Summer school courses do not count toward the enrollment requirement unless students successfully complete four summer courses at Brown. (See section below on Tuition Regulations Relating to Brown Summer Session Courses.)

Concurrent Program Leading to a Baccalaureate Degree and a Master’s Degree

Subject to the prior approval of the department involved, the Graduate Council, and the Committee on Academic Standing, exceptionally capable students may be permitted, in their junior year, to enter a graduate program of study leading to the earning of both baccalaureate and master’s degrees at the end of eight or nine semesters. Students who are granted this permission complete a minimum of 34 courses within eight or nine semesters. Specific requirements for both degrees must be met, although some courses may be used for credit toward both degrees. Normally, no more than two courses counted toward the undergraduate concentration may be used to fulfill the requirements of the graduate degree. The program includes at least two 2000-level courses, not including any 2000-level courses counted for the independent project or thesis.

In cases where the requirements for an advanced degree are partially completed by students in meeting the requirements for a baccalaureate degree, graduate credit for such work may be allowed upon formal admission to the Graduate School. The Graduate Council shall, in consultation with the department involved, determine the remaining requirements to be satisfied for the advanced degree.

The Committee on Academic Standing follows certain guidelines in considering requests for admission to this combined degree program. Interested students should obtain a copy of these guidelines at the Office of the Registrar prior to filing an application.

Integrated Five-Year Baccalaureate–Master’s Degree Program

With the approval of the Graduate Council, academic departments may establish integrated programs leading to the successive awarding of the bachelor’s and the master’s degrees. In such programs, a student may offer up to two courses taken during undergraduate study at Brown in partial fulfillment of the requirements for the master’s degree. In all cases, the equivalent of at least six semester courses must be taken in-residence at Brown University.

A student must apply for admission to an integrated program no later than the end of the third week of his or her penultimate semester of undergraduate study. Admission to the Graduate School for the fifth year will ordinarily be a matter of course; however, such admission must be applied for at the proper time and decided on in the regular way. Students interested in this program should consult with the Associate Dean for Academic Affairs in the Graduate School.

Brown-Rhode Island School of Design Dual Degree Program

In this five-year program, students complete a baccalaureate degree at Brown and a Bachelor of Fine Arts (B.F.A.) degree at RISD. The Brown degree earned by students in the program will ordinarily be an A.B. degree. Earning a Bachelor of Science degree is not prohibited, but doing so is difficult because Sc.B. programs are more credit heavy than A.B. programs. For this reason, permission to pursue an Sc.B. in this program is granted on a case-by-case basis. The RISD degree will in all cases be a bachelor of fine arts (B.F.A.) degree. Other degrees offered at RISD ordinarily take five years and thus are excluded from the program.

To gain admission to the program, students must apply to and be admitted by both schools. Because of the program’s strict requirements, only students applying to enter as first-year students are eligible. Approximately 15 students matriculate in the program each year. Once admitted to the program, students must complete 156 credit hours, at least 60 of which (15 courses) must be taken at Brown. This requirement does not include courses earned on Brown sponsored exchange or approved study abroad programs nor Brown summer session courses.

Program in Liberal Medical Education

Each year, Brown’s Program in Liberal Medical Education (PLME) matriculates approximately fifty first-year students who will pursue an undergraduate degree and professional studies in medicine in a single eight-year program. As undergraduates, PLME students may choose to work toward an A.B. or Sc.B. degree in the sciences, or toward an A.B. in the humanities, social sciences, or behavioral sciences. The undergraduate experience is designed to prepare students for the last four years of the program, which constitute the medical school years and culminate in the MD degree.
To apply to the PLME program, students submit the standard Brown application. Candidates considered admissible by the College Admission Office are reviewed by the PLME Advisory Board. Applicants not admitted to PLME are still considered candidates to the College for the Bachelor of Arts or Bachelor of Science degree.

Academic Advising Programs

A strong network of advisors and mentors helps students engage fully and successfully with Brown’s open learning environment. Brown’s advising programs are designed to facilitate these relationships and provide students with maximum opportunity to formulate and achieve their educational objectives. Students are expected to take the initiative in seeking out and working with advisors to make the best use of their time at Brown.

To ensure that students have the guidance and support they need to make informed choices, the University assigns each first-year student two advising partners: an academic advisor. The academic advisor provides long-term institutional perspective on educational options while generally informing, sometimes encouraging, and occasionally challenging students. The student Meiklejohn provides an experienced perspective on the ins and outs of course registration, course reputations, prerequisites, and the like.

As first-year students transition to the sophomore year, they are encouraged to stay with their first-year advisors so that they can benefit from the continuity and depth of a two-year advising relationship. Most do stay with the same advisor, although some select a different faculty member or administrator. The efforts of assigned sophomore advisors are augmented by Randall Advisors and Sophomore Deans in the Dean of the College Office. These advising resources constitute the foundation of “sophomore advising” at Brown and help students navigate the critical second year of undergraduate study.

Students declare a concentration in their fourth semester of study. Concentration advisors help with this process by explaining the dimensions of their academic disciplines, reading and providing feedback on students’ concentration declaration essays, and advising students during their final two years at Brown. Faculty of individual departments and programs that administer concentrations often serve as informal advisors to their concentrators.

Students in all four years can interact informally with advisors over coffee or tea in Advising Central, located on the third floor of J. Walter Wilson. Academic deans and Faculty Advising Fellows hold office hours in Advising Central every weekday afternoon. Faculty Advising Fellows (FAFs) are experienced academic advisors who are interested in students’ lives both in and outside the classroom. By directing students to Brown’s many programs and resources, FAFs can help first years, sophomores, juniors, and seniors make the most of their college experience.

A broad network of academic, co-curricular, and personal counseling complements the work of assigned advisors and faculty fellows. Throughout the year, deans in the College and in the Office of Student Life provide one-on-one consultation to all students who request it. Additional support is available from the Tutoring Program, the Curricular Resource Center, the Sarah Doyle Women’s Center, the Brown Center for Students of Color, the Career Development Center, the professional staff in University Health Services, and the chaplains. Peer advising groups include Brown’s Meiklejohn advising program, residential peer leaders, minority peer counselors, Career Center peer counselors, pre-med peer counselors, and athlete peer advisors.

Academic Support Services

A number of programs support undergraduates’ academic success and help them take full advantage of the curriculum.

- The Office of Co-Curricular Advising and Tutoring organizes academic coaching, group tutoring, and individualized tutoring. Group tutoring is offered for select courses in chemistry, economics, math, and physics. Individual tutoring is available by application.
- The Curricular Resource Center provides advising, facilitation and reference materials for students wishing to design their own courses (ISPs and GISPs), to craft independent concentrations, and to explore options for time away from Brown.
- Student and Employee Accessibility Services (SEAS) coordinates and facilitates services for students, faculty, and staff with physical, psychological, and learning disabilities.
- The Math Resource Center assists students in introductory mathematics courses.
- The Science Center offers academic support, tutoring, science-related activities, and a network of faculty and peer advisors familiar with Brown’s science curricula. Through various events and workshops, the Center works to increase the Brown community’s understanding of science.
- The Writing Center provides individual and group writing support to any member of the Brown community. Writing Center staff members help students with all stages of the writing process, from finding a topic through drafting, revising, and final editing. Writing Center associates also offer workshops for groups of students on various writing topics.

Academic Standing

The Brown Faculty and Corporation set the minimum standards students must meet in order to earn the baccalaureate degree. Undergraduate students are normally expected to take 4 courses each semester for a total of 32 courses in 8 semesters and will ordinarily complete 8 courses in every 2 consecutive semesters. Students must complete a minimum of 30 courses in 8 semesters. (Successful completion means a course completed with a grade of A, B, C, or S.)

To remain in good academic standing, Brown students must satisfactorily complete at least three courses by the end of the first semester, seven courses by the end of the second semester, eleven courses by the end of the third, fifteen by the end of the fourth, eighteen by the end of the fifth, twenty-two by the end of the sixth, twenty-six by the end of the seventh, and thirty courses to graduate after eight semesters. In addition, students making satisfactory academic progress will complete a minimum of seven courses in any two consecutive semesters. Prior to summer 2016, academic standing was determined only on the basis of courses completed at Brown. Effective Summer 2016, academic standing is determined on the basis of courses completed at Brown or via approved transfer credit noted on the transcript AFTER a student has been matriculated as a degree candidate. Any pre-Brown matriculation credit, such Advanced Placement (A.P.) credit, IB, college credits for transfer students, etc. do not figure in the determination of academic standing.

Undergraduates who, in the judgment of the Committee on Academic Standing, have unsatisfactory scholastic records may be placed in one of three categories—Academic Warning, Serious Warning, or Academic Suspension. Academic Suspension includes a permanent transcript notation. The Committee’s judgment will depend on the extent of a student’s academic deficiency as defined by rules approved by the Faculty on February 5, 1991:

Academic Warning cautions a student that his or her record is below the standard for graduation.

Serious Warning notifies a student that, unless the record improves, he or she will be subject to academic suspension at the end of the semester.

Academic Suspension may be ordered when the Committee finds that a student’s academic record falls more than two credits below the number expected for the student’s semester level.

Students on Academic Warning and Serious Warning are required to obtain special academic advising from an assigned dean.

Guidelines for Study Elsewhere

Students who wish to transfer credit for study completed at other four-year institutions may do so with prior approval of the appropriate departments and the Committee on Academic Standing (CAS). The rules governing transfer credit for study away from Brown are complex. One set of rules governs study abroad; another applies to study away in the U.S. Yet another set of rules applies to summer study transfer credits. This section describes the policies and procedures that are most common called
into play when matriculated students wish to have credits from elsewhere added to their Brown transcript. Students may receive up to eight course credits for work undertaken during the academic year. In a semester credit hour system, one Brown course is considered the equivalent of six semester hours. In a quarter credit hour system, one Brown course is considered the equivalent of six quarter hours. For that reason, the number of course credits received for study away from Brown may not be equal to the number of courses taken. For example, a student taking three four-semester-hour courses, all properly approved for Brown transfer credit, will receive the equivalent of three Brown course credits. However, a student taking three four-quarter-hour courses, all properly approved for Brown transfer credit, will receive the equivalent of two Brown course credits. It is the student's responsibility to clarify in advance any concerns regarding the amount of transfer credit that may be awarded.

In order to be considered for transfer credit, courses must be completed with a grade of C or better, and an official transcript must be received by Brown's Office of the Registrar from the host institution. This transcript will be retained by the University. All transfer credit must receive faculty and Committee on Academic Standing approval. Students should also keep all records from their work away, including: course syllabi, exams, papers, notes, projects, and portfolios, in the event that post-approval is required from an academic department at Brown.

The Brown transcript will indicate the name of the host institution, the time period during which the student studied there, as well as the courses taken and/or unassigned credits at Brown. In the case of Brown sponsored exchange and approved study abroad programs during the academic year, all course work is reflected with the actual course title and a grade of 'S'.

Students applying to graduate and professional schools are often asked to provide official transcripts from all institutions at which they have been enrolled. In such cases, the student will need to request copies of their transcripts from the study-away institution.

**Study Away in the U.S.**

Students planning to study elsewhere in the United States should obtain an instruction sheet and a preliminary transfer credit approval form from the Dean of the College website. Students should then work out a program and present it to their concentration advisor and/or other appropriate faculty members for approval. When the preliminary transfer credit form is returned to the study away dean, that dean will approve it on a tentative basis for the CAS or advise the student to petition the CAS, in which case instructions for that petition will be made available. Students should also keep all records from their work away, including: course syllabi, exams, papers, notes, projects, and portfolios, in the event that post-approval is required from an academic department at Brown.

**Study Away during the Summer**

Two avenues of study are available to undergraduate students interested in summer work. They may take courses in Brown's Summer School, or apply for transfer credit from other summer programs—either domestic or international—that meet certain conditions. Whether studying in the U.S. or abroad, students must study at accredited, degree granting, four-year institutions. Extension division courses are generally not allowed. Students should obtain preliminary approval for summer study away from Brown by the Committee on Academic Standing and appropriate faculty.

Students may count as many as four summer courses from all sources (or their equivalent, if summer courses carrying fewer than 4 credits were transferred to Brown) toward the baccalaureate degree. No more than the equivalent of two Brown courses will be transcripted for any given summer of enrollment. Summer transfer credit may not be used to advance a student's date of graduation. Students interested in summer study elsewhere should consult the Dean of the College office or the Office of International Programs (OIP), as appropriate.

**International Study**

Brown's Office of International Programs (OIP) coordinates all study abroad undertaken by Brown students either on Brown sponsored programs or on Brown approved programs. At present, Brown sponsors programs in France, Spain, Cuba, Czech Republic, Italy, Germany, Denmark, Sweden, The United Kingdom, Tanzania, Japan, Barbados, Brazil, India. Students interested in study abroad should check with OIP as far in advance of any intended study as possible. Brown students of any nationality are not allowed to study abroad in countries where there is a travel ban by the U.S. State Department.

The College Curriculum Council (CCC) has established the following guidelines for study abroad by Brown students:

To receive credit for international study, students must spend at least one semester enrolled in a international institution of higher learning, subject to the same rules and regulations as the host institution's regular students. There are two exceptions: where the language of study is one in which sufficient proficiency is unlikely to be achieved by the average Brown undergraduate, but the student should study the language while in the country; and where the usual assessment procedures may not be appropriate, in which case special arrangements may have to be made. Students may not study on itinerant programs (i.e., those which travel through many sites rather than being based in one primary site). Nor may they study at institutions created for overseas study for Americans, with special exceptions: for study of a specific area and/or field research unavailable at Brown or better pursued at an international site OR in sites where "the average Brown student" cannot study alongside local students because of the language, e.g., Keio, Denmark, Sweden, Czech Republic. Exceptions include Syracuse-in-Florence, for art history students; ICCS in Rome for classics students; programs that provide a structured "field studies" curriculum appropriate for students in such fields as development studies, environmental studies, ecology, geological studies, etc.; and programs providing for studies pursued at Brown but often not found in regular university programs overseas, such as studio art or theater arts.

Prerequisites for such programs will be stated and must include previous course work pertinent to the intended study abroad.

**International Study and Brown Curriculum**

International study should complement the student's program of study at Brown. This should be ascertained by the Office of International Programs (OIP) in consultation with the CCC subcommittee on International Study, the Committee on Academic Standing (CAS), and regional advisory committees.

**Non-Brown programs**

Brown's Office of International Programs works closely with key academic departments to develop a list of programs approved for international study. This list includes all Brown-sponsored programs and programs administered by institutions other than Brown in each region. All such programs should conform to the above guidelines for international study. Students do not need CAS approval for study on these programs. The list will be reviewed every two years, and any new Brown-sponsored programs are added immediately.

**For Programs Not on the List**

Students may petition for approval to study on other programs but should be sure to check the international study guidelines to see if the proposed program meets the criteria. Grounds for exceptions include: the desire to study in a country where there is no approved program; or the desire to study at an institution known for excellence in a specific field. Students must submit a written rationale, a tentative list of courses, and a supporting statement by a faculty member who is familiar with the program or who has expertise in the field of study being pursued. The proposal will be evaluated by the appropriate regional committee; CAS will make the final decision.

OIP reports annually on petition actions to the CCC subcommittee on international study.

Students planning to study abroad must be in good academic standing. They must be able to demonstrate competency in a foreign language, if they are involved in the international study. For some programs, applications are reviewed by faculty committees. Prior approval of the Committee on Academic Standing is required for all students intending to study abroad on non-Brown programs not on the approved list for transfer credit. Prior approval of departments must also be secured for credit towards concentration.
Curricular Programs

Diverse Perspectives in Liberal Learning

Brown’s open curriculum challenges students to open their perspective on the world by embracing new experiences, new ways of thinking, and new people. One way students can address this expectation is through challenging coursework. Diverse Perspectives in Liberal Learning courses offer students the means not only to understand the complex dynamics of social inequity, exclusion, and difference but also to do something with what they learn.

Through content, methodology, or pedagogy, DPLL courses seek to:
• Expose and critique the diverse historical and cultural forces that shape the construction of knowledge in all disciplines;
• Teach the arts of critical reflection: questioning thoughtfully, listening openly, and speaking cogently about differing points of view;
• Develop responsible citizens by examining the ways that power and privilege affect human lives and providing pathways to meaningful change.

Some DPLL courses may, through their content, focus on questions of race, nationality, ethnicity, sexuality, religion, gender, age, disability, or socio-economic status. Others may employ creative methods to investigate how knowledge is constructed and received in different contexts. Still others may feature community-based activities, encouraging students to become agents of change both locally and globally.

A complete list of each semester’s DPLL courses may be viewed in Courses@Brown by choosing “Diverse Perspectives in LL” in the Curricular Programs field.

First Year Seminars

First-year seminars ensure close contact between first-year students and faculty members while simultaneously offering a rigorous introduction to the concepts and methods of a particular subject area or department. Seminars have few if any prerequisites and are offered in all areas of the curriculum, from anthropology to physics to literary arts. Students receive regular feedback on the work they produce for the seminars, and seminar faculty often serve as informal mentors for their students long after the class has ended.

A complete list of each semester’s seminars may be viewed in Courses@Brown by choosing “First-Year Seminar” in the Curricular Programs field. Registration for first-year seminars takes place during the summer prior to students’ matriculation to Brown. Depending on availability, first-year students may also add seminars to their course schedules during pre-registration and shopping periods.

Liberal Learning

The Liberal Learning course list was created to assist students in planning a course of study consistent with the goals of a liberal education. These courses, which are an established part of the Brown curriculum, emphasize synthesis rather than survey and focus on methods, concepts, and values. Reflecting Brown’s conviction that liberal education requires active student involvement, Liberal Learning courses entail extensive student participation through papers, projects, reports, and class discussion.

A complete list of each semester’s LILE courses may be viewed in Courses@Brown by choosing “Liberal Learning” in the Curricular Programs field.

Sophomore Seminars

Sophomore seminars bring together ideas, perspectives, and approaches that are not normally seen side by side in a given course or program. Embracing a range of intellectual perspectives, many of the seminars focus specifically on issues of social justice, identity, and difference.

Limited to twenty students each, the seminars help students develop the skills, knowledge, and values they need to progress toward more advanced learning in a discipline or field.
A complete list of each semester’s SOPH seminars may be viewed in Courses@Brown by choosing “Sophomore Seminar” in the Curricular Programs field.

Writing-Designated Courses

Brown students are expected to work on writing in their general studies and in the concentration. Students may begin to fulfill this expectation by taking at least one course that carries the WRIT designation. WRIT courses are offered across the curriculum and help students develop the ability to write well in styles appropriate to different academic disciplines. A complete list of each semester’s WRIT courses may be viewed in Courses@Brown by choosing “Writing-Designated Courses” in the Curricular Programs field.

The Graduate School

The Graduate School oversees graduate education at Brown University, which prepares students for distinguished careers in research, teaching, and as experts in the public and private sectors. Master’s students are trained to assess information and trends in their fields and to create original works. Doctoral students perform research at the highest level, advancing knowledge in their fields.

The rigors of research, analysis, debate, performance, and publication prepare our graduates to help solve local, national, and international problems.

Brown University offers more than 70 graduate programs through the Graduate School. Brown has a friendly scale and collaborative culture. With 2,000 graduate students and more than 700 full-time faculty members, Brown offers exceptionally close mentoring in its doctoral and terminal master’s programs.

The Graduate School website (http://www.brown.edu/academics/gradschool) serves as the primary source of information on doctoral programs (http://www.brown.edu/academics/gradschool/phd-programs) and master’s programs (http://www.brown.edu/academics/gradschool/masters-programs) including a distinct page (also contained with this Bulletin) for each program in terms of application and completion requirements. The Graduate School website also explains the general application (http://www.brown.edu/academics/gradschool/application-information) process as well as provides the link to the online application.

Information on general rules and regulations are detailed on the Graduate School (http://www.brown.edu/academics/gradschool/academics/rules-regulations) site. The Graduate School Handbook, dissertation guidelines, and master's thesis guidelines can all be found in that section. Additional regulations with regards to overall requirements and tuition regulations can also be found on the Office of the Registrar's (http://www.brown.edu/about/administration/registrar/degree-guidelines-0/graduate-school) website.
The Division of Biology and Medicine

The Division of Biology and Medicine is home to five academic departments, fourteen clinical departments, and is affiliated with seven diverse teaching hospitals (http://brown.edu/academics/medical/about/hospitals) in and around Providence. At the Division's core is the Warren Alpert Medical School and the five academic departments in Biology (which includes study at the undergraduate and graduate levels).

For more information on Brown's many research centers, institutes, programs, and other initiatives in the health and life sciences found within the Division of Biology and Medicine, please visit http://biomed.brown.edu/research/cip.

For further summary information on the academic units within the Division, please follow the below links:

- Biology (Undergraduate) (p. 104)
- Biology (Graduate) (p. 121)
- Neuroscience (p. 126)

The Warren Alpert Medical School of Brown University

Dean
Jack A. Elias

Admissions

Students interested in the study of medicine at the Warren Alpert Medical School of Brown University may apply through a variety of admission routes designed to create a highly qualified and diverse medical student body.

The majority of the 120 matriculants in the first-year class apply through the American College Application Service (AMCAS). Approximately (40%) of the first-year class enroll from Brown’s eight-year combined Bachelor’s-medical degree Program in Liberal Medical Education. These students are joined by students entering through special programs at institutions with which the medical school has formed linkages (postbaccalaureate and early identification). These admission routes are described below.

AMCAS Admission

Qualified students or graduates of accredited colleges or universities in the United States or Canada may apply to Alpert Medical School (AMS) through the AMCAS route. Individuals must first complete and submit the electronic AMCAS application, found on the website of the American Association of Medical Colleges (https://www.aamc.org), and indicate that they wish to apply to the Warren Alpert Medical School of Brown University. Applicants must also complete a web-based secondary application (forwarded by AMS Office of Admissions) and submit an application fee to be considered an eligible candidate for admission.

The AMCAS applicant pool for the most recent entering class (MD 2016) was competitive, with over 3300 applicants vying for 57 seats (of 120). The applicant pool was impressive in geographic scope and size, including residents of 49 states, the District of Columbia, the Commonwealth of Puerto Rico, and a number of foreign countries (predominantly Canada, China, and South Korea).

Additional information and related admission requirements may be found at http://www.brown.edu/academics/medical/admission. The Office of Admissions may be contacted by email (MedSchool_Admissions@brown.edu) or telephone (401) 863-2149. Letters and other correspondence should be mailed to the Office of Admissions, Box G-M, Brown University, Providence, RI 02912-9706.

Program in Liberal Medical Education (PLME)

The Program in Liberal Medical Education is an eight-year continuum of liberal arts and medical education leading to both the bachelor’s and M.D. degrees. The PLME is open to high school graduates who have applied to and are simultaneously admitted to Brown for their undergraduate studies. The PLME seeks highly qualified and strongly motivated high school students who are committed to a career in medicine at an early age and who also wish to pursue another area of academic interest to an advanced level of scholarship within the framework of a broad liberal education.

From a large (approximately 2,000) and highly qualified applicant pool, roughly 50 students matriculate annually. For additional information regarding the PLME, access the website at http://www.brown.edu/academics/medical/plme or contact the College Admission Office, Brown University, Prospect Street, Providence, RI 02912-9706; (401) 863-2378.

Postbaccalaureate Linkage Programs

The Postbaccalaureate (PB) Linkages are cooperative ventures between Alpert Medical School and the Premedical PB Programs at Bryn Mawr College, Columbia University, Johns Hopkins University, and Goucher College. Postbaccalaureate students enrolled in these programs may be offered admission to the medical school during the spring semester of their first year of study, thus allowing them to enter the medical school in the next class.

Selection occurs by a nomination process in which the premedical advisor selects candidates meeting established eligibility criteria (e.g., age, postbac grade point average). The number of PB students in each medical school class depends upon the number of places available as well as the caliber of the applicant pool. PB students nominated for admission must apply to AMCAS and complete an AMS secondary application. The MCAT is not required for admission. Timelines for this process are distributed to PB Program Directors on a yearly basis. Completed applications are reviewed by a subcommittee of the Admissions Committee, which selects nominees for interviews. The interviews follow the same protocol as that for AMCAS applicants and the same evaluation form is used.

The Early Identification Program (EIP)

The Early Identification Program (EIP) provides selected students at cooperating institutions with a place at Alpert Medical School upon continued academic progress and college graduation. This route provides opportunities for a medical career to two groups:

- Rhode Island residents enrolled at Providence College, Rhode Island College, and the University of Rhode Island; and
- Students enrolled at Tougaloo College, a historically black, liberal arts institution in Mississippi.

Eligible students are identified by their premedical advisor in the sophomore year of college, participate in selected PLME activities, and enroll in medical school after receiving the bachelor's degree. Generally, up to two students may be admitted annually from each school. For more information and application procedures, please contact the premedical advisor at the participating institutions. For more information access the website at http://www.brown.edu/academics/medical/admission/other-routes-of-admission

Definition of Rhode Island Residency for Medical School Admission

An individual is considered a Rhode Island resident if he or she graduated from a Rhode Island high school and if the individual's parent(s) have lived in Rhode Island for the previous two calendar years, as documented by federal tax returns. For dependent students, the custodial parent(s) must claim the student as a dependent on his or her federal tax returns for the prior two years. Individuals who are independent (i.e., not living with parents and filing individual federal tax returns for the previous two years) must have at least one parent residing in Rhode Island for the previous two years, as documented by federal tax returns.

Selection Factors

Students admitted to Alpert Medical School must attain competence in the sciences basic to medicine at a sufficient level to provide adequate
preparation for medical school. Applicants are expected to demonstrate competence by successfully completing the following premedical course requirements at a college or university in the United States or Canada: one semester of organic chemistry; and two semesters of physics, inorganic chemistry, and social and behavioral sciences. The Medical College Admission Test (MCAT) is required for AMCAS route applicants.

All applicants are selected on the basis of academic achievement, faculty evaluations, evidence of maturity, motivation, leadership, integrity, and compassion. For the PLME, Brown seeks highly qualified and strongly motivated students who wish to pursue an area of academic interest to an advanced level of scholarship within the framework of a liberal premedical education.

In order to be eligible for consideration, candidates must present a minimum cumulative grade point average of 3.00 (on a 4.00 scale) in courses taken as a matriculated student at an undergraduate college. Applicants who have attended graduate school must achieve a cumulative grade point average of 3.00 (on a 4.00 scale) in courses taken in graduate school. Applicants must have completed requirements for the baccalaureate degree before matriculating into the medical school. All applicants must be capable of meeting the competency requirements expected of all graduates. Technological compensation can be made for some disabilities in certain competency requirements. Candidates accepted for admission who will need special accommodations cannot be admitted unless those supportive services are available, as determined by the Dean of Medicine and Biological Sciences. The processes for assessing whether applicants will be able to meet the competency requirements for the M.D. degree are described in Technical Standards for Medicine, listed below.

In keeping with the mission of Brown University, the office of admissions recognizes the importance of diversity to the success of the medical school. Dimensions of diversity include, but are not limited to: race, ethnicity, religious affiliation, gender identity, sexual orientation, veteran status, age, socioeconomic status and geographic background. Multicultural perspectives enrich educational understanding, improve outreach to the community, enhance trust and communication, and facilitate development of culturally appropriate clinical and research programs.

Technical Standards for Medicine

Process for Assessing Whether Applicants Meet Technical Standards for Medicine:

1. No inquiry will be made on the application forms concerning disability. Brown’s policies regarding technical abilities and skills necessary to meet the competency requirements are included with the letter of admission, and students are asked at that time to contact the Associate Dean for Medical Education if they have any concerns about their ability to meet these standards.

2. Applicants who are identified as having a disability through volunteered information, supporting credentials, or interviews will have an assessment of their ability to meet competency requirements only after a determination is made of their admissibility to the medical program.

3. Those applicants with disabilities deemed admissible to the Medical School will be requested to have submitted on their behalf appropriate documentation in regard to the disability from a qualified health professional. The health professional will be asked to provide an opinion on the candidate’s ability to meet the competency requirements for the M.D. degree. The applicant may also be requested to respond to that question.

4. The responses will be submitted to a committee appointed by the Dean of Medicine and Biological Sciences. This committee may ask for a review of the supporting documentation by appropriate members of the faculty in regard to the applicant’s meeting the competency requirements. The committee will ascertain what accommodations, if any, the medical program would need to make in order that the applicant might be able to meet the competency requirements, and assess the feasibility of any needed accommodations.

5. The committee will review the information received to determine if the applicant will be able to meet the competency requirements, with reasonable accommodations on the part of the medical program, if necessary.

6. The committee will recommend to the Dean of Medicine and Biological Sciences acceptance of applicants who can meet the competency requirements or will recommend nonacceptance if they cannot.

Process for Assessing Student’s Ability to Continue in the Medical School Should Disability Occur After Matriculation at Brown University:

1. A student who develops a disability after matriculation at Brown University may be identified to the Medical Student Affairs Office through a variety of sources, e.g., reporting of accident or illness by peers, family, friends, or faculty and subsequent follow-up with health professionals managing the care.

2. If the degree to which the student has become disabled raises questions related to meeting the competency requirements after a review by the Associate Dean for Medical Education, a meeting of an ad hoc committee will be set up to discuss the situation. The student will be asked to meet with the committee members, unless the disability is so severe that the student needs to be represented by another individual. In some cases, it might be more appropriate to have a health professional, not directly involved in the care, serve as a consultant to the committee on the issues surrounding the disability.

3. The ad hoc committee will develop a recommendation as to the student’s ability to successfully pursue a medical education based on his or her ability to meet the competency requirements of the medical program. These educational accommodations will be discussed with the appropriate course directors to be certain that there is agreement on how the student will be managed. If facilities accommodations are recommended, the committee will discuss these with the appropriate individuals to be certain that the needs for the disabled student can be provided. The committee’s recommendations will be discussed with the student or his or her representative in the event that the student cannot attend.

4. When the recommendation is that the disabled student can meet the medical program’s competency requirements, the committee will develop a report on any educational program accommodations that, if made, will still meet the competency requirements.

5. Should the decision of the committee be to recommend to the dean that the student be dropped from enrollment in the medical program, the normal due process appeals mechanism will be in effect, and the Student Affairs Office will work with the individual as appropriate on potential alternative career options. For students in the Program in Liberal Medical Education continuum, being dropped from the program due to inability to meet competency requirements for medical education does not necessitate the withdrawal of the student from the undergraduate college if that phase of the student’s education has not been completed.

Advanced Scholarship

Medical students who wish to earn an advanced degree (M.A., Sc.M., M.P.H., Ph.D. ), must meet the requirements of the Graduate School. Numerous academic departments at Brown offer graduate programs. All graduate studies are carried out under the supervision of a faculty member of a graduate program at Brown University and are subject to the specific requirements of that program in addition to the general guidelines given below. Students should discuss their interests and goals with a director of a graduate program in planning any study that might lead to an advanced graduate degree.

Educational Programs

Program in Liberal Medical Education

The Program in Liberal Medical Education (PLME) offers a unique opportunity to combine undergraduate education and professional studies in medicine into an eight-year program.

The PLME is not an accelerated medical program. Rather, it encourages students to take advantage of the breadth of a liberal arts education, to
take charge of their education, and to become active learners. At Brown, creative students need not sacrifice the benefits of a rich liberal arts education in order to gain admission to medical school. The PLME provides great flexibility in curriculum planning. During the early years, students take courses related to their chosen concentration and to obtain a broad liberal education. In addition, students take courses designed to meet the competencies required for admission to Alpert Medical School. This begins with courses in the natural, social and behavioral sciences, and mathematics, which provide a foundation for later medical science and clinical courses. Students may choose to work towards an A.B. or Sc.B. degree in the sciences, or to fulfill the requirements for an A.B. in the humanities, social sciences or behavioral sciences. Several interdisciplinary concentrations such as Public Policy and International Relations are also available. The expected duration of the program is eight years. The last four years of the program culminate in the M.D. degree.

Brown’s entire faculty is available to PLME students. This access to faculty throughout the University fosters collaborative teaching and research among scholars and students from widely divergent disciplines. Although the program is characterized by the unique breadth of educational opportunities available to students, it has great strength in the conventional biomedical sciences accompanied by in depth research opportunities as well.

The Medical Curriculum

The Alpert Medical School curriculum has been designed and implemented with the intention of creating an integrated, contemporary, compassionate, and flexible program of learning for our students. Our approach to medical education is predicated on the vision that tomorrow’s physician must be a lifelong learner who is scientifically and clinically enlightened, patient and service-centered, and who understands the economic underpinnings of the US health care system. Our goal is to train physicians who will provide informed and compassionate care while at the same time serving as leaders and change agents for the health care system. To achieve the latter goal, we aim to train physicians who will be leaders at all levels.

These educational goals are pursued through a curriculum with the following structure. During Years 1 and 2, students enroll in four sequential semesters of Integrated Medical Sciences (IMS-I through -IV) and Doctoring-I through -IV. The elective Scholarly Concentrations Program is introduced to students during Year 1. Year 3 allows students to explore core disciplines and related specialties through the completion of required clerkships in medicine, surgery, pediatrics, obstetrics & gynecology, psychiatry, and family medicine. The transition from the third year to the fourth year takes place in May, after which time students have the opportunity to develop a program of elective rotations aimed at finalizing a career choice, and obtaining and preparing for a residency in their chosen field.

Alpert Medical School continues to employ a competency-based curriculum that was officially launched in 1996 for the graduating MD Class of 2000. The rationale behind the competency-based curriculum stems from the need to define the outcomes of the educational process: what are the desirable qualities of a medical school graduate, and what constitutes the essential knowledge base that will enable a graduate to make a successful transition to his or her chosen medical field?

All students are expected to gain competency in the Nine Abilities (see below) and knowledge base by graduation. Each course within the core curriculum of the Medical School identifies which abilities and parts of the knowledge base it addresses. Students may also meet the competency requirements through individualized study, group independent study projects (GISPs), or alternative courses that might be arranged as part of collaborative learning opportunities.

Nine Abilities:

1. Effective communication
2. Basic clinical skills
3. Using basic science in the practice of medicine
4. Diagnosis, prevention, and treatment
5. Lifelong learning
6. Professionalism
7. Community health promotion and advocacy
8. Moral reasoning and clinical ethics
9. Clinical decision making

For additional information regarding Alpert Medical School please visit the website at: http://brown.edu/academics/medical/

Courses

Biology

BIOL 3001. Clerkship in Medicine.
Twelve weeks.

BIOL 3005. Clerkship in Medicine - LIC.
No description available.

BIOL 3010. Systemic Pathology.
First-semester systemic pathology course building on the general principles of disease introduced in general pathology IMS-1. Objectives include learning the classification of systemic disease according to basic pathological mechanisms, describing and explaining the functional and structural changes produced by the most common diseases, and enhancing the ability to diagnose and treat patients. Runs in parallel with pathophysiology BIOL 3500; covers four organ system segments: cardiovascular, renal, and pulmonary and supporting structures.

BIOL 3890. Culture, Patient, Advocacy and the Community.  
This course focuses on the knowledge, skills, and attitudes required for effective patient advocacy with an emphasis on the role of culture in developing advocacy partnerships with patients, families, peers and community service providers. Specifically, it examines the relationships between race, ethnicity, social factors, economic factors and health status indicators. The course will provide opportunities to build self-awareness, to develop greater insight into the social and community contexts of health care and patient advocacy, and to refine physician-patient communication skills.

BIOL 5795. Clerkship in Family Medicine - LIC. No description available.
BIOL 5820. Elective in Family Medicine. No description available.
BIOL 5850. Primary Care Sports Medicine. No description available.
BIOL 5860. Preventive Cardiology Nutrition. No description available.
BIOL 5880. Clinical Skills Clerkship Teaching Academy. No description available.
BIOL 5885. Clinical Skills Clerkship. No description available.
BIOL 5895. Medical Spanish. No description available.
BIOL 5900. Art and Medicine Seminar. No description available.
BIOL 5920. Public Health and Primary Care in Rural Honduras. No description available.
BIOL 5990. Internship Preparation Elective. No description available.
BIOL 610. Human Morphology II. No description available.
BIOL 6120. Research in Perinatal/Pediatric Pathology. No description available.

BIOL 6260. Radiation Oncology in a Private Practice Setting. No description available.
BIOL 6300. Nuclear Medicine Preceptorship. No description available.
BIOL 6380. Pediatric Radiology. No description available.
BIOL 6390. Intro to Women's Diagnostic Imaging. No description available.
BIOL 6400. Radiation Oncology. No description available.
BIOL 6501. Medical Chinese Elective. Students will attain a working knowledge of Chinese relevant to medical practice in order to better communicate with and serve Chinese-speaking patients. Open to students who are proficient in the Mandarin dialect of Chinese.
BIOL 6502. Intermediate Medical Spanish. The course is designed for students to gain beginning-level competence in Medical Spanish that will enable them to communicate more effectively with Spanish-speaking patients and their families. Specifically, the students will develop critical Spanish lexicon and language skills for conducting the medical interview. Perquisite: Background in Spanish. Grading: S/NC
BIOL 6505. Introduction to Multidisciplinary Fetal Medicine. An 8-session elective seminar for 2nd year medical school students. Emphasis is placed on the multidisciplinary approach to medical problems. The course concentrates on those conditions for which fetal and/or neonatal intervention may be indicated, from gene therapy to fetal surgical intervention.
BIOL 6507. Elective in Mindfulness Training. No description available.
BIOL 6508. Gender and Sexuality in Healthcare: Caring for All Patients.
The goal of the course is to provide medical students with the knowledge needed to effectively and competently work with a growingly diverse patient (and colleague) population. Contemporary medical school curricula are lacking in the instruction and discussion of patients of all genders and sexualities. This elective will address this need. The course will consist of eight 2-hour sessions, with guest speakers lecturing for the first hour and small group discussion happening for the second hour. Students are required to keep a journal of their experiences as their final assignment for the class. The class will be graded S/NC.

The topics range from LGBTQ Teenagers to Institutionalized Homophobia to Hormone Therapy, led by experts in each field.

BIOL 6509. Introduction to Surgical Subspecialties.
No description available.

BIOL 6510. Topics in Medicine - An International Perspective at University of Rostock, Germany.
No description available.

BIOL 6511. Comparative Medical Ethics at University of Tuebingen, Germany.
No description available.

BIOL 6512. Modern Genetics: Ethics, Policy, and the Doctor-Patient Relationship.
No description available.

BIOL 6513. (Play)writing and Medicine.
No description available.

This elective seminar for 1st and 2nd year medical school and PLME students will introduce them to the world of complementary and alternative forms of healing (CAM) and place it into a framework of an Integrative medicine.

BIOL 6515. Humanities as Medical Instruments.
No description available.

BIOL 6516. Race, Health Disparities, and Biomedical Interpretations.
No description available.

BIOL 6517. Diseases, Doctors and Divas.
No description available.

BIOL 6518. Design and Health.
No description available.

BIOL 6519. Leadership in the Health Professions.
No description available.

BIOL 6520. Artists and Scientists as Partners.
No description available.

BIOL 6521. Advanced Spanish.
No description available.

BIOL 6522. The Healer’s Art.
No description available.

BIOL 6524. Introduction to Sports Medicine.
No description available.

No description available.

BIOL 6526. Neuroimaging of Mindfulness + Contemplative Practice.
No description available.

BIOL 6527. Physician as Medical Illustrator.
No description available.

BIOL 6528. Art and Healing.
No description available.

BIOL 6529. Addiction Medicine.
No description available.

BIOL 6530. Homeless Communities Health Outreach.
No description available.

BIOL 6533. Sex and Gender Based Medicine.
No description available.

BIOL 6534. Neurological Surgery.
No Description Available.

BIOL 6535. Biomedical Informatics.
No description available.

No description available.

BIOL 6537. Medical Students Outreach to Mothers to Be (MOMS).
No description available.

BIOL 6538. The Bionic Human Elective.
No description available.

BIOL 6540. Wilderness Medicine Preclinical Elective.
The Wilderness Medicine elective is designed to instill the basic survival skills training necessary for environments outside the hospital, both urban and wild. It combines didactic lectures on such topics as toxicology and travel medicine with field skills sessions & workshops (e.g. suturing, splinting). These sessions also include mock medical scenarios, such as near drownings, for the students to handle. It includes off-campus consultation with experts to review their medical emergency procedures. A final project consisting of writing about a popular wilderness myth and its veracity is required.

BIOL 6542. The Virtuous Physician.
No description available.

BIOL 6543. Medical Impact of Translational and Basic Science.
No description available.

BIOL 6544. Entrepreneurship in Medicine.
No description available.

BIOL 6545. Environmental Health.
No description available.

BIOL 7160. Scholarly Concentration Independent Study. No description available.
BIOL 7165. Scholarly Concentration Independent Study. No description available.
BIOL 7170. Academic Scholar Program. No description available.
BIOL 7180. Advanced Independent Study. No description available.
BIOL 7225. International Elective: University of Rostock (Germany). No description available.
BIOL 7240. International Elective: University of Tuebingen (Germany). No description available.
BIOL 7249. International Elective Kyoto University (Japan). No description available.
BIOL 7250. International Elective University of Notre Dame Haiti. No description available.
BIOL 7301. Seminar on Race + Health Disparities. No description available.
BIOL 7600. Approved Subinternship Away. No description available.
BIOL 7605. Approved Subinternship Away 2. No description available.

**Medical Education**

MED 2010. Health Systems and Policy I. This course will explore how multiple social determinants influence individual and population health; the laws and policies that shape the social environments in which patients live; and the role of physicians in advocating for systems and policy changes that will reduce health disparities and improve population health outcomes.

MED 2030. Research Methods in Population Medicine. The thesis requirement for the Master of Science degree in Population Medicine is an integral component of the Primary Care-Population Medicine program at Brown University. This course will have students develop and demonstrate the necessary research skills to formulate a population medicine research question and then design, conduct and write a manuscript presenting a research study that will satisfy the thesis requirements. The course itself has three parts: An introductory primary on biostatistics A research methodology seminar series A journal club in which the biostatistics and research methodology will be integrated in the analysis and critique of studies related to population medicine

MED 2040. Health Systems and Policy II. This course will offer an overview of the critical issues in U.S. healthcare and public health policy. It will also provide future leaders in population medicine with a foundation for analyzing healthcare reform and public health efforts and for identifying the role of physicians in driving and shaping future policy reforms to improve the healthcare system and population health.

MED 2045. Quantitative Reasoning. In this course, students will be introduced to fundamental concepts in clinical epidemiology and basic statistics, as they relate to population and clinical research. This course is intended to teach students both the basic knowledge required to develop and interpret clinical studies as well as the skills in order to conduct basic statistical analyses.

MED 2046. Leadership in Health Care. This course emphasizes practical application of teamwork and leadership skills across multiple settings. Leadership in Health Care is a master’s level course for second year medical students enrolled in the Primary Care-Population Medicine (PC-PM) program. Through interactive classroom sessions, field work in health care advocacy, and a team-based “leadership action project”, students will develop foundational leadership skills. The first formal leadership course at Alpert Medical School, Leadership in Health Care will contribute to the PC-PM program’s ultimate goal of preparing physician leaders who will improve the quality of health care and wellness of the population.
MED 2050. Population and Clinical Medicine I. This is the first semester of Population and Clinical Medicine, a two-semester course focused on the integration of population medicine and clinical practice. In this course, students will focus on topics integral to clinical medicine, but expand beyond the patient into the population and beyond. Given the importance of population health interventions for impacting the health of vulnerable and underserved patients, the course will focus on issues affecting these populations.

MED 2060. Population and Clinical Medicine II. This is the second semester of Population and Clinical Medicine, a two-semester course focused on the integration of population medicine and clinical practice. In this course, students will focus on topics integral to clinical medicine, but expand beyond the patient into the population and beyond. Given the importance of population health interventions for impacting the health of vulnerable and underserved patients, the course will focus on issues affecting these populations.

MED 2980. Independent Study in Population Medicine. For students enrolled in the Primary Care-Population Medicine program at Alpert Medical School, this course is structured to allow students to conduct research focused on population health with a mentor at Brown University.

Program in Liberal Medical Education

PLME 0200. Primetime Bioethics. Is it ethical to design a perfect baby? Who should get these organs? Is it ever okay to be dishonest with patients for their own good? These questions and more will be tackled in this discussion-based course that uses episodes of popular medical television shows to highlight topics in medical ethics. Students will watch 1-2 episodes of TV shows and read related articles and chapters on biomedical ethics and ethics theory. The goal is to give students the background with which to approach the ethical topics. This course may be most beneficial to students pursuing a career in medicine.

PLME 0550. Italian and American Health Care: a Cultural, Historical and Practical View. This program has been developed for Brown PLME students and first year Italian medical students to familiarize the future physicians with the much-debated theme of health care delivery and policies. Students will focus on medicine beyond science through the critical study of how socioeconomic and cultural factors impact this field. Students will compare the Italian and American systems, focusing on historical structures and current issues in health care regulation. Enrollment limited to 10.

PLME 1000. PLME Senior Seminar in Scientific Medicine. This course is an interdisciplinary and integrative science course that will supplement the preparation of both PLME and pre-medical students for the study of medicine in the 21st century. The course will use a case-based approach to relevant and contemporary subjects in medicine and health care, such as: biological systems and their interactions; diagnosis and therapy optimization; and the humanitarian aspects of patient care. The course is intended for seniors interested in attending medical school but who preferentially enroll PLME students. Prerequisite: PLME competency in Biology, Chemistry (inorganic and organic), Physics, and introductory calculus. Enrollment limited to 40. S/NCS

Biology (Undergraduate)

Associate Dean of Biology and Chair
Edward Hawrot

Director of Undergraduate Affairs
Katherine F. Smith

The Undergraduate Program in Biology offers courses at all levels of biological organization: molecular, cellular, organismal, and population, and concentration programs with varying degrees of multidisciplinary or specialized focus. There is a vast range of collaborative opportunities for independent study and research under the mentorship of the faculty. Faculty maintain research programs at the cutting edge of their fields including biochemistry, biophysics, cell biology, developmental biology, ecology, evolution, genetics, immunology, molecular biology, neurobiology, physiology, anatomy, artificial organs, microbiology, virology, experimental pathology, and pharmacology. The close administrative relationship with the Alpert Medical School offers additional opportunities for blending fundamental biology and clinical sciences in research projects at the Brown-affiliated hospitals.

The Office of Biology Undergraduate Education is a full service academic resource center, serving a key role for students of the life sciences here. The Office provides individualized advising for students at all levels; oversees student-faculty research collaborations, holds special events and maintains a variety of programs that support and enrich student life. For further information, please visit: http://www.brown.edu/academics/biology/undergraduate-education/

Biology Concentration Requirements

The Biology concentration invites students to study, in depth and in breadth, the science of life and living matter. Whether pursuing the A.B. or Sc.B. in biology, students can expect to learn broadly in the discipline through a selection of courses in three areas: cell and molecular biology, structure and function, and organismal biology. In addition, students pursuing the Sc.B. complete a thematic track through which they gain an in-depth understanding of a particular subject (such as, Immunopathology; Ecology and Evolutionary Biology; Physiology/Biotechnology; Cell and Molecular Biology; Physical Sciences; Marine Biology (through 2016)). The concentration also emphasizes practical skills and experimental design. Concentrators are required to take at least 3 courses with a laboratory or fieldwork component. Within all of these requirements, students have a high degree of flexibility and choice. Broad research opportunities are also available across several departments within the basic sciences as well.

Standard program for the A.B. Biology

The concentration program for the A.B. in Biology consists of four prerequisite courses in math, chemistry, and a statistics course as well as ten courses in biological sciences, including at least one course in each of the following three areas: Area 1: Cell/Molecular Biology, Area 2: Structure/Function, and Area 3: Organismal Biology.

Prerequisites: ¹

Principles of Neurobiology

Organic Chemistry

Inquiry in Plant Biology: Analysis of Plant Biology of Reproduction

Principles of Ecology

Biological Design: Structural Architecture

The Brain: An Introduction to

The Fossil Record: Life through Time on Earth

Environmental Science in a Changing World

Honors in biology requires a thesis and presentation based on a research project (conducted via BIOL 1950/BIOL 1960), which should reflect the advanced cluster.

As of the 2014-15 academic year, students pursuing a ScB in Biology have the option to substitute a course for CHEM 0360 (Organic Chemistry) in their background core. For students pursuing the Marine Biology track, an upper level course in Geological Sciences may replace CHEM 0360. For students pursuing all other tracks, BIOL 0280 (Introductory Biochemistry) may serve as the replacement course. Please note that approval from the concentration advisor is required for these background course substitutions. If the student has already declared, then a revised concentration plan must be submitted and approved via the ASK system. If BIOL 0280 is used as a substitute for CHEM 0360, it cannot be counted as a core course, as a laboratory course, or as an Area 1 course. Students planning to apply to medical or graduate school should seek additional advising (such as from the Health Careers Office) in crafting their course plan.

Prerequisites: 1

MATH 0090 Introductory Calculus, Part I (or placement. MATH 0050/MATH 0060 may be substituted for MATH 0090)

MATH 0100 Introductory Calculus, Part II or MATH 0170 Advanced Placement Calculus

CHEM 0330 Equilibrium, Rate, and Structure (or IB credit)

CHEM 0350 Organic Chemistry

CHEM 0360 Organic Chemistry or BIOL 0280 Introductory Biochemistry

PHYS 0030 Basic Physics (or equivalent. PHYS 0050 or ENGN 0030 may be substituted for PHYS 0030.)

PHYS 0040 Basic Physics (or equivalent. PHYS 0060 or ENGN 0040 may be substituted for PHYS 0040.)

Core Courses: 2, 3

BIOL 0200 The Foundation of Living Systems (or placement) 1

The Area requirement must be fulfilled by taking at least one course in each of these groups:

Area 1 (Cell/Molecular Biology)

BIOL 0280 Introductory Biochemistry

BIOL 0470 Genetics

BIOL 0500 Cell and Molecular Biology

BIOL 0510 Introductory Microbiology

BIOL 0530 Principles of Immunology

BIOL 1050 Biology of the Eukaryotic Cell

BIOL 1310 Developmental Biology

NEUR 1020 Principles of Neurobiology

Area 2 (Structure/Function)

BIOL 0400 Biological Design: Structural Architecture of Organisms

BIOL 0410 Invertebrate Zoology

BIOL 0440 Inquiry in Plant Biology: Analysis of Plant Growth, Reproduction and Adaptive Responses

BIOL 0800 Principles of Physiology

BIOL 1120 Biomaterials

BIOL 1310 Developmental Biology

BIOL 1330 Biology of Reproduction

BIOL 1880 Comparative Biology of the Vertebrates

NEUR 0010 The Brain: An Introduction to Neuroscience

Area 3 (Organismal Biology)

BIOL 0140K Conservation Medicine

BIOL 0210 Diversity of Life

BIOL 0350 The Fossil Record: Life through Time on Earth

BIOL 0380 The Ecology and Evolution of Infectious Disease

BIOL 0410 Invertebrate Zoology

BIOL 0415 Microbes in the Environment

BIOL 0420 Principles of Ecology

BIOL 0430 The Evolution of Plant Diversity

BIOL 0480 Evolutionary Biology

BIOL 1880 Comparative Biology of the Vertebrates

ENVS 0490 Environmental Science in a Changing World

Six additional courses chosen from BIOL and/or NEUR offerings for concentrators. At least two at the advanced (1000-2000) level. The Core may include up to two related sciences, with advisor approval.

Total Credits 10

1 AP scores of 4 or above may substitute Math courses.

2 At least two biology and/or neuroscience courses must be at the advanced level (between 1000-2999). EXCLUSIONS: BIOL 0920 series courses, BIOL 1070, & BIOL 1920 series courses. *Courses numbered below BIOL 0100 do not carry concentration credit. At least three of the Biology and/or Neuroscience courses must include laboratory or fieldwork. BIOL 1950/Biol 1960, (Directed Research) may be included, but is not required. If a lab project, this can count for ONE of the three lab course requirements, and one advanced course.

3 No substitutions per above Area list. If a course is listed in more than one area, it may be used to fulfill one of those, the other must be fulfilled by a different course.

4 Biology courses for concentration credit include those numbered greater than 0100 with some exceptions noted within the course descriptions. Courses numbered over 3000 do not count towards Undergraduate requirements either quantity or for concentration.

Standard Program for the Sc.B. Biology

The concentration program for the Sc.B. in Biology consists of seven prerequisite courses in math, chemistry, and physics as well as thirteen to fourteen courses in biological sciences, including courses in each of the following three areas: Area 1: Cell/Molecular Biology, Area 2: Structure/Function, and Area 3: Organismal Biology, and the three-course Track. The biological sciences requirement also requires research (BIOL 1950/Biol 1960), which should reflect the advanced cluster.
Bio 1070, or Bio 1920 series courses.

EXCLUSIONS: Bio 0920 series courses, Bio 1070, or Bio 1920 series courses. Courses numbered below Bio 0100 do not carry concentration credit. At least two biology or neuroscience courses numbered at the 1000 or 2000 level. At least two biology or neuroscience courses numbered above prerequisite level, and suitable for concentrations.

If substantial research is carried out away from Brown, it must be approved by an appropriate Brown BioMed faculty member but does not carry course credit toward the Core program.

At least two, and preferably all three, must be above 1000-level. Courses used for the cluster, must be approved by an advisor. A required senior capstone course or activity builds on the program's focus.

3. A limited number of transfer or study abroad courses may be used within the program, subject to approval of advisor, and Associate Dean of Biology, Katherine Smith.

Health & Human Biology Concentration Requirements

Health and Human Biology is an interdisciplinary concentration that provides a rigorous foundation in the biological sciences with substantive course work in humanities and social sciences within a subfield of Human Health and Disease. The program includes: background courses, biology core courses, a set of theme courses, and a Senior Capstone activity. Background courses provide the essential foundations in chemistry, mathematics, methods, and basic biology. These support the Biology core, which is comprised of a flexible menu of intermediate and advanced courses. A required portion of the Biology core is Genetics, a cornerstone of human biology and its interface with other fields. The Biology core underscores the related coursework within the Health and Disease Theme. The Theme courses are social science and humanities courses that form a cohesive, thoughtful grouping. Theme groupings must be approved by the advisor. A required senior capstone course or activity builds on the program's focus.

Program Requirements

REQUIREDSUBMISSION:

Four (4) courses including:

- OR-
MATH 0090 Introductory Calculus, Part I (or equivalent placement) 1
MATH 0050 Analytic Geometry and Calculus
& MATH 0060 and Analytic Geometry and Calculus
MATH 0100 Introductory Calculus, Part II
& MATH 0170 Advanced Placement Calculus
CHEM 0330 Equilibrium, Rate, and Structure 1
BIOL 0200 The Foundation of Living Systems 1
BIOL 0280 Genetics
- OR-
Bio 1480 Evolutionary Biology
& Bio 1500 and Cell and Molecular Biology
Bio 1480 Evolutionary Biology
& Bio 1510 and Introductory Microbiology
Bio 1480 Evolutionary Biology
& Bio 1520 and Introductory Biochemistry
Select one course in structure/function/development such as:

Bio 1400 Biological Design: Structural Architecture
& Bio 1450 of Organisms
Bio 1400 Principles of Physiology
Bio 1310 Developmental Biology
Bio 1800 Animal Locomotion
Bio 1880 Comparative Biology of the Vertebrates
NEUR 0010 The Brain: An Introduction to Neuroscience
One course in organismal/population biology such as:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOL 0370</td>
<td>Experimental Evolution</td>
</tr>
<tr>
<td>BIOL 0380</td>
<td>The Ecology and Evolution of Infectious Disease</td>

<td>Environmental Science in a Changing World</td>
</tr>
</tbody>
</table>

Or a course from the NEUR 1940 series

c) Two Biology or Neuroscience courses that relate to and support the chosen theme course grouping. At least one must be at the advanced level.

THEME: With the advisor's assistance, a theme is chosen and a cohesive set of courses are selected outside of Biology. See Notes below:

SENIOR CAPSTONE ACTIVITY: Must be conducted during the senior year, fulfilled by one of the following, and related to the student's chosen theme:

1) Advisor approved senior seminar or advanced course related to the theme

2) One semester of independent research/independent study (BIOL 1950 or BIOL 1960); in the case of a senior honors thesis, both BIOL 1950 and BIOL 1960 can be used as the capstone.

3) An appropriate internship with a scholarly context can be used if coupled with a semester of independent study mentored by a Brown faculty member.

Total Credits 14

THEME:

- Approved courses must be above the introductory level and at least one must be 1000-level or above.
- No more than TWO courses from a given department may be included in the theme portion.
- NOTE: Beginning with the Class of 2020: Health Systems, Structure and Policy and Women's/Children Health will be eliminated.
- Students will then select from FOUR theme options: 1) Health Behavior, 2) Environmental Health, 3) Global/International Health, 4) Social Context of Health and Disease.

CAPSTONE: See http://www.brown.edu/academics/biology/undergraduate-education/ for more information on the Capstone Activity.

HONORS: See more information about Honors at http://www.brown.edu/academics/biology/undergraduate-education/.

Applied Mathematics-Biology Concentration Requirements

The Applied Math - Biology concentration recognizes that mathematics is essential to address many modern biological problems in the post genomic era. Specifically, high throughput technologies have rendered vast new biological data sets that require novel analytical skills for the most basic analyses. These technologies are spawning a new "data-driven" paradigm in the biological sciences and the fields of bioinformatics and systems biology. The foundations of these new fields are inherently mathematical, with a focus on probability, statistical inference, and systems dynamics. These mathematical methods apply very broadly in many biological fields including some like population growth, spread of disease, that predate the genomics revolution. Nevertheless, the application of these methods in areas of biology from molecular genetics to evolutionary biology has grown very rapidly in with the availability of vast amounts of genomic sequence data. Required coursework in this program aims at ensuring expertise in mathematical and statistical sciences, and their application in biology. The students will focus in particular areas of biology. The program culminates in a senior capstone experience that pairs student and faculty in creative research collaborations.

Standard program for the Sc.B. degree

Required coursework in this program aims at ensuring expertise in mathematical and statistical sciences, and their application in biology. The students will focus in particular areas of biology. The program culminates in a senior capstone experience that pairs student and faculty in creative research collaborations. Applied Math – Biology concentrators are prepared for careers in medicine, public health, industry and academic research.

Required Courses:

Students are required to take all of the following courses.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 0090</td>
<td>Introductory Calculus, Part I</td>
</tr>
<tr>
<td>or MATH 0100</td>
<td>Introductory Calculus, Part II</td>
</tr>
<tr>
<td>or MATH 0170</td>
<td>Advanced Placement Calculus</td>
</tr>
<tr>
<td>MATH 0180</td>
<td>Intermediate Calculus (or equivalent placement)</td>
</tr>
<tr>
<td>MATH 0520</td>
<td>Linear Algebra</td>
</tr>
<tr>
<td>or MATH 0540</td>
<td>Honors Linear Algebra</td>
</tr>
<tr>
<td>CHEM 0330</td>
<td>Equilibrium, Rate, and Structure</td>
</tr>
<tr>
<td>PHYS 0030</td>

<tr>
<td>BIOL 0200</td>
<td>The Foundation of Living Systems (or equivalent)</td>
</tr>
</tbody>
</table>

Additional Courses

In addition to required courses listed above, students must take the following:

Two additional courses in Applied Math or Biology. At least one of these must be a directed research course, e.g. a senior seminar or independent study in Applied Math or a directed research/independent study in Biology. For example:

- A course from the APMA 1930 series
- A course from the APMA 1940 series

<table>
<thead>
<tr>

<td>Directed Research/Independent Study</td>
</tr>
</tbody>
</table>

Four classes in the biological sciences agreed upon by the student and advisor. These four courses should form a cohesive grouping in a specific area of emphasis, at least two of which should be at the 1000-level. Some example groupings are below:

Areas of Emphasis and Suggested Courses:
Some areas of possible emphasis for focusing of elective courses are listed below. Given the large number of course offerings in the biosciences and neuroscience, students are free to explore classes in these areas that are not listed below. However, all classes must be approved by the concentration advisor.

Biochemistry
BIOL 0280 Introductory Biochemistry
BIOL 1270 Advanced Biochemistry
CHEM 0350/0360 Organic Chemistry
CHEM 1230 Chemical Biology

Biotechnology and Physiology
BIOL 0800 Principles of Physiology
BIOL 1100 Cell Physiology and Biophysics

Ecology, Evolution, and Genetics
BIOL 0410 Invertebrate Zoology
& BIOL 0480 and Evolutionary Biology
BIOL 0420 Principles of Ecology
& BIOL 0430 and The Evolution of Plant Diversity
BIOL 0470 Genetics

Neuroscience
APMA 0410 Mathematical Methods in the Brain Sciences

Honors
Requirements and Process: Honors in the Applied Math-Biology concentration is based primarily upon an in-depth, original research project carried out under the guidance of a Brown (and usually Applied Math or BioMed) affiliated faculty advisor. Projects must be conducted for no less than two full semesters, and student must register for credit for the project via APMA 1970 or BIOL 1950/BIOL 1960 or similar independent study courses. The project culminates in the writing of a thesis which is reviewed by the thesis advisor and a second reader. It is essential that the student have one advisor from the biological sciences and one in Applied Mathematics. The thesis work must be presented in the form of an oral presentation (arranged with the primary thesis advisor) or posted at the annual Undergraduate Research Day in either Applied Mathematics or Biology. For information on registering for BIOL 1950/BIOL 1960, please see https://www.brown.edu/academics/biology/undergraduate-education/undergraduate-research

Biochemistry & Molecular Biology Concentration Requirements
How does life work at the molecular level? This question is at the core of the concentration program Biochemistry and Molecular Biology. In earlier years of this discipline, the focus was on structure and function of proteins, nucleic acids, lipids, carbohydrates and small molecules such as vitamins. Today the logical approach and tools of biochemical science are being expanded to new areas in neuroscience, developmental biology, immunology, pharmacology and synthetic biology (the design of analogs of biological systems). Training in biochemistry begins with a foundation in mathematics, physics, chemistry and biology. Some courses offered in other departments, including engineering, geology and computer science, are also useful. A key component of this program is the year of hands-on research carried out in collaboration with a faculty member here at Brown. Faculty sponsors are drawn from both the Chemistry Department and the Division of Biology and Medicine, and include basic science and clinical faculty.

Standard program for the Sc.B. degree

Students must take twenty courses in biology, chemistry, mathematics, and physics, including the following core requirements, some of these may be fulfilled with AP credits.

Science, typically including MATH 0090, MATH 0100, or equivalent

Two courses in physics, typically: 1

Total Credits 18

1 Students whose independent study is expected to be in an experimental field are strongly encouraged to take APMA 1660, which covers experimental design and the analysis of variance (ANOVA), a method commonly used in the analysis of experimental data.

Honors

Students whose independent study is expected to be in an experimental field are strongly encouraged to take APMA 1660, which covers experimental design and the analysis of variance (ANOVA), a method commonly used in the analysis of experimental data.

Honors
Requirements and Process: Honors in the Applied Math-Biology concentration is based primarily upon an in-depth, original research project carried out under the guidance of a Brown (and usually Applied Math or BioMed) affiliated faculty advisor. Projects must be conducted for no less than two full semesters, and student must register for credit for the project via APMA 1970 or BIOL 1950/BIOL 1960 or similar independent study courses. The project culminates in the writing of a thesis which is reviewed by the thesis advisor and a second reader. It is essential that the student have one advisor from the biological sciences and one in Applied Mathematics. The thesis work must be presented in the form of an oral presentation (arranged with the primary thesis advisor) or posted at the annual Undergraduate Research Day in either Applied Mathematics or Biology. For information on registering for BIOL 1950/BIOL 1960, please see https://www.brown.edu/academics/biology/undergraduate-education/undergraduate-research

Excellence in grades within the concentration as well as a satisfactory evaluation by the advisors are also required for Honors. The student’s grades must place them within the upper 20% of their cohort, in accordance with the university policy on honors. Honors recipients typically maintain a Grade Point Average of 3.4 or higher in the concentration. However, in the case of outstanding independent research as demonstrated in the thesis and supported by the Thesis Committee, candidates with a GPA between 3.0 an 3.4 will be considered and are encouraged to apply.

The deadline for applying to graduate with honors in the concentration are the same as those of the biology concentrations. However, students in the joint concentration must inform the undergraduate chair in Applied Mathematics of their intention to apply for honors by these dates.

The Division of Biology and Medicine
A strong grade record in concentration courses. This means a grade point average for the concentration that is higher than 3.25.

Two semesters of Independent Study (CHEM 0970, CHEM 0980 or equivalent). Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (http://www.brown.edu/academics/chemistry/undergraduate).

A Thesis in a form approved by the research advisor, and recommended by the research advisor. Additional information about thesis guidelines will be provided by the Concentration Advisor in the first half of the fall semester.

**Biomedical Engineering Concentration Requirements**

The Sc.B. program in Biomedical Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org/. It is jointly offered by the School of Engineering and the Division of Biology and Medicine as an interdisciplinary concentration designed for students interested in applying the methods and tools of engineering to the subject matter of biology and the life sciences. The education objectives of the Biomedical Engineering program are to prepare graduates: (1) to be employed in careers of useful service to society, including scientific and technical areas within medicine, industry, and health care delivery; (2) to demonstrate the ability to apply the basic principles of engineering and science, as well as problem solving skills and critical thinking, to a broad spectrum of biomedical engineering problems; (3) to demonstrate their ability to work in teams, and to effectively communicate and understand the broad social, ethical, economic and environmental consequences of their lifelong education. The student outcomes of this program are the (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs (available online at http://www.abet.org/accreditation-criteria-policies-documents/)." The Biomedical Engineering concentration shares much of the core with the other engineering programs, but is structured to include more courses in biology and chemistry, and a somewhat different emphasis in mathematics.

The requirements regarding Mathematics, Advanced Placement, Transfer Credit, Substitutions for Required Courses, and Humanities and Social Science Courses are identical to those of the Sc.B. degree programs in Engineering. Please refer to the Engineering section of the University Bulletin for explicit guidelines.

The Biomedical Engineering concentration shares much of the core with the other engineering programs, but is structured to include more courses in biology and chemistry, and a somewhat different emphasis in mathematics.

**Standard program for the Sc.B. degree**

1. **Core Courses**
   - ENGN 0030 Introduction to Engineering 1
   - ENGN 0040 Dynamics and Vibrations 1
   - ENGN 0510 Electricity and Magnetism 1
   - ENGN 0720 Thermodynamics 1
   - ENGN 0810 Fluid Mechanics 1
   - BIOL 0200 The Foundation of Living Systems 1
     - or NEUR 0010 The Brain: An Introduction to Neuroscience
   - BIOL 0800 Principles of Physiology 1
   - CHEM 0330 Equilibrium, Rate, and Structure 1
   - CHEM 0350 Organic Chemistry 1
   - MATH 0190 Advanced Placement Calculus (Physics/Engineering) 1
     - or MATH 0170 Advanced Placement Calculus
   - MATH 0200 Intermediate Calculus (Physics/Engineering) 1
     - or MATH 0180 Intermediate Calculus
     - or MATH 0350 Honors Calculus
   - APMA 0330 Methods of Applied Mathematics I, II 1
     - or APMA 0350 Applied Ordinary Differential Equations
   - APMA 0650 Essential Statistics 1
     - or APMA 1650 Statistical Inference I

2. **Upper Level Biomedical Engineering Curriculum**
   - ENGN 1110 Transport and Biotransport Processes 1
   - ENGN 1210 Biomechanics 1
ENGN 1230 Instrumentation Design 1
ENGN 1490 Biomaterials 1
Three Additional Upper Level Biomedical Engineering Courses 3

Select at least one of the following:  
BIOL 1140 Tissue Engineering  
or ENGN 1220 Neuroengineering  
or ENGN 1400 Analytical Methods in Biomaterials  
or ENGN 1930B Biomedical Optics  
or ENGN 1930R Molecular and Cell Biology for Engineers  
or ENGN 2910S Cancer Nanotechnology  

Select at most two of the following:  
BIOL 1150 Stem Cell Engineering  
or BIOL 1210 Synthetic Biological Systems  
or BIOL 1800 Animal Locomotion  
or BIOL 2110 Drug and Gene Delivery  
or BIOL 2130 Techniques in Molecular and Cell Science  

3. Capstone Design 5

ENGN 1930L Biomedical Engineering Design, Research and Modeling 1

* In addition to program requirements above, students must take four courses in the humanities and social sciences.  

Total Credits 21

1 Students with advanced biology backgrounds may replace with BIOL 0470, BIOL 0530, or other biology courses.
2 Students with advanced math backgrounds may replace with CHEM 0360.
3 Or other advanced bioengineering courses (e.g. ENGN 1510 and ENGN 1520), subject to concentration advisor approval.
4 Or other advanced bioengineering courses, subject to concentration advisor approval.
5 Biomedical engineering students are also encouraged to pursue independent research with faculty members in the School of Engineering or the Division of Biology & Medicine.

Biophysics Concentration Requirements

Biophysics is that it is a quantitative science that requires a significant level of competence in physics, chemistry, mathematics, and biology. These areas therefore form the required background coursework for this program, and serve as a springboard to an advanced focus, developed in consultation with a concentration advisor. Advanced foci may include structure-function relations of macromolecules, biomechanics of cell cytoskeleton, biotechnology for drug and gene delivery, molecular mechanisms of membrane transport, sensory signal transduction, for examples. The program also requires a capstone research project that reflects this focus and may be drawn from collaborative research opportunities offered by faculty in biology, chemistry, or physics departments.

Additional detailed information about the field of Biophysics may be found: http://www.biophysics.org/AboutUs/Biophysics/tabid/517/Default.aspx.

Select two additional biology courses chosen with approval of the advisor. Examples include courses in:

**Cell Biology**
- BIOL 0500 Cell and Molecular Biology
- BIOL 1050 Biology of the Eukaryotic Cell
- BIOL 1200 Protein Biophysics and Structure

**Pharmacology**
- BIOL 1260 Physiological Pharmacology

**Biotechnology**
- BIOL 1090 Polymer Science for Biomaterials
- BIOL 1120 Biomaterials
- BIOL 1140 Tissue Engineering

Select six additional intermediate or advanced level courses, chosen from biology (e.g., biochemistry, genetics, physiology, physics, chemistry, and/or computer sciences and mathematics). Examples include:

**Biology**
- BIOL 0280 Introductory Biochemistry
- BIOL 0470 Genetics
- BIOL 0800 Principles of Physiology
- BIOL 1190 Synaptic Transmission and Plasticity

**Physics**
- PHYS 0500 Advanced Classical Mechanics
- PHYS 0560 Experiments in Modern Physics
- PHYS 1410 Quantum Mechanics A
- PHYS 1420 Quantum Mechanics B
- PHYS 1610 Biological Physics

**Mathematics**
- MATH 0520 Linear Algebra

**Applied Mathematics**
- APMA 0330 Methods of Applied Mathematics I, II
- APMA 0340 Methods of Applied Mathematics I, II
- APMA 0350 Applied Ordinary Differential Equations
- APMA 0360 Applied Partial Differential Equations I

**Chemistry**
- CHEM 1230 Chemical Biology
- CHEM 1450 Advanced Organic Chemistry

A course from the CHEM 1560 series.

Select at least one semester (two are recommended) of Directed Research 1

**Biology**
- BIOL 1950/1960 Directed Research/Independent Study

**Chemistry**
- CHEM 0970/0980 Undergraduate Research

**Physics**
### Computational Biology Concentration Requirements

Computational biology involves the analysis and discovery of biological phenomena using computational tools, and the algorithmic design and analysis of such tools. The field is widely defined and includes foundations in computer science, applied mathematics, statistics, biochemistry, molecular biology, genetics, ecology, evolution, anatomy, neuroscience, and visualization.

Students may pursue a Bachelor of Arts or a Bachelor of Science. Students pursuing the ScB have the option of electing a concentration in Computational Biology with one of three focus areas: Computer Sciences, Biological Sciences, or Applied Mathematics & Statistics. Both programs require a senior capstone experience that pairs students and faculty in creative research collaborations.

#### University Writing Requirement:

As part of Brown's writing requirement, all students must demonstrate that they have worked on their writing both in their general studies and their concentration. There are a number of ways for Computational Biology concentrators to fulfill these requirements:

- Writing an Honors Thesis
- Taking a "WRIT" course in the final two years

#### Capstone Experience

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision. The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor, or a 2000-level Computational Biology course.

### Biological Sciences track

- At least four courses comprising a coherent theme in one of the following areas: Biochemistry, Ecology, Evolution, or Neurobiology.
- AND select two courses from the following:
  - CSCI 1820 Algorithmic Foundations of Computational Biology
  - PHP 2620 Statistical Methods in Bioinformatics, I
  - APMA 1660 Statistical Inference II
  - BIOL 1430 Computational Theory of Molecular Evolution and Population Genetics
  - BIOL 1465 Human Population Genomics
  - APMA 1690 Computational Probability and Statistics

### Applied Mathematics & Statistics Track:

- At least three courses from the following:
  - APMA 1660 Statistical Inference II
  - CSCI 1410 Applied Artificial Intelligence
  - APMA 0340 Methods of Applied Mathematics I, II & APMA 0330
    and Methods of Applied Mathematics I, II
  - OR
  - APMA 0360 & APMA 0350
    Applied Partial Differential Equations I and Applied Ordinary Differential Equations

- At least three of the following:
  - BIOL 1430 Computational Theory of Molecular Evolution and Population Genetics
  - CSCI 1820 Algorithmic Foundations of Computational Biology
  - PHP 2620 Statistical Methods in Bioinformatics, I
  - APMA 1070 Quantitative Models of Biological Systems
  - BIOL 1465 Human Population Genomics

Total Credits: 18-20

---

### Honors:

In order to be considered a candidate for honors, students will be expected to maintain an outstanding record, with no "C"s in concentration courses and with a minimum of an "A-" average in concentration courses. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters, of reading and research with a CCMB faculty member or approved advisor. Students must submit to a public defense of their theses to be open to the CCMB community.

- Students seeking honors are advised to choose a Thesis Advisor prior to the end of their Junior year
- Students must complete the Registration form for Comp Bio and submit it to CCMB@BROWN.EDU

Any deviation from these rules must be approved by the director of undergraduate studies, in consultation with the student's advisor.

### Marine Biology Concentration Requirements

**Note:** This concentration program is being phased out for Class of 2017 students and greater in favor of a track program within the Sc.B. in Biology.

**Standard program for the Sc.B. degree**

Two additional courses in physics, chemistry, mathematics, applied mathematics, computer science, engineering, or geological sciences, as approved by advisor.

Select four of the following biology courses:

- BIOL 0410 Invertebrate Zoology
- BIOL 0420 Principles of Ecology
- BIOL 0510 Introductory Microbiology
- BIOL 0800 Principles of Physiology
- BIOL 1180 Comparative Animal Physiology
- BIOL 1440 Marine Biology
- BIOL 1880 Comparative Biology of the Vertebrates

Select three additional biology courses, highly recommended are:

- BIOL 0200 The Foundation of Living Systems
- BIOL 0470 Genetics
- BIOL 0480 Evolutionary Biology
- BIOL 0500 Cell and Molecular Biology
- BIOL 1180 Comparative Animal Physiology
- BIOL 1310 Developmental Biology
- BIOL 1410 Evolutionary Genetics
- BIOL 1420 Experimental Design in Ecology
- BIOL 1470 Conservation Biology
- ENVS 0490 Environmental Science in a Changing World

Select two of the following group of related science courses:

<table>

Courses

Introduces the basic principles of human nutrition, and the application of these principles to the specific needs of humans, and the role of nutrition in chronic diseases. Provides an overview of the nutrients and their use by the human body. Also examines the role of nutrients in specific functions and disease states of the body. Not for biology concentration credit. Enrollment limited to 100. LILE

BIOL 0040. Nutrition for Fitness and Physical Activity.
Reviews the role of nutrition in physical activity and health. It is designed to provide the student with the information and skills needed to translate nutrition and physical activity recommendations into guidelines for both the athlete for maximal performance and the non-athlete to improve both health and body weight. Students will learn the use of the energy yielding nutrients in physical activity and how food choices can influence both athletic performance and long-term health through the effect on risk factors for chronic diseases. Prerequisite: BIOL 0030. Enrollment limited to 20. Instructor permission required.

BIOL 0060. Introduction to Human Physiology.
An introduction to human physiology aimed primarily at undergraduates who have minimal to no Biology background or who are not concentrating in biology. Acquire a basic understanding of the physiological mechanisms that allow for the running of each major organ systems. Topics include basic cardiovascular, respiratory, urinary, digestive, endocrine, and neuromuscular function, as well as aspects of reproduction and exercise physiology. Not for biology concentration credit. Lab.

BIOL 0080. Biotechnology Management.
An examination of the pharmaceutical, biotechnology, and medical product industries: what they are, how they function, whence they originate, and the pervasive influences of the FDA, patent office, and courts. Extensive reading; emphasis on oral presentation. Primarily intended for students planning a career in biomedical industry. Not for biology concentration credit. Students MUST register for the lecture section and the conference. Enrollment limited to 20.

BIOL 0140A. Topics in Science Communications: Science Journalism Practicum.
Participants will understand how to read scientific research papers to interpret their findings and communicate these to a broader lay audience; analyze and understand best practices in science writing and the challenges of covering science for mass media; interviewing; fair and balanced coverage in reporting; give and receive peer feedback. Not for concentration credit in Biological Sciences programs. Enrollment limited to 10. Instructor permission required. S/NC WRIT

BIOL 0140B. Communicating Science: Biological Illustration.
This Sophomore Seminar is an immersion practicum that conjoins art and science. Employing a series of techniques, students will learn the protocols of scientific rendering in an intensive hands-on approach. Field trips will include the RISD Nature Lab, the Brown Greenhouse, and John Hay collection of biomedical and botanical folios. Media will include graphite/ carbon dust; pen and ink (stipple, line); coquille board; scratchboard, colored pencil, watercolor and polymer clay. Course will be driven by project presentations focused on communicating science through illustration. Not for concentration credit in Biological Sciences programs. Instructor permission required; enrollment 10 students. 1/2 credit. SOPH

BIOL 0140C. Communicating Science: Animating Science.
Taught by RISD/Brown professors with the Science Ctr and Creative Mind Initiative, this course explores the pedagogy of using visual media to convey scientific concepts. The goal is to assess the quality of existing material and design new material that fill an educational need and makes science engaging and accessible. Lectures, labs, discussions, critiques and speakers. Teams collaborate on a series of short exercises leading to the creation of videos/animations explaining scientific concepts. Projects evaluated on accuracy, clarity of explanation, educational value, viewer engagement and creativity. Not for concentration credit in Biological Sciences programs. Enrollment limited to 12; instructor permission.

BIOL 0140K. Conservation Medicine.
How have fruit bats contributed to the emergence of Nipah virus in Malaysia? Is an infectious cancer going to drive the Tasmanian Devil to extinction? Will a warmer world be a sicker world? We will consider these and additional topics at the intersection of global change biology and infectious disease emergence in this course. The course should be of interest to pre-med, general biology and environmental studies concentrators seeking interdisciplinary learning classroom experience. This will satisfy “Area 3” organizational biology concentration requirement for Biology/Health-Human Biology. Expected background: BIOL 0200 or equivalent placement. Enrollment limited to 12 sophomores. Instructor permission required. SOPH

BIOL 0150A. Techniques and Analyses using DNA-Based Biotechnology.
Students will study and practice a range of methods used in molecular biology while examining the ways in which those tools are used in research and in the development of medical treatments. This experience, combined with the reading and discussion of selected papers from the primary literature, fosters development of a skill set critically important for the modern day biology student. Expected background: high school Biology course. Enrollment limited to 10 first year students. Instructor permission required. Half-credit course. S/NC. FYS

BIOL 0150B. Statistical Computing for Biology.
Modern biological research is a data rich endeavor, necessitating strong quantitative and computational skills to interpret the results of experimental and observational studies. In this course we will explore the application of statistics and modeling in biological research and environmental science. Topics covered will include basic probability, experimental design, sampling, hypothesis testing and mathematical models for prediction. No prior statistics knowledge is assumed. Enrollment limited to 10 first year and sophomore students. Instructor permission, based on a portfolio review. This is a half-credit course. S/NC

BIOL 0150C. Methods for Extraction and Analyzing Secondary Metabolites of Medicinal Plants.
Plant secondary metabolites are currently the subject of much research interest when investigating new target compounds for potential medicine from natural products. New leads for drugs and phytomedicines from plants and plant parts have been increasing at a rapid rate especially by the pharmaceutical industry. Many plants have been selected and collected for their specific secondary compounds and healing powers by ethnomedicians in the field. The final step is the extraction, analyzing and identification of these plant specimens. Enrollment limited to 10 first year students. Instructor permission required. Half-credit course. S/NC. FYS
BIOI 0150D. Techniques in Regenerative Medicine: Cells, Scaffolds and Staining

Regenerative Medicine, also known as Tissue Engineering, is the process of creating living, functional tissues to repair or replace native tissue or organ functions that have been lost due to disease or congenital defects. As such, it is a prominent scientific discipline that can either "stand alone" or complement material-based research efforts in the areas of device design, drug delivery, diagnostics and pharmaceuticals. Students will develop competencies in basic cell culture techniques, early stage tissue regeneration strategies and histochemical characterization of mammalian cell constructs. Enrollment limited to 10 first year students. Instructor permission required. Half-credit course. S/N/C. FYS

BIOI 0160. Plants, Food, and People

Examines the selection, breeding, cultivation and uses of food plants. Discusses the effects on agriculture of pathogens, climate change, and loss of biodiversity. Considers whether enough food can be produced for a world population of potentially 10 billion, while sustaining biodiversity and environmental quality. Course will include two papers and assistance from Writing Fellows; feedback from first paper will be available when writing second paper. Enrollment limited to 50. LILE

BIOI 0170. Biotechnology in Medicine

Introduces undergraduates to the main technological advances currently dominating the practice of medicine. Provides an overview of the objectives, techniques, and problems related to the application of biomedical technology to the diagnosis and treatment of disease and the contemporary health care industry. Topics include: pharmaceutical development and formulation; organ replacement by prosthesis and transplantation; medical imaging; tissue engineering, therapeutic cloning, regenerative medicine; stem cells; societal, economic, and ethical issues. This course does carry Biology concentration credit.

BIOI 0180. The Biology of AIDS

AIDS represents an example of the vulnerability of humans to new infectious agents. We will review some human infectious diseases including smallpox yellow fever and influenza, and then explore AIDS/ HIV. First characterized in 1981, AIDS became the leading cause of death in U.S. males aged 25-44 within a decade. We will examine what factors make HIV such a potent pathogen. The course is intended for students beginning in biology. Expected: BIOI 0200, or equivalent placement. This course does carry Biology concentration credit.

BIOI 0190E. Botanical Roots of Modern Medicine

This course will explore a variety of medicinal plants found throughout the world, the diverse cultures that use them in their daily lives and the scientific underpinnings of their medicinal uses. In conjunction with readings, students will gain a hands-on approach in lab, observing, identifying and growing these plants. Enrollment limited to 20. Students MUST register for the lecture section and the lab. FYS

BIOI 0190F. Darwinian Medicine

Explores evolutionary explanations of why we get sick, and how this can shape, or misshape, our interpretations of medicine. Draws on evolutionary genetics, population biology, molecular biology and physiology. This course will build on evolutionary biology and then focus on disease processes such as infection, aging, cancer, allergy, diabetes, and obesity. Enrollment limited to 20 first year students. FYS

BIOI 0190P. Pride and Prejudice in the Development of Scientific Theories

We will examine how the pace and shape of scientific progress is affected by the social/cultural context and the "personality" of the individual. We will look into how the interplay between society and the individual affects how scientific theories arise, are presented, are debated and are accepted. The course will initially focus on Charles Darwin and his theory of Natural Selection using the biography of Adrian Desmond and James Moore, "Darwin: The Life of a Tormented Evolutionist." Enrollment limited to 20 first year students. FYS DPLL

BIOI 0190Q. Climate Change and Species Extinction

In this course students will go beyond the headlines and delve into the science to explore the impact of climate change on species extinction. Students will explore the integration of science and technology through traditional textbooks, primary literature, open source databases, simulations, and discussions. Students will investigate the impact of climate change on species distribution, ecology, and behavior through interactive, inquiry-based, collaborative classroom investigations. Students will learn to integrate information from a variety of sources and disciplines and share their ideas through classroom discussion, written assignments, and oral presentations. Enrollment limited to 20 first year students. FYS WRIT

BIOI 0190R. Phage Hunters, Part I

A research-based lab class for freshmen; both semesters are required in the sequence. Students will isolate and characterize a bacteriophage viruses found in the soil. Lab work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and EM characterization of your phage. Several phages will be selected for genome sequencing over winter break, and are annotated in the spring. One hour lecture, discussion, and 3 hours lab per week. Expected: AP Biology or equivalent, and HS chemistry. Instructor permission required. Admission based on review of applications in the first class. Limited to 20 freshmen. FYS

BIOI 0190S. Phage Hunters, Part II

A research-based laboratory/class for freshmen; both semesters are required. Students will isolate and characterize a bacteriophage viruses found in the soil. Lab work includes isolation and purification of your own phage, DNA isolation and restriction mapping, and EM characterization of your phage. Several phages will be selected for genome sequencing over Winter Recess, and annotated in the spring. One hour of lecture/discussion, and 3 hours lab per week. Expected: AP Biology or equivalent, HS chemistry, and permission of the instructor. Students are expected to take fall and spring courses in the sequence. Enrollment limited to 20 first-year students. Instructor permission. FYS

BIOI 0190T. Bioinformatics: A Practical Introduction

The amount of biological sequence data has grown at an exponential pace and spurred the development of computational tools that allow biologists to use this information. Students will become familiar with useful bioinformatics tools used by researchers. The course will introduce concepts of information transfer in biological molecules, storage in public databases, and how to use tools to access this information and organize it meaningfully. We will explore tools for studying whole genomes, including high-throughput sequencing data to assemble genomes and mapping subsets. Students will gain hands-on experience using these tools. Expected: AP credit or equivalent placement for BIOI 0200. FYS

BIOI 0190U. Plant Development, Structure and Function

This course presents an integrated account of development, structure and function in plants, especially seed plants. Enrollment limited to 20 first year students. FYS WRIT

BIOI 0200. The Foundation of Living Systems

A broad overview of biological systems, emphasizing patterns and processes that form the basis of life. Explores essentials of biochemistry, molecular, and cellular biology and their relationship to the larger issues of ecology, evolution, and development. Examines current research trends in biology and their influence on culture. Appropriate for all students interested in biology. Serves as a gateway course to much of the intermediate and advanced curriculum. Placement tests are offered (contact Jody_Hall@brown.edu); AP scores of 4 or 5 are equivalent to BIOI 0200, and place a student out of this course. Students will be assigned to a lab section during the second week of class. LILE
BIOL 0210. Diversity of Life
This course will explore biological diversity – the number of taxa, and the functions, and processes that support life – from the perspectives of ecology and evolutionary biology. It will draw on examples and case studies from the geological record, functional morphology, the evolution of organ systems in vertebrates, genomics, behavior and sexual selection in birds and invertebrates. Overarching themes will emphasize that taxonomic diversity is an emergent property of complex life on Earth, and the importance of diversity of biological functions and processes in generating and maintaining taxonomic diversity. Class Restriction: Freshmen and sophomores; others by instructor permission.

BIOL 0280. Introductory Biochemistry
Lectures and recitation sections explore the mechanisms involved in the principles of macromolecular structure and function, the organization and regulation of pathways for intermediary metabolism, and the transfer of information from genes to proteins. It is expected that students have taken CHEM 0350 or are taking it concurrently.

BIOL 0285. Introductory Biochemistry Laboratory
Working in small groups, students will examine enzymatic reactions in bacterial metabolic pathways. They will gather information from online databases, define a working model and test this model by purifying a target enzyme and characterizing its biochemical function. They will then propose a hypothesis for the enzymatic reaction mechanism and test this hypothesis by designing mutations in the enzyme active site and characterizing these mutant enzymes experimentally. Priority given to sophomores and junior students planning to enter research careers. Expected: Students have previously taken or are concurrently enrolled in BIOL 0280; preference given to students concurrently enrolled. Instructor permission required. Course credit 0.5; final grade determined for BIOL 0285.

BIOL 0300. Endocrinology
A basic examination of endocrinology with emphasis on hormone biosynthesis, mechanism of action, physiological roles, and endocrine pathology. Topics include: mechanism of action of steroid, amine, and peptide hormones; neuroendocrinology; reproductive endocrinology; and endocrinology of metabolism and calcium homeostasis. It is expected that students have taken BIOL 0200 (or equivalent) and CHEM 0350.

BIOL 0320. Vertebrate Embryology
Introduction to the developmental anatomy of vertebrate embryos, including humans, in an evolutionary context, through lecture, discussion and microscope slide study. Gametogenesis through germ layers and their organ system derivatives. Expected: BIOL 0200, or equivalent placement, or AP Biology score of 4 or 5. Limited to 18 freshmen and 18 sophomores. Students MUST register for the lecture section and the lab.

BIOL 0350. The Fossil Record: Life through Time on Earth
Course is designed for students with prior background in geology or evolutionary biology and who want to learn more about the fossil record, the origins of modern biodiversity and ecosystem structure, and interaction between organisms, and the geological and chemical cycles on the Earth. Lectures will cover major time periods during which animals and plants lived, as well as focusing on major transitions in the evolution of life on Earth. This course will fulfill requirements in both the geology/biology and evolutionary biology concentrations. Expected: BIOL 0210, GEOL 0240 or equivalent. Instructor permission, enrollment limited to 20 sophomores/juniors; register for course/lab.

BIOL 0380. The Ecology and Evolution of Infectious Disease
We will survey the diverse biology of microbes responsible for human infectious disease, develop and apply ecological and evolutionary theory to infectious microbes, and provide practical experience interpreting and synthesizing the peer-reviewed scientific literature. The discovery of infectious microbes, the role of genetic novelty, population structure and transmission mode, and the influence of clinical therapeutics and host immune response will be considered. Evaluation will be based on preparation, participation, weekly student presentations, brief weekly written assignments, a midterm and a final. Expected: BIOL 0200 or equivalent. Enrollment limited to 25 first year students and sophomores.

BIOL 0390. Vertebrate Evolution and Diversity
An overview of vertebrate evolution that not only covers historical events, but also introduces various scientific concepts and modes of thought. Topics include past and present biodiversity, convergent evolution, biogeography, competition, continental drift, climatic change over time, the notion of evolution as progress, and a whole-animal approach to understanding evolutionary events. Enrollment limited to 50. WRIT

BIOL 0400. Biological Design: Structural Architecture of Organisms
Many questions about the workings of living creatures can be answered by joining math, physics, and biology. We will identify basic physical science concepts that help biologists understand the structure and function of animals, plants, and microorganisms, and use these to study how the physical world constrains and facilitates the evolution of the extraordinary design and diversity of organisms. For first and second year students; others by permission. Recommended background: BIOL 0200, or equivalent. Enrollment limited to 40. Instructor permission required. WRIT

BIOL 0410. Vertebrate Zoology
A survey of invertebrate animals emphasizing evolutionary patterns and ecological relationships. Functional morphology, physiology, reproduction, development, and behavior of invertebrates will be examined. Laboratory exercises and two separate day-long field trips provide firsthand experience with the animals. Expected: BIOL 0200 or equivalent. Enrollment limited to 44. Students MUST register for the lecture section and a lab.

BIOL 0415. Microbes in the Environment
Examines the diversity of microbial life in the environment. Surveys key services that microbes perform on land and sea, including biodegradation of contaminants in the environment and ecosystem processes related to climate change. Examines biological interactions of symbioses, quorum sensing, and antibiotic production in a ecological context. Explores the genomic mechanisms explaining phylogeny and life history strategies in microbes. Demonstrate knowledge of the diversity of microbes in the environment and benefits in an ecological/evolutionary context. Lecture based, two fieldtrips to expand appreciation for microbial ecology. BIOL 0200 or equivalent placement; CHEM 0330. Enrollment limited to 20 sophomores, juniors and seniors. WRIT

BIOL 0420. Principles of Ecology
The principles, concepts, and controversies involved in the study of the distribution and abundance of plant and animal populations and their integration into natural communities. Emphasizes interactions among organisms and the hierarchical nature of ecological processes affecting individuals, populations, and communities. Expected: BIOL 0200 (or equivalent) and MATH 0090. Lectures and weekly discussion.

BIOL 0430. The Evolution of Plant Diversity
Examines the evolutionary history of plants from a phylogenetic perspective. Introduces the science of phylogenetics - how to infer phylogenies and how to use them to understand organismal evolution. Highlights major trends in plant evolution over the past 400 million years. Lectures survey major plant lineages, with special focus on flowering plants. Weekly labs, field trips, and assignments stress basic plant anatomy and morphology, identification, and learning the local flora. Expected: BIOL 0200 (or equivalent placement), WRIT

BIOL 0440. Inquiry in Plant Biology: Analysis of Plant Growth, Reproduction and Adaptive Responses
This course focuses on what plants do and how they do it. Introduces the biology of plants, their growth and development, structural features, and their cellular and organismal responses to key stimuli. Examines physiological, reproductive and developmental strategies throughout the plant life cycle and in relation to environmental challenges. Discusses the significance of various plant model systems for genetic research and understanding of mechanisms controlling plant growth and development. Prerequisites: BIOL 0200 (or equivalent placement). Students MUST register for the lecture section and a lab. Enrollment limited to 24 students.
BIOL 0455. Coastal Ecology and Conservation. Will enable to students to master fundamental ecological concepts and understand how this knowledge can be used to inform coastal conservation and management. Case studies from New England and elsewhere, field trips to rocky shores, salt marshes and coastal ecosystems enable students to develop scientific skills and experience the challenges of coastal conservation science. The course is aimed at freshmen and sophomores. Expected background: BIOL 0200 or equivalent placement. Enrollment limited to 10 students, and written permission required. Email (Mark_Bertness@brown.edu) to receive course application (due May 1). Admitted students register for the course in September.

BIOL 0460. Insect Biology. Focuses on characteristics that make insects unique and why more insect species have been described than all other organisms combined; the opportunity to investigate diversity and adaptation; their abundance, small size, and short lifespans; their importance as agents of biocatalysis, pollination, agricultural pests, and disease vectors. Expected: BIOL 0200 or equivalent. Enrollment limited to 20. Students MUST register for lecture AND lab. Primarily for freshmen and sophomores.

BIOL 0470. Genetics. Genetic phenomena at the molecular, cellular, organismal, and population levels. Topics include transmission of genes and chromosomes, mutation, structure and regulation of the expression of the genetic material, elements of genetic engineering, and evolutionary genetics. One laboratory session and one discussion session per week. (Students should not plan to take BIOL 0470 after 1540.) Expected: BIOL 0200 (or equivalent placement). Students will be assigned to Lab sections the first week of class.

BIOL 0480. Evolutionary Biology. A broad introduction to the patterns and processes of evolution at diverse levels of biological organization. Topics covered include natural selection, adaptation, speciation, systematics, macroevolution, mass extinction events, and human evolution. Weekly discussion sections involve debates on original research papers. Occasional problem sets involve computer exercises with population genetics and phylogeny reconstruction. Expected: BIOL 0200 (or equivalent placement).

BIOL 0495. Statistical Analysis of Biological Data. A first course in probability distributions and the use of statistical methods for biological data. Topics covered will include describing data, statistical inference (hypothesis tests and confidence intervals), analyzing association, and methods for categorical data (contingency tables and odds ratios). Methods will be applied to data drawn from areas of biological inquiry. For statistics or related science credit in Biology programs. Expected background: BIOL 0200 or equivalent, math equivalent to MATH 0100. This course is for related science credit only in Biological Sciences concentration programs. Enrollment limited to 40 undergraduates-20 juniors and 20 sophomores. Registration for seniors requires permission from the instructor.

BIOL 0500. Cell and Molecular Biology. This course examines the structure and function of the basic unit of an organism, the cell. An experimental approach is used to examine cellular functions, ranging from gene transcription, cell division and protein secretion, to cell motility, and signal transduction. Relevance to health and disease will be considered. Expected: BIOL 0200 (or equivalent placement).

BIOL 0510. Introductory Microbiology. Introduces role of microbes in our understanding of biology at the cellular and molecular level. Focuses on microbial significance for infectious disease, public health, genetics, biotechnology, and biochemical cycles. Laboratory involves basic microbiological techniques and selection and manipulation of microbes. Expected: BIOL 0200 (or equivalent placement). Students MUST register for the lecture session, conference, and the lab. Enrollment limited to 108.

BIOL 0530. Principles of Immunology. Introduction to experimental and theoretical foundations of immunology. Focuses on concepts, landmark experiments and recent advances. Topics include innate and adaptive immunity; structure/function of antibody molecules and T cell receptors; regulation of immune responses through cellular interactions. Applications of concepts to medically significant issues (vaccines, transplantation, inflammation, autoimmunity, cancer, HIV/AIDS) are discussed. Interpretative analysis of experimental data is emphasized. Expected background: BIOL 0200 or equivalent placement credit.

BIOL 0800. Principles of Physiology. Introduction to the function and integration of organ systems with an emphasis on human physiology. Includes basic concepts in cell and organ system physiology as well as fundamentals of modern trends in physiological science. Emphasizes the application of physical and chemical principles to organ function at both the cellular and systemic levels. Expected: BIOL 0200 or equivalent.

BIOL 0860. Diet and Chronic Disease. This course addresses the relationship of food to the development and treatment of chronic diseases. Chronic diseases discussed are obesity, dyslipidemia/heart disease, diabetes mellitus, cancers and osteoporosis. Dietary recommendations for these diseases are critically assessed. Geared toward students interested in nutrition, medicine, and public health. Prerequisites: BIOL 0030 and 0800, plus permission of the instructor. Enrollment limited to 20.

BIOL 0920A. Controversies in Medicine. Why and how do controversies in medicine emerge at specific moments in time? Why do scientists come to different conclusions based on the same data? Does it matter how we interpret controversies? This sophomore-level seminar critically analyzes contemporary controversies in medicine and public health. Using a case study approach, we will examine the social and political assumptions that inform important controversies. Questions related to the relationship between science, media, activism, and health inequality will be woven into the case studies. Enrollment limited to 20 sophomores. (For theme, not biology, credit in Health and Human Health and Biology only.) SOPH

BIOL 0940A. Viral Epidemics. This sophomore seminar will examine epidemics (outbreaks) of viral infections from a historical perspective. We will also cover current literature and up to the minute news accounts of infectious disease related outbreaks occurring around the globe. The major focus will be on virus related diseases but any microbial outbreak in the news will be explored. The seminar will cover basic aspects of microbial pathogenesis so students can gain an appreciation of microbial host interactions. Essential writing skills will also be developed. Enrollment limited to 20 sophomore students. WRIT SOPH

BIOL 0940B. Sophomore Seminars in Biology: Life in a Shell. This Sophomore seminar is an examination of broad themes in whole animal physiology with an emphasis on environmental adaptations. The foundation of the course will be the instructor’s recent book “Life in a Shell: A Physiologist’s View of Turtle.” A consideration of this iconic animal’s novel biological traits will lead into comparisons with our own biology and that of other animals. Topics: respiration, circulation, metabolic rate, buoyancy control, overwintering, migration, reproduction, and bone structure and function. Relevant original research papers will be used. Mandatory S/NC; enrollment of 20 students; override required. Expected: BIOL 0200 or equivalent placement credit. SOPH

BIOL 0940C. Sophomore Seminar: Insect Biology. Focuses on characteristics that make insects unique and why more insect species have been described than all other organisms combined; the opportunity to investigate diversity and adaptation; their abundance, small size, and short lifespans; their importance as agents of biocatalysis, pollination, agricultural pests, and disease vectors. Expected: BIOL 0200 or equivalent. Enrollment limited to 12 sophomores only. Students MUST register for lecture AND lab. SOPH
BIOL 0940D. Rhode Island Flora: Understanding and Documenting Local Plant Diversity.
This Sophomore Seminar focuses on species level identification of plants in Rhode Island and will cover the dominant plant species in each of the state’s main habitats including coastal wetlands and uplands, freshwater wetlands, peatlands, upland forests, and disturbed areas. Students will learn to identify plants using online interactive keys as well as more technical dichotomous keys and will also cover basic ecological processes in each habitat including the interaction of soils, geology, and hydrology. Materials related to plant morphology, plant taxonomy, plant evolution, understanding phylogenetic trees, and botanical illustration. Pre-requisites: BIOL 0200. Instructor permission required. SOPH

BIOL 0960. Independent Study in Science Writing.
Incorporates a nontechnical science journalism component into the BioMed curriculum. A series of four to six specific assignments are recommended, based on topics derived from another biology course taken previously by the student, whose instructor has agreed to serve as a BIOL 0960 sponsor. Assignments may include, for example, investigative or analytical reviews, or feature articles on ethical or social impacts of new discoveries. The student and instructor schedule meetings to discuss topics and due dates, review rough drafts, and evaluate completed work. Not for concentration credit in the biological sciences programs. Permission must be obtained from the instructor prior to registering. Section numbers vary by instructor. Half credit.

BIOL 1040. Ultrastructure/Bioimaging.
This course examines microscopy and image analysis in the life sciences. Theoretical and practical aspects of microscopy will be discussed. Students will obtain hands-on experience with electron microscopy, light microscopy, fluorescence microscopy, and confocal microscopy. Students will learn to display images in 3D. Advanced undergraduates. Instructor permission required.

BIOL 1050. Biology of the Eukaryotic Cell.
Examines organelles and macromolecular complexes of eukaryotic cells with respect to structural and functional roles in major cellular activities. Emphasizes experimental basis for knowledge in modern cell biology using original literature, and discusses validity of current concepts. For advanced undergraduates and beginning graduate students. Complementary to BIOL 1270 and 1540. Prerequisites: BIOL 0280 or 0470 or 0500, or instructor permission. Graduate students register for BIOL 2050.

This course examines contemporary biotechnologies used to combat the predominant, worldwide problems in human health. Global health will be addressed from the scientific and engineering perspectives while integrating public health policy, health systems and economics, medical and research ethics, and technology regulation and management. This course is intended for graduate and advanced undergraduate students in biology, engineering, or related fields who have an interest in global health initiatives. Expected background: BIOL 0200 and BIOL 0800, or equivalents. Preference will be granted to graduate students in the Biotechnology and Biomedical Engineering programs. Only for related course credit in Biology, and for theme course credit in Health and Human Biology programs. Enrollment limited to 20. Instructor permission required.

BIOL 1090. Polymer Science for Biomaterials.
Basic principles of polymer science and its application in medicine. Topics include basic polymerization chemistry, kinetics of polymerization and depolymerization with emphasis on bioerodible polymers, characterization of polymers by physical methods, bulk and surface properties, behavior of polymers in solutions, crystallization, gelation, and liquid crystals. Hands-on experience with polymer characterization. Expected: CHEM 0350. Enrollment limited to 25.

BIOL 1100. Cell Physiology and Biophysics.
Current topics in cell physiology, with an emphasis on membrane-mediated interactions between cells and their environment. Topics may include: ion channel structure, function and regulation; intracellular regulatory molecules; mechanisms of sensory transduction; membrane receptors and second messenger systems; vesicle secretion; and cytoskeletal regulation of cell function. Lectures, discussion, and student presentations of the current literature. Expected: BIOL 0800 or NEUR 0910. Instructor permission required. Registration overrides will not be given out until after the first one or two classes. Enrollment limited to 30, and admission is based on seniority -- graduate students, seniors, then juniors. (Not for first and second-year undergraduates.)

BIOL 1110. Topics in Signal Transduction.
Signal transduction is one of the most rapidly developing fields in biomedical sciences. Defects in signaling pathways can be responsible for diseases such as cancer, diabetes, cardiovascular disorders and psychoses. This course offers students an overview of the molecular pathways that allow cells to receive and process signals from their external environment, with an emphasis on the emerging state-of-the-art techniques used in their study. Expected background: BIOL 0200, 0280, 0470, or 0500. Enrollment limited to 20 juniors and seniors. Instructor permission required.

BIOL 1120. Biomaterials.
A biomaterial is defined as a material suitable for use in medical implants that come in direct contact with patients’ tissues. These include polymers, metals, and ceramics, and materials obtained from biological sources or through recombinant biotechnology. Goal: to provide comprehensive coverage of biomaterial science and technology. Emphasizes the transition from replacement to repair strategies. For advanced undergraduates and graduate students. Prerequisite: BIOL 0800 or instructor permission.

BIOL 1140. Tissue Engineering.
Tissue engineering is an interdisciplinary field that incorporates progress in cellular and molecular biology, materials science, and engineering, to advance the goal of replacing or regenerating compromised tissue function. Using an integrative approach, we will examine tissue design and development, manipulation of the tissue microenvironment, and current strategies for functional reconstruction of injured tissues. Expected: CHEM 0330, plus BIOL 0500 or 0800. Enrollment limited to 20. Instructor permission required.

BIOL 1150. Stem Cell Engineering.
Stem cell engineering focuses on using adult, embryonic, and induced stem cells to repair damaged or diseased tissues. This course will examine the role of stem cells in development, tissue homeostasis, and wound healing, as well as how they are being applied in regenerative medicine. A lecture and discussion format for major topic areas. Students will receive hands-on training in how to isolate, culture, and differentiate adult stem cells in a laboratory setting. Expected: CHEM 0330 and BIOL 0500 or an equivalent course in cell biology or physiology. Cell culture experience highly recommended. Enrollment limited to 20. Instructor permission required.

BIOL 1160. Principles of Exercise Physiology.
Application of the basic principles of physiology to the study of the response mechanisms of the human body during exercise. Topics include muscle and neural control, energy metabolism, cardiovascular and respiratory effects, endocrinology, principles of training, and special topics (e.g., diving, high altitude, and microgravity). Student presentations based on scientific articles are included. Expected: BIOL 0800 or written permission of the instructor.

BIOL 1180. Comparative Animal Physiology.
Comparative approach to the function and regulation of animal systems with an emphasis on vertebrates. Topics include circulation, gas exchange, neuromuscular function, excretion, acid-base and ion regulation, and temperature regulation. Considers the unity and diversity of physiological processes in animals differing both in phylogeny and environmental adaptation. Original papers are discussed. Expected: BIOL 0800 or equivalent.
BIOL 1190. Synthetic Transmission and Plasticity.  
Synapses are the means by which the nervous system communicates. In this seminar-style course, we will explore the molecular and physiological underpinnings of synaptic transmission. We will then examine ways in which synapses can modulate their strength during development, learning, and other adaptive processes. Expected: BIOL 0800 or NEUR 1020. Enrollment limited to 20. Instructor's permission required.

BIOL 1200. Protein Biophysics and Structure.  
Structural Biology is the science to determine 3-dimensional structures of biomacromolecules (i.e. proteins, RNA, and DNA). These structures enable biologists to understand and explore their function. Since proteins, RNA, and DNA are the primary molecules of life, structural biology enables us to understand and influence these molecular machineries which form the basis of all biological processes. Throughout the class, the students will see examples of biologically important proteins and protein complexes that will allow them to correlate structure and biological function. Prerequisite: BIOL 0280.

BIOL 1210. Synthetic Biological Systems.  
A multidisciplinary course that combines science and engineering providing a solid foundation in a cutting edge field of biological engineering. Synthetic biology is a mixture of biology, chemistry, engineering, genetic engineering and biophysics. It builds on recent work in systems biology which involves the modeling of biological systems, but goes further in that it involves the construction and standardization of biological parts, that fit together to form more complex systems. Expected: at least four courses beyond BIOL 0200, CHEM 0330, PHYS 0300, ENGN 0300, MATH 0900, or CS CI 0040.

BIOL 1220. Synthetic Biological Systems in Theory and Practice.  
A multidisciplinary laboratory, lecture, and discussion based course that combines several areas of science and engineering providing a foundation in the cutting edge field of synthetic biological engineering. The field of synthetic biology is centered around trying to make biology easier to engineer. It builds on recent work in systems biology which involves the modeling of biological systems, but goes further in that it involves the construction and standardization of biological parts that fit together making complex systems. This course will combine classes, guest lectures and discussion lab visits to give students the best possible tools for understanding and applying research in synthetic biology. Expected: at least two courses in any of the key disciplines (biology, chemistry, physics, math, engineering, computer science) beyond the introductory level, and permission of the instructor.

BIOL 1222A. Current Topics in Functional Genomics.  
A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of “system-wide” approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Students typically have taken an advanced undergraduate-level course in biology.

BIOL 1250. Host-microbiome Interactions in Health and Disease.  
Will focus on our current understanding of how various microbiomes communicate and interact with the host and the factors that influence these interactions. We will discuss how the new technologies such as metagenomics and metabolomics have enhanced our understanding of host-microbiome interactions in health and disease. Students will have the opportunity to participate in discussions on how to apply recent discoveries to disease processes, health restoration and maintenance. The course will help students develop skills in critical thinking and in reading and evaluating original scientific literature. Expected: students with a background in basic microbiology (BIOL 0530 or its equivalent). 20 enrollment.

BIOL 1260. Physiological Pharmacology.  
Covers the physiology of human disease (e.g., Heart failure and arrhythmia; cancer signaling pathways with a focus on breast cancer; neurological disorders such as schizophrenia and Parkinson’s disease) and discusses the pharmacology of the drugs used to treat disease. A group of the most commonly prescribed drugs is discussed in terms of their fundamental modes of action and clinical importance. Expected: BIOL 0800.

BIOL 1270. Advanced Biochemistry.  
An advanced course in biochemistry, biochemical methods, and reading of the primary literature, featuring systematic coverage of the biochemistry of the central dogma, including DNA (replication, repair, recombination), RNA (regulation and mechanism of transcription, processing, turnover), and proteins structure, synthesis, modification, degradation, mechanisms of action, function). Expected: BIOL 0280, CHEM 0350, 0360. Graduate students register for BIOL 2270.

Provides a conceptual understanding of molecular events underlying development of human cancer. Focused on genetic changes leading to malignant transformation of cells. Covers cell cycle control, DNA damage, mutagenesis, cancer predisposition syndromes, oncogenic viruses, tumor immunology, metastasis, cancer chemotherapy and drug resistance. Lecture plus discussion of primary literature. Prerequisites: BIOL 0280 OR BIOL 0470 OR BIOL 0500.

BIOL 1300. Biomolecular Interactions: Health, Disease and Drug Design.  
Interactions between the molecules of life-proteins, RNA, DNA, membrane components-underlie all functions necessary for life. This course focuses on how nature controls these interactions, how these interactions can go awry in disease, and how we can learn the rules of these interactions to design drugs to treat disease. Students will review the physical basis of molecular interactions, learn classic and state-of-the-art high-resolution and high-throughput tools used to measure interaction, and survey the experimental and computational strategies to harness these interactions using a case study in rational drug design. Prerequisite: Introductory Biochemistry (BIOL 0280). Enrollment limited to 20; instructor permission. WRIT

BIOL 1310. Developmental Biology.  
Covers the molecular and cellular events of development from fertilized egg to adult. Genetic basis of body form, cell fate specification and differentiation, processes controlling morphogenesis, growth, stem cells and regeneration will be examined. Differential gene regulation, intercellular signaling and their evolutionary conservation will be central to discussion of mechanisms governing developmental processes. Additional topics: developmental plasticity, impact of epigenetic and environmental factors, and basis of disease gleaned from developmental biology research. Live embryos will complement and reinforce concepts covered in class. Enrollment limited to 36. Expected: BIOL 0200 (or equivalent), and one course in genetics, cell biology or embryology.

This course is an advanced, seminar-based course. Primary literature is emphasized to complement the format of extensive student seminar presentations. It is essential that students have a strong background in biology in order to gain the most from this course. The emphasis of the course is student seminar presentation and extensive discussion on the material. This is often the first opportunity for students to present/discuss science in a seminar format. Expected background: a course in Cell Biology (e.g. BIOL 0500 or 1050), and two additional Biology courses above the introductory (BIOL 0200) level. Enrollment limited to 20.

BIOL 1410. Evolutionary Genetics.  
This course will focus on selected topics in molecular population genetics, molecular evolution, and comparative genomics. Classic and current primary literature at the interface of evolution and genetics will be discussed in a seminar format. The laboratory involves wet-lab exercises (allozymes, PCR-RFLP, sequencing), plus computer labs using DNA analysis packages. Students will prepare a final grant proposal on specific research interests. Expected: BIOL 0470 or 0480. Students MUST register for the lecture section and the lab. Enrollment limited to 20.
BIOI 1420. Experimental Design in Ecology. An overview and discussion of the basic principles used to design lab and field experiments in ecology and environmental science. Topics include: replication and statistical power, appropriate use of factorial designs, nonparametric methods, post hoc tests, natural versus manipulative experiments, experimental artifacts and impact study design. Discussions based on primary literature and a new text. Expected: BIOI 0420.

BIOI 1425. Phylogenetic Biology. This course is the study of the evolutionary relationships between organisms, and the use of evolutionary relationships to understand other aspects of organism biology. This course will provide a detailed picture of the statistical, mathematical, and computational tools for building phylogenies and using them to study evolution. Enrollment is by instructor permission. Students will present scientific papers in class and complete a final project consisting of their own phylogenetic analysis. Expected Background: Evolutionary Biology and quantitative methods (such as statistics, computation, or math). Open to juniors, seniors, and graduate students. Enrollment limited to 16.

BIOI 1430. Computational Theory of Molecular Evolution and Population Genetics. Population genetics is the study of how biological processes such as mutation, natural selection, population size, and subdivision drive evolution over the timescale of generations. The past 20 years have seen a flowering in our understanding of this process from both theoretical and experimental perspectives. This course will present a rigorous introduction to modern population genetics, with particular emphasis on the complementary interplay between theory and experiment. Students will also gain extensive experience with the primary literature of the field. Prerequisites: MATH 0100 and one of BIOI 0470 or 0480, or permission. LILE

BIOI 1440. Marine Biology. An examination of current topics in the ecology of marine organisms and communities. Current literature and ideas are analyzed in a seminar format (Shrweek). A class research project provides hands-on experience with designing and interpreting experimental field work. Prerequisites: BIOI 0410 and 0420. Instructor's permission required.

BIOI 1450. Community Ecology. This course will explore foundational concepts in community ecology, and will draw on examples and case studies from marine and terrestrial ecosystems, including species-rich tropical rain forests and coral reefs, the marine intertidal and benthic environments, and species-poor forests and grasslands of the temperate zone. Overarching themes will emphasize theoretical frameworks to understand the evolutionary origins and maintenance of this biological diversity. This will be accomplished using traditional lectures, weekly student-led discussions, readings of the primary literature, and class activities. Expected background: BIOI 200 or equivalent placement; and BIOI 0420; OR instructor permission.

BIOI 1465. Human Population Genomics. An introduction to human genomics and the evolutionary forces that shape observed genetic variation across humans today. Topics will include the relationship among humans and other primates, human population genetics and genomics, and examples of the concomitant evolution of both cultural traits and domesticated organisms. Assignments include a class presentation and reviewing papers on a selected topic. Expected background: BIOI 0470 or 0480, and BIOI 0495, PHP 2500, or equivalent. Enrollment limited to 25. Instructor permission required. WRIT

BIOI 1470. Conservation Biology. Conservation Biology is the scientific study of the phenomena that affect the maintenance, loss, and restoration of biological diversity. Topics covered include: 1) the impacts of global warming, species invasions, and habitat destruction on biodiversity, 2) strategies developed to combat these threats, and 3) a consideration of key economic and ethical tradeoffs. Special attention will be paid to current debate and controversy within this rapidly emerging field of study. Readings will include the primary literature. A term-paper will be required. Prerequisite: BIOI 0420 or instructor permission. Enrollment limited to 30.

BIOI 1475. Biogeography. Will provide an overview of the field of biogeography—the study of geography of living organisms. Class meetings will be split between lectures and discussions. Each discussion will expose students to foundational papers, which set the context for the field's development, and more recent papers, which show where the field is headed. Each student will conduct a short (but time consuming) original research project on some topic in biogeography. Prerequisites: BIOI 0420 and 0480. Expected: one taxonomy-based course (e.g., BIOI 0410, 0430, or 0460). Enrollment limited to 15 juniors, seniors, and graduate students. Instructor permission required.

BIOI 1480. Terrestrial Biogeochemistry and the Functioning of Ecosystems. Three fundamental multidisciplinary questions will be addressed: How do ecosystems work? What limits the growth of life on Earth? How are humans altering the framework in which all life exists? Earth is basically a closed chemical system, and the reactions that support life are fueled by sunlight. But added to this chemistry and physics is the tremendous influence of life. Life created an oxygen atmosphere; the evolution of biological nitrogen fixation exponentially increased how many organisms could exist, and the soils that support human food production developed only by biologically-mediated processes. Throughout Earth's 4.5 billion-year history changes in Earth's basic biogeochemical processes have been fairly slow. Under our inattentive stewardship, we have almost instantaneously altered all of the major element cycles. We will focus heavily on what these changes mean for life on Earth. Instructor permission required.

BIOI 1485. Climate Change Health and Ecology. Explore the linkages between climate change and health. Students will come to appreciate the topic through the foundations of the primary disciplines relevant to the field including global health, environmental change, disease ecology, and others. Climate-health linkages will be learned through weekly case studies addressed collectively through student-centered lectures, discussion of the primary literature, groups activities and guest lectures from campus faculty on topics ranging from climate migration to infectious disease range shifts. Expected background: BIOI 0475, or BIOI 1470, or PHP 1070, or PHP 1920, or equivalent experience with instructor's permission. Enrollment limited to 12 juniors and seniors.

BIOI 1500. Plant Physiological Ecology. An in-depth look at plant ecological strategy, focusing on the anatomical and physiological adaptations of plants to particular environments. Additional topics include plant-animal interactions, historical biogeography, and community assembly processes. A comparative, phylogenetic approach is emphasized. Lectures present a broad overview of topics, and discussions focus on current outstanding problems. Lab exercises provide hands-on experience in designing experiments, measuring plant performance, and scientific writing. Required laboratory hours to be arranged by the instructor. Expected: BIOI 0430 or BIOI 0440. Enrollment limited to 15.

BIOI 1520. Innate Immunity. Innate immunity is the initial response to microbes that prevents infection of the host. It acts within minutes to hours, allowing the development of the adaptive response in vertebrates. It is the sole mechanism of defense in invertebrates such as insects. The components and mechanisms dictating this response are explored. Prerequisite: BIOI 0530. Enrollment limited to 30. Graduate students must obtain instructor permission.

BIOI 1540. Molecular Genetics. Covers advanced genetic and molecular methods and their use in analysis of complex biological phenomena such as development, signaling, behavior, and disease. Discusses how these techniques are applied in various organisms, with emphasis on the major Eukaryotic genetic model systems (Drosophila, nematodes, mouse, yeast, Arabidopsis) and on human genetics. Uses primary literature to analyze the design of forward- and reverse- genetic approaches to discover novel gene function. For advanced undergraduates and beginning graduate students. Prerequisite for undergraduates: BIOI 0470 or instructor permission. Expected background: any of BIOI 0280, 0500, 1050, or 1310. Graduate students should register for BIOI 2540.
BIOL 1550. Biology of Emerging Microbial Diseases.
Emerging diseases influence the health of human populations in less developed countries and are expected to have similar effects worldwide. Rising incidence of “new” diseases underscores the need for knowledge of infection mechanisms and their outcomes. Focuses on biochemical, genetic, cellular and immunological events of emerging pathogens and host responses. Expected: BIOL 0470 or BIOL 0530.

BIOL 1555. Methods in Biomedical Informatics.
Will provide a methodological survey of approaches used in biomedical informatics. Particular emphasis given to formalisms and algorithms used within the context of biomedical research and health care, including those used in biomolecular sequence analysis, electronic health records, clinical decision support, and public health surveillance. Practical programming skills will also be taught within these contexts. The final project of the course is to demonstrate an understanding of biomedical informatics approaches through development of a solution within biomedical research or healthcare context. Prerequisite: introductory statistics course. Enrollment: 20 students. For biological science concentrators, graduate students, others with permission.

BIOL 1560. Virology.
Emphasizes the understanding of molecular mechanisms of viral pathogenesis. Begins with a general introduction to the field of virology and then focuses on the molecular biology of specific viruses that are associated with human disease. Lectures based on current literature. Prerequisite: BIOL 0280, 0470, or 0530, or instructor permission.

BIOL 1600. Development of Vaccines to Infectious Diseases.
Provides background steps involved in vaccine development, from conceptualization to production to deployment. Considers infectious diseases and associated vaccines in context of community health. Appropriate for students wanting to gain an understanding of vaccine science. Provides a foundation for advanced courses in immunology and infectious disease, biomedical research, or medical/graduate studies. Activities include a weekly section meeting for discussion of relevant primary literature, and a final project of the student’s choice in the form of an in–class presentation, a research paper or an approved alternative format. Expected: BIOL 0200 or equivalent placement; BIOL 0530, and at least one additional biology course.

How and why do animals run, jump, swim and fly? Physiology, anatomy, ecology, and evolutionary history all influence, and are influenced by, the way animals move around. We will integrate analyses from many levels of biological organization - from molecular motors, through bone-muscle systems, to biogeography - with methods and approaches from mechanics, fluid dynamics, and robotics. Expected: BIOL 0800 and PHYS 0030. Instructor permission required. WRIT

BIOL 1820. Environmental Health and Disease.
Fundamental concepts relating to the adverse effects of chemical agents on human health. Topics include dose-response relationships, absorption, distribution, metabolism, excretion, mechanisms of toxicity, and the effects of selected environmental toxicants on organ systems. Many of these concepts will be reinforced through the use of a case-study approach where a pertinent environmental issue is incorporated into the ongoing lectures. Expected: BIOL 0500 and BIOL 0800, plus either ENVS 0490 or BIOL 0420. Advanced students have priority.

BIOL 1850. Environmental and Genetic Toxicology.
Human disease is produced by complex interactions between inherited genetic predisposition and environmental exposures. These interactions will be explored at the molecular, cellular, and systemic levels. Prototype diseases will include hereditary disorders of hemoglobin, hypercholesterolemia, birth defects, and cancer. Expected: Cell Biology.

BIOL 1870. Techniques in Pathobiology.
A methodology course featuring laboratory and lecture instruction in established and leading-edge technologies. Examples: flow cytometry (multi-parameter analysis, cell sorting, DNA analysis, apoptosis analysis); molecular biology (PCR, in situ hybridization, southern blotting, cytogenetics, gene cloning, bioinformatics); digital imaging (image acquisition, processing and analysis); light microscopy (confocal, immunohistochemistry); transmission electron microscopy (immunolabeling/ enzyme cytochemistry); scanning electron microscopy (including x-ray microanalysis).

BIOL 1880. Comparative Biology of the Vertebrates.
The biology, structure, and evolutionary history of the vertebrates considered phylogenetically, emphasizing evolution of the major body systems. Stresses an evolutionary approach to the correlation of structure and function with environment and mode of life. Labs include dissection of several different vertebrates and comparative osteological material. Emphasis of course is on critical thinking rather than memorization of material. Recommended: BIOL 0320 or 0800. First year students must obtain instructor permission to register. Enrollment limited to 32. Students MUST register for the lecture section and the lab.

BIOL 1890. Human Histology.
This course will provide an in-depth treatment of the “stuff we are made of” and the wonderful logic of its organization. This course focuses first on the biology of the four basic tissues (epithelium, connective tissue, muscle and nerve) and second, how they contribute to the functional anatomy of all organs and systems. For Pfizer students only.

BIOL 1920B. Health Inequality in Historical Perspective.
Seminar takes a historical perspective to explore causes of health inequality in the US. Draws on studies from the 19th century-present. Examines socio–political and economic context of health/disease, focusing on how race, class, and gender shape the experience of health, disease causality, and public health responses. Includes health consequences of immigration, incarceration, race-based medicine, the Chicago heatwave, and Katrina. BIOL 0200 and work in Africana Studies and/or science-technology courses SUGGESTED. Not for biology concentration credit. Suitable as related science or theme course for HHB. Enrollment restricted to 20, third- AND FOURTH-year students.

BIOL 1920C. Social Contexts of Disease.
What shapes our understandings of disease, and what makes a disease real? How might we explain the demise of formerly prevalent diseases and the arrival of others? How do politics, technologies, and institutions affect conceptions of disease and structure their treatment? Will examine the impact of social context on patients’ experiences of disease, including clinical, scientific, and public health approaches. Will consider disease in relation to social relationships, power of the state to regulate disease, and cultural care of the body. Enrollment limited to 20 students; instructor permission required; serves as Capstone in Health and Human Biology. Not for concentration credit. WRIT

BIOL 1920D. Race, Difference and Biomedical Research: Historical Considerations.
This advanced seminar places the current debate over race, health, and genetics in historical context. An overarching goal is to understand how the social world informs the scientific questions we ask, design of research studies, and interpretation of findings. How have the theories and practices of biomedical science and technology produced knowledge of “race” and racial difference historically? How does race relate to gender and class? What are the implications of this debate for understanding health inequality? Previous coursework in Africana Studies, biomedical science, history of science, and/or science and technology studies preferred. Enrollment limited to 20; instructor permission. WRIT

BIOL 1941A. Plants in a Changing Planet.
Plants are the foundation of Earth's ecosystems and essential to human survival and civilization. This seminar will examine the physiological, ecological, and evolutionary responses of plants to rapid environmental change, and the consequences for agriculture and the structure and function of natural systems. Expected background: at least one of the following courses - BIOL 0420, 0430, 0440, 0480, or ENVS 0490.
BIOL 1950. Directed Research/Independent Study
Directed research/independent study in biological sciences: basic science, social studies of biomedical science, and clinically-oriented projects, mentored by individual faculty members in the Division of Biology and Medicine. Sites include campus and hospital based facilities. Projects can serve as the basis for Honors theses, or to fulfill research requirements in a Bio-Med concentration program. Students planning to use 1950/1960 to fulfill a concentration requirement must receive approval from the concentration advisor. No more than two (2) semesters of BIOL 1950/1960 may be used toward a concentration program in the biological sciences. Faculty from outside the Division may supervise projects for bio-med program concentrators, but should do so using their Department's own Independent Study course number.

BIOL 1960. Directed Research/Independent Study
Directed research/independent study in biological sciences: basic science, social studies of biomedical science, and clinically-oriented projects, mentored by individual faculty members in the Division of Biology and Medicine. Sites include campus and hospital based facilities. Projects can serve as the basis for Honors theses, or to fulfill research requirements in a Bio-Med concentration program. Students planning to use 1950/1960 to fulfill a concentration requirement must receive approval from the concentration advisor. No more than two (2) semesters of BIOL 1950/1960 may be used toward a concentration program in the biological sciences. Faculty from outside the Division may supervise projects for bio-med program concentrators, but should do so using their Department's own Independent Study course number.

BIOL 1970A. Stem Cell Biology
Senior seminar course will provide an interactive forum by which up to twenty seniors (and qualified juniors with permission) will explore the biology of stem cells from their humble beginnings in the embryo to their potential use in regenerative medicine. The potency and regulation of embryonic and adult stem cell populations derived from diverse organisms will be contrasted with laboratory-derived human stem-like cells for biomedical applications. Critical reading of classical and modern literature in the field of stem cell biology will form the basis of student-led presentations, papers and ethical forums. Expected: biochemistry, genetics and/or cell biology. Instructor permission; 20 students.

BIOL XLIST. Courses of Interest to Biology Concentrators
Fall 2016
The following courses may be taken for concentration credit. Please see the sponsoring department for the time and location of each course.

Environmental Studies
ENVS 0490 Environmental Science in a Changing World

Biology (Graduate)

Associate Dean of Biology
Edward Hawrot

Associate Dean of Graduate and Postdoctoral Studies
Elizabeth O. Harrington

Graduate Biological Sciences Education
The Division of Biology and Medicine offers multiple programs of advanced graduate study leading to the degrees of A.M., Sc.M., and Ph.D. These programs are thematically based: Biotechnology; Molecular Biology, Cell Biology, and Biochemistry; Molecular Pharmacology and Physiology; Pathobiology; Ecology and Evolutionary Biology; Computational Biology; Neuroscience; and Biomedical Engineering. The research network at Brown features advanced facilities situated on campus and at partner institutions which encourages discovery and innovation with state-of-the-art equipment and resources including: Genomics Core (http://www.brown.edu/Research/CGP/core/equipment) and Proteomics Facility (http://biomed.brown.edu/epscor_proteomics), Bioimaging facility (http://www.brown.edu/Facilities/Leduc_Bioimaging_Facility), Mouse Transgenic and Knockout Core (http://www.brown.edu/Departments/Molecular_Biology/transgenic), Animal Care Facilities (http://biomed.brown.edu/ancare), Plant Environmental Center (http://www.brown.edu/academic/ecology-and-evolutionary-biology/plant-environmental-center), Water Flume (http://www.brown.edu/Departments/EEB/research/morphology.htm), RI BioBank (http://biomed.brown.edu/rhode-island-biobank), Molecular Pathology Core (http://brown.edu/Research/SRP/coreD.shtml). More information about the Division's Research Facilities can be found here: http://biomed.brown.edu/research/facilities.

Students entering graduate programs generally have appropriate preparatory course work as well as significant research experience. Courses are chosen with the advice of program counselors, and may include, in addition to divisional offerings, courses offered by other university departments. As a part of the doctoral training most students will be required to participate in the teaching of one or more courses related to the program.

For further information on Graduate Study in the Biological Sciences at Brown, please visit the Office of Graduate and Postdoctoral Studies website: http://biomed.brown.edu/grad-postdoc/

Biotechnology Graduate Program
The Biotechnology graduate program offers the Master of Arts (A.M.), Master of Science (Sc.M.), and Doctor of Philosophy (Ph.D.) degrees and is designed for students interested in a range of topics related to the field of biotechnology including drug & gene delivery, drug discovery, and cell therapy. The educational objective is to promote an understanding of the designs and materials used in novel cell and drug delivery systems; the molecular, cellular and animal sciences of drug discovery & drug development; and the development and testing of cell-based therapies for the treatment of diseases. Active areas of research include: bioadhesive drug delivery systems, mesenchymal stem cells, alternatives to animal testing, nerve guidance channels, cartilage regeneration, cardiac arrhythmias, micro-vehicles, anti-microbials, insulin regulation, neuroactive & neuroprotective agents and cell delivery & encapsulation strategies. For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-biotechnology-0

Ecology and Evolutionary Biology Graduate Program
The graduate program in Ecology and Evolutionary Biology is intended for highly qualified students who plan to pursue a career that includes research or teaching in ecology and/or evolutionary biology. Individual programs are designed to meet each student's needs and interests while providing a strong background in ecology, evolutionary biology and related disciplines. All students are expected to attain proficiency in ecological and evolutionary theory, quantitative research methods, statistical analysis, writing, and oral presentation. Depending on the student's interests, they may be expected to demonstrate proficiency in other areas such as functional morphology or genetics and genomics. This proficiency may be attained through coursework, seminars, independent reading, and laboratory and field programs. The Ecology and Evolutionary Biology program offers a Doctor of Philosophy (Ph.D.) degree as well as a 5th year Master of Science (Sc.M.) degree for students who would like to continue the research they started as an undergraduate at Brown. The Master of Science degree is also available for participants in Brown's Open Graduate Education Program. For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-ecology-and-evolutionary-biology

Pathobiology Graduate Program
The graduate program in Pathobiology is an interdisciplinary and interdepartmental program devoted to biomedical research into the mechanisms of human diseases. The program offers a Doctor of Philosophy (Ph.D.) degree as well as a 5th year Master of Arts (A.M.) degree. The four major research and teaching thematic areas are:
I) Environmental Pathology, II) Immunology & Infectious Diseases, III) Aging, and IV) Cancer biology. Training may be obtained in the areas of immunopathology, pulmonary pathology, chemical pathology, environmental and viral carcinogenesis, cancer biology, toxicologic pathology, extracellular matrix biology, hepatology, aging, and infectious diseases.

For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-biopathology

Molecular Biology, Cell Biology, and Biochemistry Graduate Program

The graduate program in Molecular Biology, Cell biology, and Biochemistry (MCB) is intended for highly qualified students who plan to pursue a career which includes research in biology or medical sciences. The MCB Program offers a Doctor of Philosophy (Ph.D.) degree as well as 5th Year Master of Arts (A.M.) and Master of Science (Sc.M.) degrees. The program is interdisciplinary, focusing on molecular and cellular aspects of developmental biology, genetics, genomics and gene expression, signal transduction, oncogenes, immunology, protein biochemistry, structural biology, proteomics, cell surface receptors, molecular modeling, DNA/RNA protein interactions, epigenetics, and virology.

For further information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-molecular-biology-cell-biology-and-biochemistry

Molecular Pharmacology and Physiology Graduate Program

The graduate program in Molecular Pharmacology and Physiology offers advanced training appropriate for academic and research careers in the fields of biology and medical sciences that include molecular and structural pharmacology; neuropharmacology; cellular, comparative, and organ systems physiology; and chemical biology. Programs of study and research are developed individually in consultation with the student’s adviser and advisory committee and are designed to ensure expertise in the student’s principal field. The Molecular Pharmacology & Physiology Program offers a Doctor of Philosophy (Ph.D.) degree, as well as a 5th-Year Master of Science (Sc.M.) degree for students who would like to continue the research they started as an undergraduate at Brown.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-molecular-pharmacology-and-physiology

Biomedical Engineering Graduate Program

The Biomedical Engineering (BME) program provides cutting-edge, interdisciplinary, graduate-level education at the interface of engineering, biology, and medicine. The program features an interdisciplinary approach in three, complementary research areas: I) Mechanobiology, II) Neuroengineering, and III) Regenerative Engineering. Research in these areas is advancing the understanding of fundamental problems in engineering, biology, and medicine, while developing new therapies to improve the quality of life for people with medical problems. The program is distinguished by its quantitative rigor and strong collaborative connections among academic science, clinical medicine, and industry. The BME graduate program is designed for students with backgrounds in engineering, physics, or applied mathematics that seek additional education and training in the biological sciences.

The Biomedical Engineering program offers both the Master of Science (Sc.M) degree and the Doctor of Philosophy (Ph.D) degree.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomedical-engineering

Courses

This course covers various aspects of structural and functional biology from primary to quaternary structure and deals with the 3D structure of proteins and nucleic acids and 3D structure determination. Course will be a mixture of lecture and class discussion/presentations. Students typically have taken an advanced undergraduate-level course in biology or biochemistry. Advanced undergraduates with permission. Enrollment limited to 20 students.

BIOI 2000C. Protein Biophysics and Structure: Molecular Basis of Disease.

Proteins are the engines of life. Determining how they function from a biophysical and structural perspective enables us to understand how they work and, equally important, how we can direct and alter their activities. These techniques are the basis of all medical and drug research. Students will obtain a broad and firm foundation of both biophysical methods and in depth studies of medicinally important proteins and protein complexes that will allow them to correlate structure and biological function. Graduate course; open to junior and senior undergraduates with appropriate prior coursework. Instructor permission required; enrollment limit: 12 students.

BIOI 2000D. Current Topics in Molecular, Cellular, Developmental Biology Biochemistry.

Protein synthesis is a fundamental cellular process mediated by ribosomes. This course will focus on progress in understanding: ribosome structure and function, ribosome biogenesis and export, quality control, ribosome degradation, and interface of ribosomes with other cellular pathways. Students will present research publications on a given topic and lead a discussion examining the experimental approach and findings of each publication. Enrollment limited to 20. Intended for graduates and advanced undergraduates with instructor permission.

A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of “system-wide” approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Enrollment limited to 20 graduate students. Advanced undergraduates with appropriate course preparation and permission from instructor.

BIOI 2010. Quantitative Approaches to Biology.

Graduate level introduction to quantitative and computational methods in modern biology. Topics include Programming, Modeling, Algorithms, Bioinformatics, Applied Statistics, Structural Biology, Molecular Dynamics, Enzyme Kinetics, and Population and Quantitative Human Genetics. Preference is given to graduate students in Molecular Biology, Cell Biology and Biochemistry, Molecular Pharmacology, Physiology, and Biotechnology. Limited to 20 students. Instructor permission required.

This course provides a comprehensive overview of the primary functional roles and steps involved in developing and commercializing a novel technology/scientific breakthrough within the biotechnology industry. This course is particularly suitable for students interested in pursuing a career within a biotechnology company, or for those interested in developing an in-depth knowledge of how the science of biotechnology becomes real world products. Pre Requisites: Foundations of Living Systems (BIOI0020), Principles of Physiology (BIOI0080), and Principles of Economics (ECON0110) or equivalent or instructor's permission is required.
BIOL 2030. Foundations for Advanced Study in the Life Sciences. A double-credit graduate course on multidisciplinary experimental approaches to biological questions. Focusing on primary literature, lectures and discussions cover the mechanisms and regulation of basic cellular processes involving nucleic acids (synthesis, structure, maintenance and transmission) and proteins (synthesis, maturation, function) and their integration into more complex circuits (signaling, organelle biogenesis and inheritance, cell cycle control). Required for PhD students in the MCB Graduate Program; all others must obtain instructor permission. Enrollment is limited to graduate students.

BIOL 2040. Ultrastructure/Bioimaging. This course examines microscopy and image analysis in the life sciences. Theoretical and practical aspects of microscopy will be discussed. Students will obtain hands-on experience with electron microscopy, light microscopy, fluorescence microscopy, and confocal microscopy. Students will learn to display images in 3D. For graduate students and advanced undergraduates. Instructor permission required.

BIOL 2050. Biology of the Eukaryotic Cell. (Undergraduate students should register for BIOL 1050.)

BIOL 2089. The Importance of Intellectual Property in Biotechnology. This course delves into the various roles of intellectual property in biotechnology. In addition to providing a solid foundation in the fundamentals of intellectual property, the course will use case studies in biotechnology to explore in depth the interplay between specific scientific breakthroughs and intellectual property. An understanding of the science of biotechnology is critical for advanced understanding of the value and possibilities of biotechnology intellectual property.

BIOL 2110. Drug and Gene Delivery. Topics in drug delivery systems including history of the field, advantages of controlled release technology, stabilization and release of proteins, fabrication methods, regulatory considerations, economic aspects, patents and intellectual property rights, and more. Prepares students for research in industry and academia, and offers information for consultants in the field. Expected: BIOL 1090, 1120; CHEM 0350, 0360.

BIOL 2117. Human Physiology. For Brown-Pfizer Master of arts Program students. Provides an introduction to basic human physiological concepts along with more advanced coverage of selected systems. We'll start with topics of diffusion, cell physiology and the basis of cell membrane potential and then cover the nervous, endocrine, musculoskeletal, cardiovascular, respiratory, renal and gastrointestinal systems. We'll focus on normal human physiology and at times incorporate discussions of exercise physiology, pathophysiology, and specific physiologic scenarios to build toward the goal of understanding complex integration of function between cells, tissues and organ systems. Readings will consist of textbook chapters along with primary literature covering selected topics.

BIOL 2121. The Biochemistry of Signaling and Regulation from Prokaryotes to Eukaryotes. Proteins are the engines of life. Determining how they function from a biophysical and biochemical perspective enables us to understand how they work and how we can direct and alter their activities. Proteins participate in cellular signaling pathways that are important regulators of cellular function and are often misregulated in disease. This course introduces various aspects of biochemistry involved in the analysis of cellular signaling pathways that regulate disease. Open to 12 graduate students and advanced undergraduates. Prerequisite: Students must have taken several advanced undergraduate-level courses in biology.

BIOL 2125. Bioinformatics in the Discovery, Development and Use of Medicines. This course explores the use of bioinformatics in the discovery, development and use of medicines. The purpose is to enable students to understand how computer science contributes to work in the field. Goals are for students to i) learn about core practices of bioinformatics, ii) understand the relevance of bioinformatics for evidence generation and decisions over the life of a therapeutic, and iii) apply their learning to develop of a novel, interdisciplinary research proposal that could facilitate precision medicine approaches for either Parkinson’s disease or pancreatic cancer. Pre Requisites: BIOL 0080 or equivalent, or permission of the instructor.

BIOL 2130. Techniques in Molecular and Cell Science. This course provides hands-on laboratory training in state-of-the-art techniques in molecular and cellular sciences, and reinforces this training with didactic lectures that stress key principles, the quantitative approach and the most exciting applications of these technologies in the context of current research. Areas covered include cell culture, tissue engineering, DNA cloning, gene therapy, quantitative assays, microscopy and image analysis. Enrollment is limited to 12; written permission required. Permission will be granted after the first class. Students MUST register for the lecture section and a lab.

BIOL 2135. Pharmacokinetics and Drug Design. Consists of the absorption, distribution, metabolism, and elimination of drugs. These factors, including dosage, determine the concentration of drugs at its sites of action, and intensity of effects. Will examine models describing the relationship between plasma drug concentrations and therapeutic drug effect. Will acquire biologic sampling techniques, analytic methods for measurement of drugs and metabolites, and procedures facilitating data used in designing drugs and dosage regimes. Prerequisite: BIOL 0800 or equivalent. Enrollment limited to 20. Preference given to graduate students in Biotechnology and BME, especially Masters students. Graduate students (PhD and ScM) from other programs enroll if permission of instructor is granted.

BIOL 2140. Principles in Experimental Surgery. An introduction to the principles and practice of surgery, sterile technique, anesthesia, and laboratory animal care. Intended to provide highly supervised, hands-on experience in techniques for humane handling and surgical management of experimental animal subjects. Emphasizes surgical technique, anesthesia technique, and laboratory animal medicine. Prerequisite: BIOL 0800. Limited to five (5) Graduate students only. Instructor permission required. Students MUST register for the lecture section and the lab.

BIOL 2145. Molecular Targets of Drug Discovery. This course emphasizes the role of cell physiology in the identification of drug targets and the development of novel drugs. Specific protein drug targets such as G-protein coupled receptors will be examined in detail from identifying a target to development of drugs for that target and the physiological consequences. Prerequisite: BIOL 0800. Enrollment limited to 20. Preference is given to graduate students in Biotechnology and BME, especially Masters students. Graduate students from other programs may enroll if permission of the instructor is granted.

BIOL 2150. Scientific Communication. Focused on the effective dissemination of scientific information. Through practical examples of activities common to the profession (writing a grant proposal, presenting research work orally, and preparing a critical review of a submitted scientific manuscript), students will develop the skills necessary to effectively communicate scientific ideas, experiments and results. Each of the activities will be dissected into key sets that will be individually developed with the aid of interactive discussions and peer review. Enrollment limited to 12 graduate students.

BIOL 2156. Special Topics in Biotechnology Writing. This course is open to Biotechnology Masters students not involved in lab-based research. Students choose from a list of topics and faculty mentors in the field of biotechnology. Teams conduct in-depth research and writing, with the goal of producing a final report and presentation equivalent to a professional consultant's report. Students meet weekly with mentor to monitor progress. Prerequisite: BIOL 0280 and 1120; CHEM 0350/0360 or equivalent. Enrollment limited to 20 students. Instructor permission required. Course is offered in both, Semester 1 and 2, and may be repeated once for credit.
BIOL 2160. Analytical Methods in Biotechnology. This course will cover principles and practical applications of important analytical tools used in the field of Biotechnology. Topics covered include spectroscopy, chromatography, and physical and chemical methods of characterization of a variety of molecules used for therapeutic applications. The molecules will range in size from traditional drugs with molecular weights of less than 1000, peptides and proteins as well as siRNA and industrial polymers. This course is suitable for students intending on pursuing a career in biomedical research in academia or industry. Prerequisites: BIOL 0280, BIOL 1120, CHEM 0350/0360, or equivalent course. Enrollment limited to 20 graduate students.

BIOL 2167. In Vitro Models for Disease. This course will use case studies to examine high burden diseases, their pathophysiology, treatment, and the models used to study the disease. Literature will be used to discuss the current models for the disease and the associated limitations of each of these models. The course will also cover the use of animals in research and how new in vitro models could be used to decrease their use. This course is intended for graduate students in biology, engineering, or related fields. Prerequisites: BIOL 0200 and 0800, or equivalent. Enrollment limited to 20 graduate students.

BIOL 2170. Molecular Pharmacology and Physiology. Fundamental concepts in pharmacology and physiology from the cellular/molecular level to organ systems. Required of first-year graduate students in Molecular Pharmacology and Physiology.

BIOL 2180. Experiential Learning Industry, ELI. Experiential Learning in Industry is restricted to biomedical engineering (BME) Sc.M. and biotechnology (Biotech) Sc.M. students, permission also required. The course is an extended in-depth learning experience in an industry environment related to the discipline of BME and Biotech. Industry environments include; medical device, pharmaceutical or biotechnology and industries that provide BME and Biotech relevant services to the aforementioned companies including patent law, licensing, regulatory and consulting. Students will pursue Experiential Learning in Industry during one summer plus one semester or during two semesters for which they will receive credit towards their degree. This course is restricted to BME and Biotech Masters students only. Students must have successfully completed the first year of the BME Masters Program. Slots are limited so permission is required.

BIOL 2190. MPPB Professional Development Seminar. Professional development seminar required of all first year graduate students in the Molecular Pharmacology and Physiology Graduate Program, and open to graduate students in other programs. Topics include grants and funding, effective oral presentation skills, alternative careers in science, and others. All students will be required to present a research seminar during the scheduled class time. Instructor permission required for graduate students outside the Molecular Pharmacology and Physiology Graduate Program. Not intended for undergraduate students.

BIOL 2200A. Molecular Biology and Chemistry. A critical evaluation of contemporary research in biochemistry, molecular biology, and structural biology. Intensive reading and discussion of the current literature, critical analysis, and student presentations in seminars. Advanced undergraduates with permission. Enrollment limited to 20.

BIOL 2200B. Post–Transcriptional Regulations of Gene Expression. Enrollment limited to 20.

BIOL 2200C. Current Topics in Molecular Biology: Cellular Quality Control Mechanisms. Protein synthesis is a fundamental cellular process that is dependent upon the rapid and accurate synthesis of ten to twenty thousand ribosomes per generation to carry out the equally rapid and accurate synthesis of protein. Progress in understanding Ribosome structure and function, Ribosome evolution, Ribosome biogenesis and coordination of cell growth with cell division will be explored using the current literature with weekly student seminars and a final research proposal.

BIOL 2222B. Current Topics in Functional Genomics. A technological revolution in genomics has exponentially increased our ability to gather biological data. A host of new methods and types of analysis has arisen to accommodate this dramatic shift in data collection. The broad scope of inquiry has ushered in an era of “system-wide” approaches and brute-force strategies where rare signals can be detected and studied. In this seminar we will cover papers that embody this new approach. Students typically have taken an advanced undergraduate-level course in biology.

BIOL 2230. Biomedical Engineering and Biotechnology Seminar. Required of all first- and second-year graduate students in the Biomedical Engineering and Biotechnology Seminar graduate program, and open to others. Concepts of drug delivery and tissue engineering, implantation biology, and cellular therapy, as well as the research projects directed by program faculty. Students present research seminars and participate in presentations by outside speakers. Includes Journal Club activities. Open to graduate students only.

BIOL 2240. Biomedical Engineering and Biotechnology Seminar. See Biomedical Engineering and Biotechnology Seminar (BIOL 2230) for course description.

BIOL 2245. Blood Substitutes: Principles and Therapeutics Development. Blood serves many critical functions including respiratory gas transport, hemostasis and host defense. Plasma and cellular components of blood, their functional mechanisms, pathophysiologic consequences when deficient and current treatments will be reviewed. Finally, development of blood component substitutive therapeutics (blood substitutes) based on protein and cellular engineering technologies (biotherapeutics) will be discussed. Open to Graduates students and Juniors and Seniors who meet the pre-requisites BIOL 0800 and BIOL 0280 or with instructor’s permission.

BIOL 2260. Physiological Pharmacology. The objective of this course is to present drugs in the context of the diseases they are used to treat. A list of the Common medically prescribed drugs will be discussed in terms of their fundamental modes of action and clinical importance. Pertinent background biochemistry, physiology, and pathology is provided, e.g., the electrophysiology of the heart is discussed as a background to anti-arrhythmic drugs. Course is relevant for students interested in medicine journalism, law, government, precollege teaching, biomedical research, and pharmacy. Expected: background in physiology. For graduate students ONLY register for BIOL 2260 (enrollment limit 15); all others BIOL 1260.

BIOL 2270. Advanced Biochemistry. (Undergraduate students should register for BIOL 1270.)

BIOL 2290A. Mechanisms of Virus Entry, Replication, and Pathogenesis. This course will focus on the interactions between viruses and host cells that contribute to invasion, manipulation of viral and cellular gene expression, and manipulation of the host’s response to infection. We will address interactions between viruses infecting humans, as well as those of plants, fungi, and bacteria. Students will be evaluated on their ability to critically analyze data in published manuscripts, including presentations of primary papers, classroom discussion, and completion of a research proposal. Expected: at least two of the following: BIOL 1050, 1270, 1520, 1540, 1560. Advanced undergraduates with permission of the instructor.
BIOL 2290B. Mechanisms of Protein Synthesis and Impact on Human Disease.
This course will examine mechanisms central to the regulation of protein synthesis in both prokaryotes and eukaryotes. Targeting protein synthesis through ribosomes is a proven drug target commonly used to treat many infectious diseases. The regulation of protein synthesis in eukaryotes is critical for myriad human conditions including aging and cancer, including the recently discovered role of microRNAs. This course will explore the common and unique mechanisms of regulation of protein synthesis between prokaryotes and eukaryotes and the importance of understanding these mechanisms for human health. For graduate students and advanced undergraduates with permission.

BIOL 2290C. Neuronal Signaling meets the RNA World.
The concept of one gene, one protein is nowhere more violated than in protein encoding genes expressed in the nervous system. We will cover a variety of post-transcriptional processing events which serve to generate protein diversity in the nervous system including alternative splicing, trans-splicing, and RNA editing. We will also address non-coding RNAs and their roles, in particular, in regulating nervous system function. Since it is clear that nervous system complexity is not a function of gene number across large phylogenetic distances, the course will be aimed at instilling a greater understanding of how the regulation of shared "toolkit" genes results in organismal complexity. Advanced undergraduates with permission of the instructor.

BIOL 2290D. Small RNA Regulation of Germ Cells and Development. Enrollment limited to 20.

BIOL 2290E. Signal Transduction.
This seminar course will provide a broad introduction to basic mechanisms of cell signaling from the extracellular environment to the nucleus of a cell, and to the mechanisms that regulate signal transmission. Topics of discussion will include: processing and modification of signaling molecules; signal recognition/ligand binding; co-receptors and receptor trafficking; intracellular relays; transduction to the nucleus; regulation of signal intensity and duration; feedback controls. Signal transduction pathways from several model systems will be examined and their relevance to development and disease will be considered. Senior undergraduates with permission of the instructor. Enrollment limited to 20.

Interactions between the molecules of life-proteins, RNA, DNA, membrane components-underlie all functions necessary for life. This course focuses on how nature controls these interactions, how these interactions can go awry in disease, and how we can learn the rules of these interactions to design drugs to treat disease. Students will review the physical basis of molecular interactions, learn classic and state-of-the-art high-resolution and high-throughput tools used to measure interaction, and survey the experimental and computational strategies to harness these interactions using a case study in a real drug design. Prerequisite: Introductory Biochemistry. Enrollment limited to 20; instructor permission.

BIOL 2310. Developmental Biology.
Covers the molecular and cellular events of development from fertilized egg to adult. Genetic basis of body form, cell fate specification and differentiation, processes controlling morphogenesis, growth, stem cells and regeneration are examined. Differential gene regulation, intercellular signaling and evolutionary conversation are central to discussion of mechanisms governing developmental processes. Additional topics: developmental plasticity, impact of epigenetic and environmental factors, and basis of disease gleaned from developmental biology research. Live embryos complement and reinforce concepts covered in class. Expected: BIOL0200 (or equivalent), and one course in genetics, embryology, cell biology or molecular biology. Enrollment limited to 36. (Undergraduate students register for BIOL 1310.)

BIOL 2320E. Genetic Control of Cell Fate Decisions.
A cell's fate is acquired in a process whereby largely uncommitted progenitor cells are instructed down a commitment path that ultimately results in a specific cell type with distinct molecular and physiological properties. This process is critical for the establishment of all cell types and tissues and is poised to be a critical topic in cell-based therapeutic strategies. We will investigate the intrinsic and extrinsic mechanisms that manifest at the genetic level to impart cell fate decisions on progenitors. Advanced undergraduates with permission of the instructor.

BIOL 2340. Neurogenetics and Disease.
Genetic mutations provides a powerful approach to dissect complex biologic problems. We will focus on fascinating discoveries from "forward genetic" studies – moving from nervous system phenotype to genetic mutation discovery. There will be an emphasis of neurologic disease phenotypes and the use of novel genomic methods to elucidate the central molecular and cellular causes for these conditions. The course will emphasize the use of "reverse genetics" – engineered mutations in model systems – to dissect nervous system function and disease mechanisms. Disorders to be covered include autism, intellectual disability, schizophrenia, epilepsy. Enrollment limited to 20. Instructor permission required.

BIOL 2350. The Biology of Aging.
Studying the mechanisms underlying the process of aging promises to be one of the next frontiers in biomedical science. Understanding the biology of aging is important for the long-term possibility of increasing life span, and for the immediate benefits it will have on age-related diseases. As demographics of industrialized countries have changed, age-related diseases such as cancer/cardiovascular/stroke, osteoporosis/arthritis/Alzheimer's have assumed epidemic proportions. Understanding the aging process is a pre-requisite for designing interventions for treatment. Focus is on examining the biology of aging through the examination of a molecular/cellular/genetic and demographic nature. Suggested prerequisites: BIOL 0200, 0280, 0470, 0800. Enrollment limited to 20. Advanced undergraduates with permission of instructor.

BIOL 2430. Topics in Ecology and Evolutionary Biology.
Current literature in ecology, behavior, and evolutionary biology is discussed in seminar format. Topics and instructors change each semester. Representative topics have included: structuring of communities, biomechanics, coevolution, quantitative genetics, life history strategies, and units of selection. Expected: courses in advanced ecology and genetics.

BIOL 2440. Topics in Ecology and Evolutionary Biology.
See Topics In Ecology And Evolutionary Biology (BIOL 2430) for course description.

BIOL 2450. Exchange Scholar Program.

BIOL 2540. Molecular Genetics.
(Undergraduate students should register for BIOL 1540.)

BIOL 2640A. Viral Immunology.
Viral Immunology is an advanced topics course in Microbiology and Immunology which will be focused on viral immunology. Weekly meetings will cover different issues concerning defense against viral infections and pathology related to viral infection, with focus on viral-host interactions. Topics will be selected to present either important basic concepts in the context of immune responses and/or major challenges in controlling viral infections. Recent advances in understanding virus-host interactions, host responses to viruses, cytokine regulation of immune responses or cytokine-mediated pathology during viral infections will be emphasized.

BIOL 2640B. Microbial Pathogenesis.
Examines microbial pathogens and the underlying mechanisms by which infectious organisms cause diseases. Bacterial, fungal, protozoal and viral pathogens will be studied using tools of modern biology. Also examined are the host's immune responses to infection and disease. Areas covered include mechanisms of pathogen internationalization and survival, immune responses, signal transduction and pathophysiology. Expected: BIOL 0510, 0530, or 1550.
BIOL 2640C. The Immune System.
Introduction to the experimental and theoretical foundations of immunology and the function of the mammalian immune system. Focuses on concepts, landmark experiments and recent advances. Topics include innate and adaptive immunity; structure/function of antibody molecules and T cell receptors; and regulation of immune responses through cellular interactions. Application of concepts to medically significant issues (vaccines, transplantation, hypersensitivity, autoimmunity, cancer, immunodeficiency) is discussed. Interpretative analysis of experimental data is emphasized. Activities include written assignments that analyze a hypothetical immune system and a final paper addressing an immunological topic of the student's choosing. For Pfizer students only.

BIOL 2850. Introduction to Research in Pathobiology.
Introduces incoming pathobiology graduate students with research opportunities in the laboratories of program faculty. Consists of seminars with individual faculty members in the graduate program in pathobiology. Required background reading of recent papers lead to a discussion of current research in the faculty member's laboratory. Additional discussions include safety and ethical issues in research. Open only to first-year graduate students in the program in pathobiology.

BIOL 2860. Molecular Mechanisms of Disease.
This course is designed for graduate students and focuses on the underlying causes of human disease. Students should have a solid background in the life sciences with an understanding of the fundamental principles of molecular biology, genetics, biochemistry and cell biology. A discussion of cystic fibrosis, using this disease to explore basic principles of molecular biology, genetics, physiology and pathology. Then the course centers on the genetic and environmental basis of disease and carcinogenesis. Will lecture individual student presentations and experimental planning exercises. Emphasis will be placed on the development of presentation skills and research design. Undergraduates require instructor permission.

BIOL 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

BIOL 2980. Graduate Independent Study.
Independent study projects at the graduate level. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

BIOL 2985. Graduate Seminar.
Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

BIOL 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

BIOL 2995. Thesis.
Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

Neuroscience

Chair
Barry William Connors

Neuroscience is the scientific study of the nervous system, including its development, functions, and pathologies. It is an interdisciplinary field that encompasses neurobiology (anatomy, physiology, biochemistry, molecular biology, genetics), elements of psychology and cognitive science, and mathematical and physical principles involved in modeling neural systems.

The Department of Neuroscience offers an undergraduate concentration leading to the Sc.B. degree and a graduate program leading to the Ph.D. degree. These programs include courses offered by the department and by several allied departments. The Department of Neuroscience has modern facilities for conducting research in a broad range of areas from molecular mechanisms to behavior and undergraduate students are encouraged to pursue research projects.

For additional information, please visit: http://neuroscience.brown.edu/

Neuroscience Concentration Requirements
Neuroscience is an interdisciplinary field that seeks to understand the functions and diseases of the nervous system. It draws on knowledge from neurobiology as well as elements of psychology and cognitive science, and mathematical and physical principles involved in modeling neural systems. Through the Neuroscience concentration, students develop foundational knowledge through courses in biology, chemistry, and mathematics as well as three core courses in neuroscience. They are also required to develop facility with research methodologies (through courses in statistics and laboratory methods) before moving into specific topics in the field (e.g., visual physiology, neurochemistry and behavior, and synaptic transmission and plasticity). Members of the Neuroscience faculty are affiliated with the Brown Institute for Brain Science, a multidisciplinary program that promotes collaborative research about the brain. Prospective concentrators should contact Elyse_Netto@brown.edu in order to have a faculty advisor assigned to them.

Standard program for the Sc.B. degree
The concentration combines a general science background with a number of specific courses devoted to the cellular, molecular, and integrative functions of the nervous system. The concentration allows considerable flexibility for students to tailor a program to their individual interests. Elective courses focus on a variety of areas including molecular mechanisms, cellular function, sensory and motor systems, neuropeharmacology, learning and memory, animal behavior, cognitive function, bioengineering, theoretical neuroscience and computer modeling.

The concentration in neuroscience leads to an Sc.B. degree. The following background courses, or their equivalent, are required for the degree:

**Background Courses:**
- **MATH 0090** Introductory Calculus, Part I 1
- **MATH 0100** Introductory Calculus, Part II 1
- **PHYS 0030** Basic Physics 1
- **PHYS 0040** Basic Physics 1
- **BIOL 0200** The Foundation of Living Systems 1
- **CHEM 0330** Equilibrium, Rate, and Structure 1
- **CHEM 0350** Organic Chemistry 1

**Core Concentration Courses:**
- **NEUR 0010** The Brain: An Introduction to Neuroscience 1
- **NEUR 1020** Principles of Neurobiology 1
- **NEUR 1030** Neural Systems 1
- One neuroscience lab course 1
- One critical reading course 1
- One statistics course 1
- Four electives related to neuroscience 1

Total Credits 17

1 Independent study and honors research projects are encouraged.

Neuroscience Graduate Program
The program in Neuroscience offers graduate study leading to the Doctor of Philosophy (Ph.D) degree. The program is designed to educate and train scientists who will become leaders in the field and contribute to society through research, teaching and professional service. The core of the training involves close interaction with faculty to develop expertise in biological, behavioral, and theoretical aspects of neuroscience. Graduate research and training are carried out in the laboratories of the program's
faculty. These faculty trainers lead outstanding well-funded research programs that use cutting edge technology to explore the nervous system. For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-neuroscience

Courses

NEUR 0010. The Brain: An Introduction to Neuroscience.
Introduction to the mammalian nervous system with emphasis on the structure and function of the human brain. Topics include the function of nerve cells, sensory systems, control of movement and speech, learning and memory, emotion, and diseases of the brain. No prerequisites, but knowledge of biology and chemistry at the high school level is assumed. LILE

Examines the sensory and perceptual system for hearing: the external, middle, and inner ears; the active processes of the cochlea; sound transduction and neural coding; neural information processing by the auditory system; and the nature of auditory perception and its biological substrate. Prerequisite: an introductory course in Neuroscience, Cognitive Science, Physics, Engineering or Psychology.

NEUR 0680. Introduction to Computational Neuroscience.
An introductory class to computational neuroscience. Students will learn the main tools of the trade, namely differential equations, probability theory and computer programming, as well as some of the main modern neural-modeling techniques. Assignments will include the writing of simple Matlab code.

NEUR 0700. Psychoactive Drugs and Society.
Will examine psychoactive drugs from two perspectives: (1) biological mechanisms of drug action and (2) the impact of psychoactive drug use on society and society attitudes towards psychoactive drug usage. Drugs to be discussed will include alcohol, opiates, cocaine, marijuana, LSD, nicotine and caffeine, as well as drugs used therapeutically to treat psychiatric disorders. This course will benefit students who are interested in exploring both the biological and social aspects of psychoactive drug use. Prerequisite: NEUR 0010 or equivalent.

NEUR 1020. Principles of Neurobiology.
A lecture course covering fundamental concepts of cellular and molecular neurobiology. Topics include structure of ion channels, synaptic transmission, synaptic development, molecular mechanisms of synaptic plasticity, learning and memory and neurological diseases. Prerequisite: NEUR 0010. Strongly recommended: BIOL 0200 or equivalent.

NEUR 1030. Neural Systems.
This lecture course examines key principles that underlie the function of neural systems ranging in complexity from peripheral receptors to central mechanisms of behavioral control. Prerequisite: NEUR 0010 or the equivalent. First year students require instructor approval.

NEUR 1040. Introduction to Neurogenetics.
Recent advances in molecular biology and molecular genetics have allowed researchers to test specific hypotheses concerning the genetic control of behavior and neurological disease. This course will familiarize you with the relatively new and exciting field of neurogenetics. We will cover basic topics, new ideas, and unsolved problems in neurogenetics primarily through the two assigned texts. However, neurogenetics is essentially a “frontier” area in neuroscience, and the best way to approach this topic is by scientific literature, which will be covered in some lectures.

NEUR 1440. Neural Dynamics.
Neurons and systems of neurons vary in their activity patterns on millisecond to second time scales, commonly referred to as “neural dynamics.” This course addresses mechanisms underlying this flexibility and its potential meaning for information processing in the brain. The course integrates biophysical, single neuron and human studies. Examples topics include the impact of attention on neural firing rates, oscillations and sensory representation in neocortex, and the origins and potential meaning of the dynamics during sleep. Students will be introduced to computational modeling as a method to gain insight into dynamics, but no prior mathematics or programming background is required.

While a large part of being a neuroscientist involves performing experiments to collect data, the reality of studying the brain is that you can often collect way more data than you know what to do with! In this course, we will discuss data analytic challenges in neuroscience. We will provide real data sets for hands-on student activities. By the end of the course, students will have the basic tools and techniques to begin to work with neuroscience data themselves. Topics will include spike train, EEG and behavioral analyses. The course will emphasize basic computer programming skills in Python.

NEUR 1540. Neurobiology of Learning and Memory.
Exploration of learning and memory from the molecular to the behavioral level. Topics will include declarative and procedural memory formation and storage, associative and non-associative learning, cellular and molecular mechanisms for learning, and disorders affecting learning and memory. Examples will be drawn from numerous brain areas and a variety of model systems, including humans. Students will gain experience interpreting experiments from primary literature. Prerequisite: NEUR 1020. WRIT

NEUR 1560. Developmental Neurobiology.
The course will explore core concepts of developmental biology in the context of the developing nervous system. Topics will include: neuronal specification, cell migration, axon guidance, synapse formation, and neural plasticity. Students will gain experience with the primary literature and learn about cellular and molecular mechanisms of brain development and the tools and model organisms used to study them.

NEUR 1600. Experimental Neurobiology.
Intensive laboratory experience in neuroscience appropriate for students with basic background in Neurobiology. Learn and employ the classical neurophysiological techniques of extracellular recording, intracellular recording and receptive field mapping using a variety of animal species. Experiments will include recording of sensory signals in the cockroach leg; frog sciatic nerve and sciatic nerve/muscle preparation; intracellular recording of neurons in Aplysia; receptive field mapping in frog tegment. Instruction on and practice of effective science writing is another component to this course. Labs are supplemented by informal lectures. Enrollment limited to 18. WRIT

NEUR 1650. Structure of the Nervous System.
Combined lecture and laboratory course on the anatomy of the central nervous system. Lectures survey the circuitry of the major neural systems for sensation, movement, cognition, and emotion. Laboratory exercises (Mon. 10:30-12:30) include brain dissections, microscopy of neural tissue, and discussion of clinical cases. Prerequisites: NEUR 0010, 1020, and 1030. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Instructor permission required.

NEUR 1660. Neural Basis of Cognition.
Lecture course. Emphasizes the systems approach to neuroscience and examines several neural systems that mediate perception, action, higher visual and motor processing, learning, memory, attention, emotion, consciousness and sleep. The course focuses on experiments involving behavioral electrophysiology and discusses mechanisms mediating neural activity that mediates cognition. Prerequisites: NEUR 0010 and NEUR 1030, or instructor permission.
NEUR 1700. Neuropharmacology and Synaptic Transmission.
Synaptic transmission will be studied from a biochemical and pharmacological point of view. We will explore the factors regulating neurotransmitter synthesis, storage, release, receptor interaction, and termination of action. Proposed mechanisms of psychoactive drugs and biochemical theories of psychiatric disorders will be examined. Prerequisites: NEUR 0010 and BIOL 0200 or the equivalent.

NEUR 1740. The Diseased Brain: Mechanisms of Neurological and Psychiatric Disorders.
The goals of this course are to illustrate what basic science can teach us about neurological disorders and how these pathologies illuminate the functioning of the normal nervous system. Consideration will be given to monoevasive diseases (e.g. Fragile X Syndrome, Duchenne Muscular Dystrophy and Tuberculous Sclerosis) as well as genetically complex disorders, such as Autism, Schizophrenia and Alzheimer’s Disease. Emphasis will be on the cellular and molecular basis of these disorders and how insights at these levels might lead to the development of therapies. Prerequisites: NEUR 1020, BIOL 0470 suggested.

NEUR 1750. Brain Rhythms in Cognition, Mental Health and Epilepsy.
“Everything in the universe has a rhythm, everything dances.” – Maya Angelou.
The brain, too, dances. Its rhythms are the result of millions of neurons coordinating each other’s activity. This course will explore how these rhythms are generated, how they relate to our perception and cognition, and how they can be used to better understand and diagnose psychiatric and neurological disorders. Our readings in this seminar will range from historical reviews of brain rhythms to modern primary literature employing cutting-edge experimental neuroscience techniques. Prerequisite: NEUR 0010 or the equivalent.

This critical reading course will investigate the behavioral and neural mechanisms of motor learning. Readings will focus on work done with neuroimaging, neural recording and neuropsychological approaches that have addressed how the brain organizes and controls different forms of motor learning including simple conditional, practice-related changes and sensory-motor associations. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030, or equivalent.

NEUR 1930B. From Neurophysiology to Perception.
This seminar will use readings from the research literature to explore the neural basis of perception. There will be an emphasis on vision, though other sensory modalities may be discussed. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030, or equivalent.

NEUR 1930C. Development of the Nervous System.
The course will explore core concepts of developmental biology in the context of the developing nervous system. Topics will include: neuronal specification, cell migration, axon guidance, synapse formation, and neural plasticity. Students will gain experience with the primary literature and learn about cellular and molecular mechanisms of brain development and the tools and model organisms used to study them. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1930D. Cells and Circuits of the Nervous System.
Selected topics on the biology of neurons and neuronal networks emphasizing original research literature about the membrane physiology, transmitter function, synaptic plasticity, and neural interactions of different vertebrate central nervous systems. Appropriate for graduates and undergraduates with strong neuroscience background. Offered alternate years. Previously offered as NEUR 2150.

NEUR 1930E. Great Controversies in Neurobiology.
This upper-level course examines some of the great controversies in the history of neurobiology. Reading material is drawn primarily from the primary scientific literature, so students are expected to already be familiar with reading scientific papers. Each theme will focus on a particular controversy, examining experimental evidence supporting both sides of the issue. Prerequisites: NEUR 0010 and NEUR 1020. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Instructor permission required.

NEUR 1930F. Brain Interfaces for Humans.
Seminar course will cover developing and existing neurotechnology to restore lost human neurological functions. It will cover stimulation technologies to restore hearing, vision and touch, recording technologies to return function for persons with paralysis. The course will also cover devices to modulate brain function (e.g. deep brain stimulators). We will discuss early brain technologies, the present state neural sensors and decoders and future technology developments (e.g. brain-machine hybrids, human augmentation), as well as ethical implications. A final paper will be required. Instructor permission required. Prerequisites: NEUR 0010, NEUR 1020, and NEUR 1030; 1 year of physics, calculus. Enrollment restricted to 20 Neuroscience Concentrators and Graduate Students. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1930G. Disease, Mechanism, Therapy: Harnessing Basic Biology for Therapeutic Development.
The recent surge in understanding the cellular and molecular basis of neurological disease has opened the way for highly targeted drug discovery and development. In this course we will use several case studies to illuminate how mechanistic insights are being translated into novel therapeutic approaches. Instructors permission required. Enrollment limited to 15. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1930H. Neurological Disorders: Neural Dynamics + Neurotechnologies.
This seminar course provides an introduction to neural dynamics in neurological and neuropsychiatric disorders, and an overview of current therapeutic approaches based on open-/closed-loop Brain-Computer Interfaces (BCIs) and neuromodulation. The lectures and discussion sections will cover: (1) Disorders of consciousness: Primary and secondary generalized epilepsies, coma and anesthesia; Basics of open- and closed-loop neuromodulation, and seizure prediction/control; (2) Sensorimotor disorders: Retinal and cochlear neuroprostheses, paralysis and BCIs, Parkinson’s disease and essential tremor, chronic pain; (3) Neuropsychiatric disorders: Major depression and obsessive compulsive disorder. Computational approaches for tracking ongoing brain states/ dynamics in BCIs and closed-loop neuromodulation will be reviewed. Enrollment is capped at 20. Instructor permission required.

NEUR 1930I. Neural Correlates of Consciousness.
This course will consider the neuroscience of consciousness from a variety of perspectives, using examples from behavior, neurophysiology, neuroimaging and neurology. The course content will focus on primary literature, using review articles for background. Students will lead discussions. Sign-up required by Google Docs. Strongly Recommended: NEUR 1030. Enrollment limited to 15. Instructor permission required.

NEUR 1930N. Region of Interest: An In-Depth Analysis of One Brain Area.
In-depth exploration of one region of the brain. Topics will include: cell types and properties; synaptic properties; plasticity; connections to other brain areas; sub-divisions within the area; the region's role in sensation and perception; the region's role in action and behavior; the region's role in learning and memory; and diseases and disorders. Students will gain a deeper understanding of concepts and principles that apply throughout the brain. Students will gain experience with primary literature and learn about techniques for studying the area. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Topic for Fall 2016: The Amygdala.

NEUR 1940B. Neuroethology.
Neuroethology is concerned with the neural systems serving such naturally occurring behaviors as orientation in the environment, finding food, predator detection, social communication, circadian and seasonal rhythms, and locomotion and tracking. This seminar will examine selected examples of the neuroethological approach to analysis of brain function, which sometime leads to conclusions different from those of laboratory-based experiments on traditional animal models. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Instructor permission required.
NEUR 1940C. Topics in Visual Physiology.
Selected topics in visual physiology are examined through a close and critical reading of original research articles. Emphasizes the anatomical and physiological bases of visual function. Appropriate for graduate students and undergraduates with a strong neuroscience background. Offered in alternate years. (Previously offered as NEUR 2120.)

NEUR 1940D. Higher Cortical Function.
This reading course examines a series of high-level neurocognitive deficits from the perspectives of popular science and basic neuroscience. Prerequisite: NEUR 1030. Instructor permission required. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1940E. Molecular Neurobiology: Genes, Circuits and Behavior.
In this seminar course, we will discuss primary research articles, both recent and classical, covering topics ranging from the generation of neuronal diversity to the control of behavior by specific neural circuits. Instructor permission required; enrollment limited to 15. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 1940G. Drugs and the Brain.
This is a seminar course devoted to the reading and analyzing of original research articles dealing with the interaction between drugs and the brain. This will include drugs used to analyze normal brain function, as well as drugs of abuse and drugs used for therapeutic purposes. This course is intended for undergraduate and graduate students with a strong background in neuropharmacology. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Prerequisite: NEUR 0010, 1020, and 1030. Enrollment limited to 15. Instructor permission required.

NEUR 1940I. Neural Correlates of Consciousness.
This course will consider the neuroscience of consciousness from a variety of perspectives, using examples from behavior, neurophysiology, neuroimaging and neurology. The course content will focus on primary literature, using review articles for background. Students will lead discussions. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Prerequisite: NEUR 0010, 1020, and 1030. Enrollment limited to 15. Instructor permission required.

Laboratory-oriented research in neuroscience, supervised by staff members. A student, under the guidance of a neuroscience faculty member, proposes a topic for research, develops the procedures for its investigation, and writes a report of the results of his or her study. Independent study may replace only one required course in the neuroscience concentration. Prerequisites include NEUR 0010, 1020 and 1030. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Permission must be obtained from the Neuroscience Department.

NEUR 2010. Graduate Proseminar in Neuroscience.
A study of selected topics in experimental and theoretical neuroscience. Presented by neuroscience faculty, students, and outside speakers. A required course for all students in the neuroscience graduate program.

See Graduate Pro-Seminar In Neuroscience (NEUR 2010) for course description.

NEUR 2030. Advanced Molecular and Cellular Neurobiology I.
Focuses on molecular and cellular approaches used to study the CNS at the level of single molecules, individual cells and single synapses by concentrating on fundamental mechanisms of CNS information transfer, integration, and storage. Topics include biophysics of single channels, neural transmission and synaptic function. Enrollment limited to graduate students.

NEUR 2040. Advanced Molecular and Cellular Neurobiology II.
This course continues the investigation of molecular and cellular approaches used to study the CNS from the level of individual genes to the control of behavior. Topics include patterning of the nervous system, generation of neuronal diversity, axonal guidance, synapse formation, the control of behavior by specific neural circuits and neurodegenerative diseases. Enrollment is limited to graduate students.

Focuses on systems approaches to study nervous system function. Lectures and discussions focus on neurophysiology, neuroimaging and lesion analysis in mammals, including humans. Computational approaches will become integrated into the material. Topics include the major sensory, regulatory, and motor systems. Enrollment limited to graduate students.

NEUR 2060. Advanced Systems Neuroscience.
Focuses on cognitive approaches to study nervous system function. Lectures and discussions focus on neurophysiology, neuroimaging and lesion analysis in mammals, including humans. Computational approaches will become integrated into the material. Topics include the major cognitive systems, including perception, decisions, learning and memory, emotion and reward, language, and higher cortical function. Instructor permission required.

NEUR 2110. Statistical Neuroscience.
A lecture and computing lab course for senior undergraduate and graduate students with background in either systems neuroscience or applied math/ biomedical engineering on the statistical analysis and modeling of neural data, with hands-on Matlab/Octave/Python-based applications to real and simulated data. Topics will include signal processing, hypothesis testing and statistical inference, modeling of multivariate time series and stochastic processes in neuroscience and neuroengineering, neural point processes, time and spectral domain analyses, and state-space models. Example datasets include neuronal spike trains, local field potentials, EEG/EEG, and fMRI. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration. Instructor permission required.

NEUR 2120. Topics in Visual Physiology.
Selected topics in visual physiology are examined through a close and critical reading of original research articles. Emphasizes the anatomical and physiological bases of visual function. Primarily for graduate students with a strong background in neuroscience and a working knowledge of the anatomy and physiology of the mammalian visual system. Offered in alternate years. Instructor permission required.

NEUR 2150. Cells and Circuits of the Nervous System.
Selected topics on the biology of neurons and neuronal networks emphasizing original research literature about the membrane physiology, transmitter function, synaptic plasticity, and neural interactions of different vertebrate central nervous systems. Primarily for graduate students with a background in basic neurobiology, or undergraduates with permission. Offered alternate years.

NEUR 2160. Neurochemistry and Behavior.
Examines behavior from a neurochemical perspective via readings and discussions based on original research articles. Intended primarily for graduate students with a strong background in neurochemistry and neuropharmacology and advanced undergraduates with an appropriate background. Offered alternate years. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

Many of the cellular and molecular mechanisms that underlie behavior are conserved across species. This seminar course draws on work in invertebrate and vertebrate species to examine the genes and molecules that have been implicated in diverse behaviors. Topics to be discussed include circadian rhythms, pair bonding, migration, and aggression. Each week, students will read two to three papers from the primary literature and actively participate in class discussion. Prerequisites: NEUR 0010 and NEUR 1020 (undergraduate students) or NEUR 2030 (graduate students). Enrollment limited to 13. Instructor permission required.
NEUR 2930C. Historical Foundations of the Neurosciences.
Two year sequence starting Fall 2010; students register for one year at a time. The first year (2010-2011) will examine the history of basic neuroscientific concepts from the late Greeks (Galen) to the later 19th century, up to Cajal (neuron doctrine) and Sherrington (reflexes and integration). Since the seminar meets only monthly, it must be taken in the Fall and Spring semesters to receive a semester's credit. For credit, a substantial paper (approximately 15 pages) is required at the end of the Spring semester. Primarily for graduate students in neuroscience, cognitive science, and psychology. Others may be admitted after discussion with the instructor. Auditors are welcome if they share in the rotating duty of presenting seminars. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 2930E. Bench to Bedside: Unraveling Diseases of the Nervous System.
Enrollment restricted to graduate students.

NEUR 2930F. Disease, Mechanism, Therapy: Harnessing Basic Biology for Therapeutic Development.
The recent surge in understanding the cellular and molecular basis of neurological disease has opened the way for highly targeted drug discovery and development. In this course we will use several case studies to illuminate how mechanistic insights are being translated into novel therapeutic approaches. Instructor permission required. Enrollment limited to 15 Graduate students. Sign-up sheet in Sidney Frank Hall, Room 315 beginning on the first day of registration.

NEUR 2940A. Advanced Molecular Neurobiology.
No description available.

NEUR 2940G. Historical Foundations of the Neurosciences II.
Continuation of a two year sequence focusing on the conceptual foundations in the history of neuroscience, from the late nineteenth century to the present. Primarily for graduate students in neuroscience, cognitive science, and psychology, but senior undergraduates may be admitted with written permission from the instructor. Seminar meets monthly, and must be taken for the full year to receive one semester credit.

NEUR 2940H. Ethics and Skills Workshop.
The ethics and skills workshops will be lead by faculty trainers in the Neuroscience Graduate Program. We will cover the following or similar topics over a two year period: Plagiarism, scientific accuracy, data ownership, expectations of advisory committees and mentors, authorship disagreements, and conflicts among lab members. Enrollment restricted to graduate students.

NEUR 2940I. Neural Correlates of Consciousness.
Will consider the neuroscience of consciousness from a variety of perspectives, using examples from behavior, neurophysiology, neuroimaging and neurology. The course content will focus on primary literature, using review articles for background. Students will lead the discussions. Primarily for graduate students. Senior undergraduates neuroscience concentrators and others may be admitted after discussion with the instructor. Instructor permission required. S/NC

NEUR 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

NEUR 2980. Graduate Independent Study.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. S/NC

NEUR 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.
The School of Engineering

Dean
Lawrence E. Larson

The mission of Brown University’s School of Engineering is to educate future leaders in the fundamentals of engineering in an environment of world-class research. We stress an interdisciplinary approach and a broad understanding of underlying global issues. Collaborations across the campus and beyond strengthen our development of technological advances that address challenges of vital importance to us all.

Along with our associations with the other scholarly disciplines – biology, medicine, physics, chemistry, computer science, the humanities and the social sciences – our co-operations bring unique solutions to challenging problems. The School focuses on unique and innovative clustering of faculty; in terms of research groups, engineers of all types team together with non-engineers to tackle some of the biggest problems facing engineering and science today. Our talents and expertise lie in the interdisciplinary domain where the seemingly diverse disciplines converge.

The School of Engineering offers courses and programs leading to the Bachelor of Science (Sc.B.), the Bachelor of Arts (A.B.), the Master of Science (Sc.M.), the Master of Science in Innovation Management and Entrepreneurship (Sc.M.I.M.E.), and the Doctor of Philosophy (Ph.D.). For additional information please visit the School’s website at: http://brown.edu/academics/engineering

Engineering Concentration Requirements

The concentration in Engineering equips students with a solid foundation for careers in engineering, to advance the knowledge base for future technologies, and to merge teaching, scholarship, and practice in the pursuit of solutions to human needs. The concentration offers one standard Bachelor of Arts (A.B.) program and nine Bachelor of Science (Sc.B.) degree program tracks. Of these, seven Sc.B. programs in biomedical, chemical and biochemical, civil, chemical, computer, electrical, materials, and mechanical engineering are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org/. Sc.B. degree programs in environmental engineering and engineering physics are also offered, but they are not accredited by ABET. (Note: The civil track has been discontinued for all students entering after fall 2012. Students interested in structural engineering entering in the class of 2017 and beyond may pursue a Structures track within the Mechanical Engineering program.) Other programs leading to the Sc.B. or A.B. degrees in Engineering may be designed in consultation with a faculty advisor. These programs must meet the general requirements for concentration programs in the School of Engineering. Students interested in an individualized program should consult with an Engineering faculty member willing to serve as an advisor and obtain the approval of the Engineering Concentration Committee. Engineering students with a particular interest in using their technical skills for the public benefit might also consider the Engaged Scholars Program (https://www.brown.edu/academics/engineering/undergraduate-study/engaged-scholars-program).

Please note that all student concentration forms must be approved by the Engineering Concentration Committee, which reviews them for compliance with all relevant program and accreditation requirements.

Mathematics

Mathematics 0190, 0200 is the preferred sequence of courses to be taken in the freshman year. Students with weak preparation in calculus may start in MATH 0100 or take MATH 0200 in second semester. Students without one year of secondary school level preparation in calculus should take MATH 0090, MATH 0100 in their first year, and should begin their sequence of engineering courses with ENGN 0030 in sophomore year.

The courses APMA 0330 & APMA 0340 (Methods of Applied Math I, II) can be taken in the sophomore year as well.

Advanced Placement

Students who have taken Advanced Placement courses in high school and/or have shown proficiency through advanced placement examinations are often able to start at a higher level than suggested by the standard programs below. However, please note that Advanced Placement credit cannot be used to satisfy any concentration requirements. For example, our Sc.B. programs specify that students must take at least 4 semesters of math while enrolled here at Brown, beginning with MATH 0190 or MATH 0170. If a student comes in with advanced placement credit (e.g. placing out of MATH 0190 or MATH 0200), he/she is strongly recommended to take a higher level math course as a replacement. Examples of such courses are MATH 0520 (Linear Algebra), MATH 1260 (Complex Analysis), MATH 1610 (Probability), MATH 1620 (Statistics), APMA 1170 (Numerical Analysis), APMA 1210 (Operations Research), or APMA 1650 (Statistical Inference). However, the student with advanced placement credit for MATH 0190 or MATH 0200 also has the option of replacing the math course with an advanced-level science course, subject to the approval of the concentration advisor.

Transfer Credit

Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the “Study Elsewhere” section of the University Bulletin for procedures, or contact the Dean of the College.) Transfer courses that are used to meet Engineering concentration requirements must be approved by the student’s concentration advisor, and must be described briefly on the student’s electronic concentration form. Transfer courses that are determined by the concentration advisor to be substantially equivalent to a required Brown course automatically fulfill concentration requirements. In rare cases, students may petition the concentration committee to use courses that do not have an equivalent offered at Brown to meet a concentration requirement. Substitutions of this nature can only be approved if the student’s overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their concentration advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

Substitutions for Required Courses

In exceptional circumstances, a student may petition the concentration committee to substitute a course in place of a requirement. Such substitutions can only be approved if the student’s modified program continues to meet the published educational outcomes for the concentration, and has sufficient basic science, mathematics, and engineering topics courses to meet accreditation requirements. Approval of the petition is subject to majority vote of the Engineering Concentration Committee.

Standard Program for the A.B. degree:

Candidates for the Bachelor of Arts (A.B.) degree with a concentration in Engineering must complete at least eight approved Engineering courses. The eight courses must include at least two 1000-level Engineering courses. Of these 1000-level courses, one must be a design or independent study course and the other an in-classroom experience. The set of Engineering courses must be chosen with careful attention to the prerequisites of the 1000-level courses. Please note that this A.B. degree program is not accredited by ABET.

Not all engineering courses may be used to satisfy the engineering course requirement for the A.B. degree. For example, the following courses cannot be used to satisfy the engineering course requirement for the A.B. degree: ENGN 0020, ENGN 0090, ENGN 0900, ENGN 0930A, ENGN 0930C, ENGN 1010. Therefore, the program of study must be developed through consultation with the concentration advisor.

Please note that all student concentration forms must be approved by the Engineering Concentration Committee, which reviews them for compliance with all relevant program and accreditation requirements.

Mathematics

Mathematics 0190, 0200 is the preferred sequence of courses to be taken in the freshman year. Students with weak preparation in calculus may start in MATH 0100 and take MATH 0200 in second semester. Students without one year of secondary school level preparation in calculus should take MATH 0090, MATH 0100 in their first year, and should begin their sequence of engineering courses with ENGN 0030 in sophomore year.

The courses APMA 0330 & APMA 0340 (Methods of Applied Math I, II) can be taken in the sophomore year as well.

Advanced Placement

Students who have taken Advanced Placement courses in high school and/or have shown proficiency through advanced placement examinations are often able to start at a higher level than suggested by the standard programs below. However, please note that Advanced Placement credit cannot be used to satisfy any concentration requirements. For example, our Sc.B. programs specify that students must take at least 4 semesters of math while enrolled here at Brown, beginning with MATH 0190 or MATH 0170. If a student comes in with advanced placement credit (e.g. placing out of MATH 0190 or MATH 0200), he/she is strongly recommended to take a higher level math course as a replacement. Examples of such courses are MATH 0520 (Linear Algebra), MATH 1260 (Complex Analysis), MATH 1610 (Probability), MATH 1620 (Statistics), APMA 1170 (Numerical Analysis), APMA 1210 (Operations Research), or APMA 1650 (Statistical Inference). However, the student with advanced placement credit for MATH 0190 or MATH 0200 also has the option of replacing the math course with an advanced-level science course, subject to the approval of the concentration advisor.

Transfer Credit

Students who have successfully completed college courses elsewhere may apply to the University for transfer credit. (See the “Study Elsewhere” section of the University Bulletin for procedures, or contact the Dean of the College.) Transfer courses that are used to meet Engineering concentration requirements must be approved by the student’s concentration advisor, and must be described briefly on the student’s electronic concentration form. Transfer courses that are determined by the concentration advisor to be substantially equivalent to a required Brown course automatically fulfill concentration requirements. In rare cases, students may petition the concentration committee to use courses that do not have an equivalent offered at Brown to meet a concentration requirement. Substitutions of this nature can only be approved if the student’s overall program meets published educational outcomes for the concentration and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their concentration advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

Substitutions for Required Courses

In exceptional circumstances, a student may petition the concentration committee to substitute a course in place of a requirement. Such substitutions can only be approved if the student’s modified program continues to meet the published educational outcomes for the concentration, and has sufficient basic science, mathematics, and engineering topics courses to meet relevant accreditation requirements. Students should consult their concentration advisor for assistance with drafting a petition. The decision whether to award concentration credit is made by majority vote of the Engineering Concentration Committee.

Standard Program for the A.B. degree:

Candidates for the Bachelor of Arts (A.B.) degree with a concentration in Engineering must complete at least eight approved Engineering courses. The eight courses must include at least two 1000-level Engineering courses. Of these 1000-level courses, one must be a design or independent study course and the other an in-classroom experience. The set of Engineering courses must be chosen with careful attention to the prerequisites of the 1000-level courses. Please note that this A.B. degree program is not accredited by ABET.

Not all engineering courses may be used to satisfy the engineering course requirement for the A.B. degree. For example, the following courses cannot be used to satisfy the engineering course requirement for the A.B. degree: ENGN 0020, ENGN 0090, ENGN 0900, ENGN 0930A, ENGN 0930C, ENGN 1010. Therefore, the program of study must be developed through consultation with the concentration advisor.
The A.B. program also requires preparation in Mathematics equivalent to MATH 0200 and APMA 0330, as well as at least one college-level science course from the general areas of chemistry, life sciences, physics, or geological sciences. Remedial courses, such as CHEM 0100, cannot be used to satisfy this requirement. A programming course is also recommended, but not required. The entire program is subject to approval by an Engineering Concentration Advisor and the Chair of the Engineering Concentration Committee.

**Standard programs for the Sc.B. degree**

All Bachelor of Science (Sc.B.) program tracks build upon a common core of engineering knowledge and skills applicable across all engineering disciplines. The goal of this engineering core curriculum is to prepared to practice engineering in an age of rapidly changing technology. Two-thirds of the undergraduate program consists of a core of basic mathematics, physical sciences and engineering sciences common to all branches of engineering, including a thorough grounding in programming and technical problem solving. The core provides our graduates with the basis of theory, design, and analysis that will enable them to adapt to whatever may come along during their careers.

At the same time, the core courses assist students in making informed choices in determining their areas of specialization, at the end of their sophomore year. To this end, first-year students are given an introduction to engineering - featuring case studies from different disciplines in engineering as well as guest speakers from industry. This aspect of the program is different from that at many other schools where students are expected to select a specific branch of engineering much earlier in their academic program.

In addition, all Sc.B. programs in Engineering must be complemented by at least four courses in humanities and social sciences. The minimum four-course humanities and social sciences requirement for the Sc.B. in Engineering cannot be met by advanced placement credit.

**Chemical and Biochemical Engineering Track:**

The Chemical and Biochemical Engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The education objectives of the Chemical and Biochemical Engineering program are to prepare graduates: (1) to pursue productive scientific and technical careers, beginning with entry-level engineering positions in industry, or graduate study in chemical or biochemical engineering or related fields; or to successfully pursue other careers that benefit from the analytical or quantitative skills acquired through the Brown CBE Program; (2) to effectively apply the principles of chemical and biochemical engineering, problem-solving skills, and critical and independent thinking, to a broad range of complex, multidisciplinary technological and societal problems; (3) to communicate effectively, both orally and in writing, to professionals and audiences of diverse backgrounds, and to pursue technical approaches and innovations that address the needs of society in an ethical, safe, sustainable, and environmentally responsible manner.

The student outcomes of this program are the ABET (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" (available online at http://www.abet.org/accreditation-criteria-policies-documents/).

1. Core Courses:

| ENGN 0030 | Introduction to Engineering | 1 |
| ENGN 0040 | Dynamics and Vibrations | 1 |
| ENGN 0410 | Materials Science | 1 |
| ENGN 0510 | Electricity and Magnetism | 1 |
| ENGN 0520 | Electrical Circuits and Signals | 1 |
| ENGN 0720 | Thermodynamics | 1 |
| ENGN 0810 | Fluid Mechanics | 1 |
| BIOL 0200 | The Foundation of Living Systems | 1 |
| CHEM 0330 | Equilibrium, Rate, and Structure | 1 |
| MATH 0190 | Advanced Placement Calculus (Physics/ Engineering) | 1 |
| or MATH 0170 | Advanced Placement Calculus | 1 |

2. Upper-Level Chemical & Biochemical Engineering Curriculum

| ENGN 1110 | Transport and Biotransport Processes | 1 |
| ENGN 1120 | Chemical and Biochemical Reactor Design | 1 |
| ENGN 1130 | Phase and Chemical Equilibria | 1 |
| ENGN 1710 | Heat and Mass Transfer | 1 |
| CHEM 0350 | Organic Chemistry | 1 |

3. Advanced Chemistry elective course $^2$

| CHEM 0360 | Organic Chemistry | 1 |
| CHEM 0400 | Biophysical and Bioinorganic Chemistry | 1 |
| CHEM 0500 | Inorganic Chemistry | 1 |
| CHEM 1140 | Physical Chemistry: Quantum Chemistry | 1 |

4. Advanced Natural Sciences elective course $^2$

5. 3. Capstone Design Course

| ENGN 1140 | Chemical Process Design | 1 |

In addition to program requirements above, students must take four courses in the humanities and social sciences.

**Civil Engineering Track (Available to students entering Brown on or before the Fall of 2012):**

**Important Announcement:** Civil Engineering program will continue through May 2016, and will be available to all students currently enrolled at Brown, including those who arrived as Freshmen in the Fall of 2012 (the class of 2016). Students entering in the class of 2017 and later, with interest in Structural Engineering, will be able to concentrate in this discipline through a Structures track within the Mechanical Engineering program. Students interested in Environmental Problems and Planning are directed to the programs in Chemical and Biochemical Engineering or Environmental Engineering.

The Civil Engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The education objectives of the Civil Engineering program are to prepare graduates: (1) to have distinctive careers, beginning with either entry level positions in structural and environmental areas of civil engineering or graduate study in these fields; (2) to adapt to changing opportunities, both in engineering and in other professional and business pursuits; (3) to be ethically responsible, to engage in lifelong learning, and to be of service to the engineering community and to society at large. The student outcomes of this program are the ABET (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" (available online at http://www.abet.org/accreditation-criteria-policies-documents/).

1. Core courses:

| ENGN 0030 | Introduction to Engineering | 1 |
| ENGN 0040 | Dynamics and Vibrations | 1 |
| ENGN 0310 | Mechanics of Solids and Structures | 1 |
| ENGN 0410 | Materials Science | 1 |
| ENGN 0510 | Electricity and Magnetism | 1 |

2. Upper-Level Civil Engineering Curriculum

| ENGN 1110 | Transport and Biotransport Processes | 1 |
| ENGN 1120 | Chemical and Biochemical Reactor Design | 1 |
| ENGN 1130 | Phase and Chemical Equilibria | 1 |
| ENGN 1710 | Heat and Mass Transfer | 1 |
| CHEM 0350 | Organic Chemistry | 1 |

3. Advanced Chemistry elective course $^2$

| CHEM 0360 | Organic Chemistry | 1 |
| CHEM 0400 | Biophysical and Bioinorganic Chemistry | 1 |
| CHEM 0500 | Inorganic Chemistry | 1 |
| CHEM 1140 | Physical Chemistry: Quantum Chemistry | 1 |

4. Advanced Natural Sciences elective course $^2$

5. 3. Capstone Design Course

| ENGN 1140 | Chemical Process Design | 1 |
Computer Engineering Track:

The Computer Engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The education objectives of the Computer Engineering program are to prepare graduates: (1) to pursue distinctive multidisciplinary scientific and technical careers beginning with either entry-level computer engineering positions in industry or graduate study in computer engineering and related fields; (2) to participate on multidisciplinary teams that cooperate in applying problem-solving skills and critical and independent thinking to a broad range of projects that can produce the technical innovations aimed at satisfying the future needs of society. The student outcomes of this program are the ABET (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" (available online at http://www.abet.org/accreditation-criteria-policies-documents/).

Environmental Engineering Track:
The Environmental Engineering program began in 2013. The program has not been reviewed by ABET and is not ABET-accredited. The education objectives of the Environmental Engineering program are to prepare graduates: (1) to apply in practice the knowledge obtained in school within industry, government, or private practice; (2) to work toward sustainable solutions in a wide array of technical specialties; (3) to pursue lifelong learning through continuing education and/or advanced degrees in environmental engineering. The student outcomes of this program are the (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" (available online at: http://www.brown.edu/academics/engineering/undergraduate-study).

1. Core Courses:
   - ENGN 0030 Introduction to Engineering
   - ENGN 0040 Dynamics and Vibrations
   - ENGN 0410 Materials Science
   - ENGN 0510 Electricity and Magnetism
   - ENGN 0720 Thermodynamics
   - ENGN 0810 Fluid Mechanics
   - BIOL 0200 The Foundation of Living Systems
   - CHEM 0330 Equilibrium, Rate, and Structure
   - ENVS 0490 Environmental Science in a Changing World
   - MATH 0190 Advanced Placement Calculus (Physics/Engineering)
   - or MATH 0170 Advanced Placement Calculus
   - MATH 0200 Intermediate Calculus (Physics/Engineering)
   - or MATH 0180 Intermediate Calculus
   - or MATH 0350 Honors Calculus
   - APMA 0330 Methods of Applied Mathematics I, II
   - or APMA 0350 Applied Ordinary Differential Equations
   - APMA 0650 Essential Statistics
   - or APMA 1650 Statistical Inference I

2. Advance Science Courses
   - GEOL 1370 Environmental Geochemistry
   - or GEOL 1580 Quantitative Elements of Physical Hydrology
   - BIOL 0415 Microbes in the Environment (or an approved alternative Natural Science Course)
   - or BIOL 0420 Principles of Ecology

3. Environmental Engineering Specialty Options (Complete one of the following five course sequences)

4. Capstone Design
   - ENGN 1650 Embedded Microprocessor Design
   - or ENGN 1000 Projects in Engineering Design

Total Credits 21

*In addition to program requirements above, students must take four courses in the humanities and social sciences.

Materials Engineering Track:
The Materials Engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The education objectives of the Materials Engineering program are to prepare graduates: (1) to pursue multidisciplinary scientific and technical careers beginning with entry-level engineering positions in industry or graduate study in materials science and engineering and related fields; (2) to apply an engineering problem-solving approach combined with a broad appreciation
for the liberal arts to inform and develop their understanding of current societal needs and values to achieve leadership positions in their chosen fields of endeavor. The student outcomes of this program are the (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" (available online at http://www.abet.org/ accreditation-criteria-policies-documents/).

* In addition to program requirements above, students must take four courses in the humanities and social sciences.

Subject to approval by the concentration advisor, an independent study course (ENGN1970/1971) may be used to fulfill the Engineering Capstone Design requirement. To qualify for such approval, the independent study project must: (1) contain a significant and definable design component; (2) be based on the knowledge and skills acquired in earlier course work, (3) incorporate appropriate engineering standards; and (4) address multiple realistic constraints. To request approval, please complete the online form available at: http://www.brown.edu/academics/engineering/undergraduate-study

**Mechanical Engineering Track:**

The Mechanical Engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The education objectives of the Mechanical Engineering program are to prepare graduates: (1) to pursue scientific and technical careers beginning with either graduate study in mechanical engineering and related fields or mechanical engineering positions in industry; (2) to work on interdisciplinary teams that make use of the engineering problem solving method and a broad background in the liberal arts to address societal needs. The student outcomes of this program are the (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs" (available online at http://www.abet.org/accreditation-criteria-policies-documents/).

Four courses in the humanities and social sciences.
Total Credits 21
*In addition to program requirements above, students must take four courses in the humanities and social sciences.
1 Or another advanced science course, subject to concentration advisor approval.
2 Subject to approval by the concentration advisor, an independent study course (ENGN1970/1971) may be used to fulfill the Engineering Capstone Design requirement. To qualify for such approval, the independent study project must: (1) contain a significant and definable design component; (2) be based on the knowledge and skills acquired in earlier course work, (3) incorporate appropriate engineering standards; and (4) address multiple realistic constraints. To request approval, please complete the online form available at: http://www.brown.edu/academics/engineering/undergraduate-study
3 An ENGN course of equivalent level may be substituted subject to concentration advisor approval.

Engineering and Physics Concentration Requirements
The Sc.B. program in Engineering and Physics is sponsored jointly by the School of Engineering and the Department of Physics. The program is designed to ensure that students take a significant portion of the usual curriculum in Engineering and in Physics, obtain substantial laboratory
experience, and take several upper-level elective courses, focusing on applied science. Students may take either the standard Physics or Engineering programs during their freshman and sophomore years and then switch to this combined program. The Sc.B. degree program in Engineering and Physics is not accredited by ABET.

The following standard program assumes that a student begins mathematics courses at Brown with MATH 0170 or its equivalent. Students who begin in MATH 0200 can substitute an additional science, engineering or higher-level mathematics course for the MATH 0170 or MATH 0190 requirement. To accommodate the diverse preparation of individual students, variations of the following sequences and their prerequisites are possible with permission of the appropriate concentration advisor and the instructors involved. We recommend that each student’s degree program be submitted for prior approval (typically in semester four) and scrutinized for compliance (in semester seven) by one faculty member from the Department of Physics and one faculty member from the School of Engineering.

Select one of the following two course sequences: 2

* Students are also encouraged to take courses dealing with the philosophical, ethical, or political aspects of science and technology.

| Total Credits | 19 |

## Biomedical Engineering Concentration Requirements

The Sc.B. program in Biomedical Engineering is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org/. It is jointly offered by the School of Engineering and the Division of Biology and Medicine as an interdisciplinary concentration designed for students interested in applying the methods and tools of engineering to the subject matter of biology and the life sciences. The education objectives of the Biomedical Engineering program are to prepare graduates: (1) to be employed in careers of useful service to society, including scientific and technical areas within medicine, industry, and health care delivery; (2) to demonstrate the ability to apply the basic principles of engineering and science, as well as problem solving skills and critical thinking, to a broad spectrum of biomedical engineering problems; (3) to demonstrate their ability to work in teams, and to effectively communicate and understand the broad social, ethical, economic and environmental consequences of their lifelong education. The student outcomes of this program are the (a) - (k) Student Outcomes as defined by the "ABET Criteria for Accrediting Engineering Programs (available online at http://www.abet.org/accreditation-criteria-policies-documents/)." The Biomedical Engineering concentration shares much of the core with the other engineering programs, but is structured to include more courses in biology and chemistry, and a somewhat different emphasis in mathematics.

The requirements regarding Mathematics, Advanced Placement, Transfer Credit, Substitutions for Required Courses, and Humanities and Social Science Courses are identical to those of the Sc.B. degree programs in Engineering. Please refer to the Engineering section of the University Bulletin for explicit guidelines.

The Biomedical Engineering concentration shares much of the core with the other engineering programs, but is structured to include more courses in biology and chemistry, and a somewhat different emphasis in mathematics.

Select at most two of the following:  4
BIOL 1150  Stem Cell Engineering
or BIOL 1210  Synthetic Biological Systems
or BIOL 1800  Animal Locomotion
or BIOL 2110  Drug and Gene Delivery
or BIOL 2130  Techniques in Molecular and Cell Science
3. Capstone Design  5
ENGN 1930L Biomedical Engineering Design, Research and Modeling
* In addition to program requirements above, students must take four courses in the humanities and social sciences.

Total Credits  21
1 Students with advanced biology backgrounds may replace with BIOL 0470, BIOL 0530, or other biology courses.
2 Students with advanced math backgrounds may replace with CHEM 0360.
3 Or other advanced bioengineering courses (e.g. ENGN 1510 and ENGN 1520), subject to concentration advisor approval.
4 Or other advanced bioengineering courses, subject to concentration advisor approval.
5 Biomedical engineering students are also encouraged to pursue independent research with faculty members in the School of Engineering or the Division of Biology & Medicine.

Courses
This course will address the impact that technology has on society, the central role of technology on many political issues, and the need for all educated individuals to understand basic technology and reach an informed opinion on a particular topic of national or international interest. The course will begin with a brief history of technology.

ENGN 0030. Introduction to Engineering.
An introduction to various engineering disciplines, thought processes, and issues. Topics include computing in engineering, engineering design, optimization, and estimation. Case studies in engineering are used to illustrate engineering fields and scientific principles, including in-depth studies of statics. Laboratories and design projects are included. Prerequisite: one of the following: APMA 0330, 0340, 0350, 0360, MATH 0100, 0170, 0180, 0190, 0200, 0350, 0520, 0540, which may be taken concurrently. Students MUST register for the course lecture (M01) and one of the sections during the SAME registration session. Banner will not allow a student to register for one component without registering for the other at the same time. Further, if you drop one component of the course on Banner, both components will be dropped.

ENGN 0031. Honors Introduction to Engineering.
An introduction to various engineering disciplines, thought processes, and issues. Topics include computing in engineering, engineering design, optimization, and estimation. Case studies in engineering are used to illustrate engineering fields and scientific principles, including in-depth studies of statics. Laboratories and design projects are included. The section of the Honors course will focus on scientific programming using MATLAB with applications in statics. Students pursuing concentrations in Mechanical, Electrical or Materials Engineering who complete the Honors Science course in place of CSCI 0040. Prerequisite: one of the following: MATH 0100, 0170, 0180, 0190, 0200, 0350, 0520, 0540, which may be taken concurrently.

ENGN 0040. Dynamics and Vibrations.
Study of the kinematics and dynamics of particles and rigid bodies. Principles of motion of mechanical systems. Concepts of inertia, work, kinetic energy, linear momentum, angular momentum, and impact. Applications to engineering systems, satellite orbits, harmonic vibrations of one and two degree of freedom systems. Lectures, recitations, and laboratory. Prerequisite: ENGN 0030. Corequisite: MATH 0200 or 0180.

ENGN 0090. Management of Industrial and Nonprofit Organizations.
Exposes students to the concepts and techniques of management. Topics include marketing, strategy, finance, operations, organizational structure, and human relations. Guest lecturers describe aspects of actual organizations. Lectures and discussions.

ENGN 0110. Lean LaunchPad.
The Lean LaunchPad (LLP) is a Winter Session course on how to build a startup using lean startup tools and frameworks. It is a hands-on, intensive, experiential course designed for student teams who are serious about pursuing a startup. The course teaches Customer Development, which requires students to get out of the building and test their business hypotheses with real customers, and uses the Business Model Canvas as a scorecard.
ENGN 0120A. Crossing the Consumer Chasm by Design.
Technologies have shaped human life since tools were sticks and flints to today’s hydrocarbon powered, silicon managed era. Some spread throughout society; bread, cell phones, airlines, but most never do; personal jet packs, Apple Newton, freeze dried ice cream.
Space Tourism, the Segway, electric cars: Can we predict which ones will cross the chasm to broad application? Can we help them to by combining design, engineering, marketing, communications, education, art, and business strategies?
Student teams identify potential new products, conceptualize, package, and define their business mode. By plotting their course across the chasm, we confront the cross-disciplinary barriers to realizing benefits from technology.
Enrollment limited to 18 first year students. Instructor permission required. FYS WRIT

ENGN 0120B. Crossing the Space Chasm Through Engineering Design.
Five decades of human activity in space has provided the world community with benefits including instant global communications and positioning, human and robotic exploration of the moon, planets and sun, and a perspective of earth which continues to inform and influence our relationship with our environment.
Unlike other technical revolutions of the 20th century space has not transitioned to a commercial, consumer market commodity. Rather its users and applications remain primarily large and institutional.
To experience the challenges of engineering design and of changing an industrial paradigm, we will work in one or several groups to identify a use of space, and a plan for its implementation, that could help transition space from its status as a niche technology. Through the process of design, we will confront the technical, economic, societal and political barriers to obtaining increased benefits from technologies in general, and space in particular, and to making new technologies beneficial to a wider range of users. Enrollment limited to 18 first year students. Instructor permission required. FYS WRIT

ENGN 0120C. Power: From Early Engines to the Nuclear-Powered Artificial Heart.
Mechanical and electrical power have been source of major changes in civilization in last 250 years. This course starts from introduction to animal muscle power and harnessing nature to steam and later sources of power and applications, examining not only the technologies but also the people who developed them and the social and political impacts, ranging up to the nuclear-powered artificial heart. Enrollment limited to 20 first year students. FYS

ENGN 0120D. Strategies for Creative Process: Design Topics.
There is no one simple methodology for creative thinking. Creative thinking is a critical response to the world around us - to our curiosities and interests, to the questions our observations generate, to the ways we frame problems, and to the strategies we develop for translating what we imagine into objects and experiences. Working as artist/designers, making things within a studio environment, we will examine various approaches for the development and refinement of our creative processes as we establish a technical and conceptual foundation for the design and fabrication of objects and experiences. Enrollment limited to 15 first year students. FYS

ENGN 0130. The Engineer's Burden: Why Changing the World is Difficult.
We will examine the assertion that most of the changes that have improved people’s lives are essentially technological and then we will look at the difficulties in creating sustainable and beneficial change. Topics of interest include unintended consequences, failure to consider local culture, and engineering ethics. Many, but not all, of the examples will have a third world context. The engineering focus will be on infrastructure—housing, water and sanitation, transportation, and also mobile devices as used in health care and banking.

ENGN 0230. Surveying.
Theory and practice of plane surveying; use of the tape, level, transit, stadia, and plane table; triangulation and topography. Lectures, field work, and drafting. Recommended for students interested in civil engineering. Hours arranged. Time required, about 10 hours. Audit only.

ENGN 0260. Mechanical Technology.
A basic machine shop course that, with the help of an instructor, teaches students how to fabricate a few simple objects using hand tools and some basic machines. This course is designed to introduce the student to the machining process and environment. Audit only.

Mechanical behavior of materials and analysis of stress and deformation in engineering structures and continuous media. Topics include concepts of stress and strain; the elastic, plastic, and time-dependent response of materials; principles of structural analysis and application to simple bar structures, beam theory, instability and buckling, torsion of shafts; general three-dimensional states of stress; Mohr's circle; stress concentrations. Lectures, recitations, and laboratory. Prerequisite: ENGN 0030.

ENGN 0410. Materials Science.
Relationship between the structure of matter and its engineering properties. Topics: primary and secondary bonding; crystal structure; atomic transport in solids; defects in crystals; mechanical behavior of materials; phase diagrams and their utilization; heat treatment of metals and alloys; electrical, optical, and magnetic properties of materials; strengthening mechanisms in solids and relationships between microstructure and properties; corrosion and oxidation. Lectures, recitations, laboratory.

ENGN 0510. Electricity and Magnetism.
Fundamental laws of electricity and magnetism and their role in engineering applications. Concepts of charge, current, potential, electric field, magnetic field, Resistance, capacitance, and inductance. Electric and magnetic properties of materials. Electromagnetic wave propagation. Lectures, recitation, and laboratory. Prerequisites: ENGN 0030 or PHYS 0070: ENGN 0040 or PHYS 0160 (previously 0080); MATH 0180 or 0200; and APMA 0330 or 0350 (may be taken concurrently).

ENGN 0520. Electrical Circuits and Signals.
An introduction to electrical circuits and signals. Emphasizes the analysis and design of systems described by ordinary linear differential equations. The frequency domain is introduced, including the effects of sampling and windowing in computer simulations. Other topics include transient analysis, Fourier series, and Laplace transform. Laboratories apply concepts to real problems in audio and controls. Lectures, recitation, and laboratory. Prerequisite: MATH 0180 or MATH 0200, courses may be taken concurrent to ENGN 0520.

ENGN 0720. Thermodynamics.
An introduction to macroscopic thermodynamics and some of its engineering applications. Presents basic concepts related to equilibrium, and the zeroth, first and second laws for both closed and open systems. Examples include analysis of engines, turbines, and other engineering cycles, phase equilibrium and separation processes, chemical reactions, surface phenomena, magnetic and dielectric materials. Lectures, recitations, and laboratory. Prerequisites: ENGN 0030 or ENGN 0040. Recommended: ENGN 0410 or CHEM 0330.

ENGN 0900. Managerial Decision Making.
Ways of making effective decisions in managerial situations, especially situations with a significant technological component; decision analysis; time value of money; competitive situations; forecasting; planning and scheduling; manufacturing strategy; corporate culture. Lectures and discussions. Prerequisite: ENGN 0090 or MATH 0100.
ENGN 0930A. Appropriate Technology.
Our goal for this course is that you leave it with the ability to think and act rationally and concretely on issues of technology and the human condition. We will provide background on useful technologies (e.g., wind, solar, hydro), techniques to fabricate them, and an opportunity to explore the obstacles to their implementation.

ENGN 0930C. DesignStudio.
DESIGNSTUDIO is a course open to students interested in learning through making. Working in a studio environment, we will iteratively design, build, and test projects, as we imaginatively frame design problems, and develop novel strategies for addressing those problems. We will explore design thinking, creative collaboration, exploratory play, ideation, iteration, woodworking, prototyping, CNC milling and laser cutting – in addition to other strategies that enhance our creative processes - as we establish a technical and conceptual foundation for the design and fabrication of objects and experiences. Enrollment limited to 16. Instructor permission required.

ENGN 0931. Internet of Everything.
The Internet can be visualized as Internet of information, Internet of people, Internet of places and most importantly the Internet of “things.” Internet of Everything includes these four paradigms. In this class, we will learn about how these four ideas can come together to make a difference in the world. We will study the underlying infrastructure that supports Internet, the TCP/IP model, addressing and routing. Experiments and projects in the class would include a tree on the Internet communicating with the sprinkler system only when it is thirsty. Privacy and ethical issues will also be addressed.

ENGN 1000. Projects in Engineering Design.
Projects in design for concentrators in chemical, electrical, materials, and mechanical engineering. Students generally work in teams on projects that are defined through discussions with the instructor. An assembled product or detailed design description is the goal of the semester’s effort. Prerequisite: completion of engineering core program. Written permission required.

Entrepreneurship is innovation in practice; transforming ideas into opportunities, and, through a deliberate process, opportunities into commercial realities. These entrepreneurial activities can take place in two contexts: the creation of new organizations; and within existing organizations. This course will present an entrepreneurial framework for these entrepreneurial processes, supported by case studies that illustrate essential elements. Successful entrepreneurs and expert practitioners will be introduced who will highlight practical approaches to entrepreneurial success. Enrollment limited to 35. WRIT

ENGN 1110. Transport and Biotransport Processes.
Aim: To develop a fundamental understanding of mass transport in chemical and biological systems. The course includes: mechanism of transport, biochemical interactions and separations; mass transport in reacting systems; absorption; membrane and transvascular transport; electrophoretic separations; pharmacokinetics and drug transport; equilibrium stage processes; distillation and extraction. Other features: design concepts; modern experimental and computing techniques; laboratory exercises.

ENGN 1120. Chemical and Biochemical Reactor Design.
Stoichiometry, thermodynamics, mechanisms, and rate expressions of homogeneous and heterogeneous chemical and biochemical systems. Basic concepts in homogeneous chemical and bioreactor design and ideal reactor models. Chemostats and enzymatic reactors. Optimization. Temperature and energy effects in reactors. Introduction to heterogeneous chemical and bioreactor design. Prerequisite: ENGN 0720 or physical chemistry. Offered in alternate years.

ENGN 1130. Phase and Chemical Equilibria.
Application of the first and second laws of thermodynamics and conservation of mass to the analysis of chemical and environmental processes, phase and chemical equilibria and partitioning of species in multiphase, nonreactive and reactive systems. Thermodynamic properties of fluid mixtures-correlation and estimation. Applications and examples drawn from chemical processing and environmental problems. Prerequisite: ENGN 0720.

ENGN 1140. Chemical Process Design.
Chemical process synthesis, flow charting, and evaluation of design alternatives. Process equipment sizing as determined by rate phenomena, economics, and thermodynamic limitations. Introduction to optimization theory. Applications of these principles to case studies. Prerequisites: ENGN 1110, 1130; ENGN 1120 (may be taken concurrently).

ENGN 1210. Biomechanics.

ENGN 1220. Neuroengineering.
Course Goals: To develop an advanced understanding of how signals are generated and propagated in neurons and neuronal circuits, and how this knowledge can be harnessed to design devices to assist people with neurologic disease or injury. Fundamental topics in neuronal and neural signal generation, recording methods, and stimulation methods. Clinical/Translational topics include multiple clinically available and emerging neurotechnologies. Prerequisites: NEUR 0010 and ENGN 0510; or instructor permission, which may be provided after discussion with course faculty.

ENGN 1230. Instrumentation Design.
Sensors for pressure, temperature, blood flow, muscle and neural activity. Amplifiers, filters, and A/D-D/A converters. The use of computers in monitoring and controlling physiological processes. Feedback controllers for temperature, flow rate, and experimental stimuli. Intended as a design course primarily for biomedical engineers. Lab times to be arranged. WRIT

ENGN 1300. Structural Analysis.
A unified study of truss, beam, frame, plate, and shell structures. Emphasis on principles of virtual work and numerical methods of elastic structural analysis by matrix methods. Includes calculation of deflections and reactions in beam structures, beam vibrations, and column buckling. Theorems of plastic limit analysis. Plate bending. Membrane stresses and local bending effects in axially symmetric shells. Prerequisite: ENGN 0310.

ENGN 1310. Planning and Design of Systems.
No description available.

ENGN 1340. Water Supply and Wastewater Treatment.
The hydrological cycle, surface water hydrology, ground water hydrology. Emphasis on the formulation of mathematical models of various flow problems and their solution by analytical or numerical means. Typical problems: open channel and river flows; flood routing; ground water flow in aquifers and into wells. Topics in wastewater treatment plant design: mixing, residence time, aeration, and, bacteriological and chemical treatment processes. Prerequisite: CHEM 0330 and MATH 0170 or MATH 0190. Not open to first year students. Enrollment limited to 40.

Classification and identification of geological materials: mechanical and physical properties and methods of testing. Elements of the analysis of stress and strain in rock and soil masses; theories of failure, theory of seepage. Problems of building foundations; consolidation and settlement; stability of earth slopes and embankments. Includes geotechnical laboratory. Prerequisite: ENGN 0310.
A unified study of the dynamics of particles, rigid bodies, and deformable continua. Generalized coordinates and Lagrange’s equations; variational principles; stability of equilibrium; vibrations of discrete systems and of elastic continua, and wave propagation. Prerequisites: ENGN 0040, APMA 0340, or equivalent.

ENGN 1380. Design of Civil Engineering Structures.
This course provides an introduction to the design of steel and reinforced concrete structures using ultimate strength methods. Lectures will cover key concepts of design theory, building codes, and standards using examples from real structures. Students will apply concepts through computer labs, homework problems, and a design project. Lectures plus lab. Prerequisite: ENGN 1300.

ENGN 1400. Analytical Methods in Biomaterials.
Analytical methods and instrumentation currently used to characterize biomaterials. Specific methods/instrumentation covered include: molecular scale analysis (NMR, FTIR, UV-Vis spectroscopy); surface analysis (AFM, SEM, XPS, contact angle goniometry, ellipsometry, quartz crystal microbalance, electrochemistry, grazing angle IR); bulk analysis (DSC, mechanical testing) and biological analysis (bioassays, fluorescence and confocal microscopy). Prerequisites: CHEM 0330, CHEM 0350, ENGN 0400 and BIOL 0200. Enrollment limited to 40.

ENGN 1410. Physical Chemistry of Solids.
Application of physical chemistry and solid state chemistry to the structure and properties of engineering solids as used in solid state devices, ceramics, and metallurgy. Equilibrium and free energy of heterogeneous systems, thermodynamics of solutions, chemical kinetics, diffusion, catalysis and corrosion, solid state transformations. Case studies taken from industrial practice. Prerequisites: ENGN 0410, 0720.

This course introduces the basic principles and formulations that describe kinetic processes in materials science and engineering. These are divided into the following principle types of mechanisms: solid state diffusion, reactions at surfaces and interfaces, and phase transformations. The final section of the course applies these principles to several relevant materials processing systems. Prerequisites: ENGN 0410, 0720, 1410 or equivalent.

Focuses on the science of electronic materials, the materials at the heart of modern microelectronics and optoelectronics. Addresses fundamental issues controlling their properties, processing, and reliability. Topics include band structure of semiconductors, basic devices structures (junctions and transistors), sputter deposition, molecular beam epitaxy, chemical vapor deposition, ion implantation, oxidation, and issues affecting reliability. Materials challenges that must be resolved for future generations of electronic devices.

A study of the structure and properties of nonmetallic materials such as glasses, polymers, elastomers, and ceramics. The crystal structure of ceramics and polymers, and the noncrystalline networks and chains of glasses, polymers, and elastomers and the generation of microstructures and macrostructures are considered. The mechanical, chemical, electrical, magnetic, and optical properties and their dependence on structure are developed. Laboratory. Prerequisite: ENGN 0410.

ENGN 1480. Metallic Materials.
The microstructure of metals, microstructural evolution during processing, and the relationships between the microstructure and the physical properties of the material. Crystallography and x-ray diffraction. Crystalline defects, dislocations, grain boundaries, and their effects on mechanical and other properties. Solid state diffusion and solid state phase transformations. Oxidation and corrosion. Laboratory. Prerequisite: ENGN 0410, 1410.

ENGN 1490. Biomaterials.
Biomaterials science, the study of the application of materials to problems in biology and medicine, is characterized by medical needs, basic research, and advanced technological development. Topics covered in this course include materials used in bone and joint replacement, the cardiovascular system, artificial organs, skin and nerve regeneration, implantable electrodes and electronic devices, drug delivery, and ophthalmology.

ENGN 1510. Nanoengineering and Nanomedicine.
Students in this course will develop a fundamental understanding of nanoeengineering and its applications in medicine. We will discuss nanomaterials synthesis, fabrication, and characterization. Applications of nanoeengineered materials in medicine, including nanotechnology-based drug delivery systems, nano-based imaging and diagnostics, and nanotechnology-based tissue engineering approaches will be explored in depth. Host response to nanomaterials and nanotoxicology will also be discussed. Research methods in nanoeengineering and nanomedicine will be emphasized (i.e. critical analysis of scientific literature, effective oral and written communication). This course is meant for engineering and science graduate students and advanced upper level engineering undergraduates.

ENGN 1520. Cardiovascular Engineering.
In this course, students will learn quantitative physiological function of the heart and vascular system, including cardiac biomechanics and vascular flow dynamics, through lectures and discussion of current scientific literature. A systems approach will integrate molecular biophysics, cell biology, tissue architecture, and organ-level function into a quantitative understanding of health and disease. Discussion topics will include cardiovascular devices, pre-clinical regenerative therapies, stem cell ethics, and clinical trials. WRIT

A first course on electromagnetic waves and photonics. Topics to be covered include basic wave phenomena with an emphasis on geometric optics, the interaction of light with matter, scattering, and interference and diffraction effects. Also covered will be a selected number of more advanced topics including laser physics, nonlinear optics, transmission lines, and antennas.

ENGN 1570. Linear System Analysis.
Analysis of discrete and continuous electrical signals and systems in both time and frequency domains. Modulation, sampling, spectral analysis, analog and digital filtering. Fourier, Laplace and z-transforms, the state-space approach, stability of linear systems. Prerequisite: ENGN 0520.

ENGN 1580. Communication Systems.
We will learn basic communication and information theory, but with examples drawn from a variety of areas not normally considered communication. Basic knowledge of Laplace/Fourier transforms and frequency domain is essential (ENGN 0520 or equivalent required). Linear Systems (ENGN 1570), Probability (APMA 1650 or MATH 1610), Linear Algebra (MATH 0520 or 0540) and E&M (ENGN 0510) are helpful but not required. Analog modulation, digitization, signal space, digital modulation and noise, information theory, selected topics in modern communication/ information network theory and applications to biology and physics as time and interest permit. Depending on preparation, we may also pursue final projects.

The School of Engineering
ENGN 1590. Introduction to Semiconductors and Semiconductor Electronics.
An introduction to the physics of fundamental electronic processes that underlie the operation of semiconductor devices on a microscopic scale. Basic electronic properties of semiconductors and effects at interfaces heterogeneous media, such as pn junctions and hetero-structure barriers and quantum wells. These junctions, barriers and wells are used as building blocks for devices, focusing on bipolar and field-effect transistors. Modern trends in micro- and opto-electronic devices are discussed. A brief fabrication lab will introduce pn junction fabrication technology. Prerequisites: ENGR 0410 and 0510.

ENGN 1600. Design and Implementation of Very Large-Scale Integrated Systems.
VLSI (Very Large Scale Integration) CMOS (Complementary Metal Oxide Semiconductor) technology is the main driver of our digital revolution. The goal of the course is to learn how to design and implement VLSI digital circuits and optimize them with respect to different objectives such as area, speed, and power dissipation. Design and analysis will be carried out using computer-aided tools. Prerequisite: ENGM 1630, or instructor permission.

ENGN 1610. Image Understanding.
Image processing is a technology experiencing explosive growth; it is central to medical image analysis and transmission, industrial inspection, image enhancement, indexing into pictorial and video databases, e.g., WWW, and to robotic vision, face recognition, and image compression. This senior-level undergraduate course covers theoretical underpinnings of this field and includes a series of practical MATLAB image processing projects. ENGM 1610 is recommended but not required.

Elementary device physics and circuit characteristics of semiconductor diodes, bipolar junction transistors (BJTs), and field effect transistors (FETs). Analysis and design of practical circuits using discrete semiconductor devices. Constraint on and techniques for linear integrated circuit (IC) design and the use of linear ICs as circuit building blocks. Laboratory. Prerequisites: ENGR 0510, 0520 or equivalent.

ENGN 1630. Digital Electronics Systems Design.
Fundamentals of digital logic design including: Boolean algebra, gates, truth tables, logic families, flop-flops, finite state machines, memory, and timing. More advanced topics include A-D conversion, binary arithmetic, CPU organization, programmable logic (CPLDs and FPGAs), and VHDL. Extensive laboratory requirement. Not open to first year students; permission required for sophomores.

This course introduces the main concepts and techniques for designing computer systems. Topics covered include assembly language, instruction set design, pipelining, superscalar and VLIW processor design, memory subsystem design, and I/O interfacing. Laboratory topics include programmable logic devices, hardware definition languages, and implementation of a bootable version of the pipelined MIPS processor. Laboratory emphasizes design optimizations with respect to speed and design area. Prerequisite: ENGM 1630 or passing of a quiz on basic digital logic concepts, or instructor permission.

ENGN 1650. Embedded Microprocessor Design.
This is a combined lecture and design project course offering experience in the open-ended design of an electronic product or system employing an embedded microprocessor by small-group design teams. Activity includes product specification, circuit design, programming, printed circuit layout, construction, packaging, and economic assessment. Teams are expected to produce functional products. Lecture topics will be adjusted to reflect the chosen design problems. Emphasis is placed on the criteria for choosing processors and on the interfaces and programming requirements of the system. Primarily for senior concentrators. Experience with C programming is helpful but not required. Prerequisite ENGM 1630 or permission of the instructor.

ENGN 1680. Design and Fabrication of Semiconductor Devices.
Contemporary practice in the design and fabrication of semiconductor devices. The realization of basic electronic device functions on the semiconductor platform is a central theme in a coordinated lecture and laboratory course. Topics include microcircuit photolithography; layout and design scaling rules for integrated circuits; and techniques in semiconductor and thin film processing as they apply to ULSI circuit manufacturing. Prerequisite: ENGM 1590 or permission.

ENGN 1690. Photonics and Applications.
Science and engineering principles of photonics and optoelectronics, that provide foundation to a broad range of technologies from internet to lighting, from lasers to DVD, from satellite images to computer display, from solar cells to single molecule detection. Topical content: light as waves in media, on surface, and through holes; interference and waveguiding; light generation by spontaneous emission or by stimulation; LED, Laser, Photodetector, Optical amplifier and modulator, etc. Prerequisite: ENGR 0510 or equivalent.

ENGN 1700. Jet Engines and Aerospace Propulsion.
Dynamics and thermodynamics of compressible internal flows with applications to jet engines for both power and propulsion, rocket engines and other propulsion systems. Thermodynamic analyses of engine cycles with and without afterburners. Fluid dynamics of high Mach number systems. Structural and Materials considerations for engine design. Team projects for analysis and design of novel jet engine concepts. Prerequisite: ENGM 0720 and 0810.

Steady 1D and 2D heat conduction with heat generation. Transient heat conduction, Forced convection, heat convection during external and internal flows. Natural convection. Heat Exchangers. Thermal radiation, Kirchoff's law, the perfect emitter, radiation intensity and surface emissive power, real surface radiation; view factors for black and gray surfaces. Diffusion mass transfer. Lectures and labs. Prerequisite: ENGR 0810.

ENGN 1720. Design of Thermal Engines.
Students will work in groups on semester long engine design projects. Projects are to incorporate: formulation of design problem statements and specifications, consideration of alternative solutions, detailed design descriptions, development and use of design methodology, development of student creativity and use of acquired engineering skills, while including realistic constraints such as economic factors, safety, reliability, ethics, social impact, etc. Lectures, laboratory, and computer-aided design projects with oral and written reports. Lectures to cover: thermodynamics, heat transfer, fluid dynamics, kinematics/ dynamics, lubrication, combustion, fuels, and pollution of thermal engines. Prerequisites: ENGR 0720 and 0810.

ENGN 1740. Computer Aided Visualization and Design.
Provides instruction in the application of computers to the design methods in engineering. Hands-on experience in use of CAD/CAE software packages for geometric modeling, visualization, and drafting. Emphasis on applications to solids and structural problems. Independent design projects are carried out. Course counts as an ABET upper-level design course for mechanical and civil engineering concentrators. Prerequisite: ENGM 0310.

ENGN 1760. Design of Space Systems.
Working in design groups, students conceive a space mission and design all of the elements necessary for its execution including launch and orbit trajectory, space and ground systems, including analysis of structure, thermal, radio link, power and mass budgets, altitude control and dynamics. Each group builds a hardware project to demonstrate a core element of their mission design. Prerequisites: Engineering core curriculum or equivalent.
Numerical analysis techniques related to solving systems of linear algebraic equations, matrix eigenvalue problems, nonlinear equations, polynomial approximation and interpolation, numerical integration and differentiation, ordinary and partial differential equations. Programming in Matlab. Pre-req: CSCI 0040 or equivalent, knowledge in Matlab, ENGN 0040, APMA 0330 + 0340 or equivalent.

Aims to give mechanical engineering students a deeper and more thorough grounding in principles and basic applications. Topics include review of the conservation principles; inviscid flow; viscous flow, including aerodynamics lubrication theory; laminar boundary layers; wave motions and wave drag. Lectures, assignments, computational projects, and laboratory. Prerequisites: ENGN 0720 and 0810.

ENGN 1900. Construction of the Entrepreneurial Enterprise 
Framework: Frm Decision Making to Opportunity Creation. 
Students examine and engage with the decision making process in the modern enterprise, including investment, negotiation, and opportunity creation. This is done in an entrepreneurial context. Teams research and present orally and in writing on major class themes. Case studies, Socratic discussion models, readings, guest lectures, rhetoric and writing fellows support for videotaped oral and written business plans are utilized. Enrollment limited to 35.

ENGN 1930A. 3D Photography. 
By 3D photography we refer to a number of processes that use cameras and lights to capture the shape and appearance of 3D objects. In this course we will first study and build basic 3D techniques and systems, and then cover several closely related methods based on signal processing techniques, constrained energy minimization, and the solution of diffusion differential equations to smooth, denoise, edit, compress, transmit, simplify, and optimize very large polygonal models. Applications include computer animation, game development, electronic commerce, heritage preservation, reverse engineering, and virtual reality.

ENGN 1930B. Biomedical Optics. 
Biomedical optics is a rapidly growing field with applications in medicine, biology, neuroscience, genetics, and environmental science. The course covers both theoretical background and technical approaches underlying biomedical imaging technologies. The theoretical background focuses on how photons transport in biological tissues, including the radiative transport equation and photon diffusion theory. The course offers not only mathematical fundamentals of the theories but also opportunities of learning the theories through numerical simulations on MATLAB. The technical approaches include those for various imaging technologies ranging from conventional microscopy to optical coherence tomography. Prerequisites: Undergraduate level ENGN 0510 Minimum Grade of S

ENGN 1930D. Large Scale Engineering Design Project. 
Provides a major design experience for civil, mechanical, and, with approval, environmental engineering students. This experience involves an open-ended design problem that requires teamwork and the integration of understanding developed in upper-level courses in the engineering concentrations. Intended for students in their senior year.

ENGN 1930F. Entrepreneurship and Good Work: Engineering Dreams. 
In this course, students examine the concepts of creation, organization, promotion, management and risk of ownership, to wit: entrepreneurship. This is done in the context of 'good work'. Using a combination of relevant case studies, readings, guest lectures and discussion, each participant builds a theory and framework to explore what defines innovative and meaningful engagement during one's working years. Enrollment limited to 24. Written permission required.

ENGN 1930G. Entrepreneurship I. 
Teams of students from Engineering, COE and other technical and non-technical disciplines form simulated high tech startup companies working on mentor-defined opportunities, from conception to commercialization. Intellectual property, marketing, definition of a product requirements document, human factors (including team building), safety and environmental concerns, and legal concerns are emphasized. Students in the COE Technology Management Track should complete ENGN 1010 prior to this course. Enrollment in the course is limited and students must fill out a formal application (though COE tech track seniors are automatically approved). The course meets TR from 2:30-3:50, and other outside meeting hours will be arranged. WRIT

ENGN 1930H. Entrepreneurship II. 
Please see ENGN 1930G for course description. Enrollment limited to 24. WRIT

ENGN 1930I. Ethics and Professionalism.
Issues of ethics and professionalism for the engineer and for members of other professions. The principal objectives are to examine the responsibility a person accepts when practicing his or her profession and to provide opportunities for students to explore the ethical aspects of their profession, become comfortable and confident discussing and using value systems, and practice effective expression of ideas in oral and written form.

ENGN 1930J. High-Performance Sensors and Multimedia. 
Design, construction, and programming of embedded systems with system-on-chip processors, and audio/visual sensors for real-time applications. Design and implementation of distributed audio/visual applications. Hands-on project oriented hardware/software course.

ENGN 1930L. Biomedical Engineering Design, Research and Modeling. 
This course introduces students to design, modeling and analysis of biological systems. The first portion of the course focuses on linear systems. Research projects in design will be analyzed. The course also introduces students to the Matlab programming language, which allows them to implement the design models discussed in class. For seniors only.

ENGN 1930M. Industrial Design. 
Brown engineering and RISD industrial design faculty lead product development teams through a design cycle. Engineers explore industrial design, designers gain some insight into engineering, and both groups can apply their skills to challenging problems. Frequent presentations, field trips, critiques, and labs. Preference given to seniors. Prerequisites: completion of engineering core. Enrollment limited to 15 students.

ENGN 1930N. Introduction to Magnetic Resonance Imaging and Neuroimaging. 
Magnetic resonance imaging (MRI) is a powerful tool for investigating the biological structure and functional dynamics across an incredibly broad spatial and temporal scale. This course will provide an understanding of the basic physical principles of magnetic resonance; including signal generation, detection and contrast mechanisms; as well as image acquisition techniques and reconstruction methods. This course is aimed at undergraduate and graduate students from a variety of disciplines, including: Engineering, Computer Science, Applied Mathematics, Physics, Cognitive Science and Neuroscience as well as medical students and residents. Students should have a basic understanding of matrix mathematics and familiarity with the concepts of magnetism and waves.

Integrated analysis and design of MicroElectroMechanical Systems (MEMS), which are highly integrated micron-scale devices used in many applications: sensors, energy (engines), optics, bioengineering, chemical processing, etc. Provides an introduction to the science and art of design, fabrication, performance, and use of MEMS in all disciplines of engineering.
ENGN 1930P. Solid Biomechanics.
Applications of mechanics to biological systems over a range of scales, including microscopic scales of cells and cellular components, intermediate scales of tissues and muscles, and macroscopic scales of organisms, joints, locomotion, and whole organisms. Dimensional analysis and scaling; elasticity, viscoelasticity, poroelasticity applied to tissue mechanics; models for muscle contraction; mechanics of the cytoskeleton, biopolymers, cell membranes, and cell adhesion. Prerequisites: ENGN 0040 or equivalents, APMA 0330.

ENGN 1930R. Molecular and Cell Biology for Engineers.
Applications of mechanics to biological systems over a range of scales, including microscopic scales of cells and cellular components, intermediate scales of tissues and muscles, and macroscopic scales of organisms, joints, locomotion, and whole organisms. Dimensional analysis and scaling; elasticity, viscoelasticity, poroelasticity applied to tissue mechanics, models for muscle contraction; mechanics of the cytoskeleton, biopolymers, cell membranes, and cell adhesion. Prerequisites: ENGN 0040 or equivalents, APMA 0330.

ENGN 1930S. Land Use and Built Environment: An Entrepreneurial View.
Through the use of readings, group discussions, students presentations and guest lectures, students examine and challenge the analytical and structural frameworks which underlie and support public and private land and use the urban and suburban built environments. Students build an understanding and theory of how social, political, governmental and economic forces interact with society’s present and future physical space needs.

ENGN 1930T. Aircraft Design.
The process of aircraft conceptual design as practiced in industry: requirements definition to initial sizing, configuration layout, analysis, sizing, optimization, and trade-off studies. Concepts and calculation methods for aerodynamics, stability and control, propulsion, structures, weights, performance, and cost; coverage of conventional and unconventional design methods drawing from knowledge gained in engineering science courses, synthesized towards novel imaginative aircraft designs guided by participants’ interests. Prerequisite: the level of senior in engineering studies.

ENGN 1930U. Renewable Energy Technologies.
Analysis of the thermodynamics, physics, engineering and policy issues associated with renewable and non-renewable energy technologies with applications appropriate to both the developed and the developing world. Specific technologies that will be studied include Fossil fuels, Wind, Solar, Hydro, Biomass and Nuclear. Energy consumption technologies, such as power generation and transportation will also be studied. Some technical background, such as ENGN 0030, 0040 and 0720, is strongly recommended.

ENGN 1930V. The Art and Science of Light.
This studio course explores artificial light from both artistic and scientific perspectives. Laboratory demonstrations on optics and new light emitting materials will be counterbalanced by presentations on the historical and contemporary integration of these materials within the fields of architecture, industrial design, and sculpture. Students will be asked to reimagine the light bulb by developing artistic design alternatives to conventional lighting. Extensive outside work is expected. Written permission required.

Taught via Socratic method, this course will use case studies that explore essential elements of the entrepreneurial process: Defining Entrepreneurship; Recognizing Opportunities and Developing Business Models; Assembling The Team; Raising Financial Resources; Managing Uncertainty; Managing the Growing Venture; and Realizing Value. Guests will include successful entrepreneurs and expert practitioners who will highlight practical approaches to entrepreneurial success.

Please note that beginning with the very first class, students MUST read the session’s case study and supplemental readings, to be ready for participation in discussions. For the first day’s assignment, please contact Professor Warshay directly at Daniel_Warshay@brown.edu. Enrollment limited to 35. WRIT

ENGN 1930Y. Social Enterprises.
This course will combine reading, discussion, field work, and guest talks by practitioners and theorists to delve into the workings of a variety of social enterprise models. Prerequisites: Social Entrepreneurship (ENGN1930Q) or comparable experience and an existing relationship with a social enterprise.

ENGN 1930Z. Robot Design.

ENGN 1931A. Photovoltaics Engineering.
This seminar course will provide an overview of the operation, design, characterization, and manufacturing of photovoltaic solar cells and panels. The course will span a range from the fundamental physics of solar cell operation to highly applied, industrially relevant engineering topics. Recommended prerequisites: Good knowledge of basic physics and electromagnetism concepts; proficiency in ENGN 0510 or PHYS 0470; This course is designed for undergraduate and graduate students in Physics, Chemistry and Engineering interested in the field of alternative energy with a focus in photovoltaics. Enrollment limited to 20.

ENGN 1931B. Solid State and Semiconductor Electronics.
This course will introduce the physical concepts and behavior of solid state materials, including semiconductors, insulators, and metals. The emphasis of the course is on fundamental physics and applications to current engineering problems. Relevant topics include: solid state physics, energy bands, carrier transport, optical properties, device physics, and materials science. Students will be expected to read assigned texts and to perform computer simulations. Prerequisite: ENGN 0310, 1740. Enrollment limited to 20.

ENGN 1931E. Writing Science.
This studio focuses on communicating scientific and technical information to a lay audience in ways that engage and inform. The focus is on writing about new findings, scientific disputes and policy debates, along with producing profiles, feature articles, op-eds and blog posts. Students who complete this seminar will learn how to turn a collection of facts into a story, ways of explaining complex topics in simple terms, and how to differentiate between crucial technical details and clutter. Proficiency in English is assumed. Permission from the instructor is required. Preference will be given to seniors and graduate students. Enrollment limited to 15. WRIT
ENGN 1931F. Introduction to Power Engineering.
An introduction to the generation, distribution, and use of electrical energy in three-phase balanced systems. Topics include: properties of magnetic fields and materials; magnetic reluctance circuits; phasors and the properties of balanced three-phase voltage and current lines; generators; transformers and transmission lines; induction motors; brushless DC motors; power semiconductor switches; and the properties of solar photovoltaic sources and microinverters. Laboratory project. Prerequisites: ENGN 0510 and 0520.

Describing robotic systems (i.e., systems that require movement or motion) relies on both mechanical and electrical engineering. These systems include everything from mobile robots used for rescue operation to electrically powered moving sculptures. Through a series of projects, students combine their knowledge of electronic circuit design, sensors, actuators, motors, microcontrollers, and programming to build interactive art and robotic vehicles. Projects culminate in the design of a robotic system that groups enter into a class-wide competition. Some programming experience is helpful but not required. Prerequisite ENGN 0040 and ENGN0520.

ENGN 1931J. Social Impact of Emerging Technologies – The Role of Engineers.
The role of engineering sciences in an ever-changing technology-driven world. Students will develop basic working knowledge of selected contemporary technologies that help identify and forecast future prospects while discerning future disruptions. Emphasis on the importance of ethical and social responsibilities that technologists must shoulder in answering societal challenges and contributing to policy making and corporate leadership. How do we create beneficial technologies yet anticipate their potential social costs, such as workforce automation or overdependence on the Internet? Will we give up brains as our last private space? Who will control the data / technology ecosystem that influences our decisions?

The course will explore where the majority of “useful” energy originates today. Main fossil energy sources (e.g., coal, crude oil, gas, shale oil, tar sands) and their chemical characteristics will be considered. Environmental aspects of fuel production (mining, drilling), fuel conversion technologies, both for delivering heat and power, and why there are limitations on the conversion to the latter. Calculations of “carbon footprint” will be illustrated. Common examples of emissions control technologies, including carbon capture and sequestration, will be presented. Policy and social implications of these energy issues will be discussed. Prerequisites: CHEM 0330 and ENGN 0720.

ENGN 1931X. Instrumentation for Research: A Biomaterials/Materials Project Laboratory.
This course is designed to prepare students for research in biomaterials/ materials science by focusing on a project that yields a testable product/device. Advanced equipment/instrumentation will be used to fabricate and evaluate materials required for each project and to test the performance of the product/device that uses these materials. Example projects that illustrate the course plan include building a microfluidic-based medical sensor or fabricating a polymer-based battery. These examples require materials synthesis (polymerization or hydrothermal), materials characterization (SEM, X-ray diffraction), device fabrication (microfabrication, assembly under inert/sterile atmosphere), and product testing (biological assays, electrochemical methods). Student interests will determine other projects. Completion of Laboratory Safety and Hazardous Waste Training offered by EHS.

ENGN 1931Y. Control Systems Engineering.
Control Systems is an Engineering discipline that applies control theory to analyze and design systems with desired response behavior. The objective of this course is to introduce the student to the topic of feedback control design with applications on many diverse systems. The course will cover the fundamentals of classical control theory such as modeling, simulation, stability, controller design and digital implementation. It will also address basic aspects of state-space and modern control theory. The course is open to all Engineering majors and will make use of existing simulation packages such as Matlab/Simulink.

ENGN 1931Z. Interfaces, Information & Automation.
Laboratory-intensive course to help students develop and implement simple computer programs in Python to control, query, and integrate discrete (traditionally isolated) systems, ranging from automobiles to websites. Assignments will provide hands-on practice using programmatic interfaces to control both physical and virtual systems. Topics include physical interfaces and communication protocols (e.g., GPIB, RS-232, USB) as well as accessing online resources (e.g., SOAP and RESTful web services) and building hybrid systems for data acquisition and analysis. Formal programming experience is not required, but familiarity with either Matlab or Python (at the level of CSC10040 or higher) would be very helpful.

Engineers persistently aim to create new structures, machines, and devices to leverage physical principles to man’s advantage. Stemming from recent concerns over the environmental impact of technology and increased market competition, there is heightened focus on increasing efficiency. Therefore, future engineers will have to come up with designs that are not only functional but also optimal. The course will present the mathematical theory of engineering optimization. Review of optimization theory and techniques from calculus. Calculus of variations. Necessary and sufficient conditions for optimality. Bio-inspired engineering: optimal designs found in nature. Projects involving design and fabrication of optimal engineering systems will be encouraged.

Independent Study in Engineering. Instructor permission required after submitting online proposal (http://brown.edu/academics/engineering/content/independent-study). Section numbers vary depending on concentration. Please check Banner for the correct section number and CRN to use when registering for this course.

Independent Study in Engineering. Instructor permission required after submitting online proposal (http://brown.edu/academics/engineering/content/independent-study). Section numbers vary depending on concentration. Please check Banner for the correct section number and CRN to use when registering for this course.

Interested students must register for PHYS 2020.

An introduction to methods of mathematical analysis in physical science and engineering. The first semester course includes linear algebra and tensor analysis; analytic functions of a complex variable; integration in the complex plane; potential theory. The second semester course includes probability theory; eigenvalue problems; calculus of variations and extremum principles; wave propagation; other partial differential equations of evolution.

ENGN 2110. Business Engineering Fundamentals I.
The course examines core concepts in distinct areas through three modules: (1) intellectual property and business law, (2) technical marketing and (3) finance. All aspects of intellectual property will be treated, models on how to analyze markets will be discussed, culminating in a finance module which utilizes accounting fundamentals and models to perform financial analysis.

ENGN 2120. Business Engineering Fundamentals II.
The course examines core concepts in distinct areas through three modules: (1) organizations, leadership, and human capital, (2) implementing radical technology change, and (3) engineering ethics. Organization, leadership and human capital focuses on the attributes of effective leadership and the tactical operation of start-up companies, implementing radical technological change centers on disruptive technologies and their adaptation in the marketplace, and ethics treats the issues that arise in small start-up organizations with an emphasis on the interface of ethics and environmental, health and safety issues.

The primary objective of the course is to train students on tools, skills, and behaviors required for effective management of complex engineering, research, and business development projects. Although the course will be framed in the context of early-stage technology companies, the skills and principles will be applicable to businesses of any size and maturity. The course is organized around three actionable themes: project management, team management, and decision making.

ENGN 2130. Innovation and Technology Management I.  

Examines core concepts through four modules: (1) Industry Dynamics of Technological Innovation, (2) Formulating Technological Innovation Strategy, (3) Implementing Technological Innovation Strategy, and (4) Early Commercialization and Deployment. Industry Dynamics of Innovation will explore some of the drivers of technology innovation. Implementing Technological Innovation Strategy explores execution issues concerning the flow of technology and innovation from concept to physical product or service. Early Commercialization and Deployment will focus on more salient strategic and operational issues related to commercial readiness and roll-out of a technology-based product or service. Emphasis will be on technology-oriented entrepreneurial enterprises, but exploration will also include larger more established organizations.

ENGN 2140. Innovation and Technology Management II.  

Explores concepts relevant to the management of operations in industrial enterprises with an emphasis on technology-oriented firms. Topics fall into three basic modules: (1) Capacity Planning, (2) Industrial Engineering, and (3) Materials & Resource Engineering. Capacity Planning will focus on capacity considerations in manufacturing and service organizations. Industrial Engineering will examine optimizing plant and process layouts. Materials & Resource Engineering will cover various aspects of planning and scheduling material, labor, and work center capacity. Inventory management techniques will also be introduced and examined as will concepts such as materials requirements planning and aggregate planning.

ENGN 2150. Technology Entrepreneurship and Commercialization I.  

ENGN 2150 and the spring ENGN 2160 form a sequence that develops the skills for technology-based entrepreneurship. It teaches creation of viable high-growth-potential new ventures from emerging science and technology. It is from emerging S&T that a high percentage of new jobs are created, both by existing large companies and through the formation of new companies. You will examine S&T for new opportunities, create novel product or service concepts from these sources and determine whether these concepts truly represent new business opportunities. Pedagogy is a combination of lectures and "experiential learning", with work undertaken as a two-semester project. Enrollment limited to 30 graduate students in the IMEE program.

ENGN 2160. Technology Entrepreneurship and Commercialization II.  

ENGN 2160 and the prerequisite fall course 2150 form a course sequence that develops the knowledge of, and embeds the skills for, technology-based entrepreneurship. While 2150 has helped you to examine science and technology sources, and create a portfolio of opportunities from these, this course continues by developing selected opportunities into a compelling business case for the creation of a high growth potential new venture. Once again, learning is by a combination of lectures and "experiential learning", with work undertaken as a guided two-semester project. Prerequisite: ENGN 2150. Enrollment limited to 30 graduate students in the IMEE program.

ENGN 2180. Globalization Immersion Experience and Entrepreneurship Laboratory.  

In this course, students will gain a better understanding of the political, social and cultural dynamics that influence entrepreneurial enterprises in different world regions. Meetings will be arranged with high technology companies and their venture arms, academic incubators, investment professionals, legal professionals, government officials, entrepreneurs, and other university faculty and students. The semester becomes a global entrepreneurship and innovation "laboratory" where students experience and take part in guest lectures from experts working in other countries. Classroom discussions, student presentations, papers and readings will be used to focus and further understand the globalization dynamic and its relationship to entrepreneurship. Prerequisite: ENGN 2110. Enrollment limited to graduate students in the PRIME program.

ENGN 2210. Continuum Mechanics.  

ENGN 2240. Linear Elasticity.  

ENGN 2270. Advanced Elasticity.  

ENGN 2280. Topics in Continuum Mechanics.  

Devoted to one or more advanced topics in continuum mechanics not covered in detail by the regular courses. Examples are: nonlinear viscoelastic constitutive equations, strain gradient and micropolar theories of elasticity, coupled mechanical and thermal or electromagnetic phenomena, and continuum thermodynamics.

ENGN 2290. Plasticity.  

Theory of the inelastic behavior of materials with negligible time effects. Experimental background for metals and fundamental postulates for plastic stress-strain relations. Variational principles for incremental elastic-plastic problems, uniqueness. Upper and lower bound theorems of limit analysis and shakedown. Slip line theory. Representative problems in structural analysis, metal forming, indentation, strain and stress concentrations at notches, and ductile failure.

ENGN 2320. Experimental Mechanics.  

The design and evaluation of experiments in solid mechanics. Considers methods for experimental stress analysis and for the mechanical testing of materials. Topics covered include photoelasticity, creep and relaxation tests, high-speed testing, stress wave propagation, fatigue, and fracture. Techniques, instrumentation, and recording systems for the static and dynamic measurement of mechanical parameters such as forces, displacements, velocities, accelerations, and strains.

ENGN 2370A. Thin Films. 
No description available.

ENGN 2370B. Topics in Solid and Structural Mechanics. 
Devoted to one or more advanced topics in solid and structural mechanics not covered in detail by the regular courses, such as: numerical methods in sold mechanics, theory of optimal design, shell structures and instability, or other topics of interest to the staff or visitors.

ENGN 2380. Fracture Mechanics. 

Theory of electron optics and principles of transmission electron microscopy, including dynamical theory of electron diffraction and image contrast. Applications to materials analysis including defect, boundary, and phase analysis. Analytical electron microscopy including convergent beam diffraction, energy dispersive x-ray analysis, and energy loss spectroscopy. Intensive laboratory exercises.

ENGN 2410. Thermodynamics of Materials. 

ENGN 2420. Kinetic Processes and Mechanisms in Materials Science. 
Continuum and atomistic descriptions of diffusion in solids. Reactions involving surfaces and interfaces, including evaporation, adsorption, grain growth, and coarsening. Phase transformation kinetics, including nucleation, growth, solidification, spinodal decomposition, and martensitic transformations. Analysis of systems with multiple kinetic mechanisms (typical examples include oxidation, crystal growth, and sintering). Prerequisite: background in basic thermodynamics. Recommended: ENGN 1410 or 2410 or equivalent.

ENGN 2430. Deformation Behavior of Materials. 
Linear elasticity as applied to isotropic and anisotropic materials; yield criteria including Von Mises, Tresca, Mohr-Coulomb, and Hill. Plastic deformation and slip. Dislocation theory. Mechanisms of hardening. Microstructural models of ductile, intergranular, and cleavage fracture. Toughening mechanisms. Creep. Fatigue. Prerequisites: ENGN 0410 and ENGN 1440 or equivalent.

ENGN 2440. Strength of Solids. 
Mechanical behavior of solids as interpreted through atomistic mechanisms. Theory and characteristics of dislocations in continuous and crystalline media. Intrinsic and extrinsic stacking faults, extended dislocations, point defects, nodes and networks, disclinations, crystal boundaries. Applications of dislocation theory to single and polycrystal plasticity, work-hardening, stress-corrosion, creep, fatigue, hardening mechanisms, etc.

ENGN 2490A. Crystal Structures and Crystallography. 
The study and experimental analysis of solid structures from crystallography and crystal chemistry viewpoints. Electronic structure of the atom as related to core level chemical analysis techniques in material science, atomic arrangements in solids, form crystallography, crystal symmetry and symmetry of finite objects, and experimental techniques in x-ray diffraction.

ENGN 2490B. To Be Determined.

ENGN 2500. Medical Image Analysis. 
Explosive growth in medical image analysis has enabled noninvasive methods to diagnose and treat diseases. The course will first discuss the fundamentals of formation of medical images such as CT, MRI, ultrasound, and nuclear imaging; then consider clinical constraints and discuss methods in image guided therapy/surgery, techniques to detect, delineate, measure, and visualize medical organs and structures.

ENGN 2501. Digital Geometry Processing. 
Three-dimensional geometric models are fundamental for applications in computer vision, computer graphics, medical imaging, computer aided design, visualization, multimedia, and many other related fields. This course includes the study of basic data structures and algorithms for representing, creating, manipulating, animating, editing, and analyzing digital geometry models, such as point clouds and polygon meshes, as well as state-of-the-art material from the current scientific literature. This is a project oriented course with several programming assignments and a final project. Students are expected to have successfully completed an introductory computer graphics/vision course or have an equivalent background. Instructor permission required. Open to seniors and graduate students.

ENGN 2502. 3D Photography. 
In 3D Photography, cameras and lights are used to capture the shape and appearance of 3D objects represented as graphical models for applications such as computer animation, game development, electronic commerce, heritage preservation, reverse engineering, and virtual reality. This course covers 3D capture techniques and systems, surface representations and data structures, as well as methods to smooth, denoise, edit, compress, transmit, simplify, and optimize very large polygonal models. Instructor permission required.

This course covers fundamental topics in pattern recognition and machine learning. We will consider applications in computer vision, signal processing, speech recognition and information retrieval. Topics include: decision theory, parametric and non-parametric learning, dimensionality reduction, graphical models, exact and approximate inference, semi-supervised learning, generalization bounds and support vector machines. Prerequisites: basic probability, linear algebra, calculus and some programming experience.

An introduction to the basics of linear, shift invariant systems and signals. Quantization and sampling issues are introduced. Discrete time and DFT properties, fast DFT algorithms, and spectral analysis are discussed. IIR and FIR digital filter design is a focus; stochastic and deterministic signals are introduced. MATLAB exercises are a significant part of the course.

ENGN 2540. Speech Processing. 
The basics for speech production and hearing are introduced. PDEs and simplified vocal-tract models are derived. LPC, DFT filterbank and time varying signal processing for speech recognition analysis are discussed in mathematical detail. Dynamic programming, vector quantization, hidden Markov modeling, and neural-network pattern recognition for speech are introduced. Offered every other year.

ENGN 2560. Computer Vision. 
An interdisciplinary exploration of the fundamentals of engineering computer vision systems (e.g., medical imaging, satellite photo interpretation, industrial inspection, robotics, etc.). Classical machine vision paradigms in relation to perceptual theories, physiology of the visual system, and mathematical frameworks. Selections from Gestalt psychology, Gibsonian approach primate visual pathways, edge-detection, segmentation, orientation-selectivity, relaxation-labeling, shading, texture, stereo, shape, object-recognition.
ENGN 2570. Applied Stochastic Processes
The study of stochastic processes and a number of applications central to electrical engineering. Analysis of continuous and discrete time Gaussian and second order stochastic processes. Stochastic calculus. Innovations and spectral representations. Markov random fields. Applications to Kalman filtering, the detection of signals in the presence of noise, and two-dimensional image processing. MATLAB projects. Prerequisite: an undergraduate level course in probability or statistics.

ENGN 2600. Electronic Processes in Semiconductors
Electronic processes primarily in semiconductors with tetrahedral bonding (Si, Ge, GaAs compounds). Topics include phonon spectra, band structure, impurity states, electron and hole distributions, optical properties, electron plasma, scattering processes, excess and hot carriers, semiconductor-metal transitions, one- and two-dimensional electron gas, and amorphous semiconductors. Prerequisite: ENGN 1590 and Intro Quantum Mechanics or equivalent.

ENGN 2610. Physics of Solid State Devices
Current and proposed semiconductor devices: bipolar transistors (silicon and heterojunction); field effect transistors (MOSFETs, heterostructure, and submicron FETs); hot-electron and quantum-effect devices; and photonic devices (LEDs, semiconductor lasers, and photodetectors). Prerequisites: ENGN 1590 or equivalent introductory device course; some quantum mechanics helpful but not required.

ENGN 2620. Solid State Quantum and Optoelectronics
Incorporates the study of interaction of radiation with matter emphasizing lasers, nonlinear optics, and semiconductor quantum electronics. Q-switching and mode-locking, electro- and acousto-optic interactions, harmonic generation and parametric processes, self-focusing and phase modulation, stimulated Raman and Brillouin scattering, ultrashort pulse generation, nonlinear processes of conduction electrons in semiconductors, bulk and surface polaritons. Prerequisite: ENGN 2600 or equivalent.

ENGN 2630. Electro-Optical Properties of Materials and Biomolecules
Fundamental ideas and principles relevant to the understanding of the electrical and optical properties of materials and bio-molecules are emphasized. The mathematics is deliberately kept to a minimum. Topics include metals, semiconductors dielectric materials, magnetic materials, superconductors, carbon nanotubes, DNA, photosynthesis and redox proteins. Prerequisites: ENGN 0510 and PHYS 0470.

ENGN 2640. Classical Theoretical Physics II (PHYS 2040)
Interested students must register for PHYS 2040.

ENGN 2660. Physics and Technology of Semiconductor Heterostructures
Covers, largely from an experimental point of view, topics of current interest in semiconductor heterostructure physics and technology; magnetotransport in two-dimensional electron gas; integer and fractional quantum Hall effects; resonant tunneling and superlattice transport; optical and transport properties of quantum wires and dots; heterostructure-based devices; other topics of student interest. Prerequisites: PHYS 1410 or equivalent quantum mechanics and ENGN 1590 or introductory device course helpful but not required.

ENGN 2730. Advanced Thermodynamics I
Fundamental principles of macroscopic equilibrium; thermodynamic stability; Gibbs relations and chemical thermodynamics; applications to various systems, including fluids, solids, and magnetic and dielectric materials. Fundamental principles of macroscopic nonequilibrium thermodynamics (irreversible processes). Entropy production; Curie’s principle; Onsager-Casimir reciprocal relations; applications to transport and relaxation phenomena in continuous systems.

ENGN 2740. Advanced Thermodynamics II
Introduction to the statistical mechanics of equilibrium phenomena for classical and quantum-mechanical systems. Ensemble theory; fluctuations; statistical interpretation of the laws of thermodynamics; applications to ideal gases, chemical equilibrium, simple crystals, magnetic and dielectric materials, radiation, and condensation phenomena.

ENGN 2750. Chemical Kinetics and Reactor Engineering
This course focuses on the fundamentals of chemical kinetics with engineering applications. Topics include: quantum chemistry, statistical thermodynamics, and transition state theory; tight versus loose transition states; the kinetics of gases, liquids, and surfaces; adsorption, desorption, surface diffusion; enzyme kinetics and biological processes; formation, solution, and interpretation of elementary mechanisms; global versus local sensitivity analysis; uncertainty quantification; and the coupling between fluid dynamics and chemical reactions.

ENGN 2760. Heat and Mass Transfer

ENGN 2770. Atomistic Reaction Engineering
Covers the principles of operation of heterogeneous catalysis and advanced reaction engineering with an emphasis on catalysis theory. Includes electronic structure calculations, linear scaling relations, free energy relations, surface reactivity, rate theory, and electrocatalytic concepts. Applications of study in this course will focus on catalysts for energy conversion. Students should have a background in chemical reactions and thermodynamics.

ENGN 2810. Fluid Mechanics I
Formulation of the basic conservation laws for a viscous, heat conducting, compressible fluid. Molecular basis for thermodynamic and transport properties. Kinematics of vorticity and its transport and diffusion. Introduction to potential flow theory. Viscous flow theory; the application of dimensional analysis and scaling to obtain low and high Reynolds number limits.

ENGN 2820. Fluid Mechanics II
Introduction to concepts basic to current fluid mechanics research: hydrodynamic stability, the concept of average fluid mechanics, introduction to turbulence and to multiphase flow, wave motion, and topics in inviscid and compressible flow.

ENGN 2880A. Chemical Reaction Engineering
Elements of chemical rate processes; steady-state and transient behavior of continuous-flow chemical reactors; uniqueness, multiplicity, and stability in chemical reactor systems and individual catalyst particles; heterogeneous chemical reactor analysis focusing packed beds (continuum and discrete models) and fluidized beds (deterministic and stochastic models).

ENGN 2910A. Advanced Computer Architecture
This classes focuses on advanced computer architecture concepts, including super-scalar processor design, out-of-order execution, branch prediction, multi-core processors, memory hierarchy consistency, GPU architectures, and architecture of large-scale systems such as data centers and supercomputers. Class work expected to include HWs, Labs, and projects. Prerequisite: ENGN 1640 or permission of instructor.

ENGN 2910B. Advanced Process in Materials: Thin Film Processing and Characterization
No description available.

ENGN 2910C. Advanced Processing of Materials
This course will present a detailed consideration of processing of specific types of materials. In this particular offering, electronic materials will be the focus of the discussion. Detailed state of the art methods of processing will be described and the relationship between processing and the resulting properties will be discussed.

ENGN 2910D. Engineering and Design I
No description available.
ENGN 2910E. Complex Fluids.
Complex fluids comprise a large class of "soft" microstructured materials which are encountered extensively in engineering applications and biological systems. This course will explore the interrelation between the microscale physics, microstructure and macroscopic properties of complex fluids. Topics include surfactants and self-assembly, intermolecular forces and stability of colloidal suspensions, polymer solutions, ordered phases and liquid crystals, electokinetic phenomena, rheology.

ENGN 2910F. Nano and Micro Mechanics of Solid Interfaces.
This course covers the topics: Mechanics of intermolecular forces and surface forces; Adhesion and friction of hydrophobic and hydrophilic surface complexes; Mechanics aspect of chemical etching and chemical reactions on solid surfaces; Interface energetics and kinetics with anisotropic elasticity and diffusion equations; Micromechanics of grain boundaries and interface fracture Nano and micro mechanics of single asperity and rough-surface contact friction.

ENGN 2910G. Topics in Translational Research and Technologies.
To improve human health, engineering and scientific discoveries must be explored in the context of application and translated into human/societal value. Translational research is creating a fundamental change in the way basic science and engineering research has operated for decades, breaking down the literal paths that separate basic scientists/engineers and clinical researchers. Such discoveries typically begin at "the bench" with basic research--and in the case of medicine--then progress to the clinical level, or the patient's "bedside." This seminar course will utilize case studies to demonstrate to students how the translational research unfolds. Lectures will be delivered by clinicians, medical researchers, engineers, and entrepreneurs, with case studies focused on topics ranging from value creation, IRB, HIPAA, FDA approval, etc.

ENGN 2910H. Flat Panel Display.
No description available.

ENGN 2910I. Mechanics of Entropic Forces in Biological Adhesion.
Course will cover fundamental concepts of entropic force and its significance in mechanical systems involving "soft matter". A prominent example is cell adhesion which plays a central role in cell migration, spreading, differentiation and growth. For such problems, the importance of mechanics and mechanical forces has been widely recognized and are currently under intensive research. This course is also aimed to stimulate live discussions on potential research topics and opportunities at the interface between solid mechanics and biological mechanics, with emphasis on cell-substrate, cell-cell and cell-particle interaction. Fundamental concepts to be discussed include Brownian motion, fluctuation, diffusion, dissipation, ligand-receptor bonds, single molecule mechanics, stochastic dynamics of binding/rebinding, elasticity, stress fibers, cytoskeleton, focal adhesion and endocytosis.

ENGN 2910J. Mechanics and Surface Science of Nanostructures.

Course is designed for students with a strong background that want to learn more about mathematical and mechanical descriptions of the cell and its functions. It will include an overview of cell biology emphasizing locomotion, mitosis (cell division), intracellular transport, cellular mechanotransduction, and biological material properties. The course will draw examples from recent theoretical and experimental research investigations, and teach quantitative tools commonly used by engineers in the field.

ENGN 2910L. Chemical and Transport Processes in the Environment.
This course will cover fundamental properties and processes that are important for the fate and transport of chemicals in the environment. Topics will include acid/base speciation, complexation, sorption, phase-partitioning, and solution chemistry. Emphasis will be placed on natural and engineered environmental systems, including a range of environmentally relevant media (e.g. water, air, soils/sediments, plants, organisms). Conceptual understanding of chemical structure and its role in environmental transport will be highlighted, while quantitative approaches will be used to solve problems.

This course is relevant for graduate students interested in environmental pollution chemistry. Undergraduates need permission of the instructor to register.

ENGN 2910M. Biosensors and Applied Microfluidics.
This course will acquaint students with two modules: 1) new approaches to detection and quantification of biological molecules for diverse purposes ranging from medical diagnostics to food safety to defense, 2) processes at the microscale which can be translated into applications. The topics will include sensing platforms, devices, instrumentation, biomolecular engineering of probe molecules, quantitative evaluation, separations, sample stacking, DNA/protein sizing and diagnostic devices for use in developing countries. Lectures, assignments, a group design project and a laboratory will acquaint students with the state-of-the-art in biosensors and applied microfluidics. The course is relevant to physicists, chemists, biologists and engineers.

ENGN 2910N. Molecular and Cellular Biomechanics.
Mechanics and statistical mechanics applied to biological systems. Topics will include semiflexible polymers (DNA, microtubules, actin, flagella), membranes, and molecular motors. We will cover fundamentals including Brownian motion, random walks, diffusion, the fluctuation-dissipation theorem, and electrostatics of ions in solutions.

ENGN 2910O. Atomic Simulation in Mechanics and Physics.
Random numbers in molecular simulations, Monte Carlo methods applied to equilibrium systems, Kinetic Monte Carlo methods, Molecular dynamics with simple potentials - equilibrium properties in various ensembles (ENV,NVT,NPT,NoT) and non-equilibrium properties. Simulations with three-body potentials and EAM potentials. Molecular statics. Introduction to quantum mechanical methods, Application to the above methods to defect interactions in solids, structure of surfaces, crystal growth and structure of nanostructures.

ENGN 2910P. Nano-system Design.
The goal of this course is to provide a broad understanding of the many fields that are involved in electronic nanotechnology. The material will focus on considering how new basic devices intended to replace silicon-based transistors, such as single-molecule organic switches and nanotube electron conduits, will impact VLSI, computer architecture, and how we may design systems to take advantage of the opportunities they offer. Class will include a mix of lectures and discussion on assigned reading of recent publications. Students will be responsible for leading and participating in these discussions. A course project will also be required. Prerequisites: ENGN 1640 and 1600 are helpful, but not required.

ENGN 2910Q. Chemically Reacting Flow.
This course focuses on problems in chemical engineering that involve both transport and chemical reaction. The emphasis will be on numerical methods for practical problems. The students will learn to use the open-source code Cantera. Examples will draw from combustion chemistry, porous media, and electrochemistry.

ENGN 2910S. Cancer Nanotechnology.
This course will integrate engineering and biomedical approaches to diagnosing and treating cancer, particularly using nanotechnology and BioMEMS. Topics will include the extracellular matrix and 3D cell culture, cancer cell invasion in microfluidic devices, heterotypic interactions, cancer stem cells and the epithelial-mesenchymal transition, angiogenesis and drug targeting, circulating tumor cells and biomarker detection, as well as molecular imaging and theranostics. Recommended coursework includes ENGN 1110 (Transport and Biotransport), ENGN 1210 (Biomechanics) and ENGN 1490 (Biomaterials) or equivalents.
ENGN 2910T. Physics of Materials.
No description available.

ENGN 2910U. Quantum, Statistical and Continuum Mechanics.
No description available.

No description available.

ENGN 2910W. Synthesis of VLSI Systems.
No description available.

ENGN 2910X. Video Processing.
This special topic course will address the rapidly evolving technologies involved in representing and processing video data, including compression, tracking and 3-D modeling. The course will involve projects to implement live and file-based video processing algorithms as well as periodic quizzes. Projects will be carried out primarily in C++.

ENGN 2910Z. Small Wonders: The Science, Technology, and Human Health Impacts of Nanomaterials.
Survey course focusing on nanomaterials as enabling components in emerging nanotechnologies. Covers scaling laws for physicochemical properties, synthesis routes, manipulation and characterization tools, and example applications in sensors, composites, advanced energy devices, and nanomedicine. Impacts of nanomaterials on environment and health, including the interactions between nanoscale structures and biological molecules, cells, and whole organisms. Undergraduate enrollment by permission.

ENGN 2911A. Nanoelectronics.
Review and analysis of novel and exotic electronic devices, and proposals for extending scaling into the nanometer regime. Contemporary research and development in areas such as nonclassical CMOS; single-electron and nanocrystal memories; 1D nanotube and nanowire transistors, qubits, quantum dots, spin transistors, molecular electronics; and the realization of such elements in arrays and biologically inspired networks.

ENGN 2911B. Electrical and Optical Properties of Materials and Biomolecules.
Fundamental ideas and basic principles relevant to the understanding of the electrical and optical properties of solid-state materials and biomolecules are emphasized. Topics, including metals, semiconductors, dielectric materials, magnetic materials, superconductors, carbon nanotubes, DNA, and redox proteins, are selected in order to explain the realization of such elements in arrays and biologically inspired networks.

Testing of digital integrated circuits has historically focused on the detection and diagnosis of manufacturing defects. However, in the past few years, testing for security has become an important hot topic. This course will cover testing fundamentals along with new approaches for the detection of hardware Trojans (malicious circuitry inserted into a design by an adversary). Related topics in hardware security and authentication, including physically unclonable functions, will also be discussed. Prerequisite: ENGN 1630 or equivalent or permission of instructor.

ENGN 2911D. Engineering and Design II.
No description available.

Course will cover fundamental concepts and methods in continuum, atomistic and statistical modeling of nanoscale and hierarchical materials in engineering and biology. Various systems and phenomena, including thin films, nanocrystalline materials, fracture, hierarchical tissue structures of bone and gecko, cell adhesion and endocytosis, carbon nanotubes and biomolecular assembly, are selected to stimulate discussions at the forefront of solid mechanics research.

ENGN 2911F. Topics in Emerging and Breakthrough Technologies.
No description available.

This class investigates the physical principles and algorithmic methodologies that are used in physically designing and implementing state-of-the-art digital circuits and high-performance processors. We'll also survey the main available design implementation tools in the market and examine new directions for innovative solutions.

No description available.

ENGN 2911I. Computational Electromagnetics.
This course will introduce numerical techniques for solving practical and theoretical problems in optical science. Using MatLab and Mathematica, students will develop a toolkit for physical optics and build an intuition for wave propagation (e.g., transfer matrices), Fourier optics (beam propagation methods, normal mode analysis), light emission/absorption (surface- and cavity-enhanced lifetimes) as well as general finite difference schemes (frequency and time domain). Prerequisites: ENGN 0510 or PHYS 0470; APMA 0330 or APMA 0350; MATH 0520 or MATH 0540; or equivalent courses.

ENGN 2911J. Verification, Test, Synthesis.
This course will provide an overview of algorithms and techniques in electronic design automation relating to the synthesis, verification, and test of digital integrated circuits. Some topics covered will include synthesis of two-level and multi-level circuits, logic minimization, representations of combinational and sequential circuits for design automation, ordered binary decision diagrams, equivalence checking, verification coverage, assertions, and automatic test pattern generation. Classic techniques and recent state-of-the-art research advances will both be discussed.

ENGN 2911K. Biological Impacts of Nanomaterials.
This course will emphasize advancements nanomaterials have made in several fields. In doing so, this course will cover fundamentals of nanomaterial synthesis and biological responses of nanomaterials if ingested, inhaled, or implanted. Biological concepts (immune response, cellular toxicity, etc.) will be combined with engineering concepts (manufacturing and property control) to understand the relationship between manufacturing and biological impacts of nanomaterials.

ENGN 2911L. Environmental Technologies and Human Health.
No description available.

ENGN 2911M. Reconfigurable Computing.
Driven by recent innovations in Field-Programmable Gate Arrays (FPGAs), reconfigurable computing offers unique ways to accelerate key algorithms. FPGAs offer a programmable logic fabric that provides the necessary hardware and communication assets to exploit parallelism opportunities arising in various algorithms. By mapping algorithms directly into programmable logic, FPGAs accelerators can deliver 10X-100X performance increases over generic processors for a large range of application domains. The class will describe FPGA architectures, reconfigurable systems, languages (SystemC) and design tools. The class will show a class of algorithmic techniques (e.g., dynamic programming) that are particularly attractive targets for reconfigurable computing. Mapping specific algorithms from different domains will also be described. These include computer vision, image and signal processing, network security, and bioinformatics algorithms. The class requires basic hardware and programming languages knowledge.

ENGN 2911N. Verification, Test, Synthesis.
This course will provide an overview of algorithms and techniques in electronic design automation relating to the synthesis, verification, and test of digital integrated circuits. Some topics covered will include synthesis of two-level and multi-level circuits, logic minimization, representations of combinational and sequential circuits for design automation, ordered binary decision diagrams, equivalence checking, verification coverage, assertions, and automatic test pattern generation. Classic techniques and recent state-of-the-art research advances will both be discussed.

ENGN 2911O. Principles of Nano-Optics.
The goal of this course is to help students build an intuition for light-matter interactions at the nanoscale, especially when optically active elements are located near complex surfaces. The course will begin with a review of the theoretical foundations of macroscopic electrodynamics, but will continue on to discuss specific experimental techniques for investigating microscopic behavior. Topics will include near-field optical microscopy, quantum dots and single molecule spectroscopy, surface plasmon polaritons, local density of states, and photonic crystals.
ENGN 2912A. Toxicity of Nanoparticles.
This course will emphasize advancements nanoparticles have made in several medical fields such as preventing, diagnosing, and treating various diseases. This course will integrate fundamental knowledge of toxicity into such applications. In particular, the course will cover current results in terms of nanoparticle applications and potential toxicity. Toxicity in such organs as the lungs, blood, kidneys, liver etc. will be emphasized. Biological concepts will be combined with engineering concepts to understand the relationship between manufacturing and nanoparticle toxicity.

ENGN 2912B. Scientific Programming in C++
Introduction to the C++ language with examples from topics in numerical analysis, differential equations and finite elements. As a prerequisite, some programming knowledge, e.g., MATLAB projects. The course will cover the main C++ elements: data types; pointers; references; conditional expressions; streams; templates; Standard Template Library(STL); design and debugging techniques.

ENGN 2912C. Future Directions in Computing: From Bio and Quantum to Nano and 3D
Silicon-based electronics is the foundation of computing devices. The computer industry is reaching an important milestone, where physical limits arising from using optical lithography manufacturing techniques can stop the evolution of computational power as predicted by Moore's law. In this class, we explore some of the alternatives that can be used for future computing devices. Topics covered include: quantum computing, bio-based computing, spin-based computing, nanotube-based computing, computing with light and 3D chips.

ENGN 2912D. Networks and Network-on-Chip Design
Network-on-Chip communication fabrics are a very recent approach to multi-core system-on-chip design. This class will cover state-of-the-art research in the design and test of network-on-chip communication hardware and will compare these on-chip communication networks to more traditional networks. Additional aspects of system-of-chip design and test will also be explored. Prerequisites: ENGN 1630 and ENGN 1640 or equivalent experience in digital design.

ENGN 2912E. Low Power VLSI System Design
This course deals with the design of digital systems for low power dissipation. Issues that will be addressed include CMOS power dissipation, analysis and design tools used for lower power digital circuits, design methodologies for low power CMOS circuits, low power architecture designs, and a discussion on future challenges in low power digital design. Prerequisites: familiarity with basic MOSFET structure and computer architecture principles; some circuit analysis helpful.

ENGN 2912F. Soft Matter
This is a special topics graduate course on soft matter, treating polymers, liquid crystals, surfactants, and colloids. The different topics will be unified by a common approach using statistical mechanics.

ENGN 2912H. Interfacial Phenomena
This course is an introduction to mechanics of material interfaces. Particular cases considered are liquid surfaces (surface tension, contact line slip, electro-wetting, etc), lipid membranes, and thin elastic plates and shells. The course will cover detailed analyses of statics and dynamics of these interface. Classical and modern research papers related to these topics will form the motivation for the discussion. A unified treatment of these apparently disparate interfaces is presented to conclude the course. Prerequisites: ENGN 2010, 2020, 2210, or 2810.

ENGN 2912I. Selected Topics in Physics of Locomotion (PHYS 2610E)
Interested students must register for PHYS 2610E.

ENGN 2912J. Asymptotic and Perturbation Methods
In this introductory course to perturbation methods, topics covered are inspired by problems in solid mechanics (e.g. ridges and kinks in thin plates), fluid mechanics (e.g. viscous boundary layers), electrical circuits (van der Pol oscillator), and include regular and singular perturbations, methods of strained coordinates, multiple scales, averaging, WKB, Laplace's method and the method of steepest descent for approximating integrals, and solutions of partial differential equations. Prerequisite: ENGN 2010 and 2020.

ENGN 2912K. Mixed-Signal Electronic Design
ADCs, DACs, switched-capacitor circuits, noise and distortion. Circuit simulation and system design projects. Examples will be used from various biological sensing and instrumentation applications and recent scientific literature. Prerequisite: ENGN 1620 and 1630, or instructor permission. Enrollment limited to 20.

ENGN 2912L. Topics in Bioelectronics
Seminar course covering subjects related to interactions between electronic and biological systems. Material includes energy harvesting, low-power electronic circuit design, biosensors and signal integrity, neuromorphic hardware, low-power wireless communications, and electrochemical methods. Emphasis on critical reading, technical analysis, presentation, and discussion. Design project.

ENGN 2912P. Topics in Optimization
This course will cover various topics in discrete and continuous optimization. Topics include graph algorithms, dynamic programming, linear programming, convex optimization and coarse-to-fine methods. Prerequisites: basic theory of algorithms (at the level of an undergraduate algorithms course) and linear algebra.

ENGN 2912Q. Coherence of Light in Nanooptics and Plasmonics
This class is a special topics graduate course focusing on advanced concepts in optics, including spatial and temporal coherence of optical fields, higher-order coherence phenomena in space-time domain, coherence effects at the nano- and micro-scale, optical and plasmonic interferometry using partially coherent sources. The subject is aimed at graduate and undergraduate students interested in optical communications, propagation of laser beams in biological or turbulent media, optical microscopy and imaging, as well as medical diagnostics. The concepts of “flipped teaching” and “learning by teaching” will be explored. Knowledge of advanced electricity and magnetism concepts is required.

ENGN 2912R. Implantable Devices
This course will expose students to topics across the electrical and biological sciences through lecture, design, and laboratory exercises. Students will learn basic governing concepts of implantable device design, including those of tissue interfaces, power delivery, data transmission, hermetic packaging and biocompatibility, and in vivo evaluation through appropriate animal models including design of surgical approach. Teams will be formed early in the course and maintained throughout the semester. Successful teams will invent, design, build, and implant their unique device. Teams will have access and exposure to the Technology Ventures Office through guest lectures and individual meetings.

ENGN 2912S. Application of Machine Learning to Experimental Science
Course designed to help introduce experimentalists (in engineering and related sciences) to growing array of computational tools for data analysis. Using Matlab and Python, students will learn how to leverage dedicated software for numerical optimization (e.g. CVX and MOSEK) and machine learning (e.g. TensorFlow). Emphasis will be on exposure to different techniques and practical implementation, rather than underlying fundamentals. (Students seeking rigorous foundation in machine learning should see CSCI1420/ENGN2520.) Initial assignments will introduce range of supervised and unsupervised machine learning approaches; final projects will provide students with opportunity to apply these methods to their own research data.

ENGN 2920A. Complex Fluids: Particles and Interfaces
Introduces dispersive systems (colloidal suspensions, emulsions, surfactant solutions, blood) with special attention to the thermodynamics and mechanics of interfaces. The course will bridge the physico-chemical and mechanical perspectives in the study of these materials. The intended audience is graduate students in Engineering, Physics, Chemistry, and Applied Mathematics. Prerequisite: We will sometimes use material from ENGN 2010/2020, such as differential equations, Fourier and Laplace transforms, elementary differential geometry, basic probability, vector calculus. Knowledge of basic solid/fluid mechanics will be helpful.
This course introduces the students to the mechanics aspects of battery materials and some of the current research problems. It will consist of a series of lectures by experts from academia and industry, which will cover the state of the art in lithium ion batteries, the role of mechanics in advancing the field, experimental studies, continuum modeling, ab initio modeling and practical design issues. There will be approximately one lecture each week (150 min); each lecture will focus on a specific aspect of battery materials, giving an in-depth treatment of scientific problems, the current state of understanding and future challenges.

ENGN 2920D. Environmental Technologies and Human Health.
This course explores interdisciplinary approaches to environmental safety and health drawing from Brown University faculty and other affiliated experts. Topics include history of environmental regulation and waste management; origin and chemistry of pollutants; biological impacts of exposure and risk assessment; pollutant dispersion, transport and bioaccumulation; and remediation technologies. Emphasis is placed on how scientific research impacts regulatory and engineering decisions regarding cleanup and management of contaminated sites. The target audience is graduate students and advanced undergraduates (permission required) with prior coursework or research in engineering, biology, or environmental studies. Enrollment limited to 30.

This class describes the fundamentals of statistical mechanics with a focus on both traditional analytic methods and modern atomistic simulations methods. The class is divided in two parts. (i) Techniques used to calculate interactions at the atomic level are first covered, from simple interatomic potentials to quantum mechanical first-principles methods. (ii) Simulations techniques to sample atomic degrees of freedom for obtaining macroscopic quantities are then discussed, such as Monte Carlo and Molecular Dynamics. The tools presented in class are illustrated with ongoing examples that illustrate how these methods work in concert. Enrollment limited to 40 graduate students.

ENGN 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ENGN 2980. Special Projects, Reading, Research and Design.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ENGN 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.
The School of Public Health

Dean
Terrie T. Wetle

Department Chair - Behavioral and Social Sciences
Christopher W. Kahler

Department Chair - Biostatistics
Constantine A. Gatsonis

Department Chair - Epidemiology
Alison E. Field

Department Chair - Health Services, Policy & Practice
Ira B. Wilson

The Brown University School of Public Health offers graduate programs and comprehensive course work leading to the Master of Public Health (MPH); the ScM, AM and PhD in Biostatistics; the ScM and PhD in Behavioral and Social Health Sciences; the ScM in Clinical and Translational Research; the ScM and PhD in Epidemiology; and the PhD in Health Services Research. The School of Public Health also offers an undergraduate concentration (AB) in Public Health, as well as an approved track of Statistics in the Independent Concentration rubric.

The School's faculty-to-student ratio gives students a great deal of interaction with instructors who are accessible, approachable, and encouraging of student involvement in critical projects.

For additional information regarding the School of Public Health and its programs of study and areas or research visit: brown.edu/academics/public-health/about

Public Health Concentration Requirements

Public Health is an interdisciplinary concentration through which students examine a variety of issues, including population health and disease, health policy, cross-cultural and international aspects of health, the organizational and social structures through which health services are delivered and received, and the public health system. Courses in the concentration allow students to explore the ways in which the social, political, behavioral and biological sciences contribute to the understanding of patterns of population distributions of health and disease. The concentration also provides students with courses in basic research methods and statistics necessary for problem solving and critical thinking in the emerging emphasis on evidence-based health care and public health.

The undergraduate component to the five-year AB/MPH differs in some ways from the Public Health concentration. Please refer to http://brown.edu/academics/public-health/education-training/masters/mph-program-about-us/combined-programs/abmph. Meet early with a concentration adviser to discuss your plans.

An Honors track is available for students who qualify. Honors track students are also required to enroll in PHP 1980 in both semesters of their senior year to conduct research and write the honors thesis. Please visit http://www.brown.edu/academics/public-health/education-training/undergraduate/public-health-concentration/honors-track for details or email Barbara_Dailey@brown.edu for more information.

**Study Abroad/Study Away**: Courses taken elsewhere may be applied to non-core courses. Meet with a concentration adviser, and be prepared to provide a syllabus or syllabi, that you are interested in transferring to your concentration plan.

**Master of Public Health Graduate Program**

The Master of Public Health (MPH) degree is dedicated to developing skilled professionals who are committed to improving the health of communities by translating rigorous scientific research into sound, evidence-based public health policy and practice.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/behavioral-and-social-health-sciences

**Biostatistics Graduate Program**

The graduate programs in Biostatistics offers comprehensive course work leading to a Master of Science (Sc.M.); a Master of Arts (A.M.); and the Doctor of Philosophy (Ph.D.) degrees. The graduate programs in Biostatistics are designed to provide training in theory, methodology, and practice of statistics in biology, public health, and medical science.

The program provides comprehensive training in theory and methods of biostatistics, but is highly interdisciplinary and requires students to acquire expertise in a field of application. The Ph.D. program is intended to enable graduates to pursue independent programs of research; the Sc.M. and A.M. programs provide training for application of advanced methodology in professional and academic settings.

For more information on admission and program requirements, please visit http://www.brown.edu/academics/gradschool/programs/biomed-biostatistics.

**Behavioral and Social Health Sciences Graduate Program**

The graduate programs in Behavioral and Social Health Sciences offer comprehensive course work leading to the Master of Science (Sc.M.) and Doctor of Philosophy (Ph.D.) degrees. The interdisciplinary graduate programs train graduate students who are interested in analyzing the complex behavioral and social determinants of public health, and in developing interventions to change behaviors and improve social contexts related to public health, to employ behavioral and social science theory and methods to understand contemporary health problems and to develop interventions that improve the health of individuals and populations. The program puts substantive focus on diet, physical activity and obesity; alcohol and other drug abuse; smoking and tobacco use; HIV and STI risk behaviors; and health disparities and culture.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/behavioral-and-social-health-sciences

**Clinical and Translational Research Graduate Program**

The goal of the Master of Science (ScM) degree program in Clinical and Translational Research is to train clinicians and basic scientists to extend basic scientific research into the clinical arena, ultimately leading to improvements in individual and population health. By translating basic research into improved clinical outcomes, researchers and clinicians are able to provide new treatments to patients more efficiently and quickly.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-clinical-and-translational-research
Epidemiology Graduate Program

The graduate program in Epidemiology offers comprehensive course work leading to a Master of Science (Sc.M.) degree and the Doctor of Philosophy (Ph.D.) degree. Using sophisticated study designs, statistical analyses, field investigations, and laboratory techniques, epidemiology students investigate the multiple causes of a disease, disease distribution (geographic, ecological, and social), methods of transmission, and measures for control and prevention.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/epidemiology-0

Health Services Research Graduate Program

The graduate program in Health Services Research offers comprehensive course work leading to the Doctor of Philosophy (Ph.D.) degree. The program seeks to develop scientists experienced in the use of state-of-the-art experimental and non-experimental research methods to investigate how people obtain access to health care, the components and impacts of health care costs, and what happens to patients as a result of care. Health services research aims to identify the most effective ways to organize, manage, finance, and deliver high quality care to benefit population health.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/biomed-health-services-research

Courses

**PHP 0030. Health of Hispaniola.**

Two developing countries, Dominican Republic and Haiti, have widely differing health outcomes despite centuries of shared experience on the Caribbean Island of Hispaniola. This course will examine the history, politics, economics, culture, international relations, demography, and geography, as well as epidemiology and health services, to demonstrate that multiple factors, both recent and long-standing, determine the present health of these populations. Enrollment limited to 20 first year students. Instructor permission required. FYS WRIT

**PHP 0040. Addiction: The Causes, Cures and Consequences of Substance Abuse in Modern Society.**

Addiction has been recognized by the psychological and medical community as a chronic, physical disease, affecting the body in ways which mirror the mechanisms of other neurological disorders. However, despite definitive research suggesting the genetic and physical roots of addiction disorders, the disease of addiction still faces significant prejudice from laws and societies seeking to place blame upon addicts themselves. Stereotypes and misconceptions that cast addicts as morally corrupt deviants lacking in will power still pervade cultural and political discourse, creating and maintaining powerful stigmas that prohibit addicts and their families from seeking care. Enrollment limited to 20 first year students. FYS WRIT

**PHP 0050. Pain and the Human Condition: Exploring the Science, Medicine, and Culture of Pain.**

Pain is a universal human experience, yet it is highly subjective. For most, pain represents an occasionally unpleasant, self-limited experience. However, for others, chronic pain persists beyond the recovery from an injury or as a result of a chronic health condition. Persons with chronic pain often describe their pain as permeating every aspect of their lives. While an active area of research, pain remains a significant challenge to the individual seeking treatment, the health care provider and society. This multidisciplinary course introduces students to scientific, medical, and public health aspects of pain and explores personal narratives and cultural meanings of pain. Enrollment limited to 20 first year students. FYS WRIT

**PHP 0100. First year seminar: Statistics is everywhere.**

Statistics is the universal language behind data-enabled decision making. Examples include Google's page ranking, Amazon's customer recommendations, weather prediction, medical care and political campaign strategy. This seminar will expose students to a variety of problems encountered in the media, in science and in life for which solutions require analysis of and drawing inferences from data. We will introduce basic concepts such as randomness, probability, variation, statistical significance, accuracy, bias and precision. The course will discuss statistical problems from reading assignments and material identified by the students. We will use simulation to illustrate basic concepts, though previous programing experience is not required. FYS

**PHP 0310. Health Care in the United States.**

Introduction to the health care delivery system. An overview of the U.S. health care financing, delivery and regulatory system. Considers the interaction between paying for and providing and assuring the quality of health services; changes in one component of the system inevitably affect the others. Addresses the balance between employer funded health insurance, publicly funded health insurance and the consequences of not being insured. Seven discussion sections arranged during the semester. Open to undergraduates only. LILE

**PHP 0320. Introduction to Public Health.**

An introductory overview of the U.S. Public Health System with an emphasis on the core functions of public health, challenges and strategies for working with communities, and specific health issues that impact the health of the population. Presents a comprehensive overview of the environmental and behavior factors associated with health promotion and disease prevention. LILE

**PHP 0850. Fundamentals of Epidemiology.**

As the cornerstone of public health, a strong foundation in epidemiology provides students with the ability to investigate, clarify and criticize claims of disease causation. This course provides students with a foundation in basic epidemiologic concepts and methods. Key measures of disease occurrence and effects used in epidemiology will be discussed; strengths and weaknesses of alternative epidemiologic study designs will be examined. Interpreting epidemiologic evidence to inform public health policy and practice will be emphasized throughout the course.

Open to Public Health concentrators and others by permission; Class limit 80.

**PHP 1010. Doctors and Patients- Clinical Communication in Medicine.**

Communication is central to medical practice and interpersonal relationships between patients and physicians can be powerful curative agents. This course reviews theory and research on physician-patient communication. Lectures, readings, and discussions are enhanced by direct observation of clinicians in clinical settings. Appropriate for students interested in communication sciences, health psychology, health education, pre-med and other clinical training, and medical anthropology. NOTE: Classes are held on Mondays and Wednesdays 4-6pm - two FRIDAY classes are scheduled at the beginning and end of the semester. Remaining class time is fulfilled through shadowing scheduled when students and doctors are available. Contact instructor for schedule.

**PHP 1070. The Burden of Disease in Developing Countries.**

Defines and critically examines environmental, epidemiologic, demographic, biomedical, and anthropological perspectives on health and disease in developing countries. Emphasis on changes in the underlying causes of morbidity and mortality during economic development. Focuses on the biosocial ecology of diseases. Required major term paper worth 50% of final grade is scholarly centerpiece of course. Weekly discussion sections and small group research projects supplement the two exams and term paper. Guest lecturers cover different diseases and public health perspectives. Enrollment limited to 65. DPLL LILE WRIT
PHP 1100. Comparative Health Care Systems
Focuses on principles of national health system organization and cross-national comparative analysis. Emphasizes application of comparative models to the analysis of health and health-related systems among nations at varying levels of economic development and health care reform. Addresses research questions related to population health and systems' performance. Questionnaire completion required for Freshman and Sophomore students. Enrollment limited to 30. DPLL

PHP 1101. World of Food: Personal to Global Perspectives on Nutrition, Agriculture and Policy
This course brings together issues of food and nutrition in America and around the world through the lens of public health, economics, and agriculture. The overarching theme requires that students reconsider their own previous notions, experiences and behaviors with food. This online setting intentionally requires the students to engage in and learn about their own community from many perspectives likely not previously noticed. Students will read class originated and online content, scientific and journalistic articles and book segments; will review documentary films, and will write for themselves, for their peers in groups and in class, and will submit assignments to the professor.

At the conclusion of this course, students will:
• Understand how nutrients are consumed through foods
• Define healthy and unhealthy nutritional status
• Explore food consumption in the US and in other parts of the world
• Describe the agricultural production techniques in the US
• Propose possible changes to the current food system

Through it all, students will understand better their own place in the world of food.

PHP 1320. Survey Research in Health Care
An introduction to the methodology of survey research as it is conducted by social scientists and epidemiologists. Provides an overview of all aspects of study design and instrument development as well as an introduction to statistical analysis of survey data. Prerequisite: PHP 0320. Students should fulfill the department's statistics requirement prior to taking, or concurrently with, this course.

PHP 1400. HIV/AIDS in Africa: A Multidisciplinary Approach to Support HIV/AIDS Care and Treatment Programs
The course is intended to challenge students from different disciplines to develop strategies to address the challenges of establishing and sustaining HIV/AIDS care and treatment programs in Africa. The course will begin with a general introduction to HIV/AIDS to provide a foundation wherein students will obtain a basic scientific and sociological understanding of the disease. Discussion topics on: the impact of AIDS, introducing antiretroviral therapy in Africa, monitoring and evaluating ARV therapy scale up and developing a country wide plan for a national laboratory system to support HIV/AIDS care and treatment will be facilitated through the use of case studies. Enrollment limited to 25 juniors and seniors. Graduate students with permission of instructor. DPLL

PHP 1500. Global Health Nutrition
The course focuses on nutritional status influences on population health of low and middle income countries. It covers both 1) undernutrition, including protein-calorie malnutrition and specific micronutrient deficiencies; and 2) overnutrition, including obesity. It covers morbidity and mortality associated with under- and overnutrition. Nutritional aspects of maternal and child health and the association of nutritional exposures early in life and later adult health are emphasized Specific areas include nutritional status measurement, including body size and composition, dietary intake and physical activity, as well as household, community, and national, socioeconomic and political factors. Prerequisite: PHP 1070, 2120, 2150, or BIOL 0030. DPLL

PHP 1501. Essentials of Data Analysis
This course covers the basic concepts of statistics and the statistical methods commonly used in the social sciences and public health with an emphasis on applications to real data. The first half of the course introduces descriptive statistics and the inferential statistical methods of confidence intervals and significance tests. The second half introduces bivariate and multivariate methods, emphasizing contingency table analysis, regression, and analysis of variance. This is designed to be a first course in Statistics. The course is intended for Public Health or Statistics concentrators. Others can register with instructor's permission. There are no prerequisites.

Problems and issues surrounding delivery of emergency medical services in U.S. Topics: cost of illness; rationing health care; living wills; malpractice and its effects; effects of alcohol and other risk behavior. Priority to community health concentrators and PLMS students pursuing MPH degree. Enrollment limited to 60.

PHP 1530. Case Studies in Public Health: The Role of Governments, Communities and Professions
This course provides an integrated knowledge of the public health's development, policy, practice and infrastructure and its relationship to medical care, social services and the environment. The matrix approach juxtaposes public health content (e.g., infectious disease) and public health tools (e.g., behavioral theory, policy/advocacy/epidemiology/quality improvement/program planning) using case studies. It aims to strengthen students' capacity to apply a population-based viewpoint to public health practice. Prerequisite: PHP 0320. Enrollment limited to 40.

PHP 1540. Alcohol Use and Misuse
Reviews the epidemiology of alcohol use, abuse, and dependence and examines its neurobiological and behavioral underpinnings. Covers etiology including physiological, genetic, psychological and social cultural influences, and prevention, brief intervention and treatment considerations. Course background in psychology, sociology, or community health is recommended. Recommended prerequisites: PHP 0320 and CLPS 0010. Enrollment limited to 20 juniors, seniors, and graduate students.

PHP 1600. Obesity in the 21st Century: Causes, Consequences and Countermeasures
The scope of obesity knowledge is too large to cover during one single course, therefore we will focus primarily on obesity-related health outcomes, assessment of obesity, obesity epidemiology, social and behavioral correlates of obesity, obesity and stigma, policy and interventions across population groups. The readings for this course are multi-disciplinary in nature and integrate epidemiological, biological, sociological, political and philosophical perspectives. This course is specific to the United States and thusly all readings will reflect this contextual focus. Enrollment limited to 30. DPLL

PHP 1680J. The Race To Inner Space: Conflating Science, Politics, and Economics To Promote Brain Health
Provides an understanding of how funds are raised and spent for disease-targeted research; Provides hands-on experience and exposure to public and private decision makers influencing healthcare policy related to diseases of the brain; Provides an understanding of issues, challenges, and opportunities related to neurological and psychiatric illness parity with other illnesses; Identifies lessons learned from health care research funding policy successes and failures; and, Identifies directions for future brain health policy research related to the measurement of program effectiveness and comparative effectiveness, economic benefit. Permission of primary instructor (J. Bentkover) required. Enrollment limited to 24 juniors, seniors, and graduate students.
PHP 1680K. Introduction to Conducting Clinical Research.
This course is intended to help students become familiar with the design and implementation of clinical research, including ethical and logistical processes related to collecting data and interpretation of published medical literature. In addition to weekly sessions, the course requires 4-6 hours weekly in the Emergency Department at Rhode Island Hospital enrolling patients in clinical trials. As students will be directly exposed to patient and clinical care, the course is limited to 12 students for the semester. Interested students should contact the course director to be considered for enrollment. Not open to first year students. Instructor permission required.

PHP 1680M. The Epidemiology of Violence and its Consequences.
Overview of the epidemiology of intentional injury within the social context. Selected topics include homicide, suicide, child abuse, intimate partner and family violence, sexual assault, elder mistreatment and officially sanctioned violence. Methodological challenges for epidemiologists, and the role of guns and substance use are examined. Intended as a junior/senior level course. Prerequisite: PHP 2120 or equivalent. Enrollment limited to 10.

PHP 1680N. Tobacco, Smoking, and the Evil Empire.
Reviews the epidemiology of smoking and nicotine addiction and briefly examines its neurobiological and behavioral underpinnings. Covers prevention efforts and state-of-the-art treatment interventions with an emphasis on policy implications. Course background in psychology, sociology, or community health is recommended. Suggested prerequisites: PHP 0320 and CLPS 0010. Restricted to juniors, seniors, and graduate students.

PHP 1680S. Bioethics at the Bedside.
This course explores a variety of topics in biomedical ethics. Each class will begin with a vignette, short film, or speaker, followed by a short lecture. A large portion of class time will then be devoted to class discussion/debate. The course has four parts: introduction to medical ethics in which we consider what value we assign to individuals within various ethical constructs; discussion of bioethical issues at the beginning and end of life; examination of the duty of physicians; and selection of additional topics exploring ethical issues that arise from the social, economic, and cultural differences between physician and patient. Enrollment limited to 30.

PHP 1680T. Translation, Diffusion and Cultural Relevance of Health Promotion Interventions.
Course content covers three key aspects of disease prevention/health promotion programs: (1) how “basic” behavioral and social science research is tested for effectiveness in real-life settings (translation); (2) how programs with demonstrated effectiveness, in one or more local settings, are introduced and adopted more broadly (diffusion); and (3) how cultural relevance is involved in both translation and diffusion. Translation and Diffusion are the two main sections of the semester. Cultural relevance is a theme integrated into each part of the course. Appropriate for BSSI, MPH, and advanced undergraduate students with coursework in public/community health. Open to juniors, seniors graduate students, DPLL.

PHP 1700. Current Topics in Environmental Health.
This course is designed to introduce students to the field of environmental health, and demonstrate how environmental health is integrated into various aspects of our lives, both directly and indirectly. Topics to be covered include: toxic metals, vector-borne disease, food safety, water quality, radiation, pesticides, air quality, hazardous waste, risk assessment, and the role of the community in environmental health. Several topics will be presented by guest speakers so that students can learn from the expertise of professionals in the field. Enrollment limited to 65.

PHP 1710. Climate Change and Human Health.
Global climate change is occurring and these changes have the potential to profoundly influence human health. This course provides students with a broad overview of the diverse impacts of projected climate change on human health, including effects of changing temperatures, extreme weather events, infectious and non-infectious waterborne threats, vector-borne disease, air pollution, the physical and built environment and policies to promote mitigation and adaptation. Students will explore multiple sides of controversial issues through lively and informed class discussions, writing exercises, and participation in a series of end-of-term debates. Enrollment is limited to 20 students.

PHP 1740. Principles of Health Behavior and Health Promotion Interventions.
Examines health behavior decision-making and elements for design of health promotion interventions. Covers theories of health behavior (focusing on primary and secondary prevention), principles of intervention design, and reading of research literature. Emphasizes psychological, social, and proximate environmental influences on individuals’ health-related behaviors. Restricted to juniors, seniors, and graduate students. Prerequisite: PHP 0320 or equivalent. Enrollment limited to 25.

This seminar, open by invitation only to participants in the TRI-Lab program, will investigate a range of topics related to the healthy development of children from pregnancy through school entry, including the prevalence and determinants of major health and developmental concerns of infants and young children as well as key state and federal programs designed to address them. Readings, lectures, discussions, and in-class exercises will be used to foster collaborative inquiry by students, faculty, and community participants. Students will develop projects aimed at advancing or refining solutions to key healthy early childhood development challenges in Rhode Island.

PHP 1820. Designing Education for Better Prisoner and Community Health.
This course will provide the needed background and context for understanding the multiple issues and challenges facing prisoners and the national justice and health systems that impact their fate. In addition to contextual background, students in this course will attain the knowledge and skills needed to develop a final practical, real world health communication/intervention project that addresses one or more health literacy challenges facing people who are incarcerated. Some of these final projects will be developed as prototypes over summer 2016, when students from the course will design and test health curricula and delivery modules in a multidisciplinary laboratory.

The Healthy Food Access TRI-Lab will investigate community-based approaches to increasing access to healthy food and reducing obesity and overweight and food insecurity and hunger. It will provide students with an integrative scholarship experience that combines in-class and field-based learning opportunities with the development of applied, community-based research projects addressing a range of healthy food access challenges facing Providence and Rhode Island.

The Healthy Food Access TRI-Lab brings together interdisciplinary groups of students, faculty and community practitioners to engage on the issue of healthy food access. Students will deepen their understanding of this issue, and develop and refine collaborative knowledge and potential solutions. They will investigate community-based approaches to increasing access to healthy food and reducing obesity and overweight and food insecurity and hunger. It will provide students with an integrative scholarship experience that combines in-class and field-based learning opportunities with the development of applied, community-based research projects addressing a range of healthy food access challenges facing Providence and Rhode Island.
PHP 1854. The Epidemiology and Control of Infectious Diseases. Course objectives are to introduce students to key methods and concepts in the epidemiological study and control of infectious diseases. By the end of this course, students will have a solid foundation in the distribution, transmission, and pathogenesis of major infectious diseases that affect human populations. We will investigate methods to design and evaluate public health strategies to prevent or eliminate infectious diseases, including: outbreak investigation, disease surveillance, infection control, screening, and vaccination. The course is open to undergraduate students who have completed PHP0320 and to graduate students who have completed or are concurrently enrolled in either PHP2120 or PHP2150.

PHP 1880. Meditation, Mindfulness and Health. This course provides an overview on the relation of meditation and mindfulness (the ability to attend in a nonjudgmental way to one’s own physical and mental processes during ordinary, everyday tasks) with various health outcomes and disease risk factors such as depression, anxiety, diet, substance use, and cardiovascular disease. Mechanisms by which mindfulness may influence health will be addressed. The course will assess studies in the field for methodological rigor, and students will be taught strengths and weaknesses of current research. Students will be taught various mindfulness practices including direct experience with mindfulness meditation.

PHP 1900. Epidemiology of Disorders and Diseases of Childhood and Young Adulthood. Students will learn about diseases and disorders of childhood and young adulthood, including allergies, autism, eating disorders, obesity, endometriosis, and migraines. Students will learn how these disorders are defined, how many youth are impacted, and the age-appropriate epidemiologic methods to study disorders and diseases during childhood, adolescence, and young adulthood, respectively. For the final project, students will pick a disease or disorder of interest that occurs during childhood, adolescence, or young adulthood, synthesize the results from multiple epidemiological studies, and concisely present this information in both a written report and an oral presentation.

PHP 1910. Public Health Senior Seminar. The course provides an overarching capstone experience to Public Health seniors. It is designed to weave together 3 threads, specifically: (1) Capstone final written project based on Public Health concentration goals, including a systematic review or data analysis; (2) Formalizing and presenting career plans; (3) Learning and practicing key principles of effective workplace skills. The course provides opportunities to synthesize and reflect on the knowledge gained during the undergraduate program, provide support for solidifying effective next career steps, and provide important soft skills for excelling in the workplace. Prerequisites: PHP 0310 and 0320. Open to Senior Public Health concentrators only. WRIT

PHP 1920. Social Determinants of Health. The course provides an overview of social determinants of health. Examples of topics include health effects of educational attainment, social integration, neighborhood socioeconomic characteristics, racial discrimination, gender, income inequality, childhood socioeconomic circumstances, parental neglect, and job strain. Mixed teaching methods are used, including small group discussions, problem-based learning and guest lectures. Open to graduate students and advanced undergraduates. DPLL

PHP 1960. Epidemiology of Chronic Disease. This course is aimed at providing students with an introduction to the epidemiology of chronic disease. The topics in this course will review major chronic diseases; review descriptive data on population differences and time trends in incidence, prevalence and mortality; summarize mechanisms of pathogenesis; discuss major risk factors and address methodological issues in establishing causality; address potential opportunities for disease prevention and control. Students will be expected to present a selected topic on a current topic, providing opportunities to discuss cutting-edge research areas in the field.

PHP 1964. Cancer Epidemiology and Prevention. This course is aimed at providing students with an introduction to cancer epidemiology. The topics in this course will review cancer risk factors; discuss descriptive data on cancer rates; address methodological issues and limitations in assessing causality; discuss potential opportunities for primary and secondary cancer prevention. Students will be expected to present a selected topic on a current topic in cancer, providing opportunities to discuss cutting-edge research areas in the field. The first class of the week will include a review of the topic for that week and the second class will be presentations by students on selected current topics.

PHP 1970. Independent Study. A special project may be arranged in consultation with an individual faculty sponsor. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

PHP 1994. Case Studies in Maternal and Child Health. This course examines current topics in maternal and child health by addressing the question: How can the communities we serve become the healthiest place possible? The course will focus on the case of Rhode Island, with the central question being posed: How can Rhode Island be the healthiest place in the world for children? This is not a survey course covering all topics. Rather the course will focus on particular topics each year. In this first year of the course, the focus is on the major causes of mortality and how to address them.

PHP 1999. Public Health Nutrition: Concepts and Controversies. Provides an introduction to the concepts and scope of public health nutrition with a focus mainly on the U.S. Students will gain an understanding of the science behind national dietary recommendations and learn about dietary assessment methods, determinants of food intake, and interventions to improve diet. The course will emphasize ways in which environment and policy can influence nutritional status of diverse populations. It will also focus on controversial topics in nutrition and will employ hands-on activities such as self-dietary assessment, debates, op-eds, and individual presentations of nutrition topics of interest. Enrollment limited to 25 juniors, seniors, and graduate students. DPLL.

PHP 2019. Measurement Issues in Health Care. Provides a theoretical and practical basis for measurement in health care. Introduces measurement theory, scale development, and criteria to be considered when choosing measures in clinical practice and research. Practical exercises include questionnaire development and a written research protocol for the development and validation of a new measure. Prerequisites: PHP 2120, 2130.

PHP 2020. Disability Over the Life Course. An overview of the epidemiology of physical and cognitive disability in America, associated patterns of medical and social service use, and current as well as "ideal" population-specific systems of formal and family care. Also explores medical, social, and psychological needs associated with the stage of life in which disability is experienced. Prerequisites for advanced undergraduates are PHP 0310 or SOC 1550, and introductory statistics.
PHP 2025. Ethics of Global Public Health Engagement.
This course explores the ethics of global public health engagement. The course begins by highlighting the intentional and unintentional exploitation of populations and communities during the course of global public health research and practice. We discuss existing ethical principles for research and professional conduct as well as regulations guiding ethical action. These principles and regulations provide a framework for interrogating and debating the protection of human subjects in public health research and practice, and introspection about our role as global health students, professionals, and advocates. We examine, using case studies, ethical quandaries and complexities that arise. The next portion of the course explores the challenge and promise of community-engaged research, practice, and learning. This portion of the course also explores strategies for finding and establishing meaningful collaborative relationships. Then we examine the challenges of ethical research and practice when working with potentially vulnerable populations. This includes conflicts that occur when ethical norms and guidelines differ across international settings and the complex ethical tensions that can arise when responding to pressing global public health challenges. Special attention is paid to methods for fostering ethical engagement. The final portion of the course provides an in-depth examination of historical, political, and economic forces that shape the context of global public health. This portion of the course also focuses upon roles and responsibilities after studies have completed, or after time in an international location has ended. We provide an overview of how to prepare for IRB. Throughout the course, students integrate what has been learned into a written syntheses that showcase how they plan to thoughtfully and meaningfully implement rigorous ethical approaches in their own global public health work. The course is intended for graduate students and advanced undergraduates. Preferably, students have taken an epidemiology course; having taken PHP 1070 "Burden of Disease in Developing Countries" or another relevant global health course would be helpful. Equivalent introductory-level courses in epidemiology and/or global health, taken at another department/institution with a grade of B or higher, can also satisfy these requirements. Students who have experience in, or concrete plans for substantive global public health work will also be considered.

PHP 2030. Clinical Trials Methodology.
We will examine the modern clinical trial as a methodology for evaluating interventions related to treatment, rehabilitation, prevention and diagnosis. Topics include the history and rationale for clinical trials, ethical issues, study design, protocol development, sample size considerations, quality assurance, statistical analysis, systematic reviews and meta-analysis, and reporting of results. Extensively illustrated with examples from various fields of health care research. Recommended prerequisites: introductory epidemiology and statistics. Pre-requisites: (PHP 2120 or PHP 2150) and either PHP 2508, 2510, or 2520. Open to graduate students only.

PHP 2040. Survey Research Methods.
Emphasizes the theory of sampling and survey methods and their application to public health research. Topics include: survey design and planning; principles of sampling and survey terminology; questionnaire construction; protection of human subjects; data collection (including interviewing and data coding procedures); and application, presentation, and evaluation of results. Suggested prerequisites: PHP 2120, and PHP 2508 or 2510. Open to graduate students only.

PHP 2060. Qualitative Methods in Health Research.
Introduces qualitative approaches to data collection and analysis in health research. Methods covered include: participant observation, key-informant interviews, focus groups, innovative data collection strategies, and non-obtrusive measures. Students will use applied projects to develop skills in: qualitative data collection and management, interviewing, transcript analysis using computerized software, triangulation between qualitative and quantitative data, and report preparation for qualitative studies. Enrollment limited to 15 graduate students.

PHP 2070. Public Health/Community Service Internship.
The course is an introduction to the history, organization, resources, concepts and issues of public health and health care. Students will be matched according to their interests in a related practical experience in a health-related organization, with the expectation that they complete a project or produce a product of public health utility. This gives students an opportunity to critically apply knowledge and skills learned in didactic sessions. Instructor permission required.

PHP 2075. MPH Analytic Internship.
The primary objective of this course is to gain hands-on experience in using data to address public health questions. Concepts from previous courses will be re-enforced as students work through the steps of addressing a public health question. Both data analysis and data interpretation will be emphasized in the context of a public health question. STATA 8.0 will be used to analyze data. Prerequisites: PHP 2120, and either PHP 2500 or 2510. Open to graduate students in the MPH program only.

PHP 2080. Public Health Law and Ethics.
The protection and preservation of the public’s health are quintessential goals of government. Equally critical is the need to respect individual rights and morals in American society. The classic conundrum of public health law and ethics is the extent to which government may restrain or impinge citizens’ interests, directly or indirectly, to promote the health and safety of the community. This course, Public Health Law and Ethics, explores the inherent tensions between promoting the public’s health and protecting the legal and ethical rights and interests of individuals.

PHP 2090. Research Grant Writing for Public Health.
This course focuses on providing knowledge and experience in creating high quality public health research grant applications. Course objectives include developing significant and innovative scientific hypotheses, learning principles of effective written communication, and developing a research grant application suitable to submit for funding. Designed for Public Health School PhD students, post-doctoral fellows, and Masters students with advanced degrees (e.g. MD, PhD). Prerequisite: PHP 2120 or PHP 2150 or instructor permission.

Epidemiology quantifies patterns and determinants of human population health, with a goal of reducing the burden of disease, injury, and disability. An intensive first course in epidemiological methods, students learn core principles of study design and data analysis through critiques of published epidemiological studies as well as hands on practice through weekly exercises and assignments. This is a graduate-level course aimed at masters and PhD students. The course is not open to first year students or sophomores but may be available for advanced undergraduates with the instructor's permission.

This course provides basic principles of human biology and its applications to public health. Examples of biology topics include the cardiovascular system, endocrine system, immune system, nervous system, genetics, cancer, cardiovascular disease, HIV/AIDS, and depression. Examples of applied topics include strengths and weaknesses of using biomarkers, accuracy and precision of biological measures, quality assurance and quality control methods for using biomarkers for public health research. Mixed teaching methods are used, including small group discussions, problem-based learning and guest lectures. Prerequisite: PHP 2120 (may be taken concurrently) or instructor permission. Enrollment limited to 20 graduate students.

The overall objective of this course is to provide students with a strong foundation in epidemiologic research methods. This is the first of a two- or four-course sequence in epidemiologic methods aimed at students who expect to eventually conduct their own epidemiologic research. There will be a strong quantitative focus in this course. By the end of the foundations course, students should be sufficiently familiar with epidemiologic research methods to begin to apply these methods to their own work. Prerequisite: PHP 2507 or 2510 (either may be taken concurrently); the typical student will also have some introductory knowledge of epidemiology.
PHP 2170. Injury As A Public Health Problem.
Injury causes significant morbidity and mortality in the U.S and across the globe. However, injuries – both violent and non-violent – are eminently preventable. The overarching objective of this course is to enable students to understand the epidemiology of injury and violence, as well as strategies to improve public health through injury prevention. Prerequisite: PHP 2120 or 2150 (may be taken concurrently) or instructor permission. Enrollment limited to 20 graduate students.

PHP 2180. Interpretation and Application of Epidemiology.
This course builds upon the foundation of introductory epidemiology and a basic understanding of quantitative and conceptual methods, with a focus on the interpretation of the strength and meaning of epidemiologic findings. The goal is to help students develop critical thinking skills in order to become more sophisticated interpreters of epidemiologic evidence for guiding policy, clinical practice, and individual decisions, combining subject matter knowledge and epidemiologic methods to wisely evaluate the available research findings. We will focus on judging causality and identifying gaps that future research would need to fill to strengthen our understanding. Prerequisite required or permission of instructor.

This second course in epidemiologic methods reinforces the concepts and methods taught in PHP 2150, with in-depth instruction in issues of study design, assessing threats to study validity including confounding and selection bias, and analyzing data with standard regression models. The course emphasizes hands-on learning and includes a combination of didactic lectures, discussions of methodologic papers, and a required laboratory component where students will learn to apply the concepts learned in class to real-world problems. Prerequisites: PHP 2150 and either 2510 or 2507, or permission of the instructor. Co-requisite: PHP 2511 or 2508.

PHP 2220A. Epidemiology of Violence and Its Consequences.
Overview of the epidemiology of intentional injury within the social context. Selected topics include homicide, suicide, child abuse, intimate partner and family violence, sexual assault, elder mistreatment and officially sanctioned violence. Methodological challenges for epidemiologists, and the role of guns and substance use are examined. Prerequisite: PHP 2120 or knowledge of elementary epidemiologic methods. Enrollment limited to 10.

PHP 2220B. Nutritional Epidemiology.
Although epidemiology is logically equipped to address the dietary causes of disease, the complex nature of diet has posed an unusually difficult challenge to this discipline. This course will focus on the methodological challenges that epidemiologists face in studying dietary factors as determinants of chronic diseases. Dietary assessment methods, biomarkers, and anthropometric measures will be reviewed. Substantive material and up-to-date issues will be used as examples. The course will consist of lectures and exercises to develop basic skills to allow students to have a strong grounding in this field. Open to graduate students only.

PHP 2220C. Perinatal Epidemiology.
Provides an overview of topics related to reproduction, maternal and fetal outcomes of pregnancy, and longer term consequences of adverse pregnancy outcomes. Methodological issues unique to reproductive and perinatal epidemiology are discussed, as well as general epidemiologic methods as applied to topics in reproductive and perinatal epidemiology. Students are expected to actively participate in class discussions, lead discussions related to selected topics by providing an overview of the biology, descriptive epidemiology, and known risk factors of the topic, along with a detailed critique of recently published articles on the topic. Open to graduate students only.

PHP 2220E. Topics in Environmental and Occupational Epidemiology.
This course introduces students to the epidemiological study of historical and contemporary environmental/occupational agents, focusing on study design, biases, and methodological tools used to evaluate and extend the evidence linking exposures to human disease. The course will discuss applications, strengths, and limitations of different study designs and their use in studying specific environmental agents. Didactic lectures and student-led discussions will be used to provide students with a basic understanding of and the tools to apply/extend their knowledge of specific environmental agents (endocrine disruptors) and special topics (children’s neurodevelopment). Prerequisite: PHP2120, PHP2150, or equivalent. Undergrads with PHP0850 and instructor’s permission.

PHP 2220G. Methodological and Practical Issues in Global Health Research.
This seminar-style course will develop critical thinking and writing about global health research among graduate students interested in population health. Reading and writing assignments are on key conceptual, methodological and practical issues. It is interdisciplinary in nature but will reflect public health and epidemiologic perspectives on measures of population health, health disparities, interactions of effects on health, and implementation research. It is suitable for graduate students in the public health sciences, social sciences, pathobiology and public policy. Prior training in epidemiologic methods and global health, or their equivalents, are expected. Recommended prerequisite: PHP 2120. Open to graduate and medical students only.

PHP 2220H. The Epidemiology, Treatment and Prevention of HIV.
The purpose of this seminar is to use HIV as an example to introduce students to a variety of methodological issues in the epidemiologic study of infectious diseases. While we will study the treatment and prevention of HIV in detail, emphasizing the current state of knowledge and critiquing the most recent literature, this course aims to use HIV as an example to better understand the variety of methodological issues in global and domestic infectious disease epidemiology today. Enrollment limited to 25 students. Prerequisites: PHP 0850 or PHP 1854 (undergraduates); PHP 2120 or 2150 and PHP 2508 or 2511 (graduate students).

PHP 2222. Genetics, Human Population and Diseases.
The purpose of this course is: 1) to introduce students to genetics, genomics and various designs of genetic studies of human diseases, and 2) to discuss selected topics in challenges and advances in human genetic studies. Some prior knowledge with genetics or epidemiology is preferred. This course may be most appropriate for second-year MPH, ScM, or PhD students, as well as first-year graduate students and advanced undergraduate students with previous exposure to introductory epidemiology and biostatistics. Prerequisite: introductory-level statistical analyses and epidemiology courses, such as PHP 2507 or 2510, and 2120 or 2150. Undergraduates need permission of instructor to register.

PHP 2230. Epidemiology of Infectious Diseases.
This course will introduce students to the field of infectious disease epidemiology. Topics will include a history of infectious diseases, epidemiology and control of infectious diseases, analytic methods, study design, outbreak investigations, and epidemic modeling. Prerequisite: PHP 2120 or PHP 2150 and PHP 2507 or 2510, or with permission of instructor. Enrollment limited to 25 students.

PHP 2240. Methods of Environmental Epidemiology.
In this course, students will understand, implement, and interpret the design and analysis tools commonly used in environmental epidemiology. Topics to be discussed include cohort, time-series, case-crossover, and panel study designs, modeling of flexible dose-effect relationships, consequences of measurement error and missing data, and analyses of effects of exposures with unknown latencies. Although these methods will be presented in the context of estimating the health effects of environmental exposures, many of these methods are readily applied to other fields. Prerequisite: PHP 2200 or instructor permission. Open to graduate students only.
PHP 2250. Advanced Quantitative Methods in Epidemiologic Research.
This course provides students with conceptual and quantitative tools based on counterfactual theory to make causal inference using data obtained from observational studies. Causal diagrams will be used to provide alternative definitions of and inform correcting for common biases. Non-, semi-, and fully parametric methods for addressing these biases will be discussed. These methods include standard regression, instrumental variables, propensity scores, inverse probability weighting, and marginal structural models. Settings when such methods may not be appropriate will be emphasized. Prerequisite: PHP 2200 and 2511; or PHP 2200 and 2508; or instructor permission. Enrollment limited to 25 graduate students.

PHP 2260. Applied Epidemiologic Analysis Using SAS.
Epidemiologic and health services research requires the use of statistical software to describe and analyze data. This computer lab-based course will introduce students to applied epidemiologic analysis using the SAS® system. In addition, students will be directed through the process of writing a journal style article in which their SAS analyses will be incorporated. Offered to graduate and medical students.

This course provides students with fundamental principles of behavioral and social research methodology for understanding the determinants of public health problems, and for executing and testing public health interventions. We will focus on experimental methods, observational studies, and qualitative approaches. We will develop skills in understanding and interpreting data—both quantitative and qualitative. Throughout the course we will emphasize ethical, cultural, and professional issues for designing public health interventions. Prior coursework in research methodology and quantitative methods is recommended but not required. Open to graduate students and advanced undergraduates. Enrollment limited to 15.

This course examines physical activity and health with an emphasis on the development of behavioral interventions to increase physical activity. Students gain knowledge of the impact of physical activity on health outcomes as well as differences in physical activity among subpopulations. They are introduced to behavioral theories, intervention design approaches, measurement issues, and methods that are relevant to physical activity. Through seminar discussions, a group project, and presentations, students engage with the material and gain skills in the development and evaluation of behavioral interventions. Students with an interest in behavioral interventions and physical activity will benefit from taking the course. Recommended prerequisites: PHP 1740, 2320, or 2360. Enrollment limited to 20. Open to graduate students and seniors concentrating in Community Health.

This course examines environmental influences on the obesity epidemic with an emphasis on the impact of the built environment and policy on physical activity. Through seminar discussions, literature reviews, policy briefs, and presentations, students will engage with the material and gain skills in the development of policy and environmental change strategies to impact physical inactivity and poor diet. Students with an interest in environmental change and policy to prevent obesity and increase physical activity will benefit from taking this course. Enrollment limited to 25.

PHP 2325. Place Matters: Exploring Community-Level Contexts on Health Behaviors, Outcomes and Disparities.
There is growing recognition among researchers, public health practitioners and policymakers that place matters for health behaviors and health outcomes. But what is place, and why does it matter? As with many health-related outcomes, the prevalence of ill health is unequally distributed across populations with certain features playing significant roles on health. In this course, we will explore the features of community environments and the associations with health behaviors (e.g. physical activity, preventive care, alcohol, sexual behaviors) and health outcomes (e.g. obesity, cardiovascular disease and mental health). This course is specific to the US. Enrollment limited to 25.

PHP 2330. Behavioral and Social Approaches to HIV Prevention.
This course examines concepts, approaches, and empirical findings from behavioral and social research to prevent HIV transmission. Students will become familiar with behavioral theories, social epidemiological principles, intervention design, and debates within the field of HIV prevention. A particular focus of this course is on the linkages between science and HIV prevention practice/policy. Students will conduct weekly readings, engage actively in seminar discussions, and participate in small-group presentations and research activities. Prior coursework in public health research methodology is recommended. Prerequisites: Graduate student or senior public health concentrator. Enrollment limited to 25 graduate and medical students. DPLL

PHP 2340. Behavioral and Social Science Theory for Health Promotion.
This course will help students become familiar with behavioral and social science theories commonly used for planning disease prevention/health promotion interventions. In addition to review of specific theories, topics to be discussed include: how theories are developed and tested; challenges and potential pitfalls in using theory for intervention planning; and creation of causal diagrams based on concepts from theories. Undergraduates need permission of instructor; priority will be for Community Health concentrators. Enrollment limited to 25.

PHP 2350. Economics of Medical Therapies: Health Policy and Practice.
Introduces methods and applications of decision analysis, cost-effectiveness analysis, and benefit-cost analysis in public health policy and practice, including health care technology assessment, medical decision making, and health resource allocation. Examines technical features of these methods, problems associated with implementing them, and advantages and pitfalls in their application in setting public health policy. Open to juniors, seniors, and graduate students.

PHP 2360. Designing and Evaluating Public Health Interventions.
Aims to develop skills in designing and evaluating public health interventions. Levels of intervention include the individual; families or small groups; organizations such as schools, worksites, health care settings; communities; social marketing and health communications; policy and environmental changes. Will identify personal and environmental factors that affect public health and discuss needs assessment, formative research, cultural sensitivity, behavior change theories, intervention mapping, process and impact/outcome evaluation and dissemination. Students will critique intervention studies and gain experience in developing a hypothetical behavior change intervention. Graduate students and AB-MPH undergraduates only. DPLL

PHP 2361. Proseminar in Health Behavior Intervention Research.
This course is required for doctoral students in Behavioral and Social Health Sciences. Students will consider advanced topics related to designing, implementing, and evaluating behavioral and social interventions to promote health. The course is designed as a proseminar, emphasizing discussion of primary readings and presentations by experienced intervention researchers.

This seminar is designed for graduate students interested in health disparities and determinants of health in LGBT populations (also referred to as sexual minority populations). Students will become familiar with key epidemiological reports, behavioral and social science theories/frameworks, intervention studies, and scientific debates related to the determinants of and disparities affecting the health of LGBT and sexual minority populations. The course will focus primarily on US populations, but will also include global LGBT and sexual minority populations. Readings and discussion will be considered in light of social, policy, and cultural contexts that frame the lives of LGBT populations.

PHP 2370. Etiology of Substance Use Disorders.
This course will help students become familiar with behavioral, genetic, neurobiological, and cultural factors related to the onset and course of substance use disorders. In addition to review of specific theories, empirical evidence supporting models will be covered as will the integration of evidence across models. Priority will be given to postdoctoral fellows.
PHP 2371. Psychosocial and Pharmacologic Treatment of Substance Use Disorders.
Intended to provide an overview of the history of the treatment of substance use disorders; assessment methods designed to determine progress in substance use treatment; and the current most common types of psychosocial and pharmacologic treatments for substance use. Enrollment limited to 20 graduate and medical students. Instructor permission required.

PHP 2380. Health Communication
This class will explore Health Communication, with a focus on behavioral and social sciences delivered through health communication programs. The course is structured so that basic building blocks (i.e., definitions of health communication, public health context for health communications interventions, theories of health communication and health behavior change) are presented sequentially early in the semester. Students will synthesize knowledge and demonstrate their understanding of the role of health communication through a final research project. Seniors with concentration in Community Health may enroll with instructor's permission. Enrollment limited to 20 graduate and medical students. DPLL

PHP 2390. Quantitative Methods for Behavioral and Social Sciences Intervention Research
This course provides broad coverage of the quantitative methods used in behavioral intervention research ranging from descriptive data analysis to longitudinal methods. Students will learn to conduct, interpret, and write up a range of statistical procedures including basic psychometrics, t-tests and ANOVAs, correlations, and multiple regression. Students also will be introduced to more advanced techniques used for longitudinal data analysis in order to understand their common uses in behavioral intervention research. The course provides students in the Master's program in Behavioral and Social Health Sciences the requisite skills to conduct analyses of behavioral data as part of their Master's Thesis. Enrollment limited to 15 graduate students in the BSHS Master's program and the MPH program.

Reviews the development of the health care delivery, financing and regulatory control systems in the U.S. and reviews the literature on the relationship between health system structure and the services used and health outcomes that populations experience. A case-study approach is used to understand the inter-relationship between financing, delivery and regulatory components of the health system and their implication for public health by drawing on epidemiological, economic, political and sociological principals. Prerequisites: Graduate standing or PHP 0310 or PHP 0070 (not available to first year students or sophomores). Instructor permission required.

PHP 2410E. Medicare: A Data Based Policy Examination
This course will explore the role of Medicare as America's health insurer for the elderly and disabled through the use of real Medicare insurance claims data, examining how Medicare policy changes in financing and regulation have affected the delivery and receipt of medical services. At the end of the course students will: 1) know the history of important Medicare policy changes; 2) be able to construct aggregated patient case mix acuity adjusted measures of provider quality using insurance claims data; 3) be able to conduct policy analyses using Medicare claims data that are sensitive to standardized coding schemes. Enrollment limited to 15 graduate students. Prerequisite: PHP 2120, 2508, or 2510. Instructor permission required.

PHP 2415. Introduction to Evidence-based Medicine
Unbiased assessments of the scientific literature by means of research synthesis methods are critical for formulating public health policy, counseling patients or prioritizing future research. We focus on the methods and uses of systematic reviews and meta-analyses and their applications in medicine and health policy. After course completion, and with some direction, students will be able to undertake a basic systematic review or meta-analysis. Enrollment limited to 15. Prerequisites: PHP 2120, 2150, or 2460; and PHP 2507/08 or 2510/11 (2508 and 2511 may be taken concurrently); and clinical background or training in basic concepts in medicine (must discuss with instructor).

PHP 2425. Doing Public Health: Getting It Done in the Real World.
This course covers topics that MPH graduates will encounter in public health work and engages students with important challenges in public health practice. Class sessions will be as real-world as possible. We will choose a major current public health problem in RI and develop a coalition of agencies. Each student will learn about a different agency, develop its role in addressing the problem as a part of the coalition, and design a proposal for intervention, interacting with experienced public health practitioners, interviewing agency staff, gathering data, writing proposals, drafting budgets etc. Assignments will foster good communication within organizations and coalitions.

PHP 2429. Prevention: Medicine, Public Health, Law and Policy.
Explores the role of law and policy in promoting prevention in medicine and public health and in reducing health disparities and health care costs. Themes will include: the limits of legal authority in public health promotion and in regulating health behaviors; promoting prevention through healthcare reform; and the use of medical and public health evidence in policymaking. Case study topics include obesity, gun violence, distracted driving, lead poisoning and injury prevention. Includes students from the disciplines of medicine, public health, law and public policy. Students will participate in an interdisciplinary experiential learning project at a public health agency or organization.

PHP 2430. Analysis of Population Based Datasets.
Epidemiologic and health services research often conducts analysis using existing population-based datasets. Benefits include representative sampling frames, timeliness, and lower costs. Information technology makes it possible to link some databases providing richer sources of information. There are several technical and methodological concerns when conducting this type of "secondary analyses." Students will download, link, and analyze several data sets to understand the advantages of these data for health policy analysis as well as understand and apply different analytic methods. Prerequisites: PHP 2120; PHP 2508 (may be taken concurrently) or PHP 2510 or similar. Open to graduate and medical students only.

The United States spends more on pharmaceuticals than any other nation, reflecting both higher use of medications and higher prices. At the same time, US pharmaceutical firms are leaders in innovation and drug development. The purpose of this course is to provide an introduction to the study of the biopharmaceutical industry. The framework for this global presentation of the pharmaceutical industry is economic and policy analysis. We will focus upon the suppliers of therapeutic agents and explore their motivation and performance. This course is intended to broaden students' understanding of the health policy process, especially as it relates to pharmaceuticals. Students should have completed at least one year of biostatistics (PHP 2510 and PHP 2511) or equivalent coursework. Prior coursework in microeconomics and introductory epidemiology would also be helpful but are not mandatory. Consent of the instructor may be sought as well.

PHP 2440. Introduction to Pharmacoepidemiology.
The course will focus on substantive topics in pharmacoepidemiology, including relevant principles of pharmacology, inference from spontaneous case reports, study design considerations, premarketing pharmacoepidemiology, common data sources for pharmacoepidemiologic studies, drug utilization review, adherence, and the development, implementation, and assessment of therapeutic risk management policies. The course will also focus on issues in pharmacovigilance, including the legal and historical basis of pharmacovigilance, evaluation of individual adverse drug events, signal detection, active safety surveillance, and medication errors. A clinical background is not required. Prerequisites are PHP2120 and PHP2510 (or PHP2507) or permission of the instructor.
PHP 2450. Measuring and Improving the Quality of Health Care.
The quality of health care in the United States is in urgent need of improvement. This course will focus on the science of measuring and improving the quality of health care. Topics will include quality assessment, patient safety, medical errors, public reporting, financial incentives, organizational change, and health care disparities. Students will engage in a team-based quality improvement project. Open to graduate and medical students only.

PHP 2451. Exchange Scholar Program.

PHP 2455A. Health Services Research Methods I.
Health services researchers use theories, models, and data to understand the health care system, assess the effectiveness of interventions (at multiple levels of the healthcare system), and inform health policy decisions. This course reviews the application of statistical and epidemiological principles to the design and analysis of health services research studies. The goal is to familiarize students with common study designs and methods in health services research, so that they can critically review the published literature and use these approaches in their own research.

PHP 2460. Research Methods in Clinical, Translational and Health Services Research.
This course will take an applied approach to understanding research methods used in health research. Students will explore concepts, gain knowledge and develop skills in the following areas: 1. Developing and refining research questions; 2. Designing research projects and appropriately implementing research methodologies; 3. Understanding the strengths and weaknesses of different study designs in addressing specific research questions, including an understanding of threats to validity; 4. Identifying Data Sources, including primary and secondary sources; 5. Understanding research ethics, including IRB processes and HIPAA regulations. Students must be accepted to the Clinical and Translational Research Summer Institute to enroll.

PHP 2470. Topics in Clinical, Translational and Health Services Research.
Through a combination of mini-courses and seminars, students will explore concepts, gain knowledge and develop skills in a variety of public health areas. To receive a half credit for this course, students will be required to successfully complete 70 units. Units must be pre-determined by the course instructor and the unit instructor. Units are generally based on the number of in-person contact hours and the number of outside of class/homework hours required for a mini-course or seminar. Students must receive special permission from the instructor or be accepted to the Clinical and Translational Research Summer Institute to enroll.

PHP 2480. Selected Topics in Global Health Economics.
This course is designed to introduce students to specific issues, theory and practice of health economics at the global level. The first part of the course will survey research papers on econometric methods in global health including: field experiments, instrumental variables, propensity score matching and regression discontinuity. The second part will discuss current topics such as: conditional economic incentives for providers and consumers, social health insurance, public goods, and externalities. Prerequisites: PHP 2511 and ECON 1110, or equivalent. Enrollment limited to 8 graduate students. Instructor permission required.

This course will cover applications of epidemiologic methods to the study of medical interventions (drugs, vaccines, devices, and procedures), focusing on advanced methods. We will use formal frameworks of causal inference. The course will focus on substantive topics in pharmacoepidemiology, including design and analytic strategies to overcome the limitations of common data sources. Other topics include the assessment of therapeutic risk management policies. Although a clinical background will be useful, it is not required. Prerequisites: PHP 2120, or PHP 2150 and 2200; and PHP 2507, 2510, or 2520; and PHP 2508 or 2511; or instructor permission. Enrollment limited to 20.

PHP 2500. Introduction to Biostatistics.
The first in a two-course series designed for students who seek to develop skills in biostatistical reasoning and data analysis. Offers an introduction to basic concepts and methods of statistics as applied to diverse problems in the health sciences. Methods for exploring and presenting data; direct and indirect standardization; probability; hypothesis testing; interval estimation; inference for means and proportions; simple linear regression, etc. Statistical computing is fully integrated into the course. Not open to freshmen or sophomores.

PHP 2501. Introduction to Multivariate Regression.
The first in a series of two-half semester courses on regression methods, designed for students who seek to develop biostatistical reasoning and data analysis skills. This course provides an introduction to multiple linear and logistic regression models as applied to diverse problems in the health sciences. PHP 2500 or equivalent is a prerequisite.

PHP 2502. Regression Analysis Discrete and Event Time Data.
The second course in the sequence in Introductory Biostatistics methods. This course will focus on regression methods (multiple linear regress, ANOVA, ANCOVA) and their natural extensions such as Logistic and Poisson regression in applications to diverse problems in the health sciences. Additionally, this course will cover regression methods for time to event data such as Cox regression for survival data. PHP 2500 or equivalent is a prerequisite.

PHP 2507. Biostatistics and Applied Data Analysis I.
The objective of the year long, two-course sequence is for students to develop the knowledge, skills and perspectives necessary to analyze data in order to answer a public health questions. The year long sequence will focus on statistical principles as well as the applied skills necessary to answer public health questions using data, including: data acquisition, data analysis, data interpretation and the presentation of results. Through lectures, labs and small group discussions, this fall semester course will focus on identifying public health data sets, refining research questions, univariate and bivariate analyses and presentation of initial results. Prerequisite: understanding of basic math concepts and terms; basic functional knowledge of Stata. Enrollment limited to 50 MPH, CTR, and BSSI students. Instructor permission required.

PHP 2508. BioStatistics and Data Analysis II.
Biostatistics and Applied Data Analysis II is the second course in a year-long, two-course sequence designed to develop the skills and knowledge to use data to address public health questions. The courses are specifically for students in the Brown MPH program, and the training programs in Clinical and Translational Research. The sequence is completed in one academic year, not split across two years. The courses focus on statistical principles as well as the applied skills necessary to address public health questions using data, including: acquisition, analysis, interpretation and presentation of results. Prerequisite: PHP 2507. Enrollment limited to 48. Instructor permission required.

PHP 2510. Principles of Biostatistics and Data Analysis.
Intensive first course in biostatistical methodology, focusing on problems arising in public health, life sciences, and biomedical disciplines. Summarizing and representing data; basic probability; fundamentals of inference; hypothesis testing; likelihood methods. Inference for means and proportions; linear regression and analysis of variance; basics of experimental design; nonparametrics; logistic regression. Open to advanced undergraduates with permission from the instructor.

Applied multivariate statistics, presenting a unified treatment of modern regression models for discrete and continuous data. Topics include multiple linear and nonlinear regression for continuous response data, analysis of variance and covariance, logistic regression, Poisson regression, and Cox regression. Prerequisite: APMA 1650 or PHP 2510. Open to advanced undergraduates with permission from the instructor.
This course will provide an introduction to probability theory, mathematical statistics and their application to biostatistics. The emphasis of the course will be on basic mathematical and probabilistic concepts that form the basis for statistical inference. The course will cover fundamental ideas of probability, some simple statistical models (normal, binomial, exponential and Poisson), sample and population moments, nite and approximate sampling distributions, point and interval estimation, and hypothesis testing. Examples of their use in modeling will also be discussed.

PHP 2520. Statistical Inference I.
First of two courses that provide a comprehensive introduction to the theory of modern statistical inference. PHP 2520 presents a survey of fundamental ideas and methods, including sufficiency, likelihood based inference, hypothesis testing, asymptotic theory, and Bayesian inference. Measure theory not required. Open to advanced undergraduates with permission from the instructor.

PHP 2530. Bayesian Statistical Methods.
Surveys the state of the art in Bayesian methods and their applications. Discussion of the fundamentals followed by more advanced topics including hierarchical models, Markov Chain Monte Carlo, and other methods for sampling from the posterior distribution, robustness, and sensitivity analysis, and approaches to model selection and diagnostics. Features nontrivial applications of Bayesian methods from diverse scientific fields, with emphasis on biomedical research. Prerequisites: APMA 1650, PHP 2510, PHP 2511, or equivalent. Open to advanced undergraduates with permission from the instructor.

PHP 2540. Advanced Methods for Multivariate Analysis.
Survey of modern statistical methods for analysis of multivariate and high-dimensional data. Topics include inference for multivariate normally distributed data, methods for data reduction, classification and clustering, multiple comparisons for high-dimensional data, analysis of multidimensional contingency tables, and functional data analysis. Applications to diverse areas of scientific research, such as genomics, biomarker evaluation, and neuroscience will be featured. Prerequisites: APMA 1650 and 1660, or PHP 2520. Open to advanced undergraduates with permission from the instructor.

PHP 2550. Practical Data Analysis.
Covers practical skills required for successful analysis of scientific data including statistical programming, data management, exploratory data analysis, simulation and model building and checking. Tools will be developed through a series of case studies based on different types of data requiring a variety of statistical methods. Modern regression techniques such as cross-validation, bootstrapping, splines and bias-variance tradeoff will be emphasized. Students should be familiar with statistical inference as well as regression analysis. The course will use the R programming language.

PHP 2560. Statistical Computing I.
Statistical computing is an essential part of analysis. Statisticians need not only be able to run existing computer software but understand how that software functions. Students will learn fundamental concepts – Data Management, Data types, Data cleaning and manipulation, databases, graphics, functions, loops, simulation and Markov Chain Monte Carlo through working with various statistical analysis. Students will learn to write code in an organized fashion with comments. This course will be taught using both R and Julia languages in a flipped format.

PHP 2580. Statistical Inference II.
This sequence of two courses provides a comprehensive introduction to the theory of modern inference. PHP 2580 covers such topics as non-parametric statistics, quasi-likelihood, resampling techniques, statistical learning, and methods for high-dimensional Bioinformatics data. Prerequisite: PHP 2520. Open to advanced undergraduates with permission from the instructor.

PHP 2601. Linear Models.
This course will focus on the theory and applications of linear models for continuous responses. Linear models deal with continuously distributed outcomes and assume that the outcomes are linear combinations of observed predictor variables and unknown parameters, to which independently distributed errors are added. Topics include matrix algebra, multivariate normal theory, estimation and inference for linear models, and model diagnostics. Prerequisites: APMA 1650 or 1660, or taking PHP 2520 concurrently.

Note: The course will cover fundamental and advanced topics in linear models, and concepts related to the generalized linear models will not be covered during the course.

PHP 2602. Analysis of Lifetime Data.
Comprehensive overview of methods for inference from censored event time data, with emphasis on nonparametric and semiparametric approaches. Topics include nonparametric hazard estimation, semiparametric proportional hazards models, frailty models, multiple event processes, with application to biomedical and public health data. Computational approaches using statistical software are emphasized. Prerequisites: PHP 2510 and 2511, or equivalent. Open to advanced undergraduates with permission from the instructor.

PHP 2603. Analysis of Longitudinal Data.
Comprehensive coverage of methods for drawing inference from longitudinal observations. Theoretical and practical aspects of modeling, with emphasis on regression methods. Topics include: multilevel and marginal models; estimation methods; study design; handling dropout and non-response; methods for observational data (e.g. time-dependent confounding, endogeneity, selection bias). SAS and S-Plus software are used. Prerequisite: Statistical inference (APMA 1650-1660 at minimum), regression (PHP 2511), working knowledge of matrix algebra (e.g. MATH 0520). Open to advanced undergraduates with permission from the instructor.

PHP 2604. Statistical Methods for Spatial Data.
This course covers a variety of topics for spatial data, including data visualization, Bayesian hierarchical models, spatial models, as well as the computation techniques and statistical software to implement these models. Examples of applications will include, but are not limited to, spatial modeling of data from epidemiology, environmental studies and social sciences. Prerequisites: APMA 1650-1660 or PHP 2510-2511, and MATH 0520; some experience with scientific computing.

This course will focus on the theory and application of generalized linear models (GLM), a unified statistical framework for regression analyses. Specifically, we will focus on using GLMs to model the categorical outcomes. The GLM for categorical outcomes include logistic regression, proportional odds model, and Poisson regression. Maximum likelihood estimation and inference will be introduced in the GLM context. The students are expected to have knowledge of probability and inference (at the level of APMA1650, APMA1660, or PHP2520), knowledge of matrix algebra (at the level of MATH0520), knowledge of regression analysis (at the level of PHP2511) and knowledge of R.

PHP 2610. Causal Inference and Missing Data.
Systematic overview of modern statistical methods for handling incomplete data and for drawing causal inferences from "broken experiments" and observational studies. Topics include modeling approaches, propensity score adjustment, instrumental variables, inverse weighting methods and sensitivity analysis. Case studies used throughout to illustrate ideas and concepts. Prerequisite: MATH 1610 or PHP 2511.
PH 2620. Statistical Methods in Bioinformatics, I.
Introduction to statistical concepts and methods used in selected areas of bioinformatics. Organized in three modules, covering statistical methodology for: (a) analysis of microarray data, with emphasis on application in gene expression experiments, (b) proteomics studies, (c) analysis of biological sequences. Brief review and succinct discussion of biological subject matter will be provided for each area. Available software will be introduced. Intro level statistics (PHP 2507/2508 or PHP 2510/2511) recommended. Other students should contact instructor. Intro to software R and Bioconductor tools provided in lab. Open to advanced undergraduates with permission from the instructor.

Data Science is a broad and rapidly emerging field concerned with extraction of meaningful knowledge from data. This course provides an integrated survey of statistical methods and principles that are fundamental to these goals: causal inference, machine learning and prediction, data-driven decision making, quantification of uncertainty, and simulation-based modeling of complex systems. Many of the readings will be drawn from source literature in statistics and computer science. The course will be conducted in seminar style and will be project-based. Students will complete up to 4 data analysis projects using methods discussed in class.

This course is designed to cover essential elements of preparing for a career in research in biostatistics. The course will cover: methods of statistical research, with a focus on problem solving in real applications; key elements of communicating research, including writing for academic publication, writing and collaborating on grant proposals, and preparing and delivering oral presentations; and professional and research ethics, with emphasis on ethics of statistical practice in multidisciplinary collaborations. Enrollment limited to 15 graduate students in Biostatistics. Students must be in research phase of program of study.

PH 2690A. Advanced Topics in Biostatistics.
Introduction to applications of statistics and the way statisticians collaborate in interdisciplinary research. Guest lecturers from industry, government and academia will describe how statisticians fit into their environment. Techniques for effective collaboration and oral and written presentation of work including interviewing, writing proposals, giving talks, working with a team and consulting as an individual will be taught. Designed for graduate students (Masters or PhD) who would like to learn how to collaborate on projects with non-statisticians. Permission of the instructor is required to enroll for the course.

PH 2690B. Introduction to Bayesian Inference: Hierarchical Models and Spatial Analysis.
Intended as a first introduction to Bayesian inference. Relevant theoretical background will be reviewed, and the Bayesian paradigm will be introduced, including choice of prior distributions and calculation of posterior distributions. Main emphasis will be on how to use Bayesian thinking to develop models for data with complex structure. Hierarchical models, meta-analysis, Bayesian design and shrinkage estimation will be covered. The benefits of hierarchical modeling will be applied to spatial data analysis as a special topic. Students will be introduced to Bayesian computing and WinBUGS, which is a necessary skill for many modern analyses. Prerequisites: PHP 2510 and 2511, or equivalent. Additional exposure to statistical inference, statistical computing, and a course in calculus would be useful. Open to graduate students only.

The purpose of this seminar is to facilitate discussions of current scientific literature in epidemiology, biostatistics, health services, behavioral and health sciences, and public health in general. The main goal is to expose students to current methodological issues and controversies, in an effort to integrate knowledge across disciplines. This seminar is only open to doctoral students in Epidemiology, Behavioral and Social Health Sciences, Biostatistics and Health Services Research.

PH 2985. MPH Independent Study for Thesis Preparation and Research.
This optional half credit course may be taken up to two times during preparation for the MPH degree. It provides MPH students with self-directed thesis research and preparation time under the guidance of a thesis advisor. Prior to taking this course the student and advisor must reach agreement as to what constitutes satisfactory completion of the course (e.g., completion of a satisfactory literature review, attainment of specific thesis benchmarks, or completion of the thesis). Please check Banner for the correct section number and CRN to use when registering for this course.

PH 2990. Thesis Preparation.

PHP XLIST. Courses of Interest to Concentrators in Community Health.
No description available.
School of Professional Studies

The Brown University School of Professional Studies offers programs including:

- Executive and Professional
- IE Brown Executive MBA
- Executive Master in Cybersecurity
- Executive Master of Healthcare Leadership
- The Choices Program
- Undergraduate Summer Session for academic credit
- Non-credit Pre-College programs

For further information visit: http://www.brown.edu/academics/professional/

Executive Masters Programs

Executive Master in Cybersecurity

The Brown University Executive Master in Cybersecurity (EMCS) is a 16-month program for professionals designed to cultivate high-demand, cross-industry executives with the unique and critical ability to devise and execute integrated, comprehensive cybersecurity strategies for nations and industries across the globe.

EMCS forges visionary leaders ready to deploy successful strategies for cybersecurity that address:

- Technologies such as big data, cloud, mobile, Web 2.0, Internet of Things
- Social trends including social networks, globalized workforce
- Human factors
- Economic tradeoffs and risk management
- Policy and privacy
- Effective leadership

For further information including admission criteria and tuition and fees please visit: http://www.brown.edu/academics/professional/cybersecurity/

Executive Master of Healthcare Leadership

The Brown University Executive Master of Healthcare Leadership prepares visionary leaders to transform healthcare. This 16-month intensive degree program is designed for clinicians, executives, and senior administrators who have significant responsibility in the healthcare industry; including those from health care delivery, public health, drug product manufacturing, health care consulting, health management systems, insurance, patient advocacy, and from legal, policy and regulatory settings. It is a blend of on-campus and online learning that allows participants to work full time while pursuing an advanced degree.

The faculty and participants in the program have a depth of experience in the healthcare industry and are fully engaged in addressing the gaps and constraints of the current system. The course of study is tailored to this industry and leadership development is purposefully considered in the healthcare context.

Course of Study

- Creating the Learning Healthcare Organization
- Data-Driven Decision Making: The structure, conduct, review, and evaluation of research
- Financial Decisions in the Changing Healthcare Landscape
- Healthcare Policy: Yesterday, today, and tomorrow
- Information-empowered Patient Care: Electronic health records, health information technology, and medical information systems
- Management and Marketing Skills for Transforming Healthcare
- Navigating the Regulatory Maze
- Strategic Planning and Value Creation in Integrated Healthcare
- The Critical Challenge

For further information including admission criteria and tuition and fees please visit: http://www.brown.edu/academics/professional/healthcare-leadership/

Executive Master in Science and Technology Leadership

The Brown Executive Master in Science and Technology Leadership transforms engineering, science, and technology professionals into leaders prepared to drive innovation in today’s complex, rapidly evolving, global markets. This 16-month program of online and residential learning is for experienced professionals who are ready to go beyond their technical expertise, broaden their impact, and achieve greater success.

Through coursework and teamwork, students develop their capacity for:

- Strategic thinking to anticipate and adapt to changing market needs, technological advances, and increased global competition
- Global orientation to identify sources of innovation in different corporate and national settings, and to create products with global value
- Innovation to develop technologies that shape the future and change the world
- Effective communication to lead diverse, cross-functional teams and to influence stakeholders
- Effective leadership to inspire continued growth based on enhanced self-awareness and new skills

For further information including admission criteria and tuition and fees please visit: http://www.brown.edu/academics/professional/emstl/

Courses

Cybersecurity

EMCS 2000. Introduction to Computer Security. This course teaches principles of computer security from an applied viewpoint and provides hands-on experience with security threats and countermeasures. The course additionally covers principles and skills useful for making informed security decisions and for understanding how security interacts with the world around it. Topics include general security principles, cryptography, authentication authorization, identity, access management, operating systems security, network security, web security, and applications security. The course aims to balance theory and practice.

EMCS 2200. Global Cyber Challenges: Law, Policy and Governance. This course will examine the problems confronting the United States and the international community in addressing network and computer insecurity while upholding privacy, civil liberties and other fundamental values. We will examine cybersecurity as a problem that can be addressed from a policymaker’s perspective. We will look at a variety of legal and policy frameworks as they relate to cybersecurity and cyber conflict, modeling ways they may be employed to address cybersecurity problems.

EMCS 2400. Effective Leadership. This course prepares students to assume greater responsibility roles in their organizations by developing and reinforcing critical skills for a cybersecurity leader. Course topics include professional development, team building, communication, ethics and power, change management, conflict resolution, and cyber game simulation.

EMCS 2410. Human Factors in Computer Security and Privacy. Security is not solely, or sometimes even primarily, a technical problem; rather, human aspects are at least as important, especially the ways they interact with the technologies. The course communicates this point from many perspectives, ranging from behavioral issues to user interfaces to personnel management and more. Students will emerge with a richer understanding of the strengths and weaknesses of human agents, and thus how they are central to both the occurrence of and of solutions to cybersecurity problems. Projects include case studies on security as it relates to: business workflows, tradeoffs with usability, and the detection of insider threats.
EMCS 2800. Critical Challenge Project
Independent project under the direction of a faculty member.

Health Care Leadership

EMHL 2000. Strategic Planning and Value Creation in Integrated Healthcare
In this course, participants explore the meaning of value creation in healthcare organizations—how it relates to high performance, how it varies and is measured in different healthcare segments, and how it is embodied in the structure and performance of their own organizations. A holistic High Performance Model of enterprise value creation is presented, including strategic planning, process improvement, and resource and organizational alignment. The model is discussed from the perspectives of a variety of healthcare organizations—with the goal of applying the model to create value for the participants’ own organizations.

In this course, students appraise past and current political, legal, technological, and economic U.S. healthcare policy developments. Students critically examine the implementation of alternative methods of health services delivery and financing within multiple global healthcare systems. Participants question assumptions, think creatively, and consider integrated patient care solutions to prepare for change and new paradigms within the global healthcare sector.

In this course, students develop the management, marketing, and leadership skills needed to guide organizational change and reframe their personal leadership style to lead in today’s rapidly-changing health care landscape. Particular focus is placed on negotiation, conflict management, collaboration, and team building skills. Participants create a robust plan for their continuous development as a leader. Students also learn how to harness the power of social media to develop their brand and their organization’s influence in the marketplace.

EMHL 2030. Data-Driven Decision Making: The Structure, Conduct, Review, and Evaluation of Research
This course will provide an overview of the methods and applications of therapy economics, biostatistics and epidemiology in healthcare sector decision-making. Specific topics include: the application of therapy economics and economic evaluation to treatments, pharmacoeconomics and technology assessment; the assessment and interpretation of published epidemiological studies; institutional oversight of epidemiological research programs; the four key steps of statistical analysis (identification of scientific programs or problems of interest, collection of the required data, analysis and summary of data, and generation of a conclusion).

EMHL 2040. Navigating the Regulatory Maze
This course explores the culture of decision making as well as the structure and role of key US and international regulatory bodies. Students explore how health care is regulated with an eye towards understanding how existing regulations improve quality, enhance access, and control cost. The topics of risk management, public health, and product/drug regulation are emphasized.

This course will provide an overview of the major aspects of information technology (IT) as they relate to both the causes of and the solutions to current problems in healthcare. Issues of standardization, integration, communication and patient engagement will be stressed, and the types of strategic planning for and governance of information systems will be explored. During the course students will be presented with real problems in the field of HIT and explore possible solutions.

EMHL 2060. Quality Improvement and the Healthcare Learning Organization
In this course, students explore the quality improvement drivers, principles, systems, and tools that help create a healthcare learning organization. Students discover how quality improvement creates value, how to demonstrate the value of quality improvement to their colleagues, and how to ultimately develop a culture of learning within their organization. Students compare the learning needs of healthcare organizations to those in other industries. Students design and implement a quality improvement project within their own organization, and develop a “learning organization roadmap” for their organization.

EMHL 2070. Financial Decisions in the Changing Healthcare Landscape
This course focuses on the area of financial management as applied to international health organizations. The course emphasizes the application of principles and concepts of international health financial management to global health providers that represent innovative new structures and organizations, such as Accountable Care Organizations (ACOs) that offer integrated patient care. Students will gain competencies in the application of financial analysis tools and techniques internationally and in the interpretation of data for sound decision-making through case assignments and a class project to analyze the financial results of high performing healthcare organizations serving global markets.

EMHL 2080. The Critical Challenge: Capstone Project
In this course, supervised by Executive Master of Healthcare Leadership (EMHL) faculty, students identify a critical challenge within healthcare and then work collaboratively to integrate knowledge from various perspectives and healthcare sectors and to apply relevant skills to develop possible solutions to their challenge. Students draw upon knowledge and skills from coursework with particular emphasis on collaborating across healthcare sectors, considering ethical implications, communicating effectively and developing creative and viable solutions. Upon completion of this project, students will be able to successfully integrate knowledge of healthcare policy, strategic planning, regulation, management, marketing, healthcare research, quality improvement, finance and information technology to address a critical challenge within healthcare. Project outcomes should prove applicable to professional practice. This course spans two semesters.

IE Brown Executive MBA
Brown University School of Professional Studies and the IE Business school in Madrid, Spain offer a 15 month joint Executive MBA degree program to Senior managers, professionals, and entrepreneurs with significant work experience.

Combining IE’s strength in interdisciplinary management education and Brown’s excellence in the humanities, social, biological and physical sciences, the two schools have created the new IE Brown Executive MBA to develop informed, globally-minded, and innovative leaders.

The program provides senior managers with the opportunity to develop and broaden their management and leadership skills in an intensive, international environment. The program brings together faculty from the IE and Brown, integrating leading management thinking with wider perspectives from the humanities, social sciences, engineering, and life sciences.

For more information on the program and admissions process please visit http://brown.edu/professional/executive/iebrown-mba/index.php.
Courses

EMBA 2000. Entrepreneurial Opportunities in Emerging Economies. This course utilizes team-based experiential learning methods for the further development of skills in business opportunity creation. It builds upon the courses on entrepreneurial management and ethnographic research methods to investigate a business opportunity that participant teams create within, or stemming from, a developing region. The course leverages field work in a specific complex developing regional economy that serves as a proxy for such developing regions more broadly. Upon completion of the course, participants should be able to develop business opportunities in complex, developing regions and have a greater appreciation of the potential and challenges these regions represent.

EMBA 2020. Corporate Innovation Process. This course considers the unique barriers to innovation that must be overcome within established firms as well as the techniques and best practices utilized by exemplar firms in executing successful innovation strategies. The business environment is evolving rapidly and established firms must innovate to survive and prosper. Executives note that corporate innovation is extremely or very important to their firm's strategic growth. Challenges to innovation execution considered in this class include human capital alignment, organization of the innovation process, and encouragement of collaboration and risk taking within the enterprise.

EMBA 2100. Ethnographic Research Methods. This course develops basic skills in learning to use ethnographic research methods, the hallmark of anthropology and a crucial methodology for analyzing why people behave the way they do. Concentration is on the two key elements of ethnographic methodology: participant observation and interview techniques. Students apply these techniques in assigned course project work.

EMBA 2110. Society & Culture in the Age of Globalization. This course is designed to draw on analytical tools from sociology and anthropology to make sense of the rapidly changing nature of global society. In the past 3 decades the flows of commodities, ideas, people, norms and resources across international borders has accelerated exponentially. Driving these dynamics are not only market forces, but also social networks, cultural diffusions and institutional transformations. As a complement to the courses on political economy and global governance, this course focuses on the social structures, institutional forms, political processes and cultural practices that mediate the encounter of the global and the national.

EMBA 2200. The Spirit of Entrepreneurship. Historians argue that capitalism, especially its main engine entrepreneurship, took hold and flourished in the West not because of the promise of wealth it contained, but because of the appeal of a distinctive ethical outlook—new ideas about the value of work, business, and the acquisition of wealth that constitute the "spirit of capitalism." The objective of this module is to trace the development of this new ethical outlook animating capitalist entrepreneurship—the "spirit of entrepreneurship"—from its Reformist beginnings into our own day.

EMBA 2210. Shared History of Slavery & Capitalism. This course imparts specific content knowledge of the history of the Atlantic slave trade and the plantation regimes of the Americas and the relationship of slavery to capitalism's development in the West. The course conveys key principles of historical reasoning and argumentation: the reliance upon evidence to support interpretation; the appreciation of contingency and the specificity of time and place; skepticism towards claims of the universality of experience and the inevitability of outcomes. In unraveling the paradoxical relationship of free markets to un-free people, the course considers questions about commodities and liberties that remain urgent in today's global economy.

EMBA 2220. The Political Economy of Development. The goal of this unit is to introduce executives in the MBA Program to the politics economic & social development, with a focus on both long-run historical determinants of development and the more recent effects of globalization and neoliberal reforms on economic growth and inequality. To put these issues in context, the unit addresses debates about development in Latin America and Sub-Saharan Africa.

EMBA 2300. Globalization and the Arts. This course will exemplify the role of the humanities in high-level practical education. The humanities are understood here as way of understanding the human condition in its depth and variation. Humanistic understanding is essential to the negotiation of the globalized world and its challenges. How do the increased exchange, access, and flow of persons, products, and markets associated with globalization negotiate cultural, political, and social difference, particularly, and inequality? How do global systems negotiate between shared benefit and exploitation? Between cultural exchange and innovation on the one hand and the preservation of heritage on the other?

EMBA 2310. Natural Collections: Perspectives on Science, Art and Nature. This course explores questions about biodiversity loss and maintenance. The appropriation, exploitation and introduction to different landscapes of various plant and animal products are linked in recent history to the intertwined projects of imperialism and the enlightenment. For these reasons, containing nature is also about products and markets. The relationship between human control over nature, natural resource decline, and entrepreneurial and public sector strategies to protect the environment are considered. The course questions the ways and circumstances in which biodiversity is valued and examines the role of various social organizations in managing the environment and its resources.

EMBA 2320. Trends in Global Architecture and Urbanism Today. This course introduces students to current questions in global architecture. After a survey of the history and motivations behind the internationalization of architectural forms, we examine current debates about sustainable architecture and smart urban growth, global urban problems and potential solutions to mass housing, and the application of new technologies such as "smart materials" in architecture. Questions of local vs. global building traditions are considered. Students gain a new understanding of their built environment and will be able to 'read' and analyze buildings they encounter, engaging with questions about formal, functional and material choices.

EMBA 2400. Global Markets. This course investigates the institutions and regulations governing our global economy. Recent events have shown that traditional national regulations (or lack thereof) are no longer adequate yet international accords over aid, trade, labor standards and a host of other issues are fiercely and frequently contested by competing interests. The results of these debates, and the resulting economic systems and policies will determine winners and losers in the new global economy. Understanding the interaction between this political-economic-regulatory environment and individual firms and industries is key to determining both the possibilities for and constraints on global business in today's fast changing economy.

EMBA 2410. The Rise of China. This course examines the drivers of China's emergence as a global power, and the consequences of that emergence for international business practitioners. Employing perspectives from comparative politics, international relations, and economics, the course explores the connections between China's domestic institutional transformation, its system of governance, and its increasingly powerful indigenous firms. To what extent have Chinese firms become innovative? How have they become innovative — and, how have they even basic growth at all in the emerging global economy dominated by persistent corruption and unfettered state power? The course examines specific strategies international business practitioners can employ to navigate the Chinese environment.

EMBA 2500. Cultivating Conditions for Innovation & Creativity. What insights can an artist bring to business? When we cultivate a discerning sensitivity to the contexts in which we operate, we are more likely to identify possibilities that others miss. A critical awareness fertilizes the imagination. A creative outlook can enrich how we see the world. These ideas that spring from the imagination can be refined into concrete outcomes. By fostering a keen understanding of how our own personal creative processes work, we will explore how art provides strategies for the creation of value. We will examine these strategies as we discover ways in which creative processes facilitate innovation.
EMBA 2510. Influencing Through Communication.
This course is designed to make students more aware of the elements of effective communication (both verbal and non-verbal) to enhance their own communications and to more critically evaluate communications of others. During this practical course, students will learn elements of classical rhetorical theory and current perspectives on persuasion. The objective of this course is to teach students the elements of effective and persuasive communication to enable them to achieve concise, effective communication in all modes, especially presentations and public speaking.

EMBA 2520. Public Speak Your Mind and Your Heart.
What you say, how you say it, and how you make it relevant to the audience, can turn an idea into a power horse. And many ideas are dumped daily because their originators do not present them in a dynamic and convincing way. Presentation skills rank among the most practical for financial managers: nothing will give you a more immediate competitive edge than the ability to communicate orally in a fluent and confident manner.

EMBA 2530. Key Reflection Project.
The Key Reflection Project (KRP) is a culminating academic project where students integrate and apply the knowledge acquired during the program to examine an idea or solve a challenging problem that is within their area of influence or personal interest. The project must mirror the spirit and learning objectives of the program, which are based on the awareness of social complexities and critical analysis of business issues. The pedagogical objective is for students to practice the application of the multidisciplinary learnings of the IE Brown program to real and complex problems that they face in their own workplaces.

This course will emphasize the understanding of how financial statements are created and how accounting decisions affect these statements. The course will teach the theory emphasizing the use of accounting as a tool for decision-making and problem solving. The objective of the course is not to memorize accounting rules and perform "bookkeeping" activities. However students will have to practice some bookkeeping in order to understand deeper issues that go beyond it. Students will also learn the problems associated with accounting subjectivity and flexibility while evaluating the appropriateness of accounting policies and estimates.

EMBA 2610. Financial Management.
This course focuses on the fundamentals of corporate finance. The objective of corporate financial theory is to maximize the value of the business. In this context financial decisions can be broken down in two basic decisions (1) how much to invest and what assets to invest in, and (2) how to raise the necessary cash. This course provides a framework to answer the first question: how the firm should make the investment, or capital budgeting decision, in order to increase shareholder value.

EMBA 2620. Cost Control.
Students, as future managers, will utilize the output of cost systems (the primary internal information systems in a firm). Students will gain an understanding of cost accounting systems, including a familiarization with: the goals of cost accounting systems; the fundamental features and design of cost accounting systems; and the various uses of the data provided by cost accounting decisions. A sound understanding of these issues is necessary to interpret cost accounting system outputs; to transform them from data to information and knowledge. Without this understanding, cost accounting data is often mis-interpreted and/or mis-applied leading to erroneous decision making.

EMBA 2700. Managerial Economics.
Managerial Economics provides students with a framework to understand the main economic variables and dynamics that affect business activity. Understanding the microeconomy is the first stepping-stone toward achieving a full grasp of the economic world that surrounds us. Most of the world’s countries rely on free markets to make most of their economic decisions, and those markets automatically answer the key economic questions (What will we produce? How will we produce it? At what price? Who will get it?) through the operation of supply and demand. The course will review the basic concepts of supply, demand, market failures and externalities to provide a broad perspective on how free markets work. It will then move on to elasticity and market structures and their impact on profitability. The objective is to give students a firm understanding of how supply and demand at the micro-level determine the basic parameters of doing business.

EMBA 2710. The African Economy.
The African economy sessions will begin with an overview of the continent, focusing in particular on sub-Saharan Africa and eventually centering on South Africa. In an interactive videoconference lecture, the development challenges and their possible solutions will be reviewed along with the growth prospects for economies and markets in the region in coming years.

EMBA 2810. Managing Communities of Work.
The objectives of this course are to enable participants to: discuss the psychological, social and strategic contexts in which HR processes and principles operate; describe and appraise the social and strategic benefits of “general management” expending time and resources on “employee issues”; analyze and critique people-based processes relying on their psychological, social and strategically oriented business merits; assess the relevance of HR policies the impact on business outcomes as a function of factors such as the market, the industry or the culture of the organization; and, reflect upon emerging people topics in today’s organizations, which impact the managerial profession.

EMBA 2820. Marketing Management.
This course is designed to provide students with a deep understanding of the fundamental principles of marketing and marketing strategy making. The focus will be on getting to know the basic techniques of defining and segmenting a target market for goods or services, building a brand with a meaningful positioning, and then integrating product, price, promotion and distribution to offer a superior marketing mix leading to a long-term competitive advantage. Finally, students will be given an insight into consumer behavior and brand management, as well as understanding the role played by different marketing tools such as marketing research.

This course provides an introduction to the basic aspects of the operation of the firm by presenting an integrated vision of those concepts and techniques and an understanding of the new role of operations and supply chain management in the overall strategy of the firm. The course structure initially addresses issues related to operations strategy, followed by a focus on systems and supply chain management. The course closes with a consideration of operations in practice.

EMBA 2840. Competitive & Corporate Strategy.
This introductory course to the area of strategic management aims to provide students with a thorough understanding of the internal and external factors that shape a firm's ability to create value. Students will be familiarized with tools to analyze industries, firm resources and competitive interactions, both on the individual business and the corporate level. Perhaps most importantly, the courses strive to instill a strategic mindset that will enable students to go beyond a simple application of tools to derive a deep understanding of firm competitive behavior in order to enhance their own firm’s performance in any given situation.
EMBA 2850. Technology & Innovation Strategy.
The course introduces the critical elements of designing and developing digital products and services. Course participants will be able: to analyze digital transformation and its affect on society, industries and individuals; to develop an appreciation of the importance of information technology; to identify and understand the economic and technological factors at the heart of the digital revolution; to manage and lead product and service innovation initiatives; to apply concepts, tools and techniques to design appropriate digital business models; to strategically manage digital transformation of a business; and to understand the implications of emerging IT trends.

EMBA 2900. Entrepreneurial Management for Executives.
This course provides a forum for the in-depth examination of mindsets, methods, and managerial activities that follow the entrepreneurial process from opportunity recognition to growing new ventures, whether as startups or within existing businesses. In particular the course will examine the role of finding a fit between one’s passions, skills and markets in the pursuit of opportunities and facilitate an understanding of the stages in the entrepreneurial process: opportunity recognition, customer discovery and market validation, solution validation and crafting of the business model.

EMBA 2930. Leading People, Teams and Organizations.
This course focuses on advancing students’ understanding of how to lead and manage with the aim of increasing personal and organizational effectiveness. It is designed to address several fundamental aspects of managing and leading people. These include understanding and influencing group behavior and performance, working with and managing people on a one-on-one basis, and leading, motivating and aligning people behind a common vision or direction. This course places a particular emphasis on increasing students’ self-awareness as leaders and their ability to address the challenges of leading change in organizations.

EMBA 2940. Motivation Science.
Course objectives include: learning how motivation works from recent conceptual and empirical advances in psychology and using this knowledge to make motivation work for you—in your own performance and as a motivator of others. Most people believe that the best way to motivate others is by using “carrots and sticks” (incentives), which is based on the classic assumption that what motivates people is to approach pleasure and avoid pain (the hedonic principle). Motivation however is more than “carrots and sticks”, and, importantly, there are many different kinds of motivational mechanisms that underlie people’s choices and what influences them.

EMBA 2950. Leader Visions.
In their effort to catalyze change, transformational leaders must be able to create and communicate visions for the future state of their organizations. It is particularly critical that they understand how to close the gap between inspiration and implementation. This workshop is designed to cultivate this understanding and to provide tools and skills necessary to develop, deliver and implement a vision throughout future organizations, divisions, and teams. Moreover, the framework utilized will enable individuals to determine the vision for the next phase of their own life or a future endeavor.
Africana Studies

Chair
Brian W. E. Meeks

Located in the historic Churchill House on the campus of Brown University, the Department of Africana Studies is the intellectual center for faculty and students interested in the artistic, historical, literary, and theoretical expressions of the various cultures of Africa and the African Diaspora. Central to the intellectual work of the department is the close collaboration of artists and scholars in examining relationships between academic and artistic knowledge about the world and human experience. Our commitment to rigorous scholarship and robust student and community development is grounded in a truly global understanding of the reach and implications of the Africana World.

For additional information, please visit the department's website: http://brown.edu/Departments/Africana_Studies/

Africana Studies Concentration Requirements

The concentration in Africana Studies critically examines the artistic, historical, literary, and theoretical expressions of the peoples and cultures of Africa and the African Diaspora. Central to the work of students and faculty in the concentration is the close collaboration of artists, scholars, and writers in examining relationships between academic and artistic knowledge about the world and human experience. Concentrators work closely with faculty members in developing new knowledge about the world and human existence through the critical and comprehensive study of the peoples and cultures of Africa and the African Diaspora.

Concentrators are encouraged to study abroad in Africa, the Caribbean, and/or Latin America and to acquire language competency in a language other than English spoken in Africa and the diaspora.

In order to develop requisite competency, Africana Studies concentrators must complete eight (8) semester-long courses offered by or cross-listed with the Department. Concentrators may also petition the Department to accept other appropriate courses.

Of these courses, the following two Africana Studies courses are required:

- AFRI 0090 An Introduction to Africana Studies (Fall ONLY)
- AFRI 1360 Africana Studies: Knowledge, Texts and Methodology–Senior Capstone Seminar (Spring ONLY)

The Department strongly encourages foreign study in Africa, the Caribbean, and Latin America, during the student's junior year. While the department actively supports programs in South Africa, Tanzania, Ethiopia, Brazil, and the English-Speaking Caribbean, concentrators must complete at least six (6) courses in residence at Brown (that is, they must carry AFRI prefixes).

The Department also encourages the acquisition of language competencies, in addition to English, which are spoken in Africa and the Diaspora. Since no continental African language is currently offered at Brown, concentrators who study abroad and acquire certified competency in any African language are welcome to petition the department for competency credit.

For more information about the concentration, please contact Professor Lundy Braun (https://vivo.brown.edu/display/lbraun), Director of Undergraduate Studies.

Honors

Africana Studies' concentrators with outstanding records may be admitted to the department's Honors Program.

Students interested in pursuing honors should identify a faculty sponsor in Africana Studies in their 6th semester and begin working on their thesis project during the summer before their senior year. By the end of the second week of Semester I of their senior year, while working in consultation with a faculty advisor, the student must prepare a work plan/proposal. Please visit department website for proposal guidelines. This plan should include a timeline for completion of the thesis and is not to exceed (3) typewritten pages. The student should also identify a second reader at this point. The work plan/proposal must be approved and signed by a committee, comprised of the faculty advisor who is to direct the Honor's thesis, the second reader, and the concentration advisor. The thesis sponsor should inform the Director of Undergraduate Studies by email after approval of the proposal.

By the time the proposal is submitted, the Honor's candidate should be familiar with the secondary works in the field. (Secondary readings should be extensive and be incorporated into the proposal.) The Honor's candidate is also expected to complete research paper of distinguished quality while enrolled in an independent study with their faculty advisor during the first semester of the senior year. In most cases, this paper will be one or two chapters in their thesis. Students must enroll in at least one, preferably two, semesters of independent study to work on their thesis.

For students completing graduation requirements by the end of Semester I (Fall), a first complete draft of the thesis should be completed by November 10, 2016. Final drafts must be submitted by December 1, 2016. For students completing graduation requirements by Semester II (Spring), the first complete draft of the thesis should be submitted by March 14, 2017. The final draft of the thesis should be submitted by April 20, 2017. Students must submit bound copies of the final thesis to the department and to each of the readers, along with an electronic copy of the completed thesis to Ms. Deborah Bowen. All students will provide a copy of their thesis project to the Department of Africana Studies on the last Friday of April at a time to be determined. After this presentation, a department committee will make recommendations for honors to the Director of Undergraduate Studies and students will receive notification of the recommendation.

Africana Studies Graduate Program

The department of Africana Studies offers a graduate program leading to the Ph.D. in Africana Studies.

For more information on admission and program requirements, please visit the following website:

http://www.brown.edu/academics/gradschool/programs/africana-studies-0

Courses

AFRI 0090. An Introduction to Africana Studies.

This course introduces students to the vibrant and contested field of Africana Studies by critically exploring and analyzing the links and disjunctures in the cultural, political, and intellectual practices and experiences of people of African descent throughout the African diaspora. Beginning with a critical overview of the history, theoretical orientations, and multiple methodological strategies of the discipline, the course is divided into three thematic units that examine intellectuals, politics, and movements; identity construction and formation; and literary, cultural, and aesthetic theories and practices in the African diaspora. DPLL LILE WRIT

AFRI 0110B. The Last Professors.

Addresses the profound effects of contemporary economic, political, and social changes on the role and function of the university in the 21st century. A primary concern of the seminar is to critically analyze how and in what ways the transformations in the broader society challenges, constrain, and, at times, frustrate critical intellectual activity. The seminar will draw on a broad and diverse set of readings ranging from classic statements by Cardinal Newman and W.E.B. DuBois to contemporary critical analyses by Henry Giroux and Adolph Reed, Jr. Enrollment limited to 20 first year students. FYS
AFRI 0110C. Autobiography of the Civil Rights Movement.
Most of the rich written history of the civil rights movement originates from first-hand accounts documented in oral histories and autobiographies. This interdisciplinary course plots the milestones of the civil rights movement through the lens of several autobiographies. The aim is to critique autobiography as a historical document as well as use it to tell the stories of the civil rights movement. We will compare and contrast different texts, analyze content and map a history of the era. Students will work with a writing fellow to develop one critical paper and one autobiographical paper. Enrollment limited to 20 first year students. FYS WRIT

AFRI 0120. Philosophy of Race and Gender.
Prejudice of many kinds, such as racism and sexism is so embedded in our modern social institutions, and so traditional and pervasive that we often fail to notice it. Furthermore, race and gender have been used repeatedly to explain differences. This course is a rigorous examination of the philosophical meanings of race and gender, from a variety of historical, anthropological and feminists perspectives.

AFRI 0160. Twentieth-Century Africa.
An introduction to recent African history, the course combines chronological and topical approaches. It is organized around the major epochs of colonialism, decolonization and post-colonial independence, but within those periods, we will concentrate on themes such as health, environment, development, the state and artistic expression. Readings draw heavily on primary sources. Three exams and two projects, including group work.

AFRI 0170. Afro-American History and Society Before 1800.
Focuses on the history of Africans and persons of African descent in the part of North America that now constitutes the U.S. Centers on the history of Africans and persons of African decent in national and transnational encounters and the consequences of the civil rights movement. We will compare and contrast different texts, analyze content and map a history of the era. Students will work with a writing fellow to develop one critical paper and one autobiographical paper. Enrollment limited to 20 first year students. FYS WRIT

AFRI 0190. Caribbean History and Society Before 1800.
Examines some of the themes important in the multiracial societies of the Caribbean from the 17th through the early years of the 19th century. Explores Creole societies, plantation economies, ethnicity, maroon societies, class and racial divisions, acculturation, syncretic religions, and patterns of slave resistance. Danish, Dutch, English, French, and Spanish settlements are studied. DPLL

AFRI 0200. Modern Caribbean History and Society.
This course will critically examine five themes in modern Caribbean history and society: What is the Caribbean? Nationalism, religion, economic development, and popular culture. These themes will be discussed with reference to the different geographical, racial, cultural and political spaces, which comprise the Caribbean. DPLL

AFRI 0210. Afro Latin Americans and Blackness in the Americas.
This course focuses on the position of Blacks in the national histories and societies of Latin America from slavery to the present-day. Emphasis is on a multidisciplinary engagement with issues and the exposure of students to the critical discussion of national images and realities about blackness and Africa-descended institutions and practices. The role of racial issues in national and transnational encounters and the consequences of migration of people and ideas within the hemisphere are explored. DPLL

AFRI 0220. From Emancipation to Obama: Journeys in African American History.
This course explores African American History through the lens of black freedom struggles. The struggles take all forms, between black and white from local to national levels, within and between black communities, and between men and women. This course assumes some familiarity with basic U.S. History and will utilize a variety of primary sources from autobiographical material to visual art and music as well as the usual monographs and articles. Aside from reading, students will be required to work with a writing fellow on 2 papers. There are also 2 exams. DPLL LILE

AFRI 0280. Race, Slavery, Modernity and Knowledge.
This course will review some of the central texts that constitute the different meanings of modernity and discuss how these texts became part of our framework for thinking about modernity, the human self and its different representations. The course will also engage texts that make attempts to complicate the meanings of modernity through a set of engagements with the issues of slavery, colonialism and race. Some key words in the course are: modernity, knowledge production, double-consciousness, social construction of race, racial slavery, coloniality, FYS

AFRI 0560. Psychology of the Black Experience.
This course is designed to facilitate understanding of African American psychological experiences. We begin by critically reviewing historical approaches to the psychological study of Black people. We then shift to an examination of the themes, and research currently being generated by those involved in the quest for scholarly self-definition and for redefinition of the psychological fabric of the Black experience.

AFRI 0570. 20th Century Black Feminist Thought and Practice in the U.S.
This course will explore the ways that black women in the U.S. have experienced racial and gendered discrimination as well as what sorts of strategies (e.g., political, intellectual, narrative, and creative) black women have devised in response. We will be especially concerned with elements of African-American feminist thought and its articulation in writings, music, literature and practice/activism in the 20th century U.S. Enrollment limited to 80.

AFRI 0580. Black Theology.
"In this era of Black Power... theology cannot afford to be silent." This lecture course will plumb the depths of James H. Cone's statement by critically interrogating the cultural, political, and theoretical dimensions of the development and evolution of Black Theology. The course will consider the nature and task of theology with particular reference to its contested role in American public life, the complex relation between theology, race, and radical politics, and the connections and disjunctures between Black Theology and the fields of history, literature, and philosophy. DPLL LILE

AFRI 0600. Race, Gender, and Urban Politics.
This course will introduce students to the methods and practice of studying black urban life with a primary focus on US cities. We will critically examine the urban cultural studies debates concerned with race, gender, class and sexuality. The approach of the course will be interdisciplinary, drawing upon works from anthropology, literature, history, music, and film. Topics include tourism, immigration, poverty, popular culture, gentrification, violence, and criminalization. WRIT

AFRI 0610. Black Student Protest from Jim Crow to the Present.
This is a history-driven class about black student protest. It puts this history in direct dialogue with other kinds of student protests over the long twentieth century. The point of the class is to ground conversations about contemporary protest culture in a deeper historical context that extends well beyond Brown, that moves into the deep history of higher education and education more generally, and that reveals the intersection of protest with other global, national, and local plotlines. It is, as well, meant to think about how all of these histories have been represented popularly and politically in the very recent past. DPLL FYS

AFRI 0620. African-American Life in the City.
This course examines the social and cultural history of black urban communities by examining the foundation of black communities in Chicago, New York and Los Angeles. We will examine how migration and the intersections of race, class, culture and gender shape life in urban places, reveal the structural forces that define black urban communities, and explore urban African-American expressive forms. Enrollment limited to 45. WRIT
AFRI 0630. Drama and War in Africa: New Voices. This course is an historical, political and topical examination of the subject of War on the African continent as seen through the lens of artistic response. Class discussions will be based on the different Stage, Screen and Radio Dramas that will serve as course materials. We will analyze reflections by African artists and scholars on the violent conflicts that have characterized the region’s recent history, as well as closely related international perspectives, such as those evident in Hotel Rwanda and The Last King of Scotland. We will also explore how political actors have used performative techniques, and will specifically examine the ways that other members of society (especially women and children) deal with such crises. Canonical African dramatists like Fugard, Ngugi, Soyinka and Ousmane will be referred to, but emphasis will be laid upon the New Voices emerging from a range of African nations, including Rwanda, Uganda, Congo, Senegal, Sudan and South Africa, that have engaged with the subject of war.

AFRI 0640. Contemporary Issues in African Politics and Culture: Thinking Africa Differently. Using an interdisciplinary methodology this course will examine three current issues in African societies: War, Violence and Sovereignty; the Politics of Gender in the African postcolony and the meanings of History, Trauma and Public Memory in some African societies. We will undertake this examination by “thinking about Africa differently,” that is by thinking about these three issues outside of the dominant set of images, tropes and ideas that have conventionally constructed a particular version of Africa. DPLL LILE

AFRI 0660. Activist Scholarship: Research and Writing for Social Change. How can research advance the global social justice struggle? This course will emphasize the idea that education has never been a politically neutral undertaking. Students’ research can have social impact in the university and beyond. We will engage a variety of disciplinary fields to theorize key concepts such as intersectionality of oppression and resistance, power, hegemony, social justice, and activist research. Students will be required to carry out an original research project that tackles a pressing societal problem we face today. SOPH

AFRI 0670. Global Black Radicialism. The decade from the mid-Sixties until the mid-Seventies witnessed the rise of Black Radicalism as a global phenomenon. The emergence of Black Power in the US, Brazil and the Caribbean, the consolidation of liberation struggles in Portuguese Africa and the rise of a Black Consciousness trend in Apartheid South Africa all represent key moments. What led young activists to embrace “Black Power?” What led to the emergence of Marxist movements in Portuguese Africa? What events in the Caribbean gave ascendancy to radical tendencies? And what forces contributed to the decline of these movements? This course seeks to answer these questions. DPLL SOPH

AFRI 0700. Freedom Films. "Freedom Films" is a First Year Seminar which will focus on historical documentary films related to the Southern Civil Rights Movement of the 1960s. We will analyze how these films reflect, change, and inform our views of the traditional Civil Rights Movement and how some offer contrasting narratives of that movement. We will also examine how and in what ways the films accurately and adequately reflect the historical realities of the Southern Civil Rights Movement based on readings and research. Enrollment limited to 20 first year students. DPLL FYS

AFRI 0710A. Racial and Gender Politics in Contemporary Brazil. Brazil is commonly understood as an example of a "racially democratic" nation, but as scholars have recently shown, racism permeates all aspects of Brazilian society. This course traces the development of the theorization of race, racial identity and race relations in contemporary Brazil. The approach of the course will be interdisciplinary, drawing upon works from anthropology, literature, history, music, and film. Topics will include colonialism and exploitation, nationalism, social activism and popular culture. We will also consider how Brazilian social relations differ from or conform to other racialized patterns in other nation-states in the Americas. Particular attention will be placed on the interrelationship between race, gender, class, and nation. WRIT

AFRI 0710B. Ethics of Black Power. In his now classic text Blood in My Eye, George Jackson writes "All revolution should be love inspired". This course will plumb the depths of Jackson’s remark by critically interrogating the ethical dimensions of the Black Power concept and the cultural, ideological, and political interventions influenced by the conceptual revolution. We will assess the ethical parameters of the various ideological tendencies that influenced the conceptual formulation and political articulation of Black Power including Black Nationalism, Feminism, Liberalism, Marxism-Leninism-Maoism and Pan-Africanism.

AFRI 0760A. Rastafarianism. This course explores the philosophy, history, politics, and theology of Rastafari, one of the Caribbean’s most influential and misunderstood liberation movements. DPLL WRIT

AFRI 0760B. Ragga, Rastafari and Revolution. Bob Marley in the song Revolution declares, “Revolution Reveals.” Beginning from this frame this course will examine the history of Rastafari since it was formed in the late 1930s as an Afro-Caribbean religious practice. It will examine how the emergence of ragga music in Jamaica in the late 1960s mixed and then became one central ingredient of what has been called “conscious music” in the period of the flowering of anti-colonial and black radicalism in the 20th century. The course will explore how ragga music became a form of subaltern language rethinking questions of nation and history in the Caribbean and Africa.

AFRI 0830. How Structural Racism Works. This course is an exploration of structural racism: the normalized and legitimized range of policies, practices, and attitudes that routinely produce cumulative and chronic adverse outcomes for people of color. With a special focus on African-Americans in the post Civil Rights Era, we will explore how structural racism “works” intersectionally and in compounded ways in housing, criminal justice, education, employment, and media. We will also consider cultural, political and social challenges to structural racism as well as the role and impact of colorblind ideology and behavioralism as dominant countervailing explanations for racial disparities. DPLL

AFRI 0850. The Politics of Gender in the Caribbean Novel. This course will examine 20th Century Caribbean Literature as a genre, which poses challenges to colonialism and raises profound questions of sovereignty. It will examine how Contemporary Caribbean Literature contributes to the world of literature in general. DPLL LILE

AFRI 0880. Hip Hop Music and Cultures. This course will explore both the history of the emergence of Hip Hop and the heated debates that surround it: aesthetics, censorship, sexism, violence, musical theft, originality, authenticity, the politics of cross-racial exchanges, urban black nihilism, and corporate influences on culture. These debates will be framed by our consideration of urban black life, African-American cultural formations, gender, representation, technology, commodification, pleasure and politics. Enrollment limited to 200. DPLL

AFRI 0890. Narratives of Power. Close readings and critical discussion of some of the most influential discussions of power in the past two centuries. Seeks to develop an appreciation of the complexity and elusiveness of discourses of power.

AFRI 0950. History, Literature and the Caribbean Novel. This course examines the ways in which literature is influenced by major historical events with special reference to the literatures of the Caribbean. Students will undertake a critical examination of the fictional representation of Europe’s encounter with Africa and Asia in the Americas.

AFRI 0980. Fela Anukalpo Kutti and the Social, Cultural, Political, and Aesthetic Implications of AfroBeat. Fela! The social, cultural, political and aesthetic implications of Afrobeat. This course will examine how all of the above converge in the development and evolution of Afrobeat, with a particular focus on the impact of “colonialism” on African society and culture. Interested students should have an interest in cross-cultural analysis, music appreciation, and the willingness to explore and investigate West African/Nigerian/Yoruba society and culture.
AFRI 1020A. Black Cultural Studies. No description available.

AFRI 1020B. Freedom in Africana Political Thought. This course will be a comparative analysis of freedom as a central value in political thought. It will do this by comparing the knowledge and practices of freedom to slaves in the Haitian Revolution, the ideas of freedom in the Civil Rights Movement, and then finally, the conceptions of freedom in South Africa. Enrollment limited to 30. DPLL LILE

AFRI 1020C. The Afro-Luso-Brazilian Triangle. Examines three historical components of the South Atlantic in terms of history, culture, and contemporary political and economic consequences. European colonialism in Africa and Brazil constitutes the baseline for this exploration, but the long and tardy nature of Portuguese colonialism in Africa in comparison with other European colonial powers, especially in its post-World War II manifestations, is our starting point. Enrollment limited to 40. DPLL

AFRI 1020D. Race, Rights, Rebellion. Provides an in-depth examination of different kinds of social movements. Emphasis will be placed on the theoretical and methodological distinctions among the various kinds of social protests and social movement actors. From anti-slavery revolts to struggles for independence to anti-apartheid movements, key concepts will include power, resistance, subaltern, hegemony, identity politics and consciousness.

AFRI 1020E. Race and Visual Culture. This is a sophomore seminar on race and visual media, including everything from high art on canvas to low brow film, from the comic book superhero Blank Panther to the Black Panther Party, from the avant-garde to the burlesque, from the web to graffiti to homemade t-shirts. People who sign up for this class should be prepared to read a lot and talk a lot, to regularly get to the RISD museum, to watch a lot of stuff on OCRA, and to maybe take a field trip or two to Boston’s MFA and some similar sort of place. Curiosity is required. SOPH

AFRI 1030A. Writing the Self, Changing the World. How some of the most powerful political figures from around the globe choose to narrate their life stories in memoirs and autobiographies will be the focus of this course. From Harriet Jacobs to Mahatma Gandhi to Malala Yousafzai, these renowned scholars and activists have used autobiographical writings to document their individual experiences in political movements as well as to document the personal struggles in working in search of social justice. These autobiographical writings represent a form of narrating the self that conveys not only the challenges, but also the achievements that result in changing the world. DPLL

AFRI 1050A. Advanced RPM Playwriting. Third level of RPM Playwriting; for students that have successfully completed RPM Playwriting and Intermediate RPM Playwriting (workshop). Instructor permission. DPLL

AFRI 1050B. Africana Feminism. No description available.

AFRI 1050C. Race, Gender, Ethics and Environmental Justice. African Americans, Gender, Ethics and Environmental Justice examines the role of African Americans in the larger environmental history conversation. It utilizes a gendered lens to investigate how African American interpreted their natural surroundings and contributed to the development of 20th century American environmental consciousness. This course is reading and writing intensive. WRIT

AFRI 1050D. Intermediate RPM Playwriting. Second level of RPM Playwriting; for students that want to continue developing their RPM plays or want to begin a new project (workshop). DPLL

AFRI 1050E. RPM Playwriting. Research-to-Performance Method (RPM) Playwriting guides students through the process of developing new plays that are informed by scholarly research (workshop). DPLL

AFRI 1050F. Narrating the Radical Self. How black women in the United States and elsewhere have written about their lives in autobiographies will be the focus of this course. We will discuss black women’s use of autobiographical writing to document their own individual experiences in political movements as well as to provide key insights into how black people throughout the black diaspora have organized in recent history. Enrollment limited to 20.

AFRI 1050H. Introduction to Post-Colonial African and African Diasporic Theatre. This class will explore plays/theatrical works and ideologies of a selected group of playwrights from Africa, the Caribbean, and the United States. Exploring Culture, Creativity and Theatre practices, the course will focus on the ways in which these artists have syncretically responded to varied forms of colonization and creolization. This class will also pay attention to the Post Colonial Social and historical context that continues to impact and influence these modes of artistic production.

AFRI 1050K. Special Topics in RPM Playwriting: Playwriting Strategies From Contemporary Black Theatre. A study of Aristotle’s Poetics in relation to Dubois’ four principles of black theatre and Audre Lorde’s essay “The Master’s Tools.” What makes black theatre “black”? We will analyze plays from the 20th Century African-American canon as sites of aesthetic resistance to “normative” American Theatre; and write our own one-act plays based upon our discoveries. Prerequisite: Course is restricted to students who have taken any Africana Studies RPM Playwriting course, Theatre Arts Introduction to Playwriting, Literary Arts Intermediate or Advanced playwriting courses, or has playwriting experience. DPLL LILE

AFRI 1050L. RPM Playwriting: Advanced and Staging. AFRI 1050M. Roots of African American Fiction: Oral Narrative through Richard Wright. This course will employ a variety of narrative forms -- oral folktales, WPA narratives, slave narratives, short stories by European and American writers -- will also investigate the multiple traditions of African American fiction.

AFRI 1050P. Art and Civic Engagement: Creativity/Reality. The primary objective of this course is to learn about and reflect upon public art and communities. This course will use selected public art and artists’ ideologies as a framework for exploring culture, creativity, politics and practices and focus on the ways in which these public art works and artists’ responses to varied forms of internal and external operators and stimuli successfully and unsuccessfully give voice to aspects of the environment, history, culture, social justice, health, politics and the imagination. This course will also pay attention to arts organizations, government agencies, history, power relations, human resources as well as leadership and the political that continues to influence public modes of artistic production. DPLL LILE

AFRI 1050Q. New Narratives in African American History: The Art and Craft of Poetic and Creative Non-Fiction. This seminar examines various examples of creative and poetic non-fiction, pertaining to race and the African American experience. While touching upon historic examples and precedent, emphasis will be on contemporary works, including the genres of poetry, drama, the narrative, the memoir, the travelogue and the personal essay. The course will explore what these works offer to the knowledge, popularization and perception of black history and to the shaping of cultural dialogue on blackness and race. Enrollment limited to 25. DPLL WRIT
AFRI 1050R. The History of Afro Futurism and Black Science Fiction. Any class called The History Of Afro Futurism and Black Science Fiction automatically begs the question – "Well, what isn’t futuristic about being Black in America?" The entire history of Black America can be seen as a fundamentally futurological and science fictional enterprise – a perpetual bidding on hope and struggling for change endeavor that frequently employs far flung visions of tomorrow and other more oblique speculative stratagems in pursuit of outcomes barely foreseeable in the near-present. Enrollment limited to 25.

AFRI 1050S. Comparative Slavery and Slave Revolts: Slave Rebellion in the Americas, 1725-1865. This course explores the history of slave revolts in North and South America and the Caribbean. It examines how acts of resistance transformed the lives of enslaved Africans and their relationships with white Americans, Europeans, and free and enslaved people of African descent. We will consider in what ways geography shaped the aims of a slave rebellion, how is a successful slave revolt determined, and what are the implications of slave unrest and its aftermath in local slave societies and in the Americas? This class will focus on insurrections in Jamaica, Saint Domingue (Haiti), the United States, Cuba, and Brazil. DPLL

AFRI 1050T. Slave Resistance and Moral Order in Environmental History. This course is designed to examine the avenues by which enslaved persons redefined and re-appropriated the natural landscapes that kept them in bondage into direct forms of cultural and political resistance during the antebellum period. We will investigate rice production in South Carolina, the Dismal Swamp, maroon societies, Negro Spirituals, and the Black Judeo-Christian ethic to understand how the natural environment and the institution of slavery shaped slave resistance in the United States. This course is reading and writing intensive. DPLL WRIT

AFRI 1050V. Rhythm and Resistance. This course will investigate the crucial cultural and political contributions of the African Diaspora in the formation of the contemporary Americas through an analysis of the rhythms they have produced in different national settings. We will use these rhythms as a guide to understand the peoples, places and conditions under which they were created and sustained. Through classroom discussion and historical and music-analysis students will understand the relationship of these rhythms to larger issues like nationalism, migration, colonialism, globalization, the politics of sexuality, gender and race and to understand the different meanings and practices of resistance.

AFRI 1060A. Africa Since 1950. This seminar offers a survey of post-colonial African history, while probing the challenges of writing post-colonial history. Readings and discussions will focus on histories that bridge the colonial and post-colonial periods. How robust are these periods? What can historians draw from post-colonial theory? How can historical narratives account for both the colonial legacy and post-colonial dynamism. Enrollment limited to 20; instructor permission required. Students with a background in African history or contemporary African social science will be given priority. Interested students should email the professor at Nancy_Jacobs@brown.edu. DPLL WRIT

AFRI 1060C. Contemporary African Philosophy. An examination of some of the most influential work on problems of identity and being, theology and theodicy, time and history, method and evaluation, race and racism, postcoloniality and liberation in contemporary African philosophy. Readings include the work of Anthony Appiah, Frantz Fanon, Kwame Nkrumah, Léopold Senghor, Tsenay Serequeberhan, among others.

AFRI 1060D. Harlem Renaissance. Explores the literature, music, and art of the so-called Harlem Renaissance, within the context of broader transformations in African American and American culture and politics in the decade of the 1920s. Readings include books by Langston Hughes, Zora Neale Hurston, Nella Larsen, Alain Locke, Wallace Thurman, and Claude McKay; contemporary essays, reviews and manifestoes; and recent critical studies. DPLL

AFRI 1060E. West African Writers and Political Kingdom. Do West African writers have a role to play in the changing political landscape of their countries? An examination of the ways and means through which a select group of West African writers have dealt with issues that relate to the role of the state in the management of individual and group relations, the politics of gender, civil and military relations, and the construction of new forms of civil society. Enrollment limited to 20. DPLL

AFRI 1060F. Philosophy and Race. This advanced seminar in Africana philosophy will examine critical texts and thinkers that articulate the problems, methods, and techniques for interrogating the interrelationships between the discourse of philosophy and modern conceptions of race. The seminar will move to consider contemporary engagements in this area by drawing on readings and thinkers from analytical, continental, feminist, Marxist, and pragmatist philosophical traditions.

AFRI 1060G. Black Radical Tradition. This advanced seminar in Africana philosophy will explore the contours of insurgent forms of Africana social and political philosophy. With a temporal focus on the twentieth century, we will concern ourselves with explicating the dominant themes, theoretical orientations, and methodological understandings that inform constructions and articulations of the varities of Africana feminism/womanism, black nationalism, Marxism-Leninism-Maoism, Pan-Africanism, and radical democracy. Enrollment limited to 20.

AFRI 1060H. Racial Frontier in South African History. This seminar will focus on racial categories in South Africa. We will explore dynamic categories of race from the 17th through 20th centuries. Topics include the relationship of race and class; racial violence; the transmission of culture and knowledge across racial boundaries; intimate relations over racial boundaries; segregation; and race and nation. We will give attention to critiquing the ways that historians have represented race and the ways that conceptions of the category have evolved within the discipline, but the emphasis will be on recent scholarship. Students will be expected to participate actively in the seminar, to write one book review, and one research paper. Enrollment limited to 20.

AFRI 1060L. Africana Philosophy of Religion. Who, or rather, what is God to the oppressed? This advanced seminar in Africana philosophy will examine the various theories, methods, and arguments that engage perennial questions that arise when contemplating God. The seminar will focus on questions of philosophical method and theological exposition while also being critically attuned to modes of social and cultural analysis and critique, particularly those perspectives inspired by forms of critical theory, feminist theory, and Marxist theory. Limited enrollment.

AFRI 1060K. African Literature After Achebe: Emerging African Writers. In this course we will analyze how contemporary, emerging and marginally-read African writers contest the traditional and widely-held interpretations, understanding and assumptions of African literature. We will read and think about African literature in the contemporary post-colonial and post apartheid moment in Africa. Authors discussed include Dambudzo Marechera, Zoe Wicomb and Binyavanga Wainaina, among others. DPLL LILE

AFRI 1060L. Varieties of American Philosophical Experience. In contrast to Pragmatist and European-oriented views of American philosophy, this course will emphasize the colonial dimensions and features of American philosophy that emerged out of the colonial soil of early America. Out of this soil sprang extended debates between Native Americans, Euro-Americans and African Americans over the legitimacy of the hegemony that Euro-Americans were establishing over increasing portions of North America. This course views American philosophy as having within it two opposing traditions that have been engaged in ongoing angry dialogues: the dominant or Prosperian tradition of Euro-Americans and the subjugated or Caliban tradition of Native Americans and African Americans.
AFRI 1060M. African Environmental History.
This seminar will be devoted to the study of the environment and power in the history of sub-Saharan Africa. The goals for this class are that you learn more about the history of Africa, about the ways that relations with the environment shaped its human history, about the construction of environmental knowledge and its repercussions, and about historical research.

This course also has an applied dimension. Eight African environmental professionals visiting Brown through the Watson Scholars of the Environment (WISE) program will also participate in the class. In their final course project, students will conduct research of use to the WISE fellows on historical cases related to their training at Brown. (For more information see http://www.watsoninstitute.org/ge/watson_scholars/).

This course qualifies as a capstone seminar in the history department. Enrollment limited to 20 students. Instructors permission required. Interested students should email the instructor at Nancy_Jacobs@brown.edu with a description of their interests and background.

This course draws on film, news media, scientific discourse, and social theory to engage biomedicine’s most controversial investigations of race and the social scientific questions they have provoked. The course asks: How is contemporary science imagining, constructing, and producing knowledge about race? What are the social, political, and cultural implications of this knowledge? Students will be introduced to important science studies methods that we will apply to historical and contemporary research agendas. No prior knowledge of science or racial theory is required. Enrollment preference will be given to juniors and seniors. Limited to 20. DPLL

AFRI 1060R. Comparative Africana Literatures and Criticism.
Caribbean, African American and African literature has been called engaged literature with explicit commitments to memory, history and ways to think about the political. This course will explore a set of writers, their novels, critical essays and their practices of criticism. It will examine anti-colonial, post-colonial writers as well as African American writers who in the words of Toni Morrison, "rip that veil drawn over proceedings to terrible to relate." We will in this course read the works of George Lamming, Patrick Chamoiseau, Toni Morrison, Richard Wright, Edwidge Danticat, Yvonne Vera, Zoe Wicomb and Njabulo Ndebele.

AFRI 1060T. South Africa since 1990.
South Africa transformed after 1990, but the past remains powerful. This seminar explores the endurance and erosion of the apartheid legacy, as expressed in historical and fictional narratives. We begin with transition to majority rule and continue with the administrations of Mandela, Mbeki, and Zuma, connecting the formative histories of these leaders with the changing dynamic of politics. We end with narratives about the ways that ordinary people experienced new times. The syllabus includes scholarly works in history and politics, biography, fiction and film. Two short writing assignments and a major research paper. Enrollment limited to 20 juniors and seniors. DPLL WRIT

AFRI 1060V. Black Transnationalism.
This seminar will explore the complex dynamics of black transnationalism during the 20th century, focusing on the circulation of ideas and practices by Africans and African-descended communities; how they were contested and reconfigured as they flowed back and forth. Particular attention will be paid to some less-examined archives, interpretations and perspectives; ideas of black women activist-scholars; aesthetic practices, sonic regimes and religion; insights and experiences of those who lived diaspora. Seminar readings and discussions will introduce and "trouble" some key theoretical issues in the notion of black transnationalism, e.g. diaspora, Pan-Africanism, globality, translocalism, identity, articulation, and solidarity. Enrollment limited to 20.

AFRI 1060W. Policy, Culture and Discourse that Shape Health and Access to Healthcare.
The global discourse on health and access to healthcare are shaped by narratives that often conflate health with being about the healthcare system rather than about where we live, the policies, the politics, and narratives/discourse that shape them. Global health also tends to promote a perspective that it is about those people over there and has nothing to do with us here. This course will create a platform that ties the global to the local. We will discuss how political and cultural discourse on race, class, and gender create the conditions that allow social inequalities to thrive.

AFRI 1060X. African Development.
Course takes an interdisciplinary approach to introduce contemporary development issues in Africa. Drawing on literature from political sciences, economics, sociology and history, it explores the challenges of development in the continent since independence, as well as investigates the influences of governance, institutions, conflicts and external forces in Africa’s development trajectories. This is an applied course that would utilize both theoretical and policy analytical approaches to examine the political and socioeconomic dynamism in contemporary Africa. This course is guided by questions, such as: Why have most African countries remained underdeveloped, poor and susceptible to conflicts (many of which seem intractable)? DPLL

AFRI 1060Y. Sex, Violence and the Policing of Black Struggle.
This seminar considers some of the historical dimensions and diverse manifestations of the relationship between sex and violence across the eras of black social movement in order to inquire into the nature of a society structured in antiblackness. We consider violence, gender, sex, and freedom across an interdisciplinary terrain, dealing with problems of representation, punishment, policing, and self-determination. The real significance of iconic black lives lost to policing in recent days and years lies within this realm of sexual violence, beyond an examination of law and policing.

AFRI 1070. RPM: Traditional and Contemporary Elements of Intertribal Indigenous Theater in America.
Utilizes Rites and Reason Theater’s research-to-performance method of developing new play scripts to examine the development and relationship of the colonial Euro-American art form, theatre, to its existence within the Indigenous intertribal (Native American Indian) communities in America. DPLL

From the publication of The Souls of Black Folk in 1903 until his death in Ghana sixty years later, W. E. B. Du Bois remained one of America’s most penetrating analysts of what he called "the color line." Students read and discuss a selection of Du Bois’s writings from his career as journalist, essayist, sociologist, historian, poet, political leader, and pioneering Pan-Africanist. Prerequisite: one course in AC, AF or US History. DPLL

Lecture course that examines the extended history of the mass civil rights movement in the U.S. Starting at World War II, we consider the roles of the courts, the federal and state governments, organizations, local communities, individuals and various activist strategies in the ongoing struggle for African American equality, focusing on African American agency, particularly in the South, but also in Boston, Mass. Sources include photographs, documentaries, movies, letters, speeches, autobiographies, and secondary readings. Requirements: Weekly readings, documentary viewings, 4 short papers, 2 exams. DPLL

AFRI 1110. Voices Beneath the Veil.
Thirty plays, written by Afro-American playwrights and presented on the American stage between 1858 and the 1990s, are examined as cultural and historical documents of Afro-American realities. Supplementary readings from the humanities and social sciences provide critical framework for in-class discussions and student papers. Instructor permission required. WRIT DPLL
AFRI 1120. African American Folk Traditions and Cultural Expression. A research, development, and performance workshop designed to explore, examine, and articulate various folk traditions and cultural expressions of African Americans. Readings include slave narratives, folktales, and the works of Hughes, Hurston, Bass, and Baraka. Topics covered are music as the African American language of choice; Africanisms in Afro-American culture; and race, color, class, and culture. Instructor permission required.

AFRI 1140. Women, the State and Violence. Examines the role of black women in 20th-century political movements, including with the turn-of-the-century anti-lynching campaigns, the southern civil rights movement, the black liberation movement, and contemporary educational activism for human rights. Central concerns include history of American radicalism and analyses of antiracist experiences, and the politics stemming from African American women's leadership. Prerequisites: AF 150 and/or AF 125. DPLL

AFRI 1150. Afro-Caribbean Philosophy. An introduction to the field of Afro-Caribbean philosophy. The first half focuses on the history of the field, identifying its African background and surveying some of its major schools, such as the Afro-Christians, the positivists, the humanists, and the existentialists. The second half consists of a more intensive comparative focus on the ontologies and epistemologies of two of these schools. DPLL LILE

AFRI 1160. Public Health in Africa: History, Politics, and Practice. Examines the ways in which medical knowledge has been produced in sub-Saharan Africa. Treats all medical discourses and practices—including biomedicine and "indigenous" and pluralistic medicines—as culturally-based systems of knowledge production. Explores the political economy of health and disease and the role of medicine and medical practices (hygiene, epidemiology, demography) in producing and maintaining power in both the colonial and postcolonial periods.

AFRI 1170. African American Women's History. Recovers black women's history and renegotiates American history. Throughout the seminar, discussions will analyze the various tensions that complicate black women's lives, from accommodation to resistance, or gender issues versus racial issues, or the class tensions that pervade the African American community. Through the series of readings loosely hinged around themes and concepts, students will gain knowledge and understanding of the rich social, intellectual, political and economic networks and activities that African American women undertook on a daily basis in order to survive, progress and uplift. The course ensures the development of a broader and more comprehensive grasp of the complexities African, racial and gender histories. Must have taken at least one Women's History course and one U.S. history course. Enrollment limited to 20. DPLL LILE WRT

AFRI 1180. Visual Cultures of the Afro-Americas. This course will examine how the visual modalities of power operate to ascribe, authenticate, and contest meaning within the Afro-Americas, understood here to include Afro-Caribbean, Afro-Latin American and African-American cultures. We will query the complex histories and technologies that constitute the social life of vision in the Afro-Americas, while cognizant of the fact that the field of visuality cannot be understood from single point of view. We will consider images made of and images made by peoples of African descent throughout the Americas as we attend to the reception, interpretation and reproduction of images, as well fields of invisibility. Enrollment limited to 20 juniors and seniors.

AFRI 1190. Haiti, "A New World, A Free World": History, Art, Politics and Revolution. This course will examine the dual Haitian Revolution as a pivotal moment in the making of the modern world. It will review the various historical interpretations of the Haitian events, examine how these events contribute to or troubles our ideas about modern politics and notions of freedom as well as our conceptions of revolution. The course will engage in these issues by working through three archives: Vodou Religion; The Art of the Revolution and the conventional historiography about the revolution, and will be held to the hosting of a joint Brown/RISD exhibition on Haitian Art. Enrollment limited to 15 juniors and seniors concentrating in Africana Studies, Visual Art, or History; and 15 RISD students.

AFRI 1210. Afro-Brazilians and the Brazilian Polity. Explores the history and present-day conditions of Afro-Brazilians, looking specifically at the uses of African in contemporary Brazil, political and cultural movements among Afro-Brazilians, domestic politics and its external dimensions, and Brazilian race relations within a global comparative framework. Texts from a variety of disciplines. A reading knowledge of Portuguese is not required but students so advantaged should inform the instructor. DPLL

AFRI 1250. Women in the Civil Rights Movement. This seminar focuses on women in the civil rights movements, spanning the years of 1955-1968. This course examines issues of gender, race, sexuality, social protest, nonviolent civil disobedience and self-defense during the height of activism against apartheid in the United States and for civil rights.

AFRI 1260. The Organizing Tradition of the Southern Civil Rights Movement. This seminar aims to fill in some of the gaps of the official canon by emphasizing that the modern (1954-1966) southern civil rights movement was not as it is mainly portrayed, a movement of mass protest in public spaces led by charismatic leaders; but rather, a movement of grassroots community organizing - quiet day-to-day work. Enrollment limited to 40.

AFRI 1280. Writing About Race in the Post Civil Rights Era. This seminar is an explanation of the transformation of racial policies, relations and rhetorics since the end of the civil rights era in the United States. We will examine the complex ways race has remained central to US society and yet has dramatically shifted examining terms such as: color-blind society; integration; political race, racialized (and gendered) community formation. Enrollment limited to 20. WRT

AFRI 1360. Africana Studies: Knowledge, Texts and Methodology. This course will explore the issues of Africana Studies as a discipline by engaging in a series of critical readings of the central texts, which laid the protocols of the discipline. The course will also raise issues of knowledge production and methodologies. This course is a senior capstone seminar. Open to all senior Africana Studies concentrators; others by instructor permission only. Enrollment limited to 25. DPLL LILE

AFRI 1410. Africans and the West: Studies in the History of Ideas. This course will examine the political thought of a selection of Africana thinkers from the period of slavery to the 20th century. It will examine the political thought of thinkers like, Franz Fanon, Ida B. Wells, Cugoano, CLR James, W.E.B. DuBois and Rastafari. The course will be an exploration of black radical intellectual tradition and its different meanings. DPLL

AFRI 1440. Theorizing the Black Diaspora. This seminar will focus on the theorization of the black diaspora as a way to explore the various articulations of colonialism, gendered racism and resistance against that racism throughout African-descendant communities. Course readings will highlight the scholarship of black women who have contributed to the internationalization of radical black vis-a- vis theories of diaspora, transnationalism, transformative politics, identity formation, and community.

AFRI 1470. Southern African History. This course examines major themes of the history of southern Africa from the earliest times until 1994, with a heavy emphasis on historiographical debates. Our discussions of the Southern African past will always be informed by a consideration of the approach of the scholars who have interpreted and presented it as history. Our major questions concern the origins of his human rights and the creation of racial groups. We will probe the significance of race in South African history but also the limitations of its explanatory power. Readings are arranged at three levels. First, we will be reading primary sources, to gain experience in working with the evidence that informs historical work. Second, we will be working through a concise textbook that summarizes the major themes of South African history. Third, we will be reading specialized scholarly books and articles, chosen to illustrate recent discussions about the interpretation of South Africa's past. The course will meet twice a week for lecture and discussion groups will meet once a week.
AFRI 1500. Incarceration, Education, and Political Literacy.
This seminar (w/out audits) in politics and social justice is open to juniors/ seniors. Captivity has become a critical political-social phenomenon in U.S. democracy, given that the United States has over two million people in prison/jails/INS detention centers. This two-part, one-year long course examines and maps (using cyber technology) captivity and criminality in the United States, focusing on race, gender, politics and literacy. Students are strongly urged to take both semesters; the second semester course as practicum, with training in cyber-technology and community-based learning/literacy, is open only to those who complete the fall course (Pt I) and the grade option for the second part of the course will be S/NC. Pre-Semester writing assignment required; see syllabus on WebCt for details.

AFRI 1500A. Black Life in the Post-Industrial City.
This course explores key themes in African American life in post-industrial U.S. cities. Relying on scholarly and historical sources and films, we will examine the complicated interplay of race, class, ethnicity, and gender dynamics in the transformation of black urban life in the late twentieth-century, the structures that have defined black urban life, and various expressive cultures and modes of resistance that have emerged out of the urban context. While not required, it is beneficial for students to have a working knowledge of twentieth century American history, and African American history in particular. DPLL

AFRI 1500B. Black Women Thinkers: Alternative Genealogies of Black Radical Thought.
This seminar examines contributions of Black women as major thinkers within the Black radical tradition, and provides a critical genealogy of Black feminist activists, writers and scholars contributing to social movements in the 20th century. Throughout the course, we will ask the following questions: What methods do Black women use to form critical thought? How is Black women’s knowledge disappeared and devalued within academic and activist contexts? Finally, how can we recover and center those histories within our work? Assignments include short writing assignments, a final paper, and a collaborative digital humanities project. Introduction to Africana Studies preferred. DPLL WRIT

AFRI 1540. Black Popular Cultures.
This course is an historical and topical examination of the development of black popular cultures. We will explore the debates about popular culture and specifically examine the ways that race (as well as gender, sexuality and class) shape these debates. In addition we will explore specific black popular cultural practices (music, dance, film, radio, theater, etc.) as well as the larger contexts for their production and reception. Instructor permission required.

The aim of the course is to introduce students to novels like Head's A Question of Power, El Saadawi's God Dies by the Nile, Adoche's Half of a Yellow Sun and other major prose works by contemporary African women writers. It will present the African woman as a writer, her environment and her commitments. The emphasis is on the writing of continental African women, but will include works of other women writers. For a brief but necessary historical background to the course, it will be introduced with selections from Margaret Busby's Daughters of Africa. Enrollment limited to 25. DPLL LILE

AFRI 1600. History, Nation, Popular Culture and Caribbean Politics.
Examines Jamaican popular music as an ideological site of resistance to Creole nationalist versions of Caribbean history and politics. It grapples with the meanings of race, history, and nation-state as contested notions in Jamaican/Caribbean society tracing an alternative genealogy of Caribbean history and politics. DPLL

Examines the development of a unique African-American cultural and political identity in New Orleans. The seminar focuses on the development of the Faubourg Tremé, the oldest free black community in the United States, and covers the period from 1718 until 1899. Topics include: slavery and resistance; relations between enslaved and free blacks; social and political agitation; and the resulting early development of the nation's Civil Rights movement and legislation. There is discussion also of the formation and continued tradition of artists’ and artisans’ guilds; Creole language (e.g., Creole slave songs, proverbs); NOLA relationship to the Caribbean and Latin America. Enrollment limited to 20. DPLL

Focus on origins of Modernism among Africana authors of the Americas, with emphasis on the poetry, poetics and poetry movements of Brazil and Latin America, the Caribbean and US from 1888 through the first half of the 20th century. Begins with an overview of innovations wrought by Rubén Dario of Nicaragua, arguably the first modernist poet, and continues with the Harlem Renaissance of the 1910's and 20's; the Brazilian writers at the center of the Week of Modern Art of 1922; Caribbean writers of the Negriamo and Négritude movements; concludes with the work of such US and Anglophone Caribbean poets as Gwendolyn Brooks, Robert Hayden and Martin Carter. Enrollment limited to 20. DPLL

This course on the history of Africa begins as European empire unraveled after the Second World War and ends with a look toward the future. Development was high on the international and national agenda in the mid-twentieth century, but the most conspicuous outcome of the following decades was dependency and decline. Yet the story is more mixed than has been represented in American headlines; it was not one of pre-determined and constant failure. More than ever, at the beginning of this new millennium, conditions across the continent have diverged. What are current signs for future development or continuing crisis? WRIT

AFRI 1710A. Political Visions and Community Formations.
This course aims to consider the depths of connection between forms of racialized, gender, class and sexual oppression vis a vis the creation and maintenance of community and intimate social bonds among the oppressed. We will read sociologists, historians and others who have worked at this intersection and musicians and writers such as: Morrison, Barbara, Baldwin, Hill-Collins, Hansberry, soul and neosoul artists. Instructor permission required. Enrollment limited to 20.

A lecture course examining the history of Eastern Africa from earliest times until 1963. The area includes the Great Lakes region, the Horn of Africa, Madagascar, and the East African Coast. The major topics are: precolonial interactions, the development of states and stateless societies, contact with other Indian Ocean people, the slave trade, colonial rule, and independence movements. DPLL

AFRI 1800. Race, Empire and Modernity.
Taking Cicero's notion of empire as "ways of life", this course will survey the history of empires as forms of rule. It will explore how race has been deployed in the various types of empire. The course will pay particular attention to empires in modernity since 1492. The course will think about the various technologies of rule and their discourses of power. DPLL

This course examines some contemporary responses to the human condition in Africa. Topics will include Democracy, human rights, instability, social justice, identity, community and solidarity. These topics will be approached through the works of Canonical figures such as Leopold Senghor, K. Nkrumah, Frantz Fanon, Steve Biko and the recent analytical (T. Kiros), Hermeneutical (T. Serequeberhan), Existential (L. Gordon) Historicism and poeticism (P. Henry) and Postcolonial Mislocation (M. Diawara). DPLL LILE
AFRI 1850. The Civil Rights Movement: History and Legacy.
Explores the origins, conduct and complex legacy of the Civil Rights Movement. Topics include: historical roots of the movement; the campaign against legal segregation; the birth of S. N. C. C.; Black Power; the impact of the Cold War, Vietnam and the coming of African independence; and the movement’s impact on other political struggles, including movements among women, Latinos, and Native Americans. DPLL

AFRI 1900. Philosophy, Literature and the Caribbean Novel.
This is a thematic course on the philosophical and literary themes which emerge from the Caribbean novel and writing in general. DPLL LILE

AFRI 1905. History and Memory in Africana Literature.
Focuses on the close reading of nine works by writers of African descent - encompassing a variety of eras, forms and genres, stretching from the slave narrative to more contemporary settings. The thrust is to examine how each writer wrestles with issues of history and memory, with particular attention to the sometimes explicit, sometimes implicit interest in ideas and modes of expression that are rooted in African culture. Enrollment limited to 20 sophomores, juniors, and seniors; preference given to Africana Studies and English concentrators.

AFRI 1970. Independent Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

This course will be a close reading of the various ideas, theories and practices of the thinkers, writers, artists and activists whose work and practices have constituted an Africana intellectual tradition. In conducting this review we will examine questions around the formation and the history of thought and intellectual traditions in general. We will also think about the various fields of knowledge which have shaped Africana thought. The course therefore will spend some time working through the different meanings of intellectual work and critical thought and theory. Enrollment limited to 12 graduate students.

A preoccupation of Africana Studies involves the central, highly contested role of the notion of what constitutes black culture in the modern world. To what degree can we claim aesthetic and other distinctions between black cultures in the Diaspora and other Western cultural practices and expressive forms? What role did enslavement, forced migration and segregation play in shaping Africana culture in the modern world? These cultural debates play a central role in literary, musical, philosophical, aesthetic, historical and sociological analyses of the culture of people of African descent. Open to upper level Africana concentrators with instructor permission.

Race and the Modern World is a team taught interdisciplinary graduate seminar that critically examines the intersections of ideas, institutions, ideologies, and practices that have defined race and processes of racialization in the modern era. The seminar will closely examine the theoretical and methodological issues in the critical study of race; the politics and political theories of race; the imbrications of discourses of race, culture, and public life; the political economy of race; and the intellectual history of the discourse of race with an emphasis on the university as a key site in the production of racial knowledge. Enrollment limited to 20.

AFRI 2101. Africana Studies and Interdisciplinarity.
This graduate seminar brings together various methodological and theoretical approaches to interpreting Africana life, culture, thought, and politics. Placing special emphasis on emergent scholarship that shapes and reshapes the discipline of Africana Studies, we examine a selection of humanistic and social scientific studies of various local, national, and international contexts. Texts demonstrate the ways in which innovative interdisciplinary methods are crucial for understanding the complexity of the Africana world. We will give attention to the strategies scholars utilize to formulate their research questions, design their methodologies, and create new ideas that contribute to the advancement of Africana Studies scholarship. Enrollment limited to 20.

AFRI 2102. Interdisciplinary Methods and Africana Studies.
This graduate seminar focuses on interdisciplinary methodology and Africana Studies. The seminar explores how students and scholars in Africana Studies use interdisciplinary methods developed in the social sciences and the humanities in novel and innovative ways. Students will critically examine key methodological issues in Africana Studies and how and in what ways these issues are similar to and differ from such disciplines as economics, history, sociology, and literature. Prerequisite: a prior undergraduate or graduate level methods in Humanities or Social Sciences. Enrollment limited to 20.

AFRI 2104. Theorizing the Black Diaspora.
This seminar will focus on the theorization of the black diaspora as a way to explore the various articulations of colonialism, gendered racism and resistance against that racism throughout African-descent communities. Course readings will highlight the scholarship of black women who have contributed to the internationalization of radical black vis-a-vis theories of diaspora, transnationalism, transformative politics, identity formation, and community. This course is open to upper level concentrators in Africana Studies by permission of instructor. Enrollment limited to 20.

AFRI 2450. Exchange Scholar Program.

AFRI 2502. Race and Nation in the Spanish Caribbean.
For five centuries, the Caribbean has stood at a crucial crossroads in the unfolding history of the Americas, Europe, and the African diaspora. This seminar engages in a comparative survey of the interwoven dynamics of race and national construction in the making of the Spanish-speaking Caribbean. The focus of the seminar will be placed on the on-going centrality of race in these island nations. Drawing on a range of readings in history, music, poetry and anthropology, this course will explore the overlapping historical contexts of Cuba, Puerto Rico, and the Dominican Republic.

AFRI 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

AFRI 2980. Graduate Level Independent Reading and Research.
A program of intensive reading and research. Section numbers may vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

AFRI 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the Registration Fee to continue active enrollment while preparing a thesis.

AFRI XLIST. Courses of Interest to Concentrators in Africana Studies.

Fall 2016
The following courses may be taken for concentration credit. Please see the sponsoring department for the time and location of each course.

Comparative Literature
COLT 0711E Reading and Writing African Gender

Development Studies
DEVL 1700 Beyond Sun, Sea and Sand: Exploring the Contemporary Caribbean

English
ENGL 0710Q American Literature and the Era of Segregation
ENGL 1710P The Literature and Culture of Black Power Reconsidered

Spring 2017
The following courses may be taken for concentration credit. Please see the sponsoring department for the time and location of each course.

Biology
BIOL 1920B Health Inequality in Historical Perspective

English
ENGL 1710J Modern African Literature
ENGL 1711E African American Literature After 1975

Public Policy
PLCY 1701W Race, Gentrification, and the Policing of Urban Space
American Studies

Chair
Matthew Guterl

The Department of American Studies at Brown remains committed to the interdisciplinary study of the American experience, drawing on a range of methodologies and practices to understand American society and cultures. As one of the oldest departments of American Studies, Brown’s program has an almost seventy year history of activist teaching faculty fully engaged in research; prize-winning and productive graduate students who now teach their own students around the world; and curious and exciting undergraduates who use their educations in a range of fields from medicine to law; from social work to library science. In 2005, in collaboration with the Center for Public Humanities (http://www.brown.edu/academics/public-humanities), that administers the degree program, American Studies began an A.M. in Public Humanities, based on our revitalized undergraduate curriculum that fosters a publicly engaged scholarship and the John Nicholas Brown Center’s mission to support and strengthen the work of arts and cultural organizations that strive to preserve, interpret, and make the humanities, meaningful and accessible. Faculty and students have together pioneered new avenues in transnational research, exploring the role of the United States in the world and the importance of the world in the United States, and expanded our research and teaching into digital scholarship.

For additional information, please visit the department's website: http://www.brown.edu/Departments/AmCiv/

American Studies Concentration

Requirements

The concentration in American Studies seeks to understand American society and cultures as emerging from historical and contemporary processes at work in local, national, and global contexts. Concentrators study four broad themes: social structure and the practices of identity, space and place, production and consumption of culture, and science, technology, and everyday life. The concentration is predicated on the ideal of scholarly engagement with the public, so students take junior seminars that engage some aspect of the public humanities such as public policy, memorialization, community studies or civic engagement. Study abroad is supported and encouraged.

Interested students may contact Professor Haviland (beverly_haviland@brown.edu?subject=American Studies concentration), the director of undergraduate studies.

A concentrator in American Studies will be able to:

• Analyze texts, contexts, and data from multiple disciplinary and historical perspectives
• Synthesize research as verbal, visual and/or digital presentations
• Explore the theory and/or practice of the engagement of scholarship with a broader public
• Understand how American society and cultures have been and are being shaped by global flows of people, goods and ideas
• Experiment with new media as critical tools for scholarship

Concentrators have gone on to a vast variety of careers, including law, public humanities, politics, public service, academics, business, creative arts, and medicine.

Requirements:

Each concentrator will take 10 upper-level courses, four of which must be seminars, including a Junior Seminar and a Senior Seminar. In addition, students who wish to graduate with honors are required to take two semesters of AMST 1970 for a total of 12 credits.

Each concentrator will create an individual FOCUS consisting of at least three courses in consultation with the Concentration Advisor. The focus is the flexible core of the concentration. Here each student builds a coherent and dynamic interdisciplinary structure of related courses that develops his or her compelling interest in some aspect of American experience.

All seniors in the class of 2013 forward will be required to do a capstone electronic portfolio.

Some concentrators may elect to do an Honors Thesis and are encouraged to take AMST 1800, the Honors Seminar, in the Spring of their Junior year. Students pursuing honors are required to take two independent study courses in their senior year, in addition to the regular concentration requirements, in order to write their honors thesis.

Requirements for the American Studies Concentration

Junior Seminar: A course from the AMST 1700 series, for example: 1

Two additional upper-level seminars taken from the AMST 1700, AMST 1800, or AMST 1900 series 2

Six upper-level lectures or seminars numbered between AMST 1000 and AMST 1900, including those AMST 1900s listed above 6

1 Students who wish to graduate with honors are required to take two independent study courses in their senior year in addition to the regular concentration requirements.
2 Honors students must take two additional seminars.
American Studies at Brown is concerned with four broad themes:

- **Social Structures and the Practices of Identity**: How do communities and individuals come to define themselves, and how do others define them, in terms of, among other categories, nation, region, class, race, ethnicity, gender, sex, religion, age and sexuality? How do organizations and institutions function socially and culturally? What are the roles of social movements, economic structures, politics and government?

- **Space and Place**: How is space organized, and how do people make place? This includes the study of natural and built environments; local, regional, national and transnational communities; and international and inter-regional flows of people, goods, and ideas.

- **Production and Consumption of Culture**: How do people represent their experiences and ideas as culture? How is culture transmitted, appropriated and consumed? What is the role of artists and the expressive arts, including literature, visual arts and performance?

- **Science, Technology, and Everyday Life**: How does work and the deployment of science and technology shape American culture? How do everyday social practices of work, leisure and consumption provide agency for people?

**WHAT we study**

American Studies at Brown is an interdisciplinary, comparative concentration that examines the construction of race and ethnicity in social, cultural, historical, political, and economic contexts. Concentrators develop individual programs based on areas of focus in consultation with faculty advisors, drawing from courses in the humanities and social sciences. Typical areas of focus are social issues (such as inequality, education, or health), cultural production and the representation of racial groups, processes of racialization, the historical formation of transnational communities and of diaspora, and the history of particular ethnic or racial groups.

**Ethnic Studies Concentration Requirements**

Ethnic Studies is an interdisciplinary, comparative concentration that examines the construction of race and ethnicity in social, cultural, historical, political, and economic contexts. Concentrators develop individual programs based on areas of focus in consultation with faculty advisors, drawing from courses in the humanities and social sciences. Typical areas of focus are social issues (such as inequality, education, or health), cultural production and the representation of racial groups, processes of racialization, the historical formation of transnational communities and of diaspora, and the history of particular ethnic or racial groups.

The Ethnic Studies concentration (https://www.brown.edu/academics/american-studies/ethnic-studies) at Brown emphasizes the histories of diverse racial groups within and across the borders of the United States, including examining issues of diaspora, migration, social movements, and the political economies of social inequality and racial formation. Concentrators strive for intellectual fluency in a range of critical approaches to race and ethnicity across disciplines, and demonstrate this fluency through the composition or creation of a significant piece of original research or creative work.

Brown University established an Ethnic Studies concentration in 1996, originally within the Center for the Study of Race and Ethnicity in America (https://www.brown.edu/academics/race-ethnicity) (CSREA). In the Fall of 2013, as part of changes to the CSREA and to better support students, Ethnic Studies joined a long-established Brown department, American Studies (https://www.brown.edu/academics/american-studies/home). Many American Studies faculty members (https://www.brown.edu/academics/american-studies/people) work in the areas of race and ethnicity and have held joint appointments in Ethnic and American Studies while American Studies PhD students (https://www.brown.edu/academics/american-studies/graduate-students) have done some of the most exciting Ethnic Studies research on campus. Faculty and students in Ethnic Studies and American Studies are eager to see how the two programs move forward together.

As an academic field, Ethnic Studies is rooted in the protests of the 1960s and 1970s, out of which emerged the very first Latino/a Studies, Asian American Studies, African American Studies, and Native American studies programs. Organized around straightforward political goals – the enrichment through diversification of the curriculum and the systematic, multi-disciplinary, and the often comparative study of racial and ethnic inequality – Ethnic Studies has become an important feature of major research universities.

Faculty, both core and affiliated, create and participate in groundbreaking Ethnic Studies scholarship. Areas of faculty research include borderlands history, Latina/o literary studies, and indigenous movements. Students can focus in Native American, Asian American, or Latino Studies and choose a thematic interest including such current examples as: “social issues affecting racialized groups” (students have looked at health disparities or educational inequality); “the study of cultural production or
cultural representations;” “the history of a particular racial or ethnic group;” and “the study of comparative processes of racialization.”

Requirements:

ETHN 0500 Introduction to American/Ethnic Studies 1
Any two introductory courses in Latino/a, Africana, Asian-American, or Native American Studies. The courses in the list below are examples of these courses. Other courses may be approved by the Advisor.

AFRI 0090 An Introduction to Africana Studies
A course from the AMST 1610 series, as approved by the concentration advisor

ANTH 1121 From Coyote to Casinos: Native North American Peoples and Cultures
SOC 1270 Race, Class, and Ethnicity in the Modern World
ANTH 1400 Race, Culture, and Ethnic Politics or ANTH 1420 Ethnicity, Race, and Gender in the Americas

Courses taught by core Ethnic Studies faculty may be recognized in consultation with concentration advisor.

Any three courses in Ethnic Studies that address the student's focus area (as approved by the concentration advisor), for example:

ETHN 0909A The Border/La Frontera
ETHN 0909B Critical Mixed Race Studies in the Twenty-First Century
ETHN 0907A Introduction to Latino/a History
ETHN 0907B Ethnic Writing
ETHN 0907C Introduction to Latino/a Cultural Studies
ETHN 0909A Native Americans and the Media
ETHN 0909C Theory Into Practice: Service Learning at a Dual Language Charter School
ETHN 0909D Race and Remembering
ETHN 0909E Hip Hop Music and Culture
ETHN 0909F The Research Process: Qualitative and Ethnographic Methods
ETHN 0909G Race and Language in the United States
ETHN 0909H Race in the Americas
ETHN 0909J Immigrant Social Movements: Bridging Theory and Practice
ETHN 0909K Ethnic Los Angeles
ETHN 0909L Latino/a Communities Seminar
ETHN 0909M Native North Americans in the Media: Representations and Self Representations in Film
ETHN 0909N Chicana/o Fiction
ETHN 0909O Queer Latina/o Literature and Theory
ETHN 0909P Eating Cultures
ETHN 0909Q Reading Race: Advanced Seminar in Critical Race Theory
ETHN 0909R Seminar on Latino Politics in the United States
ETHN 0909S Native American and European Contact in Early North America, ca. 1600-1750
ETHN 0909T Business, Culture, and Globalization: An Ethnographic Perspective
ETHN 0909U Indigenous Music of the Americas
ETHN 0909V Johnny, Are You Queer: Narratives of Race and Sexuality

ETHN 1890F Bad Boys and Bad Girls in Asian American Literature and Culture
ETHN 1890G Native Americans in the Media: Representation and Self-Representation on Film
ETHN 1890H Introduction to American Indian Studies
ETHN 1890J Native American Environmental Health Movements
ETHN 1890K Engendering Empire
ETHN 1890L (De)Colonizing Women: Writing the Third Space
ETHN 1890M Treaty Rights and Food Fights: Eating Local in Indian Country
ETHN 1890N Thawing the “Frozen Indian”; American Indian Museum Representation
ETHN 1890O The Latina/o Novel
ETHN 1890P Introduction to Native American Literature
ETHN 1890Q The Hispanic Caribbean and its Diasporas
ETHN 1890R Latina Feminisms
ETHN 1890S Youth, Art, Engagement and Social Justice
ETHN 1890U Extravagant Texts: Reading the World Through Asian American Literature
ETHN 1892 Race, Class and Gender in Latino Communities

Any three courses drawn from a list of related courses (as approved by the concentration advisor), for example:

ETHN 1900A Alien Nation: US Immigration in Comparative Perspectives
ETHN 1900B Community, Language and Literacy: A Practicum
ETHN 1900C Contemporary Latino/a Education in the United States
ETHN 1900D Latino Communities Seminar
ETHN 1900E Senior Seminar in Ethnic Studies
ETHN 1900F Theory, Creativity, Activism
ETHN 1900G Race and Immigration in the Americas
ETHN 1900H What is Ethnic Studies?
ETHN 1900I Transpacific Asian American Studies

Students in the concentration should also take a WRIT course from within the concentration, from a list of cross-listed courses, or from a course approved by their advisor. Students should also be sure to take a methods course.

Total Credits 10

1 To be taken in the first semester of the student's final year. The senior seminar is the capstone course and is required of all concentrators.

Honors

Candidates for honors must have at least a B+ average in the concentration and be approved by the Concentration Committee. Honors candidates will propose a thesis project to be completed by the end of their final semester. The development of a thesis project will begin during the sixth semester. Honors candidates will have two readers, at least one of whom must be Ethnic Studies core faculty.

Concentrators who choose not to request consideration for honors will be required to complete a major essay or project by the end of their final semester. The essay or project can be the result of major work completed in the senior seminar.

Students seeking information about the Ethnic Studies Program or in need of advising should contact (401-863-7034).
American Studies Graduate Program

The department of American Studies offers graduate programs leading to the Master of Arts (A.M.) in American Studies, and the Doctor of Philosophy (Ph.D.) in American Studies. For more information on admission and program requirements, please visit the following website:

http://www.brown.edu/academics/gradschool/programs/american-studies

In collaboration with the JNBC, who administers the degree program, the department of American Studies also offers the Master of Arts (A.M.) in Public Humanities.

For more information regarding admission and Public Humanities program requirements please visit: http://www.brown.edu/academics/gradschool/programs/public-humanities

Courses

American Studies

AMST 0150B. Boston: A City Through Time.
This interdisciplinary seminar for first year students will examine the City of Boston from its seventeenth-century origins to the present day. Among the topics covered will be architecture, city planning, physical expansion, political leadership, urban renewal, historical preservation, park development, racial and ethnic tensions, and suburban sprawl. Includes a Boston tour. Enrollment limited to 20 first year students. FYS

AMST 0150C. Bodies of Knowledge: Gender, Race and Science.
This course examines how science and medicine have located racial and sexual differences in the human body and gendered the natural world from the seventeenth through the twentieth centuries, with a focus on the nineteenth and twentieth centuries. We will consider historical changes in the production of scientific knowledge about gender, race, and sexuality, as well as debates about who participates in scientific work. FYS

AMST 0150D. The West in the American Imagination.
No region has such a purchase on Americans' collective imagination as the West. No region is so drenched in misrepresentation and mythology. In this seminar, we will use fiction, film, and works of history to explore the American West as both historical reality and wellspring of collective myth. Enrollment limited to 20 first year students. FYS

AMST 0150F. What Does A Woman Want?
This course is an introduction to psychoanalysis and its vexed and productive relationships to women and feminism. Freud asked his famous question: "What does a woman want?" after years of clinical practice and theoretical speculation. Woman's desire remained a mystery to him, but the attempt to solve it has given rise to a rethinking of human sexuality, gender, of social structures, and of creativity. We will read foundational texts by Freud and by feminist disciples and critics of psychoanalysis theories. The literary texts will be read as critiques of theoretical positions, as well as examples of particular historical constructions of gender. The course is broadly interdisciplinary and explores the boundaries and intersections of different disciplinary practices and frameworks. Enrollment limited to 20 first year students. FYS

AMST 0150J. The Boy Problem.
Focusing on the beginning, middle, and especially concluding decades of the 20th century, this course examines the ways in which both expert and popular discourse in the US have conflated male adolescence with social pathology and have constructed an image of the teenage boy as both symptomatic of and responsible for the nation's ills. Particular attention will be paid to issues of gender, race, and class. Primary source readings and original research will be emphasized. Enrollment limited to 20 first year students. FYS

AMST 0150K. Culture, Communities, and Change.
Studying varied organizations such as museums, community arts groups, rock bands, and dance companies, this seminar works on three levels. Students consider the role of cultural production in local, national, and international economies and lives; think about methods for studying creative communities; and write the "biographies" of Providence cultural organizations. Issues of tourism, representation, hierarchy, urban space, and social change as well as questions about who puts culture to work and the role of cultural workers will be addressed. We will consider public humanities, engaged scholarship and community organizing as methods as we explore the Providence cultural scene. Enrollment limited to 17 first year students. FYS WRIT

AMST 0150L. Object Histories: The Material Culture of Early America (HIST 0550A).
Interested students must register for HIST 0550A.

AMST 0150M. 95 North: New York Fictions.
This course examines representations of love in advertising as a point of contrast, but the course will focus on graphic novels such as Alison Bechdel's Fun Home, Adrian Tomine's Shortcomings and the like. Students consider the role of cultural production in local, national, and international economies and lives; think about methods for studying creative communities; and write the "biographies" of Providence cultural organizations. Issues of tourism, representation, hierarchy, urban space, and social change as well as questions about who puts culture to work and the role of cultural workers will be addressed. We will consider public humanities, engaged scholarship and community organizing as methods as we explore the Providence cultural scene. Enrollment limited to 17 first year students. FYS WRIT

AMST 0150N. Color Me Cool.
This seminar is an introduction to graphic novels produced in the U.S. since 1985 and will train you in critically interpreting graphic novels. We will pay close attention to the relationship between the visual and textual components of the novels. While we will draw on many critical reading tools, we will use Scott McCloud's Understanding Comics to give us a shared critical vocabulary. I may use one superhero graphic novel as a point of contrast, but the course will focus on graphic novels such as Alison Bechdel's Fun Home, Adrian Tomine's Shortcomings and the like.

AMST 0150P. The Teen Age: Youth, Society and Culture in Early Cold War America.
An interdisciplinary and multimedia exploration of the experiences, culture, and representation of youth in the United States from the end of World War II through the beginning of the Vietnam War. Enrollment limited to 20. WRIT FYS

AMST 0170A. American Slavery On Screen.
Since the advent of American cinema, antebellum slavery has remained an abiding topic of interest for filmmakers and theatergoers alike. From Thomas Edison's Uncle Tom's Cabin (1903) to Steve McQueen's 12 Years A Slave (2013), our infatuation with the peculiar institution appears to be as relevant to our nation's ongoing discussions about race and civic belonging as it was to those antislavery debates that precipitated the Civil War. This course examines the various ideological ends to which cinematic slavery has been put to use. SOPH DPLL

AMST 0190A. Selling Love, Selling Sex: Romance in Popular Culture.
Where do our beliefs about love and romance come from? Is it true that "sex sells"? This course examines representations of love in advertising and popular culture from the 1920s, 1950s, 1980s and the present. We'll compare texts such as Ladie's Home Journal, I Love Lucy, and Dynasty to Maxim, Desperate Housewives, and Mad Men. Enrollment limited to 17 first year students and sophomores. WRIT
AMST 0190B. Histories of Memory/Memories of History. This course examines the role of historical narratives in popular culture and politics, using memoir, films, newspapers, political cartoons, and scholarship to think about how such narratives build and break local, national, and transnational communities, serve and interrupt different kinds of political agendas, and reform the way we orient ourselves to the way we live and to those with whom we live. How is the past made? By whom? Topics will include the Holocaust, the Vietnam War, Columbus, memorials, and holidays. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190C. American (Mass)culturinities: Sexuality, Race and Aesthetics. This course explores masculinity in American popular cultures since 1945. Starting with theories of homosociality, racial and gender formation at the turn of the century, to modern and post-modem cultural productions that visualize or narrativize "masculinity" including novels, films, and video. Through frameworks of psychoanalytic theory, queer theory and critical race theory we think about masculinity as narrative, as a set of discourses, an epistemology, an aesthetic and privileged form of Americana. How we understand the politics of race and sexuality through images of male bodies? What it means to decouple masculinity and men? What are the relationships between gender/genre? Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190D. Popular Music and the City. This course will examine the relationship between popular music and its sociocultural context by concentrating on three urban music forms; blues, soul, and hip hop. Readings will focus on: (1) concepts such as audiences, the music industry, cultural infrastructure, and race; (2) processes such as urbanization, demographic change, and the politicization of popular music. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190E. It's the End of the World As We Know It: Zombie and Apocalypse Narratives in American Pop Culture. Zombie narratives originated as part of racist colonial ideologies prevalent in Haiti and the Caribbean, and have since become a means of social and political critique. This course charts how the zombie has been re-appropriated and redeployed in American culture. Taking an interdisciplinary approach, we examine zombie and apocalypse narratives in film, literature, comics, and video games. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190F. Beyond the Tourist Trap: The Past, Present, and Future of Asian American Urban Spaces. Beyond the lure of the "exotic" food, cultural festivals, and distinctive architecture of Chinatowns, Little Tokyos, Filipinotowns, Koreatowns, Little Saigons, and Little Indias, Asian American spaces are at once historical remnants of an exclusionary past and the current embodiment of the diversity of ethnic communities. This class seeks to understand such spaces by considering the people involved — those within and outside of the community — and the complex relationships between communities and groups. Texts will include histories, maps, works by urban planners, and a field trip to Boston's Chinatown. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190G. The Fringe is the Fabric: Anti-Immigrant Movements in the United States. This course traces nativist anti-immigrant movements and violence in the United States. Starting in the colonial period and ending with contemporary issues, the course demonstrates how anti-immigrant movements occur across place and time and serve to police the boundaries of U.S. citizenship. The course relies on fiction, documentary films and other historical texts to highlight continuing violent conflicts. We focus on the use of "vigilante" violence and put contemporary discussions of immigration in a new frame. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190H. Junkies, Robots, and Fight Clubs: Revisioning the "American Dream" in US Popular Culture. From fembots to fightclubs, this course explores our obsession with revisions of the American Dream. We examine film and literary translations of three recycled stories—Rags-to-Riches, the Open Road, and Domestic Bliss—to better understand how we narrate the "American" experience and consider how these nationalizing narratives construct race, class, and gender. Films and texts include "Stepford Wives," "Easy Rider," and "Wall Street." Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190I. Re-Thinking Political Aesthetics: Beauty, Modernity, and Justice in the Americas. The United States and the Americas have always been spaces of intertwined artistic, political, and religious expression. Yet, in the growing field of political aesthetics, works of European modernism are prized while examples from the Americas are rarely mentioned. This course examines the philosophical texts used to frame the field of political aesthetics, as well as food in the colonial diet of New Spain, painting during the Civil War, photography and the New Negro movement, jazz and the Beat generation, and other case studies of American expression that engage, complicate and re-construct the relationship between art and politics. WRIT

AMST 0190J. Four-Color Creatures: Race, Gender, and Monstrosity in American Comic Books and Popular Culture. This course explores the relationship between race, gender, and monstrosity in American popular culture, particularly in comic books and graphic novels. Utilizing the concept of the monster as a metaphor, we examine the intersection of these discourses to interrogate how monstrosity informs our collective understanding of the other and affects the representation of race and gender in contemporary print ephemera and visual culture. To compliment our understanding of these materials, we engage with scholarship in the emerging fields of Monster Studies and Comic Studies to highlight the way that these artifacts embody larger trends within American society. WRIT.

AMST 0190K. The American War/Vietnam War: Politics, Struggle, and the Construction of History in the US/Vietnam. What Americans call the "Vietnam War," the Vietnamese remember as the "War of Resistance against the United States for National Salvation." This class seeks to explore multiple American and Vietnamese perspectives on a prolonged conflict that profoundly shaped the nations' political, social, and cultural landscapes. We focus on differences and similarities in Vietnamese and American interpretations of the origins, conduct and demouement of the war. We examine war memories through memoirs, monuments, movies, documentaries, magazines, and newspapers, as well as in foreign and domestic policies. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190S. Los Angeles Plays Itself: Culture and Critique in the City of Angels. Explores the history of culture produced in and about Los Angeles during the last century, examining representations of the city in literature, film, television, music, and theory. Texts ranging from detective novels to teen dramas to hip-hop songs will reveal the ongoing conversations and conflicts among Los Angeles's diverse inhabitants that have shaped its physical, cultural, and social landscapes. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190T. Talking Social Reform: From Populism and Progressivism to Obama and McCain. This course argues that two broad "languages" of social reform, coming out of the Populist and Progressive Movements of the late nineteenth century, have shaped the ways in which Americans understand politics. Students consider how the possibilities for contemporary reform and change have been informed by these languages. We will examine political texts discussing the New Deal, the eugenics movement, the Cold War, liberalism, and the New Left, among others. Enrollment limited to 17 first year students and sophomores. WRIT
AMST 0190U. Sports Mediated: Athletics and the Production of Culture in 20th Century America.
When we watch sports, we’re watching more than a game. Newspapers, radio, television, and the internet produce athletic spectacles within certain cultural boundaries determined by profits, as well as by race, gender, and class. The course questions how sports media played a generative role in late twentieth century American culture through three case studies: Michael Jordan’s rise to sports stardom; the emergence of skateboarding as an “alternative” sport; and controversies surrounding transgender and transsexual athletes. Non-sports fans are welcome and encouraged! Enrollment limited to 17 first year students and sophomores. Instructor permission required. WRIT

AMST 0190V. Reading the City: Literary Tourism in New York, Los Angeles, Santo Domingo and Manila.
What shapes our conception of a city we haven’t visited? Is it the novels we read or the films we watch? How do our ideas change when we tour or live there? This course investigates New York, Los Angeles, Santo Domingo, and Manila through the various social, political and sexual experiences portrayed in novels, creative nonfiction, poetry, and film. Mindful of our own role as reader-tourists, we will compare depictions of reading, visiting, touring, and living in cities especially with regards to issues of identity and its transformation. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190W. Displaying Activism Then and Now: Making an Exhibition for Social Justice.
We will investigate the possibilities for activism and social relevance through museum exhibitions. We will create an exhibition at the John Hay Library that displays historical and contemporary activism, based on student choices of possible movements including queer rights, animal rights, and environmental concerns. Students choose objects, write labels, and act as curators for the exhibit. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190X. Gendered Mobility: Migrant Women Workers in a Globalized Economy.
Today’s women workers migrate at a historically unprecedented rate. This class looks at Third World women who migrate for work in global cities. We examine their experiences through the intersectional lens of gender, race, class, and nationality. We also question the social, political, and economic forces that drive migration and draw women workers to specific destinations. Finally, we will look at the multiple inequalities these workers confront and the ways in which they negotiate and challenge them. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190Y. Dead or Alive?: The American West in Popular Culture.
This course traces the imagined Western frontier as seen in television, film, photographs, museum exhibits, art, tourism, amusement parks, performance, video games, and science fiction. It explores these imagined spaces through the lenses of popular and visual culture, placing the West within the larger social, cultural, economic, and political histories of the US. Both real and imagined, these images defined and consolidated the identities of Westerners and those who wanted to be Westerners. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0190Z. Queering the Archive: History and the Politics of Identity.
How is history made? Who makes it? Who benefits from how stories of the past are told? How might we queer the making of histories and how could this influence our futures? This course follows feminists, queer theory scholars, and activists in their journeys to critically analyze historical archives and open up queer readings of the past. We will spend time with a variety of cultural texts including Cheryl Dunye’s film The Watermelon Woman, Lara Kramer’s performance piece NGS (Native Girl Syndrome), and Octavia Butler’s novel Kindred to think about historical knowledge production and its relationship to identity formation. WRIT DPLL

This course examines how representations of race continue to be critical to the formation of the American nation. We will look at cultural and historical texts that grapple with how “race” is used to (1) define who does and does not belong to the U.S., (2) configure feelings of longing for a homeland, and (3) resist dominant narratives of national inclusion through visual art, performance, and stand-up comedy. The course will use Middle Eastern Americans as its primary case study of these larger themes, and will also incorporate many readings that touch on African American and Latinx experiences. WRIT DPLL

AMST 0191G. TV on History: Representations of the American Past on Commercial Television.
This course explores commercial television's influence on our understanding of the American past and the way that this sense of history, in turn, helps audiences to form cultural and political identities. We will discuss foundational methods for critical analysis of television as we use this inquiry to examine some of the guiding themes of American Studies. This class, which has a significant viewing component, traces the evolution of history-based programming in many genres and considers the message and impact of programs such as Ken Burns' Civil War, Roots, Colonial House, and Mad Men. Enrollment limited to 17 first year students and sophomores. WRIT

From waiting periods to mandatory ultrasounds, a record number of provisions aimed at restricting women’s access to abortion were enacted in 24 U.S. states in 2011. Dubbed the "war on women" by numerous observers, these legislative battles evidence the difficulty in determining reproduction’s “proper” place in governmental politics. But is there more to this battle than abortion? Beginning with Roe v. Wade, this course explores how welfare, labor, citizenship, the family, religion, and activism alter mainstream conceptions of reproductive politics. Using a variety of sources, including films and websites, we will consider what an expansive reproductive freedom might entail. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0191I. Identities on the Move: South Asian Americans In Popular Culture.
Interdisciplinary course looks at the migration, representation and cultural productions of the South Asian diaspora in the United States. We’ll examine how category of “South Asian” was created as well as the ramifications of such a label: what does it mean to be South Asian in the United States? Through the examination of academic texts, as well as literature, television and film, we’ll explore how South Asian Americans navigate the United States while at the same time, maintaining (or, in some cases, disrupting) connections to countries in the South Asian subcontinent. Enrollment limited to 17. WRIT

This course examines how representations of race continue to be critical to the formation of the American nation. We will look at cultural and historical texts that grapple with how “race” is used to (1) define who does and does not belong to the U.S., (2) configure feelings of longing for a homeland, and (3) resist dominant narratives of national inclusion through visual art, performance, and stand-up comedy. The course will use Middle Eastern Americans as its primary case study of these larger themes, and will also incorporate many readings that touch on African American and Latinx experiences. WRIT DPLL

AMST 0191K. New Jack(ed) Cinema: Negotiating Race, Criminality, and Place in the Hollywood Film.
This interdisciplinary course engages critically with film to examine issues of race and criminality, and to better understand our collective, spatial, and personal identities. We study a sub-genre of films, from the 1990s, and investigate how these films interact and intersect with other cultural texts and narratives of race, criminality, sexuality, gender, and the American dream. Films studied include "Colors"; "New Jack City"; "Clockers"; "Boyz 'n the Hood"; and "Menace II Society"; while readings come from film studies, sociology, history, memoir, and policy studies. Enrollment limited to 17 first-year students and sophomores. WRIT
AMST 0191L. Are You Creative?: The Rise of a Modern Virtue.  
Are you creative, or, even, a "creative"? Do you plan to be an entrepreneur, a writer, or an artist? Today, "creativity" is championed by education activists, fringe artists, and corporate CEOs alike. This course gives a critical perspective by tracing the biography of an idea through various fields. We will look everywhere for signs of creativity and focus on the relationship between creativity, work, and economic development, taking of Providence, RI, the "Creative Capital" as an example. We will talk to people involved in various aspects of the city's creative strategy to observe the effects of this powerful idea. Enrollment limited to 17 first year students and sophomores. WRIT

This course examines how our understanding of one of the most mediated armed conflicts of the twentieth century has changed. Why has "Vietnam" become a metaphor for imperial wars and how has it figured in cultural production within and beyond the United States? Considering photographs, films, and personal narratives beginning during the war and continuing into the present, we recognize the fictive and flexible nature of history and how even the worst experiences are made available for collective memory and mass consumption. The course works to decenter the United States and takes into account long-range ramifications and multiple voices. Enrollment limited to 17 first year students and sophomores. WRIT

What does it mean to be Korean American? This course explores the historical and contemporary experiences of people of Korean descent in the United States. In the broader context of U.S.-Korean/Asian relations and through the lenses of race, ethnicity, class, and gender, this course will examine the connections and differences in the lives of diverse Korean populations. The composition of these populations ranges from adoptees, military wives, and entrepreneurs to secondary migrants from Latin America. Throughout the semester, students will be familiarized with the central themes in immigration and ethnic studies such as diaspora, transnationalism, racial formation, and community formation. Enrollment limited to 17 first years and sophomores.

AMST 0191O. Revolting Bodies: Aesthetics, Representation, and Popular Culture.  
Our understanding of ourselves and others are formed by visual images and bodily feelings that are social in origin. They make us feel (un)comfortable, sublime, ridiculous, grotesque. In this course we will examine how the materiality of the body grounds our metaphors about identity and subject formation. This course moves between cultural studies, queer theory, disability studies, science fiction, drama and film asking how representations structure the way we "know" and "see" bodies. Ultimately we will explore how revolting bodies—bodies that disgust, repulse, signal their difference—can become bodies in revolt—bodies that resist and imagine new possibilities. WRIT

Beyond the "exotic" dishes, cultural festivals, and distinct architecture of Chinatowns, Little Tokyos, Little Manilas/Filipinotowns, Koreatowns, Little Saigons, and Little Indias, Asian American spaces are both historical remnants of racial oppression and the current home of diverse ethnic communities. Using field trips, films, first person accounts and scholarly explorations, this class examines such spaces by considering the people involved—tourists and residents—and how their complex relationship creates urban and suburban ethnic spaces. Students will workshop and revise papers as well as gain a grounding in approaches to Asian American studies, urban studies, and to the study of public spaces. Enrollment limited to 17 first year students and sophomores. WRIT

AMST 0191Q. Disbelieving the Evidence: Popular Opposition to 20th Century Public Health Initiatives.  
Why do Americans reject programs that make them healthier? Many of the most effective public health initiatives in the 20th century encountered deep resistance. This course explores three initiatives (vaccination, fluoride, and black lung) that continue to generate skepticism or outright opposition. Students will practice several different styles of writing intended for different audiences, including an op-ed and a Wikipedia entry. This writing-designated course will appeal to students of public health, politics, and those interested in the social impact of medical research, as well as those wanting practice in science writing. Enrollment limited to 17 first year students and sophomores.

AMST 0191R. Fat, Messy, and Late: Unregulated Bodies in American Capitalism.  
This course examines disorganized bodies in 19th and 20th century US history and how slenderness, neatness, and timeliness became virtues. Through these lenses we study capitalism working upon individual bodies; the way these "moral virtues" generate forms of self-regulation; and the way these forms of self-regulation perpetuate the status quo. We draw upon history, sociology, anthropology, and critical theory, starting each section in the 19th century and moving to the present. Using our personal experiences, we examine how belief systems become internalized. This interdisciplinary course welcomes community health and biology concentrators as well as humanities and social science concentrators. Enrollment limited to 17 first year students and sophomores.

AMST 0191S. Visualizing the Middle East: From National Geographic to the Arab Spring.  
American visual media remains flooded with images, inspiring and hopeful, or horrifying and terrifying, of the peoples and places of the Near East. By examining National Geographic photography, Hollywood cinema, televised news programs, and images and videos encountered online, we examine how visual culture has both reflected and actively helped shape the relationship between the U.S. and the Near East. Students will experiment with a diverse methods of visual analysis, work with a class Tumblr site, and write and revise a series of essays. Enrollment limited to 17 first year students and sophomores.

How do we think about our own place in history? This writing-intensive seminar examines how individual Americans have explored the relationship between their identity and historical events, and introduces the legitimacy of using individual experiences to understand history. Themes include the gendering of domestic and public space, the formation of identity within families, class alignments, societal expectations of gender/sexuality, how American exceptionalism manifests itself at the individual level, and narrative (un)reliability. Our discussions center on autobiographies, memoirs, and films from authors such as Audre Lorde, Harry Crews, Malcolm X. Alison Bechdel, and Tobias Wolff. WRIT

AMST 0191U. Imagining the American Mind.  
How are theories about our own minds and brains represented in American culture? We use literature and film, psychology, neuroscience, philosophy, history and sociology to investigate how we imagine our minds, and the consequences of those representations for our ideas about race and gender, for our social lives and responsibilities, for our means to communicate to one another and, even, to know ourselves. Writing in different formats, students bridge the gap between the humanities and the human sciences. Concentrators in biology and neuroscience consider the cultural history of their research while humanities/social science students explore how culture ties to science. WRIT

AMST 0191V. American Capitalism and Its Critics.  
In the wake of the Great Recession, many Americans have become disenchanted with capitalism, wondering whether the market economy harms more than it helps. This course introduces students to writers, artists, and activists from the past who shared that feeling and in plays, essays, films, and photographs protested the rise of capitalism in the United States. We will explore issues of power, poverty, profit, and equality through in-class discussions and four writing assignments. Students interested in history, art, literature, and economics will learn more about class, capitalism, and the history of American politics. WRIT
AMST 0191W. American Indian Law and Legacies.
From the U.S. Constitution to MTV and Urban Outfitters, this course traces the history and legacies of American Indian law and policy. Using a case studies approach, students will read legal documents alongside film, television, literature, blogs, poetry, photography, fashion, news articles, manifestos, and Twitter to explore the ways in which American Indian law and policy manifests in the daily lives of contemporary Indian people and Native nations. All students welcome! This course will be of special interest to those studying indigenous histories and cultures, American government, representations/memory, and law. WRIT

AMST 0191X. Troubled Pasts and Visual Cultural: Comparative Models from Providence to Pretoria.
This course examines the intersections of visual culture, commemorative politics, and individual and collective memories to analyze the politics of memory. We will look at debates over formal and informal engagements with the memory of three traumatic events: the “Dirty War” in Argentina, South African apartheid, and September 11th, 2001 in the US. Looking at the past as contested ground we will explore the challenges, ethics, and controversies around representing these events across a variety of mediums including film, art, music, and memorials. This class will be of interest to students of visual culture, cultural politics, and memory studies. WRIT

AMST 0191Y. Cradle of Democracy?: Race, Childhood, and U.S. National Identity.
From Elian Gonzalez to Trayvon Martin, children play an important role in political narratives concerning domestic and international affairs. Engaging with a range of texts—including blogs, films, and online exhibits—students will consider how the idea of childhood and the bodies of children have constructed our gendered and racialized sense of self. Such ideas about difference and belonging also emerge through children’s material culture, and so students will create a children’s book and multimedia website as well as visit the Providence Children’s Museum. WRIT DPLL

AMST 0191Z. Food and Gender in U.S. Popular Culture.
Why is salad coded as feminine and steak as masculine? This course examines how gender is constructed and performed in sites across the U.S. food system, taking in farm fields, supermarkets, home kitchens, and restaurants. We explore food production, cooking, feeding, eating, and dieting, through a variety of food texts, including cookbooks, advertisements, and the Food Network. We will engage all of our senses (especially taste!), as we explore how gender intersects with other significant cultural categories and shapes everyday food experiences in the United States. WRIT DPLL

AMST 0192A. Unsettled Things: Objects and Knowledge in Nineteenth-Century America.
This course explores the history of collecting, with a focus on local museum and university collections. College Hill is home to numerous accumulations of things, from Civil War relics to Old Master paintings and fragments of taxidermy. Where did these objects come from? Why were they collected? How have their meanings and uses changed over time? How might we reconsider them today? Students will examine objects; read about collecting and the development of natural history, anthropology, history, and fine art; write research papers that incorporate material culture methodology; and co-curate an exhibition. WRIT

AMST 0192B. Remaking Racial Codes: Interraciality in Literature and Film Post-1945.
Throughout a reading of select critical theory, literary texts, and films, students will look critically at the ways in which interracial relationships have been prescribed and figured in U.S. culture post-1945. Decentering the dominant narrative of black-white miscegenation, we will give equal attention to the role that Asian bodies play in complicating this binary. We will also investigate the potentiality of texts to challenge social norms or reclaim injurious identities. Authors include Lillian Smith, Jhumpa Lahiri, and Celeste Ng. Films include Guess Who’s Coming to Dinner (1967), Snow Falling on Cedars (1999) and Beyond the Lights (2014). WRIT DPLL

AMST 0192C. Race in the Museum.
From the Smithsonian’s National Museum of African American History and Culture to Walt Disney World’s EPCOT theme park, this course examines how museums and cultural institutions address issues of race and identity. We will think critically about the display of race and difference in sites of leisure and consider how such institutions can be reclaimed as spaces for dialogue and action. At the end of the course, students will propose an original exhibition plan exploring these issues. This course will be useful for students interested in public history, visual culture, and critical race studies. WRIT DPLL

AMST 0192D. Social Memory and the 60s: From Nixon to Nostalgia.
The 1960s were watershed years in the US. From the Civil Rights movement to the Vietnam War, women’s liberation to Woodstock, a series of revolutions occurred during this decade. How do we remember the 1960s? How do we understand its legacies embodied in texts, images, music, memorials, and rituals? This class uses the interdisciplinary methods of memory studies to answer these questions by analyzing primary sources and learning new collaborative research methods. Students interested in sociology, anthropology, and history will find new approaches to enduring questions about how societies remember and forget crucial events and experiences. DPLL WRIT

AMST 0253. Religion, Politics, and Culture in America (HIST 0253).
Interested students must register for HIST 0253.

AMST 1010. Introduction to American Studies: American Icons.
Why do certain American photos, novels, and films become "iconic"? What does the very word 'icon' mean? Studying a collection of American images, texts, places, and practices, this course investigates the key themes of American Studies. DPLL LILE

AMST 1250A. American Folk Art.
Examines material expressions of folk culture in America from the 18th century to the present. Focuses on the study of regionally idiosyncratic artifacts decorated beyond necessity and emphasizes the importance of the cultural context in which they were made and used. Visits to local burying grounds and museum collections during class and a Saturday field trip. Concludes with an original research project and final paper.

AMST 1250B. Gravestones and Burying Grounds.
Students examine gravestones and burying grounds as material evidence of American cultural history. Themes include the forms of written language and visual imagery in colonial New England, changing roles of women and minorities in society, historical craft practices, implications of stylistic change, attitudes towards death and bereavement, and the material evidence of discrete cultural traditions. Includes field trips.

AMST 1250E. The Neocolonial Ideal in America, 1775-1840.
This course examines the art, architecture, and domestic furnishing of America in the early national period. It focuses on visual culture as a reflection of the new nation’s self image as a democratic and enlightened society. Includes class visits to local burying grounds and museum collections, and a Saturday Boston field trip.

AMST 1250F. Topics in Material Culture: Houses and Their Furnishings in Early America.
Old houses and the objects used to furnish them are interpreted as material evidence of domestic life in colonial and early national America. Through slide lectures and field trips, this class examines Providence’s historic buildings, museum collections, and public archives as primary documents in the study of cultural history. WRIT

AMST 1250G. Topics in Material Culture Studies: The Arts and Crafts Movement in America 1880-1920.
In the 1880s an international movement to reform the design of buildings and their furnishings took hold in America. Its proponents wanted to improve visual life in America by advocating the pride and honesty of craftsmanship and by embracing the ideal of unity of design—which means they hoped to change the way Americans lived and worked. This course examines the architecture, furniture, silver, ceramics, and printed works of the Arts & Crafts Movement in America from 1880 -1920. Understanding and interpreting material life is emphasized through local field trips and first-hand experience with the collections of the RISD Museum.
AMST 1500A. Research and Transnational Communities: Qualitative Fieldwork Methods
This course will equip students with the skills to design and implement their own transnational American Studies or Public Humanities research project. We will consider different qualitative social science research methods including, ethnographic participant observation, formal and informal interview techniques, and survey data analysis. Students will learn how different methodologies lend unique insights into specific research questions, and will be able to identify different methodological bases for empirical findings across diverse transnational social problems. Throughout the course, we will explicitly engage the personal, public, and ethical concerns involved with conducting research with transnational communities, including researcher positionality, privilege, ethics, and responsibility.

AMST 1500B. Broadway Modern: Race, Gender, Class, and the American Musical.
[WINTERSESSION] What is musical theatre? What makes the Broadway musical quintessentially "American"? And what do these brightly colored, mesmerizing, beguiling spectacles reveal about the troublesome workings of race and class, gender and sex, nation and world? Searching for answers to these and other questions, students in this course will survey, critique, and theorize the complicated, strange, and often disturbing history of the genre, from its 19th century roots in minstrel performances, Shakespeare, and European opera, through the heyday of the mid-20th century, and, finally, right up to the current, provocative productions of "Hamilton" and "Shuffle Along." DPLL

AMST 1500C. Critical Approaches to Global Humanitarianism in Thailand.
Course will introduce students to conceptual and analytical frameworks that question the sources of power and privilege inherent in contemporary global social action. Concerned with the increasing prevalence of market-based solutions to social problems, this course takes the framework the "industrial complex" its starting point of inquiry. This lens has been productive to understand the systems through which the state, market, and civil society converge to achieve both social and entrepreneurial goals. The course will explore three dimensions of market-based solutions to global humanitarian problems in Thailand, ultimately interested in benefits, opportunities, constraints and/or unintended consequences that global humanitarianism may have.

AMST 1510. Museum Collecting and Collections
This course will explore and examine the methods, practices, and theory of collections management in a museum setting including collections development, museum registration methods, cataloging, collections care, and interpretation. Through readings, discussion, workshops, site visits, and exhibitions, students will explore what it means to be physically and intellectually responsible for museum objects. This course places heavy emphasis on experiential learning and will include several project-based assignments.

AMST 1520. Technology and Material Culture in America: The Urban Built Environment
A slide-illustrated lecture course that examines the development of the urban landscape. Covers American building practices and the effects of human-made structures on our culture. Examines technological and behavioral aspects of architectural design and urban development. Topics include housing, factories, commercial buildings, city plans, transportation networks, water systems, bridges, parks, and waterfronts. A companion course to AMST 1530.

AMST 1530. Technology and Material Culture in America: The Automobile in American Life
Examines the cultural significance of the automobile. Employs materials and methodologies from various disciplines to study this machine and the changes it has produced in our society and our landscape. Slide-illustrated lectures cover such topics as the assembly line, automobile design, roadside architecture, suburbs, auto advertisements, and the car in popular culture.

A survey of the skills required for public humanities work. Presentations from local and national practitioners in a diverse range of public humanities topics: historic preservation, oral history, exhibition development, archival and curatorial skills, radio and television documentaries, public art, local history, and more. Enrollment limited to 50.

This 8-week summer course begins with four weeks in Hong Kong, exploring the ways that private individuals, institutions, and government have preserved the city's cultural heritage, examining the conflict and negotiation of economic and political interests in urban renewal and heritage conservation and preservation. The second four weeks are in Providence, where students will explore the history and present-day philosophy and politics of preserving sites and stories from Colonial times to the present, exploring historical archaeology, historic preservation, museum exhibition, and oral history. This is a double credit course. Enrollment limited to nine Brown students and nine from Hong Kong. S/NC

AMST 1570. Site- Specific Writing in Brown's Historical Spaces.
Using on-site writing techniques, students will write, workshop, and direct research-based site-specific short plays to be performed by local actors in historic Providence mansions. Class discussion will explore local history (class includes a walking tour), performance texts, and types of site-specific work. Students will emerge having written and directed a research-based work in a National Historical Landmark. Enrollment limited to 13. S/NC

AMST 1580A. Artists and Scientists as Partners: Theory to Practice (TAPS 1281Z).
Interested students must register for TAPS 1281Z.

AMST 1596. Education Beyond the Classroom Walls: Teaching and Learning in Cultural Institutions.
Explore teaching and learning beyond classroom walls. We will focus on teaching/learning in cultural institutions (museums, historic houses, children's museums). We will begin with our own experiences with this kind of learning, then explore the pedagogical methods, underlying philosophies and learning theories, debates, and goals of informal education today. What kind of learning happens in cultural institutions? How does it compare to learning in schools? Which pedagogical methods are most common in cultural institutions today and how do they align with stated goals? What are the debates within the field and what are our visions for the future of the field?

AMST 1600A. Global Macho: Race, Gender, and Action Movies.
Carefully sifting through an oft-overlooked but globally popular genre - the muscle-bound action - this class asks: what sort of work does an action movie do? What is the role of women in this genre? How should we recognize these supposedly empty tripe of the global popular? How should we think critically about movies that feature - often without apology - a deep, dangerous obsession with masculinity, patriarchy, war, and lawlessness, with violence outside of civil society. In short, from Hollywood to Hong Kong to Rio to Paris to Mexico City, what makes the action movie genre tick? DPLL, WRIT

This course will provide an overview of contemporary issues surrounding Global China, including the People's Republic of China, Hong Kong, and Taiwan, as well as their regional and global influence through migration, culture, multinational trade, and labor manufacturing. We will study institutions (the government, family, and education), forces of globalization (rural to urban migration, ethnicity and identity, human trafficking, diaspora communities, labor production and consumption, and cultures of resistance (underground music, human rights movements, radical internet blogging, environmental justice activism and Chinese contemporary art). DPLL
AMST 1600C. The Anti-Trafficking Savior Complex: Saints, Sinners, and Modern-Day Slavery.
How can we understand the global movement to combat human trafficking within critical frameworks on "industrial complexes"? Drawing from scholarship on the prison industrial, non-profit industrial, and white savior complexes this course examines human trafficking through the lens of race, class, gender, and national forms of power and subjectivity. Readings will problematize the so-called saints and sinners of the movement, investigating various global helping projects that exist to stop "modern day slavery." DPLL

AMST 1600D. Sports in American Society.
This course seeks to understand, analyze, and criticize sport--seen here as one of the primary institutions in the lives of Americans. Working from the basis of sporting events in the Durkheimian sense of symbolic community, we will elevate them to the status of religious and educational institutions in our everyday lives. Using the primary lenses of gender and race this class examines sports at five different levels--professional, Olympic, NCAA, scholastic, and youth--and uses the "Big 3" sports of baseball, basketball, and football to understand how athletics have impacted, and will continue to impact, American Society. DPLL

AMST 1600E. Performance, Politics, and Engagement (TAPS 1680).
Interested students must register for TAPS 1680.

AMST 1601. Health and Healing in American History.
Surveys the history of American medicine in its social and political contexts, including changing understandings of disease, treatment practices, and medical institutions. Focuses on how gender and race have informed how patients and healers have made sense out of pain and disease. WRIT

AMST 1610A. American Advertising: History and Consequences.
Traces the history of American advertising, particularly in the 20th century, to understand the role advertising plays in our culture. Topics include the rise of national advertising, the economics of the advertising industry, the relation of advertising to consumption, the depiction of advertising in fiction and film, and broadcast advertising. LILE

AMST 1610C. American Popular Culture.
This interdisciplinary course examines the history of popular culture in the industrialized United States, drawing on methodologies from different fields, and using a variety of evidence, including minstrel song sheets, amusement parks, television, and romance novels. We look at the audience, the producers and the texts presented by American popular culture both domestically and internationally. LILE WRIT

AMST 1610F. Asian America Since 1945.
Since the end of WWII the Asian American community has undergone radical transformations. This course will examine the shifting political and cultural status of Asians in America, the demographic revolution in Asian America ushered in with the Immigration Reform Act of 1964, Asian Americans and globalization of the US economy, and Asian Americans in contemporary US race relations. DPLL

AMST 1610G. Asian American History.
This course focuses on Asian America as a historical subject and on Asian Americans as makers of their own histories. It is loosely chronological but principally organized around the emergence of an Asian American historical voice. Films, personal accounts, and historical analyses will be read. Many of the texts feature photographs, which we will engage primarily as historical documents. Examining the material realities they represent or suggest, we will also probe their political, economic and cultural dimensions. As weapon, commodity and heirloom, photography has been integral to shaping Asian Americans' visibility and therefore their social position in the United States. DPLL

AMST 1610H. Asian Immigration to the Americas.
Asian America is an extremely diverse community including fifth generation Californians and yesterday's arrivals: Hmong from Laos, Indians from Guyana, Japanese from Brazil, native born Americans, immigrants, refugees, adoptees, doctors, garment workers, physicists, poets, and storekeepers. The patterns of migration and settlement from Asia to the Americas-U.S. and Canada, the Caribbean and Latin America--over the past two hundred years are examined.

AMST 1610I. Beyond Chinatown: Asian Communities in the United States.
From Manila villages in 18th-century Louisiana, to Punjabi-Mexican families in early 20th-century California, to today's "little Saigons" and Asianam cyberspace, Asian Americans have built a diverse array of communities in the U.S. The historical circumstances, social forces, and political movements that have shaped these communities are examined. Particular attention paid to the dynamics of race, ethnicity, class, gender, and sexuality in the development of these communities.

Examines the history of women/gender in relation to discourses about sexuality (both physical and mental) in the era of the Civil War through the progressive era. It samples a variety of ideas and movements, including efforts to regulate sexuality and initiatives to advance women into the medical and "helping" professions. Specialization is given to issues of class, race and ethnicity. DPLL

Examines the evolution of child welfare in the United States from its origins in the late 19th century through its purported crisis in the late 20th. Specifically, will trace the history of policies and programs aimed at providing support for dependent children, and at dealing with defiant or delinquent children. Emphasis will be on understanding the social, cultural, and political contexts in which child welfare was formed and transformed during this century.

AMST 1610M. Childhood and Adolescence in American Literature and Culture.
A survey of how changing ideas of childhood and the "new" construction of the category of adolescence are mirrored in American fiction and poetry from the Puritans to the present. Among the writers considered are Anne Bradstreet, Harriet Beecher Stowe, Mark Twain, Henry James, and J. D. Salinger. Provides a comparative cultural perspective by studying works by Wordsworth, Dickens, Pater, and Kosinski.

AMST 1610N. Citizenship, Race, and National Belonging in the Americas.
What is the relationship between citizenship, national belonging, and ideologies of race in the Americas? In what ways do gender and class differences affect this relationship? Focusing on these questions, this course compares the racial and social experience of the U.S. Latinos with that of the populations in various countries in the hemisphere.

AMST 1610O. Civil Rights and the Legacy of the 1960s.
Recent mainstream interpretations of the 1960s tend to neglect the presence and participation of Chicanos and Puerto Ricans in the various movements for civil rights. Using an interdisciplinary approach and drawing on historical, autobiographical and contemporary texts, films, and documentaries, this course examines the Latino experience during the Civil Rights period and explores its legacy today in the lives of Latino and other racial minorities.

AMST 1610P. Class, Culture, and Politics.
Surveys the working class and radical movements that have challenged the ruling economic, political, and cultural systems. Major topics include the railroad uprising of 1877, the Knights of Labor, sexual utopianism and spiritualism, black nationalism, the Socialist and Communist parties, women's and gay liberation, and the modern ecology movement. Emphasizes cultures. Prerequisite: At least one semester of a college-level course in U.S. history or literature. LILE

AMST 1610R. History of Sexuality in the United States.
This course introduces students to the history of sexuality in America from the colonial era to the present. This is not only a history of gay and lesbian communities. Rather it builds on those histories to create a portrait of how Americans, gay and straight, lived sexual lives in relationship to disciplines of knowledge, cultural and political institutions, and popular culture.
AMST 1610S. Immigration to the United States from the Sixteenth Century to the Present
Explores 350 years of immigration to what is now the U.S. Organization is both chronological and topical. We will reconstruct and compare the major waves of immigration, consider causal theories of migration, examine U.S. immigration policy over time, debate the economic impact of immigration, and discuss the institutions and strategies that immigrants have designed to facilitate adaptation.

AMST 1610U. Introduction to Latino Studies
A survey of the ways that aspects of the histories and cultures of the U.S. and Latin America have contributed to shape public policy issues and to differentiate the experiences of U.S. Latinos. Among the questions guiding class discussions: What are the implications of grouping nationally, racially, and socially heterogeneous populations under one term, such as Hispanic or Latino? To what extent do "ethnic labels" foster alliances among different ethnic or racial groups? DPLL LILE

AMST 1610V. Introduction to Latino Studies II: Culture and Identity
Explores the ways in which gender roles and intergenerational expectations-diversified by race, class, national identity, and citizenship status-shape the varied identities and cultural experiences of Latinos and Latinas in different decades of the post-World War II period in the U.S.

AMST 1610W. Latino Immigration in the 20th Century
The purpose of this course is to examine the political, economic, cultural and social impact of Latina/o immigration in the 20th Century and on Latina/o identity formation. We examine the intimate and personal history of the United States in relation to Latin America, Central America, the Caribbean, and Mexico that established interdependent relationships between nations and its people.

AMST 1610X. Latino Popular Music and Culture
This course explores the various forms of popular culture associated with U.S. Latino communities. It focuses on the production, dissemination, and consumption of mass mediated cultural forms, primarily music, television, film and journalism, but it also examines other cultural expressions such as vernacular art, food, festivals, and folklore. Prerequisite: At least one semester of college-level course in U.S. history or literature.

AMST 1610Y. Latinos and Film
Examines the way Latinos have been constructed and misrepresented in Hollywood film from the silent era to the present, and compares these images with contemporary Latino-made films that counteract Hollywood stereotypes with more accurate and complex images of their own histories and cultures. Readings introduce students to film criticism from a Latino perspective. Weekly screenings in and outside class.

AMST 1610Z. American Popular Culture
Popular culture is part of everyday life, but also an important site to examine how American identities have been both shaped and reflected through film, television, music, performance, and fashion. We trace American popular culture from the nineteenth century to the present, paying particular attention to the development of different media, and looking at the production and reception of popular culture, as well as the cultural texts themselves. WRIT

AMST 1611A. Making America: Twentieth-Century U.S. Immigrant/ Ethnic Literature
Examines the literature of first and second generation immigrant/ethnic writers from 1900 to the 1970’s. Attempts to place the individual works (primarily novels) in their literary and sociocultural contexts, examining them as conscious works of literature written within and against American and imported literary traditions and as creative contributions to an ongoing national discourse on immigration and ethnicity. DPLL

AMST 1611B. Pacific Rim in American History
This course is a comparative study of Filipino, Chinese, Japanese, Korean and Indian settlement in the United States. It begins in the 1700s when Filipino seamen first settled in what is now Louisiana and Texas and concludes with the end of World War II. Attention will be given to immigration from Asia and its relationship to the development of the capitalist world system, the role that Asian American labor played in class and racial formation in America the political economies of Asian American communities, and the various social movements and legislative efforts to exclude Asians from American society and Asian resistance to exclusion.

AMST 1611E. Popular Culture in the United States
Focusing on popular culture since industrialization, the course will examine particular forms (broadcasting, romance novels, amusement parks, sports) we will as look at the producers of, and the audiences for, those forms. Requirements include three papers based on outside readings and a final.

AMST 1611F. Race, Gender, and Community in Latina Autobiography
Examines how Latinas chronicle their identities in transitions vis-a-vis markers of race and gender. Through autobiography, memoir, literary criticism, and theoretical readings emphasizing the negotiations of self, place and community via social and geographical locations including family, region, and the nation. Engages in critical interpretation of the socio-cultural and political worldviews of Latina self-discovery and self-authorship.

AMST 1611G. Race, Ethnicity, Religion and Community
This course examines the intersection of religion and community for communities of color in the United States. A survey of these communities is guided by the desire to discover the collective stories and memories that socialize social and ethnic identities, and serve as a source of personal and political transformation. Out point of entry for understanding the sacred is at "ground level" perspective.

AMST 1611H. Religion and Society in the United States
Offers a sociological perspective on theories of the relationship between religion and societies that will help us understand and analyze current religious practices and trends, both inside and outside of religious institutions. Students will conduct several observations in religious institutions and create religious rituals of their own.

AMST 1611L. Sex, Love, Race: Miscegenation, Mixed Race and Interracial Relations
This class will explore the conditions and consequences for crossing racial boundaries in North America. We will take a multidisciplinary approach, exploring literary, anthropological, and historical writings along with several feature and documentary film treatments of the subject.

Examines the evolution of U.S. child welfare from its origins in the late 19th century through its purported crisis in the late 20th century. Traces the history of policies and programs aimed at: providing support for dependent children; improving infant and child survival and health; protecting children from exploitation and abuse; and dealing with deviant and delinquent children.

AMST 1611M. Trauma and the Shame of the Unspeaking: The Holocaust, American Slavery, and Childhood Sexual Abuse
The problem of representing traumatic experience has been raised by witnesses and survivors, psychoanalysts, psychologists, sociologists, philosophers, and artists. This course compares three historical situations—The Holocaust, American slavery, and childhood sexual abuse—by reading histories, memoirs, and fictions, and analyzing material cultural artifacts such as memorials. Questions about the relation of individual trauma to collective and cultural trauma will be pursued through readings that will include Freud, Jeffrey Alexander, Judith Herman, Dominique La Capra, Primo Levi, Jill Christman, Harriet Jacobs, Toni Morrison, Gayle Jones and Art Spiegelman.

AMST 1611N. Early American Film
American film-making from its origins as a technological amusement to the period of classic Hollywood cinema. Particular attention given to representations of gender, race, and ethnicity with comparisons to the evolution of European film. The Birth of a Nation (1915) by D. W. Griffith will be a key text in dialogue with African-American director Oscar Micheaux's Within Our Gates (1920).

AMST 1611Q. The Asian American Case: Race, Immigration and the Law
The central historical themes are exclusion, citizenship rights, and equal protection. The experience of Chinese and Japanese Americans dominates the historiography but we will use that scholarship to help us think about a wider range of issues across time.
AMST 1611R. Bourgeois Blues: Class Conflict in African American and Caribbean Literature and Film.
This course investigates class differentiation and its effects in African-diaspora novels, autobiographies, and films (such as The Good Negress, Brothers and Keepers, Crick Crack Monkey, and "Sugar Cane Alley"). Alongside these literary works and films, we will read a wide range of critical/theoretical essays on class and class conflict and the intersection between class and race, gender, sexuality, and nationality.

AMST 1611U. History of American Technology.
Technologies reflect and transform American society and culture. This course examines the invention, introduction and use of new machines and systems, with a focus on infrastructure, manufacturing, and information and communication technologies. Special attention paid to labor, business, political and cultural contexts of technological change.

AMST 1611V. Color Me Cool: A Survey of Contemporary Graphic Novels.
Surveys a variety of comic books and graphic novels, both mainstream and independent. The emphasis, however, will be on the independent graphic novel. Students will also read history and criticism to understand better the context from which the books emerge and to grasp more firmly their visual and textual aesthetics. Must attend first three lectures to be eligible for enrollment.

AMST 1611W. Asian Americans and Popular Culture.
From the Fu Manchu to Lucy Liu, Asian Americans have long been the objects of loathing, terror and desire, in American popular culture. This course looks Asian Americans in popular literature, music, theater, film and television as subjects, producers and consumers.

AMST 1611X. Narratives of Liberation.
The theme of human liberation has appeared in literary works from around the world and across centuries. This course will examine a variety of narratives that foreground the attainment of physical, spiritual, and political freedom for individuals and groups. Beginning with the Book of Exodus and traveling through African American slave narratives, British proto-feminist novels, Latin American testimonios, and contemporary films, we will examine how a wide range of writers and filmmakers have conceptualized the goal and the process of liberation in their works.
Requirements for the course will include two papers/projects and a final exam.

AMST 1611Z. The Century of Immigration.
Examines in depth the period of immigration that stretched from the late 1820s through the 1920s and witnessed the migration of over 36 million Europeans, Asians, Canadians, and Latin Americans to the United States. Explores causal theories of migration and settlement, examines the role of family, religion, work, politics, cultural production, and entertainment in immigrant/ethnic communities, and traces the development and impact of federal immigration policy.

AMST 1612A. Chicago and America.
This course explores the history of Chicago, but also uses the city as a way to think about issues in American history. Sources include novels, memoirs, popular histories, film, and music.

AMST 1612B. Celluloid America.
The American motion picture developed as a unique art form in the early 1920s and has had a profound impact on American culture. This course examines the period of immigration that stretched from the late 19th century to the present. We will examine the archetypal aspects of coming to grips with maturity and the world, class and gender roles, and the invention of "adolescence" as a new psychological category. International perspectives will be provided by reading some British and Japanese works. Authors covered will include Dickens, Melville, Twain, Alcott, Kerouac, Hemingway, Baldwin, Mishima and Tan, among others. Lectures, class discussions and student reports. S/NC

AMST 1612C. Growing Up in America.
This course will consider American narratives of adolescence and coming of age from the nineteenth century to the present. We will examine the archetypal aspects of coming to grips with maturity and the world, class and gender roles, and the invention of "adolescence" as a new psychological category. International perspectives will be provided by reading some British and Japanese works. Authors covered will include Dickens, Melville, Twain, Alcott, Kerouac, Hemingway, Baldwin, Mishima and Tan, among others. Lectures, class discussions and student reports. S/NC

AMST 1612D. Cities of Sound: Place and History in American Pop Music.
This course investigates the relationship between popular music and cities. We will look at a number of case studies from the history of music in the late 1940s and the early 1950s. We will try to tease out the ways that certain places produce or influence certain sounds and the ways that musicians reflect on the places they come from in their music. Accordingly, we will consider both the social and cultural history of particular cities and regions--New Orleans, Memphis, Chicago, New York, Washington DC, and others--and aesthetic and cultural analyses of various forms of music--including blues, jazz, punk, hip-hop, and others.

AMST 1612E. Henry James Goes to the Movies.
This course will focus on some of the novels and stories by James that have been made more than once into films or TV shows - Washington Square, The Turn of the Screw, The Portrait of a Lady, and The Golden Bowl - and study the narrative and visual choices as interpretations of James's texts. Critical readings on the art of fiction and the art of film will also be introduced.

AMST 1612F. Immigrant America and Its Children.
With a focus on the experiences of the immigrant second generation, this course seeks to expose students to the recent social science literature on contemporary immigration to the United States, including discussions on its origins, adaptation patterns, and long-term effects on American society. We will closely examine patterns of assimilation and adaptation for the children of immigrants, address the challenges they confront when trying to straddle two cultures, describe their ethnic identity formation, and interrogate the effects of their increasing presence on U.S. schools and society in general. The experiences of the second generation will be examined in various institutions including the family, labor market, schools, and community, and we situate these institutions in both national and transnational spheres. The course will consist of lectures by the instructor combined with class discussion of assigned texts. This course will also provide students with an analytic framework to address questions of multiculturalism. The course will also help students develop a better understanding of the dynamics of race, class, gender, and sexuality in society.

AMST 1612G. Eating Cultures: Food and Society.
This course will look at various ways to understand the complex role of food in society. We will look at issues of food production and consumption, and how our relationship to food contributes to the political and social structures that we live with. Our approach will be historical and pay special attention to the ways in which communities of color and immigrants have shaped, and have been shaped by, the food they cultivate, harvest, consume, and market. Field trips and readings explore how food creates ways for people to form bonds of belonging while also creating bonds of control and regimes of inequality. Enrollment limited to 20.

AMST 1612H. Children of Immigrants.
Gives an overview of the experiences of the children of contemporary immigrants in the United States. It looks at their experiences in key social institutions including schools, the family and ethnic community. The course will examine the integration of immigrant children and how factors of race, class, and gender shape their experiences. To address the integration of immigrant children, the course will look at their process of assimilation, maintenance of transnational ties, and lastly the formation of youth identity.

AMST 1612I. Political Theatre of the Americas (TAPS 1610).
Interested students must register for TAPS 1610.

AMST 1612J. 21st Century American Drama (TAPS 1650).
Interested students must register for TAPS 1650.
AMST 1612P. First Nations: the People and Cultures of Native North America to 1800 (HIST 1805). Interested students must register for HIST 1805.

AMST 1612Q. Women / Writing / Power. An introduction to American women's writing and to the development of feminist literary practice and theory. This course will cover a broad historical range from the colonial poets Anne Bradstreet and Phillis Wheatley to contemporary writers Toni Morrison, a Nobel Laureate, and Marilynne Robinson, a Pulitzer Prize winner. Attention to the effects of racial, class, and cultural differences will inform this course that will focus on gender and literature. LILE

AMST 1612R. Race, Inequality, and the American City since 1945. This course will explore the dynamics of race and class in American cities during the post-World War II period. The readings and discussions will focus on suburbanization, the decline of central cities, conflict over the use and definition of urban space, urban governance, spatial fortification, and popular dissent. The cities examined will include Buenos Aires, Chicago, Detroit, Liverpool, Los Angeles, New York City, São Paulo, and St. Louis.

AMST 1612S. Introduction to American Indian Studies (ETHN 1890H). Interested students must register for ETHN 1890H.

AMST 1612T. Slackers and Hipsters: Urban Fictions, 1850-Present. Slackers and Hipsters surveys the cult of the cool and disaffected in literature and film over two centuries. Beginning with Melville's "Barzleby the Scrivner," but also sampling works as varied as Chatterjee's English August and Kunkel's Indecision, we'll examine both the aesthetic and political implications of the "slacker" in his/her ironic, apathetic, and peculiarly alienated view of the world.

AMST 1612V. Sinner, Saints, and Heretics: Religion in Early America (HIST 1511). Interested students must register for HIST 1511.

AMST 1612W. Rethinking Women's Bodies and Rights: Transnational Reproductive Politics. This course examines the issues and debates surrounding women's reproduction in the United States and beyond. It pays special attention to how knowledge and technology travel across national/cultural borders and how women's reproductive functions are deeply connected to international politics and events abroad. Topics include: birth control, eugenics, population control, abortion, prostitution, reproductive hazards, genetic counseling, new reproductive technologies, midwifery, breastfeeding, and menstruation. Students will analyze historical and contemporary materials concerning women's reproductive roles, as well as read scholarly studies on reproductive issues in various parts of the world.

AMST 1612X. Performances in the Asias (TAPS 1270). Interested students must register for TAPS 1270.

AMST 1612Y. Twentieth-Century Western Theatre and Performance (TAPS 1250). Interested students must register for TAPS 1250.

AMST 1612Z. First Nations: the People and Cultures of Native North America to 1800 (HIST 1512). Interested students must register for HIST 1512.

AMST 1700B. Death and Dying in America. No description available. Open to juniors and seniors concentrating in American Studies.

AMST 1700C. Slavery in American History, Culture and Memory. Nearly four centuries have passed since the first enslaved Africans arrived in what is today the United States. More than 140 years have passed since American slavery was abolished. Yet slavery remains a palpable presence in the United States. In this interdisciplinary course, we will examine slavery as a problem in American history, culture, and memory, exploring the institution and its legacies in such arenas as history, literature, cinema, visual arts, and heritage tourism. Open to juniors and seniors concentrating in American Studies.

AMST 1700D. Race and Remembering. This junior seminar engages debates in Ethnic Studies, History, Gender Studies, and the Public Humanities that grapple with the relationship between historical narratives, memory, and social relations of power. Students will examine current tensions in national memory. Each year the topic of this course will change to consider racial formation through alternating social and cultural institutions. This semester we will consider the history of racial formation through encounters with the judicial system, with policing practices, with detention, and incarceration. Students will collaborate to make these histories publicly accessible using methods in public humanities. DPOLL LILE WRIT

AMST 1700F. American Publics. Americans worry about the quality of their civic life and fear its decline. This junior seminar examines an important concept, the public sphere, in its popular and political dimensions as well as looking at the challenges to the boundaries of American public life. Who is a citizen and thus eligible to participate? The course pays particular attention to concerns about the impact of new media--print, broadcasting, the internet--and offers a range of possible final projects. Not open to first year students or sophomores. Enrollment limited to 20. WRIT

AMST 1700G. Public Memory: Narratives of 9/11. This junior seminar will focus on narratives concerned with the events of 9/11 and their aftermath: documentary, testimony, stories, memoirs, novels, graphic novels and feature films. We will also study and visit some of the memorials and museums that have been proposed or created in connection to 9/11 and consider them in the context of public memory and public art. Course work will require a project or research paper that engages the question of the role of the humanities in the creation of the public memory of catastrophic events. Enrollment limited to 20 junior and senior American Studies concentrators. WRIT

AMST 1700H. Community Engagement with Health and the Environment. This junior seminar explores how local community organizations are taking up issues of health and the environment in culturally relevant contexts. We will examine issues of environmental justice, health disparities and the basic tenets of community based participatory research. We will then partner with a local community organization and, depending on need, assist in the design, implementation, and/or evaluation of a program designed to improve the local environment and/or health status of the community. Enrollment limited to 20 juniors and seniors. WRIT

AMST 1700J. The Teen Age: Youth, Society and Culture in Early Cold War America. An interdisciplinary and multimedia exploration of the experiences, culture, and representation of youth in the United States from the end of World War II through the beginning of the Vietnam War. Enrollment limited to 20 junior and senior American Studies concentrators. Others by permission of the instructor. WRIT

AMST 1800. Honors Seminar. This seminar is for second-semester junior American Studies and Ethnic Studies concentrators who are interested in writing an honors thesis in their senior year. The outcome of this course will be a proposal for the honors thesis along with a bibliography and a research plan and schedule. Topics covered will be the research methods associated with different disciplines; how to make the thesis interdisciplinary; integrating public projects and new media into a thesis. Open to juniors concentrating in American Studies and Ethnic Studies. Enrollment limited to 20. S/NC

AMST 1900A. The Problem of Class in America. Class is everywhere in American life, but rarely discussed explicitly. This course will investigate why this is. How does class operate in American life? Why is it so often obscured? What are the cultural, political and historical forces that have made it such a contested category? We will approach class from a variety of disciplines, including history, cultural studies, and sociology; study the ways class interacts with race and gender; and consider the prospects of class in America in the context of the twenty-first century’s widening inequality and globalized economy.
AMST 1900B. America and the Asian Pacific: A Cultural History. From Columbus to the present, Asia has been central to the shaping of American culture. This course will examine the role of trade, migration and cultural exchange across the Pacific in the shaping of American culture and society. Enrollment limited to 20 juniors and seniors. DPLL LILE

AMST 1900C. Narratives of Slavery. This course analyzes circum-Atlantic accounts of racial slavery in various forms, including the slave narrative, iconography, historiography, film, and performance. In so doing, it interrogates how factors such as form and/or genre, race, gender, power, and geography influence narrative and knowledge production regarding slavery. Key themes the course addresses include racial slavery as civil and social death, ancient and modern/colonial genealogies of slavery, gendered experiences of bondage, regionalism in U.S. historiography of slavery, and the un/spoken and un/representable nature of atrocity. The course also examines contemporary narratives that underscore the significance that racial slavery brings to bear upon the present. DPLL WRIT

AMST 1900D. America as a Trans-Pacific Culture. From Columbus to the present, Asia has been central to the shaping of American culture. This course will examine the role of trade, migration and cultural exchange across the Pacific in the shaping of American culture and society. Enrollment limited to 20 juniors and seniors. DPLL LILE

AMST 1900E. Transnational Popular Culture. This course looks at popular culture as a transnational phenomenon. Taking up issues of cultural imperialism, globalization, domestication, and the economics of the culture industry, the course considers the history of cultural flows, from nineteenth century topics such as Chinese opera in the U.S. and Wild West shows in Europe to twenty-first century fast food, anime, sports, Disney, and music. We will consider both the consumers and producers of popular culture in Europe, South America, Asia and Africa, as well as those in the United States. Enrollment limited to 20 juniors and seniors. LILE

AMST 1900F. Ethnicity, Identity and Culture in 20th Century New York. This seminar will provide a theoretical and empirical overview of contemporary transnational social movements. Addressing issues ranging from fair-trade and labor exploitation, to environmental protection, to indigenous rights, and LGBTQ advocacy, social movements increasingly draw from morality and the global market in order to achieve their goals. This course critically investigates the ways in which humanitarian action is celebrated, contested, and commodified through art, social enterprise, and various other formal and informal institutional arrangements. DPLL WRIT

AMST 1900G. Movements, Morals, and Markets. This seminar will provide a theoretical and empirical overview of contemporary transnational social movements. Addressing issues ranging from fair-trade and labor exploitation, to environmental protection, to indigenous rights, and LGBTQ advocacy, social movements increasingly draw from morality and the global market in order to achieve their goals. This course critically investigates the ways in which humanitarian action is celebrated, contested, and commodified through art, social enterprise, and various other formal and informal institutional arrangements. DPLL WRIT

AMST 1900H. Latin/o Cultural Theory. Advanced seminar designed to familiarize students with past and present debates in Latin/o Studies. Knowledge of these critical conversations will aid students in making their own contributions to the field as they write their theses and dissertations. We will read such folks as Jose Limon, Mary Pat Brady, Frances Aparicio, and Gustavo Perez Firmat, to name but a few. Enrollment limited to 20 juniors and seniors.

AMST 1900J. Race, Immigration and Citizenship. "Who can become an American?" is a central question in American society. This seminar examines the construction of national identity, citizenship as a legal and cultural status, and the struggle for equal protection of the law. The experience of excluded Asian and Latino immigrants are key to understanding this historical and ongoing process. Enrollment limited to 20 juniors and seniors.

AMST 1900K. China in the American Imagination. Since Columbus, China has occupied a special place in the way America has been imagined and in the ways Americans have imagined their place in the world. This seminar will explore the relationship between China and America from Columbus to the present. While politics and diplomacy play an important role, the emphasis will be on trade, immigration and culture. Enrollment limited to 20 juniors and seniors.

AMST 1900L. Cold War Culture The American Culture in the Cold War. This seminar will explore domestic politics, social movements, family life, sexuality, gender roles and relations, intellectual currents, and popular culture in the United States during the Cold War years. Special topics include adolescence, "conformity", and the rise of television. Sources include historical monographs, memoir, film, and fiction. Enrollment limited to 20 juniors and seniors.

AMST 1900N. Ethnicity, Identity and Culture in 20th Century New York City. Explores the processes by which 20th-century New Yorkers created a self-consciously modern, urban, and ethnic American culture. Focuses on literary and artistic representations of life in 20th-century New York as manifested in works by five ethnic groups of New Yorkers that immigrated or migrated to the city after 1800: Jews, African Americans, Italians, Chinese, and Puerto Ricans. Enrollment limited to 20 juniors and seniors.

AMST 1900O. Filipino American Cultures. Examines the situation of Filipinos in the U.S. Drawing from social history, cultural studies, literature, and visual culture, the readings focus on the Filipino experience in the U.S. through a study of self-representations in various forms such as literature and visual culture. Readings include Campanones, Rafael, Bulosan, Linmark, and San Juan. Enrollment limited to 20 juniors and seniors.

AMST 1900P. Essaying Culture. This course is interested in the essay as form. As a verb, essay means "to make an often tentative or experimental effort to perform." We will explore through reading and our own writing the poetic, gnomic, and often desultory moves the essay makes as it seeks to understand its cultural objects. Like the novel, the essay is an omnivorous form. It consists of fragments, poetry, personal reflection, lists, rational argument, and much more as it winds its way to understanding. We will be reading a range of essays, as well as theories of the form. WRIT

AMST 1900Q. From Perry to Pokemon: Japan in the United States, the United States in Japan. This course traces the cultural interactions between Japan and the United States beginning with Matthew Perry is 1854 voyage. Topics include historical monographs, memoir, film, and fiction. Enrollment limited to 20 juniors and seniors.

AMST 1900R. Gender, Race, and Class in the United States. Focuses on the emergent feminist scholarship that both empirically and theoretically analyzes how the intersection of race, class, gender, sexual preference, and age shapes the lives of women, men, and transgendered people in the U.S. Enrollment limited to 20 juniors and seniors.

AMST 1900S. Green Cities: Parks and Designed Landscapes in Urban America. Examines the cultural meaning and public use of greenspace in American towns and cities. Covers city parks and metropolitan park systems; the landscaping of riverfronts, streets, cemeteries, and company property; and the contributions of landscape architects such as Frederick Law Olmstead and Warren Manning to the field of urban planning. Begins in the 17th century with the creation of Boston Common and ends by reviewing the latest greenway plans for Providence. Enrollment limited to 20 juniors and seniors.

AMST 1900U. Immigrant Radicals: Asian Political Movements in the Americas 1850-1970. Since Columbus, China has occupied a special place in the way America has been imagined and in the ways Americans have imagined their place in the world. This seminar will explore the relationship between China and America from Columbus to the present. While politics and diplomacy play an important role, the emphasis will be on trade, immigration and culture. Enrollment limited to 20 juniors and seniors.
AMST 1900V. Immigrants, Exiles, Refugees, and Citizens in the Americas.
Focuses on populations who leave their homelands within the Americas. Examines the meaning of categories "refugee," "exile," "citizen," and "immigrant" in the postwar period. Explores the experience and reasons of people who leave their homelands, the relations between their countries of origin and their new society, and their access to rights in both countries. Questions the extent of population movements in the Americas as redefining conceptions of citizenship, rights, nation, and national identity in the U.S. Enrollment limited to 20 juniors and seniors.

AMST 1900W. Latina Literature: The Shifting Boundaries of Identity.
Focuses on the relationship between national identity and ethnic identity in narratives by and about Mexican American, Puerto Rican, Cuban, Dominican and Central and South American women in the U.S. Texts by and about women from other ethnic and minority groups. Readings from Gloria Anzaldúa, Judith Ortiz Cofer, Dolores Pría, Cristina García, Julia Alvarez, among others. Enrollment limited to 20 juniors and seniors.

AMST 1900X. Latina/o Religions: Encounters of Contestations and Transformations.
The purpose of this seminar is to survey and review the literature in the new and emerging field of Latina/o Religions. We seek to define the Latina/o religious experience and identify its unique qualities and expressions in relation to other religious movements and expressions in the Americas. Enrollment limited to 20 juniors and seniors.

AMST 1900Y. Latino New York.
The Latino population of NYC in the present generation has generated new lines of inquiry for the study of diasporas in contemporary urban settings. This course undertakes an analysis of this experience from diverse interdisciplinary perspectives, with a focus on cultural expressions and representations and with a view toward new ethnographic and historical approaches. Enrollment limited to 20 juniors and seniors.

AMST 1900Z. Latinos and Film.
Analyzes the way Latino ethnicities have been constructed-and misrepresented-in Hollywood films from the silent era to the present, and examines contemporary work by Latino directors, producers, screenwriters, and actors who produce films that counteract the negative stereotypes of Hollywood films with more accurate, complex, and positive images of their own histories and cultures. Weekly screenings both in and out of class and readings that introduce a new body of film criticism from a Latino perspective. Enrollment limited to 20 juniors and seniors.

AMST 1901A. Latinos in Black and White: Race, Ethnicity and Identity in the Americas.
This seminar looks critically at traditional models of "race relations" in the Americas, the historical development and expressions of "blackness," "brownness" and "whiteness" at regional, national and international levels, and their contemporary articulations and ramifications. A primary focus will be the social and political dimensions of "ethnicity" and "race" in relations between Caribbeans and African Americans in New York City. Enrollment limited to 20 juniors and seniors.

AMST 1901C. Making America: The Immigrant Experience in Literature.
Examines the literature produced by immigrants and their children who came to the U.S. between 1865 and 1965. Will place literature in its sociocultural and literary contexts, considering it as a creative contribution to debates on acculturation, generational conflict, intermarriage, racism, gender politics, labor exploitation, and immigrant entrepreneurs. Will read works by authors of Chinese, Irish, Scandinavian, Japanese, Slavic, East European Jewish, Mexican, and Caribbean origin. Enrollment limited to 20 juniors and seniors.

AMST 1901D. Motherhood in Black and White.
Focuses on American motherhood with respect to race: under slavery; at the turn of the 20th century; and in contemporary society. Texts include fiction, film, history, feminist and psychoanalytic theory, e.g., "Uncle Tom's Cabin," "Incidents in the Life of a Slave Girl," "Imitation of Life," and "The Reproduction of Mothering." Enrollment limited to 20. DPLL WRIT
AMST 1901Q. Screening Men: Hollywood Masculinities, 1944-Present. Surveys Hollywood representations of dominant masculinity with the aim of interrogating these representations. Considers how such representations have changed over time and how changes may be read in relation to contemporary social, economic, and political pressures. In addition, considers how these texts interact with theoretical issues of representation, identification, and spectatorship. Enrollment limited to 20 juniors and seniors.

AMST 1901R. Social Movements of the 1960s. This course examines U.S. social movements from 1954 through 1974, concentrating on the 1960s. Drawing on primary and secondary sources, we examine such topics as the Civil Rights Movement and the emergence of Black Nationalism, the antiwar movement, the relationship between the New Left and second-wave feminism, and the movement for gay liberation. The course also pays attention to how the “sixties” are represented in contemporary culture. Enrollment limited to 20 juniors and seniors.

AMST 1901S. Society and Identity: A Comparative Approach to the Colonial Americas. Compares New Spain, the British North American mainland, and the Caribbean from initial colonization in the 16th century to 18th-century wars of independence. Focuses on the complex interplay of class, gender, race, and ethnicity that defined social formations and shaped identities. Reading biographies of ordinary people as well as synthetic histories, engages the past on different levels and connects individual identity and action to broader historical processes. Enrollment limited to 20 juniors and seniors.

AMST 1901U. The Charm of Anticipated Success: Varieties of the American Dream in U.S. History. The American Dream is one of the great myths of our national history—not “myth” in the sense of a falsehood, but rather a widely-held belief whose validity cannot be definitively proved or disproved (like “all men are created equal”). Using sermons, fiction, songs, and other cultural forms, this research seminar explores the complexities of the myth from the time of the Puritans to the present. Enrollment limited to 20 juniors and seniors.

AMST 1901V. The Contested City: Urban Culture in America, 1880-1940. Focusing on the popular culture of American cities, this course examines the evolution, commercialization, uses, and struggles over vaudeville, jazz, and early film, and leisure activities such as dancing, nightclubs, drinking, and shopping. Consideration will be given to the gendered, class-based, and racialized nature of leisure activities and spaces, reform efforts, and the dynamics of social change. Prerequisite: At least one semester of college-level course in U.S. history or literature. Enrollment limited to 20 juniors and seniors.

AMST 1901W. The Development of Black Feminism. Beginning with the participation of black women in the abolition movement and ranging forward to current black women novelists and feminist theorists, this course will examine the intellectual development of black feminism. We will pay particular attention to black feminism as an area of critical study, and will explore the concepts of representation, ideology, discourse, race, gender, and sexuality. Enrollment limited to 20 juniors and seniors.

AMST 1901Y. The Making of U.S. Child Welfare. Will examine the origin and design, at the beginning of this century, of the U.S. child welfare system. The separation of child from adult welfare, the definition of a special relationship between children and the state; foster care versus institutional care; the juvenile justice system; child labor; infant and maternal welfare; aid to children in families; and school-based welfare are some of the topics to be covered. Enrollment limited to 20 juniors and seniors.

AMST 1901Z. The Old/New Immigration. By comparing and contrasting the migration and adaptation experiences of Russian Jews and southern Italians, explores in depth the massive immigration from eastern and southern Europe that took place between 1880 and 1924. Topics include: the causes and contours of emigration, settlement patterns, adaptation and assimilation, ideologies of left and right, immigration as a gendered experience, immigrant writers and intellectuals, nativism and restriction, and the “new immigration” and national memory. Enrollment limited to 20 juniors and seniors.

AMST 1902A. The Politics of Asian American Culture. From Bret Harte's "Heathen Chinee" to Bill Clinton's John Huang, Asian Americans have been represented as aliens in American culture. The task of Asian American cultural production has been to create a space for an Asian American citizenship. This course looks at autobiography, fiction, drama, film, and cultural criticism to understand how Asian American culture makers have sought to combat imposed stereotypes, subvert structural hegemony, and undermine self-imposed orthodoxies. Enrollment limited to 20 juniors and seniors.

AMST 1902B. Topics in Latino Studies: Racial Ideologies, National Belonging, and Citizenship in the Americas. This seminar reviews the theoretical literatures on diaspora and transnationalism. We then place Asian migrations to the Americas (North America, Hawaii, the West Indies, Central and Latin America) in the context of migrations out of and within Asia in the 19th and 20th centuries. Finally, we consider transnationalism as an analytical framework for understanding the process of Asian-American community formation. Enrollment limited to 20 juniors and seniors.

AMST 1902C. Topics in Latino Studies: Racial Ideologies, National Belonging, and Citizenship in the Americas. What is the relationship between citizenship, national belonging, and ideologies of race in the Americas? In what ways do gender and class differences affect this relationship? Focusing on these questions, the racial and social experience of U.S. Latinos are compared with that of the populations in various countries in the hemisphere. Theoretical readings and empirical examples. Enrollment limited to 20 juniors and seniors.

AMST 1902D. Urban Borderlands. This course analyzes changing patterns of immigration from Latin America to the U.S. by comparatively examining the emergence of various Latino communities and cultures in selected cities. It explores interethnic relations among the various Latino communities, as well as Latinos' interactions with other racial and ethnic groups. The cities to be considered are Los Angeles, New York, Miami, San Antonio, Washington DC, and Providence—the last of which will be explored via student projects in the community. Enrollment limited to 20 juniors and seniors.

AMST 1902P. Women and American Modernism, 1900-1940. No description available. Enrollment limited to 20 juniors and seniors.
AMST 1902Q. Chicano Studies Seminar
Explores the culture and politics of Mexican people in the United States leading up to and through the 1960s and 1970s, and the post-nationalist period that continues to the present. Our approach will be interdisciplinary, including readings and films that explore the history, sexuality, art, music, labor, and gendered identities of this diverse community. Prerequisite: Introduction to America/Ethnic Studies recommended. Enrollment limited to 20 juniors and seniors.

AMST 1902T. Henry James and The American Scene.

AMST 1902Y. The Black Female Body in American Culture.
This course on gender and representation will use the black female body as an example of the ways in which images, both verbal and visual, of women of color are utilized within American culture. Through literature, film, visual art, and popular culture, we will consider the legacy of slavery, the persistence of stereotypes, sexual violence, and black women’s resistance. Enrollment limited to 20 juniors and seniors.

AMST 1902Z. Radio: From Hams to Podcasts.
This course examines the history of radio broadcasting and asks if a consideration of radio’s historic flexibility can predict the future of this interesting medium. Readings will focus on the exciting new field of radio studies, emphasizing economics, structures, and listeners. Topics include radio’s ability to cross borders, create racial and gender categories, and change programming possibilities. Enrollment limited to 20 juniors and seniors. WRIT

AMST 1903B. Alien-nation: Latina/o Im/migration in Comparative Perspective.
Explores how Latina/o immigration to the United States has reshaped the meaning of “America” over the last hundred years. We will study Latina/os in comparison to other im/migrants and examine how US immigration policy has created a nation partly composed of “alien” residents, some citizens, others not, who have constructed alternative notions of belonging. Enrollment limited to 20 juniors and seniors.

AMST 1903E. City of the American Century: The Culture and Politics of Urbanism in Postwar New York City.
This seminar will investigate the life, history and culture of New York City from World War II to the fiscal crisis of the mid 1970’s, with a particular interest in transformations in the built environment of the city and region. We will primarily focus on the cultural representations, intellectual visions, and political struggles that arose around these transformations, but will also consider their effects on everyday life. Enrollment limited to 20 juniors, seniors, and graduate students concentrating in American Studies.

AMST 1903F. Topics in Asian American History: Migration, Race and Citizenship.
This seminar will explore the relationship between Asian Americans and the US State in three historical moments; the era of exclusion, WWII internment, and the post-civil rights era. We will look at citizenship as a cultural signifier that organizes race, gender, sexuality and class as well as a legal status. Enrollment limited to 20 juniors and seniors.

AMST 1903G. Oral History and Community Memory.
Students in this seminar will conduct oral history interviews and archival research to create an audio and visual history of one Providence neighborhood. Collected materials will be prepared for public presentation as a walking tour and web site. Enrollment limited to 20 juniors, seniors, and graduate students.

AMST 1903H. Space and Place: Geographies of the Black Atlantic.
Is the map on an iPhone representative of the space beneath our feet? Does a ‘map’ have to represent geographic space or can it represent something else? For centuries people have sought to make sense of the geographies of their everyday lives as well as environments out of their purview. In this course, we will engage with a number of approaches to space and place including historical, cultural, ethnographic, literary, geographic, and artistic, focusing on African diasporas and the Black Atlantic. Students will analyze texts, artworks, and web-based projects, and at the end of the course, create their own maps. Enrollment limited to 20 juniors, seniors, and graduate students.

AMST 1903J. Anthropology and Art.
Art is a historic topic of inquiry in anthropology. From the early days of collecting and displaying ethnographic relics in cabinets of curiosities to the bustling movements of art and artists in global art markets, anthropologists have sought to understand social life through art, and art through social life. Through readings, discussions, films, digital materials, and artworks, we will learn about artists, art worlds, art practice, and how anthropologists have studied the arts. Course assignments include critical responses to course material, a final research project, and participation in Providence arts events.

AMST 1903L. Please, Please Me.
This seminar will investigate theories of pleasure and its representation in a range of fictional texts. What is it that makes a text pleasuring and for whom? How do we talk about pleasure and explain it to others? I am especially interested in the representation of pleasure from the 1970s on. Enrollment limited to 20 juniors and seniors.

AMST 1903Q. Out of Place: Regional Boundaries and their Transgression in Novels, Photography, Public Humanities.
This class explores the meaning of “region” in contemporary American culture. Focusing primarily on the West, we’ll examine the construction and transgression of geographical and ideological regional boundaries. Questions considered include: What does crossing boundaries tell us about the stability and meaning of region? What role do race, gender, and nationality play in moving across regional lines? What do shifting regional identities tell us about the possibilities and problems in ways of transforming identity? Sources include fiction, essays, websites, and photography. We use skills and ideas built over the semester to consider the ways museums and other public sites construct regional boundaries. Enrollment limited to 20 juniors and seniors, with priority given to American Studies concentrators.

AMST 1903R. Big Business, the Bomb, and Smokey Bear: Cold War Origins of Today’s Environmental Movement.
Beginning with the psychological, cultural, and environmental changes brought by the Atomic Bomb, this seminar traces Americans’ growing environmental awareness and concern with corporate power. We will look at classics like Aldo Leopold’s Sand County Almanac and Rachel Carson’s Silent Spring, as well as films, poetry, popular texts, and histories complicating traditional notions of the origins and conduct of the contemporary environmental movement. Students will have the opportunity to explore an aspect of environmentalism or the environment in depth through a semester writing project. Enrollment limited to 20 juniors and seniors.

AMST 1903T. The Materiality of History: Material Culture Theory and Practice.
Focusing on Native American, early American, and contemporary US material culture, this course develops critical methods for analyzing historic materials, not as silent monuments to the past, but as legible research materials for scholarly work. Who studies ‘things’, and with what methods? From the invisible to the living to the monumental, what are the limits of “thingness”? What is the role of commodification and American consumerism? Through selected readings and site visits, we will identify ‘best practices’ for integrating artifacts, collectibles, and every day things with documentary research in narrating and exhibiting the past. Enrollment limited to 20 juniors and seniors.
AMST 1903V. Asian and Latino Immigration.
This seminar examines the ways in which the histories of Asian and Latino immigration parallel and intersect each other throughout US history. Capitalist development and labor migrations; wars and refugees; immigration policies and changing racial formations will be among the topics we explore. Enrollment limited to 20 juniors, seniors, and graduate students concentrating in American Studies and Ethnic Studies. DPLL

AMST 1903W. The Boy Problem: Male Adolescence as Social Pathology.
Focusing on the beginning, middle, and especially concluding decades of the 20th century, this course examines the ways in which both expert and popular discourse in the US have conflated male adolescence with social pathology and have constructed an image of the teenage boy as both symptomatic of and responsible for the nation’s ills. Particular attention will be paid to issues of gender, race, and class. Primary source readings and original research will be emphasized. Enrollment limited to 20 juniors and seniors.

AMST 1903X. Style and the Man: Masculinity in Fashion and U.S. Seniors.
This class will examine the role clothes have played in constructing notions of masculinity and manhood from the mid-19th century to the present. We will take seriously the oft-heard comment, "the clothes make the man," by studying the sartorial circumstances around the formation of men’s fashion. These circumstances include class, ethnicity, race, gender, sexuality, and generation. Our study will be episodic and privilege New York and Los Angeles, though other locations will be considered comparatively. Enrollment limited to 20 juniors and seniors concentrating in American Studies.

AMST 1903Y. American Publics.
Americans worry about the quality of their civic life and fear its decline. We examine the public sphere’s popular and political dimensions as well as challenges to the boundaries of American public life. Who is a citizen and thus eligible to participate? The course pays particular attention to concerns about the impact of new media—print, broadcasting, the internet. Taught simultaneously with the same course at the University of Melbourne, Australia, students will be linked digitally for discussion and collaborative writing. Enrollment limited to 20 juniors and seniors.

AMST 1903Z. Shrine, House or Home: Rethinking the House Museum Paradigm.
This seminar will examine historic house museums within the context of American culture from the founding of Mount Vernon in 1853 to their present decline in popularity and relevance. Utilizing sources from a variety of disciplines including literature, women’s and family history, and museum and preservation theory and practice, students will re-examine the prevailing historic house museum paradigm and develop interpretation plans for house museums in the Providence area. Enrollment limited to 20. If oversubscribed, priority is given to students in the Public Humanities Programs and Department of American Civilizations. No prerequisites.

AMST 1904A. Memories, Memorials, Collections and Commemorations.
To understand how American culture thinks about the past, we will explore a range of texts including museum exhibits, historical society collections, memorials, and civic celebrations. These sites and objects, the material culture of memory, help us understand the construction of national, community and personal identity. Students will also undertake practical projects in memorialization and commemoration, among them designing the program for a new memorial to the Rhode Island slave trade. Enrollment limited to 20 juniors and seniors.

AMST 1904B. Henry James Goes to the Movies.
This course will focus on some of the novels and stories by James that have been made more than once into films or TV shows - Washington Square, The Turn of the Screw, The Portrait of a Lady, and The Golden Bowl - and study the narrative and visual choices as interpretations of James’s texts. Critical readings on the art of fiction and the art of film will also be included. Enrollment limited to 20. WRIT

AMST 1904C. The Pacific Rim in American History.
Investigates the circuits of people, goods and ideas between Asia and the Americas. Although these flows have been at work for the past half millenium, this course will focus principally on three historical moments: the trading world of the 17th and 18th centuries; colonialisms and their critique in the late 19th and early 20th centuries; and the “American Century” in the late 20th century. Enrollment limited to 20 juniors and seniors.

Explores the complexity of the American experience, the displacements and diasporas of the Vietnamese, the Cambodians, the Hmong, the Lao, and the Hmong in America through multiplicity of perspectives and interdisciplinary approach. Special emphases are on the reinvention of new lives in New World, the American-born generation, how the American-ness and the sense of “home” are constructed, defined, and contested through literary and cinematic works, self-representations, and cultural productions written and produced by these new Asian Americans themselves. Enrollment limited to 20. DPLL

AMST 1904G. Museums, Identities, Nationhood.
Will explore the national museum as a cultural institution in a range of contrasting contexts, revealing how these museums have been used to create a sense of national self, deal with the consequences of political change, remake difficult pasts, and confront those issues of nationalism, postcolonialism and multiculturalism which have come to the fore in national politics in recent decades. Enrollment limited to 20 juniors, seniors, and graduate students.

AMST 1904I. Art/Place.
This course surveys the many ways in which contemporary artists respond to, remake, and intervene in places, and teaches students to articulate their own creative responses to place. We will be working intensively in Providence’s Jewelry District, collaborating with the nonprofit Artists in Context to create a public artwork, and developing each person’s creative practice in response to the narrative and aesthetic prompts of this contested space. The course will culminate in a final exhibition of student projects curated by the students themselves. Enrollment limited to 14. LILE

AMST 1904J. The Asian American Movement: Communities, Politics and Culture.
In 1969 students at S.F. State College invented a new social category; they called it Asian America. This seminar begins with an examination of the Asian American Movement, its origins and aspirations, its ideological cross currents, its failures and enduring legacies. But the central question we will ask is, what relevance does the Asian American Movement have for struggles for social justice today? Enrollment limited to 20 juniors and seniors.
AMST 1904L. Cultural Heritage, Curation and Creativity.
The course examines current theories and practices in cultural heritage work from various international perspectives and places them in dialogue with practices, theories and critical perspectives from the contemporary arts. It offers students the opportunity to participate in a practical and creative cultural heritage project, realizing a curated experience/event/experience within the urban environment of Providence. Questions of material and form; the relationship between language and vision; the role of description in interpretation; and what constitutes learning through visual experience will be considered. Following readings in cultural heritage theory, curatorial studies and critical theory, the course will engage students both intellectually and practically through individual and group curatorial projects. Enrollment limited to 14 juniors and seniors. LILE

AMST 1904M. Charles Chapin and the Urban Public Health Movement.
Examines the science, politics, and programs of the 19th and early 20th century urban public health movement. Scope will be national but the focus will be on Providence, particularly during the tenure of Charles Chapin as Superintendent of Health. Will result in the mounting of an exhibit illustrating and explaining one of facets of the movement. Enrollment limited to 20 juniors and seniors.

AMST 1904N. The Korean War in Color (ENGL 1761V).
Interested students must register for ENGL 1761V.

AMST 1904O. Native American Environmental Health Movements (ETHN 1890J).
Interested students must register for ETHN 1890J.

AMST 1904P. Queer Relations: Aesthetics and Sexuality (ENGL 1900R).
Interested students must register for ENGL 1900R.

AMST 1904Q. Engendering Empire (ETHN 1890K).
Interested students must register for ETHN 1890K.

This course explores the challenges to narrative modes, institutional patterns, and models for studies in material culture that are posed by emerging digital media practices. This course will focus on the example of the collections and resources of the Haffenreffer Museum of Anthropology. Readings in brain science and anthropology that focus on the cognitive and social mechanics of cultural capital formation to project development techniques in simulation and prototyping that derive from movie production, interaction design, game development and architecture. Students from a broad spectrum of arts and science backgrounds, including specifically those from museum curation and computer science, are welcome. Enrollment limited to 15. LILE

AMST 1904S. Ethnic American Folklore: Continuity and the Creative Process.
The course investigates how folklore and the oral culture of diverse cultural groups have transformed within their texts and in their creative representations and meanings. It looks into the dynamics of cultural continuity and the creative process involved, from oral narratives, foodscape, family lore, the senses of place, and the senses of home. At the juncture of the oral, the written, the popular, and the high tech, what are the new cultural forms, new cultural products, communication milieu and venues negotiated and contested. Anthropological field research methods and training will be a major emphasis of the course. Enrollment limited to 20.

Debates about women and work seem to be everywhere in American culture, dominated by the question of whether professional women can “have it all.” Simultaneously, women—especially women of color—continue to be concentrated in the lowest-level, most poorly-paid jobs. And as more families depend on women’s income, the contradictions between waged work and unwaged family work grow more acute. Controversies about women and their labor—waged and unwaged—have a long history in the U.S. This course will explore current debates from historical, sociological, and theoretical perspectives, with particular attention to the impact of race and class. Enrollment limited to 20 sophomores, juniors, seniors.

AMST 1904V. Decolonizing Minds: A People’s History of the World.
This seminar will explore the knowledge-production and military-financial infrastructures that maintain empires, as well as the means through which people have either resisted or embraced empire. While some attention will be made to the 19th and early 20th century colonial context, the bulk of the course will focus on the Cold War liberal era to the neoliberal regime that continues today. Possible topics include: popular culture and ideology, the Cold War university, area studies, international anti-war networks, transnational labor activism, the anti-colonial radical tradition, and the Arab Spring/Occupy Movements. Weekly readings; evaluation based on participation and analytical essays. Enrollment limited to 20. No overrides will be given before the semester begins. Please come to the first class meeting if you are interested in taking the course. DPLL

AMST 1904W. Native American Environmental Health Movements (ETHN 1890J).
Interested students must register for ETHN 1890J.

AMST 1904X. Imagining And Depicting China In America.
Geographically remote and less-obviously intertwined politically and culturally, China’s distance has fostered an active imaginary, producing rich visual and textual resources. This seminar examines narrative and visual culture over the long period Americans have been fascinated with China and the Chinese, from the 18th century to the present. Visual primary sources are our principal “texts” and include paintings, cartoons, decorative arts, photography, films, fiction, news articles, and government documents. The goal of the course is to interrogate how we envision China and the Chinese today, placing that vision within a critical historical perspective. Enrollment limited to 20. DPLL

AMST 1905A. Crises in American Capitalism.
We are now in the midst of what is commonly called the Great Recession—the biggest economic crisis since the Great Depression. This course investigates these two crises in American capitalism: how they were caused, resisted, represented, and remembered. Students will be asked to interrogate the meanings of these economic crises, and to consider their various political and cultural uses. Assigned texts will include history, fiction, journalism, film, memoir, and photography. Enrollment limited to 20 sophomores, juniors, and seniors.

AMST 1905B. Media and Modern Childhood (GNSS 1960S).
Interested students must register for GNSS 1960S.

AMST 1905C. Mainstream Journalism in America (through the prism of The New York Times).
Jefferson is supposed to have said that if he were forced to choose between a free government and a free press he would choose a free press, because without it a free government would not survive. It is still big in Mexico City while Spidey is a political superhero in Hong Kong and Bangkok street protesters flash Mockingjay salutes. In this seminar, we will use three spaces of cultural production and consumption, food, performance and street art, to illuminate deep circuits of migration, labor, culture, and popular politics across and around the Pacific. DPLL

AMST 1905D. African American Musical Theatre (MUSC 1905D).
Interested students must register for MUSC 1905D.

AMST 1905E. American Poetry II: Modernism (ENGL 1711A).
Interested students must register for ENGL 1711A.

AMST 1905F. Literature and the Problem of Poverty (ENGL 1710K).
Interested students must register for ENGL 1710K.

AMST 1905J. American Poetry I: Puritans through the Nineteenth Century (ENGL 1511O).
Interested students must register for ENGL 1511O.

AMST 1905L. Transpacific Popular Culture.
General Tso’s Chicken is as American as apple pie, half the nation’s 8-year olds practice some “ancient” Asian form of mayhem, and K-pop is still big in Mexico City while Spidey is a political superhero in Hong Kong and Bangkok street protesters flash Mockingjay salutes. In this seminar, we will use three spaces of cultural production and consumption, food, performance and street art, to illuminate deep circuits of migration, labor, culture, and popular politics across and around the Pacific. DPLL
In this course students examine the commemoration of specific sites, private and public, in creating, remembering, and preserving public history. Through theoretical readings, case studies, and workshops, students will explore the intersection of people—as individuals, community members, and citizens—with their built environment, historic memory, and narrative. We explore how cultural heritage gets made, who chooses the sites, and whose history gets remembered by writing a U.S. National Park Service Landmark nomination for a local Chinese American site. The course also compares American cultural heritage programs with those of other countries and provides practical experience with National Park Service processes. DPLL

AMST 1905N. War and the Mind in Modern America.
This course examines how the crucible of war has shaped modern conceptions of human nature. Moving from the Civil War to the present, we will consider questions such as changing theories of combat trauma, evolutionary and social scientific explanations for why people fight wars, and the role of memory in individual and collective understandings of violent conflicts. Students will analyze representations of war in film and literature in addition to reading historical and theoretical texts. WRIT

AMST 1905O. Reading and Righting Histories of Violence.
This seminar proposes “histories of violence” as a useful framework to interrogate the varied forms of violence that constitute Western liberal modernity. These forms include systems of state power and imperial practices; subjective violence through raced, gendered, and sexualized hierarchies; and narrative violence that prevents histories and voices from emerging through the erasure of archives and narrative silencing. Course readings consider ongoing local and transnational struggles to reckon with the violent histories of slavery, empire, colonialism, nationalism, and democracy. They offer interdisciplinary models for researching and narrating these histories. Class discussions with consider avenues for reckoning with histories of violence. DPLL LILE WRIT

This course examines US women’s history from the late 19th century to the present, with a focus on labor broadly defined. It will consider how differences among women (e.g. race, ethnicity, religion, sexuality), as well as their status as women, historically shaped their experiences of work, cultural life, activism, and reproduction. WRIT

Interested students must register for HIST 1972E.

Interested students must register for HIST 1970B.

AMST 1905V. Digital Communities.
Community and online engagement have been falsely cast in a dichotomous light—either a cure-all or a sure failure. Working with local and online communities will shape our understanding and questions about the complexities of groups. We’ll learn context, tools, and tricks for building powerful community-based campaigns. Students examine how projects can gain new participants while maintaining their focus and think about the differences in community involvement in on-line spaces and off. In a hands-on project, this class explores how to work together in digital space, to create moving media, and to build a campaign for support and growth.

AMST 1906H. Beauty Pageants in American Society.
Beauty pageants are often ridiculed, and even vilified, in American society. Yet their cultural power—from “There She Is” to Toddlers + Tiaras to pageant waves—is undeniable. What accounts for the enduring power of beauty pageants? This course draws on inter-disciplinary scholarship across the social sciences and humanities to examine how and why pageantry and American femininity have become linked in the public consciousness. By the end of this course you will be able to use beauty pageants as a lens to carefully examine gender, race, age, and appearance, and apply that critical thinking to other pop culture phenomena. WRIT

AMST 1906I. Collecting Culture: Indigenous Objects, Colonialism, and Museums.
This course addresses “global indiginity” in comparing ethnographic collections in Taiwan and North America. How do Anthropology museums maintain and interpret objects collected under English, US, or Japanese colonialism. In hands-on and virtual examination of museum collections, students follow ethnographic artifacts from useful circulation to glass cabinets—and ultimately to art galleries. We explore collecting and representation strategies of “ethnic” objects in relation to colonialism, decolonization, ethnic politics, and nationalism. What are strategies of the post-colonial museum and indigenous-led design? WRIT DPLL

AMST 1906J. Race, Gentrification, and the Policing of Urban Space (PLCY 1701W).
Interested students must register for PLCY 1701W.

AMST 1906K. Crimes of Gender and Sex: Producing and Imprisoning Criminals in the Age of Mass Incarceration.
Growing interest in mass incarceration has brought new attention to longstanding critiques of the criminal justice system. This course looks beyond failings such as “tough on crime” sentencing and racist policing to examine criminal justice as a system that defines and produces criminality. Specifically, we will examine criminalization as a social, political, and cultural process that not only makes certain bodies “criminal,” but also reinforces dominant beliefs about gender, sexuality, and sex. We will explore theories of criminality, methods of policing and imprisonment, rehabilitation initiatives, and prison activism through an intersectional lens. WRIT DPLL

AMST 1906N. Whiteness, Power, and Privilege: The Invention and Persistence of the White Race.
Terms like whiteness and white privilege have entered the American mainstream in the wake of racial tensions and the rise of movements like Black Lives Matter. This course seeks to situate historically, socially, psychologically, politically, economically, and corporeally what is meant by whiteness and how it affects our daily lives in this country and at a global level. Through engagement with classic texts in critical whiteness studies and select case-studies, students will discuss the invention, development, and power of whiteness. From the advent of race-based slavery to the 2016 Presidential Election, this course explores the meaning and power of whiteness. DPLL WRIT

AMST 1906P. Food in American Society and Culture.
How do we define American food and how does food define Americans? What determines what we eat, how we eat it, and what we believe we should eat? How is food used to construct and declare ethnic, racial, regional, class, and gender identities? How do food and nutrition become employed as signifiers of social justice and injustice and as sites of political struggle? What issues inform current discussions of the economics of local, national, and global food production and consumption? What is meant by eating responsibly? This course will examine these and other related questions currently animating food studies.

AMST 1907. Independent Reading and Research.
Required of all honors candidates in the senior year. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. S/NC

AMST 2010. Introduction to Interdisciplinary Methods.
Introduction to interdisciplinary studies required of all first-year graduate students in American Studies. Graduate students from other departments may enroll with permission of the instructor.

This graduate-level course offers an introduction to the discipline of American Studies through a close reading of four important texts representing different methodologies and theories within the discipline. We will also read a series of seminal articles focused on transnationalism, highlighting the significance of border-crossings to the American experience throughout the semester. The goal of the course is to familiarize students with pedagogical approaches within American Studies, through active seminar discussions, fieldtrips within the community, and work with material and visual media as well as secondary texts.
AMST 2220A. Digital Scholarship.
This course examines how the social sciences and humanities changed as a result of the information revolution. We will look at changes in museums, publishing, knowledge production, and pedagogy. Students learn digital tools and use them to create new media projects experimenting with public scholarship, digital humanities research, archival tools, and/or classroom possibilities. Digital novices welcome. Enrollment limited to 20.

AMST 2220B. Culture, Politics and the Metropolitan-Built Environment.
This interdisciplinary readings seminar will provide graduate students with an introduction to recent scholarly work on 20th century and contemporary cities and suburbs. Readings will be drawn from cultural, political, social, and intellectual history, American Studies, political science, sociology, and ethnography. They will investigate the interconnections between urban and suburban development and the role of ideology, class, gender, race, and globalization in shaping planning, architecture, culture, policy, politics, and social movements. This class is open to students in American Studies, History, Sociology, Political Science, Anthropology, and other disciplines who find themselves interested in multi-disciplinary approaches to the study of cities and suburbs.

AMST 2220D. Museums in Their Communities.
This seminar examines in detail the internal workings of museums (of anthropology, art, history, science, etc.) and their place in their communities. Accessions, collections management, conservations, education, exhibition, marketing, research, and museum management are among the topics discussed. Open to graduate students only.

AMST 2220E. American Orientalism and Asian American Literary Criticism (ENGL 2760Y).
Interested students must register for ENGL 2760Y.

AMST 2220G. Old Media New Artists: Innovation and Contingency in African American Culture.
What are the defining characteristics of newness in twentieth-century African American culture? How have black creative artists repurposed their respective disciplines in accordance with and against the shifting proclivities of African American social politics? Through an interdisciplinary focus that considers music, literature, visual arts, and interactive media, this seminar proposes several alternative epistemological frameworks for recognizing the emerging artistry of our time. Enrollment is limited to 20 graduate students.

AMST 2220I. Skin Deep: Reading Race, Reading Form.
There is a movement away from symptomatic/paranoid readings of literature. In 2009, Stephen Best/Sharon Marcus pitched this in their call for surface readings, which deals with what is manifest/present in texts, rather than the latent/concealed. I hope to get beyond politically-instrumental readings of literature/to thinking in a sustained fashion about language/form/aesthetics of race. The seminar will divide between reading histories/theories of race (obsession with physical variation as race and technologies of seeing that we use to read race)/working through a range of post-nationalist works of literature/sharpening our understanding of reading as a mean-making event. Limited to Grad Students and seniors.

AMST 2450. Exchange Scholar Program.

AMST 2500. Museum Interpretation of the American Experience.
A seminar examining methods of museum interpretation, the ways that museums convey information to the public with exhibits, tours, demonstrations, films, video tapes, slide shows, interactive computer programs, publications, and other techniques. We will visit museums that have an historical or anthropological focus and read theoretical and critical writings on the public interpretation of American material culture.

AMST 2510. Industrial Archaeology.
No description available. S/NC

This course explores the mechanics of a doctorate degree in American Studies. We will explore the constitution of our field through the elaboration of field exam lists and narratives, query its pedagogical application in the design of undergraduate syllabi, and begin to outline and enact our participation in the profession both within and beyond the academy. At the end of this class, students will have constructed a portfolio that will assist their progress towards a degree and provide the tools with which to chart pathways once a degree is in hand. S/NC

This course surveys public humanities work, including cultural heritage preservation and interpretation, museum collecting and exhibition, informal education, and cultural development. It also provides an overview of the contexts of that work in nonprofit organizations, including governance, management, and development.

AMST 2550A. Asian American Political Movements to 1970.
This research seminar will examine political movements in Asian immigrant communities in the United States and the Caribbean before the emergence of "Asian America" in the late 1960s.

AMST 2550B. The Japanese in the Americas.
A research seminar on the comparative historical experience of Japanese in Hawaii, mainland U.S., Brazil, and Peru. Open to undergraduates with permission of instructor.

AMST 2550C. Advanced Seminar on Asian American History.
Advanced seminar on Asian-American history, diaspora studies and globalization.

AMST 2580. Managing and Evaluating Arts and Culture Institutions.
Cultural and arts organizations are re-assessing why they exist, who they serve and how they should be structured and supported to do their best work. This course explores how current and emerging field leaders, practicing artists and educators; trustees and donors, philanthropists and public officials answer these questions. Students will investigate how a particular institution is adapting (or not) to new conditions. Students will formulate responses to real world dilemmas from the perspective of Executive Directors, program officers, practicing artists, educators, and community members.

AMST 2590. Creativity, Community and Controversy in Cultural Policy.
The art of making good policy lies in making tough choices between competing options to maximize public good. Governments perceive the arts/arts-education as amenities and slash their budgets. However, creative placemaking initiatives, the expansion of the creative economy, the rise of design thinking suggest new ways for policy makers to constructively resolve apparent dilemmas to advance arts policy goals. The course explores public policies that stimulate the arts; how arts advocates make their case to public officials; the benefits of the arts to the communities; and how policy makers in many sectors in the US and internationally leverage/exploit, arts-based solutions.

This seminar presents and analyzes contemporary institutional initiatives and policies relating to culture, including public art, tourism, historic preservation, and museums. It demonstrates how political, social, cultural, advocacy, and media organizations from the local to international level shape policies designed to protect and present cultural sites and activities in society. Enrollment limited to 10 graduate students.

AMST 2650. Introduction to Public Humanities.
This class, a foundational course for the MA in Public Humanities with preference given to American Studies graduate students, will address the theoretical bases of the public humanities, including topics of history and memory, museums and memorials, the roles of expertise and experience, community cultural development, and material culture. Enrollment limited to 20 graduate students.
AMST 2651. The Responsive Museum.
This course considers the many kinds of experiences available to people in art museums. Although art museums have tended to embrace the values of art history, visitors use them in surprising, personally meaningful, powerful ways. Among the topics we will activate: building community, stimulating creativity, evoking memory and associations, learning about the self and others, healing, and crossing cultural boundaries. Enrollment limited to 15 graduate students.

AMST 2652. Community Documentary and Storytelling.
This class focuses on ways that documentary methodologies and storytelling help individuals articulate and negotiate issues of race, ethnicity, gender and social class in local and regional communities. Through readings, discussions, and presentations by guest speakers, students will examine written, digital, visual, video/film, and oral presentations and performances as ways to express community stories. We will also consider how such projects can facilitate civic engagement. The class will involve participation in a community documentary project. Enrollment limited to 15 graduate students.

The course offers an opportunity for RISD and Brown students to work together to understand the growing interdisciplinary field of public art. We will explore the potential of working in the public realm as artists and/or arts administrators. Topics include: pivotal events and artworks that formed the history of public art from the early 20th century to the present; approaches to site-specificity; ideas of community and audience; current debates around defining the public and public space; temporary vs. permanent work; controversies in public art; memorials, monuments, and anti-monuments; case studies; public art administration models, among others.

AMST 2654. Designing Heritages: From Archaeological Sensibilities to Relational Heritages.
Do you believe in the past? This course takes as its starting assumption that pasts are not temporally distant from today. They are contemporary experiences whose structure and mediation impact how we live in our shared world. This course will explore the intellectual history of archaeological thought and the development of heritage theory. While simultaneously exploring practical design skills, it will provide context to contemporary synergies between art, archaeology and heritage studies through interdisciplinary studies of architecture, art history, cultural criticism, heritage studies and archaeological theory. Enrollment limited to 15 graduate students.

AMST 2655. Against Invisibility: Asian America/s, Collective Memory and the Public Humanities.
This seminar confronts the problem of Asian American invisibility in U.S. public culture. The popular “model minority” narrative about (primarily East) Asian Americans has effaced radically different trajectories of migration, community formation and racializations as well as sharp contradictions of class, gender, and sexuality. We will study different strategies and projects deployed by Asian American communities to confront, remember and memorialize collective memories of these struggles. Students will draw on their research and work with community groups to design exhibits, memorials, and arts projects that will help change this dynamic.

Cultural policy is the aggregate of governmental activities in the arts, humanities, and heritage. This seminar explores its history and public/private context and offers practical insights about how to influence cultural policy design, especially methods to achieve public consensus through planning. Students discuss contemporary issues, examine policy planning principles, and learn practical methods through case study to develop policy recommendations. Enrollment limited to 20 seniors and graduate students.

AMST 2657. Museum Interpretation Practices.
Examines current interpretive practices and offers students the opportunity to participate in creating gallery interpretation for the museum context. Questions of material and form; models of attention and perception, the relationship between language and vision; the role of description in interpretation; and what constitutes learning through visual experience will be considered. Throughout the semester students will develop an interpretive practice through a series of workshops, exercises, site visits and critical discussions. Enrollment limited to 14: seven seniors and graduate students, along with seven RISD students.

AMST 2658. Releasing the Imagination in Public Humanities Practice.
Designed to stimulate and nourish creative approaches to work in museums and other venues of public humanities practice. Students will be invited into a series of creative adventures drawing on essential skills of close looking, deep listening, persuasive writing, and creative production. Essays from Maxine Greene’s “Landscapes of Learning” and “Releasing the Imagination,” as well as an array of personal essays, exhibition catalogues, fiction, and research from the fields of education, sociology, and psychology. Enrollment limited to 15 graduate students; undergraduates may be admitted with instructor permission.

The course offers an in-depth exploration of the radical roots and continual transformations of the academic discipline of American Studies within particular historical contexts, beginning in the early 20th century into the present. We will read seminal texts responsible for the formation of defining moments in the discipline's history, including the "myth & symbol school," "American exceptionalism," multiculturalism, post-nationalism and transnational American Studies. Students will produce reviews of current texts and reflect on future possibilities for a mature and globalized American Studies. Enrollment limited to 20 graduate students.

AMST 2660. Projects in Public Humanities.
Devoted to one or more advanced projects in Public Humanities not covered in detail by the regular courses. Projects in public humanities provide practical, hands-on project and group project management experience that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty advisor to project completion. Written permission and topic description required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. This course is repeatable for credit. Prerequisite: AMCV 2650 or demonstrated ability of equivalent experience. Instructor permission required.

AMST 2670. Practicum in Public Humanities.
Practicums in public humanities provide practical, hands-on training that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty to find appropriate placements and negotiate a semester's or summer work, in general a specific project. Available only to students in the Public Humanities M.A. program.

AMST 2680. Practicum in Public Humanities.
Practicums in public humanities provide practical, hands-on training that is essential for careers in museums, historic preservation, and cultural agencies. Students will work with faculty to find appropriate placements and negotiate a semester's or summer work, in general a specific project. Available only to students in the Public Humanities M.A. program.

AMST 2690. Management of Cultural Institutions.
This course explores public humanities institutions as an organizational system interacting with broader community systems. Students gain an understanding of the managerial, governance and financial structures of public humanities organizations and how those structures relate to mission, programming and audience. The course is designed to help those who work on the program side of public humanities and cultural nonprofits (as educators, librarians, curators, interpreters, exhibit designers, public programming coordinators, and/or grant makers) engage more strategically with planning, organizational behavior, revenue generation, finance, marketing, and governance.
AMST 2691. Poetry in Service to Schools and the Community
Poetry in service to the community honors a connection between poetry and wisdom, assumes that poetry is a wisdom medium (vehicle, vessel, conveyance) toward more enlightened thinking and practice. In this way, it is also an ideal medium for extending our study and practice beyond Brown, conducting workshops in schools, community centers, youth detention facilities and elsewhere. The class emphasizes community building, in teaching pairs and classes and workshops throughout Providence, in Renga and workshop groups. Poetry is the connective tissue; building relationships is at the heart of the practice. Students will write and teach. Enrollment limited to 16.

AMST 2692. Digital Public Humanities.
What is “digital humanities” and how does it impact and intersect with the field of public humanities? Digital humanities work involves new approaches to reading, writing, research, publication, and curation: digital tools help us examine digital and non-digital material in innovative ways, and digital modes of communication help us reach new and wider ranges of audiences. This course provides students with the opportunity to create digital projects and utilize digital tools to further their academic and professional interests.

AMST 2693. Community Arts with Young People.
Blurring the boundaries between artist and audience, practitioners of community arts have engaged underrepresented audiences who have traditionally relegated to more passive forms of participation, including young people with little access to arts education. This class provides students the opportunity to research and/or to conduct their own community arts projects with young people in Providence. Students will develop a deeper and more critical understanding of theorizing and implementing community arts projects with youth; will examine how to create pedagogic conditions with youth through the arts and humanities, as well as ways to systematically observe, document, and analyze these pedagogies. Enrollment limited to 15.

AMST 2694. Decolonizing Public Humanities: Intersectional Approaches to Curatorial Work + Community Organizing.
This course will decenter experiences and cultural expectations attendant to whiteness, cis-maleness, able-bodiedness, heterosexuality, and middle/upper-classness in the public humanities, and thereby explore the contemporary problems and possibilities of intersectional approaches in the field. What do contemporary paradigms of “diversity,” “public engagement,” and “cultural organizing” have to teach us about effective and ethical public humanities approaches? Do different, multiply marginalized communities of affinity practice entirely different public humanities? How are cultural interventions changing to accommodate the demands of an increasingly segmented public sphere?

AMST 2695. Museum as Idea.
What should museums be in the 21st ce? Are museums of today relevant to cultural historical, scientific, artistic, political and educational purposes? How can they provide more meaningful encounters with objects to inspire curiosity and to honor their creators? How can museums relate to their diverse communities today? Must they own objects to be museums? Growing from the historical basis for museum theory, We'll suggest alternative directions, create platforms for new perspectives. We'll rely on readings, discussion, and meetings with museum leaders, and on independent creative research. All will be challenged to invent their own concept of “museums.” Enrollment limited to 12.

AMST 2696. The Promise of Informal Learning.
The course will take as its focus “Facilitated informal learning” - learning that happens outside of formal learning environments but is facilitated by an educator. It will explore facilitated informal learning within cultural institutions - museums, historic houses, zoos, libraries, science centers, children’s museums. The course will explore the pedagogical methods, underlying philosophies and learning theories, audience, debates, and goals of facilitated informal learning today.

AMST 2697. Museum Interpretation Practices.
This course examines current interpretive practices and offers students the opportunity to participate in creating gallery interpretation for the museum context. Questions of material and form; models of attention and perception, the relationship between language and vision; the role of description in interpretation; and what constitutes learning through visual experience will be considered. Throughout the semester students will develop their interpretive practice through a series of workshops, exercises, site visits, and critical discussions. Enrollment limited to 15.

AMST 2699. Digital Storytelling.
This course surveys the current state of digital storytelling, examining topics ranging from digital curation to data journalism to social media activism (and beyond). We will consider the narrative conventions, multimodal dimensions, and mechanics of a wide range of digital stories, carefully examining both the tools available to creators and the theoretical perspectives that motivate their authors. Students will determine best practices for digital storytelling projects through their engagement with course readings, their participation in in-class workshop sessions where we experiment with particular tools and publishing platforms, and their implementation of a digital storytelling project. Enrollment limited to 15.

AMST 2760Z. African American Literature After 1965: Nationalism and Dissent (ENGL 2760Z).
Interested students must register for ENGL 2760Z.

AMST 2920. Independent Reading and Research.
Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2921. Independent Reading and Research.
Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2922. Independent Reading and Research.
Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2923. Independent Reading and Research.
Section numbers vary by instructor. Search Banner by instructor name to find the correct section number and CRN to use when registering for this course. You will need instructor permission to register and the course may be repeated with different instructors. Open to American Studies graduate students only. S/NC

AMST 2950. Independent Reading and Research in Public Humanities.
For MA in Public Humanities Students who wish to do independent reading and research.

AMST 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

Ethnic Studies

ETHN 0066L. Beyond World Music: Singing and Language (ANTH 0066L).
Interested students must register for ANTH 0066L.
ETHN 0090A. The Border/La Frontera.
We will examine the historical formation, contemporary reality and popular representation of the U.S.-Mexico border from a bilingual (English-Spanish), multicultural (U.S., Mexican, and Latino), and transnational perspective within the framework of globalization. We will explore the construction of border communities, lives and identities on both sides of the international divide, and pay particular attention to the movement of peoples in both directions. We will read materials, watch films, and conduct class discussions in English and Spanish. Comfort and reasonable proficiency in Spanish is required, but native command is not necessary. Enrollment limited to 20 first year students. FYS WRIT

This course will guide students through an understanding of the historical, contemporary, and ideological rationale behind the constructions of mixed race, and how mixed race theory plays out in history, art, and contemporary media. This course aims to expand the conversations of mixed race beyond the stereotypes of tragic mulattos and happy hapas, instead interrogating what mixed race looks like in the twenty-first century and what historical precedents can explain current phenomena. DPLL FYS

ETHN 0091. An Introduction to Africana Studies (AFRI 0090).
Interested students must register for AFRI 0090.

ETHN 0100. Introduction to Cultural Anthropology (ANTH 0100).
Interested students must register for ANTH 0100.

ETHN 0100V. Inventing Asian American Literature (ENGL 0100V).
Interested students must register for ENGL 0100V.

Interested students must register for SOC 0130.

ETHN 0190C. American (Mass)culinities: Sexuality, Race and Aesthetics (AMST 0190C).
Interested students must register for AMST 0190C.

ETHN 0190E. It’s the End of the World As We Know It: Zombie and Apocalypse Narratives in Pop Culture (AMST0190E).
Interested students must register for AMST 0190E.

ETHN 0190F. Beyond the Tourist Trap: The Past, Present, and Future of Asian American Urban Spaces (AMST 0190F).
Interested students must register for AMST 0190F.

ETHN 0190G. The Fringe is the Fabric: Anti-Immigrant Movements in the United States (AMST 0190G).
Interested students must register for AMST 0190G.

ETHN 0190X. Gendered Mobility: Migrant Women Workers in a Globalized Economy (AMST 0190X).
Interested students must register for AMST 0190X.

Interested students must register for AMST 0191P.

ETHN 0201G. Killing them Softly: Satire and Stereotype in African-American Literature (ENGL 0201G).
Interested students must register for ENGL 0201G.

ETHN 0210. Blacks in Latin American History and Society (AFRI 0210).
Interested students must register for AFRI 0210.

ETHN 0270. Introduction to Latino/a History.
The Latino/a population in the United States continues to be mischaracterized in popular culture, political debates, and in the media. How can one discuss a group as diverse as Mexican Americans, Dominican Americans, Cuban Americans, Puerto Ricans, and, most recently, Americans from Central America? This course will introduce key moments of racial formation for Latinos/as. Students will explore state policies, social phenomena, and social revolutions that influence the daily life of Latinos/as in the US and in US territories. Students will analyze cultural texts and social policies and will develop a facility with key concepts in the field. DPLL

ETHN 0271. Introduction to Latino/a History.
The Latino/a population in the United States continues to be mischaracterized in popular culture, political debates, and in the media. How can one discuss a group as diverse as Mexican Americans, Dominican Americans, Cuban Americans, Puerto Ricans, and, most recently, Americans from Central America? This course will introduce key moments of racial formation for Latinos/as. Students will explore state policies, social phenomena, and social revolutions that influence the daily life of Latinos/as in the US and in US territories. Students will analyze cultural texts and social policies and will develop a facility with key concepts in the field. DPLL

ETHN 0290D. Women, Sex and Gender in Islam (RELS 0290D).
Interested students must register for RELS 0290D.

ETHN 0300. Ethnic Writing.
This course will explore the idea of "ethnic writing" in both theory and practice. Students will examine how writers draw upon race and ethnicity (not always their own) to produce creative works and will then put these ideas in practice in their own writing, including but not limited to fiction, poetry, memoir, and inter-genre work. Interested students should attend the first session prepared for an in-class exercise that will determine attendance. Enrollment limited to 17. Instructor permission required. S/NC.

ETHN 0301. Culture and Health (ANTH 0300).
Interested students must register for ANTH 0300.

ETHN 0500. Introduction to American/Ethnic Studies.
Considers the U.S. as a society whose unifying identity is rooted in ethnic and racial diversity. Explores the historical and contemporary experiences of racial and ethnic groups in this country and analyzes different forms of representation of those experiences, as well as representations of the racial and ethnic stratification in the U.S. imagination. DPLL

ETHN 0510F. Che Guevara, The Man and the Myths (COLT 0510F).
Interested students must register for COLT 0510F.

ETHN 0512. Introduction to Latina/o Cultural Studies.
This course serves as an introduction to the many discourses that structure and challenge Latinidad -- the feeling of being Latina/o. Through historically situated critical analysis of Latina/o cultural production, including theoretical essays, literature, and film, we will meditate on the major issues that shape the Latina/o U.S. experience. We will study how Latinidad is constructed as an identity and how that identity varies across origin, place, and time. Major themes we will explore include the legacies of U.S. colonialism; cultural nationalism, citizenship, immigration and exile; labor and class; race and ethnicity; and gender and sexuality. WRIT

ETHN 0700E. Postcolonial Literature (ENGL 0700E).
Interested students must register for ENGL 0700E.

ETHN 0710B. Ethics of Black Power (AFRI 0710B).
Interested students must register for AFRI 0710B.

ETHN 0710F. Being There: Bearing Witness in Modern Times (ENGL 0710F).
Interested students must register for ENGL 0710F.

ETHN 0710J. Introduction to Asian American Literature (ENGL 0710J).
Interested students must register for ENGL 0710J.

ETHN 0750B. Hispanics in the United States (HISP 0750B).
Interested students must register for HISP 0750B.

ETHN 0790A. Latina/o Literature.
This course will introduce students to a broad array of Latina/o literature-fiction, poetry, drama, and graphic novels. While there is a long tradition of Latina/o literature in the United States, we will focus primarily on a period from 1970 to the present. Aimed to familiarize students with debates in the field, the readings will also include critical essays. Enrollment limited to 20.
ETHN 0790B. Native Americans and the Media. This course explores the ways in which Indigenous Americans have been constructed in the White American imagination and through self-representation from Frontier phase of American history, through contemporary images in American popular culture and media. Through films created about, and later by, Native people we will explore the evolution of the image of Native American in America culture.

ETHN 0790C. Theory Into Practice: Service Learning at a Dual Language Charter School. Students will explore Dual Language (Two-Way Immersion; Bilingual) education through a variety of activities, using the service-learning model. Students will contribute at least 2 hours per week at the International Charter School (K-5), and another two hours in seminar at Brown University in conversation about readings, service, and politics pertaining to Two-Way Immersion education.

ETHN 0790D. Race and Remembering. This course will explore struggles for power over narrating history and engages current tensions in public history and national memory. Together students will consider ongoing struggles to reckon with the violent histories of slavery, empire, colonialism, nationalism, and democracy in the US. Students will engage questions regarding remembering, forgetting, memorializing, and reckoning with histories of racial formation and violence. What are the methodological and narrative pitfalls of representing these histories? What are the possibilities for reckoning with violent histories? This course will concentrated on the Americas, but will also incorporate global understanding of legacies of narrative and memory.

ETHN 0810. Belonging and Displacement: Cross-Cultural Identities (POBS 0810). Interested students must register for POBS 0810.

ETHN 0820G. Race and Political Representation (POLS 0820G). Interested students must register for POLS 0820G.

ETHN 0880. Hip Hop Music and Cultures. Interested students must register for AFRI 0880 S01 (CRN 27044).

ETHN 0900. Introduction to Deaf Studies (SIGN 0900). Interested students must register for SIGN 0900.

ETHN 0901L. African American Media Visibility: Image, Culture, Crisis (MCM 0901L). Interested students must register for MCM 0901L.

ETHN 0901L. African American Media Visibility: Image, Culture, Crisis (MCM 0901L). Interested students must register for MCM 0901L.

ETHN 0980. The Research Process: Qualitative and Ethnographic Methods. Paying attention to methodology and research design can enhance the capacity of research in any field and contribute to knowledge production. The purpose of this seminar is to introduce students to a variety of social science research methods with an emphasis on ethnographic, mixed-methods research (research-design, data-collection, and data analysis). Social science research is a craft, and like any other craft, it takes practice to do it well. This seminar emphasizes a "hands-on," "applied," and/or practical approach to learning. The course is suited to students who have an on-going research project they plan to pursue throughout the semester. Enrollment limited to 20.

ETHN 1020. Race and Language in the United States. This course will examine the role of language in the social construction of race, racism and racial identity. We will address the different language issues facing African Americans, Latinos/as, Asian Americans, Native Americans, and speakers of "accented" English. We will explore current issues such as the Oakland Ebonics case, English-Only legislation, bilingualism, and hate speech vs. free speech.

ETHN 1020C. The Afro-Luso-Brazilian Triangle (AFRI 1020C). Interested students must register for AFRI 1020C.

ETHN 1038. Contemporary Indigenous Education in North America. This course examines education in contemporary contexts for Indigenous students in North America. DPLL.

ETHN 1039. History and Resistance in Representations of Native Peoples. Throughout history, Native peoples have been portrayed through a stock set of stereotypes such as savage warriors, Indian princesses, or mystical shamans. These images surround us in advertising, news media, Hollywood, sports mascots, and Halloween costumes. This course will examine the foundations of these representations and their connections to colonization, with a focus on contemporary and ongoing examples, from Johnny Dep's Tonto, Urban Outfitters' "Navajo" products, to JK Rowlings' "History of Magic in North America," with a focus on the ways Native peoples are taking back and reshaping Native representations through activism, social media, art, design, film, and other realms. DPLL SOPH.

ETHN 1050. Race in the Americas. This class will explore issues of race, racial identity construction, and racism throughout Central and Latin America (including the Caribbean). This is a class in comparative race relations that covers peoples of African, Asian, Native, and European descent. Topics covered include: miscegenation, diaspora, space, socioeconomic inequality, and nation building. Previous coursework in Ethnic Studies or similar suggested.

ETHN 1060E. West African Writers and Political Kingdom (AFRI 1060E). Interested students must register for AFRI 1060E.

ETHN 1060F. Africana Philosophy of Religion (AFRI 1060F). Interested students must register for AFRI 1060F.

ETHN 1070. Ethnic Studies Practicum: Strategy, Tactics and Tools for Social Change. This is an academic and reflective practicum on the politics and processes of social justice organizing. Students will learn about the historical and political evolution of organizing, the connection between organizing and ideology/vision, concrete tools and tactics used in the strategies of social justice organizing, and elements of running non-profit organizations. This course will require, equally, academic rigor, personal leadership and involvement, and introspective analysis. Students will be required to intern at a local organization in Providence, and reflect on their involvement utilizing the theories and discussions gained through the classroom. This course will also explore connections between local, national, and international movements. In keeping with this course's commitment to real-life organizing examples and experience, course instructors and guest speakers are themselves experienced organizers and Executive Directors of social change organizations. This will be a small class with preference given to students with some experience in community, student/youth, and/or labor organizing. Permission of instructors required: contact sara@darasotin.org or koheiishihara@gmail.com.

ETHN 1071. China Modern: An Introduction to the Literature of Twentieth-Century China (EAST 1071). Interested students must register for EAST 1070.

ETHN 1110. Korean Culture and Film (EAST 1100). Interested students must register for EAST 1100.

ETHN 1110. Voices Beneath the Veil (AFRI 1110). Interested students must register for AFRI 1110.

Interested students must register for AFRI 1170.

ETHN 1201C. Imagined Networks, Global Connections (MCM 1201C).
Interested students must register for MCM 1201C.

ETHN 1210. Afro-Brazilians and the Brazilian Polity (AFRI 1210).
Interested students must register for AFRI 1210.

ETHN 1250. Twentieth-Century Western Theatre and Performance (TAPS 1250).
Interested students must register for TAPS 1250.

Interested students must register for ANTH 1251.

ETHN 1255. Anthropology of Disasters (ANTH 1255).
Interested students must register for ANTH 1255.

ETHN 1260. The Organizing Tradition of the Southern Civil Rights Movement (AFRI 1260).
Interested students must register for AFRI 1260.

ETHN 1270. Race, Class, and Ethnicity in the Modern World (SOC 1270).
Interested students must register for SOC 1270.

ETHN 1271. Performances in the Asias (TAPS 1270).
Interested students must register for TAPS 1270.

ETHN 1310. African American Politics (POLS 1310).
Interested students must register for POLS 1310.

ETHN 1311. International Health: Anthropological Perspectives (ANTH 1310).
Interested students must register for ANTH 1310.

ETHN 1320. Anthropology and International Development: Ethnographic Perspectives on Poverty/Progress (ANTH 1320).
Interested students must register for ANTH 1320.

ETHN 1360. Africana Studies: Knowledge, Texts and Methodology (AFRI 1360).
Interested students must register for AFRI 1360.

ETHN 1411. Nations within States (ANTH 1411).
Interested students must register for ANTH 1411.

ETHN 1421. Ethnic American Folklore: Continuity and the Creative Process (ANTH 1421).
Interested students must register for ANTH 1421.

ETHN 1430. The Psychology of Race, Class, and Gender (EDUC 1430).
Interested students must register for EDUC 1430.

ETHN 1440. Theorizing the Black Diaspora (AFRI 1440).
Interested students must register for AFRI 1440.

ETHN 1500. Mellon Mays Research Seminar.
This seminar is a required course for Mellon Mays Fellows with Junior standing. Topics will include research methods; health and wellness in the pursuit of scholarship; barriers to success; and cohort peer review. The outcome of this course will be a completed research plan, literature review and thesis proposal. Open to juniors who have already been accepted into the MMUP program. Instructor permission. Grade option S/NC. DPLL WRIT

ETHN 1600C. Cross-Cultural Perspectives on Education: Education and the Portuguese-Speaking World (POBS 1600C).
Interested students must register for POBS 1600C.

ETHN 1611M. Trauma and the Shame of the Unspeakable: The Holocaust, Slavery, Childhood Sexual Abuse (AMST 1611M).
Interested students must register for AMST 1611M.

ETHN 1611W. Asian Americans and Popular Culture (AMST 1611W).
Interested students must register for AMST 1611W.

ETHN 1611Z. The Century of Immigration (AMST 1611Z).
Interested students must register for AMST 1611Z.

ETHN 1623. Archaeology of Death (ANTH 1623).
Interested students must register for ANTH 1623.

ETHN 1624. Indians, Colonists, and Africans in New England (ANTH 1624). Interested students must register for ANTH 1624.

ETHN 1625. Questions of Remembrance: Archaeological Perspectives on Slavery in the New World (ANTH 1625).
Interested students must register for ANTH 1625.

ETHN 1630. Performativity and the Body: Staging Gender, Staging Race (TAPS 1630).
Interested students must register for TAPS 1630.

ETHN 1670. Latino/a Theatre and Performance (TAPS 1670).
Interested students must register for TAPS 1670.

Interested students must register for EDUC 1700.

ETHN 1710I. Harlem Renaissance: The Politics of Culture (ENGL 1710I).
Interested students must register for ENGL 1710I.

Interested students must register for ENGL 1710J.

ETHN 1710M. Nationalizing Narratives: Race, Nationalism, and the 20th-C. American Novel (ENGL 1710M).
Interested students must register for ENGL 1710M.

ETHN 1750A. Immigrant Social Movements: Bridging Theory and Practice.
What is the impact of legal status on the potential for undocumented individuals’ participation in a social movement? Relatedly, how is the heterogeneity of movement participants represented in campaigns and political protest? In this course we will examine the undocumented immigrant movement in the United States today through readings, films and guest lectures from local immigrant rights activists. As part of the course students will be partnered with local community based organizations where they will complete a semester-long internship. DPLL

ETHN 1760P. "Extravagant" Texts: Experiments in Asian American Writing (ENGL 1760P).
Interested students must register for ENGL 1760P.

ETHN 1761V. The Korean War in Color (ENGL 1761V).
Interested students must register for ENGL 1761V.

ETHN 1805. First Nations: the People and Cultures of Native North America to 1800 (HIST 1805).
Interested students must register for HIST 1805.

ETHN 1810. Language and Power (ANTH 1810).
Interested students must register for ANTH 1810.

ETHN 1810G. Fiction and History (COLT 1810G).
Interested students must register for COLT 1810G.

ETHN 1811D. Reading Revolution, Representations of Cuba, 1959-The Present (COLT 1811D).
Interested students must register for COLT 1811D.

ETHN 1812V. War, Anti-War, Postwar: Culture and Contestation in the Americas (COLT 1812V).
Interested students must register for COLT 1812V.

ETHN 1870A. Ethnic Los Angeles.
This course will focus on the historical and contemporary struggles of people of color in Los Angeles, California, throughout the twentieth century. We will take an interdisciplinary approach, examining films, literature, and history pertaining to the city. There are no prerequisites. Enrollment limited to 20.
ETHN 1870B. Latino/a Communities Seminar.
This seminar's first goal is to introduce students to the social and economic issues that affect contemporary Latino communities. The second goal is to train the students in empirical fieldwork research methods in Ethnic Studies. The seminar searches for ways to link the academy and communities through empirical research that addresses the needs and demands of Latino/a urban communities.

ETHN 1870C. Native North Americans in the Media: Representations and Self Representations in Film.
How have Native North American peoples been represented and self-represented in film from the early 1900s to today? Filmmaking is employed to explore the construction and stereotyping of Indigenous peoples of North America in American popular culture, as well as the recent (re)construction of Native identities by American Indian peoples. Specific topics include identity, race, gender, violence, religion and spirituality, cultural appropriation, and Native humor frame the analysis and comparison of American popular and Native representations of Native Americans. The course centers on the screening and discussion of selected movies, complemented by academic and non-academic literature in the form of books, articles, reviews, and other media materials. Completion of introductory courses on Native American peoples and cultures is strongly recommended.

ETHN 1870D. Chicana/o Fiction.
This course is a survey of Chicana/o fiction from the 1950s to the present. We will be reading novels as well as stories, with the occasional inclusion of poetry. Our literary texts will be supplemented with secondary sources—history, literary criticism, cultural studies, and the like. The course will also ask students to consider the relationship between Chicana/o literature and other writing in the Americas.

ETHN 1870E. Queer Latina/o Literature and Theory.
Enrollment limited to 20.

ETHN 1870F. Eating Cultures.
Enrollment limited to 20.

Enrollment limited to 20.

ETHN 1890A. Seminar on Latino Politics in the United States.
Advanced seminar on the politics of Latino communities in the United States. Considers the history of Latino politics; participation, partisanship and office-holding; immigration and citizenship; social movements; public policy; gender and race; and pan-ethnic identity. Advanced undergraduate and graduate students. Includes optional community research project. Some familiarity with Latino studies, U.S. politics, Latin American politics, or ethnic studies would be helpful. DPLL

ETHN 1890B. Native American and European Contact in Early North America, ca. 1600-1750.
This course will consider contact between Native Americans and Europeans in the early Americas with particular attention to interactions in the greater New England area. Readings stress the diversity of Native lifeways and how contact changed both Natives and Europeans. An equally important theme is to examine the ways in which the history of Native peoples has often been ignored, changed, appropriated, and distorted, as well as reclaimed and re-evaluated over time. Therefore, while the focus is on the seventeenth and eighteenth centuries, the class will also consider how the histories of that time have been told and retold in later eras, including our own. We will also pay attention to the way in which different historians undertake the study of the past. This seminar has no prerequisites, but please be advised that the workload is substantial. If the class is oversubscribed, preference will be given to Ethnic Studies concentrators. DPLL

ETHN 1890C. Business, Culture, and Globalization: An Ethnographic Perspective.
The exchange of goods, resources, or commodities is commonly understood as business transactions. Business transactions have always been global, but in the new information age, it seems that many can take part in this exchange system. What is termed as "globalization" has become increasingly popular, yet efforts to clearly define what the term actually means continue to change. This course aims at complicating, rather than simplifying, the term and to understand how business transactions unfold in a "global" economy.

ETHN 1890D. Indigenous Music of the Americas.
Introduces students to music of indigenous communities in North, Central, and South America, with particular attention to the relation between performance, cultural identity, and social change. We will focus especially on indigenous societies in the Andes, Brazil, and the United States and Canada. The course is designed to explore common links between indigenous history, worldview, and performance throughout the hemisphere, while simultaneously illuminating how distinct experiences of colonization and recovery have fostered unique musical practices.

ETHN 1890E. Johnny, Are You Queer: Narratives of Race and Sexuality.
This course is intended as a wide-ranging romp through the fields of queer theory and narratives of race and sexuality. It will move from the 1980s through the present looking at representations of queerness and race in poetry, fiction, creative non-fiction, music, etc. We will investigate the convergences and divergences in the discourses of race and sexuality.

ETHN 1890F. Bad Boys and Bad Girls in Asian American Literature and Culture.
From the angry Asian men of the "Aiiiiieeeel" anthologies to Margaret Cho's raucous comedy acts, bad boys and bad girls in Asian American literature and culture have been interpreted as helping to shatter the model minority stereotype. This course examines bad subjects, especially in their relations to popular culture, gender, and sexuality. We will investigate what puts the "bad" in bad boys and bad girls, how ideas of "bad" change, and what the bad subject does for readers and writers. Readings and viewings to include Frank Chin, John Okada, Gish Jen, Margaret Cho, Harold & Kumar Go to White Castle, Better Luck Tomorrow. Enrollment limited to 20.

ETHN 1890G. Native Americans in the Media: Representation and Self-Representation on Film.
How have Native North American peoples been represented and self-represented in film? Specific topics include identity, race, gender, violence, religion and spirituality, cultural appropriation, and Native humor frame the analysis and comparison of American popular and Native representations of Native Americans. The course centers on screening and discussing selected movies, complemented by academic and non-academic literature such as books, articles, and reviews. Completion of introductory courses on Native American cultures is recommended, but not necessary. All students are welcome. Enrollment limited to 20.

ETHN 1890H. Introduction to American Indian Studies.
Introduces students to both historical and contemporary issues in North America. Issues of identity, sovereignty, representation and self-representation are key components. Because this course is interdisciplinary, we will use texts from anthropology, cultural studies, history, film and literature as tools to understand and appreciate the ways in which American Indian cultures survive, flourish and shape the United States. No special background is required. All students are welcome. Enrollment limited to 30.
ETHN 1890J. Native American Environmental Health Movements. American Indian reservations are home to countless sources of environmental contamination, which impact residents' health and ability to maintain cultural practices. In response to this assault, and the numerous scientific studies that often follow, Native communities are taking charge of the research process, and partnering with scientists to explore health affects and remediation possibilities. Through case studies, we will examine how Native communities are pushing to “indigenize” the research process. This class is broadly interdisciplinary, and will be useful for students interested in contemporary issues in Native American communities, and students intending to conduct scientific research in minority communities. Enrollment limited to 20.

ETHN 1890K. Engendering Empire. This class studies the ways in which empire is a gendered construct. We will also keep in mind that gender never exists in isolation, but on the contrary is always on the crossroads with race, class, and ethnicity. How have brown and black women’s bodies borne the mark of empire? This class will closely examine the relationship between empire and gender, specifically this class will discuss this relationship as it has developed in the Americas.

ETHN 1890L. (De)Colonizing Women: Writing the Third Space. As women of color, we are in the intersections of race, gender, and class. A feminist movement that does not incorporate analyses of race and class cannot meet our needs. A civil rights movement that does not address gender cannot meet our needs; therefore, we create our own space -- a third space. This course reads the literature, poetry, film and theory of third space feminism in the United States. Enrollment limited to 20. WRIT

ETHN 1890M. Treaty Rights and Food Fights: Eating Local in Indian Country. In many Native American communities the push to "eat local" is often based on reviving a traditional food culture as well as a way of promoting better health. This class explores the disparate health conditions faced by Native communities, and the efforts by many groups to address these health problems through increasing community access to traditional foods, whether by gardening projects or a revival of hunting and fishing traditions. We will examine the ways in which Native food movements have converged and diverged from general American local food movements, and the struggles they often face in reviving treaty-guaranteed food ways.

ETHN 1890N. Thawing the "Frozen Indian"; American Indian Museum Representation. This course examines the role of museums as sites where issues of identity, memory, place, and power intersect. We will review the histories, theories and paradigms that have influenced collecting processes and exhibitions, focusing on representations of Native American peoples. We will explore the ways in which Native people have spoken out against conventional museum practice and have sought to reshape it as a means of decolonizing their history, as well as utilizing museums to their benefit to both preserve and promote Native art and culture. How can non-Native and scholarly museum professionals contribute to this effort? Enrollment limited to 15. DPLL

ETHN 1890O. The Latina/o Novel. This course is an advanced seminar in the study of the contemporary Latina/o Novel. Close attention will be paid to the social and historical context of the work with a particular attention to the form and style of the novel. We will read about eight to ten novels over the course of the semester. Rigorous participation is expected in class discussion. The class aims to hone your written and oral communication skills in the analysis of the Latina/o novel.

ETHN 1890P. Introduction to Native American Literature. This survey course introduces several prominent genres of Native American literary production, including oral traditions, nonfiction essay, novel, short story, and stand-up comedy/performance. Selections are drawn primarily from Native American/Aboriginal writers and performers in the United States and Canada from the nineteenth century to present, including indigenous women from Pacific Islander communities. In addition to genre considerations, particular attention will be given to the social, cultural, and political contexts in which these works were produced.

ETHN 1890Q. The Hispanic Caribbean and its Diasporas. The purpose of this course is to examine the history and cultures of the Hispanic Caribbean. An enduring feature of the region as a whole is its cultural diversity and vitality. Perhaps to a degree unsurpassed among world regions, the Caribbean is a set of immigrant societies, shaped by successive waves of European, Africa and Asian settlers. Through art, music, and literature Caribbean people have not just borrowed from but added to Western civilization and the pan-African heritage. Increasingly, Caribbean people are making their voices heard as immigrants in the U.S. and the former colonial metropoles of Europe.

ETHN 1890R. Latina Feminisms. This course will serve as a focused and rigorous exploration of Latina feminist cultural production. Our analysis driven seminar discussions will include critical consideration of novels, short stories, film, and performance and visual art largely by an about Latina women. Their work will address topics that include: gendered expectations, non-normative sexuality, race hierarchies, labor, reproductive justice, and gendered violence. Together we will query how cultural objects come to function as salient social and political texts in order to ascertain the contributions and challenges that Latina feminists bring to dominant discourses of race, gender, sexuality, and nationalism, among others.

ETHN 1890S. Youth, Art, Engagement and Social Justice. This course is designed for students concerned with the challenges, theoretical models, and best practices of academic research and advocacy relationships. The goals of this course are to navigate the challenges of bridging the gap between the academy, community-based organizations, and social justice research and to accrue experience forging these partnerships. This course has a practice component where students develop a project with a non-profit organization and a portion of each course session is devoted to discussion about progress and challenges of each students project.

ETHN 1890T. Race, Gentrification, and the Policing of Urban Space (PLCY 1701W). Interested students must register for PLCY 1701W.

ETHN 1890U. Extravagant Texts: Reading the World Through Asian American Literature. In this course we study a body of writings that self-consciously move beyond the topics and genres with which Asian American literature has traditionally been associated—that are, in Maxine Hong’s Kingston’s formulation, “extravagant.” We explore works that adopt a transnational or diasporic perspective and that are written in such genres as magical realism, speculative fiction, graphic novels, and plays. In addition to more conventional concerns like racism or immigration, these works also address such issues as empire, war, mixed-race identity, adoption, and sexuality. Writers we examine include: Theresa Cha, Jessica Hagedorn, David Henry Hwang, Adrian Tomine and Karen Tei Yamashita. DPLL

ETHN 1890V. Asian Americans and the Struggle for Social Justice. In 1868, in the largest strike that America had ever seen, ten thousand Chinese workers struck Central Pacific Railroad. One hundred years later, Asian Americans, now stereotyped as the “model minority,” are rendered invisible in current struggles for social justice. Yet as railroad workers, laundrymen, farmworkers, draft resisters, sewing women and nurses, Asian Americans have left us a rich legacy of legal, social and political activism. Particular attention will be paid to solidarity across racial, gender, and national boundaries. DPLL

ETHN 1892. Race, Class and Gender in Latino Communities. Examines the roles of racial, class, and gender identities, in the emergence and consolidation of Latino political power in the United States. We look at Latino racial attitudes and racial hierarchies, as “inherited” from Latin American social systems, and as developed here in the U.S. We explore class politics as they shape Latino social movements, economic conditions, and communities, and we analyze the impact of Latino immigration and union membership on organized labor. We consider gender roles and patriarchy in Latino families, and the roles of intersectionality and feminism in Latino politics. Enrollment limited to 40. DPLL
ETHN 1900A. Alien Nation: US Immigration in Comparative Perspectives.
Latina/o immigration to the United States has reshaped the meaning of "America" over the last hundred years. We will study Latina/os in comparison to other immigrants and examine how US immigration policy has created a nation partly composed of "alien" residents--some citizens, others not—who have constructed alternative notions of belonging.

ETHN 1900B. Community, Language and Literacy: A Practicum.
This course examines adult language and literacy learning and approaches to teaching in community settings. It is designed to support students’ work teaching language and literacy to immigrant adults. Working with the Swearer Center and its community partners students will explore theories informing educational practice, and will gain skills and practice in providing language and literacy instruction to adult learners in the community. This practicum specifically addresses issues of language acquisition, acculturation, and broader contexts framing adult education. Enrollment limited to 20.

ETHN 1900C. Contemporary Latino/a Education in the United States.
Latino/as are now the second largest group of students in United States schools and, in aggregate, among the most troubled as measured by drop-out rates and grade-level retentions. Yet Latino/a students also perform well in some settings. This course reviews contemporary Latino/a education, focusing on the multiple educational contexts Latino/as encounter, including how non-Latino/a educators regard Latino/a students.

ETHN 1900D. Latino Communities Seminar.
Enrollment limited to: 20.

ETHN 1900E. Senior Seminar in Ethnic Studies.
No description available.

ETHN 1900F. Theory, Creativity, Activism.
This class will bring together much of the literature and discussions conducted throughout your education as an Ethnic Studies major and prepare you for the application of Ethnic Studies in your post-graduate life. I have chosen to emphasize three themes that have been dominant in your Ethnic Studies curriculum: Theory, Creativity, and Activism. We will begin by critically exploring the democratic principles and imperial practices that underlie the "American system" and the political formation of The Third World. Our discussions and readings will include an examination of the contributions and limitations of multiculturalism, postmodernism, anti-colonialism and feminism, and the relevance of (ethnic) "experience" in interpreting and addressing the problems we face as a planetary civil society. The majority of the class will be dedicated to the praxis of Ethnic Studies and other graduate students for graduate credit. It is designed to support students’ work teaching language and literacy to immigrant adults. Working with the Swearer Center and its community partners students will explore theories informing educational practice, and will gain skills and practice in providing language and literacy instruction to adult learners in the community. This practicum specifically addresses issues of language acquisition, acculturation, and broader contexts framing adult education. Enrollment limited to 20.

ETHN 1900P. Please, Please Me (AMST 1903P).
Interested students must register for AMST 1903P.

ETHN 1903V. Asian and Latino Immigration (AMST 1903V).
Interested students must register for AMST 1903V.

ETHN 1903X. Style and the Man: Masculinity in Fashion and U.S. History (AMST 1903X).
Interested students must register for AMST 1903X.

Interested students must register for AMST 1904J.

ETHN 1910. Independent Study.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ETHN 1910D. Faces of Culture (ANTH 1910D).
Interested students must register for ANTH 1910D.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ETHN 1940. Ethnographic Research Methods (ANTH 1940).
Interested students must register for ANTH 1940.

ETHN 1950G. Contemporary Chinese Culture and Media (EAST 1950G).
Interested students must register for EAST 1950G.

Interested students must register for GNSS 1960D.

Interested students must register for HMAN 1970L.

ETHN 2070. Music and Identity (MUSC 2070).
Interested students must register for MUSC 2070.

ETHN 2220. Urban Politics (POLS 2220).
Interested students must register for POLS 2220.

ETHN 2340. Human Development and Urban Education (EDUC 2340).
Interested students must register for EDUC 2340.

ETHN 2970C. Rethinking the Civil Rights Movement (HIST 2970C).
Interested students must register for HIST 2970C.

Science and Society

SCSO 0020. The Digital World (CSCI 0020).
Interested students must register for CSCI 0020.

SCSO 0050C. Reproductive Health: Science and Politics (GNSS 0090C).
Interested students must register for GNSS 0090C.

SCSO 0050E. Crossing the Consumer Chasm by Design (ENGN 0120A).
Interested students must register for ENGN 0120A.

SCSO 0050F. Crossing the Space Chasm through Engineering Design (ENGN 0120B).
Interested students must register for ENGN 0120B.

SCSO 0070E. The Anthropology of Gender and Science (ANTH 0077N).
Interested students must register for ANTH 0077N.

SCSO 0120. Culture and Health (ANTH 0300).
Interested students must register for ANTH 0300.

SCSO 0121. Foragers, Farmers, Feasts: An Anthropology of Food (ANTH 0880).
Interested students must register for ANTH 0880.

SCSO 0251. Ancient Philosophy (PHIL 0350).
Interested students must register for PHIL 0350.

SCSO 0270. Poetic Cosmologies (ENGL 0700Q).
Interested students must register for ENGL 0700Q.

SCSO 0292. Introduction to Environmental Social Science (ENVS 0495). Interested students must register for ENVS 0495.

SCSO 0380. A Global History of the Atomic Age (HIST 0276). Interested students must register for HIST 0276.

SCSO 0381. The Philosophers' Stone: Alchemy From Antiquity to Harry Potter (HIST 0150B). Interested students must register for HIST 0150B.

SCSO 0382. The Phoenix and the Hummingbird: Natural History from Antiquity to Evolution. Scientists love to solve mysteries. From the philosophers of antiquity to pioneers of Biology, the study of nature has focused on the creatures that have most puzzled humankind. These have inspired natural histories: encompassing studies covering everything that could be known about an animal—from what it symbolized and how it behaved to its place in the natural order. By looking at issues of truth and its relationship to myth, direct experience, and nature's systematization, this course provides an introduction to the history of science through what naturalists have written about the more mystifying creatures in the natural world. DPLL

SCSO 0470. Digital Media (MCM 0230). Interested students must register for MCM 0230.

SCSO 0520. Modern Science and Human Values (PHIL 0060). Interested students must register for PHIL 0060.

SCSO 0700B. Science and Social Controversy. In this course we examine the institution of science and its relations to the social context in which it is embedded. Scientific objectivity, scientific consensus, scientific authority, and the social and moral accountability of scientists will be considered in the context of discussing such controversies as: the AIDS epidemic, climate change, science and religion, the Manhattan Project, the Tuskegee Syphilis Experiment, genetic and pharmacological enhancement, the role of drug companies in science and medicine, psychiatric diagnosis and medication, robotics, and the implications of neuroscience for free will and moral responsibility. Enrollment limited to 20 first year students and sophomores.

SCSO 0700C. Gender, Nature, the Body (ANTH 1223). Interested students must register for ANTH 1223.

SCSO 0700D. The Social Lives of Dead Bodies in China and Beyond (HIST 0685A). Interested students must register for HIST 0685A.

SCSO 0700E. Bodies of Knowledge: Gender, Race and Science (AMST 0150C). Interested students must register for AMST 0150C.

SCSO 0700F. Science and Society in Darwin's England (HIST 0582B). Interested students must register for HIST 0582B.

SCSO 1000. Introduction to Science and Society: Theories and Controversies. What is "science"? How do scientific ideas become knowledge? What is the nature of scientific objectivity, how can it be compromised? What is a scientific community, scientific consensus, and scientific authority? What roles does science play in our culture, and how is science related to other social institutions and practices? The interdisciplinary field of science studies is introduced through exploration of topics that include: gender and race, psychiatric classification, the drug industry, science and religion, and the use of nuclear weapons during World War II. Enrollment limited to 30 sophomores, juniors, seniors; others may enroll with permission of instructor. LILE WRIT

SCSO 1120. International Health: Anthropological Perspectives (ANTH 1310). Interested students must register for ANTH 1310.

SCSO 1121. AIDS in Global Perspective (ANTH 1020). Interested students must register for ANTH 1020.

SCSO 1122. Bioethics and Culture (ANTH 1242). Interested students must register for ANTH 1242.

SCSO 1152. Astronomy, Divination and Politics in the Ancient World (ASYR 1700). Interested students must register for ASYR 1700.

SCSO 1270. Zoopoetics (ENGL 1900J). Interested students must register for ENGL 1900J.

SCSO 1340. Health and Healing in American History (GNSS 1960B). Interested students must register for GNSS 1960B.

SCSO 1385. History of Medicine I: Medical Traditions in the Old World Before 1700 (HIST 0286A). Interested students must register for HIST 0286A.

SCSO 1386. History of Medicine II: The Development of Scientific Medicine in Europe and the World (HIST 0286B). Interested students must register for HIST 0286B.

SCSO 1389. The Science of Life: Biology, 1790 to Present (HIST 1825R). Interested students must register for HIST 1825R.

SCSO 1390. Science at the Crossroads (HIST 1825M). Interested students must register for HIST 1825M.

SCSO 1391. From Medieval Bedlam to Prozac Nation (HIST 1830M). Interested students must register for HIST 1830M.

SCSO 1392. Science, Medicine, Technology (HIST 1825H). Interested students must register for HIST 1825H.

SCSO 1393. Nature on Display (HIST 1820G). Interested students must register for HIST 1820G.

SCSO 1394. The Roots of Modern Science (HIST 1825L). Interested students must register for HIST 1825L.

SCSO 1520. Philosophy of Quantum Mechanics (PHIL 1620). Interested students must register for PHIL 1620.

SCSO 1522. Philosophy of Science (PHIL 1590). Interested students must register for PHIL 1590.

SCSO 1523. Time (PHIL 1670). Interested students must register for PHIL 1670.
SCSO 1524. Aristotle (PHIL 1250).
Interested students must register for PHIL 1250.

SCSO 1700C. Science and Technology Policy in the Global South.
Junior-senior seminar exploring the relationships among science, technology, society, and public policymaking in the Global South. Exemplar countries are South Africa, Brazil, India, and China. Biotech, nanotech, public health, environment, and science training policies are among those closely examined. Three writing assignments, plus electronic conversations with counterparts in the Global South.

SCSO 1700F. Health Inequality in Historical Perspective (BIOL 1920B).
Interested students must register for BIOL 1920B.

SCSO 1700H. Native American Environmental Health Movements (ETHN 1890J).
Interested students must register for ETHN 1890J.

SCSO 1700N. Race, Science, and Society: Genomics and Beyond.
Why are drugs being marketed as racial saviors? What does biotechnology have to do with race? This course introduces students to interdisciplinary approaches to the study of race in science and society as an integrated natural and social scientific endeavor. Using a team-based pedagogy, interdisciplinary groups of natural and social science concentrators will explore real-world problems like validating knowledge about racial differences, the relationship between politics and science, and the newest findings in such scientific fields as anthropology, epidemiology, and cognitive science. Enrollment limited to 20. S/N/C DPLL

SCSO 1700P. Neuroethics.
In this course, we will examine ethical, social, and philosophical issues raised by developments in the neurosciences. Topics will include: neurodevelopment and the emergence of persons; the impact of child abuse on brain development; aging, brain disease, and mental decline; life extension research; strategies and technologies for enhancement of human traits; “mind-reading” technologies; agency, autonomy, and excuse from responsibility; error and bias in memory; mind control; neuroscientific and evolutionary models of religious belief and moral judgement. Enrollment limited to 20. Instructor permission required. LILE

SCSO 1700R. Community Engagement with Health and the Environment (AMST 1700I).
Interested students must register for AMST 1700I.

SCSO 1700S. Environmental Change: Ethnographic Perspectives (ANTH 1552).
Interested students must register for ANTH 1552.

SCSO 1700V. The Changing Arctic Environment: Science, Society and Politics.
The Arctic has become a lens through which to understand the world. An unstable Arctic poses threats not only to the future of the Arctic but the world itself. This seminar will explore the Arctic as a region and the challenges it faces due to climate change, the rising conflicts over its vast mineral reserves, and the competing interests within the nations. The course is intended for students who are interested in Science, Technology and Society, Environmental Studies, Environmental Policy, and International Relations. There are no prerequisites for this class.

Interested students must register for HIST 1970G.

SCSO 1700Z. Science and Performance (TAPS 1450).
Interested students must register for TAPS 1450.

Interested students must register for ANTH 1551.

Who were the “first scientists” in the Americas?, what exactly do we mean by “science” in this context?, and what has amounted to “America” in the past? Focusing on present-day Latin America, this seminar analyses the links between the exploration of the New World and scientific discovery in the early modern period. We will explore issues of primacy (why have both empires and scientists cared about “arriving first”); the nature of science (what kind of knowledge has been considered “scientific” in different periods); and locality in knowledge production (was there something special about the New World in fostering scientific thinking).

Interested students must register for HIST 1976N.

SCSO 1701E. Race, Difference, and Biomedical Research: Historical Considerations (BIOL 1920D).
Interested students must register for BIOL 1920D.

SCSO 1701F. The Nuclear Age (HIST 1974S).
Interested students must register for HIST 1974S.

SCSO 1701G. War and the Mind in Modern America (AMST 1905N).
Interested students must register for AMST 1905N.

SCSO 1701H. The Anthropocene: Climate Change as Social History (HIST 1976E).
Interested students must register for HIST 1976E.

SCSO 1701I. The World of Isaac Newton (HIST 1976I).
Interested students must register for HIST 1976I.

Interested students must register for HMAN 1972C.

SCSO 1701K. Anthropology of Climate Change (ANTH 1112).
Interested students must register for ANTH 1112.

SCSO 1701L. Gender, Nature, the Body (ANTH 1223).
Interested students must register for ANTH 1223.

Interested students must register for ENVS 1927.

SCSO 1900. Senior Seminar in Science and Society.
This is an advanced seminar that uses a Problem Based Learning style pedagogy to explore real-world problems in STS. To solve assigned problems students will want to explore critical scholarship in areas such as laboratory studies, feminist science and technology studies, the rhetoric and discourse of science and technology, expertise and the public understanding of science. Course is intended for Science and Society senior concentrators, but is open to others with appropriate background. Enrollment limited to 20.

Independent reading and research work in Science and Society is available to students who have completed introductory and intermediate level work in STS. To solve assigned problems students will want to explore critical scholarship in areas such as laboratory studies, feminist science and technology studies, the rhetoric and discourse of science and technology, expertise and the public understanding of science. Course is intended for Science and Society senior concentrators, but is open to others with appropriate background. Enrollment limited to 20.

SCSO 2700A. The Politics of Knowledge (HIST 2981F).
Interested students must register for HIST 2981F.
Annenberg Institute for School Reform

The Annenberg Institute for School Reform (AISR) is a national policy research and reform-support organization, headquartered at Brown University, that collaborates with school districts, communities, and other education stakeholders to improve the conditions and outcomes of urban public schools, especially those attended by traditionally underserved children. AISR’s vision is the transformation of traditional school systems into “smart education systems” that develop and integrate high-quality learning opportunities in all areas of students’ lives— at school, at home, and in the community. AISR conducts research; works with a variety of partners committed to educational improvement to build capacity in school districts and communities; and shares its work through print and web publications.

Established in 1993 by education reform leader Theodore (Ted) Sizer, the founder and chair of the then-Brown University-based Coalition for Essential Schools, the organization was renamed shortly thereafter to honor philanthropist, former diplomat and publisher Walter H. Annenberg, following the Annenberg Foundation’s $50-million donation to endow AISR. A University Corporation-appointed Board of Overseers, chaired by Brown’s president, governs the organization, which is the largest among the 40 programs, institutes and centers at Brown University. Michael Grady, Ed.D., is Deputy Director of the Institute; Warren Simmons, Ph.D., is Senior Fellow and the former executive director.

For more than two decades, AISR has been an influential national leader in public education reform. AISR’s research has provided an important evidence base to inform public discourse and decision making in a national climate too often driven by ideology. AISR has also regularly been sought out as a convener and technical assistance provider by district and state education stakeholders and consistently attracts grants from major funders. AISR’s publications, including research reports, a high-traffic public website, online tools, videos, and its award-winning flagship journal, *Voices in Urban Education (VUE)*, are extensively cited and reach a broad cross-sector national audience of education opinion leaders, policymakers, funders, researchers, the media, and community leaders, among others. The VUE website receives more than 37,000 visitors per year, while the AISR site attracts over 34,000 visitors annually.

AISR has been in the vanguard of thinking about school districts for over 15 years. In 2000, AISR formed a national task force to examine the education-reform role of urban school districts, and was among the first to conclude that district redesign and transformation is essential to the achievement of equity and school improvement at scale— contrary to the prevailing discourse of the time that districts should simply be dismantled and schools reformed one by one. Through its District & Systems Transformation (DST) practice (formerly District Redesign & Leadership), AISR currently collaborates with urban districts to build capacity; strengthens schools and programs, while activating participation of the community and other partners, while working toward the goal of a smart education system. AISR has developed an array of tools to support districts and their partners, including a widely disseminated series of resources on college readiness.

AISR has also been in the forefront of thinking about urban communities as powerful allies and assets rather than problems. In 2006, AISR formed the Community Organizing & Engagement (CO&E) practice by incorporating the Community Involvement Program, formerly based at New York University, and opening a New York City office. CO&E supports community organizing for education reform by helping youth, parent, and community groups to develop sufficient power to drive and sustain improvement in low-performing urban school districts. Research and technical assistance from AISR was instrumental in helping community organizations in New York City develop an equity-driven education agenda that was embraced across all candidates in the 2013 mayoral elections, and CO&E staff are currently informing national education reform discussions.

AISR’s Research and Policy (R&P) staff engage in a range of projects to inform both AISR’s own work and the fields of district-level reform and community organizing for school reform. This includes original research, documentation and evaluation of reform efforts, analyses of current education policies, and the development of tools to share lessons and best practices. The impact of AISR’s research is felt locally and nationally, within academia and beyond, in the worlds of local, state, and federal policy, district administration, philanthropy, and community leadership. In 2014-15, R&P in collaboration with the Boston Public Schools, and the Center for Collaborative Education, conducted a two-phase, multi-method research project which described the increasing diversity of enrollment of Black and Latino males in the district, as well as a troubling, systemic opportunity gap facing these students; the second phase employed case studies to identify promising school practices as well as “unfinished business,” or a lack of cultural competency and willingness to address race and gender within schools. In 2009, AISR published an extensively cited, groundbreaking series of research reports, as part of the first study to demonstrate the positive impact of community organizing on school improvement. Other major research projects have produced advances in the field of public education in significant areas of national interest such as expanded learning time. A portion of the R&P team is Los Angeles based.

AISR has also been in the forefront of thinking about urban communities as powerful allies and assets rather than problems. In 2006, AISR formed the Community Organizing & Engagement (CO&E) practice by incorporating the Community Involvement Program, formerly based at New York University, and opening a New York City office. CO&E supports community organizing for education reform by helping youth, parent, and community groups to develop sufficient power to drive and sustain improvement in low-performing urban school districts. Other major research projects have produced advances in the field of public education in significant areas of national interest such as expanded learning time. A portion of the R&P team is Los Angeles based.

In collaboration with Brown’s Education Department, AISR established a Master’s Program in Urban Policy (UEP) in 2006. The tightly focused, 12-month academic curriculum, integrated with a nine-month internship, is designed to impart a set of core skills and competencies necessary for successful careers in urban education policy. To date, degrees have been conferred on over 190 graduates. In 2012, AISR’s Board of Overseers established the Ruth J. Simmons Urban Education Policy Scholarship, a permanent annual award for UEP Master’s degree candidates that honors the University’s retired president and former AISR board chair.

AISR also serves as a bridge from Brown to Providence and the state, providing support for the Providence Public School District, the R.I. Department of Education, the Central Falls School District, and it hosts the Providence Children & Youth Cabinet. In 2008-09, AISR supported the Governor’s Urban Task Force, a key factor in Rhode Island’s successful Race to the Top application. Furthermore, in partnership with the Rhode Island Foundation, AISR helped establish a series of eight forums in 2011-14 focused on “Building a 21st Century Education System” in the Ocean State.

Anthropology

Chair

Daniel J. Smith

The Department of Anthropology at Brown is a vibrant, award-winning group of scholars in the subfields of cultural anthropology, archaeology, and anthropological linguistics. Our research and teaching cover a wide range of the field, with special strengths in anthropological demography, political anthropology, medical anthropology, language and culture, ethnicity, gender, ancient writing and representation, early urbanism, historical and forensic archaeology, and Latin American studies. As a discipline, Anthropology works at the crossroads of the social sciences and the humanities, and it works to understand human experience in all of its fullness. Unlike other departments, Anthropology does not restrict itself to a single aspect of human social life, such as the political or the aesthetic. Conversations in our classrooms and seminar rooms attempt to put behavior in the broadest contexts of meaning, power, institutions, and history. They cast a global net, ranging from discussions of the transnational process of foreign aid between Japan and Latin America to the hieroglyphic system of the ancient Mayan people to the relationship between Islamic ethics and organ transplant in Egypt. In a world of increasing specialization and fragmentation of knowledge, Anthropology provides an opportunity to look at the big picture and find it in the locally meaningful. In a world of manifold crises, it provides
opportunities for applying the knowledge it produces, and in a world of increasingly global connection, the discipline provides many roadmaps. For additional information, please visit the department's website: http://www.brown.edu/Departments/Anthropology/

Anthropology Concentration Requirements

Anthropology is the study of human beings from all times and all places, offering holistic, comparative, international, and humanistic perspective. In studying and interpreting the vast range of similarities and differences in human societies and cultures, anthropologists also seek to understand how people themselves make sense of the world in which they live. The Department of Anthropology at Brown is a vibrant, award-winning group of scholars working primarily in the subfields of cultural anthropology, archaeology, and anthropological linguistics. The concentration provides students with a broad introduction to the discipline and includes the major subdisciplines of the field: sociocultural anthropology, archaeology, anthropological linguistics, and biological anthropology. The department also allows students to pursue the Engaged Scholars Program (https://www.brown.edu/academics/college/special-programs/public-service/engaged-scholars-program). ESP is for students with an interest in making deeper connections between their concentration curriculum and long-term engaged activities such as internships, public service, humanitarian and development work, archaeological excavations, and many other possible forms of community involvement.

Concentrators should select their courses in anthropology in consultation with the concentration advisor. At least nine courses in anthropology are required, including:

Select one of the following sociocultural/linguistic anthropology classes: 1

A course from the ANTH 1910 Series (Normally taken in senior year) 1

Five additional Anthropology courses. 1

Total Credits 9

1 Of the required courses, at least five courses counted toward the concentration must be offered at the 1000-level or above and one course must be on a particular world area.

Honors

Candidates for honors should apply to the concentration advisor by the end of his or her 6th semester, but no later than the 4th week of the 7th semester. An application consists of a brief statement addressing the focus of a proposed thesis and the names and signatures of two faculty members from the Department of Anthropology who have agreed to serve as the student’s honors committee—one as honors thesis advisor, the other as a reader. Candidates for honors are required to:

1. Fulfill the standard concentration requirements.
2. Take two additional courses, usually, which may be used for thesis preparation.
3. Have a majority of A’s in the concentration.
4. Submit an approved honors thesis.

Field Work

Concentrators interested in archaeology are urged to obtain training in field archaeology by participating in Brown-sponsored field research, or by participating in an archaeological field school elsewhere.

Anthropology Graduate Program

The department of Anthropology offers a Doctor of Philosophy (Ph.D.) program as well as a Master of Arts (A.M.) program. For more information on admission and program requirements, please visit the following website: http://www.brown.edu/academics/gradschool/programs/anthropology

Courses

ANTH 0001. Anthropology of Stuff. Our lives are surrounded by objects we make, gift, sell and buy. What can these objects tell us about who we are as humans? This course will introduce students to material anthropology, exploring what objects can tell us about culture, society and experience. We will talk about gifts, commodities, counterfeits, and copyrights. Students will learn how people make objects, how objects make people, and how the circulation of objects has connected people historically and in the present. Students will also have the opportunity to learn some ethnographic methods to talk about the meaning of objects in the world around them.

ANTH 0066A. Politics of Race and Culture. Addressing the subjects of race, culture and ethnicity, focusing on minority groups in the U.S. Seeks to clarify the philosophical and theoretical issues in contemporary America using a cross-disciplinary approach. FYS

ANTH 0066B. Mythscapes. An experimental seminar that will combine classroom discussion with visits to field sites within walking distance of the Brown campus. The aim will be to acquaint students with some fundamentals of symbolic analysis and to apply these fundamentals to interpreting the moral and historical messages suffused in the landscapes around us. Readings will include sources on the anthropological interpretation of myth combined with historical sources on Brown and its neighboring communities and institutions. Students will acquire a deeper sense of the mythic qualities of this place and some analytical tools for understanding mythscapes elsewhere. Enrollment limited to 20 first year students. FYS DPLL

ANTH 0066C. Population and Culture. This seminar for first year students examines the relationship between individuals and population and the impact of culture on population. How do the lives and actions of individuals cumulative to the characteristics of a population? How do the characteristics of a population affect the lives of the people in it? For first year students only. FYS

ANTH 0066D. Who Owns the Past?. Examines the role of the past in the present. Using examples from the U.S. and other parts of the world, we will look at how archaeological evidence is implicated in contemporary cultural and political issues. Students will learn that the past is not just the focus of archaeologists’ interest and scientific inquiries, but is also a subject romanticized by antiquarians, mobilized in nation-building, marketed for profit, re-enacted as entertainment, consumed by tourists, and glorified in commemoration. Understanding these different and competing valuations, claims, and uses of the archaeological past will provide an introduction to why the past matters in the present and to the future. Enrollment limited to 20 first year students. FYS DPLL
ANTH 0066E. Colonial Cities.
This course attempts to understand the nature of colonialism in Africa and India. Comparative methodological approach to the study of colonial cities introduces the students to a multiple and interlocking idea and symbols used by colonial power to create in their images, cities which reflect their own image. For first year students only. DPLL FYS

ANTH 0066F. Families and Households.
This course explores the diversity of families and households, both between cultures and within cultures; changes in family forms over time, changing experiences of family over the life course, the diverse meanings, metaphors, and values of "family"; and current controversies about what families are and what they should be. Enrollment limited to 20 first year students. Instructor permission required. FYS

ANTH 0066G. Explorers and Cultural Encounters.
Looks at famous land and sea expeditions, including Marco Polo, Cheng Ho, James Cook, Samuel Hearne, Elisha Kane, Ernest Shackleton and others. Whether the voyage was inspired by a specific intellectual inquiry, mapping, exploration of a new land, establishing a new trade route, friendly alliance, or a colonial expansion, these expeditions changed the views people had about the world, peoples, and places. FYS

ANTH 0066H. Human Trafficking.
We will retrace the development and impact of the 2000 UN Protocol to Prevent, Suppress, and Punish Human Trafficking, especially women and children. This set of norms was created as a supplement to the UN Convention against International Organized Crime. This course will deal with the protocol as both a legal as a living document, with a history and ongoing political relevance. FYS LILE

ANTH 0066J. So You Want to Change the World?.
Examines from an anthropological perspective efforts to address global poverty that are typically labeled as "development." The enterprise of development is considered critically, both with regard to the intentions and purposes that underlie the actions of wealthy countries, donor organizations, and expatriate development workers and with regard to the outcomes for the people who are the intended beneficiaries. Privileging the perspectives of ordinary people in developing countries, but also looking carefully at the institutions involved in development, the course relies heavily on ethnographic case studies that will draw students into the complexity of one of the greatest contemporary global problems: social inequality. Enrollment limited to 20 first year students. FYS DPLL LILE

ANTH 0066K. International Perspectives of Women's Agency and Society.
This course is designed to address the postcolonial identities and the cross cultural issues of women through anthropology and women's writings. Identifying select cases from Africa and Asia. We will analyze the cross-cultural issues and meaning of gender, the cultural construction of gender, the anthropological theory that defines the paradigm through which we come to understand a woman's domain, agency and empowerment, and the modes of behavior in the spheres of everyday life. S/NC only. Reserved for First Year Students. Enrollment limited to 20. FYS LILE DPLL

ANTH 0066L. Beyond World Music: Singing and Language.
An introduction to music and language in cultural context. Drawing on case studies from around the world, we consider how music and language are intimately connected. Topics covered include canibals' singing in colonial Brazil, music and electoral politics in Texas, working class culture and country music, singing and society in the Amazon, whistle speech and songwriting in indigenous Mexico, Apache identity and popular music, modernity and classical Indian music, music and mass advertising in the United States, and the politics of Zulu music production in South Africa. Reserved for First Year Students. Enrollment limited to 20. FYS

ANTH 0066M. Holy Wars.
No description available.

ANTH 0066N. Peoples and Cultures of Greater Mexico.
This course will focus on the cultural area known as Greater Mexico, incorporating Mexicans resident south of the Rio Grande, as well as the approximately 25 million Mexicans living permanently or for at a time in the United States. Specific topics to be covered in the class include: urban peasants and rural proletarians, recent challenges to gender conventions, national and international migration, nationalism and the changing meanings of the Conquest and colonial periods, land and indigenous rights, everyday violence, machismo, popular culture, and protest and rebellion. Limited to first-year students. DPLL FYS LILE

ANTH 0066O. How to do Things With Gifts: Charity, Corruption and Friendship Across Cultures.
In all human societies, people exchange goods and services, From Adam Smith onwards, economists have emphasized the central importance of the "free" market, where self-interested individuals strike bargains, and simultaneously expand humanity's "common stock." Yet costly practices-expensive weddings, charitable donations, corporate hospitality-still flourish, which appear designed to build human relationships rather than generate hard profits. And in today's global economy, personal gifts remain an essential part of doing business in places like China, Japan, Nigeria and Saudi Arabia. Where mainstream economic analysis sees inefficiency or corruption, this course explores classic and contemporary alternative understandings of gift-giving's cultural significance. FYS

ANTH 0066P. Transnational Lives: Anthropology of Migration and Mobilities.
In an era characterized by globalization, by the increasing and rapid flows of ideologies, information, money, goods, and people across national borders, how do individuals, families, and communities grapple with the new forms of existence brought forth by migration? This course will go beyond macro-economic explanations of why migration happens to explore what migration does: the effects of mobility on a range of practices that include parenting, health, gender roles, marriage, politics, and anthropological research itself. We will consider three overlapping issues: the everyday practices of transnational living in a variety of cross-cultural settings; the theory and methodology anthropologists use to better understand local experiences of migration; and the ways in which migration has been effectively politicized. Enrollment limited to 20 first year students. FYS LILE WRIT

ANTH 0066Q. Crisis of Identities in the Global Order.
The seminar is intended to engage first-year students in discussion and analysis of one of the perplexing questions of the modern age. Why, with globalization and an attendant world-view shaped by the technological revolutions of communication that appeal to commonalities, we find more emphasis on local differences, more conflicts related to identities determined by opposition to "the other"? A concordant question will be: how do different disciplines address the concept of identity? Enrollment limited to 20 first year students. FYS

ANTH 0066R. Child and Youth Cultures.
This first year seminar addresses childhood from two linked but distinctive theoretical perspectives. First, what is childhood? Rather than assuming it is a universal category, we will explore how childhood has been constructed differently through history and across cultures, in opposition to infancy, youth, and adulthood. Second, who are children? In contrast to conventional representations of young people as passive objects of socialization, we will review anthropological conceptions of children and youth as social actors with respect to identity formation, cultural expression, and political economy. Enrollment limited to 20 first year students. DPLL FYS WRIT

ANTH 0066S. Contemporary Egypt in Revolution.
On January 25, 2011 protestors in Egypt amassed in Tahrir Square in Cairo with basic demands: Bread, Freedom, Social Equality, and Human Dignity. After hundreds of peaceful protestors were killed at the hands of riot police and hired thugs, eighteen days later, President Husni Mubarak resigned. Yet since then, En, hundreds more have been killed, Egypt's revolution continues, and the basic demands are as crucial today as they were at its inception. We will read contemporary Egypt from the perspectives of anthropologists and social historians, and discuss the value of social theory and analysis for understanding current political turmoil. Enrollment limited to 20 first year students. DPLL FYS S/NC
ANTH 0066T. Postcolonial Matters: Material Culture between Colonialism and Globalization.
This course is about things - "stuff" - as it is about people past and present and their entanglements in and through colonial situations. It explores colonialism past and present through the combined lenses of postcolonial theory and material culture - the emphasis is thus not so much on literary and figurative representations of colonial conflicts and engagements but rather on the material surroundings of people living those colonial worlds. In other words, this course is about what people did and about the things they used to construct their daily lives in colonial situations across the globe and through time. Enrollment limited to 20 first year students. FYS

ANTH 0066U. An Archaeology of Native American Art.
This seminar is an introduction to the art and material culture of the indigenous peoples of North America. The regional coverage includes the continental United States and Canada, focusing on the peoples of Northeast, Midwest, Southwest, Plains, Pacific Northwest, and the Arctic and Subarctic. Topics addressed include art and artifact, function and symbol, innovation and tradition, and museums and representational practices, ethics and repatriation. Special attention will be given to the changing relations between museums and contemporary Native peoples. The seminar will make extensive use of the archaeological and ethnomorphic collections of the Haffenreffer Museum of Anthropology. FYS LILE

ANTH 0066V. The Anthropology of Children and Childhood.
This first year seminar explores childhood and children from an anthropological perspective. First, we will examine the concept of childhood both historically and cross-culturally. Second, we look at the development pathways that cultural communities provide for the children. These pathways are shaped by cultural ecology and history and by the goals of parents, communities and children themselves. Finally, we will review anthropological conceptions of children as social actors who shape their cultures and lives. FYS

ANTH 0066W. What Does It Mean To Be Green?
What does it mean to be green? From saving energy to recycling to eating organic food, in recent years the idea of going green has gained increasing attention. But green is not solely a proxy for environmentalism: it encompasses competing, and at times contradictory meanings. This seminar places contemporary green debates in historical and cross-cultural contexts. We will examine multiple paradigms of greenness in the Global South as well as the Global North. Topics range from imperial visions of tropical landscapes to the green revolution emphasis on agrochemicals, from conservation to climate change. Enrollment limited to 20 first year students. DPLL FYS

ANTH 0077N. The Anthropology of Gender and Science.
This seminar examines topics including genetics, reproduction, and evolution, all through the lens of gender/sex systems. The themes of social justice, identity, and difference are central to the course. We will explore: How epidemiology and engendered social justice are often in conflict in the fight against AIDS in Africa; to learn about difference, anthropomorphism, gender, and primatologists’ comparisons between humans, bonobos, and chimpanzees; efforts to scare men in the United States about "Low Testosterone," and how they reflect shifting identities as much as reduced hormone levels; and the relationship between gender, Traditional Chinese Medicine, and Western Biomedicine in China. SOPH LILE DPLL

ANTH 0100. Introduction to Cultural Anthropology.
This course provides an introduction to cultural anthropology, surveying its defining questions, methods, and findings. We will examine the history and utility of anthropology’s hallmark method, ethnography, the long-term immersion of the researcher in the culture under study. We will compare cultural anthropology’s findings and comportment in other cultures to its conclusions and conduct in our own. No prerequisites. WRIT DPLL LILE

This course offers students an opportunity to examine and analyze a range of contemporary global social problems from an anthropological perspective. We will explore human-environment entanglements with particular attention to intersecting issues of capitalism, international development, and state and non-state governance. Course materials will look at various kinds of work in, on, and with the environment, asking questions about the possibilities of over-working our landscapes, while addressing the potentials for social and environment justice and sustainability. LILE

ANTH 0125. Violence and the State.
This course allows students the opportunity to interrogate the relation between violence and the state. Students will be introduced to a variety of analytical frames through which to understand both the concept of violence and that of the state from an anthropological perspective. Through diverse case studies we will consider topics such as what it means to see and be seen by the state, the rationalization of "exceptional" violence, and domination through symbolic violence. The course has no prerequisites, but a foundational course in the social sciences is recommended.

ANTH 0300. Culture and Health.
An introduction to the field of Medical Anthropology. Lecture reading and discussion will examine the social context of health and illness, looking at the diverse ways in which humans use cultural resources to cope with disease and develop medical systems. The course will provide an introduction to the overall theoretical frameworks that guide anthropological approaches to studying human health related behavior. Medical anthropology offers a unique and revealing perspective on the cultural diversity that characterizes human experiences of sexuality, disease, aging, mental illness, disability, inequality and death. DPLL LILE WRIT
ANTH 0301. Gender and Politics.
This course focuses on ideologies of gender and sexuality cross-culturally and how they influence peoples' involvement in political processes. We begin with a broad working definition of politics-power dynamics and arrangements whereby groups are affected by one another. The course looks at the circumstances under which peoples' gender and sexual identities are mobilized into social movements, and the conditions and social consequences of public visibility. Our broader aim is to understand ways in which gendered inequalities produce—and are produced by—forms of political exclusion, as well as innovative ways in which people transform existing structures of power. DPLL LILE

ANTH 0302. Anthropology of Gender and Globalization.
We live in a global world in which the movements of people, goods, and ideas cause productive frictions, transforming the prevailing formations of gender and sexuality. This course examines the intersections of gender and globalization by looking at how globalization shapes cultural constructions and political configurations of gender, and exploring how an ethnographic focus on gender sheds light on various aspects of globalization. Topics covered include anthropological theory of gender and sexuality, gender and global capital, gender and the (colonial) state, and gender and global politics (including gender activism, human rights, and development). Open to undergraduates only. DPLL LILE

ANTH 0310. Human Evolution.
Examination of theory and evidence on human evolution in the past, present and future. Topics include evolution and adaptation, biocultural adaptation, fossil evidence, behavioral evolution in primates, human genetic variation and contemporary human biological variation. LILE

Explores the complex issues of growing up as an ethnic, bicultural, or a multicultural person and how these dual or multiple identities affect or interact with individual behavior, priorities, the sense of self, and how individual identity is formulated and defined. Cross-cultural and interdisciplinary approaches combining anthropology, comparative human development, interethnic communication, life history, and literary works are used. Instructor permission required. DPLL LILE

ANTH 0450. Inequality, Sustainability, and Mobility in a Car-Clogged World.
The global car population is predicted to reach two billion by the year 2020. The social, political, health, and environmental consequences are immense. These, as well as the cultural and political economic explanations for the car population explosion, will be explored in this class, as will alternative futures for transit. DPLL LILE

ANTH 0500. Past Forward: Discovering Anthropological Archaeology.
This course offers a broad journey through the human past, from material culture crafted by our evolutionary ancestors to the remnants of the recent historic past. To facilitate this journey, the class explores the methods, concepts, and theories that anthropologists employ in the study of past peoples, places, and things. Case studies stretch across the globe. As a hands-on endeavor, archaeology focuses on tangible evidence. In this course, small-group discussion, laboratory, and field exercises will complement lectures, leading to an understanding of how anthropologists study the past and how that knowledge affects the present. LILE

ANTH 0505. Introduction to South American Archaeology.
The course examines the development of human cultures in South America, from the first Ice Age settlers to the arrival of the Spanish. Drawing on archaeological and historical evidence, it covers the complex civilizations of the Andes, including the Moche and Tiwanaku polities and the expansionist Inca empire. It also explores the archaeology of foraging societies throughout the continent and of sedentary societies in the Amazon region and northern South America whose complexity has only recently begun to be understood. The course concludes with a study of the Spanish Conquest and the transformation of indigenous societies during the Colonial period. DPLL LILE

ANTH 0510. Who Owns the Past?
This class examines the relationship between the Western world and African indigenous cultures, heritage, and ideas of the past. By looking at the history of science in reference to the treatment of Africans and African material culture, we will question who owns the rights to an indigenous past. DPLL LILE

The figure of the pirate is an all-time favorite in Western imagination. It has inspired some of the most popular narratives of the past, solidly grounded in classic literature and contemporary visual culture. Focusing on the mid-17th century, the golden age of piracy in the Atlantic World, this course will use historical and archaeological data to investigate the way in which the image of the pirate has been constructed in the West, as an embodiment of cultural, legal, moral and sexual transgression, and as an object of both fascination and fear which is still current in the contemporary, global world. DPLL LILE

ANTH 0600. Of Beauty and Violence.
What is the place of beauty in human experience and how does it find articulation in words? Using an interdisciplinary approach, this course explores the unexpected expressions and uses of beauty in a variety of social and ethnographic contexts marked by violence. We trace the potential of beauty to act at times as a counterweight to violence, sociopolitical crises, and marginalization, but also how it may be used to deepen already existing power structures. This is a writing-intensive course aimed at developing students' ethnographic writing skills. No prerequisites. DPLL WRIT

ANTH 0680. Anthropology of Food.
An exploration of the human experience of food and nutrition from evolutionary, archaeological, and cross-cultural perspectives. The course will review the various approaches employed by anthropologists and archaeologists to understand diet and subsistence in the past and present. Starting with the evolutionary roots of the human diet in Plio-Pleistocene Africa, we will trace patterns of human subsistence to the present, including the social and health implications of the agricultural revolution. We will then explore modern foodways in cross-cultural perspective, focusing on the interplay of ecology, politics, technology, and cultural beliefs. LILE WRIT

ANTH 0800. Sound and Symbols: Introduction to Linguistic Anthropology.
This introduction to the study of language and culture considers how language not only reflects social reality but also creates it. We'll examine specific cases of broad current relevance, in the process learning how an analytical anthropological approach to language use lays bare its often hidden power. We'll consider how language creates and reinforces social inequality and difference, how language promotes and resists globalization, and how language is used creatively in performance, literature, film, advertising, and mass media. We will also consider how language does important social work in specific contexts, such as classrooms, courtrooms, medical settings, and political campaigns. DPLL LILE

ANTH 1020. AIDS in Global Perspective.
Communities around the world are affected in different ways by the HIV-AIDS pandemic. This course is concerned with cross-cultural variation in knowledge, perception, and treatment of AIDS in a global context. Twenty-five years into the global epidemic, how does social and cultural variation influence the continued spread or management of the disease? In addition to reading significant anthropological works related to the meaning of AIDS in cultural context, the course will address major public health initiatives related to the global AIDS pandemic, and offer an anthropological critique of their design, implementation and success. Enrollment limited to 40. DPLL LILE

ANTH 1031. Classic Mayan Civilization.
Examines the history, culture, and society of the Classic Maya, with special emphasis on Preclassic precursors, dynasties, environmental adaptation, imagery, architecture, urban form, and the Maya Collapse.
ANTH 1100. Circumpolar Ethnography.
An examination of the traditional and modern lifeways of native peoples across the Arctic and subarctic from European Lapland through Siberia, Alaska, Canada, and Greenland. Topics covered are society; ethnic relations; religion (Shamanism); art; and politics, including issues of land claims and home rule. DPLL LILE

In this course we engage with anthropological literature and films on the diverse ethnicities, cultures, and "traditions" of sub-Saharan Africa. We trace the histories and the processes of cultural, social, and political change, beginning with colonialism and ending with the contemporary period. We will deconstruct and debunk dominant Western ideas of Africa that present it as primitive and characterized by poverty, AIDS, famine, and violence. We will learn about how Africans see and represent themselves through reading ethnographies, engaging with African popular culture, and watching documentary films. DPLL LILE

ANTH 1111. Anthropology of China.
This course introduces students to contemporary Chinese culture and society, w/a focus on the rapid changes that have taken place during the post-Mao reform era in the People’s Republic of China (1978- present). Emphasis will be placed on the importance of historical and global context in developing an understanding of contemporary Chinese culture. Readings and lectures will draw primarily upon recent ethnographic work conducted in the PRC, but readings from the disciplines of history, political science, public health, and contemporary Chinese literature (in translation) will also be incorporated. Topics: family life, urbanization, housing, migration, gender, health/disease, labor, globalization, and cybersecurity. LILE WRT

ANTH 1112. Anthropology of Climate Change.
Contemporary climate change is a profoundly human issue. This course disaggregates "the human" in climate change, employing an anthropological perspective to ask how people experience changing climates in different ways throughout the world. From receding glaciers to rising seas to unpredictable seasons and periods of drought, the ways people understand, respond to, and experience climate change are shaped by diverse cultures and histories. Topics include environmental change, capitalism, energy, climate justice in indigenous communities, green economies, tropical forests, denial and skepticism, and the visibility of climate change. Articles and ethnographies cover the Global North as well as the Global South. DPLL WRT

ANTH 1119. Andean Anthropology.
The area studies paradigm continues to provide solid information about "culture areas," and the rich ethnography and archaeology of Andean societies is no exception. Particular strengths emerging from this literature include studies of land use, religious syncretism, textiles, and collateral themes: continuities and recognizable features of "Andean culture" (lo andino), gender relations, migration, and politics. Throughout, we will analyze the ways that history, ecology, and the broad notion of reciprocity (ayn) cross-cut each of these. The result will be a close and in-depth study of cultural practices within three Andean countries (Peru, Ecuador, and Bolivia), the majority populations of which continue to be indigenous (predominantly Quechua- and Aymara-speaking). These are countries within which recent political and social changes have produced far-reaching transformations. Prerequisite: one course in either Anthropology or Classics. LILE

ANTH 1120. Peoples and the Cultures of the Americas.
Examines the diverse cultures and history of the Americas - especially Brazil, Peru, Mexico, and the Caribbean. Topics include the organization of labor, cultural and artistic practices, changing conventions of gender and family, international migration, national and local identities, indigenous rights, and protest and rebellion. LILE DPLL

ANTH 1121. From Coyote to Casinos: Native North American Peoples and Cultures.
An anthropological overview on the history and cultures of Native North American peoples from the prehistoric times to the present. Where did Native North Americans come from? What were their traditional lives like? What was their relationship with newcomers of European extraction, including anthropologists? What challenges do they face today? Indigenous and anthropological insights will be brought to bear on these and other questions. DPLL LILE

ANTH 1122. American Indian Art and Artifacts.
Drawing on the rich North American Indian collections of the Haffenreffer Museum of Anthropology, the goal of this course is to examine theoretical approaches to the artifacts of indigenous people and analytical strategies for their research and interpretation. Insights from anthropology, art history, American Indian perspectives, and conservation are explored. Meets at the museum.

An examination of the process of land alienation of Native Americans through the enactment of federal laws to settle the frontiers and protect the wilderness. Through the use of oral history, ethnographies, film, historical documents, and the public record, the course compares Native American and Euro-American perspectives on the ownership of land and rights to resources.

ANTH 1124. United States Culture.
The United States is often described as "multi-cultural". This course examines dominant cultural values such as equality, choice, privacy, and responsibility. It also investigates aspects of the social structure of the United States such as inequality, power, race/ethnicity, kinship, and gender. Individual lives illustrate the ways that people living in the United States negotiate cultural values and confront social institutions. Enrollment limited to 40. Instructor permission required. DPLL LILE

ANTH 1125. Indigenous Archaeologies.
This is an intro. to Indigenous archaeology, sometimes defined as archaeology "by, for and with Indigenous peoples." These approaches combine the study of the past with contemporary social justice concerns. However, they are more than this. In addition to seeking to make archaeology more inclusive of and responsible to Indigenous peoples, they seek to contribute a more accurate understanding of archaeological record. They thus do not reject science, but attempt to broaden it through a consideration of Indigenous epistemologies. This course covers topics as the history of anthropological archaeology, Indigenous knowledge and science, decolonizing methodologies, representational practices and NAGPRA. DPLL LILE

ANTH 1130. Peoples and Cultures of Southeast Asia.
An introduction to the anthropological study of Southeast Asia. Emphasis is placed on understanding the diversity of cultures and societies through both space and time. DPLL LILE

From its role as an emerging economic power, to characterization of outsourcing global media, political discourses, and worldwide popularity of Bollywood, India is undergoing rapid changes, global imagination, and importantly in how Indians think about themselves in an era of globalization. We cover anthropological issues of contemporary India, including Hinduism and Islam, caste, social structure and forms of social relations using ethnographic texts. We will focus on postcolonial India, particularly two decades since liberalization in 1991. We will consider how history, cultural practices and existing social norms continue to shape and change contemporary Indian society and its relation to the world.

ANTH 1133. Ethnonationalism- The Asian Arena.
Three Asian countries-China, Thailand, and Myanmar-are unique national arenas to examine and compare specific definitions, representations, and contentions among nationalistic discourse, ethnic legitimization, and ethnonationalism as they are played out in response to cultural politics, national ideology, European colonial expansion, religious identity, and ethnic identity. Nationalistic movements, ethnic nationalism, and transnational politics are explored. DPLL LILE
ANTH 1140. European Ethnography. Familiarizes students with the societies and cultures of Europe from an anthropological perspective. Historical material provides for the understanding of current cultural, linguistic, religious, and ethnic variation. Major emphasis on the analysis of a range of contemporary communities from peasant to urban, from East to West, and from North to South.

ANTH 1145. Barbarians and Bandits: Exploring Subaltern Resilience and State Power. In the imaginations of ancient Greeks and Romans, the urban centers of 'civilization' were surrounded by wild lands where barbarians roamed. Even now, mountains, marshes, forests, and deserts are the realms of bandits, primitive tribes, warlords, and terrorists. From 'shepherd-bandits' in highland Sardinia and 'red-faced Gauls' in Roman France to 'marginal tribes' in the Kabyle mountains and the 'wild people' of the Ethiopian borderlands, this course explores peripheral lands through time and across the globe. We will critically examine such stereotypical representations, to understand how their inhabitants carved out their own spaces in the interstices of ancient and modern states.

ANTH 1150. Middle East in Anthropological Perspective. A seminar focusing on anthropological methods of analyzing and interpreting Middle Eastern cultures and societies. Emphasizes the study of kinship, tribal structure, social organization and gender relations, ethnic groups relations, and urban-rural distinctions. Draws upon insights from these topics as a basis for understanding contemporary social, economic, and political dynamics in the region. LILE

ANTH 1151. Ethnographies of the Muslim Middle East. An introduction to ethnographic studies of Middle East, focus on: religion, language, modernity, gender, and political culture. Students will engage in critical examination which anthropologists sought to capture Middle Eastern life, and problems that have pervaded anthropological representation, methodologically and theoretically. You will learn, through the ways anthropologists approach the peoples, ideas, and cultures of the region in ways that complement and contradict the knowledge production of other disciplines, the processes we come to understand cultural difference, and ways this encounter sheds light on our selves and practices. Previous course in Anthropology/ Middle East studies is suggested. Enrollment limited to 25. DPLL LILE

ANTH 1210. Culture and Cognition. Are there cultural differences in thought and perception? If so, what are these differences and to what are they attributable? Reviews the history of the controversy on "primitive thought," the influence of culture and environment on perception and concept formation, the development of cognitive operations, and differences in logical processes and decision making in other cultural contexts.

ANTH 1211. Cross Cultural Perspectives on Children. Explores how the behavior and psychological functioning of children are shaped by culture and how different cultures tend to produce children with characteristic personalities, selves, thought patterns and behaviors. Every cultural community provides developmental pathways for children. These pathways are shaped by history and by the goals of parents, communities and children themselves. The course will focus on how human knowledge is transmitted through multiple cultural channels in both informal and formal contexts. This is a service-learning course in which students provide a needed service: Mentoring and tutoring Liberian young people in a literacy program. This will serve as a basis for conducting research on this refugee population and the final paper will be the recording of oral histories from teenagers. Enrollment limited to 30. DPLL

ANTH 1212. The Anthropology of Play. Play enters all fields, from physics to human development, art to scientific experimentation. In all cultures, play figures centrally in rites of passage, childhood development, learning, and times of celebration. Central to this course is an understanding of the rules of play, its intentions in work, functions throughout human history, and role in formal education. LILE

ANTH 1220. Comparative Sex Roles. Covers specific cross-cultural issues of gender, cultural roles, the status of women, and their structural position in society. Themes of gender representations in the field of economics, ritual, and politics underline the concerns of the course. Though African and Asian communities are the primary focus, aspects of American society are drawn into consideration when relevant. DPLL LILE

ANTH 1221. Anthropology of Masculinity. Contemporary anthropological and historical study of masculine identities and practices throughout the world, focusing on topics such as the cultural economies of masculinity, cultural regions and images of manhood, male friendship, machismo, embodied masculinity, violence, power, and sexual fault lines. Prerequisite: Prior course in Social Science or instructor's permission required. LILE

ANTH 1222. Kinships Compared: Relations, Families, and Connections. In all cultures people see themselves as related more closely to some people than to others and usually experience that relation in terms of some shared substance such as blood. Beyond these generalizations there is an enormous variety of ways in which people live in, build, and maintain connections with others - in nuclear and extended families, peer groups, friends, ethnic groups, and so on. This course is about kinship as an idea, as an experience, and as an institution. In the midst of divorce and blended families, new reproductive technologies, and adoption we will investigate kinship and connection in our own lives, in a range of other cultures, and within the discipline of Anthropology.

ANTH 1223. Gender, Nature, the Body. This course is an interrogation of the ways in which gender difference comes to be conceived as "natural" in modern science and different cultures. What is the connection between the science of gender difference and the colonial encounter? What are some different ways of imagining gender difference? How are gender inequalities structured and perpetuated by science and political economy? Through careful reading of historical and anthropological texts, we will learn about various ways in which gender systems are constructed and resisted, how science is used to construct gender, and how gender politics influence scientific outcomes and practices. DPLL SOPH WRIT

ANTH 1224. Human Trafficking, Transnationalism, and the Law. Designed to give students an opportunity to engage in transnational research on social issues through an extended case study of a new generation of international norms that identify and combat "human trafficking." The course format combines seminar discussions, lectures, and small group exercises. Students will learn by doing. As we consider legal instruments, UN and U.S. documentary archives, anti-trafficking media such as films and websites, and the prosecution of criminal networks, we will experiment with alternative methodologies for analyzing them. We will study the relation of texts to the social and political contexts of their production and circulation. Enrollment limited to 30. DPLL LILE WRIT

ANTH 1227. Science, Activism, and Politics of Gender. How did much of the world agree that female genital cutting should be ended? This course explores grassroots and international campaigns in Africa and the West, effects of asylum and criminal laws, and international organizations' attempts to create evidence-based, scientific governance to end cutting. We will focus on ethnographies that problematize these interventions by analyzing their histories, cultural politics, contradictory effects on local communities, and global political ramifications. By examining interventions against cutting, this course offers a methodological and conceptual blueprint for researching local-global production of human rights crises and efforts to resolve them. Enrollment limited to 20. Not open to first year students. LILE
ANTH 1229. Democracy and Difference: Political Anthropology, Citizenship and Multiculturalism.
In seemingly endless contexts, the term “democracy” is employed toward a wide range of political and social goals. This course examines the question of cultural citizenship - the right to be different while remaining part of the national community - as observable in places where liberal democracy’s focus on the individual citizen clashes with communal wishes for collective representations of difference. By reading case studies from multiple locales, this course examines the attempts of democratic regimes to govern varied populations through the lens of political anthropology. DPLL LILE WRIT

ANTH 1230. Political Anthropology.
Anthropological perspectives on politics, ranging from political processes in small-scale nonliterate societies to those in industrialized states. Special attention is given to the uses of symbolism and ritual in politics. Topics include: how is political legitimacy established and maintained? how are certain political views of the world created? what is the relationship between political change and the reinterpretation of history?

ANTH 1231. Kings, Courts, and Aristocracy.
Explores the nature and variety of kingship, royal courts, and aristocracy through comparative evidence, with strong emphasis on historical data, architecture, and archaeology. Test cases will be examined in Mesoamerica, Europe, Africa, and Asia.

ANTH 1232. War and Society.
Cross-cultural and historical perspectives on war and its larger social context. Course readings and lectures use political economic, cultural, and feminist approaches to understanding war and its effects on social life. Case studies will be drawn from several eras and areas of the globe, including the Rwandan genocide, Central American counterinsurgency wars of the 1980s, and the war in Iraq. LILE

ANTH 1233. Ethnographies of Global Connection: Politics, Culture and International Relations.
Historically, IR and Anthropology examined interactions within and among bounded objects, whether sovereign states or small-scale societies. Increasingly, through, they explore flows, circulations and exchanges across borders, and their impact on different societies. Through case-studies, the course will analyze evolving understandings of “globalization” and “culture,” and explore how effectively different genres of research and representation capture their complex interactions.

ANTH 1234. Anthropology and Utopia.
Utopia: designs for good societies and efforts to create them; and Anthropology: observation and description of societies. A wide-ranging reading and discussion class that will address such questions as: Does Anthropological description contribute to the design of good societies? Have Anthropologists been looking for Utopia? What does Anthropology suggest is wrong with existing societies? Whose job is it to judge societies? How would Utopias be like to live in? How have people tried to build Utopias? Have they failed completely? Is failure inevitable? Is a better world possible? What would it look like? How would we get there? LILE

ANTH 1236. Urban Life: Anthropology in and of the City.
This course examines how anthropologists have worked in the city – to understand dwelling and lived experience from the center to the margins of society; as well as how anthropologists have contributed to the study of the city – conceptualizing the city itself in relation to its inhabitants, and working to understand how cities develop, decline, or are sustained. Anchored in key theory, classic texts, and contemporary ethnography, the course traces also the history, present, and possible futures of the discipline. Students learn the methods of urban ethnography, and gain hands-on experience through local field exercises and related writing assignments.

ANTH 1240. Religion and Culture.
Global events in recent years seem to defy the commonsensical idea that religious traditions would decline or disappear in the modern epoch. We examine classic theories and methods in the study of religion to understand the continuing vitality of spiritual contemplation, asceticism, myths, rituals, magic, witchcraft, experiences of healing, and other ways of thinking and acting that are typically associated with (or against) the concept of religion. DPLL LILE

ANTH 1241. Science and Culture.
This course is an introduction to methods and topics in the anthropology of science and technology, including: social inequalities in science, race, gender, post-coloniality, and the globalization of bio-technologies. The course will focus on ethnographies and films about science and culture, covering topics such as the social implications of genetic testing, biopropecting and the environment, the development of pharmaceuticals, and repercussions of nuclear technologies. LILE

ANTH 1242. Bioethics and Culture.
This course examines bioethics from an ethnographic point of view. Topics include pregnancy, death, suicide, disability, medical research, organ transplantation, and population control. We will distinguish between the moral experiences of people faced with difficult choices, and the ethical ideals to which they aspire. We will then ask: how can these perspectives be reconciled? When trying to reconcile these perspectives, how can we account for powerful dynamics of race, gender, class, religion, and cultural difference? Finally, how can we develop a code of ethics that takes these issues into account and also is fundamentally connected to everyday life? DPLL LILE WRIT

ANTH 1244. Religion and Secularism: Affinities and Antagonisms.
Global events in recent years seem to defy simple ideas of the confinements of religion to a wholly private, non-modern or otherworldly domain, in ways that compels scholars across a range of disciplines in the social sciences, critical theory and philosophy to rethink the category of secularism, and the relationship between religion and politics. Is secularism a failed ideal? In what ways are ideas of the secular being contested and reformulated in different global contexts? This course seeks to familiarize students with recent debates on secularism, working towards a more nuanced understanding of the relationship between religion and politics. DPLL LILE

ANTH 1250. Film and Anthropology: Identity and Images of Indian Societies.
The course examines representation of Indian society in film and anthropological literature. We compare how gender, national identity, religious practices, and historical events are portrayed in films and anthropological literature. We will explore the relationship between visual and textual, showing how film reflect and make comprehensible anthropological concepts of Indian culture, and creates different images of the society. DPLL LILE

ANTH 1251. Violence and the Media.
The role of media in shaping perceptions of violent conflict. Analysis of constructions of the “violent other”, “victims”, and “suffering”, the use of culture, ethnicity, and psychopathology as tropes for articulating the motivations of violent perpetrators. Multiple subject positions and political interests will be considered. Case studies include the Cold War, conflicts, insurgencies urban riots, the genocide, and terrorism. Pre-requisite: a previous course in Anthropology, or permission of the instructor.

ANTH 1252. Kill Assessment: An Investigation into Death, Genocide and Other Forms of Violence.
Is violence best understood as a set of “random acts” marginal to society? Or, do societies need violence to make culture systematic and functional? We will address two major issues throughout this course. First, we will discuss different types of violence: physical, material, structural and symbolic violence. Second, we will become familiar with ways that social groups turn violence into an aesthetic object and an artistic project. LILE
ANTH 1255. Anthropology of Disasters
This course examines disasters from an anthropological perspective. We focus on how disasters have been defined and understood, and work more broadly to see what they tell us about human conditions, vulnerabilities, and capacities for resilience building, survival, and long-term sustainability. Drawing on and comparing case studies from around the world, we also examine the nature of destructive agents; degrees of impact and injury; rescue, relief, and humanitarian responses; and the often slow and uneven process of recovery and resilience building.

ANTH 1260. Indigenous Peoples and Nature: Birds
An exploration of intersections of indigenous peoples with the natural world; this semester with the avian world. Through a sustained focus on one class of living things, the hope is to gain access to a range of issues concerning the relationship between people and the environment. LILE

ANTH 1300. Anthropology of Addictions and Recovery
The purpose of this course is to consider the uses and misuses alcohol, tobacco and drugs, and approaches to recovery from addictions. We will read some of the major cross cultural, ethnographic, linguistic, and social-political works on addictions. Students will have the opportunity to conduct their own anthropological interviews regarding substance misuse and recovery as well as observe a local 12 step recovery meeting. Enrollment limited to 20. LILE WRIT

ANTH 1301. Anthropology of Homelessness
Homelessness emerged as a public concern in the United States and in other industrialized countries in the late 1970s as people began encountering people living on the streets, a way of life which had formerly been confined to the skid rows of large cities. In this course, through readings, readings, discussion, and hands on experiences with homeless populations, we will uncover the causes, conditions, and responses to homelessness. Each student will spend at least two hours per week in a local homeless-serving agency in order to gain face to face experiences. The field placements will be facilitated by the professor. LILE

ANTH 1305. Medical Humanities: Critical Perspectives on Illness, Healing, and Culture
Medicine is arguably the most humanistic of the hard sciences, one that strives to ensure the basic dignity of individuals. In our increasingly globalized world, access to medical care is recognized as a fundamental human right. However, there continues to be considerable debate over the "best" ways to provide medical services to economically and culturally diverse communities across the globe, given the complex ways that people prioritize and perpetuate their health. This seminar explores the multifaceted relationships between biomedicine and cultural understandings of illness, both in the US and worldwide. Instructor permission required. Enrollment limit 25 juniors and seniors. DPLL LILE

ANTH 1310. International Health: Anthropological Perspectives
This upper-level medical anthropology course focuses on the social and cultural complexity of health problems in developing nations, employing anthropological approaches to public health. International health issues such as HIV/AIDS, malaria, tuberculosis, leprosy, reproductive health, violence, and mental illness will be examined. The historical, political and socio-cultural dimensions of international health problems will be explored through reading ethnographic case studies. DPLL LILE

ANTH 1311. Language and Medicine in Practice
This course is part of the Engaged Scholars Program and provides a foundation through which to think about how people’s use of language shapes and is shaped by the medical sphere. Team taught by a linguistic anthropologist (Faudree) and medical anthropologist (Hamdy), this course provides foundations to understanding the scholarly intersections between language, medicine, and society. At the same time, the course offers a strong pragmatic dimension, as students will engage in volunteer and participant-observation work in clinical settings. Throughout the course we will be bringing our insight and observations of clinical practice to bear on anthropological tools of analysis. The course is limited to 20 students who will be admitted to the class via an application process. Priority given to seniors, those in the Engaged Scholars Program, and Anthropology concentrators. DPLL LILE WRIT

ANTH 1312. Stratified Reproduction: Race, Class and Parenthood
This Engaged Scholar course will examine the social, cultural, and economic dynamics that guide and shape the process of becoming a parent in the context of deepening global and national inequalities. In addition to reading widely in relevant social science literature, students will embed themselves in one of the many local organizations in Providence and the broader New England area that provide services for new mothers and fathers in need. The course is limited to 15 students admitted to the class via an application process. Priority given to seniors, those in the Engaged Scholars Program, and Anthropology concentrators. DPLL LILE

ANTH 1320. Anthropology and International Development: Ethnographic Perspectives on Poverty and Progress
Examines international development from an ethnographic perspective, looking critically at issues of poverty and progress from local points of view. Course is organized around the premise that culture is central to understanding processes of development. Broad development themes such as public health, agriculture, democracy, and the environment will be explored through readings representing a wide range of regions and cultures. DPLL LILE

ANTH 1321. Impact on Colonialism: Gender and Nationalism in India
This course is designed to look into colonial and post-colonial identities within the disciplines of history of literary studies. We will adopt an anthropological approach to those subjects, taking the cultural anthropology and construction of gender as the guideline for the analysis. Topics will include: orientalism, and gender; nationalism and religion.

From child soldiers to starving refugees, Americans are inundated with media images of violent suffering in the developing world. Our politicians frequently present international humanitarian intervention as an unequivocal good, without examining the actual outcomes of aid initiatives. This course uses tools from anthropology to explore the motivations for global aid, along with the concrete--and often unexpected--effects it produces on the ground. Foregrounding an ethnographic approach, we seek to understand the enduring influence of the concept of 'rights,' the ways that local populations both welcome and resist humanitarian work, and the successes and failures of international charitable organizations. First-year students require an instructor override to register. DPLL LILE

ANTH 1323. The Culture and Politics of Colonial Cities: Migration, Markets and the Diaspora
Two colonial powers (British Empire and Portuguese) form the basis for this comparative approach to unravel and comprehend how colonial policies differed in two regions. Colonial cities have a special mystique, and studying them in the present unravels socio-historical and political connections make the present more meaningful. For post-colonialism, we address migration and Diaspora, the participation of groups under analysis in transnational economy and local and global markets. Focusing on the Diaspora, we seek to tie history and cultural development to the wider issue of Diaspora and the displacement of people, the search for opportunities, migration and the global markets. DPLL LILE

ANTH 1324. Money, Work, and Power: Culture and Economics
Economic activities take place within cultural contexts which define appropriate values and goals, and in societies varying in scale, technology, and organization. Looking cross-culturally, and at economic activities in societies such as the United States, this course examines the production, distribution, and consumption of material goods, analyzing these as essentially social activities - properly understood only when we take account of social relations and cultural values. Consequently, the course also investigates the extent to which the words commonly used to describe economic life, such as "market", "wealth", "price", "profit", "work", and "money", are culturally specific rather than universally applicable. At least one previous course in Anthropology or another social science is strongly recommended. WRIT
ANTH 1325. Business and Entrepreneurship in Global Perspective.
In a world of free trade, government downsizing, and the rapid movement of people and ideas, business and entrepreneurialism have become central to many peoples' economic livelihoods and social identities. Anthropologists have most often treated business and entrepreneurialism as reflections of culture and social life, rather than sites of production in their own rights. Corporate workplaces, small businesses, and trade encounters are starting points for understanding myriad different social outcomes: novel forms of intercultural communication, new patterns of transnational labor migration, changing class configurations, and forums through which socially marginalized groups participate in society. DPLL LILE

ANTH 1326. The New Economic Anthropology.
This course introduces students to the new economic anthropology of capitalism and sitsuate it within the historical development of economic anthropology since the late 19th century. The course begins by introducing students to basic notions of 'economy' as understood in the ancient Mediterranean up through to the present. The course covers early anthropological research into forms of personhood and sociocultural organization that contrasts sharply with the assumed universality of Homo economicus. The course focuses on key debates within economic anthropology over the possibility of using 'western' economic categories for analysis and explores some of the alternative frameworks developed by anthropologists. LILE

ANTH 1330. Women in Socialist and Developing Countries.
A seminar, jointly taught by a sociologist and an anthropologist, exploring the changing role of women in the former socialist countries of Eastern Europe and developing countries in Africa and Asia. Includes women's position, ideologies, and choices within these societies, and the transitions that are taking place. Contributes to a better understanding of the role of women in our own society.

ANTH 1400. Race, Culture, and Ethnic Politics.
A seminar addressing the subjects of race, culture, and ethnicity, focusing on minority groups in the U.S. Seeks to clarify the philosophical and theoretical issues in contemporary America using a cross-disciplinary approach. DPLL

ANTH 1410. Reconstructing Multiraciality.
An examination of, first, the racial and social history of interracial and interethnic relations in the U.S. and different parts of the world, then, the contemporary American situation and changing trends in these cross-group relationships. Exploratory and interdisciplinary-intended to open a dialogue on multiple issues involved, diachronically as well as synchronically.

ANTH 1411. Nations within States.
Examines the interactions between small-scale indigenous societies (often referred to as Fourth World Nations) and the modern states within which they now exist. The relationship is obviously asymmetrical, yet these ethnic or "racial" minorities have the support of world opinion and international organizations. The sociocultural, economic, and political structure of these nations within states is the focus of the course. DPLL

ANTH 1412. Anthropology of State Power and Powerlessness.
How do we conceptualize state power? Is power primarily a capacity for force and coercion or a source of welfare and social cohesion? States the world over often do not manage to provide adequate welfare or to maintain a monopoly on violence. How then might we understand state power not only as a capacity but also in its incapacities and vulnerabilities? We engage these paradoxes of state power through classic texts of anthropology and political theory including Foucault, Weber, Hobbes, Locke and Rousseau, in tandem with lively ethnographic analyses of state power in its capacities and incapacities. DPLL

ANTH 1420. Ethnicity, Race, and Gender in the Americas.
The historical and contemporary ethnography of ethnicity, race, and gender in the Americas. Topics include racism, multiculturalism, affirmative action, immigration, nationalism, acculturation, cultural autonomy, slavery, colonialism, and genocide. DPLL

ANTH 1421. Ethnic American Folklife: Continuity and the Creative Process.
An investigation of the dynamics of cultural continuity and the creative process involved in ethnic American folklore from oral narratives, life history, to foodways, and the senses of place. How do these cultural forms intersect with ethnicity, gender, group activism, and transnational contacts and exchanges? What are the new cultural forms, communication milieus, and venues negotiated or contested in contemporary America? DPLL

ANTH 1422. The American Experience-Southeast Asian Refugees/ Americans.
Explores the diaspora of the Cambodian, the Hmong, the Lao, and the Vietnamese American from their initial exodus from their war-torn countries to their strategies for reconstructing new lives. Topics include socioeconomic changes, changing family life, gender roles, life choices, and the growing American generation. Materials used include films, songs, and autobiographies written by the refugees/Americans themselves. DPLL

ANTH 1450. Living with Conflict.
Exploration into ways in which cultural groups perceive and approach situations of conflict and how these situations in turn shape cultural practices, beliefs, and norms within the group. Examples are taken from ethnographies of different parts of the world and include a discussion of customs that help mitigate conflict among members of the group as well as conflict between groups. DPLL LILE

ANTH 1470. Illustrating and Interpreting the Past: Visual Representation in Archaeology.
Archaeologists investigate culture using material artifacts as evidence about the past, but in order to communicate and compare that evidence, they must turn to technologies of reproduction and representation. This course traces the evolution of archaeological illustration, and its contributions to our knowledge of the past, in the context of technological and intellectual change over time. It explores the most up-to-date methods of archaeological illustration and their current place and future directions in the digital humanities. Working with objects from the Haffenreffer Museum of Anthropology, students will acquire experience in traditional and cutting-edge illustration techniques. DPLL LILE

ANTH 1491. 1493: The Spanish Invasion and Its Indigenous Responses in the Americas.
Drawing on historical sources from the John Carter Brown Library and objects from the Haffenreffer Museum, this course re-examines the history of Ibero-American cultural encounters between 1492 and 1700 AD. Students learn to interpret the different perspectives offered by archaeological and historical evidence to create more nuanced accounts of indigenous social history before and after the Spanish invasion. Topics addressed include cultural (mis)communication, disease and ecological change, roles played by people of African descent, and the legacies of conquest in the present. Special emphasis is placed on the Taino, Mexica, Inka, Maya and Pueblo cultures. DPLL

ANTH 1505. Vertical Civilization: South American Archaeology from Monte Verde to the Inkas.
This course offers an introduction to the archaeology of indigenous south American Civilizations, from the peopling of the continent around 13,000 years ago, to the Spanish Invasion of the 16th Century C.E. Throughout, we seek to understand the often unique solutions that South America indigenous peoples developed to deal with risk and to make sense of the world around them. Course lectures and discussions focus on recent research and major debates. Weekly sections draw on viewings of artifacts and manuscripts from the Haffenreffer Museum and the John Carter Brown Library. DPLL
ANTH 1515. Anthropology of Mental Health. Mental illness and wellbeing have been defined and treated in dramatically different ways across cultures and historical epochs. In this course we engage with religious and secular healing traditions including biomedicine, and the ways in which these shape the experience and understanding of “madness”, of common mental disorders (such as depression and anxiety), and changing perceptions of the normal and the pathological. Drawing on anthropology, psychiatry, philosophy, literature and cinema, we follow the emergence, translation and critique of diagnostic categories across different parts of the contemporary world. Key authors include Foucault, Deleuze and Guattari, Kleinman, Good, Veena Das, and others.

ANTH 1530. American Indian Archaeology. Traces the development of North American Indian cultures through the comparative study of prehistoric archaeological remains. Topics include the origins of Native Americans, Native American hunting-gathering lifeways, and the rise of the Native American agricultural societies. Emphasizes analyses of subsistence modes, settlement patterns, and symbolic systems. DPLL

ANTH 1540. Power, Profit, and Pillage: The Rise and Fall of Trading Kingdoms in Asia. A course survey of the pre- and protohistoric archaeology of the eastern half of Asia. Topics include the origins and evolution of agricultural societies, the emergence of village and urban life, and the rise of states and kingdoms. The early states were often characterized and even reinforced by elaborate symbolic and religious systems expressed through ritual, art, and architecture-topics also covered by the course.

ANTH 1550. Ancient Environments. This course teaches students how scientists investigate ancient environments and climate change and how these are related to ancient people and culture history. Students will learn about methods ranging from pollen and soil analysis to climate reconstruction and ecology. The class will look at a number of archaeological case studies in which climate or environment are believed to have been integral in past cultural developments. Case studies include the Levant, Mesopotamia, Polynesia, the American Southwest, and the Maya area. Students will be evaluated on class participation, weekly writing assignments, and final research papers. Prerequisite: ANTH 0500 or instructor permission. DPLL LILE

ANTH 1551. Techno-Ecologies: Health, Environment and Culture in the Digital Age. This course examines how people's health and lived experiences are impacted today by global environments in flux—and how these interconnected ecologies are deeply shaped and scrutinized in turn through various networks of technoscience. Topics will include food and nutrition in post-industrial economies; “conservation medicine” and the health of animals; energy and art; the global health implications of climate change; representations of race and indigeneity amid the “politics of nature”; society and microbiome; oil leaks and water wars; chemical exposures and disease; hybridity and nano-technology; and debates surrounding corporate social responsibility in practice. DPLL LILE

ANTH 1552. Environmental Change: Ethnographic Perspectives. What can anthropology’s concepts and methods help us understand about the ways people unevenly experience, govern, fuel or contest global environmental changes today? Focusing on sociocultural accounts and ethnographic films, we will examine contemporary realities such as global warming and the anthropology of hydrocarbons; water politics and privatization of nature; pollution and its governance; agricultural change and human health; nuclear disaster; biodiversity and deforestation; the microbiome and society; and the ways environmental science is being produced alongside its emerging markets. Students will learn to put debates about ecological change in dialogue with anthropological thought and tools from the environmental humanities. DPLL LILE

ANTH 1554. The Anthropology of Violence. What does it mean to “do” or to “commit” violence? How do we recognize it when it is so ubiquitous? Be it through war, ethnic cleansing, social conflict, revolution, or various forms of interaction, the topic of violence has figured prominently in anthropological scholarship as well as social thought throughout history. This course will explore major theories of violence through engagement with social theory, ethnography, and media. We will use a range of perspectives including biopolitics, feminist critique, and queer theory, and host of examples ranging from communal violence to warfare to sexual violence to explore violence in-depth. WRIT

ANTH 1555. Environmental Anthropology. Environmental anthropology is the study of how people interact with environments, past and present. This course explores how humans have affected their environments over time and how environment shapes human culture, employing an interdisciplinary anthropological perspective to illuminate these reciprocal interactions. This course uses a variety of approaches to understand how people interact with environments, employing cultural, biological, linguistic, and archaeological methods. This course covers human adaptation to environmental change from earliest prehistory up to the present day, students will have the opportunity to explore the practical and interpretive dilemmas of environmental challenges of the 21st century and beyond.

ANTH 1556. Environmentalism and the Politics of Nature. This seminar covers fundamental themes and advanced topics in the field of environmental anthropology. Over the course of the semester, we examine the relationship between environmentalism, conservation, and globalization. The geographic focus is the Global South; articles and ethnographies cover cases in Africa, Asia, and Latin America. Topics include indigeneity, wilderness, parks and protected areas, politics of space, development, and ideas of native and invasive species. DPLL

ANTH 1570. American Indian Archaeology. This course traces the development of North American Indians and culture through a comparative study of prehistoric archaeological remains. Some of the questions addressed will be: When where and why did people first migrate into North America? Were these people responsible for the mass animal extinction at the end of the last Ice Age? What accounts for the similarities and differences in the politics and adaptations of Native Americans? DPLL

ANTH 1580. ISIS, NAGPRA, and the Academy: Archaeology and Global Issues in Cultural Heritage. These days cultural heritage is all over the news. The wars in Syria, Iraq, Afghanistan, Yemen, and Libya have led to the destruction of countless sites and museums, and the looting of artifacts on a massive scale. Cultural heritage is a broad term however, and there are people and institutions around the world that have stakes in how it is defined and managed. How then do archaeologists, museum specialists, and others in the academy define, work with, and protect cultural heritage? This course will explore current themes in cultural heritage with an eye to material culture and ethical action.

ANTH 1590. Archaeology of the Ancient Near East. A survey of archaeological sites in the ancient Near East from the Neolithic period to the early Roman Empire. Archaeology allows us to explore the development of agriculture, cities, and urban-based culture, as well as to make comparisons between cultures and examine issues of trade and commerce. We evaluate sites in relation to theoretical and methodological issues in anthropological archaeology.

ANTH 1600. Hunter-Gatherer Adaptations. Addresses the question: to what extent can the concept of the ecosystem, as developed in evolutionary biology, explain variability in human behavior? Examines the literature on contemporary hunting and gathering societies, both human and nonhuman, as well as relevant findings in archaeology and human biology. Background in general biology and anthropology is helpful, but not required.
ANTH 1620. Global Historical Archaeology. The course examines historical archaeology as a multidisciplinary approach to the study of the historic past. Draws in recent research from different parts of the world, including North America, South Africa, Australia, the Caribbean, and South America, to illustrate historical archaeology’s contributions to interpreting peoples’ everyday lives and the diversity of their experiences in the post-1500 era. LILE

ANTH 1621. Material Culture Practice. Combines theory with hands-on study of artifacts from historical archaeological contexts in North and Latin America. Students will gain skills and experience in artifact identification, dating, recording, analysis, and interpretation, and will conduct individual or team research projects on material things as products of everyday life and history. Enrollment limited to 15. LILE

ANTH 1622. Archaeology of Death. Examines death, burial, and memorials using comparative archaeological evidence from prehistory and historical periods. The course asks: What insight does burial give us about the human condition? How do human remains illuminate the lives of people in the past? What can mortuary artifacts tell us about personal identities and social relations? What do graveyards and monuments reveal about beliefs and emotions? Current cultural and legal challenges to the excavation and study of the dead are also considered. DPLL LILE

ANTH 1624. Indians, Colonists, and Africans in New England. The course explores the colonial and capitalist transformation of New England’s social and cultural landscapes following European contact. Using archaeology as critical evidence, we will examine claims about conquest, Indian Extinction, and class, gender and race relations by studying the daily lives and interactions of the area’s diverse Native American, African American, and European peoples. DPLL LILE

ANTH 1625. Questions of Remembrance: Archaeological Perspectives on Slavery in the New World. Archaeology of slavery, and particularly that of enslaved African-American communities in what came to be the United States, has been one of the fastest growing areas of archaeological research in the last few decades. This course will look into both classic and current literature on the archaeology of Atlantic slavery in order to understand the development of this archaeological subfield, from an initial focus on the living conditions of slaves on plantation sites to later interests in the processes of consolidation of African-American ethnicities. What are current challenges faced by those investigating the material constitution of African Diaspora through time? DPLL LILE

ANTH 1630. The City, the Maroon and the Mass Grave. How has archaeology contributed to our understanding of the past in the former Spanish colonies? How has this knowledge been presented and made socially relevant in present-day Latin America? This course proposes a critical insight into the achievements and future challenges of historical archaeology in Spanish speaking America, exploring the diverging trajectories that the discipline has had in different countries of the region, and the way in which archaeological knowledge about the colonial, republican, and contemporary periods has been either ignored or assimilated into the development of specific politics of cultural heritage at the local level. LILE

ANTH 1640. Maize Gods and Feathered Serpents: Mexico and Central America in Antiquity. Mexico and Central America are the cradles of one of the world’s most enduring cultural traditions. The modern identity of the region was forged in these ancient traditions and their influence is apparent the world over, particularly in the area of agricultural domesticates (corn, chocolate, and chilies). Their cities (Teotihuacan, Monte Alban, Chichen Itza, etc.) rank among the greatest of the ancient world. This course offers a survey of Pre-Columbian Mexico and Central America, from the early monumental centers of the Olmec to the great Aztec city of Tenochtitlan, and explores how anthropologists and archaeologists investigate Middle America’s indigenous past.

ANTH 1650. Ancient Maya Writing. Nature and content of Mayan hieroglyphic writing, from 100 to 1600 CE. Methods of decipherment, introduction to textual study, and application to interpretations of Mayan language, imagery, world view, and society. Literacy and Mesoamerican background of script. LILE

ANTH 1660. The Ancient Body: Past Ideas about Human Physicality. Course addresses the burgeoning literature on the human body, especially the meanings attached to it through time and across cultures. Anthropology, history, and archaeology offer the principal sources of evidence for this introduction to past ideas about the body. LILE

ANTH 1670. Global Origins of Plant and Animal Domestication. A seminar providing the basic information on the prehistory of the Circum Arctic of Northern Fennoscandia, Russia, and North America. Not open to first year students.

ANTH 1692. Southwestern Archaeology. This course is an introduction to the archaeology of the native peoples of the Southwestern United States and Northern Mexico. It discusses the history of the field and examines how it is currently re-engaging with contemporary native peoples. It emphasizes past and present cultural diversity and traces out long-term continuities in beliefs and practices. Special attention is given to comparing and contrasting three formative cultural systems - Chaco, Hohokam, and Paquimé - that linked the Southwest into a series of broad social, political, and ideological networks. Students will be introduced to the Southwestern collections of the Haffenreffer Museum of Anthropology. DPLL

ANTH 1700. Evolutionary Theory and Human Behavior. An introduction to the field of human behavioral ecology, the course provides an overview of the application of the theory of natural selection to the study of behavior in an ecological setting. Focus is on anthropological topics related to reproduction such as issues of mating and parenting, sex ratios and sex preferences, and timing of life histories events.

ANTH 1710. Biological Issues in Human Origins and Variability. This course examines the fossil record of human ancestors and evidence for cultural origins in relation to evolutionary theory in biology. We will review studies of living primates as well as modern genetic and DNA research for measures of contemporary human variability. Finally, we will explore forensic applications and case studies.

ANTH 1720. The Human Skeleton. More than simply a tissue within our bodies, the human skeleton is a gateway into narratives of the past—from the evolution of our species to the biography of individual past lives. Through lecture and hands-on laboratory, students will learn the complete anatomy of the human skeleton, with an emphasis on the human skeleton in functional and evolutionary perspective. We’ll also explore forensic and bioarchaeological approaches to the skeleton. By the course conclusion, students will be able to conduct basic skeletal analysis and will be prepared for more advanced studies of the skeleton from medical, forensic, archaeological, and evolutionary perspectives. LILE

ANTH 1764. Campus Culture. This course presents and anthropological perspective on American colleges and universities from the past to present. In particular, it will address the emerging relationships between curriculum, governance, funding sources, academic values, and campus life. Readings will include theoretical sources on higher education, historical and ethnographic accounts of particular institutions, and recent essays regarding the purpose, practices and criticism of contemporary colleges and universities. DPLL

ANTH 1800. Sociolinguistics, Discourse and Dialogue. An investigation of the study of language and language behavior. Centers on the study of variation in language as seen in the social and cultural context of language use. This course will feature practice in writing fictional and dramatic dialogue based on real-life discourse. Presupposes some familiarity with basic linguistics (ANTH 0800, CLPS 0030, or equivalent).
ANTH 1810. Language and Power.
This course considers how language and power relate to each other in social life. We first consider theoretical approaches to the politics of language use, such as Foucault on discursive formations, Bourdieu on language as social capital, and Bakhtin on the oppression inherent in standard languages. We then consider specific issues, including joking as linguistic resistance, language death and revitalization, the cochlear implant debate, and racializing discourses. We end with language use in the U.S. “culture wars,” covering such topics as the Ebonics controversy, language and electoral politics, hate speech, and English language legislation. DPLL LILE

ANTH 1820. Lost Languages: The Decipherment and Study of Ancient Writing Systems.
Humans make many marks, but it is writing that records, in tangible form, the sounds and meanings of language. Creating scripts is momentous; writing facilitates complex society and is a crucial means of cultural expression. This course addresses the nature of writing in past times. Topics include: the technology of script; its precursors and parallel notations; its emergence, use, and “death”; its change over time, especially in moments of cultural contact and colonialism; writing as a physical object or thing; code-breaking and decipherment, including scripts not yet deciphered; and the nature of non-writing or pseudo- or crypto-scripts.

ANTH 1830. The Pictured Text.
Writing makes language visible, and thus concerns images. Language also delimits the legibility of imagery. Turning words into images and images into words occurs at great speed around us. This course explores the relation of text and image across world traditions—Chinese, Mayan, Egyptian, Islamic, Greco-Roman, and others, extending up to the present. Topics include: calligraphy, context, scribal practice, the form and shape of writing, including typography, hidden or pseudo-writing, graffiti, and contemporary art.

ANTH 1848. Ethnography + Social Critique.
This class will study classic and contemporary anthropological ethnographies – as well as studies from sociology, journalism, and history – that achieve ethnographic results, but will require discussion to determine what they “are.” We will examine the methods involved in research for the books and articles and how the ethnographies were written. Ethnographies will be chosen for their importance in anthropology and other fields, and will cover a broad range of topical and geographic contexts. This class is to study ethnographies more than to make them. That said, assignments will include practicing certain methods that are often employed by ethnographers. Preference given to students who have taken another Anthropology class. DPLL LILE

ANTH 1850. Body Arts: The Human Frame as Cultural Expression.
The body is inescapable: humans live with it and through it, sending messages and instating identity. The body remains, and will remain, our principal means of cultural expression. As its guiding proposition, this seminar affirms that body arts have a history and social setting, whether of gesture, clothing, fashion, tattooing, make-up, hair-styles, cranial deformation, jewelry, perfume, dance or other embellishments and subtractions of the human frame. Those arts involve material equipment and a set of theories and dispositions needing close review and appraisal. These come from varied sources, including anthropology, art history, cultural studies, literature history or archaeology.

ANTH 1870A. Reproductive Health and Sexuality.
No description available.

ANTH 1880. From Magic Mushrooms to Big Pharma: Anthropology of Drugs.
This course considers the social, political, and medical issues associated with illegal and pharmaceutical drugs. Some of the topics we consider are debates over the commercialization and criminalization of hallucinogenic plants such as marijuana, the politics of antiretroviral distribution, the ethics of medical and ethnic tourism, the legacies of colonialism and botanical migrations, “biopiracy” and indigenous knowledge, and critiques of modern food production, including the “locavore movement” and opposition to genetically modified foods. Through it all, we consider how the ways people talk and write about these issues affect concrete realities in daily life. Enrollment limited to 20 juniors and seniors. DPLL LILE

Looks at the way anthropological methods and theories have interfaced through history to understand the dominant concerns in present-day anthropology. What were the important issues that influenced the discipline’s history? Who were the significant, and not so well known, historic personalities who shaped anthropological practice and gave it its identity? Enrollment limited to 20.

ANTH 1901. Anthropology in/of the Museum.
This course provides an introduction to museums from an anthropological perspective. Topics include politics of representation and the construction of the “Other”; objects, identity, and meaning; collecting and cultural property; and collaboration, community engagement, and indigenous self-representation. Assignments involve work with the Haffenreffer Museum of Anthropology’s exhibitions and collections. The course focuses on museums dedicated to natural and cultural history, but establishes theoretical and practical grounding for thinking about and working in other disciplines and other kinds of display institutions. It is suitable for both undergraduate and graduate students. There are no prerequisites; but familiarity with anthropology is presumed.

ANTH 1910A. Anthropological Approaches to World Issues.
Capstone seminar for Anthropology concentrators that explores how anthropology can challenge conventional or dominant wisdom about global social problems. Original research project required.

ANTH 1910B. Anthropology of Place.
The anthropology of place serves as a unifying theme for the seminar by bridging anthropology’s subdisciplines and articulating with other fields of knowledge. Through readings and discussion, students will explore how place permeates people’s everyday lives and their engagement with the world, and is implicit in the meanings they attach to specific locales, their struggles over them, and the longings they express for them in rapidly changing and reconfigured landscapes. Enrollment limited to 20.

ANTH 1910C. Campus Culture.
Looks at the way anthropological methods and theories have interfaced through history to understand the dominant concerns in present-day anthropology. What were the important issues that influenced the discipline’s history? Who were the significant, and not so well known, historic personalities who shaped anthropological practice and gave it its identity? Enrollment limited to 20.

ANTH 1910D. Faces of Culture.
The seminar is designed to allow you as anthropology majors to question to debate and examine some of the assumptions of the discipline, and critically explore the multifacous uses of the concept. We will contextualize the study of culture with the history of anthropology and across other disciplines in the humanities and the social sciences. Limited to 20.

Prerequisite: ANTH1900
ANTH 1910E. Media and the Middle East.
Media anthropology is a reinvented field within the discipline, emerging from critical engagements with ethnographic film and the crisis of representation of the 1980s. We'll explore the development of an anthropological approach to mass media studies by focusing on research conducted and theories derived from a particular region: the Middle East. Enrollment limited to 20 senior Anthropology concentrators. Prerequisite: ANTH 1621, 1900, 1940, or 1950. DPLL LILE

ANTH 1910F. Social Construction.
No description available. Enrollment limited to 20.

ANTH 1910G. Senior Seminar: Politics and Symbols.
Examination of the key role played by symbols in politics. We examine symbols, myths, and rituals used to win support, create political reality, and form political groups, whether in defense of the status quo or creating movements seeking to overthrow it. The 2016 U.S. presidential, congressional, state, and local political campaigns receive attention. Students, in part working in groups, will engage in original research both on the 2016 American elections and a wide variety of historical and contemporary political developments, from ISIS and the Arab Spring to the American anti-abortion movement. Prerequisites: two previous courses in anthropology.

Migration is a main way that not only populations change, but also economies, landscapes, cultures, and identities. Drawing on cases from across the globe and through time, we will examine migration through both the global flows of capital and culture and through migrants' lives as they build families, fight for belonging, and transform the built environment. This capstone seminar is designed to further concentrators' engagement with anthropology, its methods, subfields, and its contributions to our knowledge of human experience. Particular emphasis will be on how anthropology aids in understanding the interrelation of global political and economic systems and local experiences. DPLL LILE

ANTH 1940. Ethnographic Research Methods.
To understand the different theoretical assumptions that shape research efforts; to examine how hypotheses and research questions are formulated; and to appreciate the ethical and scientific dimensions of research by hands-on experience in fieldwork projects. Prerequisite: One Anthropology course. WRIT

This course brings design thinking into conversation with anthropological research methods, examining the elements of a comprehensive perspective of context. It introduces students to design research methods, ethnographic methods, and how they work together. Students will learn how to use these methods to identify and engage in ‘deep hanging out’ with the problem, gap or inefficiency in question. They will then move on to patient, contextualized opportunity identification for meaningful innovation. By the end of the course, students will have developed a process for effective context analysis. This course is relevant for designers of products, services, organizations, and experiences. Enrollment limited to 40. LILE

Training in archaeological lab and field techniques for archaeologists. Topics include the nature of field archaeology, tools of the trade, interdisciplinary field techniques, ethics, excavations methodology, survey and GIS, systematic vs. ad hoc excavation, artifact analysis, site and artifact preservation. Students gain experience as practicing archaeologists through the active investigation of local historical and archaeological sites in the College Hill area.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

A seminar investigating some themes in the history of anthropological theory. Starting with the delineations of the scope and nature of social science by Marx, Durkheim, and Weber, the seminar then considers various explorations of the concepts of structure, function, and agency, concluding with Bourdieu’s reformulation of social anthropology for a new generation in the form of practice theory.

A seminar exploring fundamental theoretical and ethnographic currents in 20th- and 21st-century cultural anthropology.

Contributes to anthropological understandings of globalism, political and urban anthropology, with a focus on one particular theoretical orientation that may guide research design and/or analysis. In addition to studying this particular philosophy through which they might understand culture, this course offers a model for the adoption of any given theoretical lens that might be taken up, critiqued, and otherwise put to use in cultural analysis.

ANTH 2018. Labor and Social Life.
This is a graduate seminar that will explore anthropologies of labor. The Fall 2016 focus will be on labor, posthuman and feminist theory, and critical studies of capitalism.

A seminar on the methodological problems associated with field research in social and cultural anthropology. Designed to help students prepare for both summer and dissertation research.

The purpose of this seminar is to help graduate students conceptualize ethnographic research, formulate a research problem, develop a research design, consider its ethical implications, design appropriate methodologies and prepared the proposal for IRB approval. The methodologies will be discussed with a view to arriving at a critical understanding of the ethical, political and theoretical issues embedded in them and the way in which they fit into our conception of anthropological practice.

ANTH 2030. Advanced Field Methods.
A seminar for advanced graduate students returning from field research or preparing for dissertation field work. Case studies are used for a critical examination of research design and data analysis.

ANTH 2035. Professional Preparation for Anthropologists.
This course covers research ethics and politics, writing of proposals, theses, and articles, publishing, public speaking, CVs and resumes, and the job search.

ANTH 2040. Advanced Social Theory.
This seminar is for graduate students who have taken ANTH 2000 and ANTH 2010 or equivalent graduate introductory courses in anthropological theory. Topics to be explored in this seminar include contemporary theories of globalization, hybridity, the politics of identity, class, cultural citizenship, democracy, social suffering, structural violence, agency, human rights, militarization, the body, multistied ethnography, and writing culture.

ANTH 2045. Proposal Writing Workshop for Anthropological Fieldwork.
This course is designed for third-year graduate students in any subfield of anthropology or closely related fields who are writing grant proposals for dissertation research. Student grant proposals will be pre-circulated and workshopped. Students will gain familiarity with the format for writing successful proposals, with the strategies needed to operationalize them, and with the everyday academic labor of both offering and responding to substantive feedback.

ANTH 2050. Ethnography.
Each week this class will study classic and contemporary ethnographies - as well as studies from sociology, journalism, and history - that achieve ethnographic results, but will require discussion to determine what they “are”. We will carefully examine the methods involved in research for the books and how the ethnographies were written. Ethnographies will be chosen for their importance in anthropology and other fields, and will cover a broad range of topical and geographic contexts.
ANTH 2055. Infrastructure, Inequality and Ignorance.
This seminar provides an introduction to three literatures: those on infrastructure, inequality, and knowledge/ignorance. We will examine the concepts as distinct ones as well as in relation to their overlapping concerns. Cases are drawn from a wide variety of mainly contemporary settings around the world. The emphasis will be on ethnographic and textual approaches to the issues. Appropriate for graduate students from across the social sciences.

ANTH 2060. Anthropology Dissertators’ Seminar.
This seminar is for post-field graduate students in residence at Brown who are at any stage of writing their dissertations. It is intended to support dissertators by providing a structured community, providing a setting for sharing goals, and workshopping writing.

ANTH 2100A. Contemporary Ethnography on Latin America and Beyond.
This graduate seminar addresses contentious and creative issues in anthropology by focusing on the science and art of ethnography. Readings feature new transnational ethnographic writers. Topics: alternative research framing, the relation of field research to writing, representing violence and porous borders in practice.

ANTH 2100B. People of the Andes.
No description available.

Focuses on debates over significant social and cultural issues in Africa. Historical and cultural continuities are premised as a way of understanding political, economic, and religious complexities in present-day Africa.

ANTH 2120. Critical Locations in the Anthropology of the United States.
This graduate seminar locates and explores the anthropology of the United States. Students first work to understand the social history of anthropology in the U.S., including its theoretical and methodological contributions, and the range of approaches and examples. The course is then organized thematically as students explore key moments along this trajectory, through a close reading of ethnographic work in various settings. The course places a particular emphasis on scholars, topics, and populations that have been historically understudied and sidelined within the larger inquiry, but that are nonetheless critical for the expanded contribution of anthropological work in this field.

ANTH 2200A. International Health.
This graduate seminar (upper-class undergraduates may seek permission from the instructor) focuses on the social and cultural complexity of health problems in developing nations, exploring anthropological approaches to public health. International health issues will be investigated using historical, ecological, epidemiological, political-economic, and ethnomedical perspectives, and the role of “applied” anthropology will be explored.

ANTH 2210. Analysis of Social Structure.
This course will discuss the analysis of kinship and the construction of the person cross culturally.

ANTH 2230. Medical Anthropology.
This graduate seminar provides a theoretical, methodological, and ethnographic foundation in medical anthropology. The focus will be on sociocultural approaches to the study of the suffering, illness and the body, though the course will also engage with key issues in biocultural approaches to understanding disease processes. Topics will include: social suffering, religion and medicine, local biologies, gender and the body, biotechnology, bioethics, caregiving and doctoring, and the global burden of disease.

ANTH 2240. Anthropological Approaches to the Body.
This course is an in-depth exploration of theoretical and analytical approaches to the body in socio-cultural anthropology. Topics covered include: the body as site and sign of the social order; theories of embodiment and the cultivation of the self; bodily order and social ritual; the senses; the relationship between bodily epistemology and socio-political structures; the commodification of the body; technological intervention in the body; the visualization of the bodily interior; and state interventions and regulations of bodily processes.

ANTH 2250A. Psychology of Gender.
This course critically examines the role of gender in development and maturation, or the psychological differentiation of males and females, in the context of their socio-cultural environment.

ANTH 2251. Anthropology of Gender and Sexuality.
In this course we will engage with writings from the social sciences on sex, gender, and sexuality. We will look at the categories that anthropologists have created to explain bodies, sexual choices, and subjectivities and historicize and interrogate them. We will do close readings of ethnographies to see how sex, sexuality, and gender are theorized and how these ideas are applied to a variety of cultural contexts and how people live their everyday lives. Enrollment limited to 15.

This course will build upon the momentum gained from the work and engagement of critical, and radical scholars of postcolonialism, feminism, race, cultural studies, sexuality studies, and indigenous studies in revealing multiple blind spots and various forms of violence associated with the privileging of Eurocentric, liberal, secular, enlightenment, and rationalist ways of seeing the world.

ANTH 2255. Gender, Liberalism, and Postcolonial Theory.
What makes the concept of gender useful to think with, both within academia and beyond? How does gender relate to the political projects of feminism and liberalism? What explanatory potential do gender and liberalism hold for addressing (or obfuscating) social inequalities, racism, and other forms of oppression? Drawing on multiple disciplines in the social sciences, this course offers students analytical tools to theorize gender, sexuality, and liberalism in the contemporary world. Building on critical interventions of post-colonial theorists, we will explore anthropological contributions to the study of gender, sexuality and liberalism through ethnographic writings. Open to graduate students and seniors.

ANTH 2260. Politics and Symbolism: At the Interface of Anthropology and History.
An examination of the theoretical roots of the symbolic analysis of politics and the application of these perspectives to both contemporary and historical study of political life.

ANTH 2261. Globalisms: Empires and Social Movements.
This seminar explores globalism in two of its contemporary forms, including empires and global networks of social movements. Focuses on theories of empire and on their implications for anti-war and anti-corporate movements in particular.

ANTH 2262. Social Analysis, Public Goods and Social Movements.
This seminar explores some of the political, ethical, and social issues and dilemmas involved in using social analysis to advance public interests.

ANTH 2263. Colonialism and Neocolonialism.
A seminar addressing the concepts of colonialism, postcolonialism, and nationalism. The nature of colonial “rule of law,” the stages of the dissolution and formation of “African” native states, and the notion of “traditional” power are all examined in a comparative context using Francophone and Anglophone case studies in Africa.

ANTH 2264. Ethnicity, Race, and Nationalism.
Study of key issues debated by anthropologists regarding ethnicity, race, and nationalism, with examination of concepts such as identity, cultural citizenship, transnationalism-globalization, gender, home, and acculturation-hybridity.

ANTH 2270. Ethnography and Women’s Literature of Non-Western Societies.
Interdisciplinary and cross-cultural exploration of representation in ethnographic and literary texts. Confronts the apparent analytical opposition of objectivity and subjectivity and addresses the challenge in the academy of “writing culture.” Encourages connections between women writers in the Third World and American minority discourse to deepen understanding of global politics and the poetics of culture.
ANTH 2300. Anthropological Demography
A seminar devoted to the investigation of the interface of anthropology (especially sociocultural anthropology) and demography. A wide variety of demographic topics-fertility, mortality, marriage, migration—are considered, and the links between anthropological and demographic writings on and approaches to these areas are examined.

ANTH 2301. Interdisciplinary Perspectives on Population
Brown University’s 10 year of excavations has created a lens through which to examine the complexities of the Nabataeans and their culture. The main information about the Nabataeans comes primarily from their extant monuments. There are also literary and epigraphic sources. This seminar will create a constellation of readable ideas, although we will still be left with many open questions about these people.

ANTH 2302. Field Methods for Anthropological Demography
Concentrates on methods for collecting or producing data that bear on demographic issues and that are suitable for demographic analyses. Topics include: fertility histories, life histories, genealogies, household surveys, networks, and social units. Particular emphasis on the social contexts of data production, local meanings, and discovering appropriate categories and units of analysis.

ANTH 2303. Anthropology of Fertility and Reproduction
A seminar examining the social significance and cultural meanings of human fertility and reproduction, including the social and cultural consequences of different fertility levels, the variety of people involved in decisions about reproduction, the allocation of responsibility for parenthood, and the political implications of contemporary debates about the meanings of biological and social reproduction.

ANTH 2304. Issues in Anthropology and Population
This seminar is intended for graduate students and postdoctoral fellows interested in anthropological approaches to population issues and is normally taken as the second course in a two-course sequence that begins with ANTH 2300. The overarching theme of the seminar is the contributions that sociocultural anthropology can make to the understanding of population processes.

ANTH 2310A. Violence, Governance, and Transnationalism
This seminar deals with contemporary anthropological approaches to violence, governance, and transnationalism. As faculty and graduate students, we have worked together to identify important ethnographic experiments that provide novel anthropological framings of major global issues. Our goal is to interrogate anthropological writing, explore its relation to field research, and trace anthropological appropriations of contemporary social theory from a variety of sources. Prerequisites: three previous courses in Anthropology.

ANTH 2310B. Violence, Governance and Transnationalism
Deals with contemporary anthropological approaches to intersection of violence, human rights, law, and transnationalism. Readings will focus on the development of a new generation of research in the anthropology of human rights and its implication for rethinking legal anthropology. Anthropology has moved beyond the “cultural relativism” paradigm on to new projects which analyze the appropriation and use of human rights discourse and international norms as political tools for a variety of national and local agendas. Anthropologists have produced ethnographies that focus on the institutional grounding of legal discourse and practice in community and neighborhood politics, social movements, and ethnic nationalist projects. They have studied the radical reworking of rights discourse in different parts of the world and debated the ways in which these technologies for legal redress in the face of violence are politically empowering and/or disempowering in particular historical and cultural circumstances.

ANTH 2315. Anthropology of State Power and Powerlessness
How do we conceptualize state power? Is sovereign power primarily a capacity for force and coercion or a source of welfare and social cohesion? States the world over often do not manage to provide adequate welfare or to maintain a monopoly on violence. How then might we understand state power not only as a capacity but also in its incapacities and vulnerabilities? We engage these paradoxes of power through classic texts of anthropology and political theory including Foucault, Deleuze, Weber, Hobbes, and Rousseau, in tandem with lively ethnographic analyses of state power in its capacities and incapacities.

ANTH 2320. Ideology of Development
An examination of different development theories and their relationship to field application. The analysis of project preparation and implementation is used to question the goals and objectives of Western and indigenous notions of progress and change within a social and economic context. Third World countries are utilized as case studies to address related issues, such as the meaning of development.

ANTH 2321. Coming to Terms with India: Anthropology of Colonialism and Nationalism
This seminar discusses anthropological approaches to material culture in museum contexts, by developing themes, selecting objects, and preparing a preliminary script for an exhibition in Manning Hall. This year, “Humans and Nature.” (ANTH 2400 is followed by ANTH 2410. Students can enroll in each course independently). Instructor permission required.

ANTH 2325. Exhibitions in Museums
The goal of this seminar is to implement in Manning Hall an exhibition script developed in ANTH 2400, on “Humans and Nature” (see that course). Topics discussed and put into practice include: representation of cultures modern museum displays; thematic development; interpretation, handling, and mounting of objects in contextually rich and engaging museum environments; conservation; audience assessment.

ANTH 2420. Museums in Their Communities
This seminar examines in detail the internal workings of museums (of anthropology, art, history, science, etc) and their place in their communities. Accessions, collections management, conservations, education, exhibition, marketing, research, and museum management are among the topics discussed.

ANTH 2450. Exchange Scholar Program
ANTH 250A. Problems in Archaeology: Archaeology of Colonialism.
Explores the theoretical discourses shaping anthropological approaches and defining archaeological projects on culture contact and colonialism. Attention will be given to examining colonial encounters between Europeans and indigenous peoples as ongoing processes rather than particular historical moments, and to looking at recent efforts at decolonizing archaeological practice.

ANTH 250B. Problems in Archaeology: The Archaeology of Empires.
Empires have been among the most influential political and social formations in global history. This seminar will explore general literature on imperial genesis, consolidation and decline, as well as considering the specific and unique contributions archaeology and art history can offer to the understanding of empire. A variety of case studies will be explored, with selections depending on student interest.
ANTH 2500C. GIS and Remote Sensing in Archaeology.
This course will train advanced students in the laboratory methods needed for the successful application of GIS and remote sensing technologies in archaeology. We will conduct an exhaustive literature review of spatial research in archaeology to place GIS and remote sensing within a broader conceptual framework. Each student will design their own geodatabase that they will be able to build upon in future research.

ANTH 2501. Principles of Archaeology.
Examines theoretical and methodological issues in anthropological archaeology. Attention is given to past concerns, current debates, and future directions of archaeology in the social sciences.

ANTH 2510. Circumpolar Archaeology.
A specialized course dealing with advanced problems in Arctic archaeology. Although primarily oriented toward the northern specialist, the seminar is designed to present, by example, methodological and analytic problems that are applicable to most archaeological areas and to hunting, fishing, and gathering societies.

ANTH 2520. Mesoamerican Archaeology and Ethnohistory.
Seminar focusing on current issues in the archaeology and history of Mesoamerica, including Mexico and Northern Central America. Draws on rich resources at Brown, including the John Carter Brown Library.

ANTH 2530. Archaeology of Tribes and States.
Explores concepts of complexity and inequality and how these have been used to study the origins and development of complex society. Categories such as tribes, chiefdoms, the state, etc. are evaluated as conceptual tools for understanding the rise of civilizations and early state formation, as well as transformations in later historical contexts.

ANTH 2540. Historical Archaeology: From Colony to City.
Examines historical archaeology as a complex field of inquiry that engages multiple sources of evidence and incorporates a wide range of theoretical and methodological approaches. The seminar will consider the range of evidence available to historical archaeologists, and draw on examples from colonies and cities around the world to explore how the richness and diversity of the evidence is used.

ANTH 2541. Ethnohistory.
Seminar topic: "Comparative Ethnohistory of the Americas." Examines Indian/European encounters and interactions in North America and Latin America. Explores the conjunction of anthropology and history, combining both theoretical orientations from and methodology of the two disciplines, with particular emphasis on the problems posed by comparative analyses.

ANTH 2550. Archaeological Research Methods, Theory and Practicum.
The seminar is designed to help the student develop good research and analytical skills in archaeology. By focusing on research design, analytic techniques, the relationship between theory and methodology, and the development of research proposal and/or reports, we shall examine how both scientific and humanistic theoretical concerns can be sources of meaningful archaeological questions, and how these questions can be transformed into viable research problems.

ANTH 2560. Lived Bodies, Dead Bodies: The Archaeology of Human Remains.
Bioarchaeology is the study of human remains from archaeological contexts. We will survey the "state of the art" in bioarchaeology, while exploring its relevance and application to the archaeology of complex societies. We will survey a range of bioarchaeological methods and applications, including paleopathology, stable isotope analysis, population affinity/ancient DNA, perimortem trauma, and body modification. In turn, we will explore how bioarchaeology can be used to approach a wide range of archaeological problems relative to complex societies, including subsistence, economy, migration, urbanism, social inequality, conflict and warfare, and identity. Open to graduate students only. S/NC. LILE

ANTH 2590. Space, Power, and Politics.
This course critically examines the politics of space and landscape from an interdisciplinary perspective. After reading key texts in political philosophy and cultural geography, we explore themes in recent scholarship including the spatial production of sovereignty, capital, and political subjectivity and the evolving role of digital cartography in public culture and politics. Case studies are drawn from archaeology, art history, ethnography, cultural geography, and history.

ANTH 2800. Linguistic Theory and Practice.
An introduction to theoretical and methodological issues in the study of language and social life. We begin by examining semiotic approaches to language. We turn to classical research on language as a structured system - covering such topics as phonology and grammatical categories - but we focus on the implications of such work for broader social scientific and humanistic research. We then consider areas of active contemporary research, including cognition and linguistic relativity, meaning and semantics, pronouns and deixis, deference and register, speech acts and performativity, interaction, verbal art and poetics, reported speech, performance, and linguistic ideology.

ANTH 2810. Performance Theory.
Explores the concept of performance as used in several social science and humanities disciplines: linguistics, anthropology, folklore, ethnomusicology, and theater. Also addresses practical problems of conducting research on performance forms. Seminar.

ANTH 2900. Teaching Practicum.
No description available.

ANTH 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ANTH 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ANTH 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

ANTH XLIST. Courses of Interest to Students Concentrating in Anthropology.

**Fall 2016**
The following courses, listed in other departments, may be of interest to students concentrating in Anthropology. Please check the course listings of the sponsoring department for times and locations.

**Archaeology and the Ancient World**
ARCH 1900 The Archaeology of College Hill

**Environmental Studies**
ENVS 0070E What Does It Mean To Be Green?

**Public Health**
PHP 1070 The Burden of Disease in Developing Countries

**Spring 2017**
The following courses, listed in other departments, may be of interest to students concentrating in Anthropology. Please check the course listings of the sponsoring department for times and locations.

**Archaeology and the Ancient World**
ARCH 2105 Ceramic Analysis for Archaeology

**Education**
EDUC 0410A New Faces, New Challenges: Immigrant Students in US Schools
EDUC 1270 Adolescence in Social Context

**English**
ENGL 2901F Around 1948: Interdisciplinary Approaches to Global Transformations

**University Courses**
UNIV 1700 Transformation of the Research University

---

**Applied Mathematics**

**Chair**
Bjorn Sandstede
Associate Chair

John Mallet-Paret

The Division of Applied Mathematics at Brown University is one of the most prominent departments at Brown, and is also one of the oldest and strongest of its type in the country. The Division of Applied Mathematics is a world renowned center of research activity in a wide spectrum of traditional and modern mathematics. It explores the connections between mathematics and its applications at both the research and educational levels. The principal areas of research activities are ordinary, functional, and partial differential equations; stochastic control theory; applied probability, statistics and stochastic systems theory; neuroscience and computational molecular biology; numerical analysis and scientific computation; and the mechanics of solids, materials science and fluids. The effort in virtually all research ranges from applied and algorithmic problems to the study of fundamental mathematical questions. The Division emphasizes applied mathematics as a unifying theme. To facilitate cooperation among faculty and students, some research programs are partly organized around interdepartmental research centers. These centers facilitate funding and cooperative research in order to maintain the highest level of research and education in the Division. It is this breadth and the discovery from mutual collaboration which marks the great strength and uniqueness of the Division of Applied Mathematics at Brown.

For additional information, please visit the department's website: http://www.dam.brown.edu/

Applied Mathematics Concentration

Requirements

The concentration in Applied Mathematics allows students to investigate the mathematics of problems arising in the physical, life and social sciences as well as in engineering. The basic mathematical skills of Applied Mathematics come from a variety of sources, which depend on the problems of interest: the theory of ordinary and partial differential equations, matrix theory, statistical sciences, probability and decision theory, and numerical analysis, among others. Applied Mathematics appeals to people with a variety of different interests, ranging from those with a desire to obtain a good quantitative background for use in some future career, to those who are interested in the basic techniques and approaches in themselves. The standard concentration leads to either the A.B. or Sc.B. degree. Students may also choose to pursue a joint program with biology, computer science or economics. The undergraduate concentration guide is available here (http://www.brown.edu/academics/applied-mathematics/undergraduate).

Both the A.B. and Sc.B. concentrations in Applied Mathematics require certain basic courses to be taken, but beyond this there is a great deal of flexibility as to which areas of application are pursued. Students are encouraged to take courses in applied mathematics, mathematics and one or more of the application areas in the natural sciences, social sciences or engineering. Whichever areas are chosen should be studied in some depth.

Standard program for the A.B. degree.

Prerequisites

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 090</td>
<td>Introductory Calculus, Part I</td>
<td>2</td>
</tr>
<tr>
<td>&amp; MATH 0100</td>
<td>and Introductory Calculus, Part II</td>
<td></td>
</tr>
</tbody>
</table>

Program

Ten additional semester courses approved by the Division of Applied Mathematics. These classes must include:

1. MATH 0180 Intermediate Calculus
2. MATH 0520 Linear Algebra
3. APMA 0350, APMA 0360

Select one course on programming from the following:

1. APMA 0090 Introduction to Mathematical Modeling
2. APMA 0160 Introduction to Scientific Computing
3. CSCI 0040 Introduction to Scientific Computing and Problem Solving
4. CSCI 0150 Introduction to Object-Oriented Programming and Computer Science
5. CSCI 0170 Computer Science: An Integrated Introduction

Total Credits

10

1 Substitution of alternate courses for the specific requirements is subject to approval by the division.

2 Concentrators are urged to complete MATH 0540 as an alternative to MATH 0520.

3 APMA 0330, APMA 0340 will sometimes be accepted as substitutes for APMA 0350, APMA 0360.

4 Concentrators are urged to complete their introductory programming course before the end of their sophomore year.

Standard program for the Sc.B. degree.

Program

Eighteen approved semester courses in mathematics, applied mathematics, engineering, the natural or social sciences. These classes must include:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 0090</td>
<td>Introductory Calculus, Part I</td>
<td>2</td>

<td></td>
</tr>
<tr>
<td>MATH 0180</td>
<td>Intermediate Calculus</td>
<td>1</td>
</tr>
<tr>
<td>MATH 0520</td>
<td>Linear Algebra</td>
<td>1</td>
</tr>
<tr>
<td>APMA 0350</td>
<td>Applied Ordinary Differential Equations</td>
<td>2</td>
</tr>
<tr>
<td>&amp; APMA 0360</td>
<td>and Applied Partial Differential Equations</td>
<td>1</td>
</tr>
</tbody>
</table>

Select one senior seminar from the APMA 1930 or APMA 1940 series, or an approved equivalent.

Select one course on programming from the following:

1. APMA 0090 Introduction to Mathematical Modeling
2. APMA 0160 Introduction to Scientific Computing
3. CSCI 0040 Introduction to Scientific Computing and Problem Solving
4. CSCI 0150 Introduction to Object-Oriented Programming and Computer Science
5. CSCI 0170 Computer Science: An Integrated Introduction

Ten additional courses, of which six should be chosen from the 1000-level or higher level courses taught by the Division of Applied Mathematics.

Total Credits

18

1 Substitution of alternate courses for the specific requirements is subject to approval by the division.

2 Concentrators are urged to consider MATH 0540 as an alternative to MATH 0520.

3 APMA 0330, APMA 0340 will sometimes be accepted as substitutes for APMA 0350, APMA 0360.

4 Concentrators are urged to complete their introductory programming course before the end of their sophomore year.

Applied Mathematics-Biology Concentration Requirements

The Applied Math - Biology concentration recognizes that mathematics is essential to address many modern biological problems in the post genomic era. Specifically, high throughput technologies have rendered
vast new biological data sets that require novel analytical skills for the most basic analyses. These technologies are spawning a new "data-driven" paradigm in the biological sciences and the fields of bioinformatics and systems biology. The foundations of these new fields are inherently mathematical, with a focus on probability, statistical inference, and systems dynamics. These mathematical methods apply very broadly in many biological fields including some like population growth, spread of disease, that predate the genomics revolution. Nevertheless, the application of these methods in areas of biology from molecular genetics to evolutionary biology has grown very rapidly in with the availability of vast amounts of genomic sequence data. Required coursework in this program aims at ensuring expertise in mathematical and statistical sciences, and their application in biology. The students will focus in particular areas of biology. The program culminates in a senior capstone experience that pairs student and faculty in creative research collaborations.

**Standard program for the Sc.B. degree**

Required coursework in this program aims at ensuring expertise in mathematical and statistical sciences, and their application in biology. The students will focus in particular areas of biology. The program culminates in a senior capstone experience that pairs student and faculty in creative research collaborations. Applied Math – Biology concentrators are prepared for careers in medicine, public health, industry and academic research.

**Required Courses:**

**Students are required to take all of the following courses.**

**Additional Courses**

In addition to required courses listed above, students must take the following:

Two additional courses in Applied Math or Biology. At least one of these must be a directed research course, e.g. a senior seminar or independent study in Applied Math or a directed research/independent study in Biology. For example: 1

- A course from the APMA 1930 series
- A course from the APMA 1940 series
- APMA 1970 Independent Study
- BIOL 1950 Directed Research/Independent Study
- BIOL 1960 Directed Research/Independent Study

Four classes in the biological sciences agreed upon by the student and advisor. These four courses should form a cohesive grouping in a specific area of emphasis, at least two of which should be at the 1000-level. Some example groupings are below:

**Areas of Emphasis and Suggested Courses:**

Some areas of possible emphasis for focusing of elective courses are listed below. Given the large number of course offerings in the biosciences and neuroscience, students are free to explore classes in these areas that are not listed below. However, all classes must be approved by the concentration advisor.

**Biochemistry**

- BIOL 0280 Introductory Biochemistry
- BIOL 1270 Advanced Biochemistry
- CHEM 0350/0360 Organic Chemistry
- CHEM 1230 Chemical Biology

**Biotechnology and Physiology**

- BIOL 0800 Principles of Physiology
- BIOL 1100 Cell Physiology and Biophysics
- BIOL 1090 Polymer Science for Biomaterials
- BIOL 1120 Biomaterials
- BIOL 1140 Tissue Engineering
- BIOL 1150 Stem Cell Engineering
- BIOL 1210 Synthetic Biological Systems

**Ecology, Evolution, and Genetics**

- BIOL 0410 Invertebrate Zoology
- & BIOL 0480 and Evolutionary Biology
- BIOL 0420 Principles of Ecology
- & BIOL 0430 and The Evolution of Plant Diversity
- BIOL 0470 Genetics
- BIOL 1420 Experimental Design in Ecology
- BIOL 1430 Computational Theory of Molecular Evolution and Population Genetics
- BIOL 1465 Human Population Genomics
- BIOL 1540 Molecular Genetics

**Neuroscience**

- APMA 0410 Mathematical Methods in the Brain Sciences

Neurosciences courses: See [https://www.brown.edu/academics/neuroscience/undergraduate/neuroscience-concentration-requirements](https://www.brown.edu/academics/neuroscience/undergraduate/neuroscience-concentration-requirements)

- BIOL 1100 Cell Physiology and Biophysics
- BIOL 1110 Topics in Signal Transduction
- BIOL 1190 Synaptic Transmission and Plasticity

**Honors**

Requirements and Process: Honors in the Applied Math-Biology concentration is based primarily upon an in-depth, original research project carried out under the guidance of a Brown (and usually Applied Math or BioMed) affiliated faculty advisor. Projects must be conducted for no less than two full semesters, and student must register for credit for the project via APMA 1660. Honors students are strongly encouraged to take APMA 1660, which covers experimental design and the analysis of variance (ANOVA), a method commonly used in the analysis of experimental data.

**Students whose independent study is expected to be in an experimental field are strongly encouraged to take APMA 1660, which covers experimental design and the analysis of variance (ANOVA), a method commonly used in the analysis of experimental data.**

**Honors**

Requirements and Process: Honors in the Applied Math-Biology concentration is based primarily upon an in-depth, original research project carried out under the guidance of a Brown (and usually Applied Math or BioMed) affiliated faculty advisor. Projects must be conducted for no less than two full semesters, and student must register for credit for the project via APMA 1660. Honors students are strongly encouraged to take APMA 1660, which covers experimental design and the analysis of variance (ANOVA), a method commonly used in the analysis of experimental data.

**Excellence in grades within the concentration as well as a satisfactory evaluation by the advisors are also required for Honors. The student’s**
grades must place them within the upper 20% of their cohort, in accordance with the university policy on honors. Honors recipients typically maintain a Grade Point Average of 3.4 or higher in the concentration. However, in the case of outstanding independent research as demonstrated in the thesis and supported by the Thesis Committee, candidates with a GPA between 3.0 and 3.4 will be considered and are encouraged to apply.

The deadline for applying to graduate with honors in the concentration are the same as those of the biology concentrations. However, students in the joint concentration must inform the undergraduate chair in Applied Mathematics of their intention to apply for honors by these dates.

**Applied Mathematics-Computer Science Concentration Requirements**

The Sc.B. concentration in Applied Math-Computer Science provides a foundation of basic concepts and methodology of mathematical analysis and computation and prepares students for advanced work in computer science, applied mathematics, and scientific computation. Concentrators must complete courses in mathematics, applied math, computer science, and an approved English writing course. While the concentration in Applied Math-Computer Science allows students to develop the use of quantitative methods in thinking about and solving problems, knowledge that is valuable in all walks of life, students who have completed the concentration have pursued graduate study, computer consulting and information industries, and scientific and statistical analysis careers in industry or government. This degree offers a standard track and a professional track.

**Requirements for the Standard Track of the Sc.B. degree.**

**Prerequisites - two semesters of Calculus, for example**

MATH 0090  Introductory Calculus, Part I  1
MATH 0100  Introductory Calculus, Part II  1
MATH 0170  Advanced Placement Calculus  1

**Concentration Requirements (17 courses)**

**Core-Math:**

MATH 0180  Intermediate Calculus  1
or MATH 0350  Honors Calculus  1

MATH 0520  Linear Algebra  1
or MATH 0540  Honors Linear Algebra  1
or CSCI 0530  Directions: The Matrix in Computer Science  1

**Core-Applied Mathematics:**

APMA 0350  Applied Ordinary Differential Equations  1
APMA 0360  Applied Partial Differential Equations I  1
APMA 1170  Introduction to Computational Linear Algebra  1
or APMA 1180  Introduction to Numerical Solution of Differential Equations  1

**Core-Computer Science:**

Select one of the following Series:

**Series A**

CSCI 0150 & CSCI 0160  Introduction to Object-Oriented Programming and Computer Science and Introduction to Algorithms and Data Structures  2

**Series B**

CSCI 0170 & CSCI 0180  Computer Science: An Integrated Introduction and Computer Science: An Integrated Introduction  2

**Series C**

CSCI 0190  Accelerated Introduction to Computer Science  2

Select three of the following intermediate-level courses, one of which must be math-oriented and one systems-oriented:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CSCI 0220</td>
<td>Introduction to Discrete Structures and Probability (math)</td>
</tr>
<tr>
<td>CSCI 0320</td>
<td>Introduction to Software Engineering (systems)</td>
</tr>
<tr>
<td>CSCI 0310</td>
<td>Introduction to Computer Systems (systems)</td>
</tr>
<tr>
<td>or CSCI 0330</td>
<td>Introduction to Computer Systems</td>
</tr>
<tr>
<td>CSCI 1010</td>
<td>Theory of Computation</td>
</tr>
</tbody>
</table>

Three 1000-level Computer Science courses. These three courses must include a pair of courses with a coherent theme. A list of approved pairs may be found at the approved-pairs web page. You are not restricted to the pairs on this list, but any pair not on the list must be approved by the director of undergraduate studies.

Three 1000-level Applied Mathematics courses approved by the concentration advisor, of which two should constitute a standard sequence or address a common theme. Typical sequences include: APMA 1200/1210 and APMA 1650/1660. A capstone course: a one-semester course, normally taken in the student’s last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth, to produce a culminating artifact such as a paper or software project.

Note: CSCI 1450 may be used either as a math-oriented core course or as an advanced course. CSCI 1450 was formerly known as CSCI 450: they are the same course and hence only one may be taken for credit. Applied Math 1650 may be used in place of CSCI 1450. However, concentration credit will be given for only one of Applied Math 1650 and CSCI 1450.

**Total Credits** 17

**Requirements for the Professional Track of the Sc.B. degree.**

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete two two-to-four-month full-time professional experiences, doing work that is related to their concentration programs. Such work is normally done within an industrial organization, but may also be at a university under the supervision of a faculty member.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student’s concentration advisor:

- Which courses were put to use in your summer’s work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.
### Applied Mathematics-Economics Concentration Requirements

The Applied Mathematics-Economics concentration is designed to reflect the mathematical and statistical nature of modern economic theory and empirical research. This concentration has two tracks. The first is the advanced economics track, which is intended to prepare students for graduate study in economics. The second is the mathematical finance track, which is intended to prepare students for graduate study in finance, or for careers in finance or financial engineering. Both tracks have A.B. degree versions and Sc.B. degree versions, as well as a Professional track option.

#### Standard Program for the A.B. degree (Advanced Economics track):

**Prerequisites:**
- MATH 0100  Introductory Calculus, Part II
- MATH 0520  Linear Algebra

**Course Requirements:**

**Applied Mathematics Requirements**

(a)  1
- APMA 0350  Applied Ordinary Differential Equations
- APMA 0360  Applied Partial Differential Equations

Select one of the following:  1
- APMA 0160  Introduction to Scientific Computing (preferred)
- CSCI 0040  Introduction to Scientific Computing and Problem Solving (preferred)
- CSCI 0150  Introduction to Object-Oriented Programming and Computer Science
- CSCI 0170  Computer Science: An Integrated Introduction

Select one of the following:  1
- APMA 1200  Operations Research: Probabilistic Models
- APMA 1210  Operations Research: Deterministic Models
- APMA 1650  Statistical Inference I

(b)  1
Select one of the following:  1
- APMA 1200  Operations Research: Probabilistic Models
- APMA 1210  Operations Research: Deterministic Models

**Economics Requirements:**

- ECON 1130  Intermediate Microeconomics (Mathematical)  3
- ECON 1210  Intermediate Macroeconomics  1
- ECON 1630  Econometrics I  1

Two 1000-level courses from the "mathematical-economics" group:  4
- ECON 1170  Welfare Economics and Social Choice Theory
- ECON 1225  Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies

**Total Credits**  13

1 No course may be used to simultaneously satisfy (a) and (b).
2 APMA 0330 and APMA 0340 may be substituted with advisor approval.
3 Or ECON 1110 with permission.
4 No course may be used to simultaneously satisfy the "mathematical economics" and the "data methods" requirements.

#### Standard program for the Sc.B. degree (Advanced Economics track):

**Prerequisites:**
- MATH 0100  Introductory Calculus, Part II
- MATH 0520  Linear Algebra

**Course Requirements:**

**Applied Mathematics Requirements**

(a)  1
- APMA 0350  Applied Ordinary Differential Equations
- APMA 0360  Applied Partial Differential Equations

Select one of the following:  1
- APMA 0160  Introduction to Scientific Computing (preferred)
- CSCI 0040  Introduction to Scientific Computing and Problem Solving (preferred)
- CSCI 0150  Introduction to Object-Oriented Programming and Computer Science
- CSCI 0170  Computer Science: An Integrated Introduction

Select one of the following:  1
- APMA 1200  Operations Research: Probabilistic Models
- APMA 1210  Operations Research: Deterministic Models
- APMA 1650  Statistical Inference I

**Economics Requirements:**

- ECON 1130  Intermediate Microeconomics (Mathematical)  3
- ECON 1210  Intermediate Macroeconomics  1
- ECON 1630  Econometrics I  1

Two 1000-level courses from the "mathematical-economics" group:  4
- ECON 1170  Welfare Economics and Social Choice Theory
- ECON 1225  Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies

**Total Credits**  14

1 No course may be used to simultaneously satisfy (a) and (b).
2 APMA 0330 and APMA 0340 may be substituted with advisor approval.
3 Or ECON 1110 with permission.
4 No course may be used to simultaneously satisfy the "mathematical economics" and the "data methods" requirements.
Economics Requirements:

ECON 1130 Intermediate Microeconomics (Mathematical) 3
ECON 1210 Intermediate Macroeconomics 1
ECON 1630 Econometrics I 1

Three 1000-level courses from the "mathematical-economics" group: 2

ECON 1170 Welfare Economics and Social Choice Theory
ECON 1225 Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies
ECON 1465 Market Design: Theory and Applications
ECON 1470 Bargaining Theory and Applications
ECON 1640 Econometrics II
ECON 1650 Financial Econometrics
ECON 1750 Investments II
ECON 1759 Data, Statistics, Finance
ECON 1810 Economics and Psychology
ECON 1820 Behavioral Economics
ECON 1850 Theory of Economic Growth
ECON 1860 The Theory of General Equilibrium
ECON 1870 Game Theory and Applications to Economics

One 1000-level course from the "data methods" group: 4

ECON 1305 Economics of Education: Research
ECON 1310 Labor Economics
ECON 1360 Health Economics
ECON 1410 Urban Economics
ECON 1510 Economic Development
ECON 1520 The Economic Analysis of Institutions
ECON 1530 Health, Hunger and the Household in Developing Countries
ECON 1640 Econometrics II
ECON 1650 Financial Econometrics
ECON 1759 Data, Statistics, Finance
ECON 1765 Finance, Regulation, and the Economy: Research

Two additional 1000-level economics courses 2

Total Credits 16

Prerequisites:

MATH 0100 Introductory Calculus, Part II
MATH 0520 Linear Algebra

Course Requirements:

Applied Mathematics Requirements

(a)

APMA 0350 & APMA 0360 Applied Ordinary Differential Equations and Applied Partial Differential Equations I 2

Select one of the following:

APMA 1180 Introduction to Numerical Solution of Differential Equations
APMA 1330 Applied Partial Differential Equations II
APMA 1660 Statistical Inference II
APMA 1670 Statistical Analysis of Time Series
APMA 1680 Nonparametric Statistics
APMA 1690 Computational Probability and Statistics
APMA 1700 The Mathematics of Insurance
APMA 1720 Monte Carlo Simulation with Applications to Finance (preferred)
APMA 1740 Recent Applications of Probability and Statistics

(b)

Select one of the following:

APMA 1180 Introduction to Numerical Solution of Differential Equations
APMA 1330 Applied Partial Differential Equations II
APMA 1660 Statistical Inference II
APMA 1670 Statistical Analysis of Time Series
APMA 1680 Nonparametric Statistics
APMA 1690 Computational Probability and Statistics
APMA 1700 The Mathematics of Insurance
APMA 1720 Monte Carlo Simulation with Applications to Finance (preferred)
APMA 1740 Recent Applications of Probability and Statistics

MATH 1010 Analysis: Functions of One Variable

Economics Requirements:

ECON 1130 Intermediate Microeconomics (Mathematical) 3
ECON 1210 Intermediate Macroeconomics 1
ECON 1630 Econometrics I 1

Select two 1000-level courses from the "financial economics" group: 2

ECON 1650 Financial Econometrics
ECON 1710 Investments I
ECON 1720 Corporate Finance
ECON 1730 Entrepreneurial Finance and Venture Capital
ECON 1750 Investments II
ECON 1759 Data, Statistics, Finance
ECON 1760 Financial Institutions
ECON 1765 Finance, Regulation, and the Economy: Research
ECON 1770 Fixed Income Securities
ECON 1780 Corporate Strategy
ECON 1790 Corporate Governance and Management

Select one 1000-level course from the "mathematical economics" group: 1

No course may be used to simultaneously satisfy (a) and (b).

1 APMA 0330 and APMA 0340 may be substituted with advisor approval.
2 Or ECON 1110 with permission.
3 No course may be used to simultaneously satisfy the "mathematical economics" and the "data methods" requirements.
4 No course may be used to simultaneously satisfy the "mathematical economics" and the "data methods" requirements.

Total Credits: 13

1 APMA 0330 and APMA 0340 may be substituted with advisor approval.
2 No course may be used to simultaneously satisfy the "financial economics," the "mathematical economics," or the "data methods" requirements.
3 Or ECON 1110 with permission.

**Standard program for the Sc.B. degree (Mathematical Finance track):**

**Prerequisites:**
- MATH 0100 Introductory Calculus, Part II
- MATH 0520 Linear Algebra

**Course Requirements:**

**Applied Mathematics requirements:**

(a) APMA 0350 & APMA 0360

Select one 1000-level course from the "data methods" group: 1
The department of Applied Mathematics offers graduate programs leading to the Master of Science (Sc.M.) degree and the Doctor of Philosophy (Ph.D.) degree.

For more information on admission and program requirements, please visit the following website:
http://www.brown.edu/academics/gradschool/programs/applied-mathematics

Courses

**APMA 0070. Introduction to Applied Complex Variables.**
Applications of complex analysis that do not require calculus as a prerequisite. Topics include algebra of complex numbers, plane geometry by means of complex coordinates, complex exponentials, and logarithms and their relation to trigonometry, polynomials, and roots of polynomials, conformal mappings, rational functions and their applications, finite Fourier series and the FFT, iterations and fractals. Uses MATLAB, which has easy and comprehensive complex variable capabilities.

**APMA 0090. Introduction to Mathematical Modeling.**
We will explore issues of mathematical modeling and analysis. Five to six self-contained topics will be discussed and developed. The course will include seminars in which modeling issues are discussed, lectures to provide mathematical background, and computational experiments. Required mathematical background is knowledge of one-variable calculus, and no prior computing experience will be assumed. FYS

**APMA 0100. Elementary Probability for Applications.**
This course serves as an introduction to probability and stochastic processes with applications to practical problems. It will cover basic probability and stochastic processes such as basic concepts of probability and conditional probability, simple random walk, Markov chains, continuous distributions, Brownian motion and option pricing. Enrollment limited to 20 first year students. FYS

**APMA 0110. What's the big deal with Data Science?.**
This seminar serves as a practical introduction to the interdisciplinary field of data science. Over the course of the semester, students will be exposed to the diversity of questions that data science can address by reading current scholarly works from leading researchers. Through hands-on labs and experiences, students will gain facility with computational and visualization techniques for uncovering meaning from large numerical and text-based data sets. Ultimately, students will gain fluency with data science vocabulary and ideas. There are no prerequisites for this course. FYS WRIT

**APMA 0120. Mathematics of Finance.**
The current volatility in international financial markets makes it imperative for us to become competent in financial calculations early in our liberal arts and scientific career paths. This course is designed to prepare the student with those elements of mathematics of finance appropriate for the calculations necessary in financial transactions.

**APMA 0160. Introduction to Scientific Computing.**
For student in any discipline that may involve numerical computations. Includes instruction for programming in MATLAB. Applications discussed include solution of linear equations (with vectors and matrices) and nonlinear equations (by bisection, iteration, and Newton’s method), interpolation, and curve-fitting, difference equations, iterated maps, numerical differentiation and integration, and differential equations. Prerequisite: MATH 0100 or its equivalent.

**APMA 0180. Modeling the World with Mathematics: An Introduction for Non-Mathematicians.**
Mathematics is the foundation of our technological society and most of its powerful ideas are quite accessible. This course will explain some of these using historical texts and Excel. Topics include the predictive power of “differential equations” from the planets to epidemics, oscillations and music, chaotic systems, randomness and the atomic bomb. Prerequisite: some knowledge of calculus. LILE

**APMA 0200. Introduction to Modelling.**
This course provides an introduction to the mathematical modeling of selected biological, chemical, engineering, and physical processes. The goal is to illustrate the typical way in which applied mathematicians approach practical applications, from understanding the underlying problem, creating a model, analyzing the model using mathematical techniques, and interpreting the findings in terms of the original problem. Single-variable calculus is the only requirement; all other techniques from differential equations, linear algebra, and numerical methods, to probability and statistics will be introduced in class. Prerequisites: Math 0100 or equivalent.
APMA 0330. Methods of Applied Mathematics I, II.
This course will cover mathematical techniques involving ordinary differential equations used in the analysis of physical, biological, and economic phenomena. The course emphasizes established methods and their applications rather than rigorous foundations. Topics include: first and second order differential equations, an introduction to numerical methods, series solutions, and Laplace transformations.

APMA 0340. Methods of Applied Mathematics I, II.
Mathematical techniques involving differential equations used in the analysis of physical, biological and economic phenomena. Emphasis on the use of established methods, rather than rigorous foundations. I: First and second order differential equations. II: Applications of linear algebra to systems of equations; numerical methods; nonlinear problems and stability; introduction to partial differential equations; introduction to statistics. Prerequisite: MATH 0100, 0170, 0180, 0190, 0200, or 0350, or advanced placement.

This course gives a comprehensive introduction to the qualitative and quantitative theory of ordinary differential equations and their applications. Specific topics covered in the course are applications of differential equations in biology, chemistry, economics, and physics; integrating factors and separable equations; techniques for solving linear systems of differential equations; numerical approaches to solving differential equations; phase-plane analysis of planar nonlinear systems; rigorous theoretical foundations of differential equations. Format: Six hours of lectures, and two hours of recitation. Prerequisites: MATH 0100, 0170, 0180, 0190, 0200, 0350 or advanced placement. MATH 0520 (can be taken concurrently).

Covers the same material as APMA 0340, albeit of greater depth. Intended primarily for students who desire a rigorous development of the mathematical foundations of the methods used, for those students considering one of the applied mathematics concentrations, and for all students in the sciences who will be taking advanced courses in applied mathematics, mathematics, physics, engineering, etc. Three hours lecture and one hour recitation. Prerequisite: MATH 0100, 0170, 0180, 0190, 0200, or 0350, or advanced placement.

Basic mathematical methods commonly used in the neural and cognitive sciences. Topics include: introduction to probability and statistics, emphasizing hypothesis testing and modern nonparametric methods; introduction to differential equations and systems of differential equations, emphasizing qualitative behavior and simple phase-plane analysis. Examples from neuroscience, cognitive science, and other sciences. Prerequisite: MATH 0100 or equivalent.

APMA 0450. Essential Statistics.
A first course in probability and statistics emphasizing statistical reasoning and basic concepts. Topics include visual and numerical summaries of data, representative and non-representative samples, elementary discrete probability theory, the normal distribution, sampling variability, elementary statistical inference, measures of association. Examples and applications from the popular press and the life, social and physical sciences. No prerequisites.

APMA 1070. Quantitative Models of Biological Systems.
Quantitative dynamic models help understand problems in biology and there has been rapid progress in recent years. The course provides an introduction to the concepts and techniques, with applications to population dynamics, infectious diseases, enzyme kinetics, aspects of cellular biology. Additional topics covered will vary. Mathematical techniques will be discussed as they arise in the context of biological problems. Prerequisites: APMA 0330, 0340 or 0350, 0360, or written permission.

APMA 1080. Inference in Genomics and Molecular Biology.
Sequencing of genomes has generated a massive quantity of fundamental biological data. Drawing traditional and Bayesian statistical inferences from these data, including: motif finding; hidden Markov models; other probabilistic models, significances in high dimensions; and functional genomics. Emphasis - application of probability theory to inferences on data sequence, the goal of enabling students to construct prob models. Statistical topics: Bayesian inferences, estimation, hypothesis testing and false discovery rates, statistical decision theory. Enroll in 2080 for more in depth coverage of the class. Prerequisite: APMA 1650, 1655 or MATH 1610 or CSCI 1450; BIOL 0200 recommended, programming skills required.

APMA 1170. Introduction to Computational Linear Algebra.
Focuses on fundamental algorithms in computational linear algebra with relevance to all science concentrators. Basic linear algebra and matrix decompositions (Cholesky, LU, QR, etc.), round-off errors and numerical analysis of errors and convergence. Iterative methods and conjugate gradient techniques. Computation of eigenvalues and eigenvectors, and an introduction to least squares methods.

APMA 1180. Introduction to Numerical Solution of Differential Equations.
Fundamental numerical techniques for solving ordinary and partial differential equations. Overview of techniques for approximation and integration of functions. Development of mult-istep and multi-stage methods, error analysis, step-size control for ordinary differential equations. Solution of two-point boundary value problems, introduction to methods for solving linear partial differential equations. Students will be required to use Matlab (or other computer languages) to implement the mathematical algorithms under consideration: experience with a programming language is therefore strongly recommended. Prerequisites: APMA 0330, 0340 or 0350, 0360.

This course will provide students with an overview of the subjects necessary to perform robust simulations of computational fluid dynamics (CFD) problems. After an initial overview of the finite volume method and fluid mechanics, students will use the finite volume library OpenFOAM to explore the different components that make up a modern CFD code (discretization, linear algebra, timestepping, boundary conditions, splitting schemes, and multiphysics) and learn how to navigate a production scale software library.

Basic probabilistic problems and methods in operations research and management science. Methods of problem formulation and solution. Markov chains, birth-death processes, stochastic service and queueing systems, the theory of sequential decisions under uncertainty, dynamic programming. Applications. Prerequisite: APMA 1650, 1655 or MATH 1610, or equivalent. LILE

An introduction to the basic mathematical ideas and computational methods of optimizing allocation of effort or resources, with or without constraints. Linear programming, network models, dynamic programming, and integer programming.

Interested students must register for ENGN 1370.

APMA 1260. Introduction to the Mechanics of Solids and Fluids.
An introduction to the dynamics of fluid flow and deforming elastic solids for students in the physical or mathematical sciences. Topics in fluid mechanics include statics, simple viscous flows, inviscid flows, potential flow, linear water waves, and acoustics. Topics in solid mechanics include elastic/plastic deformation, strain and stress, simple elasto-statics, and elastic waves with reference to seismology. Offered in alternate years.

APMA 1330. Applied Partial Differential Equations II.
APMA 1340. Methods of Applied Mathematics III, IV.
See Methods Of Applied Mathematics III, IV (APMA 1330) for course description.

APMA 1360. Topics in Chaotic Dynamics.
This course gives an overview of the theory and applications of dynamical systems modeled by differential equations and maps. We will discuss changes of the dynamics when parameters are varied, investigate periodic and homoclinic solutions that arise in applications, and study the impact of additional structures such as time reversibility and conserved quantities on the dynamics. We will also study systems with complicated “chaotic” dynamics that possess attracting sets which do not have an integer dimension. Applications to chemical reactions, climate, epidemiology, and phase transitions will be discussed. This course can be used as a senior seminar.

APMA 1650. Statistical Inference I.
APMA 1650 is an integrated first course in mathematical statistics. The first half of APMA 1650 covers probability and the last half is statistics, integrated with its probabilistic foundation. Specific topics include probability spaces, discrete and continuous random variables, methods for parameter estimation, confidence intervals, and hypothesis testing. Since 2016 is a presidential election year, examples throughout the course will be drawn from electoral politics. Prerequisite: One year of university-level calculus. At Brown, this corresponds to MATH 0100, 0170, 0180, 0190, 0200, or 0350. A score of 4 or 5 on the AP Calculus BC exam is also sufficient.

APMA 1655. Statistical Inference I.
Students may opt to enroll in 1655 for more in-depth coverage of APMA 1650. Enrollment in 1655 will include an optional recitation section and required additional individual work. Applied Math concentrators are encouraged to take 1655. Prerequisite (for either version): MATH 0100, 0170, 0180, 0190, 0200, or 0350.

APMA 1660. Statistical Inference II.
APMA 1660 is designed as a sequel to APMA 1650 to form one of the alternative tracks for an integrated year's course in mathematical statistics. The main topic is linear models in statistics. Specific topics include likelihood-ratio tests, nonparametric tests, introduction to statistical computing, matrix approach to simple-linear and multiple regression, analysis of variance, and design of experiments. Prerequisite: APMA 1650, 1655 or equivalent, basic linear algebra.

APMA 1670. Statistical Analysis of Time Series.
Time series analysis is an important branch of mathematical statistics with many applications to signal processing, econometrics, geology, etc. The course emphasizes methods for analysis in the frequency domain, in particular, estimation of the spectrum of time-series, but time domain methods are also covered. Prerequisites: elementary probability and statistics on the level of APMA 1650-1660.

APMA 1680. Nonparametric Statistics.
A systematic treatment of distribution-free alternatives to classical statistical tests. These nonparametric tests make minimum assumptions about distributions governing the generation of observations, yet are of nearly equal power to the classical alternatives. Prerequisite: APMA 1650 or equivalent. Offered in alternate years.

Examination of probability theory and mathematical statistics from the perspective of computing. Topics selected from random number generation, Monte Carlo methods, limit theorems, stochastic dependence, Bayesian networks, dimensionality reduction. Prerequisites: A calculus-based course in probability or statistics (e.g. APMA1650 or MATH1610) is required, and some programming experience is strongly recommended. Prerequisite: MATH 0100, 0170, 0180, 0190, 0200, or 0350, or equivalent placement.

APMA 1700. The Mathematics of Insurance.
The course consists of two parts: the first treats life contingencies, i.e. the construction of models for individual life insurance contracts. The second treats the Collective Theory of Risk, which constructs mathematical models for the insurance company and its portfolio of policies as a whole. Suitable also for students proceeding to the Institute of Actuaries examinations. Prerequisites: Probability Theory to the level of APMA 1650 or MATH 1610.

APMA 1710. Information Theory.
Information theory is the fundamental limits of information transmission and storage. This course, intended primarily for advanced undergraduates and beginning graduate students, offers a broad introduction to information theory and its applications: Entropy and information, lossless data compression, communication in the presence of noise, channel capacity, channel coding, source-channel separation, lossy data compression. Prerequisite: one course in probability.

APMA 1720. Monte Carlo Simulation with Applications to Finance.
The course will cover the basics of Monte Carlo and its applications to financial engineering: generating random variables and simulating stochastic processes; analysis of simulated data; variance reduction techniques; binomial trees and option pricing; Black-Scholes formula; portfolio optimization; interest rate models. The course will use MATLAB as the standard simulation tool. Prerequisites: APMA 1650 or MATH 1610.

APMA 1740. Recent Applications of Probability and Statistics.
This course develops the mathematical foundations of modern applications of statistics to the computational, cognitive, engineering, and neural sciences. The course is rigorous, but the emphasis is on application. Topics include: Gibbs ensembles and their relation to maximum entropy, large deviations, exponential models, and information theory; statistical estimation and the generative, discriminative and algorithmic approaches to classification; graphical models, dynamic programming, MCMC computing, parameter estimation, and the EM algorithm. For 2,000-level credit enroll in 2610; for 1,000-level credit enroll in 1740. Rigorous calculus-based statistics, programming experience, and strong mathematical background are essential. For 2610, some graduate level analysis is strongly suggested.

APMA 1850. Introduction to High Performance Parallel Computing.
No description available.

APMA 1860. Graphs and Networks.
Selected topics about the mathematics of graphs and networks with an emphasis on random graph models and the dynamics of processes operating on these graphs. Topics include: empirical properties of biological, social, and technological networks (small-world effects, scale-free properties, transitivity, community structure); mathematical and statistical models of random graphs and their properties (Bernoulli random graphs, preferential attachment models, stochastic block models, phase transitions); dynamical processes on graphs and networks (percolation, cascades, epidemics, queuing, synchronization). Prereq: APMA 0360 and MATH 0520 and either APMA 1650 or MATH 1610, or equivalents of these, and programming experience. APMA 1200 or APMA 1690 or similar courses recommended.

APMA 1880. Advanced Matrix Theory.
Canonical forms of orthogonal, Hermitian and normal matrices; Rayleigh quotients. Norms, eigenvalues, matrix equations, generalized inverses. Banded, sparse, non-negative and circulant matrices. Prerequisite: APMA 0340 or 0360, or MATH 0520 or 0540, or permission of the instructor.

APMA 1930A. Actuarial Mathematics.
A seminar considering selected topics from two fields: (1) life contingencies-the study of the valuation of life insurance contracts; and (2) collective risk theory, which is concerned with the random process that generates claims for a portfolio of policies. Topics are chosen from Actuarial Mathematics, 2nd ed., by Bowers, Gerber, Hickman, Jones, and Nesbitt. Prerequisite: knowledge of probability theory to the level of APMA 1650 or MATH 1610. Particularly appropriate for students planning to take the examinations of the Society of Actuaries.
APMA 1930B. Computational Probability and Statistics.
Examination of probability theory and mathematical statistics from the perspective of computing. Topics selected from: random number generation, Monte Carlo methods, limit theorems, stochastic dependence, Bayesian networks, probabilistic grammars.

APMA 1930C. Information Theory.
Information theory is the mathematical study of the fundamental limits of information transmission (or coding) and storage (or compression). This course offers a broad introduction to information theory and its real-world applications. A subset of the following is covered: entropy and information; the asymptotic equipartition property; theoretical limits of lossless data compression and practical algorithms; communication in the presence of noise-channel coding, channel capacity; source-channel separation; Gaussian channels; Lossy data compression.

APMA 1930D. Mixing and Transport in Dynamical Systems.
Mixing and transport are important in several areas of applied science, including fluid mechanics, atmospheric science, chemistry, and particle dynamics. In many cases, mixing seems highly complicated and unpredictable. We use the modern theory of dynamical systems to understand and predict mixing and transport from the differential equations describing the physical process in question. Prerequisites: APMA 0330, 0340; or APMA 0350, 0360.

APMA 1930E. Ocean Dynamics.
Works through the popular book by Henry Stommel entitled A View of the Sea. Introduces the appropriate mathematics to match the physical concepts introduced in the book.

APMA 1930G. The Mathematics of Sports.
Topics to be discussed will range from the determination of who won the match, through biomechanics, free-fall of flexible bodies and aerodynamics, to the flight of ski jumpers and similar unnatural phenomena. Prerequisite: APMA 0540 or equivalent; or permission of the instructor.

APMA 1930H. Scaling and Self-Similarity.
The themes of scaling and self-similarity provide the simplest, and yet the most fruitful description of complicated forms in nature such as the branching of trees, the structure of human lungs, rugged natural landscapes, and turbulent fluid flows. This seminar is an investigation of some of these phenomena in a self-contained setting requiring little more mathematical background than high school algebra.

Topics to be covered: Dimensional analysis; empirical laws in biology, geosciences, and physics and the interplay between scaling and function; an introduction to fractals; social networks and the "small world" phenomenon.

APMA 1930I. Random Matrix Theory.
In the past few years, random matrices have become extremely important in a variety of fields such as computer science, physics and statistics. They are also of basic importance in various areas of mathematics. This class will serve as an introduction to this area. The focus is on the basic matrix ensembles and their limiting distributions, but several applications will be considered. Prerequisites: MATH 0200 or 0350; and MATH 0250 or 0540; and APMA 0350, 0360, 1650, and 1660. APMA 1170 and MATH 1010 are recommended, but not required.

APMA 1930J. Mathematics of Random Networks.
An intro to the emerging field of random networks and a glimpse of some of the latest developments. Random networks arise in a variety of applications including statistics, communications, physics, biology and social networks. They are studied using methods from a variety of disciplines ranging from probability, graph theory and statistical physics to nonlinear dynamical systems. Describes elements of these theories and shows how they can be used to gain practical insight into various aspects of these networks including their structure, design, distributed control and self-organizing properties. Prerequisites: Advanced calculus, basic knowledge of probability. Enrollment limited to 40.

APMA 1930M. Applied Asymptotic Analysis.
Many problems in applied mathematics and physics are nonlinear and are intractable to solve using elementary methods. In this course we will systematically develop techniques for obtaining quantitative information from nonlinear systems by exploiting small scale parameters. Topics will include: regular and singular perturbations, boundary layer theory, multiscale and averaging methods and asymptotic expansions of integrals. Along the way, we will discuss many applications including nonlinear waves, coupled oscillators, nonlinear optics, fluid dynamics and pattern formation.

APMA 1930P. Mathematics and Climate.
The study of Earth's climate involves many scientific components; mathematical tools play an important role in relating these through quantitative models, computational experiments and data analysis. The course aims to introduce students to applied mathematics to several of the conceptual models, the underlying physical principles and some of the ways data is analyzed and incorporated. Students will develop individual projects later in the semester. Prerequisites: APMA 0360, or APMA 0340, or written permission; APMA 1650 is recommended.

APMA 1930Q. Mathematical Models of Cortical Dynamics.
A Senior Applied Mathematics seminar on brain modeling, emphasizing: stochastic aspects of cortical dynamics; models of spike-timing-dependent plasticity; mean-field approaches to the analysis of large networks; the emergence of network motifs and their role in cortical function. Open to Neuroscience and CLPS students with adequate mathematical and computational preparation. Background in neuroscience desirable but not required.

APMA 1930R. Probabilities in Quantum Mechanics.
We will start from scratch. The only prerequisites are some probability and a good facility with mathematics. We will be rigorous, while making a careful accounting of the (surprisingly few) conceptual assumptions that lead inexorably to consequences that are almost impossible to believe. With an eye on some of the most startling and vexing of these, we will construct a minimum mathematical foundation sufficient to explore: the abrupt transition from the weird quantum to the familiar classical world; the uncertainty principles; teleportation; Bell's theorem and the Einstein-Bohr debates; quantum erasure; the Conway-Kochen "free-will theorem"; and (unbreakable) quantum encryption.

APMA 1940A. Coding and Information Theory.
In a host of applications, from satellite communication to compact disc technology, the storage, retrieval, and transmission of digital data relies upon the theory of coding and information for efficient and error-free performance. This course is about choosing representations that minimize the amount of data (compression) and the probability of an error in data handling (error-correcting codes). Prerequisite: A knowledge of basic probability theory at the level of APMA 1650 or MATH 1610.

APMA 1940B. Information and Coding Theory.
Originally developed by C.E. Shannon in the 1940s for describing bounds on information rates across telecommunication channels, information and coding theory is now employed in a large number of disciplines for modeling and analysis of problems that are statistical in nature. This course provides a general introduction to the field. Main topics include entropy, error correcting codes, source coding, data compression. Of special interest will be the connection to problems in pattern recognition. Includes a number of projects relevant to neuroscience, cognitive and linguistic sciences, and computer vision. Prerequisites: High school algebra, calculus. MATLAB or other computer experience helpful. Prior exposure to probability theory/statistics helpful.

APMA 1940C. Introduction to Mathematics of Fluids.
Equations that arise from the description of fluid motion are born in physics, yet are interesting from a more mathematical point of view as well. Selected topics from fluid dynamics introduce various problems and techniques in the analysis of partial differential equations. Possible topics include stability, existence and uniqueness of solutions, variational problems, and active scalar equations. No prior knowledge of fluid dynamics is necessary.
APMA 1940D. Iterative Methods.
Large, sparse systems of equations arise in many areas of mathematical application and in this course we explore the popular numerical solution techniques being used to efficiently solve these problems. Throughout the course we will study preconditioning strategies, Krylov subspace acceleration methods, and other projection methods. In particular, we will develop a working knowledge of the Conjugate Gradient and Minimum Residual (and Generalized Minimum Residual) algorithms. Multigrid and Domain Decomposition Methods will also be studied as well as parallel implementation, if time permits.

APMA 1940E. Mathematical Biology.
This course is designed for undergraduate students in mathematics who have an interest in the life sciences. No biological experience is necessary, as we begin by a review of the relevant topics. We then examine a number of case studies where mathematical tools have been successfully applied to biological systems. Mathematical subjects include differential equations, topology and geometry.

APMA 1940F. Mathematics of Physical Plasmas.
Plasmas can be big, as in the solar wind, or small, as in fluorescent bulbs. Both kinds are described by the same mathematics. Similar mathematics describes semiconducting materials, the movement of galaxies, and the re-entry of satellites. We consider how all of these physical systems are described by certain partial differential equations. Then we invoke the power of mathematics. The course is primarily mathematical. Prerequisites: APMA 0340 or 0360, MATH 0180 or 0200 or 0350, and PHYS 0080 or PHYS 0090 or ENGN 0510.

APMA 1940G. Multigrid Methods.
Multigrid methods are a very active area of research in Applied Mathematics. An introduction to these techniques will expose the student to cutting-edge mathematics and perhaps pique further interest in the field of scientific computation.

APMA 1940H. Numerical Linear Algebra.
This course will deal with advanced concepts in numerical linear algebra. Among the topics covered: Singular Value Decompositions (SVD) QR factorization, Conditioning and Stability and Iterative Methods.

APMA 1940I. The Mathematics of Finance.
The mathematics of speculation as reflected in the securities and commodities markets. Particular emphasis placed on the evaluation of risk and its role in decision-making under uncertainty. Prerequisite: basic probability.

APMA 1940J. The Mathematics of Speculation.
The course will deal with the mathematics of speculation as reflected in the securities and commodities markets. Particular emphasis will be placed on the evaluation of risk and its role in decision making under uncertainty. Prerequisite: basic probability.

APMA 1940K. Fluid Dynamics and Physical Oceanography.
Introduction to fluid dynamics as applied to the mathematical modeling and simulation of ocean dynamics and near-shore processes. Oceanography topics include: overview of atmospheric and thermal forcing of the oceans, ocean circulation, effects of topography and Earth’s rotation, wind-driven currents in upper ocean, coastal upwelling, the Gulf Stream, tidal flows, wave propagation, tsunamis.

APMA 1940L. Mathematical Models in Biophysics.
Development mathematical descriptions of biological systems aid in understanding cell function and physiology. The course will explore a range of topics including: biomechanics of blood flow in arteries and capillaries, motile cells and chemotaxis, cell signaling and quorum sensing, and additional topics. Formulating and using numerical simulations will be a further component. Students will develop individual projects. Prerequisites: APMA 0360, or APMA 0340, or written permission.

APMA 1940M. The History of Mathematics.
The course will not be a systematic survey but will focus on specific topics in the history of mathematics such as Archimedes and integration. Oresme and graphing, Newton and infinitesimals, simple harmonic motion, the discovery of ‘Fourier’ series, the Monte Carlo method, reading and analyzing the original texts. A basic knowledge of calculus will be assumed.

APMA 1940N. Introduction to Mathematical Models in Computational Biology.
This course is designed to introduce students to the use of mathematical models in biology as well as some more recent topics in computational biology. Mathematical techniques will involve difference equations and dynamical systems theory, ordinary differential equations and some partial differential equations. These techniques will be applied in the study of many biological applications such as: (i) Difference Equations: population dynamics, red blood cell production, population genetics; (ii) Ordinary Differential Equations: predator/prey models, Lotka/Volterra model, modeling the evolution of the genome, heart beat model/cycle, transmission dynamics of HIV and gonorrhea; (iii) Partial Differential Equations: tumor growth, modeling evolution of the genome, pattern formation. Prerequisites: APMA 0330 and 0340.

APMA 1940O. Approaches to Problem Solving in Applied Mathematics.
The aim of the course is to illustrate through the examination of unsolved (but elementary) problems the ways in which professional mathematicians approach the solution of such questions. Ideas considered include: choosing the "simplest" nontrivial example; generalization; and specification. Ways to think outside convention. Some knowledge of probability and linear algebra helpful. Suggested reading: "How to solve it", G. Polya "Nonplussed", Julian Havil

APMA 1940P. Biodynamics of Block Flow and Cell Locomotion.

APMA 1940Q. Filtering Theory.
Filtering (estimation of a "state process" from noisy data) is an important area of modern statistics. It is of central importance in navigation, signal and image processing, control theory and other areas of engineering and science. Filtering is one of the exemplary areas where the application of modern mathematics and statistics leads to substantial advances in engineering. This course will provide a student with the working knowledge sufficient for cutting edge research in the field of nonlinear filtering and its practical applications. Topics will include: hidden Markov models, Kalman and Wiener filters, optimal nonlinear filtering, elements of Ito calculus and Wiener chaos, Zakai and Kushner equations, spectral separating filters and wavelet based filters, numerical implementation of filters. We will consider numerous applications of filtering to speech recognition, analysis of financial data, target tracking and image processing. No prior knowledge in the field is required but a good understanding of the basic Probability Theory (APMA1200 or APMA2630) is important.

APMA 1940R. Linear and Nonlinear Waves.
From sound and light waves to water waves and traffic jams, wave phenomena are everywhere around us. In this seminar, we will discuss linear and nonlinear waves as well as the propagation of wave packets. Among the tools we shall use and learn about are numerical simulations in Matlab and analytical techniques from ordinary and partial differential equations. We will also explore applications in nonlinear optics and to traffic flow problems. Prerequisites: MATH 0180 and either APMA 0330-0340 or APMA 0350-0360. No background in partial differential equations is required.

APMA 1940V. Topics in Coding Theory.
This class covers two distinct areas: (1) algebraic coding theory; (2) examples of code breaking and design. Part (1) stresses cryptography, data compression, error correction and sphere packings. Part (2) will involve case studies of code breaking and code design in applications. Depending on student interest these may include decoding scripts (Ventris and Linear B), or design problems in synthetic biology (e.g. RNA folding and DNA self-assembly).
APMA 1940W. Randomized Algorithms for Counting, Integration and Optimization.
We consider the construction and analysis of random methods for approximating sums and integrals, and related questions. Example, consider the problem of counting the number of vectors with integer components that satisfy a collection of linear equality and inequality constraints. Depending on the number of constraints, this could be a problem of counting the number of needles in a haystack, and straightforward enumeration is impossible. There are now a variety of randomized methods that can attack this problem and other problems with similar difficult features. We survey some of the methods and the problems to which they apply.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Introduces science and engineering graduate students to a variety of fundamental mathematical methods. Topics include linear algebra, complex variables, Fourier series, Fourier and Laplace transforms and their applications, ordinary differential equations, tensors, curvilinear coordinates, partial differential equations, and calculus of variations.

Introduces science and engineering graduate students to a variety of fundamental mathematical methods. Topics include linear algebra, complex variables, Fourier series, Fourier and Laplace transforms and their applications, ordinary differential equations, tensors, curvilinear coordinates, partial differential equations, and calculus of variations.

APMA 2080. Inference in Genomics and Molecular Biology.
Sequencing of genomes has generated a massive quantity of fundamental biological data. We focus on drawing traditional and Bayesian statistical inferences from these data, including: motif finding; hidden Markov models; other probabilistic models, significances in high dimensions; and functional genomics. Emphasis is on the application of probability theory to inferences on data sequence with the goal of enabling students to independently construct probabilistic models in setting novel to them. Statistical topics: Bayesian inference, estimation, hypothesis testing and false discovery rates, statistical decision theory. For 2,000-level credit enroll in 2080; for 1,000-level credit enroll in 1080.

APMA 2110. Real Analysis.
Provides the basis of real analysis which is fundamental to many of the other courses in the program: metric spaces, measure theory, and the theory of integration and differentiation.

APMA 2120. Hilbert Spaces and Their Applications.
A continuation of APMA 2110: metric spaces, Banach spaces, Hilbert spaces, the spectrum of bounded operators on Banach and Hilbert spaces, compact operators, applications to integral and differential equations.

Calculus of asymptotic expansions, solution of integrals. Solution of linear ordinary differential equations in the complex plane, WKBJ method, special functions.

Topics vary according to interest of instructor and class.

APMA 2210. Topics in Nonlinear Dynamical Systems.
Topics to be covered in this course may vary depending on the audiences. One of the goals that is planned for this course is to discuss the boundary layers and/or the boundary value problems that appear and play a very important role in the kinetic theory of gases; in particular, in the theory of the Boltzmann equations. Students are encouraged to attend and participate in the kinetic theory program offered by the ICERM institute in the Fall 2011 semester. This course may be taken twice for credit.

The theory of the classical partial differential equations, as well as the method of characteristics and general first order theory. Basic analytic tools include the Fourier transform, the theory of distributions, Sobolev spaces, and techniques of harmonic and functional analysis. More general linear and nonlinear elliptic, hyperbolic, and parabolic equations and properties of their solutions, with examples drawn from physics, differential geometry, and the applied sciences. Generally, semester II of this course concentrates in depth on several special topics chosen by the instructor.

The theory of the classical partial differential equations, as well as the method of characteristics and general first order theory. Basic analytic tools include the Fourier transform, the theory of distributions, Sobolev spaces, and techniques of harmonic and functional analysis. More general linear and nonlinear elliptic, hyperbolic, and parabolic equations and properties of their solutions, with examples drawn from physics, differential geometry, and the applied sciences. Generally, semester II of this course concentrates in depth on several special topics chosen by the instructor.

APMA 2260. Introduction to Stochastic Control Theory.
The course serves as an introduction to the theory of stochastic control and dynamic programming technique. Optimal stopping, total expected (discounted) cost problems, and long-run average cost problems will be discussed in discrete time setting. The last part of the course deals with continuous time deterministic control and game problems. The course requires some familiarity with the probability theory.

APMA 2410. Fluid Dynamics I.
Formulation of the basic conservation laws for a viscous, heat conducting, compressible fluid. Molecular basis for thermodynamic and transport properties. Kinematics of vorticity and its transport and diffusion. Introduction to potential flow theory, viscous flow theory, the application of dimensional analysis and scaling to obtain low and high Reynolds number limits.

APMA 2420. Fluid Mechanics II.
Introduction to concepts basic to current fluid mechanics research: hydrodynamic stability, the concept of average fluid mechanics, introduction to turbulence and to multiphase flow, wave motion, and topics in inviscid and compressible flow.

APMA 2450. Exchange Scholar Program.

APMA 2470. Topics in Fluid Dynamics.
Initial review of topics selected from flow stability, turbulence, turbulent mixing, surface tension effects, and thermal convection. Followed by focussed attention on the dynamics of dispersed two-phase flow and complex fluids.
APMA 2480. Topics in Fluid Dynamics.
No description available.

Finite difference methods for solving time-dependent initial value problems of partial differential equations. Fundamental concepts of consistency, accuracy, stability and convergence of finite difference methods will be covered. Associated well-posedness theory for linear time-dependent PDEs will also be covered. Some knowledge of computer programming expected.

APMA 2560. Numerical Solution of Partial Differential Equations II.
An introduction to weighted residual methods, specifically spectral, finite element and spectral element methods. Topics include a review of variational calculus, the Rayleigh-Ritz method, approximation properties of spectral and finite element methods, and solution techniques. Homework will include both theoretical and computational problems.

APMA 2570A. Numerical Solution of Partial Differential Equations III.
We will cover spectral methods for partial differential equations. Algorithm formulation, analysis, and efficient implementation issues will be addressed. Prerequisite: APMA 2550 or equivalent knowledge in numerical methods.

APMA 2570B. Numerical Solution of Partial Differential Equations III.
We will cover finite element methods for ordinary differential equations and for elliptic, parabolic and hyperbolic partial differential equations. Algorithm development, analysis, and computer implementation issues will be addressed. In particular, we will discuss in depth the discontinuous Galerkin finite element method. Prerequisite: APMA 2550 or equivalent knowledge in numerical methods.

APMA 2580A. Computational Fluid Dynamics.
The course will focus primarily on finite difference methods for viscous incompressible flows. Other topics will include multiscale methods, e.g. molecular dynamics, dissipative particle dynamics and lattice Boltzmann methods. We will start with the mathematical nature of the Navier-Stokes equations and their simplified models, learn about high-order explicit and implicit methods, time stepping, and fast solvers. We will then cover advection-diffusion equations and various forms of the Navier-Stokes equations in primitive variables and in vorticity/streamfunction formulations. In addition to the homeworks the students are required to develop a Navier-Stokes solver as a final project.

APMA 2580B. Computational Fluid Dynamics.
An introduction to computational fluid dynamics with emphasis on compressible flows. We will cover finite difference, finite volume and finite element methods for compressible Euler and Navier-Stokes equations and for general hyperbolic conservation laws. Background material in hyperbolic partial differential equations will also be covered. Algorithm development, analysis, implementation and application issues will be addressed. Prerequisite: APMA 2550 or equivalent knowledge in numerical methods.

APMA 2610. Recent Applications of Probability and Statistics.
This course develops the mathematical foundations of modern applications of statistics to the computational, cognitive, engineering, and neural sciences. The course is rigorous, but the emphasis is on application. Topics include: Gibbs ensembles and their relation to maximum entropy, large deviations, exponential models, and information theory; statistical estimation and the generative, discriminative and algorithmic approaches to classification; graphical models, dynamic programming, MCMC computing, parameter estimation, and the EM algorithm. For 2,000-level credit enroll in 2610; for 1,000-level credit enroll in 1740. Rigorous calculus-based statistics, programming experience, and strong mathematical background are essential. For 2610, some graduate level analysis is strongly suggested.

A one-semester course that provides an introduction to probability theory based on measure theory. The course covers the following topics: probability spaces, random variables and measurable functions, independence and infinite product spaces, expectation and conditional expectation, weak convergence of measures, laws of large numbers and the Central Limit Theorem, discrete time martingale theory and applications.

A one-semester course in probability that provides an introduction to stochastic processes. The course covers the following subjects: Markov chains, Poisson process, birth and death processes, continuous-time martingales, optional sampling theorems, martingale convergence theorems, Brownian motion, introduction to stochastic calculus and Ito's formula, stochastic differential equations, the Feynman-Kac formula, Girsanov's theorem, the Black-Scholes formula, basics of Gaussian and stationary processes. Prerequisite: APMA 2630 or equivalent course.

APMA 2660. Stochastic Processes.
Review of the theory of stochastic differential equations and reflected SDEs, and of the ergodic and stability theory of these processes. Introduction to the theory of weak convergence of probability measures and processes. Concentrates on applications to the probabilistic modeling, control, and approximation of modern communications and queuing networks; emphasizes the basic methods, which are fundamental tools throughout applications of probability.

APMA 2670. Mathematical Statistics I.
This course presents advanced statistical inference methods. Topics include; foundations of statistical inference and comparison of classical, Bayesian, and minimax approaches, point and set estimation, hypothesis testing, linear regression, linear classification and principal component analysis, MRF, consistency and asymptotic normality of Maximum Likelihood and estimators, statistical inference from noisy or degraded data, and computational methods (E-M Algorithm, Markov Chain Monte Carlo, Bootstrap). Prerequisite: APMA 2630 or equivalent.

APMA 2680. Mathematical Statistics II.
The course covers modern nonparametric statistical methods. Topics include: density estimation, multiple regression, adaptive smoothing, cross-validation, bootstrap, classification and regression trees, nonlinear discriminant analysis, projection pursuit, the ACE algorithm for time series prediction, support vector machines, and neural networks. The course will provide the mathematical underpinnings, but it will also touch upon some applications in computer vision/speech recognition, and biological, neural, and cognitive sciences. Prerequisite: APMA 2670.

APMA 2720. Information Theory.

APMA 2810A. Computational Biology.
Provides an up-to-date presentation of the main problems and algorithms in bioinformatics. Emphasis is given to statistical/probabilistic methods for various molecular biology tasks, including: comparison of genomes of different species, finding genes and motifs, understanding transcription control mechanisms, analyzing microarray data for gene clustering, and predicting RNA structure.

APMA 2810B. Computational Molecular Biology.
Provides an up-to-date presentation of problems and algorithms in bioinformatics, beginning with an introduction to biochemistry and molecular genetics. Topics include: proteins and nucleic acids, the genetic code, the central dogma, the genome, gene expression, metabolic transformations, and experimental methods (gel electrophoresis, X-ray crystallography, NMR). Also, algorithms for DNA sequence alignment, database search tools (BLAST), and DNA sequencing.

No description available.

APMA 2810D. Elements of High Performance Scientific Computing II.
No description available.

APMA 2810E. Far Field Boundary Conditions for Hyperbolic Equations.
No description available.
APMA 2810F. Introduction to Non-linear Optics.
No description available.

APMA 2810G. Large Deviations.
No description available.

APMA 2810H. Math of Finance.
No description available.

APMA 2810I. Mathematical Models and Numerical Analysis in Computational Quantum Chemistry.
We shall present on some models in the quantum chemistry field (Thomas Fermi and related, Hartree Fock, Kohn Sham) the basic tools of functional analysis for the study of their solutions. Then some of the discretization methods and iterative algorithms to solve these problems will be presented and analyzed. Some of the open problems that flourish in this field will also be presented all along the lectures.

APMA 2810J. Mathematical Techniques for Neural Modeling.
No description available.

APMA 2810K. Methods of Algebraic Geometry in Control Theory I.
Develops the ideas of algebraic geometry in the context of control theory. The first semester examines scalar linear systems and affine algebraic geometry while the second semester addresses multivariable linear systems and projective algebraic geometry.

APMA 2810L. Numerical Solution of Hyperbolic PDE's.
No description available.

APMA 2810M. Some Topics in Kinetic Theory.
Nonlinear instabilities as well as boundary effects in a collisionless plasmas; Stable galaxy configurations; A nonlinear energy method in the Boltzmann theory will also be introduced. Self-contained solutions to specific concrete problems. Focus on ideas but not on technical aspects. Open problems and possible future research directions will then be discussed so that students can gain a broader perspective. Prerequisite: One semester of PDE (graduate level) is required.

APMA 2810N. Topics in Nonlinear PDEs.
Aspects of the theory on nonlinear evolution equations, which includes kinetic theory, nonlinear wave equations, variational problems, and dynamical stability.

APMA 2810O. Stochastic Differential Equations.
This course develops the theory and some applications of stochastic differential equations. Topics include: stochastic integral with respect to Brownian motion, existence and uniqueness for solutions of SDEs, Markov property of solutions, sample path properties, Girsanov's Theorem, weak existence and uniqueness, and connections with partial differential equations. Possible additional topics include stochastic stability, reflected diffusions, numerical approximation, and stochastic control. Prerequisite: APMA 2630 and 2640.

APMA 2810P. Perturbation Methods.
Basic concepts of asymptotic approximations with examples with such as evaluation of integrals and functions. Regular and singular perturbation problems for differential equations arising in fluid mechanics, wave propagation or nonlinear oscillators. Methods include matched asymptotic expansions and multiple scales. Methods and results will be discussed in the context of applications to physical problems.

APMA 2810Q. Discontinuous Galerkin Methods.
In this seminar course we will cover the algorithm formulation, stability analysis and error estimates, and implementation and applications of discontinuous Galerkin finite element methods for solving hyperbolic conservation laws, convection diffusion equations, dispersive wave equations, and other linear and nonlinear partial differential equations. Prerequisite: APMA 2550.

APMA 2810R. Computational Biology Methods for Gene/Protein Networks and Structural Proteomics.
The course presents computational and statistical methods for gene and protein networks and structural proteomics; it emphasizes: (1) Probabilistic models for gene regulatory networks via microarray, chromatin immunoprecipitation, and cis-regulatory data; (2) Signal transduction pathways via tandem mass spectrometry data; (3) Molecular Modeling for ligand-receptor coupling and docking. The course is recommended for graduate students.

APMA 2810S. Topics in Control.
No description available.

This course introduces techniques useful for solving many nonlinear partial differential equations, with emphasis on elliptic problems. PDE from a variety of applications will be discussed. Contact the instructor about prerequisites.

APMA 2810U. Topics in Differential Equations.
No description available.

APMA 2810V. Topics in Partial Differential Equations.
The course will cover an introduction of the $L_p$ theory of second order elliptic and parabolic equations, finite difference approximations of elliptic and parabolic equations, and some recent developments in the Navier-Stokes equations and quasi-geostrophic equations. Some knowledge of real analysis will be expected.

This is an advanced seminar course. We will cover several topics in high order numerical methods for convection dominated problems, including methods for solving Boltzmann type equations, methods for solving unsteady and steady Hamilton-Jacobi equations, and methods for solving moment models in semi-conductor device simulations. Prerequisite: APMA 2550 or equivalent knowledge of numerical analysis.

APMA 2810X. Introduction to the Theory of Large Deviations.
The theory of large deviations attempts to estimate the probability of rare events and identify the most likely way they happen. The course will begin with a review of the general framework, standard techniques (change-of-measure, PDE, weak convergence, etc.), and basic examples (e.g., Sanov's and Cramer's Theorems). We then will cover the Wentzel-Freidlin theory. The last part of the course will be one or two related topics, possibly drawn from (but not limited to) risk-sensitive control and Monte Carlo methods. Prerequisites: APMA 2630 and 2640.

APMA 2810Y. Discrete high-D Inferences in Genomics.
Genomics is revolutionizing biology and biomedicine and generated a mass of clearly relevant high-D data along with many important high-D discreet inference problems. Topics: special characteristics of discrete high-D inference including Bayesian posterior inference; point estimation; interval estimation; hypothesis tests; model selection; and statistical decision theory.

APMA 2810Z. An Introduction to the Theory of Large Deviations.
The theory of large deviations attempts to estimate the probability of rare events and identify the most likely way they happen. The course will begin with a review of the general framework, standard techniques (change-of-measure, subadditivity, etc.), and elementary examples (e.g., Sanov's and Cramer's Theorems). We then will cover large deviations for diffusion processes and the Wentsel-Freidlin theory. The last part of the course will be one or two related topics, possibly drawn from (but not limited to) risk-sensitive control; weak convergence methods; Hamilton-Jacobi-Bellman equations; Monte Carlo methods. Prerequisites: APMA 2630 and 2640.
APMA 2811A. Directed Methods in Control and System Theory.
Various general techniques have been developed for control and system
problems. Many of the methods are indirect. For example, control
problems are reduced to a problem involving a differential equation
(such as the partial differential equation of Dynamic Programming) or to
a system of differential equations (such as the canonical system of the
Maximum Principle). Since these indirect methods are not always effective
alternative approaches are necessary. In particular, direct methods are of
interest.
We deal with two general classes, namely: 1.) Integration Methods; and,
2.) Representation Methods. Integration methods deal with the integration
of function space differential equations. Perhaps the most familiar is
the so-called Gradient Method or curve of steepest descent approach.
Representation methods utilize approximation in function spaces and
include both deterministic and stochastic finite element methods. Our
concentration will be on the theoretical development and less on specific
numerical procedures. The material on representation methods for Levy
processes is new.

APMA 2811B. Computational Methods for Signaling Pathways and
Protein Interactions.
The course will provide presentation of the biology and mathematical
models/algorithms for a variety of topics, including: (1) The analysis
and interpretation of tandem mass spectrometry data for protein
identification and determination of signaling pathways, (2) Identification of
Phosphorylation sites and motifs and structural aspects of protein docking
problems. Prerequisites: The course is recommended for graduate
students. It will be self-contained; students will be able to fill in knowledge
by reading material to be indicated by the instructor.

APMA 2811C. Stochastic Partial Differential Equations.
SPDEs is an interdisciplinary area at the crossroads of stochastic
processes and partial differential equations (PDEs). The topics of the
course include: geneses of SPDEs in real life applications, mathematical
foundations and analysis of SPDEs, numerical and computational aspects
of SPDEs, applications of SPDEs to fluid dynamics, population biology,
hidden Markov models, etc. Prerequisites: familiarity with stochastic
calculus and PDEs (graduate level).

APMA 2811D. Asymptotic Problems For Differential Equations And
Stochastic Processes.
Topics that will be covered include: WKB method: zeroth and first
orders; turning points; Perturbation theory: regular perturbation, singular
perturbation and boundary layers; Homogenization methods for ODE's,
elliptic and parabolic PDE's; Homogenization for SDE's, diffusion
processes in periodic and random media; Averaging principle for ODE's
and SDE's. Applications will be discussed in class and in homework
problems.

This course gives an introduction to the the basic concepts of a posteriori
estimates of finite element methods. After an overview of different
techniques the main focus will be shed on residual based estimates
where as a starting point the Laplace operator is analyzed. Effectivity
and reliability of the error estimator will be proven. In a second part of the
course, students will either study research articles and present them or
implement the error estimates for some specific problem and present their
numerical results. Recommended prerequisites: basic knowledge in finite
elements, APMA 2550, 2560, 2570.

APMA 2811F. Numerical Solution of Ordinary Differential Equations:
IVP Problems and PDE Related issues.
The purpose of the course is to lay the foundation for the development
and analysis of numerical methods for solving systems of ordinary
differential equations. With a dual emphasis on analysis and efficient
implementations, we shall develop the theory for multistage methods
(Runge-Kutta type) and multi-step methods (Adams/BDF methods).
We shall also discuss efficient implementation strategies using Newton-
type methods and hybrid techniques such as Rosenbruck methods. The
discussion includes definitions of different notions of stability, stiffness
and stability regions, global/local error estimation, and error control.
Time permitting, we shall also discuss more specialized topics such as
symplectic integration methods and parallel-in-time methods. A key
component of the course shall be the discussion of problems and methods
designed with the discretization of ODE systems originating from PDE's in
mind. Topics include splitting methods, methods for differential-algebraic
equations (DAE), deferred correction methods, and order reduction
problems for IBVP, TVD and IMEX methods. Part of the class will consist
of student presentations on more advanced topics, summarizing properties
and known results based on reading journal papers.

APMA 2811G. Topics in Averaging and Metastability with
Applications.
Topics that will be covered include: the averaging principle for stochastic
dynamical systems and in particular for Hamiltonian systems; metastability
and stochastic resonance. We will also discuss applications in class
and in homework problems. In particular we will consider metastability
issues arising in chemistry and biology, e.g. in the dynamical behavior
of proteins. The course will be largely self contained, but a course in
graduate probability theory and/or stochastic calculus will definitely help.

APMA 2811H. Survival Analysis.
APMA 2811I. An Introduction to Turbulence Modeling.
Turbulence is the last mystery of classical physics. It surrounds us
everywhere – in the air, in the ocean, in pipes carrying fluids and
even in human body arteries. The course helps to understand what
makes modeling the turbulence so difficult and challenging. The course
covers the following issues: The nature of turbulence, characteristics
of turbulence and classical constants of turbulence; Turbulent scales;
Navier-Stokes equations, Reynolds stresses and Reynolds-Averaged
Navier-Stokes (RANS) equations; RANS turbulence models: algebraic
models, one-equation models, two-equation models; Low-Reynolds
number turbulence models; Renormalization Group (RNG) turbulence
model; Large-Eddy Simulation (LES); Students will be provided with user-
friendly computer codes to run different benchmark cases. The final grade
is based on two take home projects - computing or published papers
analysis, optionally.

APMA 2811K. Computational/Statistical Methods for Signaling
Pathways and Protein Interactions.
The course will cover the main mathematical/computational models/
algorithms for a variety of tasks in proteomics and structural proteomics,
including: (1) The analysis and interpretation of tandem mass
spectrometry data for protein identification and determination of signaling
pathways, (2) Identification of Phosphorylation sites and motifs, and (3)
structural aspects of protein docking problems on the basis of NMR data.
Open to graduate students only.

APMA 2811L. Topics in Homogenization: Theory and Computation.
Topics that will be covered include: Homogenization methods for ODE's,
for elliptic and parabolic PDE's and for stochastic differential Equations
(SDE's) in both periodic and random media; Averaging principle for ODE's
and SDE's. Both theoretical and computational aspects will be studied.
Applications will be discussed in class and in homework problems.
Prerequisites: Some background in PDE's and probability will be helpful,
even though the class will be largely self contained.
APMA 2811O. Dynamics and Stochastics.
This course provides a synthesis of mathematical problems at the interface between stochastic problems and dynamical systems that arise in systems biology. For instance, in some biological systems some species may be modeled stochastically while other species can be modeled using deterministic dynamics. Topics will include an introduction to biological networks, multiscale analysis, analysis of network structure, among other topics. Prerequisites: probability theory (APMA 2630/2640, concurrent enrollment in APMA 2640 is acceptable).

APMA 2811Q. Calculus of Variations.
An introduction to modern techniques in the calculus of variations. Topics covered will include: existence of solutions and the direct method, Euler-Lagrange equations and necessary and sufficient conditions, one-dimensional problems, multidimensional nonconvex problems, relaxation and quasiconvexity, Young’s measures, and singular perturbations. The emphasis of the course will be equal parts theory and applications with numerous examples drawn from topics in nonlinear elasticity, pattern formation, wrinkling thin elastic sheets, martensitic phase transitions, minimal surfaces, differential geometry and optimal control.

APMA 2811S. Levy Processes.
Lévy processes are the continuous-time analogues of random walks, and include Brownian motion, compound Poisson processes, and square-integrable pure-jump martingales with many small jumps. In this course we will develop the basic theory of general Lévy processes and subordinators, and discuss topics including local time, excursions, and fluctuations. Time permitting we will finish with selected applications which are of mutual interest to the instructor and students enrolled in the class. Prerequisite: APMA 2640 or equivalent.

APMA 2811T. Dissipative Particle Dynamics.
This seminar course will cover topics on coarse graining of liquids and soft matter using the Dissipative Particle Dynamics (DPD) method. It will cover some basic concepts on Mori-Zwanzig formulation for particle systems and the derivation of DPD from first principles. The seminars will be presented by the instructor and the participants in the course.

APMA 2811U. Topics in Markov Processes And Stochastic Analysis.
This course will provide a brief introduction to the basics of Markov processes and stochastic analysis, and then delve into several special topics of current interest including interacting particle systems, scaling limits of random objects and their applications.

APMA 2811V. Convex Analysis and Minimization Algorithms.
This course provides a solid presentation of modern convex analysis and convex optimization algorithms for large scale problems. Topics include: subdifferential calculus, duality and Fenchel-Legendre transform, proximal operators and Moreau’s regularization, optimal first-order methods, Augmented Lagrangian methods and alternating direction method of multipliers, network flows. The course will provide the mathematical and algorithmical underpinnings. It will also explore some applications in signal and image processing, optimal control and machine learning.

APMA 2820A. A Tutorial on Particle Methods.
No description available.

APMA 2820B. Advanced Topics in Information Theory.
Explores classical and recent results in information theory. Topics chosen from: multi-terminal/network information theory; communication under channel uncertainty; side information problems (channel, source, and the duality between them); identification via channels; and multi-antenna fading channels. Prerequisite: APMA 1710 or basic knowledge of information theory.

APMA 2820C. Computational Electromagnetics.
No description available.

APMA 2820D. Conventional, Real and Quantum Computing with Applications to Factoring and Root Finding.
No description available.

APMA 2820E. Geophysical Fluid Dynamics.
No description available.

APMA 2820F. Information Theory and Networks.
No description available.

APMA 2820G. Information Theory, Statistics and Probability.
No description available.

APMA 2820H. Kinetic Theory.
We will focus on two main topics in mathematical study of the kinetic theory: (1) The new goal method to study the trend to Maxwellians; (2) various hydrodynamical (fluids) limits to Euler and Navier-Stokes equations. Main emphasis will be on the ideas behind proofs, but not on technical details.

APMA 2820I. Multiscale Methods and Computer Vision.
Course will address some basic multiscale computational methods such as: multigrid solvers for physical systems, including both geometric and algebraic multigrid, fast integral transforms of various kinds (including a fast Radon transform), and fast inverse integral transforms. Basic problems in computer vision such as global contour detection and their completion over gaps, image segmentation for textural images and perceptual grouping tasks in general will be explained in more details.

APMA 2820J. Numerical Linear Algebra.
Solving large systems of linear equations: The course will use the text of Trefethen and Bao that includes all the modern concepts of solving linear equations.

We discuss the construction and general theory of multistep and multistage methods for numerically solving systems of ODE’s, including stiff and nonlinear problems. Different notions to stability and error estimation and control. As time permits we shall discuss more advanced topics such as order reduction, general linear and additive methods, symplectic methods, and methods for DAE. Prerequisites: APMA 2190 and APMA 2550 or equivalent. Some programming experience is expected.

APMA 2820L. Random Processes in Mechanics.
No description available.

APMA 2820M. Singularities in Elliptic Problems and their Treatment by High-Order Finite Element Methods.
Singular solutions for elliptic problems (elasticity and heat transfer) are discussed. These may arise around corners in 2-D and along edges and vertices in 3-D domains. Derivation of singular solutions, characterized by eigenpairs and generalized stress/flux intensity factors (GSIF/GFIFs) are a major engineering importance (because of failure initiation and propagation). High-order FE methods are introduced, and special algorithms for extracting eigenpairs and GSIF/GFIFs are studied (Steklov, dual-function, ERR method, and others).

APMA 2820N. Topics in Scientific Computing.
No description available.

APMA 2820O. The Mathematics of Shape with Applications to Computer Vision.
Methods of representing shape, the geometry of the space of shapes, warping and matching of shapes, and some applications to problems in computer vision and medical imaging. Prerequisite: See instructor for prerequisites.

APMA 2820P. Foundations in Statistical Inference in Molecular Biology.
In molecular biology, inferences in high dimensions with missing data are common. A conceptual framework for Bayesian and frequentist inferences in this setting including: sequence alignment, RNA secondary structure prediction, database search, and functional genomics. Statistical topics: parameter estimation, hypothesis testing, and characterization of posterior spaces. Core course in proposed PhD program in computational molecular biology.

APMA 2820Q. Topics in Kinetic Theory.
This course will introduce current mathematical study for Boltzmann equation and Vlasov equation. We will study large time behavior and hydrodynamic limits for Boltzmann theory and instabilities in the Vlasov theory. Graduate PDE course is required.
APMA 2820R. Structure Theory of Control Systems.
The course deals with the following problems: given a family of control systems $S$ and a family of control systems $S'$, when does there exist an appropriate embedding of $S$ into $S'$? Most of the course will deal with the families of linear control systems. Knowledge of control theory and mathematical sophistication are required.

APMA 2820S. Topics in Differential Equations.
A sequel to APMA 2210 concentrating on similar material.

APMA 2820T. Foundations in Statistical Inference in Molecular Biology.
In molecular biology, inferences in high dimensions with missing data are common. A conceptual framework for Bayesian and frequentist inferences in this setting including: sequence alignment. RNA secondary structure prediction, database search, and tiled arrays. Statistical topics: parameter estimation, hypothesis testing, recursions, and characterization of posterior spaces. Core course in proposed PhD program in computational molecular biology.

APMA 2820U. Structure Theory of Control Systems.
The course deals with the following problems: given a family of control systems $S$ and a family of control systems $S'$, when does there exist an appropriate embedding of $S$ into $S'$? Most of the course will deal with the families of linear control systems. Knowledge of control theory and mathematical sophistication are required.

Course begins with self-contained introduction to theory of "hyperbolic conservation laws", that is quasilinear first order systems of partial differential equations whose solutions spontaneously develop singularities that propagate as shock waves. A number of recent developments will be discussed. Aim is to familiarize the students with current status of the theory as well as with the expanding areas of applications of the subject.

APMA 2820W. An Introduction to the Theory of Large Deviations.
The theory of large deviations attempts to estimate the probability of rare events and identify the most likely way they happen. The course will begin with a review of the general framework, standard techniques (change-of-measure, subadditivity, etc.), and elementary examples (e.g., Sanov’s and Cramer’s Theorems). We then will cover large deviations for diffusion processes and the Wentsel\text{-}Frediin theory. The last part of the course will be one or two related topics, possibly drawn from (but not limited to) risk-sensitive control; weak convergence methods; Hamilton-Jacobi-Bellman equations; Monte Carlo methods. Prerequisites: APMA 2630 and 2640.

APMA 2820Y. Approaches to Problem Solving in Applied Mathematics.
TBA

APMA 2820Z. Topics in Discontinuous Galerkin Methods.
We will cover discontinuous Galerkin methods for time-dependent and steady state problems. Stability and error estimates of different discontinuous Galerkin methods will be discussed. In particular, we will discuss in depth the local discontinuous Galerkin method. Prerequisite: APMA 2550 or equivalent knowledge of numerical analysis.

No description available.

APMA 2821B. To Be Determined.

APMA 2821C. Topics in Partial Differential Equations.
The course will start by reviewing the theory of elliptic and parabolic equations in Holder spaces. Then we will discuss several topics in nonlinear elliptic and parabolic equations, for instance, the Navier-Stokes equation and Monge-Ampere type equations. This course is a sequel to APMA 2810V, but APMA 2810V is not a prerequisite.

APMA 2821D. Random Processes and Random Variables.

APMA 2821E. Topics in Variational Methods.
This course consists of two parts: a general introduction to variational methods in PDE, and a more focused foray into some special topics. For the former we will cover the direct method in the calculus of variations, various notions of convexity, Noether's theorem, minimax methods, index theory, and gamma-convergence. For the latter we will focus on several specific problems of recent interest, with emphasis on the Ginzburg-Landau energy functional.

APMA 2821F. Computational Linear Algebra.
The course will cover basic and advanced algorithms for solution of linear and nonlinear systems as well as eigenvalue problems.

APMA 2821G. High-Performance Discontinuous Galerkin Solvers.
Addresses strategies and algorithms in devising efficient discontinuous Galerkin solvers for fluid flow equations such as Euler and Navier-Stokes. The course starts with an introduction to discontinuous Galerkin methods for elliptic and hyperbolic equations and then focuses on the following topics: 1) Serial and parallel implementations of various discontinuous Galerkin operators for curvilinear ele- ments in multiple space dimensions. 2) Explicit, semi-explicit and implicit time discretizations. 3) Multigrid (multi-level) solvers and preconditioners for systems arising from discontinuous Galerkin approximations of the partial differential equations.

This course will cover fundamental concepts of parallel computing: shared and distributed memory models; metrics for performance measuring; roof-line model for analysis of computational kernels, prediction and improving their performance on different processors; code optimization. We will analyze algorithms maximizing data reuse, and memory bandwidth utilization. Prior experience in coding is a plus. One course meeting will take place at IBM/Research, students will interact with experts in areas of HPC, visualization, social media and more. There will be bi-weekly homework assignments and a final project. Students are encouraged to suggest final project relevant to their research and level of expertise.

APMA 2821I. Formulation and Approximation of Linear and Non-linear Problems of Solid Mechanics.
Presents the formulation and approximation by the Finite Element Method (FEM) of linear and non-linear problems of Solid Mechanics. The formulation of problems is based on the Virtual Work Principle (VWP). Increasing complexity problems will be considered such as simple bar under traction, beams, plates, plane problems and solids with linear and hyperelastic materials. All problems are formulated using the same sequence of presentation which includes kinematics, strain measure, rigid body deformation, internal work, external work, VWP and constitutive equations. The approximation of the given problems is based on the High-order FEM. Examples will be presented using a Matlab code.

APMA 2821J. Some Topics in Kinetic Theory.
In this advanced topic course, we will go over several aspects of recent mathematical work on kinetic theory. Graduate level PDE is required.

APMA 2821K. Probabilistic and Statistical Models for Graphs and Networks.
Many modern data sets involve observations about a network of interacting components. Probabilistic and statistical models for graphs and networks play a central role in understanding these data sets. This is an area of active research across many disciplines. Students will read and discuss primary research papers and complete a final project.
APMA 2821L. Introduction to Malliavin Calculus.
The Malliavin calculus is a stochastic calculus for random variables on Gaussian probability spaces, in particular the classical Wiener space. It was originally introduced in the 1970s by the French mathematician Paul Malliavin as a probabilistic approach to the regularity theory of second-order deterministic partial differential equations. Since its introduction, Malliavin's calculus has been extended beyond its original scope and has found applications in many branches of stochastic analysis, e.g., filtering and optimal control, mathematical finance, numerical methods for stochastic differential equations. This course will introduce, starting in a simple setting, the basic concepts and operations of the Malliavin calculus, which will then be applied to the study of regularity of stochastic differential equations and their associated partial differential equations. In addition, applications from optimal control and finance, including the Clark-Ocone foruma and its connection with hedging, will be presented.

APMA 2821M. Some Mathematical Problems in Materials Science.
We will study a variety of mathematical models for problems in materials science. Mainly we will consider models of phase transformation, static and dynamic. Some of the topics to be treated are: (1) models of phase transformation; (2) gradient flows; (3) kinetic theories of domain growth; (4) stochastic models; (5) free boundary problems. A working familiarity with partial differential equations is required.

The course seeks to lay the foundation for the development and analysis of numerical methods for solving systems of ordinary differential equations. With a dual emphasis on analysis and efficient implementations, we shall develop the theory for multistage methods (Runge-Kutta type) and mult-step methods (Adams/BDI methods). The discussion includes definitions of different notions of stability, stiffness and stability regions, local/global error estimation, and error control. We also discuss more specialized topics such as symplectic integration methods, parallel-in-time methods, include splitting methods, methods for differential-algebraic equations (DAE), deferred correction methods, and order reduction problems for IBVP, TVD and IMEX methods.

APMA 2821O. Topics in Posteriori Error Estimations: Finite Element and Reduced Basis Methods.
The course will contain two related parts. An introduction of different types of a posteriori error estimations for various finite element methods, certified reduced basis method, where a posteriori error estimations play an important role. Emphasize both the theory and implementation. Related Matlab programs. Residual-type, local-problem type, and recovery-type error estimators for conforming, mixed, non-conforming, and discontinuous galerkin finite element methods for different types of equations. Reduced basis methods, offline-online procedure, greedy algorithm, error estimator, empirical interpolation method, and successive constraint method will be discussed. Goal-Oriented primal-dual approach for both FEM and RBM will be covered. Objective: To learn various theoretical and practical results of adaptive finite element methods and reduced basis methods.

APMA 2821P. Topics in the Atomistic-to-Continuum Coupling Methods for Material Science.
Atomistic-to-continuum coupling methods (a/c methods) have been proposed to increase the computational efficiency of atomistic computations involving the interaction between local crystal defects with long-range elastic fields. This course provides an introduction to the fundamentals required to understand modeling and computer simulation of material behavior. This course will first briefly review material from continuum mechanics, materials science including crystals and defects and then move on to advanced topics in development and analysis of a/c coupling methods both in static and dynamic cases. I will also select topics from statistical mechanics and temporal multiscale accelerated molecular dynamics methods (hyperdynamics, parallel replica dynamics).

APMA 2821R. Topics in the Atomistic-to-Continuum Coupling Methods for Material Science.
Atomistic-to-continuum coupling methods (a/c methods) have been proposed to increase the computational efficiency of atomistic computations involving the interaction between local crystal defects with long-range elastic fields. This is an advanced topics course for graduate students. Provides an introduction to the fundamentals required to understand modeling and computer simulation of material behavior. First briefly review material from continuum mechanics, materials science including crystals and defects and then move on to advanced topics in development and analysis of a/c coupling methods both in static and dynamic cases. select topics from statistical mechanics and temporal multiscale accelerated molecular dynamics methods (hyperdynamics, parallel replica dynamics).

APMA 2821T. Theory of Large Deviations.
The theory of large deviations is concerned with the probabilities of very rare events. There are many applications where a rare event can have a significant impact (think of the lottery) and it is of interest to know when and how these events occur. The course will begin with a review of the general framework, standard techniques, and elementary examples (e.g., Cramer's and Sanov's Theorems) before proceeding with general theory and applications. If time permits, the course will end with a study of large deviations for diffusion processes.

APMA 2821U. Kinetic Theory.
Topics in kinetic theory, particularly concerning Boltzmann equations and related but simpler models (e.g., the Kac model). Key issues include the mathematical derivation of the Boltzmann equation, the Cacha problem, Boltzmann's $H$ theorem, and hydrodynamic limits yielding the equations of fluid mechanics. We will be most interested in rigorous results, but will not turn away from formal calculations when these are the only things available. A probabilistic viewpoint will be emphasized. In addition to these "traditional" topics, we will also introduce the Smoluchowski coagulation equation and a similar equation, and some microscopic models described by these in the kinetic limit or exactly. Students should have PDE background equivalent to or exceeding MATH 2370/APMA 2230. Familiarity with probability will be helpful, but we will review this according to the audience's needs.

APMA 2821V. Neural Dynamics: Theory and Modeling.
Our thoughts and actions are mediated by the dynamic activity of the brain's neurons. This course will use mathematics and computational modeling as a tool to study neural dynamics at the level of signal neurons and in more complicated networks. We will focus on relevance to modern day neuroscience problems with a goal of linking dynamics to function. Topics will include biophysically detailed and reduced representations of neurons, bifurcation and phase plane analysis of neural activity, neural rhythms and coupled oscillator theory. Audience: advanced undergraduate or graduate students. Prerequisite: APMA 0350-0360 and Matlab programming course. Instructor permission required.

APMA 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

APMA 2980. Research in Applied Mathematics.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

APMA 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

Brown Institute for Brain Science

The Brown Institute for Brain Science (http://brown.edu/academics/brain-science) (BIBS) advances multidisciplinary research, technology development, and training in the brain sciences and works to establish Brown University as an internationally recognized leader in brain research. BIBS unites more than 100 faculty from a diverse group of departments at Brown, spanning basic and clinical departments, and
The graduate program in Brain Science is a unique interdisciplinary program formed to tackle one of the greatest mysteries of man. The program was designed to promote collaborative theoretical and experimental study of the brain from the molecular to the behavioral and cognitive level. It unites faculty who study the fundamental mechanisms of nervous-system function and those who seek to create devices with brain-like functions that can assist mankind. The faculty are also committed to translating fundamental knowledge for the diagnosis and treatment of the devastating effects of disease and trauma of the nervous system. Brown is a leader in related research and offers exceptional training and translational research, including clinical application. The Center for Vision Research (http://cvr.brown.edu/aboutcvr.html) was created in 2007. Initiatives in Neurotechnology and in Synaptic and Neurodegenerative Disease are underway. BIBS has also established an MRI Research Facility and an Analytical Analysis Core Facility.

For more information on admission and program requirements, please visit: http://www.brown.edu/academics/gradschool/programs/brain-science

**Brain Science Graduate Program**

The three tracks of the concentration are as follows:

1. Business Economics
2. Organizational Studies
3. Entrepreneurship and Technology Management

Upon completion of all concentration requirements, students receive the Bachelor of Arts (A.B.) degree in Business, Entrepreneurship and Organizations.

### The Curriculum

1 For specific gateway and subfield courses, refer to the BEO website.
2 Technical subfields include Biotechnology/Biomaterials, Information Technology and Computer Engineering, Energy and the Environment, and others.

Courses

BEO 1930A. BEO Capstone I: Organizational Studies Track.
The first in a two-semester Capstone for BEO Organizational Studies track seniors, open to all BEO seniors. Capstone builds upon concepts covered in BEO courses, specifically concepts from SOC 1311 and 1315. Students will synthesize knowledge at several levels: across disciplines, across theoretical understanding and practical application, and across private and public sector experiences of entrepreneurship and innovation. Students will be organized into client-mentored teams for social entrepreneurship and social innovation projects. BEO 1930A (fall) required; 1940A (spring) strongly advised for all Organizational Studies track seniors. Application required to match students to projects. Project team meetings required outside scheduled lectures. WRIT

BEO 1930B. BEO Capstone II: Entrepreneurship and Technology Management Track.
The first in a two-semester Capstone required of BEO Tech track seniors. Student teams from Engineering, BEO and other technical and non-technical disciplines form simulated high tech start-up companies working on mentor-defined opportunities. Concepts reviewed in class include: product commercialization, intellectual property, marketing, product requirements documentation, team building, safety, environmental and legal requirements. BEO Tech track concentrators should complete ENGN 1010 prior to course. Enrollment is limited. Students must complete formal application (BEO Tech track seniors automatically approved). Project team meetings required outside scheduled lectures. Non-BEO concentrators require instructor permission. WRIT
BEO 1930C. BEO Capstone I: Business Economics Track. 
Designed for BEO Business Economics track seniors, this capstone is open to all BEO students, and builds upon BEO concepts in economics, finance, strategy and markets. Students form teams to solve existing business problems, simulating groups of consultants. Projects range from recommending appropriate finance for new investments to project evaluation and pricing of new services. Student teams have client-mentors. Students apply analytical frameworks of BEO disciplines to hone writing, presentational, leadership and organizational skills. Application required to match students to projects. Project team meetings required outside scheduled lectures. WRIT

BEO 1940A. BEO Capstone II: Organizational Studies Track.
Continuation of Semester 1, BEO Capstone I: Organizational Studies Track (BEO 1930A). This course involves the completion of team projects begun in fall semester. WRIT

BEO 1940B. BEO Capstone II: Entrepreneurship and Technology Management Track.
Continuation of Semester 1, BEO Capstone I: Entrepreneurship and Technology Management Track (BEO 1930B). This course involves the completion of team projects begun in fall semester. Non-BEO concentrators require instructor permission. WRIT

Course allows concentrators to complete BEO 1930 as an independent study due to scheduling conflicts.

Chemistry

Chair
Paul Gregory Williard
The Department of Chemistry maintains pedagogical and research strengths in organic, inorganic, theoretical and experimental physical chemistry, analytical chemistry, chemical biology and nanotechnology. Faculty, post-doctoral fellows, graduate and undergraduate students collaboratively pursue interdisciplinary research within the department, enhanced by the partnerships with colleagues in the medicine, biology, geology, physics and engineering.

For additional information, please visit the department's website: http://www.brown.edu/academics/chemistry/

Chemistry Concentration Requirements

The Chemistry concentration offers courses and research opportunities that range from fundamental studies involving the characterization and preparation of synthetic and naturally occurring molecules, to interdisciplinary studies at the interfaces of chemistry with biology, medicine, physics, engineering, and nanoscience. As early as their first year, undergraduates are able to work one-on-one or in small groups with faculty members on cutting edge research projects. The Sc.B. degree provides a thorough foundation for further graduate study or for entry-level technical positions in each area. Students seeking the Sc.B. may either pursue the standard Chemistry concentration or one of the two optional tracks: Chemical Biology or Materials Chemistry. Students may also pursue the A.B. degree in Chemistry, which provides a core education in the discipline.

Two advanced science/math electives. 2

Total Credits 9

1 Note that the physical chemistry courses (CHEM 1140, CHEM 1150, CHEM 1160) have mathematics and physics prerequisites.

2 At least one must be a chemistry course. BIOL 0280 is credited as an elective for the chemistry concentration.

Standard program for the Sc.B. degree

The Chemistry Department offers three tracks for the Sc.B. Chemistry Concentration – a Chemistry track, a Chemical Biology track and a Materials Chemistry track. These tracks are not separate concentrations – your degree will still be an Sc.B. in Chemistry. The Chemical Biology track is designed for students who have a strong interest in the interface of chemistry with biology. The Materials Chemistry track is designed for students who have a strong interest in the interface of chemistry with nanoscience and materials science. The expectation is that courses required for the concentration will be taken for a letter grade.

Concentrating in Chemistry – Three tracks

The required/recommended courses for the three tracks are given below.

Chemistry Track:

### Concentration Requirements

**Biochemistry & Molecular Biology Concentration Requirements**

How does life work at the molecular level? This question is at the core of the concentration program Biochemistry and Molecular Biology. In earlier years of this discipline, the focus was on structure and function of proteins, nucleic acids, lipids, carbohydrates and small molecules such as vitamins. Today the logical approach and tools of biochemical science are being expanded to new areas in neuroscience, developmental biology, immunology, pharmacology and synthetic biology (the design of analogs of biological systems). Training in biochemistry begins with a foundation in mathematics, physics, chemistry and biology. Some courses offered in other departments, including engineering, geology and computer science, are also useful. A key component of this program is the year of hands-on research carried out in collaboration with a faculty member here at Brown. Faculty sponsors are drawn from both the Chemistry Department and the Division of Biology and Medicine, and include basic science and clinical faculty.

### Standard program for the Sc.B. degree

Students must take twenty courses in biology, chemistry, mathematics, and physics, including the following core requirements, some of these may be fulfilled with AP credits. Students are expected to take courses that will count toward the concentration ABC/NC. Students should discuss the S/NC option with their concentration advisor if circumstances warrant consideration. Students should not register S/NC for a concentration course without advisor pre-approval.

### Independent Study

Three courses of independent study should be taken, and at least two must be chemistry courses. It is recommended that students discuss their Independent Study with their concentration advisor if circumstances warrant consideration. Students should not register S/NC for a concentration course without advisor pre-approval.

### Total Credits

19

### Honors Requirements for Chemistry

All ScB Chemistry concentrators, and any AB concentrator who completes the following requirements, are candidates for Honors; no separate application is necessary.

The requirements for Honors in Chemistry are:

- A strong grade record in concentration courses. This means a grade point average for the concentration that is higher than 3.50.
- Two semesters of Independent Study (CHEM 0970, CHEM 0980 or equivalent. Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (http://www.brown.edu/academics/chemistry/undergraduate). A Thesis in a form approved by the research advisor, and recommended by the research advisor. Additional information about thesis guidelines will be provided by the Concentration Advisor in the first half of the fall semester. A Poster presentation at the chemistry department's spring undergraduate poster session.

### Additional Requirements

- A strong grade record in concentration courses. This means a grade point average for the concentration that is higher than 3.50.
- Two semesters of Independent Study (CHEM 0970, CHEM 0980 or equivalent. Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (http://www.brown.edu/academics/chemistry/undergraduate).
- A Thesis in a form approved by the research advisor, and recommended by the research advisor. Additional information about thesis guidelines will be provided by the Concentration Advisor in the first half of the fall semester. A Poster presentation at the chemistry department's spring undergraduate poster session.

### Suggested Elective Courses

Students are required to take six (6) elective courses: four (4) taken from the chart below and two (2) from any science or mathematics course relevant to biochemistry, cell and molecular biology from the suggested courses below.

Biochemistry Electives:

- CHEM 0500 Inorganic Chemistry
- CHEM 1140 Physical Chemistry: Quantum Chemistry
- CHEM 1220 Computational Tools in Biochemistry and Chemical Biology
- CHEM 1230 Chemical Biology
- CHEM 1240 Biochemistry
- CHEM 1450 Advanced Organic Chemistry

Quantitative Science or Mathematics Electives: 2

Select two electives from any quantitative science or mathematics course relevant to biochemistry (including courses on the preceding list) and approved by a concentration advisor.

Total Credits 20

1 Note that the mathematics and physics requirements may be satisfied by Advanced Placement credit.

2 or any NEUR course in Cell, Genetics, Molecular Biology, or Development.

Honors Requirements for Biochemistry

All ScB Biochemistry concentrators are candidates for Honors; no separate application is necessary. The requirements for Honors in Biochemistry are:

* A strong grade record in concentration courses. This means a grade point average for the concentration that is higher than 3.25.

* Two semesters of Independent Study (CHEM 0970, CHEM 0980 or equivalent). Guidelines and requirements associated with Independent Study are in the Undergraduate Concentration Handbook which can be found at the department website (http://www.brown.edu/academics/chemistry/undergraduate).

* A Thesis in a form approved by the research advisor, and recommended by the research advisor. Additional information about thesis guidelines will be provided by the Concentration Advisor in the first half of the fall semester.

Chemical Physics Concentration Requirements

Chemical Physics is an interdisciplinary field at the crossroads of chemistry and physics and is administered jointly by the two departments. The concentration provides students with a broad-based understanding in fundamental molecular sciences, as well as a background for graduate studies in physical chemistry, chemical physics, or molecular engineering. Concentrators are required to take twenty courses in chemistry, physics, and mathematics, although approved courses in applied mathematics, biology, computer science, geological sciences, or engineering may be substitutes. Chemical Physics concentrators are also advised to take at least six courses in the humanities and social sciences. Chemical Physics concentrators at all levels (first-year through seniors) are actively involved in research with faculty members in both departments.

Standard program for the Sc.B. degree

Twenty-one semester courses1 in chemistry, physics, and mathematics, with a minimum of four semester courses in mathematics. The expectation is that courses required for a concentration in Chemical Physics will be taken for a letter grade. Core courses are:

CHEM 0330 Equilibrium, Rate, and Structure 1
CHEM 0350 Organic Chemistry 1
CHEM 0500 Inorganic Chemistry 1
CHEM 1140 Physical Chemistry: Quantum Chemistry 1
PHYS 0070 Analytical Mechanics 1
PHYS 0160 Introduction to Relativity and Quantum Physics 1
PHYS 0470 Electricity and Magnetism 1
Select one of the following laboratory courses: 1
- CHEM 1160 Physical Chemistry Laboratory
- PHYS 0560 Experiments in Modern Physics
- PHYS 1560 Modern Physics Laboratory
Select one course in statistical mechanics: 1
- CHEM 1150 Physical Chemistry: Thermodynamics and Statistical Mechanics
PHYS 1530 Thermodynamics and Statistical Mechanics
MATH 0190 Advanced Placement Calculus (Physics/Engineering) 1
MATH 0200 Intermediate Calculus (Physics/Engineering) 1
MATH 0520 Linear Algebra 1
Seven courses, primarily at the 1000 or 2000 level, in chemistry or physics. 7
Select two semesters of independent study: 2
- CHEM 0970/0980 Undergraduate Research
PHYS 1990 Senior Conference Course

Total Credits 21

1 Other approved courses in applied mathematics, biology, computer science, geological sciences, or engineering may be substituted for some of the twenty-one.

Students are advised to take at least six courses in the humanities and social sciences.

Chemistry Graduate Program

The Department of Chemistry offers graduate programs leading to the Master of Arts (A.M.); the Master of Science (Sc.M.); a the Doctor of Philosophy (Ph.D.) degree. Research in Chemistry stretches from the exploration of physical phenomena of individual molecules, to the creation of new molecules, to material science, and indeed to the foundations of life. The Department of Chemistry reflects this profound importance and diversity by offering excellent research opportunities in areas including organic and inorganic chemistry, chemical biology, analytical chemistry, nanotechnology and theoretical and experimental physical chemistry. In addition, graduate students have the opportunity to participate in interdisciplinary research in molecular biology, chemical engineering and the Institute for Molecular and Nanoscale Innovation. The faculty student ratio is approximately 3:1 with most research groups numbering no more than six graduate students. For more information on admission and program requirements, please visit the following websites:

http://www.brown.edu/academics/gradschool/programs/chemistry

Courses

CHEM 0080A. First Year Seminar- Energy.
An introductory study of the scientific foundation of energy, fundamental physical, chemical, and thermodynamic aspects of common (fossil, nuclear) as well as novel (fuel cells, solar, wind, etc.) energy sources. Concentrates on scientific principles, but includes discussion on resources and reserves, environmental impact, current usage, and future needs. For students of all disciplines who are interested in obtaining an understanding of scientific principles of energy. Enrollment limited to 20 first year students. FYS LILE
CHEM 0080B. Molecular Structures in Chemistry and Biology. This course will consist of a survey of historical developments and concepts of three dimensional structures of molecules. The course will conclude with a survey of the current state of the art of structure determination and 3D structure motifs for small molecules, nanomaterials and biological macromolecules. This freshman only seminar will be strictly limited to a maximum of 20 students. FYS

CHEM 0080C. Drug Discoveries in the Pharmaceutical Industry. A Freshman seminar that provides a survey of past and current approaches that enable the discovery and development of therapeutic agents. Topics ranging from target validation to the development of therapeutics (small molecules, biologics, and stem cells) will be discussed. Enrollment limited to 20 first-year students. FYS

CHEM 0080D. Chemical Ecology: Pheromones, Poisons and Chemical Messages. This first year seminar will explore how plants and animals use chemicals to send and receive information about mating, identify potential hosts, defend themselves, and establish social networks. We will focus on the chemistry and biochemistry of these signals, with some examples of the behavioral and ecological consequences of chemical signaling. Enrollment limited to 20 first year students. FYS

CHEM 0080E. Exploration of the Chemistry of Renewable Energy. The various types of renewable energy sources will be explored through classroom discussions, activities, and laboratories. Students will learn about the various types of renewable energy sources and the chemistry associated with each. The course will include short laboratories to illustrate the application of the energy sources. Renewable energy will be discussed in relationship to environmental factors and social impact. Active learning strategies will be used throughout the course. For students of all disciplines who are interested in obtaining an understanding of renewable energy. FYS LILE WRIT

CHEM 0080F. Kitchen Chemistry. Have you ever wondered why olive oil is a liquid but butter is solid? Or why bread and cookies rise when baked? This Kitchen Chemistry course is an experimental approach to chemistry, as seen in cooking. We will examine topics such as trans fats, baking soda as a leavening agent in baking, ripening of fruit, artificial sweeteners, GMOs, and enzymatic and non-enzymatic browning of foods. Edible experiments will be used to discuss the science behind recipes. Enrollment limited to 14 first year students. Instructor permission is required. FYS WRIT

CHEM 0090. Kitchen Chemistry. Kitchen Chemistry is a course that highlights the chemistry underlying food and cooking. We will examine topics such as trans fats, baking soda as a leavening agent in baking, chemical basis for ripening of fruit, pectin as a cellular glue, artificial sweeteners, GMOs, and enzymatic and non-enzymatic browning of foods. In-class demonstrations and edible experiments will be used to discuss the science behind cooking. Content will be discussed using a variety of contexts including primary scientific literature, public policy reports, mainstream media, and food blogs. This class is appropriate for all students interested in chemistry. LILE

CHEM 0100. Introductory Chemistry. Explores stoichiometry, atomic and molecular structure, chemical bonding, solutions, gases, chemical reactions, equilibria, thermochemistry. Three hours of lecture, one conference per week, no laboratory section. S/N/C.

CHEM 0120. Chemistry of the Environment. Focuses on understanding a number of environmental questions from the underlying laws and concepts of chemistry and physics. While some knowledge of math, physics and chemistry are useful, none is assumed. Concepts of chemistry and physics will be developed as needed. LILE

CHEM 0190. Chemical Ecology: Pheromones, Poisons, and Chemical Messages. Plants and animals use chemicals to send and receive information about mating, identify potential hosts, defend themselves against enemies and pathogens and establish social networks. We will focus on the chemistry and biochemistry of these signals, with some examples of the behavioral and ecological consequences of chemical signaling. FYS

CHEM 0330. Equilibrium, Rate, and Structure. Explores the electronic structure of atoms and molecules, thermodynamics, solution equilibrium, electrochemistry, chemical kinetics, and reaction mechanisms. Course includes lecture and laboratory sections. Laboratory cannot be taken without the lecture. Students who previously passed 0330 lab may be excused from repeating the lab portion of the course. Required background: CHEM 0100 or AP Chemistry 4 or CHEM Placement Test 8 or IBC Chemistry.

CHEM 0330L. Equilibrium, Rate, and Structure Lab. Please see course description for CHEM 0330.

CHEM 0332. Equilibrium, Rate Structure - Tutorial. The CHEM 0332 tutorial program offers students a second opportunity to develop mastery of the chemistry concepts taught in the fall semester CHEM 0330: Equilibrium, Rate and Structure course. Students not performing at a passing level in the fall CHEM 0330 course may apply to join the tutorial program. Students accepted into the tutorial program begin by reviewing compound and reaction stoichiometry toward the end of the fall semester. Tutorial students enroll in CHEM 0332 during the spring semester to complete their studies of equilibrium, acid-base equilibria, thermodynamics, atomic and molecular structure and kinetics. There are no lectures in CHEM 0332. Students in the CHEM 0332 tutorial program complete weekly reading reflection assignments, online homework, and weekly problem sets during the fall and spring semesters and participate in two mandatory regularly scheduled problem sessions during each week of the spring semester. The tutorial program has three midterms and one comprehensive final exam. The first exam is on the same day as the final exam of CHEM 0330 in the fall semester. Admission to the CHEM 0332 tutorial program requires an application and an interview with Prof. Russo-Rodriguez no later than November 20th. To qualify for consideration, a student's performance on Fall CHEM 0330 exams must be below the passing level AND the student must be on track to pass the laboratory. Accepted students receive a grade of incomplete for the Fall CHEM 0330 course. Upon successful completion of the CHEM 0332 tutorial program in the spring semester, the incomplete in Fall CHEM 330 is replaced by the student's tutorial program grade. Permission by Prof. Russo-Rodriguez and an override by Ms. Sheila Quigley are both required.

CHEM 0350. Organic Chemistry. Sequel to CHEM 0330. Investigates the constitution and properties of the different classes of organic compounds, with considerable attention to reaction mechanisms. The laboratory work involves an introduction to microscale preparative and analytical techniques of organic chemistry and the preparation of representative organic compounds. Three hours of lecture and five hours of prelaboratory and laboratory. Prerequisite: CHEM 0330.

Students MUST register for a common meeting, a lecture section, a lab and a conference. If you previously completed CHEM 0350 laboratory but received a grade of no credit in the course, please register for lab section 11.

CHEM 0350L. Organic Chemistry Lab. Please see course description for CHEM 0350.

CHEM 0360. Organic Chemistry. Sequel to CHEM 0350. Investigates the constitution and properties of organic compounds at a fundamental level with an introduction to physical organic, bioorganic, and synthetic organic chemistry. Laboratory work is concerned with the identification and characterization of organic compounds, including modern instrumental methods. Three hours of lecture and five hours of prelaboratory and laboratory. Prerequisite: CHEM 0350.

Students MUST register for a lecture section, a lab and a conference. If you previously completed CHEM 0360 laboratory but received a grade of no credit in the course, please register for lab section 11.

CHEM 0360L. Organic Chemistry Lab. Please see course description for CHEM 0360.
CHEM 0400. Biophysical and Bioinorganic Chemistry.
Examines aspects of physical and inorganic chemistry relevant to biochemistry: thermodynamics of hydrophobic and hydrophilic interactions, electrically charged membranes, coordination chemistry, active and passive transport, enzyme kinetics and mechanisms, metal-based drugs, and physical methods. Three hours of lecture and five hours of laboratory. Prerequisite: CHEM 0360 and MATH 0100 or 0170. Prerequisite or corequisite: PHYS 0040 or 0060.

Students MUST register for a lecture section and a lab.

CHEM 0500. Inorganic Chemistry.
Examines the chemistry of main group and transition metal elements with treatment of covalent bonding and molecular structure along with the methods of studying inorganic compounds and reactions. Three hours of lecture and five hours of prelaboratory and laboratory attendance. Prerequisite: CHEM 0360.

Students MUST register for a lecture section and a lab.

CHEM 0970. Undergraduate Research.
Prerequisite: permission of the staff. Permission should be requested before the end of the preceding semester. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CHEM 0980. Undergraduate Research.
See Undergraduate Research (CHEM 0970) for course description. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CHEM 1060. Advanced Inorganic Chemistry.
Covers the physical and chemical properties of transition metal compounds as well as current research topics in inorganic chemistry. Laboratory is designed for the practice of modern inorganic chemistry through the synthesis and spectroscopic characterization of air-sensitive transition metal compounds. Prerequisite: CHEM 0500.

CHEM 1110. Physical Chemistry: Quantum Chemistry.
An introduction to the quantum theory of chemical systems. Elements of quantum mechanics; electronic structure of atoms and molecules; study of molecular structure and behavior by spectroscopy; chemical bonding are all explored. Prerequisites: CHEM 0330, MATH 0180 or equivalent, PHYS 0030 and PHYS 0040 or PHYS 0050 and PHYS 0060 or PHYS 0070 and PHYS 0470 or ENGN 0030 and ENGN 0040.

Examines the question: Where does chemical equilibrium come from? Focuses on macroscopic perspectives on chemical systems and the molecular origins of macroscopic behavior along with elements of statistical mechanics, the laws of thermodynamics, and the relationships between the two. Prerequisite: CHEM 1140 or written permission of the instructor.

CHEM 1160. Physical Chemistry Laboratory.
An introduction to modern instrumentation and experimental techniques as applied to physical chemistry. Experiments will emphasize application of the ideas of spectroscopy, kinetics, statistical mechanics, and thermodynamics to systems of chemical and biochemical interest. Required course for concentrators in chemistry. One to two afternoons of laboratory per week. Prerequisites: CHEM 1140 or permission of the instructor.

CHEM 1170. Environmental Chemistry.
A laboratory course using analytical methods to help in the study and description of several realistic environmental problems. Illustrates scientific methodology and measurement techniques as they apply to these important problems. A problem-solving course employing a kind of environmental chemical detective work. Two laboratory sessions per week. Prerequisites: MATH 0100 or the equivalent, or permission of the instructor. Enrollment limited to 8. Instructor permission required.

Introduction to computational tools used to analyze protein sequences and structures, DNA sequence analysis, RNA structure, biochemical pathways and the analysis of microarray data. Extensive use of programs such as AMBER, BLAST, PSIBLAST and a discussion of their limitations.

CHEM 1230. Chemical Biology.
This course covers topics at the interface of chemistry and biology and, specifically, the use of chemical tools to probe biological systems. Using examples from the recent literature, we will discuss using the central methods of chemistry, namely the ability to design and synthesize compounds with a particular set of properties, to analyze biological problems. Specific topics include molecular recognition of DNA, artificial enzymes, small molecule sensors, and in vivo imaging of proteins, nucleic acids, and cell-surface carbohydrates. Prerequisites: CHEM 0360 and BIOL 0280. If enrollment exceeds the limit, permission to enroll will be allotted in the order: 1) first year graduate students, 2) senior concentrators in Chemistry or Biochemistry 3) junior concentrators 4) other students. Students who have registered or have permission to enroll must attend the first three classes or risk losing their places to someone on the waiting list.

CHEM 1240. Biochemistry.
Examines the chemical, mechanistic, and structural basis for enzymatic catalysis. Uses examples from the recent literature to examine how the experimental and conceptual tools of chemical synthesis, isotopic labeling, stereochemistry, enzymology, kinetics, and protein structure can be brought to bear to unravel the chemical and physical principles underlying the enormous catalytic acceleration and exquisite structural specificity of enzyme-catalyzed reactions. Prerequisites: Strong background in organic chemistry (CHEM 0360, A or B performance preferable) plus at least one semester of Biochemistry (BIOL 0280). Enrollment limited to: 25 students, written permission required.

CHEM 1450. Advanced Organic Chemistry.
Lectures cover topics of current interest in organic reaction mechanisms, synthesis, and structure determination. Laboratory emphasizes spectroscopic and separation techniques and modern synthetic methods. Prerequisite: CHEM 0360. Students MUST register for a lecture section, conference and a lab. WRIT

CHEM 1560A. Molecular Modeling.
No description available.

CHEM 1560B. Techniques in Inorganic Chemistry.
No description available.

CHEM 1560C. Advanced Spectroscopy.
No description available.

CHEM 1560D. Chemistry and Biology of Naturally Occurring Antibiotics.
Small molecules produced by organisms for chemical defense have long been exploited in medicine, biotechnology, and biological research. 1560D will examine the origins, uses, modes of action, and preparations of some of the most important and useful of these "antibiotic" molecules. Given the inter-disciplinary nature of this topic, this course is open to students with backgrounds in the biological and/or physical sciences. Familiarity with concepts of organic chemistry and biochemistry will be assumed.

CHEM 1560E. Biological Mass Spectrometry.
This seminar course will survey the instrumentation, methods, and applications of modern biological mass spectrometry. Through lecture and interactive discussions, we will explore the fundamentals of mass spectrometry. We will then proceed to cover a series of topics relevant to the protein and peptides analysis. The seminar will conclude with an exploration of recent developments in instrumentation or applications of particular interest to the participants. Recommended pre-requisites: CHEM 0360, BIOL 0280, PHYS 0040. Enrollment limited to 20.

CHEM 1560F. Organic Structure Analysis.
CHEM 1560G. Nuclear Magnetic Resonance.
These special topics courses cover the basics of modern NMR spectroscopy. Topics to be included are as follows: modern Fourier transform methodology, modern NMR instrumentation, and a comprehensive discussion of one and two dimensional experiments that are routinely performed. Topics such as coherence transfer and pulsed field gradients will also be included. Experimental methods covered in detail include COSY, TOCSY, HSQC, HMBC, NOSEY, ROSEY, EXSY, and DOSY methodology. This course will not focus on structure determination or spectral interpretation but rather on experimental methodology.

CHEM 1560H. Chemical Glycobiology.
This course examines the chemistry and biology of carbohydrates in living systems. Topics to be covered may include - principles of carbohydrate recognition, enzymes involved in synthesis and modification of carbohydrates, carbohydrates in bacterial/viral and other cellular interactions, glycomics, carbohydrate synthesis. Prerequisites: CHEM 0360 and BIOL 0280. Instructor permission required. Attendance at the first class meeting is required for enrollment.

CHEM 1560I. DNA Damage and Repair.
This course analyzes the chemistry of DNA damaging agents and the molecular mechanisms of DNA replication and DNA repair. We will also analyze the mutagenic and toxic consequences of modifications to DNA structure. Specific topics include the reactions of alkylating agents, ultraviolet radiation, and oxidizing radicals with DNA; additionally, chemotherapeutics that modify DNA will be discussed. Multiple cellular repair pathways will be covered including base excision repair, nucleotide excision repair, mismatch repair, and direct reversal. Prerequisites: CHEM 0350, CHEM 0360, BIOL 0280, BIOL 1270, or by permission.

CHEM 1560J. Topics in Bioinorganic Chemistry.
Covers current topics of bioinorganic chemistry with review of fundamental inorganic and biological chemistry. Topics include metal ion transport and storage, oxygen metabolism, electron transfer, respiration and photosynthesis, metal ion receptors and signaling, hydrolytic chemistry, metallo-neurochemistry, and medicinal bioinorganic chemistry. Students are strongly urged to complete both CHEM 0500 and CHEM 0360 prior to this special topics course.

CHEM 1560K. Computational Chemistry.
Introduction to computational tools for studying the structure of molecules, chemical bonding and chemical reactions. A survey of computational approaches for calculating electron distribution such as molecular mechanics, semi-empirical and ab initio methods (Hartree-Fock, configuration interaction, perturbation theory and density functional theory) will be given. Methods for calculating dynamics of atoms in molecular vibration and chemical reactions will be covered. The course is intended for seniors and graduate students in all subdivisions of chemistry. The goal is to make students capable of using research level tools and carry out simple calculations related to their research interests.

CHEM 1560L. Modern Natural Product Biosynthesis.
This course will cover the biosynthesis of the major classes of natural products - polyketides, non-ribosomal peptides, including beta-lactam antibiotics, terpenes, alkaloids and vitamins. The readings from original literature will cover the chemical logic and mechanisms of biosynthetic pathways and individual reactions, including isotopic labeling for whole-cell feeding experiments, stable isotopic NMR analysis, and mass spectrometry. Modern topics include genomics of natural product biosynthesis, genome mining, and pathway engineering. Prerequisites: CHEM 0350 and 0380. Recommended: CHEM 1230, 1240, or 1450. Enrollment limited to 25 juniors and seniors.

CHEM 1560M. Applied Materials Chemistry.
Materials chemistry is the study of the synthesis, structure, properties, and application of solid materials. Our technology-driven world is fueled by advances in materials chemistry with examples of application in areas such as microelectronics, polymers, and energy technology. This course will explain the application of materials chemistry through the materials properties and characterization, detailing how the crystalline and molecular structure of materials can be related to electronic, optical, thermal, and mechanical properties. WRIT

CHEM 1620A. Photoacoustics.
Prerequisite: CHEM 1140 or equivalent.

CHEM 1620B. Spectroscopy.
Prerequisite: CHEM 1140 or equivalent.

CHEM 1620C. Topics in Modern Physical Chemistry.
No description available.

CHEM 1660. Instrumental Analysis with Environmental Applications.
This course covers the principles and practical applications of important analytical chemistry tools used to study environmental problems, including discussions of method selection and statistical treatment of data. Students will strategize and implement a study of a field site. Includes lab sessions with hands-on experience of instrumental analysis using atomic and molecular spectroschemical techniques, separations by gas and liquid chromatography, and electrochemical methods. Prerequisite: CHEM 0330 or GEOI 1370. Enrollment limited to 20. Instructor permission required.

Focuses on synthesis, properties, and applications of nanoscale materials. It begins with the introduction to size-dependent properties and to general characterization methods of nanomaterials. It then outlines the synthesis, surface chemistry and self-assembly of nanomaterials. It further reviews catalytic, optical and magnetic properties of nanomaterials. Finally, the course highlights the applications of nanomaterials in information storage, energy conversion, and biomedicine. Prerequisites: CHEM0350, PHYS 0030 or 0050, BIOL0280 recommended.

CHEM 2010. Advanced Thermodynamics.
Fundamental principles of macroscopic equilibrium thermodynamics. The three laws of thermodynamics, the thermodynamic potentials, temperature scales, heat engines and refrigerators, entropy, kinetic theory, and transport phenomena. Applications to solids, fluids, and magnetic systems; Gibbs relations, first and second order phase transitions, thermal radiation, gas expansions.

Introduction to modern equilibrium statistical mechanics, including the classical and quantum descriptions of ideal gases, the molecular basis of thermodynamics, the concepts of ensembles and fluctuations, and the implications of quantum mechanical indistinguishability. Applications include chemical and phase equilibria, the transition-state theory of chemical reaction rates, and the theory of liquids.

CHEM 2210. Chemical Crystallography.
Introduces the principles of crystallography (plane groups, point groups, space groups, Bravais lattice, crystal classes), crystallographic methods (single-crystal, powder XRD, macromolecular), strategies for data collection, methods for data reduction, and structure interpretation; reviews modern crystal structure databases (CSD, ICSD) and search engines; reviews the historical development of crystallography and the scope, potential and application of X-ray analysis.

CHEM 2310. Organometallic Chemistry.
This course intends to help students understand structures and reactions of transition metal complexes with common organic ligands: 18-electron rule; the structure and properties of transition metal complexes with carbonyl and other common organic ligands: chemical reactions initiated by metal-organic bonding interactions; and organometallic catalysis. Prerequisites: CHEM 0360, CHEM 0400, CHEM 1060.

CHEM 2320. Solid State Chemistry.
This course focuses on descriptive understanding of structures and properties of inorganic materials. It covers symmetry operations in crystals, crystal structure, physical properties of inorganic materials, materials phase diagram and preparation, and solid state electrochemistry for battery, fuel cell and supercapacitor applications. Prerequisites: CHEM 0500 and 1060 or equivalents or written permission. Recommended for seniors and first-year graduate students.
Detailed examination of organic reaction mechanisms, reactive intermediates, and the methods employed for their characterization (e.g., kinetics, free energy relationships, isotope effects, molecular orbital theory, spectroscopy, and product distributions). Topics may include concerted, free radical, elimination, and photochemical reactions, and the chemistry of radicals, carbocations, carbanions, and carbenes.

CHEM 2420. Organic Reactions.
Study of organic reactions and reaction mechanisms. Discussion and analysis of organic transformations. Topics can include arrow pushing strategies and synthetic methods.

CHEM 2430. Synthetic Organic Chemistry.
Methods, strategies, and mechanisms. Topics may include the chemistry of anions, cations, and radicals, concerted reactions, conformational analysis, and stereochemistry.

CHEM 2770. Quantum Mechanics.
Semester I: Time independent quantum mechanics and its application to atomic and molecular problems. Discussions of modern theories of electronic structure, chemical bonding, and molecular spectroscopy. Prerequisite: CHEM 1140 or equivalent.

CHEM 2780. Quantum Mechanics.
Semester II: Lectures consider the theory and application of time-dependent quantum mechanical methods in chemical physics. Both few and many-body methods are described and discussions include the correlation function formulation of chemical dynamics. Numerical path integral methods for equilibrium and dynamical problems are introduced. Prerequisite: CHEM 2770.

CHEM 2810. Departmental Seminars.
No description available.

CHEM 2820. Departmental Seminars.
No description available.

CHEM 2870. Departmental Colloquia.
No description available. Open to graduate students only.

CHEM 2880. Departmental Colloquia.
No description available. Open to graduate students only.

CHEM 2920A. Chemistry and Physics of Amorphous Materials.
No description available.

CHEM 2920B. Organic Spectroscopic Methods.
No description available.

CHEM 2920C. Topics in Modern Spectroscopy.
No description available.

CHEM 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CHEM 2980. Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CHEM 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

CHEM XLIST. Courses of Interest to Students wishing to Study Chemistry.

Classics

Chair
Jeri B. Debrohun

Like the discipline itself, which lies at the foundation of the humanities, Brown’s Department of Classics has a long and distinguished history, stretching from the founding of the University down to the current initiatives for academic enrichment. The department provides both specialized training for those who wish to enter graduate school in preparation for a career in scholarship, and a broad liberal education for those with more general interests. Courses are offered from beginning to advanced levels in Ancient Greek, Latin, and Sanskrit language and literature, and also in Modern Greek. Each semester the department offers a number of courses that require no knowledge of the ancient languages, in such areas as classical literature, mythology, ancient history, philosophy, and religion.

For additional information, please visit the department’s website: http://www.brown.edu/academics/classics/

Classics Concentration Requirements

Classics focuses on the languages, literature, history, and culture of Greco-Roman antiquity. It provides specialized training for students intending to enter graduate school, and a broad liberal education for those with more general interests. Students may choose to study Ancient Greek, Latin, Sanskrit, or Modern Greek and gain knowledge in literature, mythology, ancient history, philosophy, and religion. Students may either pursue the standard Classics concentration - the most popular choice - or they may pursue one of the several optional tracks: Greek, Latin, Greek and Latin, South Asian Classics, Sanskrit, Greek and Sanskrit, or Latin and Sanskrit. Concentrators are strongly encouraged to integrate their studies in various fields of Classics by writing a senior thesis, by participating in an undergraduate seminar, or by undertaking a senior capstone project.

All tracks except “Greek and Latin,” “Greek and Sanskrit,” and “Latin and Sanskrit” require the satisfactory completion of eight courses as described below. Programs are flexible and students are encouraged to discuss their plans with the concentration advisor. The introductory courses in Greek and Latin may not usually be counted toward a concentration, but those in Sanskrit may be counted in some of the tracks.

Classics

One course in Greek or Latin on the 1000-level or above.

Select one of the following series:

---

Brown University
Bṛhatkathāslokasamgraha of original works of Indian culture such as the short story collection An examination of various historical, geographical, social, scientific, and uncontrolled happenings. Authors include Euripides, Thucydides, Plato, human being's search for a good and valuable life. What the best life required. LILE WRIT No description available. FYS LILE

Courses

CLAS 0010. The Greeks. For centuries Western civilizations have seen the Greeks as their intellectual and spiritual ancestors. The 'Greek miracle' is explored by reviewing its major achievements and discoveries: poetry (heroic epic, tragedy, political comedy), philosophy, historical research, political analysis and institutions, science. All texts read in English. LILE WRIT

CLAS 0020. The Romans. Statesmen exposed republican conspiracies; historians chronicled imperial intrigue; playwrights "Greeked-it-up" with toga parties; epic poets sang of Rome's rise (and fall); moralizers bemoaned gladiators' beauty habits; and a novelist recounted the adventures of a man turned into an ass. This course tracks the development of literary culture at Rome from its beginnings to the end of the Empire, with an emphasis on the major genres, authors, and works of Roman literature. Intended for all students desiring an introduction to Roman literary culture and its masterpieces. All texts read in English; no previous experience in Roman history or Latin required. LILE WRIT

CLAS 0150. Ancient Philosophy. Ancient Greek views about the prospects and limits of reason in the human being's search for a good and valuable life. What the best life is; how, and how far, reason can provide for its realization; what social/ political conditions it requires; how vulnerable it is (and should be) to uncontrolled happenings. Authors include Euripides, Thucydides, Plato, Aristotle, Epicurus, Lucretius, Augustine, and Dante. WRIT

CLAS 0180. Indian Civilization through Its Literature. An examination of various historical, geographical, social, scientific, and literary aspects of Indian civilization through the reading of translations of original works of Indian culture such as the short story collection Bhāhatkāthālokaśamsāgraḥ. Each topic that comes up in the story is explored in greater depth in supplemental material.

CLAS 0210A. Alexander the Great and Alexandria. No description available. FYS LILE

CLAS 0210B. Death in Ancient Greece. Examines how ancient Greeks understood, described, and experienced death. Making use of sources in translation, considers how death is anticipated, imagined, feared, and sometimes sought. Also contrasts classical ideas with current experiences in our own society in order to see whether and how our assumptions concerning death are culturally determined. Enrollment limited to 20 first year students. FYS LILE WRIT

CLAS 0210E. The Family in the Classical World. It has been said that the household, not the individual, was the core of classical society. Using primary sources, we examine such questions as parental (and paternal) authority, the status of women, the role of private property, extended kinship, the physical structure of houses, the experience of childhood, etc. Comparisons are drawn with other societies, including our own.

CLAS 0210F. Themes in Ancient Science. The ideas of ancient scientists are apt to seem both oddly familiar and utterly strange. Examines the major developments in ancient physics, biology, medicine, mathematics, technology, anthropology, and astronomy. Pays particular attention to the tensions between observation and theory, science and society, and the reappearance of ancient notions in modern beliefs. FYS

CLAS 0210G. Themes in Ancient Science. The ideas of ancient scientists are apt to seem both oddly familiar and utterly strange. Examines the major developments in ancient physics, biology, medicine, mathematics, technology, anthropology, and astronomy. Pays particular attention to the tensions between observation and theory, science and society, and the reappearance of ancient notions in modern beliefs. FYS

CLAS 0210H. Thucydides: History and Cultural Context. Thucydides' history of the Peloponnesian War is a magnificent and profound study of the growth and deterioration of Athenian imperialism. We shall examine his history against the background of concurrent intellectual achievement in drama, philosophy, and rhetoric. FYS

CLAS 0210I. How Women were Seen. Classical literature offers a wide array of representations of women, from loyal wives like Penelope to murderesses like Medea, from powerful queens like Dido to helpless slaves like the women of Troy after the destruction of their city. Through a selection of poems and prose texts, almost all composed by men, we shall attempt to gain insight into the place of women in the ancient Greek and Roman imagination. FYS

CLAS 0210J. Homer - The 'Big Bang' of Western Literature?. The history of Western literature seems to begin with a 'Big Bang', the iliad and the Odyssey. A primary goal of this First Year Seminar will be to become thoroughly familiar with the many fascinating and highly influential characteristics of the two epics and their plots by means of close reading (in English translation). At the same time, we will examine the key factors which made this 'miraculous beginning' possible. This includes a question that has received much attention in recent scholarship: the influence of literature from the Middle East. Looking in the other direction, Homer's enormous and lasting influence on literature and art will also be discussed. Enrollment limited to 20 first year students. FYS WRIT

CLAS 0210L. Who Owns the Classical Past?. This course offers a forum for informed discussion of a variety of difficult questions about access to the classical past, and its modern-day ownership and presentation, seen primarily from the perspective of material culture (archaeology, art, museum displays, etc.). Enrollment limited to 20 first year students. FYS

CLAS 0210M. Seneca: A Philosopher in Politics. The Stoic philosopher Seneca led a life full of contradictions: a millionaire and a politician, a man who preached the importance of mind over matter but begged for return from exile, and a philosopher compromised by his relationship with the emperor Nero, his pupil and his murderer. At least his end was heroic: ordered to commit suicide in 65 AD, he modeled his death on that of Socrates, discussing calmly about philosophy with his friends as the blood drained out of his veins. In this course we'll read broadly in his writings and try to come up with some answers about this complex and fascinating figure and the philosophy of living for which he stood.
CLAS 0210O. Sport in the Ancient Greek World
Athletics and sports were as popular and significant in the ancient Greek world as they are today, and so offer an excellent introduction to its archaeology and history. This class will discuss the development of Greek athletics, the nature of individual events, the social implications of athletic professionalism, women and athletics, and the role of sport in Greek education. Enrollment limited to 20 first year students. FYS

CLAS 0210P. Dead and Loving It: The Cult of the Saints in the Eastern Mediterranean.
This course introduces students to the literature, history, and religious life of the late ancient and medieval Mediterranean through the lens of a highly significant socio-cultural phenomenon: the Christian cult of the saints. Students will have the opportunity to engage with a variety of primary source texts in translation, while examining the subject from the perspectives of anthropology, religious studies, material culture, history and literary studies, to approach this rich topic through an interdisciplinary framework. Enrollment limited to 20 first year students. FYS

CLAS 0210R. Revolutionary Classics (or, the classical origins of your Brown education).
When Brown University was founded in 1764 the curriculum was based on classical texts. In early America, the classics of Greek and Roman antiquity – read in the original Greek and Latin – were the foundation of a gentleman’s education. This course will explore early ideas and structures of higher learning in America from the springboard of those classical texts. We will read a sizable portion of Brown’s earliest curriculum (in English translation), but just as importantly we will seek to set that curriculum in the context of early American intellectual history, from roughly the Colonial to the Antebellum Period. FYS WRIT

CLAS 0210T. Travelers in Greece: from Pausanias to Shirley Valentine.
Ever since Pausanias the Periegete wrote his “Description of Greece” in the 2nd century CE, travelers have been inspired both to see the sights of Greece and to narrate their travels. The subject of this course is travel narratives about Greece, and our own journey will lead us to sights throughout the country. Yet we will also be using these narratives as launchpads for exploring the imaginary and imagined power of the Greek landscape: from its ancient status as seat of the gods to its modern appeal as a land of anonymity, relaxation and freedom for the wearied 'westerner'. WRIT FYS

CLAS 0210Y. The Philosophy of Classical Indian Yoga.
This course will introduce the history of the classical Indian texts and ideas that came to provide the philosophical foundations of the classical school of Indian Yoga. We will examine the oldest evidence for yoga in the ancient texts of the Vedas, the Jainas, and the Buddhists. We will watch it take clear shape in the Upanishads and in texts of the Mahabhārata, especially the Bhagavad Gītā. We will conclude the course by reading the classical exposition of Indian Yoga, Pātañjali’s Yogasūtras. This course is a philosophy course, not an introduction to the practice of yoga. FYS

CLAS 0280. Latin in English/Latinate English.
The influence of Latin not only on the English vocabulary but on English style. Topics include: word building from Latin (and some Greek), Latin words and phrases in English, English lexicography, translations into and from Latin, euphuism, the revolt against Latin elements (Saxonism). Students write essays exemplifying these types of writing.

CLAS 0300. Animals in the Greco-Roman World.
Animals are an important part of any culture. This is especially true for the civilizations of the ancient world, which used animals not only for food and companionhip but also for labor power, medicine and entertainment. In this class, we will explore the role of animals in the civilizations of the Greco-Roman world, looking at both practical uses and literary or artistic portrayals. We will focus on ancient beliefs about animals that now seem strange to us (kneelless elephants, self-castrating beavers, venomous mice, etc.), and we will try to explain how those beliefs came to be so widely held.

CLAS 0310. Social Welfare in the Ancient Greek City.
What inequalities existed in the ancient Greek city? This course seeks to identify the different treatment of the inhabitants of the Greek city (polis) and the degree to which the city sought to support the disadvantaged by the redistribution of wealth. Ancient Greek communities taxed activity and property, gathered revenue, and redistributed wealth within the community. The wealthy were often liable to redirect part of the wealth to the community. How well did the redistributive economy of the Greek city work? Who were the winners? Who were the losers? What conclusions can we draw about well-being in the Greek polis? WRIT SOPH

CLAS 0311. Juno: The Original Diva.
Juno was the queen supreme of Rome’s gods, the wife of philandering Jupiter, and the mother of Mars, god of war. It was Queen Juno who guaranteed the constant imperial triumph of Rome—a ruthless conqueror of nations—and who safeguarded and preserved both marriage and Rome's Republic. This course explores constructions of and attitudes towards divinity, gender, war, conquest, and family. Case studies include the destruction and religious plundering of both Etruscan Vei and Hannibal's Carthage, from the perspectives of both conqueror and conquered. Interdisciplinary in nature, course materials will include literature, art, architecture, archaeology, and comparative religious studies. LILE SOPH WRIT

CLAS 0400. Ancient Comedy and its Influence.
This course examines the origins and developments of comedy in ancient Greece (early iambic poetry, Aristophanes, Menander), its later offshoots in Rome (Plautus, Terence), England (Shakespeare), and the continued influence these ancient forms have on comedy today. Secondary readings include ancient and modern thoughts on humor and laughter, and writings on the historical contexts in which these plays were produced. WRIT

Examines, in translation, the three masterpieces of Virgil, central poet of the golden age of Latin literature. In particular, considers his epic, theAeneid, against the background of the Rome of the emperor Augustus. Subjects for discussion include the relation of poetry and power, the connection between the imagination and historical reality, and the tension between intellectual freedom and the constraints of society.

CLAS 0520. Religion and Magic in Ancient Greece.
Examines the sacred or supernatural realm that pervaded ancient Greek culture, considering both public and private practices. Topics include belief in the gods; aspects of polytheism; sacrifice; pollution; athletic and civic festivals; oracles; mystery cults; death and afterlife; hero cults; religion and gender; curses, spells, and charms; ancient atheism and agnosticism. LILE

CLAS 0560. War and Society in the Ancient World.
In a broad survey of ancient societies (from Egypt and Mesopotamia to late antiquity), but with a strong focus on the Greco-Roman world, this course examines the sociology of war in premodem societies: we investigate how in each case warfare and military organization interacted with social, economic, and political structures and how each society dealt with the challenges, gains, and costs of war. Readings in English. LILE

CLAS 0600. The Worlds of Late Antiquity.
A survey of Western culture in all its variety-social, political, economic, literary-in those centuries when the Roman Empire supposedly fell, leaving in its wake the so-called Dark Ages. Emphasizes the dialectic of continuity and change that leads from Imperial Rome to the vast Empire of Charlemagne.

CLAS 0620. Greek Tragedy.
An investigation of many of the surviving plays of the Greek tragedians Aeschylus, Sophocles, and Euripides. Considers the diverse aspects of ancient drama: the context, both religious and sociopolitical; issues of theatrical production, the poetic texture of the plays; and the influence of classical drama on later drama and western thought. Additional readings may include Aristophanes' Frogs and Thesmophoriazusae and selections from Aristotle's Poetics, the earliest criticism of Greek tragedy. LILE WRIT
CLAS 0660. The World of Byzantium.
Caught between the East and West, the culture of Byzantium inherited the ancient worlds of Greece, Rome, and Jerusalem, nurturing many a modern ideology, conflict, and identity. Byzantium is explored through its history, texts, and art. We examine the foundation and history of Constantinople, Iconoclasm, the Crusades, medieval Christianity and Islam, Byzantine court life, concepts of gender, self, and sexuality. WRIT

CLAS 0750. Gender and Sexuality in Classical Antiquity.
This course will analyze women in classical Greek and Roman society and literature. Using gender as a critical tool, we will examine Greek and Roman women in various sources, from Homeric epics and public inscriptions to scathing Roman satire. These sources show how the Greeks and Romans defined normative gender categories and how they used these categories as a vehicle for social and political criticism. We will cover both social history and gender discourse, focusing especially on the body and sexuality as a site for power. The limitations imposed by the source materials, both literary and non-literary, will be a topic of discussion throughout, as well as the relation of these ideas to contemporary constructions of gender. WRIT

CLAS 0760. Ancient Utopias/Imaginary Places.
Literary depictions of idealized imaginary societies already had a long tradition when Thomas More produced his Utopia in 1516. This course explores the ancient Greco-Roman utopian tradition, examining both literary depictions of mythological or fantastic utopias (or dystopias), including representations of societies remote in time ("the Golden Age") or place (e.g., Homer's Phaeacia), and works that critique contemporary values or attempt to describe idealized possible societies (e.g., Plato's Republic). These Greco-Roman depictions in turn provided the foundation for the utopian (and dystopian) tradition as it continued through the Medieval age and into modernity, and we will also follow that tradition. DPLL LI LIRE WRIT

CLAS 0770. The Tradition of the Philosophical Dialogue.
This course will examine the Greco-Roman tradition of the philosophical dialogue, from its Socratic origins through its adoption by early Christian authors. As we read dialogues by major practitioners including Plato, Cicero, Plutarch and Augustine, we will consider formal features of the dialogue, including setting, characterization, and authorial self-representation; and we will compare treatments of common subjects and themes, including Socrates, the pursuit of truth, good government, and the happy life. We will also discuss issues of performance and the philosophical, pedagogical, and therapeutic advantages of dialogue. All texts will be read in English. WRIT

CLAS 0780. From Antiquity to the Humanities (via Humanism) and the History of Ideas.
This course looks at the origins of several subjects in the Humanities in order to explain, question, and sometimes challenge the ways in which those subjects are studied or understood today. Consideration of sources for the Humanities today – in the educational practices of classical antiquity, in the 'humanism' of the Renaissance and in the 17th-20th centuries – will throw new light on ideas and categories which are central to western education. Topics include grammar/language, persuasive argument, scholarship; theory/practice of history, literature, poetry, fiction, fantasy, and the novel; relationship between words and images, and connections between studying the Humanities and being human. WRIT

CLAS 0800. Religious and Philosophical Thought in Ancient India.
The historical development of the main themes of ancient Indian religious and philosophical thought. Part I: The rise of monism in tension with revelation and everything based upon it (mainly the rites and authority of brahmins). Part II: The ensuing 'conversations' among the completing traditions, conversations that developed new world-views and new methods for effecting human well-being in the cosmos. DPLL

CLAS 0810A. Alexander the Great and the Alexander Tradition.
This course focuses on a single historical figure, Alexander the Great, using him as a point of departure for exploring a wide range of problems and approaches that typify the field of Classical Studies. How knowledge of Alexander has been used and abused provides a fascinating case study in the formation and continuous reinterpretation of the western Classical tradition.

CLAS 0820. Epics of India.
An introduction to Indian epic literature with reading and analysis of one or more of India's grand and powerful epics, such as the Mahabharata, the Ramayana, the Cilappadikaram, and others. DPLL

CLAS 0850. Mythology of India.
Reviews major myths from religions of India in order to understand how the peoples of India imagined their relation to the divine world, to nature, and to other human beings. Considers connections between myths and religious practices, social structures, historical events, and psychological and aesthetic dimensions of Indian cultural life. Reading of mythic narratives will be accompanied by analysis from selected theoretical perspectives. DPLL

CLAS 0855. The Bhagavad Gita.
This course will study and discuss the teachings of the Bhagavad Gita in the context of its literary, theological, and philosophical origins in ancient India. We will read the text itself (in English, not Sanskrit), parts of the epic Mahabhārata in which the Gita is situated, and collateral texts, such as Upanisads, Indian myths, Buddhist sermons, or even modern novels, that may shed light on why and how this text has exercised such far-reaching influence across the ages, inside India and beyond. DPLL WRIT

CLAS 0900. Greek Mythology.
"What of these things goes now without disaster?" -Aeschylus, Agamemnon
This course is an introduction to Ancient Greek mythological traditions. Topics include: the twelve Olympian gods; 'culture heroes' (e.g. Heracles), Homer and the Trojan Cycle of myths; mythical traditions about the families of Oedipus and Agamemnon; etc. We will conclude with an investigation of ancient mythical scholarship and skeptical views of myth in antiquity. Throughout we will be considering myth's relationship with literature, visual culture, and religion. The class focuses on the ancient material (texts, images, monuments, rituals and traditions, etc.), with some secondary readings in mythological and cultural theory.

CLAS 0990. Concepts of the Self in Classical Indian Literature.
Examination of the great Indian epic Mahabhārata and related mythology to introduce the context for the most ancient speculations of the Rigveda and the subtle teacher-student dialogues about the self contained in the Bhagavadgīta and Upanishads. We will also examine the more systematic Indian philosophical texts and note their resonance in ancient and modern European conceptions of self.

CLAS 1120A. Dreams, Love and Confession. The Middle Ages are notorious for their love of bizarre locales, hauntings, fear of demons, and superstitions. But the outlook of the medieval world also encouraged a love of hidden and of internal, spiritual space. This world-view attended to dreams, a complex anatomy of human love and confessions. In this course, we will examine the social and literary context of these three modes of communication in the classical and, especially, the medieval period. We will read classical and medieval poetry (Horace, Propertius, Ovid, Lucretius, Cambridge Songs, Alan de Lille, Bernardus Silvestris), late antique dream books (Aelius Aristides), medieval beastiaries and fables, vernacular Romances and lays, and the medieval confessional mode (Augustine, Guibert); we will also examine visual evidence, where possible.

CLAS 1120B. Epic Poetry from Homer to Lucan.
Traces the rich history and manifold varieties of the genre of epic poetry in the literatures of ancient Greece and Rome beginning with Homer's Iliad and Odyssey (VII c. B.C.) and ending with Lucan's Civil War (I. c. A.D.), Masterpieces such as Virgil's Aeneid and Ovid's Metamorphoses are included. Original sources read in translation. LILE WRIT
CLAS 1120D. Myth and Origins of Science.
Examinations of various explanations of the origin of the cosmos, of human beings, and of human institutions, with readings from literary, philosophical, and scientific texts. What constitutes a scientific explanation and in what respects ancient science was similar to and different from our own? Authors include Hesiod, Aeschylus, Plato, Aristotle, Hippocratic medical writings and the Presocratic fragments. Read in English. LILE

CLAS 1120E. Slavery in the Ancient World.
Examines the institution of slavery in the ancient world, from Mesopotamia and the Near East to the great slave societies of classical Greece and (especially) imperial Rome: comparison of ancient and modern slave systems; modern views of ancient slavery from Adam Smith to Hume to Marx and M.I. Finley. Readings in English. LILE

CLAS 1120G. The Idea of Self.
Literature gestures us toward a certain kind of knowledge not quite psychological, not quite philosophical. We read widely in the classical and medieval traditions in order to gauge the peculiar nature of what this knowledge tells us about experience and the ways in which expressions of selfhood abide or are changed over time. Authors include but are not limited to Sappho, Pindar, Catullus, Horace, Augustine, and Fortunatus. LILE WRIT

CLAS 1120H. The Invention of Literature: Literary Theory from Antiquity to the Renaissance.
Literature is a recent concept. We study the prehistory of its invention in Antiquity and the Middle Ages focusing on ideas about authorship, fiction, and practices of reading. The course is based on close reading of primary texts from classical Greco-roman and medieval Byzantine, Latin, and Arabic authors. Beyond theoretical discussions, primary readings include contemporary premodern literary texts.

CLAS 1120J. Essaying the Essay.
This course explores the personal essay as a vehicle for self-expression. Examining self-reflective essays from a variety of cultures and time periods—ancient, modern, East, and West—we trace the theme of friends as dialectical others against whom individuals define themselves. Our investigations will lead us to a provisional definition of the essay genre, keeping in mind its unique placement between fiction and non-fiction, and its relationship with non-Western forms such as the suibi and the xiaopin wen. First year students need instructor permission to enroll.

CLAS 1120K. Skeptical Traditions East and West.
The skeptical project begins and ends in doubt and the refusal to affirm any belief dogmatically. While these ideas are most frequently associated with the writings of Cicero and Sextus Empiricus, they also appear in early Buddhist and Daoist texts. The course examines several strands of Skeptical philosophy as they appear in writings from ancient Greece, Rome, China, and India. It further explores literary enactments, appropriations, and critiques of skepticism evident in the skeptical revival of the European Renaissance and in Zen kōans.

CLAS 1120L. Archaeology of Feasting.
No description available.

CLAS 1120M. Plato.
A close reading of Plato's major dialogues from a philosophical perspective. Topics may include his ethics, politics, metaphysics, epistemology, philosophy of mind, philosophy of language, or aesthetics. Readings are from original sources (in translation) and contemporary secondary literature. Students wishing to read the texts in the original Greek should make arrangements with the instructor.

CLAS 1120N. Games and Spectacles of Ancient Greece and Rome.
Will examine games and spectacles of the ancient Greek and Roman worlds, from the early Olympic contests to the popular chariot races of late antiquity. By using a variety of sources, including archaeological evidence, we will explore not only the historical development of sports in the classical world, but also its ongoing political, social and cultural importance. By seeking to understand both participants and spectators, we also hope to connect the significance of games to other facets of Greco-Roman society, including women and religion. We will not only discuss the limitations of the primary sources, but also make relevant comparisons to the role of sports in contemporary society. WRIT

CLAS 1120Q. Seven Wonders of the Ancient World.
"Everyone has heard of the Seven Wonders of the World," wrote Philo of Byzantium two millennia ago, and it's still true today. But what's a "Wonder"? And why seven of them? Why make such a list anyway, then or now? This class will use ancient texts, explorers' accounts, and archaeological investigations to travel through several thousand years of history in the Mediterranean and Near Eastern world. We will consider how the Seven Wonders captured past imaginations; the aura of technological achievements; the intersections of history, memory, invention, and myth; and how members of one culture view another culture's monuments. LILE

CLAS 1120R. Social Conflict and Political Factions in the Roman Republic.
Traces the evolution of social conflict and political factions at Rome from the foundation to the dissolution of the Republic (C5-C1 BCE). Roman armies secured a vast empire of territory, raw materials, and manpower governed by the senate and the people of Rome itself. The influx of resources, however, destabilized Rome's constitution and upset political power balances at the city of Rome. How did the Romans—elites and masses—compete amongst themselves for the bounty of empire abroad and confront their own internal conflicts at home? Was concord possible, or were the developments of empire inconsistent with the constitution of the Republic?

CLAS 1120T. Age of Augustus: Topography, Architecture, and Politics.
Augustus Caesar boasted that he had found Rome a city in brick, but left it in marble. This course explores the transformation of Rome from an undressed village to the capital of an empire. Was Rome's first emperor trying to fashion himself a Hellenistic monarch on the model of Alexander and his successors? Was he simply operating within republican traditions, which had been established through centuries of aristocratic competition at Rome? Our source materials will include ancient works of art and architecture, literary accounts, maps, and critical urban theory.

CLAS 1120U. The American Presidents and the Western Tradition.
We are accustomed to engaging the American presidency as a public office best approached through the prism of government or political science, but this course studies the ways in which the presidents in thought and action are part of a larger continuum of humanistic expression in the western tradition. It is organized around five categories: memory, language, consolation, farewell, and self-reflection. Our work involves reading and viewing/listening to various materials, including videos and original documents. The words we study, both by and about presidents, will be compared to various masterworks of Greco-Roman antiquity and the western Middle Ages. LILE WRIT

CLAS 1120V. The Age of Constantine: The Roman Empire in Transition.
The reign of Constantine the Great (306-337) and his dynasty heralded a period of remarkable/rapid change in the Roman Empire. Christianity became the sole imperially sponsored religion; the split between Western and Eastern halves of the Empire gradually became permanent and irrevocable; consequently new ways of thinking and writing about the Roman world, past and future, developed. Focusing on generous selections of primary source material in translation and current scholarship, we will explore the history, literature, and culture of Constantinian Empire in order to highlight the role of Constantine and his successors in the evolution of the late Roman Mediterranean.

CLAS 1120W. Aristotle.
A close study of Aristotle's major works: his method, natural philosophy, psychology, metaphysics, with main emphasis on his ethics. Readings from original sources (in translation) and some contemporary secondary material. The class will combine lectures and discussion and is a writing course. WRIT
CLAS 1120X. Ovid’s Metamorphoses.
Ovid’s epic Metamorphoses, a prime source for ancient mythology from the Renaissance to Disney films, has often been received as a delightful compendium of older myths retold with urbane wit; yet its biteful treatment of horrific mythological events can also unsettle, as when its place in the Columbia University curriculum recently prompted a discussion of “trigger warnings.” We will read it in English translation, exploring its capacity to inspire disparate responses. What must we suppress to find the Metamorphoses pleasant or menacing? How does it create its tensions? How do they get projected onto a later culture’s assumptions?

CLAS 1130. Society and Population in Ancient Greece.
This interdisciplinary course stresses the importance of social and demographic themes for our understanding of ancient Greek socio-economic history. The course addresses topics that are fundamental to historical demography (mortality, birth rates, and factors that affect them). It draws directly on primary sources (documentary, literary and archaeological) and readings of modern historians that allow us respectively to analyze evidence and contextualize the issues relating to social history and historical demography. The course takes a longue durée approach and incorporates ancient Greek communities in Greece, the Balkans, Asia Minor, and the Black Sea, from the Archaic, Classical, Hellenistic, and Roman periods. WRIT

CLAS 1140. Classical Philosophy of India.
This course introduces the classical traditions of philosophy in India. After presenting a general overview of this discourse and its basic Brahminic, Buddhist, and Jain branches, the course will examine selected traditions and themes from both the several schools concerned entirely with gaining ultimate beatitude (the Highest Good) (the schools known as Sāmkhya, Yoga, Theravada Buddhism, Mahāyāna Buddhism, Jainism, and Vedānta) and the schools that concentrate on issues of logic, metaphysics, and language and hermeneutics (Nyāya, Vaisheshika, and Pūrva Mimāṃsā, respectively). DPLL

CLAS 1160. Classics of Indian Literature.
This course will introduce, in English translations, the most powerful examples of the literature of India. The course will introduce students to India’s unparalleled literary richness by reading selections of the best poetry, drama, and narrative literature of Indian civilization from any of its many languages (Sanskrit, Tamil, Hindi, Bengali, etc., and English), ancient and modern. DPLL

CLAS 1210. The History of Greece from Archaic Times to the Death of Alexander.
A detailed examination of the history of the Greeks-political, economic, and social-from Homer’s time to the establishment of the Hellenistic monarchies by the successors of Alexander the Great. The ancient sources are closely and critically studied (in translation).

CLAS 1220. The Fall of Empires and Rise of Kings: Greek History 479 to 323 BC.
The Greek world was transformed in less than 200 years. The rise and fall of Empires (Athens and Persia) and metamorphosis of Macedon into a supreme power under Philip II and Alexander the Great provide the headlines. The course covers an iconic period of history, explores life-changing events that affected the people of the eastern Mediterranean and through these transformations, offers deep insight into the common pressures that ordinary people and their communities confronted. CLAS1220 addresses political, social and economic history. Literary, epigraphical and archaeological cultures provide the evidence.

CLAS 1260. The Roman Reception of Greek Literature.
Reading a number of shorter poems and excerpts in both Greek and Latin, paying particular attention to how Roman writers respond to Greek examples. Readings include Catullus and Sappho, Horace and Pindar, Virgil and Theocritus, and others, with a view to the interactions of meter, genre, and language.

CLAS 1310. Roman History I: The Rise and Fall of an Imperial Republic.
The social and political history of Ancient Rome from its origins to the death of Augustus in 14 CE. Focuses on the social conflicts of the early Republic; the conquest of the Mediterranean and its repercussions; the breakdown of the Republic and the establishment of monarchy. Readings emphasize ancient sources in translation. WRIT

CLAS 1320. Roman History II: The Roman Empire and Its Impact.
The social and political history of the Roman Empire (14-565 CE). Focuses on expansion, administration, and Romanization of the empire; crisis of the 3rd century; militarization of society and monarchy; the struggle between paganism and Christianity; the end of the Empire in the West. Special attention given to the role of women, slaves, law, and historiography. Ancient sources in translation. WRIT

CLAS 1320X. Roman History II: The Empire (HIST 1201B).
Interested students must register for HIST 1201B.

CLAS 1350. Comparative Grammar of Greek and Latin I.
An introduction to the histories of the Greek and Latin languages within the frame of their Indo-European antecedents. Addresses the sound systems of the two languages and applies our knowledge of them to a consideration of the semantics (etymology) of words in the languages. For those who know Greek and Latin well, though no specific prerequisites can be listed. Students of classics and linguistics are the main audiences addressed.

CLAS 1410. Roman Religion.
Explores the religions of Rome, from the animism of King Numa to the triumph of Christianity. Topics include: concepts of religion and the sacred; sacred law; ritual space and the function of ritual; festivals; divination; magistrates and priests; the imperial cult; death and the afterlife; mystery cults; astrology and magic. LILE

CLAS 1420. The Culture of Death in Ancient Rome.
This course examines the way that death and dying were perceived and managed in ancient Roman culture. Primary source readings will include selections from philosophers, poets, inscriptions, and a variety of prose literature (consolations, epistolography, historiography, novels). Secondary literature will focus on demography and social relations, the anthropology of funerary ritual, and material culture, which will be integrated systematically throughout the course, and which will include consideration of artistic representations and iconography, as well the archaeology of Roman mortuary practices.

CLAS 1750A. Caesar’s Failure and Augustus’ Success.
Both Caesar and Augustus reached sole power in the Roman empire by winning civil wars. Both initiated broad reform programs, but Caesar was soon assassinated, while Augustus lived for another 45 years. We will analyze their reforms and examine the causes and historical significance of Caesar’s failure and Augustus’s success.

CLAS 1750B. Justice.
An inquiry into notions and definitions of justice. Plato’s Republic is the basic reading. Considers a wide variety of novels, poems, and plays as examples.

CLAS 1750C. Undergraduate Seminar: Emotions.
Were the emotions of the ancient Greeks and Romans identical to our own? When a Greek felt pity, or a Roman was angry, were the causes and the manifestations the same as ours? This senior seminar examines how Greeks and Romans defined the emotions, and checks their descriptions against literary texts. One year of either Greek or Latin required.

CLAS 1750D. Philosophy of Socrates.
In this class we will read and discuss various ancient portraits of Socrates (in Aristophanes’ Clouds, Plato’s Apology and Symposium, and Xenophon’s Apology) and several Platonic dialogues representing Socrates in action discussing moral questions, including the Crito, Laches, Charmides, Lesser Hippias, Protagoras, and Gorgias. We will focus on questions about the historical Socrates (as distinct from the portraits), his avowals of ignorance, irony, methods of argument, and interest in definition, as well as the moral questions explored in the dialogues. All readings will be in English translation. Enrollment limited to 20.
CLAS 1750E. Writing History in the Ancient World. The Greeks and Romans created the western tradition of historiography as a genre of literature and historical reflection. The seminar will focus on the great historians from Herodotus to Tacitus and examine what purpose they pursued in writing history; investigate the origins of historical writing, and look at forms of historical reflection and writing in other ancient civilizations. 

CLAS 1750H. Heroes and Heroism in Graeco - Roman Antiquity and Beyond. Examines the concept of hero, an ancient Greek word, which had a wide variety of meanings and was employed to designate a series of diverse characters of myth. We will trace the evolution of this idea through a detailed analysis of its uses in Greek and Roman texts, and also contrast its ancient sense with present day conceptions of the hero and heroism. All readings will be in English. The course is open to all undergraduates, but preference will be given to juniors and seniors. Enrollment limited to 25. WRIT

CLAS 1750I. Highways and Byways in Antiquity. This seminar will explore the construction and development of pathways of communication and contact in the ancient (primarily Mediterranean) world. Emphasis will be placed upon major routes (highways) and the state-level powers that instituted and controlled them, but also on more modest roads and paths and the communities they promoted. The scope of the course is thus quite extensive, embracing both terrestrial and maritime roadways, and all forms of activity that took place on and along them (trade, pilgrimage, ‘strip development’, imperial postal and spy systems, ports, etc.). Some previous study of antiquity is desirable. Please note: CLAS1750I is being team-taught by Susan Alcock and John Bodel.

CLAS 1750J. Ancient Revenge Dramas. We shall study revenge tragedies composed in ancient Athens and Rome and some composed during the Renaissance. We shall examine formal characteristics of the tragedies as well as the conceptual constellations (historical, political, social, theatrical, legal) under which they operated for the three periods; an important question will be whether and how this medium permits us to understand how law and the notion of justice operates in a given society.

CLAS 1750K. Madwomen and Lovers. Ancient Greeks and Romans were fascinated by the figure of the distressed mythological heroine, and from the Classical period onward their literature showcases women tormented by love (often for a forbidden object), but able to give voice to their desires and dilemmas. We will look at examples from different types of ancient literature (especially drama and epic), focusing on the blend of victimization and self-expression in their portrayal, and on their sometimes surprising role in the literature of love, mythology, and national history.

CLAS 1750L. Erotic Desire in the Premodern Mediterranean. Erotic desire may be a universal human phenomenon. How we explain, depict, express, or experience desire is, however, not a universal, uniform matter. The premodern Mediterranean (from roughly the fifth century BCE to the fifteenth century CE) gives us a variety of forms of sexual experience and expression. We will study the history of these forms through texts, images, and objects: from Platonic love or eros to Roman tales of romance, from Judeo-Christian mysticism to Islamic literature, from sexual diets to erotic amulets. Enrollment limited to 25.

CLAS 1750P. Staging the Law: Classical Literature and Renaissance Drama. (1) We examine theater and its relation to society, particularly, its reflection of legal culture (detections of murderers, adulterers, and young lovers); we also examine law’s ‘theatricality’ (‘productions’ of trials). (2) We also explore more broadly how dramas were performed, using as comparanda Japanese Noh and Kabuki (in each, for example, we find all-male casting). (3) Attention is also directed toward twelfth century receptions of these plays; we focus largely on Japanese productions, particularly of Yukio Ninagawa, mastermind of Japanese theater who directed numerous Greek tragedies and Shakespearean plays in different venues, absorbing and subverting phenomena of traditional Japanese theater.

CLAS 1750R. Holy Places and Sacred Spaces in Ancient Greece. For thousands of years, travelers have been astonished at the physical beauty of Ancient Greek sites such as Olympia, Delphi, and Delos. For anyone who visits these numinous sites, it’s easy to see why the Greeks believed that the gods loved them, too. In this course we will be exploring the notion of sacred space in Greek, with emphasis on sanctuaries, topography, archaeological phenomenology, and pilgrimage. We will research and discuss sites and sanctuaries from literary, archaeological, and other material and theoretical perspectives; we will also ask what about certain spaces and places leads us to regard them as ‘sacred’. WRIT

CLAS 1770. Ancient Law, Society and Jurisprudence. After a brief survey of modern legal systems (USA, common and civil law systems), we return to Athens and Rome. Topics: sources of law, its evolution, (e.g., feuding societies); procedural law (e.g., how to bring cases); legal reasoning; rhetoric; substantive law (e.g., regarding marriage, religion, homicide). Different approaches are used: historical, comparativist, anthropological, case-law study.

CLAS 1930A. Introduction to Greek and Latin Meters. We will survey the major metrical systems of Greek and Roman verse by reading a wide range of short poems and brief extracts. The main concerns will be, first, how to scan poems correctly, and second, how to evaluate metrical and rhythmic choices. Prerequisite: GREK/LATN 0400, or demonstration of equivalent ability in Greek and Latin.

CLAS 1930B. Dying God. The figure of the dying god (like Adonis, Osiris, or Attis), embodying both beauty and tragedy, has exerted a fascination from ancient times to the present day. His worship was sometimes central to the community, sometimes marginal, yet compelling in its “outside” status. His myths invited meditations on love and death in various modes from comedy to epic. This course, through the great mythological texts of Greece and Rome as well as modern literature and art, will explore the figure in all its variety, along with Christian adaptations and recent interpretations. There will be writing assignments.

CLAS 1930C. Parasites and Hypocrites. The course is a study of the many forms of toadying, groveling, feigning friendship, flattery, ass-kissing, and so on, that were such a large source of concern — and comedy — in antiquity. The anxieties over hypocrisy in a democracy and parasites in client-patron systems will be explored historically, in literary representations, and in their social, political, and economic contexts. Authors to be read include Aristophanes, Plutarch, Lucian, Plautus, Horace, and Petronius.

CLAS 1930E. Economy of Ancient Greece: New Approaches. What was the material underpinning of Greek Society? How did the production and distribution of resources connect individuals and states to what ancient mentalities and ideologies governed this exchange? New scholarly approaches and new evidence have drastically changed how we understand the ancient economy in recent decades. This course will survey key issues in the ancient economy such as Mediterranean ecology, trade, the invention of coinage, taxation, consumption, agriculture, slavery, and connectivity. In the process, we focus closely on the primary sources, in the form of literacy, archeological, numismatic, and epigraphic evidence, while also considering current scholarly methodologies and controversies.

CLAS 1970. Special Topics. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CLAS 1990. Conference: Especially for Honors Students. Section numbers vary by instructor. Please check banner for the correct section number and CRN to use when registering for this course.

CLAS 2000. Proseminar in Classics. Introduction to standard research methods and tools in major subdisciplines of classical philology and ancient history. Required of entering graduate students. Survey of various subdisciplines in order to become familiar with field and scholarly principles.

CLAS 2010A. Mysteries Documents. No description available.
CLAS 210B. Roman Topography. That actions occur in place is obvious, but how does place define action, and how do actions define place? How does the accretion of meanings assigned to a place through repeated use provide significance to the current actions, affect reinterpretations of past events, and effect future uses? Topography explores not only the history of monuments but also the constellation of meanings shaped by the interaction of monuments with each other in the cultural landscape. Topographical relationships serve as an imprint of a particular community’s social, political, economic, and religious behavior within and across space and time. Ancient Roman case studies.

CLAS 210M. Problems in Old World Archaeology: The Archaeology of Empires. They were big, they were bad, they were beautiful... Cradles of civilization, wreakers of havoc, empires rank among the most influential political and social formations in global history. This seminar will explore general literature on imperial genesis, consolidation and decline, as well as the specific and unique contributions that archaeology and art history can offer to the understanding of empire.

CLAS 2080A. Seminar: Allusion/Intertextuality/Influence. We will study the full career of allusion (from Homer to hip-hop) to gain a sense of its origins and development, especially in antiquity and late antiquity; to understand allusion functionally, (and to measure the durability of that function across time); and to read extensively in the allusive practices of one ancient author.

CLAS 2080B. Seminar: Social Conflicts in the Roman Republic. This seminar, open to upperclassmen with experience in Roman history, will analyze the causes, impact, and results of social conflicts in the early (the “struggle of the orders”) and late Roman Republic (Tiberius Gracchus, the Catilinarian Conspiracy), and the latters’ contribution to the demise of the Republic. Sources in translation.

CLAS 2080C. The Emperor Tiberius. No description available.

CLAS 2080E. Greek and Roman Epyllion. The so-called “epyllion” or miniature epic offers an opportunity to read a number of texts in the tradition of ancient hexameter narrative (both Greek and Latin) and also to scrutinize our criteria for establishing generic unities and boundaries. We will think about the poems’ continuities with and differences from other ancient examples of shorter narrative and about the connections between the form and the ironic or revisionary affect often attributed to epyllion. At the end of the semester we will glance at the Early Modern reception of the ancient tradition; we will also read selections from the critical literature.

CLAS 2110A. Graduate Seminar: The Book. This seminar examines the relationship between ancient literary forms and the media in which they were presented. Specifically, it considers the connections between the ways in which ancient books were published and distributed—on papyrus rolls and bound codices, individually and in groups, privately and commercially—and the cultural conventions of reading and literary appreciation in antiquity. Chronologically the seminar focuses on the late Roman Republic and early Empire (ca. 100 BCE -200 CE), but attention is devoted also to new papyrological evidence for the development of poetry books during the Hellenistic period. A reading knowledge of Greek and Latin is required.

CLAS 2450. Exchange Scholar Program.

CLAS 2390A. Alexandrian Poetry. We will read extensive selections in the original languages from Hellenistic Greek poetry and Latin poetry with Hellenistic influence, with an eye to their historical and cultural context and to their intertextual dimension.

CLAS 2970. Preliminary Examination Preparation. For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CLAS 2980. Reading and Research. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

CLAS 2990. Thesis Preparation. For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

CLAS XLIST. Courses of Interest to Classics Concentrators. Fall 2016

Greek

GREK 0100. Essentials of the Greek Language. A two-semester approach to ancient Greek with special emphasis on developing facility in rapid reading of Greek literature. Selections from Attic Greek authors. No previous knowledge of Greek is required.

GREK 0110. Introduction to Ancient Greek. Intensive, one-semester introduction to Greek. No previous knowledge of Greek is required.

GREK 0200. Essentials of the Greek Language. Second half of a two-semester approach to ancient Greek with special emphasis on developing facility in rapid reading of Greek literature. Selections from Attic Greek authors. No previous knowledge of Greek is required.

GREK 0300. Introduction to Greek Literature. Introduction to Greek literature through intensive reading. Prerequisite: GREK 0200, GREK 0110, or the equivalent. This course focuses on translation and comprehension of Classical Greek prose. The goal is to expand your vocabulary, increase your ease with morphology, and deepen your understanding of syntax as each of these elements of the language interact with each other. The primary text will be Plato’s Symposium, in which Socrates and other guests at a drinking party consider the nature of love, ἔρως and its role in personal relationships, education, and even politics.

GREK 0310. Grammar Review and Composition. Half-credit course with attention to student's individual needs.

GREK 0400. Introduction to Greek Literature. Prerequisite: GREK 0300 (or the equivalent). Review of grammar of the Attic dialect through rapid reading of texts by Lysias, Plato, or Xenophon: Emphasis on syntax and style.

GREK 1010. Introduction to Greek Drama. Both for students who have recently finished GREK 0300 and 0400 and for those who have little or no experience of translating Greek drama. Begins with a brief review of Attic grammar with readings in Plato. Then turns to Greek drama with students reading a play of one of the dramatists and focusing on philological analysis and meters.

GREK 1050A. Aristophanes. Addresses students with at least an intermediate-level command of Ancient Greek, but previous knowledge of Aristophanic language and poetry is not required. We will read in the original language Aristophanes’ Frogs, and study different aspects (language, meter, historical background, theatrical performances, literary interpretations, etc.) of this play and of Aristophanic comedy generally. Frogs, composed towards the end of the Peloponnesian War, is one of Aristophanes’ most puzzling plays. It presents a fantasy (and comic!) vision of the afterlife and, indirectly, informs us about the literary criticism of the time.

GREK 1050D. Homer: Iliad. No description available.
GREK 1050F. Tragedy of Greeks and Others.
The class will be devoted mainly to a close reading of Aeschylus' play The Persians, attending to it in all its aspects (language, performance, historical context, meter). We will also read in translation select passages from Herodotus, Xenophon, and others bearing on Greek attitudes to Persia. We will examine key critical questions about Greek identity and self-definition in their relation to the East.

GREK 1060. Herodotus.
What does it mean to be "the father of history?" We will read the last book of the Histories in Greek, supplemented with related texts (some in English translation), as we discuss how this illuminating, entertaining masterpiece spoke to its intended audience and to modern readers as well.

GREK 1080. Attic Orators.
No description available.

GREK 1100. Advanced Homer: The Odyssey.
It is hard to imagine a more joyful way to acquire excellent control of Homeric Greek than by reading, in its entirety (if possible), Homer's wonderful and captivating work, the Odyssey. Though it can be a little time-consuming initially, students quickly become familiar with the syntax and the vocabulary, and find great pleasure in immersing themselves in this thrilling masterpiece.

GREK 1100E. Greek Literature in Italy and by Italians.
This course surveys Greek texts written in Italy or by Italians from the classical period into the Renaissance: from Pythagorean writings to Dionysius of Halicarnassus, from Plotinus to Bessarion, and from a series of exotic Sicilian Saints Lives to manuscripts of Greek popular literature. Emphasis will be placed on the post-classical tradition as well as on the transmission and manuscript history of Greek texts and authors in Italian libraries.

GREK 1100F. Fiction and Truth in Greek Story-telling.
A survey of a large number of Greek narrative texts in the post-classical tradition that probing the boundaries between fiction and truth, from historiography to hagiography, and from the ancient novel to Christian apocrypha.

GREK 1100B. Plato, Phaedrus.
We will read in Greek Plato's dialogue Phaedrus on love and rhetoric. We will attempt to understand the dialogue as a unified whole, discussing such questions as the link between love and the art of persuasion, Plato's denigration of writing, and the relationship between rhetoric and philosophy.

GREK 1110C. Plato: Statesman.
Reading of Plato's Statesman in Greek and discussion of the questions: What is special about the Statesman's expertise? How (if at all) does his expertise differ from that of the philosopher? How is the Statesman related to the philosopher-kings in Plato's Republic? Discussion of Plato's later philosophical method, a topic central of the Statesman.

GREK 1110D. Plato: Symposium.
Readings in Greek Plato's Symposium, his beautiful dialogue about love and philosophy.

GREK 1110E. Plutarch.
Reading of selections from Plutarch's works with attention to literary and historical background.

GREK 1110F. Poetry of Gods and Heroes.
Readings in early Greek hymns, creation myths (especially Hesiod's Theogony), and short poems about human struggle and values.

GREK 1110G. Selections from Greek Authors: Mysteries.
We shall read documents pertaining to the Eleusinian Mysteries. In the first part of the course, we focus on orations (Andocides 6, "On the Mysteries"; Lysias 6, Against Anocides for impiety). In the second part, we read inscriptions (including 'sacred laws') pertaining to the Mysteries.

GREK 1110H. The Odyssey.
No description available.

GREK 1110I. Selections from Greek Authors: Thucydides.
No description available.

GREK 1110J. Plato: Theaetetus.
Theaetetus is in many ways Plato's most modern dialogue. The central question is: what is it to know something? Is knowledge some sort of skill? Is it perception? True judgment? Some sort of account together with true judgment? We will read the dialogue in Greek and discuss Plato's fascinating investigation of knowledge.

GREK 1110K. Early Byzantine Literature.
No description available.

GREK 1110L. Aeschylus' Agamemnon.
No description available.

GREK 1110M. Selections from Greek Authors: Plato, Sophist.
No description available.

GREK 1110N. Menander.
Thanks to a series of remarkable discoveries over the last century, we can now read several comedies by Menander. In this course, we shall investigate the nature of New Comedy, its typical plot structures and characters, the conditions of its performance, and its relation to the Hellenistic world in which it was composed.

In this class we will read Books I, II, III, and X of Aristotle's Nicomachean Ethics and discuss his treatment of the highest human good, moral virtue, the doctrine of the mean, and his theory of action.

GREK 1110P. Sophocles.
Close reading of one tragedy by Sophocles. Rapid survey of his other works.

GREK 1110Q. Greek Erotic Literature: From Plato to the Medieval Romances.
Survey of desire in Greek writing, with an emphasis on post-classical texts. Exploration of Platonic love, Roman Greek literature on eros, friendship in late antique and medieval rhetoric and letter-writing, erotic epigrams from Imperial to Middle Byzantine times, depictions of the erotic in hagiographical texts, and, finally, the twelfth-century revival of romantic fiction. Four semesters of Greek required.

GREK 1110R. Characters and Characterization in Greek Literature.
We will read passages from a wide range of Greek literature, both verse (epic, drama, lyric, epigram) and prose (history, oratory, biography, the character sketch), as well as ancient criticism, with our attention focused on the representation of character, individuality, and self-hood, especially in relation to genre.

GREK 1110S. Xenophon.
The writings of Xenophon are among the most varied of any ancient author: they include Socratic dialogues, a continuation of Thucydides' history, the story of the march upcountry of the 10,000 Greeks stranded in Persia, a biography, a hunting manual, and the earliest surviving historical novel. All are written in an elegant and highly accessible Attic prose. We will read selections from the dialogues, the Anabasis, and some other works.

In a series of notorious dialogues, Plato delineated a distinction between two professions that were to define future intellectual history: philosophy and rhetoric, the science of thinking juxtaposed to the art of speaking. We will study the transformations of this distinction in four exceptional socio-cultural contexts: Classical Athens, Imperial Rome, Late Antiquity Alexandria, and Medieval Constantinople. We will discuss the basics and varieties of educational curricula (Aristotle's Academy, Second Sophistic, Neoplatonism), the social position and self-definition of ancient intellectual figures, and the ever-fluid boundaries between content and form, thought and style; ultimately, between philosophy and literature.
Grek 110U. Survey of Post-Classical Greek (2nd-12th century CE).
This course will study the development of post-classical Greek language and literature with an emphasis on three traditions—the Second Sophistic, late antique prose (4th-5th centuries), and writing in medieval Constantinople (9th-12th centuries)—through a close reading of texts from a variety of styles, authors, and genres. The selections will be tailored to the needs of the participants. Prior knowledge of Greek (an equivalent of 2 years) is required. Prerequisite: GREK 0400 or instructor permission. Enrollment limited to 20.

Grek 110V. Greek Funeral Orations.
Survey of Classical Greek funeral orations; authors to be covered include Thucydides, Plato, Demosthenes, and other fourth century prose writers. The emphasis of the course will be on Greek grammar and techniques of prose translation, though throughout the semester we will also be discussing the nature of ancient Greek commemorative discourses, particularly in Classical Athens. Some background on Greek lament and other funerary genres will be provided, and short supplementary texts may range from Homeric excerpts to inscribed epitaphs. Students should already have four semesters of ancient Greek (completion of GREK 0400) or the equivalent.

Grek 1110w. Persia in the Greek Historians.
This course will explore Greek encounters with Persia in the 5th and 4th centuries. Following the epoch-making conflict between Greece and Persia, the Persian empire assumed a major place in the historical, literary, cultural, and artistic production of the Greek world. We will access this world primarily through the Greek historians, principally Xenophon, Herodotus, and Ctesias, including Herodotus’ histories, Xenophon’s Cyropaedia and Anabasis, and Ctesias’ Persica. While the focus of the course will be on reading these texts in Greek, we will also engage with modern scholarship on Persia and issues of cultural contact and exchange between these cultures. Recommended prerequisite: Three semesters of Ancient Greek.

Grek 1110x. Aristotle’s Politics.
Aristotle’s Politics is a landmark in the history of political thought: the first systematic study of political life. Thinkers from Aquinas to Agamben and Foucault have taken the Politics as the foundation of their own political theories. In this course, we will read Book 1 of the Politics in its entirety, as well as selections from Books 3, 5, 7, and 8. We will address stylistic, philosophical and methodological questions raised by the text, as well as reflecting on larger interpretive questions.

Grek 1110z. Greek Texts in the Postclassical Tradition.
A treasure of unedited or insufficiently edited as well as untranslated or little studied Greek texts exists in the postclassical tradition (especially from the Roman period onward). The course will introduce graduate and qualified undergraduate students into this large body of later Greek literature as well as provide training in the study of manuscripts and the preparation of critical editions, translations, and commentaries. Participation in a joint publication project is possible.

Grek 1111c. Late Antique Historiography: Procopius of Caesarea.
This course will consider the writings of Procopius of Caesarea (ca. 500-565) in light of his place in Greek literary history, and his cultural context in the Late Roman Empire of Justinian. Sessions will combine a critical reading of texts in Greek with analysis of the author’s historical methods, style, and literary influences. We will study portions of all three of Procopius’ surviving works, beginning with The Wars, and continuing with The Secret History and The Buildings.

Grek 1111e. The Cities of Plato’s Republic.
In the course of his 10-book argument that being just is intrinsically a good thing for a person, Plato’s Socrates—with help from interlocutors Glaucon and Adeimantus—imaginatively constructs several cities: three or four (depending how you count) cities in the attempt to describe a just city, and then four increasingly unjust cities. We shall read as much of this work as we can in Greek, paying special attention to the relation between Plato’s imagined cities and the real politics of fifth- and fourth-century Greece. We shall also pay attention to the beauty of Plato’s prose.

Grek 1140. Introduction to Greek Linguistics.
Examines changes that took place in Greek from the time of its separation from its parent language (Proto-Indo-European) to the dialects of Classical times (5th-4th C.B.C.). This course is also an introduction to the methodology of historical linguistics, concentrating on phonology. Proficiency in ancient Greek is required.

Grek 1150. Greek Prose Composition.
Survey of Greek grammar and an opportunity to reflect on problems of translation. Main goals: to improve the students’ command of prose syntax (both in reading and writing), and to develop a keen sensitivity towards issues of translation. A variety of texts written in Attic prose are read and analyzed in class. Students are expected to write two to three compositions a week in good Attic prose. Advanced knowledge of ancient Greek is a prerequisite for this course.

Grek 1260. Plato and Aristotle.
No description available.

Grek 1260a. Plato’s Protagoras.
Plato’s Protagoras is a literary and philosophical masterpiece representing a great gathering of intellectuals, including Socrates and the sophist Protagoras. The two men try to outwit each other on such topics as political theory, literary criticism, and education. Major questions throughout the discussion are: What is the role of knowledge in a successful life, and how can we acquire knowledge that leads to success? We will read the dialogue in Greek. Prerequisite: two years of Greek (GREK 0400) or demonstrated equivalent ability.

Grek 1810. Early Greek Literature.
Surveys early Greek literature. Works studied include the Iliad, Odyssey, the Hesiodic poems, and archaic lyric and elegiac poetry. Emphasis on literary interpretation, the interpretive problems inherent in the study of archaic poetry, and the poetics of oral poetry. Extensive readings in the original.

Grek 1820. Fifth Century Survey.
We begin with Pindar and read poetry and prose literature composed throughout the fifth century, with attention to its historical development styles, and the intellectual ideas that drive it.

Grek 1910. Special Topics.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Grek 1930a. Euripides.
The plays of Euripides and related works, subject to consultation with students.

Grek 1930b. Greek Epigraphy.
Practical (making and reading squeezes, identifying letters, locating inscriptions, etc.) and analytical aspects of epigraphy will be pursued. The major focus will be legal inscriptions from the Greek world.

Grek 1930c. Introduction to Greek Papyrology.
During the 20th century, papyrology has become the most important source for new literary texts, with three substantial discoveries in the last decade (Simoneides, Empedokles, Poseidippos). Provides an introduction to the basic techniques of this comparatively young discipline: material evidence, decipherment, dating, interpretation, restoration, editing, etc. Focus on literary texts, but documentary papyri will also be examined.

Grek 1930d. Rapid Reading in Plutarch.
No description available.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

No description available.

Grek 2000b. Greek Epigraphy.
An introduction to the study of Greek epigraphy. We shall examine treaties, laws, decrees and other documents, mostly from Athens but also from other parts of the Greek world. Practical issues (e.g., the actual reading of letters and the identification and dating of documents) and analytic questions (e.g. regarding historical context) will be explored.

GREK 2020A. Sophocles. No description available.

GREK 2020C. Pindar. No description available.

GREK 2020D. Thucydides. Books I and VIII: language, mode of thought, and methodology; how the work was composed, historical problems; supplementary sources: epigraphical, literary.

GREK 2050A. Demosthenes. No description available.

GREK 2050B. Documents: Religious Cults and Sacred Laws. In the first half of the course we shall read documents pertaining to the Eleusinian mysteries in Athens, including (a) two orations, Andocides 1 "On the Mysteries," and Lysias 6 "Against Andocides for impiety." (b) a variety of inscriptions published by Clinton (in Eleusis, The Inscriptions on Stone: Documents of the Sanctuary of the Two Goddesses and Public Documents of the Dome), and (c) the grand inscription of Adnania (ca. 92 B.C., not Eleusinian but related). In the second half of the course, we shall read inscribed sacred laws from Greece and Asia Minor, from the fifth to the first century B.C.

GREK 2050C. Ancient Greek Law. We examine four periods of Greek law: Archaic, Classical, Hellenistic, and Roman Era. As much of the evidence for the Archaic and Classical periods comes from Athens, we shall focus there for awhile, using both literary and epigraphic sources; we shall not, however, eschew the important evidence from Crete during these periods. For the later periods, our evidence will be mainly epigraphical—and 'globally Greek.' Throughout, we shall focus on issues such as 'literacy and the writing of laws'; 'substantive vs. procedural law'; 'law and democracy'; and 'the proliferation of foreign judges'.

GREK 2070B. Seminar: Hellenistic Poetry. In this seminar we will read in their original Greek version extended portions of three major Alexandrian poets' works: Apollonius of Rhodes, Callimachus, and Theocritus, supplemented by readings in Hellenistic epigrams and other texts as well as secondary literature. We will pay attention to the social, political and literary environment of third century Alexandria, where—under very special conditions—these works were produced and received for the first time. We shall investigate the nature of the Hellenistic aesthetic, the relation of Hellenistic to archaic and classical poetry, and the way Hellenistic poetry is a reflection of its time and place.

GREK 2100A. Herodotus. No description available.

GREK 2100B. Making Memory: Simonides, Herodotus, and Greek Identity. No description available.

GREK 2100C. Drama and the Polis. No description available.

GREK 2100D. Ancient Literary Criticism. Survey of ancient literary theory, with an emphasis on Greek sources. Topics to be covered include the representation of poets, the nature of inspiration, the elements of literary style, the moral and ethical uses (and dangers) of poetry, mimesis, the relationship between poetry and citizenship, literature and education, etc. We will read, in Greek, excerpts from (e.g.) Aristophanes' Frogs, Plato's writings on poetry, Aristotle's Poetics, Plutarch's How a young man should study poetry, and pseudo-Longinus' On the Sublime. Students will be evaluated on the basis of in-class presentations, two translation exams, and a seminar paper.

GREK 2110A. Homer. A close reading of the entire Odyssey, exploring all aspects of the poem, from its oral composition, language, and style to its background myths and social dimensions. Homer's text will be read in Greek, and extensive secondary sources in several languages will be used.

GREK 2110B. Literary Criticism in Greek Scholia. No description available.

GREK 2110C. Plato's Republic and its Neoplatonic Reception. A close reading of Plato's Republic together with Proclus' fifth-century CE commentary. The main focus is Plato's discussion of poetry and mimesis (books 2, 3, and 10), his appropriation of myth and dramatic technique (books 7 and 10), and Proclus' attempt at reconciling Plato with Homer, namely Plato's anti-mimetic stance with his overt theatrics and myth-making. Brings together classical writing with its post-classical readings, broaches such topics as the notion of mimesis and the reception of Plato as well as Homer in Antiquity, and introduces students to late antique allegory and what has been termed the birth of the symbol.

GREK 2110D. Greek Epigraphy. An introduction to the study of Greek epigraphy. We shall examine treaties, laws, decrees and other documents, mostly from Athens but also from other parts of the Greek world. Practical issues (e.g., the actual reading of letters and the identification and dating of documents) and analytic questions (e.g., regarding historical context) will be explored.

GREK 2110E. Aeschines and Demosthenes, "Crowning Speeches".

GREK 2110F. Greek Palaeography and Premodern Book Cultures. Introduction to pre-modern Greek book culture and the study of Greek literary scripts from classical antiquity to the Renaissance. Students become acquainted with the history of books, the context and agents of their production, and the transmission of Greek (classical as well as post-classical) literature. Training is provided in reading and dating different scripts and in editing ancient texts.

GREK 2110G. Political Trials: Treason and Accountability in Fourth Century Athens. In studying trials of treason and accountability, we shall examine the democratic ideologies and political factionalism that fueled the trials and also the legal armature that rendered them possible. Our sources for the most part are speeches written by the Attic orators (Demosthenes, Aeschines, Lycurgos, Deinarchos, and Hrypereids) and include impeachment trials for treason by commission of adultery, for having the wrong dream in the Amphiereion, for leaving Athens in wartime; an accountability trial for treasonous conduct while serving on an embassy; and trials (including the prosecution of Demostenes) for accepting bribes from Alexander's agent, Harpalos.

GREK 2120A. Graduate Seminar: Greek Autobiography: From Plato to the Middle Ages. An exploration of autobiographical narratives written in Greek from classical to Byzantine times, focusing on the relation between changing notions of the self and the development of autobiography as a literary genre. Authors examined: Plato, Demosthenes, Nicolaus of Damascus, Marcus Aurelius, Aelius Aristides, Lucian, Gregory of Nazianzus, Libanius, Synesius, Michael Psellos, Michael Attaleiates, and Anna Comnena.

GREK 2150. Plato's Theaetetus. See PHIL 2150I for course description.

GREK 2970. Preliminary Exam Preparation. For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

GREK 2980. Reading and Research. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

GREK 2990. Thesis Preparation. For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.
Latin

LATN 0100. Essentials of the Latin Language.
An intensive two-semester approach to Latin with special emphasis on developing facility in the rapid reading of Latin literature. No previous knowledge of Latin is required.

LATN 0110. Introduction to Latin.
Intensive, one-semester introduction to Latin. No previous knowledge of Latin is required.

LATN 0200. Essentials of the Latin Language.
Second course in an intensive two-semester approach to Latin. Special emphasis on developing facility in the rapid reading of Latin literature. No previous knowledge of Latin is required prior to taking this two course sequence.

LATN 0300. Introduction to Latin Literature.
Introduction to Latin literature through intensive reading of major authors in prose and poetry with careful attention to grammar and style. Prerequisite: LATN 0100, 0200 or 0110 (or equivalent).

LATN 0310. Grammar Review and Composition.
Half-credit course with attention to student's individual needs.

LATN 0400. Introduction to Latin Literature.
Introduction to Latin literature through intensive reading of major authors in prose and poetry with careful attention to grammar and style. Prerequisite: LATN 0100, 0200 or 0110 (or equivalent).

LATN 0510A. Latin Mystical Writing.
We read variously in Latin those authors (Cicero, Horace, Augustine, Anselm, Hildegard) who articulate the best traditions of mysticism in the West: a longing for transcendence, alienation, unity through participation with divinity and culture. Prerequisite: A knowledge of Latin at the intermediate level (one or two years).

LATN 0510B. Medieval Latin Lyric.
Open to students with two years of Latin.

LATN 1010. Latin Lyric: Catullus and Horace.
Introduction to Latin lyric poetry through the poems of its finest representatives, Catullus and Horace. Emphasis placed on careful reading of the poems, which will be considered individually, as parts of a collection, and as representatives of the poetry we call lyric. The primary objective of the course is to improve students' ability to read Latin lyric poetry fluently, in terms of meter, grammar, syntax, and literary-critical appreciation. We will also read and discuss a selection of seminal articles on ancient lyric, and students will get experience (and guidance) writing scholarly criticism.

LATN 1020A. De Oratione.
No description available.

LATN 1020B. Cicero, Verrines.

LATN 1020C. Cicero's Republic.
As one of the only texts that articulates a "Roman" political philosophy, Cicero's De Re Publica is indispensable for students with an interest in Roman history or classical political thought. In this class, we will address the text from both these perspectives; but we will also read it as a work of literature that remakes the genre conventions of the Platonic dialogue for a Roman readership. We will also address the complex relationship between the text of De Re Publica and the troubled times in which it was written.

LATN 1040A. Virgil: Eclogues and Georgics.
Virgil, most famous as the poet of the Aeneid, began his career with two smaller masterpieces: a collection of ten bucolic poems (Eclogues) modeled on the Idylls of the Hellenistic poet Theocritus, and a didactic work on agriculture in four books, the Georgics, which found its inspiration both in Hellenistic models and in more recent Roman antecedents (including Lucretius' De Rerum Natura) and is viewed by many as the poet's finest achievement. We will read selections from both works, concluding with the epilogue at the end of Georgics Four, which relates the tragic love story of Orpheus and Eurydice.

LATN 1040B. Virgil: Aeneid.
Close reading of selections from all twelve books of Virgil's epic.

LATN 1060A. Latin Prose: Further Readings in Roman Historiography.
No description available.

LATN 1060B. Sallust.
A study of the nature and themes of Roman historical writing through reading one of its major representatives: "Catilinarian Conspiracy" and selections from Sallust's other works. Comparison with other authors writing on the same topics.

LATN 1060C. Sallust and Livy.
Two major Roman historians provide a basis for study of style, intent, veracity, and stature.

LATN 1060D. Sallust, Livy, and Tacitus.
Three major Roman historians provide a basis for study of style, intent, veracity, and stature.

LATN 1060E. Livy.
Close readings of Livy's history of Rome, From the Foundation of the City. As we read selections from Books 1, 5, and 21, we will explore several historiographical aspects of Livy's text. We will consider both the historical tradition Livy was adapting and the influence and intrusion of the Augustan regime upon Livy's particular construction of the past. We will pay special attention to the roles played by myth, legend, and history. We will also discuss the text as literature and examine how the historian structures and crafts his work into individual books, sets of books, and a coherent multi-volume whole.

LATN 1060F. Ovid.
Reading of selections from Ovid's poetry, with emphasis placed both on close reading and on the texts' engagement with poetic issues (genre and intertextuality) and with the wider political and cultural issues of Augustan Rome.

LATN 1060G. Tacitus.
Will examine the literary and historical significance of Tacitus' Annals. In addition to reading the entire Annals in English, we will focus on books 1 and 4 of the Latin text, translating 6-8 pages per week (time permitting, we will also practice some sight-translations from book 14). In an effort to understand Tacitus' place in the ancient historiographical tradition, we will read several secondary sources, many of which respond to (or build on) Ronald Syme's monumental work. Not open to first year students.

LATN 1060H. Conquest: Caesar and Tacitus.
Caesar's account of the Gallic Wars reconstructs his conquests, defeats, and ultimate victory. We will consider the great general's aims and objectives in launching such a major military campaign and in writing a history of these endeavors. Was he simply seeking greater glory for the Roman people? After the midterm, we will turn our critical attention to the life of another Julius: Cn. Julius Agricola, the Imperial general largely responsible for Rome's conquest of Britain. In this moral biography of his father-in-law, Tacitus mixes panegyric and invective to reveal the less savory aspects of imperialism: Rome's rapacity, corruption, greed, and despotism.

LATN 1060I. Senecan Tragedy.
Close reading and thorough translation of two Senecan revenge tragedies, the Medea and Thyestes. Emphasis will be on translation of the Latin, but as time permits we will also be discussing the two plays in their mythological, cultural, historical, and performance contexts. Students should already have four semesters of Latin (LATN 0400) or the equivalent.

LATN 1060J. Ovid Heroines.
Ovid's collection of "Heroines" is comprised of fifteen elegiac "letters" from mythological heroines to the lovers who have mistreated or abandoned them, as well as three pairs of letters between heroic lovers and their beloveds. We will read selected Heroines in Latin and the remaining poems in English translation. Emphasis will be placed on close reading of the Latin and on the poems' engagement both with poetic issues (e.g., genre and allusion) and with the wider political, social, and cultural discourses of Augustan Rome. DPLL LILE WRIT

LATN 1110A. Apuleius.
No description available. WRIT
LATN 1110B. Augustine, *Confessions.*
We will read the *Confessions* in the light of Augustine's use of ancient scriptural and pagan language, attending to the ways in which diction impinges on meaning in the autobiographical portions of the work. We will also read excerpts from some of the works written prior to it as a control and on our understanding of the *Confessions.*

LATN 1110C. Caesar: *Bellum Gallicum.*
No description available.

LATN 1110D. Civil War Literature.
Reading of Latin works that deal with the reality and experience of civil war, focusing primarily on the *Bellum Gallicum* of 49-48 B.C.E.: Caesar's *Civil War,* Cicero's letters of the time, Cicero's Caesarian orations, and selections from Suetonius and Lucan. Additional readings in translation.

LATN 1110E. Comedy.
No description available.

LATN 1110F. Fortunatus.
Wide reading in the occasional poetry of the most prolific writer of the early medieval period, attending to diction, meter, imagery, allusion, and paying special attention to the (homo- and hetero-) erotic pieces written to the poet's friends.

LATN 1110G. Latin Love Elegy.
Reading of representative selections from each of the Roman elegists: Tibullus, Propertius, and Ovid. Discussion also of the origins and development of love elegy at Rome and exploration of the themes and topoi that define the genre. Follows the poets' negotiations with various discourses and ideologies in Augustan Rome: literary, social, sexual, and political.

LATN 1110H. Literature at the Court of Charlemagne.
We will read widely in the Latin literature of the eighth and ninth centuries, paying attention to genre, meter, patronage, and the shifting uses put to poetry in the decades in which Charlemagne ruled.

LATN 1110L. Lucretius.
Lucretius' *De Rerum Natura,* a long philosophical poem, is both a major source for Epicurean philosophical thought and an example of the ambitious Latin poetry of the late Roman Republic. We will read extensive selections from the poem in Latin. Our aim will be to make a detailed exploration of these sections through close reading of the Latin text and discussion of linguistic, literary, and cultural problems.

LATN 1110J. Petronius.
Close reading of Petronius's comic masterpiece, the *Satyricon,* with emphasis on questions of form, narrative technique, and literary intention.

LATN 1110K. Selections from Latin Authors: Ausonius.
We will read widely in the poetry of Ausonius, aiming for depth and breadth, but focusing especially on those poems that speak to the ways in which the poet transformed or transferred the classical Latin tradition to his successors.

LATN 1110L. Medieval Latin Lyric.
Close reading of a representative sampling of the personal poetry of the Latin Middle Ages, paying attention to what constitutes the lyric mode in the fourth through the twelfth centuries, developments in metrics, the effects of Christianity on vision and voice, the pressures of vernacular traditions, lyric rhetoric.

LATN 1110M. Plautus.
We shall read two or three plays of the comic genius of ancient Rome, with focus on Plautus' language and cultural background.

LATN 1110N. Latin Comedy: Terence.
We shall read several plays of Terence. This course is ideal for freshman who have studied Latin for three or four years in high school and who are taking their first college course and for students returning to Latin after an interval without Latin.

LATN 1110O. Roman Satire.
Survey of the genre of Roman verse satire, with special attention to Horace and Juvenal and additional readings in Lucilius and Persius.

LATN 1110P. Lucan's Civil War.
We shall read closely Books 1 and 2 plus further selections from all ten books of Lucan's epic. Focus will be on translation of the Latin as well as consideration of the poem in its literary and historical context. Neronian Rome. Topics of discussion will include Lucan's choice and treatment of his historical subject (the Civil War between Caesar and Pompey), his use of highly rhetorical (and often gruesome) language, and his relationship with the epic tradition and, more specifically, with his most significant epic predecessor, Vergil. We shall also read the entire poem in English translation.

LATN 1110R. Catilines: Cicero and Sallust.
Close readings of selections from Cicero's Catilinarians and Sallust's *Bellum Catilinæ*.* We will explore how two contemporary authors responded to the same historical event: the Catilinarian conspiracy. We will consider not only the differences of genre (political speech v. historical monograph), but also the ways in which each author's involvement affected the content of his presentation. Additionally, we will examine Sallust's and Cicero's distinctive positions on Latin diction and stylistics. Prerequisite: Knowledge of elementary Latin grammar and intermediate Latin reading skills.

LATN 1110S. Catullus.
We will read all the extant poetry of Catullus with an emphasis on close reading of the Latin text and discussion of linguistic, literary, and cultural problems.

LATN 1110X. Selections from Latin Authors: Ovid, *Ars Amatoria.*
This course will cover Ovid's *Ars Amatoria,* Book One, as well as other selections from Ovid. Our aim will be a detailed exploration of this poetry through close reading of the Latin text and discussion of linguistic, literary, and cultural questions. Quizzes, exams, and a 7 to 10-page term paper will be required.

LATN 1110Y. Latin Epistolography (Cicero, Pliny).
The personal correspondences of Cicero and of Pliny the Younger offer insight into the social and political workings of Rome in two critical periods: the final decades of the Republic and the decades just before the Empire reached its greatest extent. Selections from Cicero, composed for a private audience, expose the statesman's inner hopes and anxieties regarding his family, his friends, and his state. Selections from Pliny, self-consciously published by the author himself, not only recount exciting moments in Roman history (such as the early persecution of Christians and Vesuvius' eruption), but also play with the very genre of epistolography.

LATN 1110Z. Dying in the Republic.
For those who witnessed the bloody violence and brutal butchering of the late Republic, death and dying were everywhere. What did these Romans believe happened to the dead? Was there an afterlife? This course explores two texts (Virgil and Cicero) that deal with visions from and of the spheres beyond the realm of the living. Discussion of supplementary material from other authors, religious studies, and material evidence further develop our notions of what it meant to die in the Republic.

LATN 1120A. Literary Culture in the Latin Middle Ages.
This course will survey the genres relevant to the Latin Middle Ages (beast poetry, hymns, sequences, tropes, miracle and passion plays, prosimetrum) and older forms in their medieval incarnations (epic, lyric, elegy, pastoral). We will also do some work in manuscript production, including the interplay of visual and textual modes. Work in selected medieval vernaculars is possible for students so inclined. We will focus on the tenth through the thirteenth centuries.

LATN 1120B. Poetry at the End of the Roman World.
Edward Gibbon thought the "fame of Ausonius condemned the taste of his age." Study of the taste of Ausonius' age, surveying Latin literature written during and after the so-called fall of Rome. Focus on some masterworks of Silver Latinity as a bridge to our period. Sampling of literature from the 4th, 5th, and 6th centuries. Authors include Prudentius, Ausonius, Paulinus of Nola, Sidonius, Avitus, and Fortunatus.
LATN 1120C. Survey of Late and Medieval Latin.  
A study of the masterworks of the Latin language written between 350 C.E. and 1300 C.E., with special emphasis on the 4th, 8th, and 12th centuries. The historical development of Latin literature; changes in Latin grammar, syntax, and morphology; innovations in genre, prosody, and stylistics; and the relationship of writings (manuscripts) to art and music.

LATN 1120D. Alcuin.  
Alcuin lived a life of wide variety and accomplishment, not least as an important member of Charlemagne’s inner circle and, like many at court, he wrote widely and in multiple genres. From his enormous output this course will focus on the large collections of poetry and letters. We will attend in both gatherings to theme, tone, style, and allusivity and, where appropriate, we will ponder alternate readings in a collection that has not been edited since the late nineteenth century.

LATN 1120E. Writing Lives in Late Antiquity: Jerome and Augustine.  
This course will explore the development of new forms of biographical and autobiographical writing in Latin in the fourth and fifth centuries CE. We will focus on two monumental late ancient authors, Jerome and Augustine, and examine the way that these Christian intellectuals conceive of and express ideal lives in a newly Christian Empire. Texts will include selections of Jerome’s Lives of Paul the Monk and Hilarion, his letters, and Augustine’s Confessions.

LATN 1120G. Reading Humanist Latin Texts.  
The course will explore in depth some important Renaissance or ‘early modern’ works of Latin literature, many of which have not been translated into English. As well as opening up a new field of Latin writing, the course will extend general knowledge of classical literature by involving some less commonly studied ancient sources. It will also introduce some early imprints, enabling you to consider texts directly in the original form in which they first appeared.

LATN 1150. Latin Prose Composition.  
Review of the basic tenets of Latin syntax, composition, and style. English to Latin translation exercises will shore up composition skills, as we study the stylistic traits of seven Roman authors: Cato, Caesar, Cicero, Sallust, Livy, Seneca, and Tacitus. The course will proceed chronologically according to author. Class time will be spent on translation exercises and review, as well as the identification of the stylistic and syntactic characteristics of the seven authors under study.

LATN 1250. Law and Literature.  
No description available.

LATN 1810. Survey of Republican Literature.  
Our purposes in this survey of Latin literature are to acquire a comprehensive historical perspective on Latin poetry and prose until the end of the Republic and a sense of its phases and the dynamics of its tradition; and to read different styles of Latin poetry and prose with confidence and ease.

LATN 1820. Survey of Roman Literature II: Empire.  
This course will survey the major authors of Latin literature in chronological order from Virgil.

LATN 1930A. Cicero: De Oratore.  
Close reading of Cicero’s De Oratore.

LATN 1930B. Ammianus Marcellinus.  
In brilliant if idiosyncratic language, Ammianus Marcellinus, last of the major Latin historians, records the exciting and fateful events of his own times, the fourth century A.D., including therein his personal and dramatic involvement in events. We will chiefly read his famous account of the deeds of the emperor Julian (“the Apostle”). The course is intended for advanced students.

LATN 1970. Special Topics.  
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

LATN 2000A. Senecan Tragedy.
LATN 2080D. Late Latin Poetry
We will read selectively in the fourth (Aeusonius, Prudentius) and the sixth (Fortunatus) centuries, paying attention to the ancient Latinity informing the compositional habits of these poets, and focusing on the collective writing of a commentary on one book of Fortunatus' collection. There will be regular reports and some guest lecturers.

LATN 2080F. Latin in America.
Exploration of some of the rich and extensive 'neo-Latin' writing from colonial Spanish America, with particular emphasis on poetry and literary prose from sixteenth-century Mexico, much of which has never been studied or translated. Latin satires, epigrams, bucolic poems, literary epistles and dialogues will be examined in relation to their classical models and influences – and in the context of the multicultural environment in which they were produced. As well as opening a new world of Latin, this course will familiarize you with the format of some early modern books and manuscripts, and offer a unique perspective on traditional classical literature.

LATN 2080H. Seminar: The Sixth Century.
We will read widely in the literary remains of the sixth century, arguably one of the more active centuries in the western literary tradition in terms of the reception and transformation of the classical literary inheritance.

LATN 2080I. Latin Atlantic Epic.
This course will involve study of Latin epics produced in Europe and the Americas (1500-1780) which addressed themes particular to the discovery, conquest and colonisation of the New World. A range of texts will be introduced, but the class will probably focus on two or three works in particular over the course of the semester. The historical conditions in which these epics were produced will be considered as well as the poets' classical models and their sources in early modern Latin and vernacular writing.

LATN 2090A. Elegy.
No description available.

LATN 2090B. Lucr...
SANS 1400. The Sanskrit Grammatical Tradition

This course introduces Sanskrit to students who have no prior knowledge of any language other than English. Students quickly learn to read the Devanagari script and study the basics of the sound-system of Sanskrit. The course rapidly surveys the basics of Sanskrit grammar while using adaptations of classical Indian myths and stories as reading exercises.

SANS 0200. Elementary Sanskrit II.

This course continues the survey of grammar and the reading exercises of SANS 100. The second half of this course reads selected passages of the Bhagavad Gītā and the beginning of the classic story of Nala and Damayanti from the Mahābhārata. Prerequisite: SANS 0100.

SANS 0300. Sanskrit Epic Narrative.

Consolidates and extends the knowledge of Sanskrit grammar introduced in first year Sanskrit; acquaints students first-hand with basic themes of ancient Indian culture, and cultivates the reading and interpretive skills necessary to read epic and closely related Sanskrit narrative with comprehension and increased fluency. Prerequisite: SANS 0200.

SANS 0400. Classical Sanskrit Story Literature.

Introduces students to the more challenging Sanskrit of classical story literature and continues to extend the knowledge of Sanskrit grammar introduced in first year Sanskrit and developed in SANS 0300, as well as present basic Indian cultural themes. Prerequisite: SANS 0300.

SANS 1020. Early Sanskrit Philosophy and Religion.

Reading in Sanskrit of selections from the Upaniṣhads, Bhagavad Gītā, Dharmasāstras, etc. Prerequisite: SANS 0200.

SANS 1080. The Critical Episodes of the Mahābhārata.

A guided tour of the structure of the Mahābhārata, "The Great Epic of India," through the reading in Sanskrit of selected critical passages.

SANS 1100. Vedic Sanskrit.

Introduction to reading the Rig Veda and later Vedic literature, with particular attention to the grammar of Vedic Sanskrit.

SANS 1400. The Sanskrit Grammatical Tradition.

Introduction to the Sanskrit tradition of vyākārana (grammatical derivation and analysis) through reading Pāṇini's Astādhyāyī and commentaries upon it.

SANS 1600. Sanskrit Belles Lettres.

Introduction to kāvya (classical Sanskrit belles lettres)—poetry, drama, and prose narrative—through the reading of authors of the Classical Period as well as works on aesthetics and commentaries upon them.

SANS 1800. Classical Schools of Indian Philosophy.

Introduction to the classical Brahminic darsanas (comprehensive, rationalized systems of philosophy and, or, theology dealing with Hermeneutics and Philosophy of Language, Logic, Metaphysics, and Ultimate Beatitude) and to corresponding Buddhist and Jain traditions through reading, in Sanskrit, of selected works. Prerequisite: SANS 0400.

In-depth study of major poetic, dramatic, epic, philosophical, religious, grammatical, medical, or astronomical texts. Topics depend on the interest of students.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor's permission required.

SANS 2100. Theme, Language, and Meter in the Mahābhārata.

This seminar will undertake systematic studies of thematic, linguistic, and metric continua in the text of the written Sanskrit Mahābhārata. We shall alternate between the discussion of important scholarly works of interpretation of the epic, important methodological controversies, and selected case studies focused upon variations in epic language and meter and the tracing of the 'threads' of important epic themes across large stretches of the epic. Prerequisite: three or more years study of Sanskrit. Instructor permission required.

SANS 2970. Sanskrit Preliminary Exam Preparation.

For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

SANS 2980. Sanskrit Reading and Research.

Section numbers will vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

Cognitive, Linguistic and Psychological Sciences

Chair
William C. Heindel

Associate Chairperson
Kathryn T. Spoehr

The Department of Cognitive, Linguistic & Psychological Sciences is dedicated to the multidisciplinary study of mind, brain, behavior, and language, and was formed through the merger of the Department of Cognitive and Linguistic Sciences and the Department of Psychology. Both departments have had a long and distinguished history at Brown: the department of Psychology was created in 1892, and the Department of Cognitive and Linguistic Sciences was created in 1986 by merging the Department of Linguistics with the faculty participating in the Center for Cognitive Science. The two departments have typically taken complementary approaches to common scientific questions. State-of-the-art research on these problems requires spanning several levels of analysis using a range of approaches and methodologies, and the integration of the departments aims to create an environment in which this intellectual synthesis will flourish.

For additional information, please visit the department's website: http://www.brown.edu/Departments/CLPS/

Cognitive Neuroscience Concentration Requirements

Cognitive neuroscience is the study of higher cognitive functions in humans and their underlying neural bases. It is an integrative area of study drawing primarily from cognitive science, psychology, neuroscience, and linguistics. There are two broad directions that can be taken in this concentration - one is behavioral/experimental and the other is computational/modeling. In both, the goal is to understand the nature of cognition from a neural perspective. The standard concentration for the Sc.B. degree requires courses on the foundations, systems level, and integrative aspects of cognitive neuroscience as well as laboratory and elective courses that fit within a particular theme or category such as general cognition, perception, language development or computational modeling. Concentrators must also complete a senior seminar course or an independent research course. Students may also participate in the work of the Brown Institute for Brain Science, an interdisciplinary program that unites ninety faculty from eleven departments.

Standard program for the ScB degree Concentration Courses

A total of 16 courses are required for the concentration. Each student is required to pass 9 courses designed to introduce students to the
The concentration in cognitive neuroscience has been designed to provide an understanding of the mind and brain. Electives may be chosen from either neuroscience courses which focus directly on the intersection of mind and brain, or related courses which focus primarily on either the mind or brain. Electives may be chosen from either group. Normally only one elective course that is below the 1000-level may count towards the elective courses required. An appropriate (but additional) laboratory course may be used in lieu of one of the four elective courses. Appropriate Topics course offerings (not listed below) may also count as electives with the approval of the Concentration Advisor.

### Core Cognitive Neuroscience Electives:

- CLPS 0410 Principles of Behavioral Neuroscience
- CLPS 0640 Developmental Psychopathology
- CLPS 1150 Memory and the Brain
- CLPS 1180B Biology of Communication
- CLPS 1400 The Neural Bases of Cognition
- CLPS 1470 Mechanisms of Motivated Decision Making
- CLPS 1480A Cognitive Neuroscience of Emotion
- CLPS 1480B Cognitive Aging and Dementia
- CLPS 1480C Cognitive Control Functions of the Prefrontal Cortex
- CLPS 1480D Cognitive Neuropsychiatry
- CLPS 1560 Visually-Guided Action and Cognitive Processes
- CLPS 1570 Perceptual Guiding and Action
- CLPS 1571 Visual Consciousness
- CLPS 1620 Developmental Cognitive Neuroscience
- CLPS 1621 The Developing Brain
- CLPS 1680B Topics in Development - Developmental Disorders
- CLPS 1820 Language and the Brain
- CLPS 1821 Neuroimaging and Language
- NEUR 0650 Neurobiology of Learning and Memory
- NEUR 1930A Cognitive Neuroscience: Motor Learning
- NEUR 1940I Neural Correlates of Consciousness
- NEUR 1930B From Neurophysiology to Perception
- NEUR 1940D Higher Cortical Function

### Related Electives:

- CLPS 0210 Human Thinking and Problem-Solving
- CLPS 0220 Making Decisions
- CLPS 0500 Perception and Mind
- CLPS 0600 Child Development
- CLPS 0610 Children's Thinking: The Nature of Cognitive Development
- CLPS 0800 Language and the Mind
- CLPS 1100 Animal Cognition
- CLPS 1130 Psychology of Timing
- CLPS 1140 Psychophysiology of Sleep and Dreams
- CLPS 1200 Thinking
- CLPS 1210 Human Memory and Learning
- CLPS 1220 Concepts and Categories
- CLPS 1230 Seminar in Decision Making
- CLPS 1240 Reasoning and Problem Solving
- CLPS 1241 Causal Reasoning
- CLPS 1320 The Production, Perception, and Analysis of Speech
- CLPS 1385 Topics in Language Acquisition: Language Acquisition and Cognitive Development
- CLPS 1389 Discourse Processing
- CLPS 1500 Perception and Action
**Cognitive Science Concentration Requirements**

The field of Cognitive Science uses scientific methods of experimentation, computational modeling, and brain imaging to study mental abilities such as perception, action, memory, cognition, speech, and language, as well as the development and evolution of those processes. Students must become knowledgeable in four areas of emphasis: perception, cognition, language, and cognitive neuroscience, as well as a set of methods relevant to Cognitive Science research. Students then create their own focus area of study, potentially integrating coursework from the Cognitive, Linguistic, and Psychological Sciences department with a diverse subset of fields including Computer Science, Neuroscience, Philosophy, Anthropology, Applied Math and Education. The A.B. program is primarily for students interested in studying human mental processes and acquiring a research orientation to the study of the mind. The Sc.B. program is designed for students who wish to develop a stronger background in Cognitive Science and requires students to engage in a specific research project in the focus area of their choosing. We recommend that prospective concentrators register for one of the gateway courses and at least one other core course in their first or second year.

### I. Standard program for the A.B. degree: 13 courses

**Honors**

Students who would like to pursue a degree with honors are normally expected to have half of their grades as A (or equivalent) within the concentration and are required to satisfactorily complete a written thesis and an oral presentation.
One Experimental Laboratory course such as:
- CLPS 1090 Research Methods in Psychology
- CLPS 1190 Techniques in Physiological Psychology
- CLPS 1290 Laboratory in Cognitive Processes
- CLPS 1490 Functional Magnetic Resonance Imaging: Theory and Practice
- CLPS 1590 Visualizing Vision
- CLPS 1690 Laboratory in Developmental Psychology
- CLPS 1890 Laboratory in Psycholinguistics

One Basic Computation Course such as:
- CLPS 1291 Computational Methods for Mind, Brain and Behavior
- CLPS 1491 Neural Modeling Laboratory
- CLPS 1492 Computational Cognitive Neuroscience
- CSCI 0040 Introduction to Scientific Computing and Problem Solving
- CSCI 0150 Introduction to Object-Oriented Programming and Computer Science
- CSCI 0170 Computer Science: An Integrated Introduction
- CSCI 0180 Computer Science: An Integrated Introduction

One course in Statistical Analysis, such as: 1

Required Capstone:

Choose four from the following:
- ANTH 1800 Sociolinguistics, Discourse and Dialogue
- APMA 1360 Topics in Chaotic Dynamics
### III. Degrees with Honors

Students interested in honors under either the A.B. or Sc.B. programs should identify a faculty honors sponsor and sign up with the concentration advisor during Semester 6. Although there is no minimum grade point average to enter the program, admission to the program is limited to students who have accumulated a strong academic record and is at the discretion of the department. It is expected that honors candidates will conduct a year-long research project under the direction of a faculty sponsor in the CLPS department culminating in a written thesis and oral examination at the end of Semester 8. Students doing honors work must enroll for CLPS 1980 or for two terms, typically in semesters 7 and 8.

### IV. Independent Study

Independent Study is encouraged for the A.B. degree and required for the Sc.B. degree. Students should sign up for CLPS 1970 or CLPS 1980 with a faculty advisor who is a member of the CLPS Department. Arrangements should be made in Semester 6 for students expecting to do independent study during Semesters 7 and/or 8. CLPS1970 or CLPS1980 can count as electives for the concentration requirements.

Cognitive Science concentrators may use at most two credits of CLPS 1970 or CLPS 1980 towards their degree. Students in the A.B. program can use these two credits to satisfy electives. Students in the Sc.B. program must use one of these credits to satisfy the Independent Study requirement (Requirement B in Section II above), and may use the second to satisfy an elective or one of the four additional courses (Requirement C in Section II).

### V. Comments

Both the A.B. and the Sc.B. programs in Cognitive Science reflect recent national trends in the field and the breadth of the course offerings and faculty research interests at Brown. A broadly trained cognitive scientist must possess certain methodological skills, including knowledge of computational methods and research methods (statistics and laboratory techniques), which are incorporated in our skills and methodology requirement. In addition, a cognitive scientist must be conversant in the four major focus areas studied in the field: perception, cognition, languages and cognitive neuroscience. Electives ensure that concentrators have the opportunity to investigate at least one particular area in depth. Finally, the concentration provides an integrative experience to all of its concentrators through the capstone senior seminar. The program is designed to provide the flexibility for each student to design a program that will meet her/his needs and interests.

The Sc.B. program is designed for students who wish to bring a stronger background in general science and a research orientation to their study of cognitive science. Sc.B. candidates must also acquire first-hand experience in doing cognitive science research through an independent study project.
Linguistics Concentration Requirements

Language is a uniquely human capacity that enables us to communicate a limitless set of messages on any topic. While human languages can differ greatly in certain respects, all are intricate, complex, rule-governed systems. Linguistics is the scientific study of these systems, their use in communicative and other social settings, and their cognitive and neural underpinnings. The linguistics concentration at Brown gives students a background in the “core” aspects of the language system: phonetics/phonology (the study of speech sounds and their patterning), syntax (the study of combinatorics of words, phrases, and sentences), and semantics/pragmatics (the study of the meanings of words, sentences, and conversation). Beyond this, students may focus more heavily in one or more of these areas and/or explore related questions such as how children and adults learn language (language acquisition), how utterances are produced and understood in real time (psycholinguistics), or how speaking and understanding are anchored in underlying neural systems (neurolinguistics). Other areas such as historical linguistics, sociolinguistics, philosophy of language, and linguistic anthropology can also be pursued in conjunction with offerings in other departments.

Requirements (10 courses)

Prerequisite Course

- CLPS 0030 Introduction to Linguistic Theory (may be waived in special instances)

Required Courses

- CLPS 1310 Introduction to Phonological Theory
- CLPS 1330 Introduction to Syntax
- AND one of:
  - CLPS 1341 Lexical Semantics
  - CLPS 1342 Formal Semantics
  - CLPS 1370 Introduction to Pragmatics

One course in Psycholinguistics to be drawn from the following:

- CLPS 1310 Language and the Mind
- CLPS 1650 Child Language Acquisition
- CLPS 1800 Language Processing
- CLPS 1820 Language and the Brain
- CLPS 1812 Neuroimaging and Language
- CLPS 1890 Laboratory in Psycholinguistics

or any Topics Course in Language Acquisition or Language Processing

5 additional appropriate electives forming a thematically related set to be determined in consultation with the Concentration Advisor. At least one of these must be drawn from the list of advanced courses listed below, and we strongly recommend that at least one course be an appropriate methods and a topics course. No more than 2 of these courses may be drawn from below 1000 level courses. The electives can be drawn from any of the above courses, or any of the other linguistic/language related courses in the CLPS department. Electives may also be drawn from courses in other in consultation with the Concentration Advisor; a list of courses which standardly count towards the Linguistics Concentration (provided they form part of the thematically related set) is appended below.

Advanced Courses

- CLPS 1320 The Production, Perception, and Analysis of Speech
- CLPS 1332 Issues in Syntactic Theory
- CLPS 1342 Formal Semantics
- CLPS 1360 Introduction to Corpus Linguistics
- A course from the 1381 series (Topics in Phonetic & Phonology)
- A course from the 1383 series (Topics in Syntax and Semantics)

Total Credits

10

1 It is recommended that students take CLPS 1310 and CLPS 1330 before higher level courses.

Honors (12 courses)

Candidates for Honors in Linguistics must meet all of the requirements above, write an Honors thesis, and take two additional courses. One course is normally CLPS 1880 (Directed Research in Cognitive, Linguistic, and Psychological Sciences) - intended for work on the Honors thesis. Three of the total 12 courses must be drawn from the advanced list above (the Directed Research course counts as one of the advanced courses). Normally a 3.5 grade-point average in the concentration is required for admission to the Honors program. Honors candidates should formalize their projects in consultation with their advisors by the end of September 6.

Refer to the CLPS Honors Program page for detailed information about the Linguistics Honors program.

Independent Study

Independent study is encouraged for the A.B. degree. Students should sign up for CLPS 1980 with a faculty advisor who is a member of the Department of Cognitive and Linguistic Sciences (CLPS). Arrangements should be made in Semester 6 for students expecting to do independent study during Semesters 7 and/or 8.

Do Foreign Language Courses Count?

Foreign language courses will generally not count towards the concentration requirements, except those that focus on the structure or history of the language. Students are, however, advised to gain familiarity with a foreign language, and are encouraged to take at least one course which deals with the structure of a language other than English.

NOTE: Please refer to the Cognitive, Linguistic, and Psychological Sciences undergraduate Linguistics concentration page for updates not listed here.

Psychology Concentration Requirements

Psychology encompasses a range of phenomena and levels of analysis in pursuit of three goals: to deepen understanding of cognitive and neural
mechanisms of sensation, perception, learning, and emotion; to probe the biological and evolutionary foundations of animal behavior; and to clarify the social perception and assessment of individuals and groups. The concentration offers an array of course options, including study in quantitative methods, laboratory techniques, and senior seminars on specialized topics. Students take upper-level courses in the field’s major sub-disciplines, including perception and cognition, behavioral neuroscience, and social psychology. The concentration in Psychology prepares students for careers in clinical psychology, business, policy-related research positions, law, and education.

Concentration Requirements

Introductory Psychology: Planning a concentration and choosing elective courses requires general knowledge about the topics psychologists study. Introductory Psychology (CLPS 0010) is required for the concentration. Students may satisfy the Introductory Psychology requirement by submitting AP (score of 4 or 5) or IB (score of 5 or above) test credit or by transferring Introductory Psychology course credits from other 4-year institutions.

Quantitative: Careers in Psychology and related fields require familiarity with statistics. Therefore, the Psychology concentration requires Quantitative Methods in Psychology (CLPS 0900). CLPS 0900 is a prerequisite for most of the laboratory courses, so concentrators should plan to take this course by their fourth semester. The department does not grant concentration credit for AP Statistics, regardless of score. Students who feel that CLPS 0900 is too elementary can complete APMA 1650 for concentration credit.

Course Distribution: Concentrators must take at least one laboratory course, which provides students with hands-on experience with research methods in a substantive area of psychology. Because the laboratory serves as the basis for independent research and is a prerequisite for the Honors program, concentrators should plan to take their lab before their senior year. This course must be taken in CLPS. Independent study or laboratory courses in other departments will not fulfill this requirement.

Advanced Seminar: Both A.B. and Sc.B. concentrators are required to take one advanced limited-enrollment seminar/critical readings course. The list of approved seminars varies yearly. Contact one of the concentration advisors for details.

AP and Transfer Credits: Students receiving AP credit for Introductory Psychology can place out of CLPS 0010, and can enroll directly in higher-level psychology courses. AP credits are not accepted for other concentration requirements. Students transferring from another college or university, or students studying abroad or at another US institution, may receive transfer credits for other concentration requirements. Please refer to our departmental policy on applying AP and transfer credits.

The A.B. degree requires 12 courses. The Sc.B. degree requires 17 courses. (Concentrators should complete either the A.B. or Sc.B. Concentration Worksheet before meeting with their Concentration Advisor.)

FOR DETAILED UPDATES, PLEASE REFER TO THE COGNITIVE, LINGUISTIC, AND PSYCHOLOGICAL SCIENCES (CLPS) UNDERGRADUATE PAGE.

An advanced seminar/critical readings course in CLPS, numbered above 1000, is required. Two elective courses, with approval of the concentration advisor, are required. The electives should complement the student’s main area of interest in Psychology. These courses can be taken outside of CLPS. Only courses that carry concentration credit in the home department can be used for this requirement. In addition, independent study and GISP courses will not fulfill this requirement.

Courses

Cognitive, Linguistic and Psychological Sciences

CLPS 0010. Elementary Psychology: An Introduction to Mind and Behavior.
A survey covering the roles of inherited and environmental determinants of human behavior. Topics include sensation, perception, learning, memory, motivation, emotion, neural processes, language, social development, personality assessment, obedience, interpersonal attraction, and the diagnosis, origins, and treatment of mental illness. Laboratory sections illustrate methodologies used to study these issues. Topic selection varies with instructor.

Cognitive science is the study of the mind from an interdisciplinary perspective. It focuses on such questions as how do we process information to recognize objects and faces, to know that a cup is not a bowl, to remember and learn, and to speak and understand? How can studying the brain inform us about the mind? This course will examine the above questions and discuss major themes in cognitive science including nature-nurture, categories and representations, and the nature of computations.

CLPS 0030. Introduction to Linguistic Theory.
The ability to speak and understand a language involves having mastered (quite unconsciously) an intricate and highly structured rule-governed system. Linguists seek to model that rule system. This course introduces the principles underlying phonology (the principles which govern how sounds are put together), syntax (the rule system governing sentence structure), and semantics (the system which relates sentences to meanings). LILE

CLPS 0040. Mind and Brain: Introduction to Cognitive Neuroscience.
This course provides an introduction to the neuroscientific study of cognition. Topics surveyed in the course include the neural bases of perception, attention, memory, language, executive function, emotion, social cognition, and decision making. In covering these topics, the course will draw on evidence from brain imaging (fMRI, EEG, MEG), transcranial magnetic stimulation, electrophysiology, and neuropsychology. The course will also consider how knowledge about the brain constrains our understanding of the mind.

CLPS 0050A. Computing as Done in Brains and Computers.
Brains and computers compute in different ways. We will discuss the software and hardware of brains and computers and with introduction to the way brains are organized, the way computers are organized, and why they are good at such different things. We will talk about our current research, the Ersatz Brain Project, an attempt to design a first-class second-class brain. Enrollment limited to 15 first year students. FYS

In a series of theoretical articles, Melvyn Goodale and his collaborators have proposed that separate, but interacting visual systems have evolved for the perception of objects on the one hand and the control of actions directed at those objects on the other hand. This seminar will cover the basic literature addressing this problem with studies involving human and animal studies. Enrollment limited to 20 first year students. FYS

CLPS 0050C. Intentionality and Theories of the Mind.
The purpose of this seminar is to familiarize students with the topic of “theory of mind” – how we understand each other's mental states. In particular, we will focus on how human beings understand other’s intentions and beliefs and come to act volitionally. Readings will span developmental, cognitive, social, and cross-cultural psychology as well as neuroscience and philosophy. Emphasis in assignments will be on evaluating and constructing scientific investigations. Reserved for First Year students. Enrollment limited to 20. FYS LILE
CLPS 0050D. Reading Science/Understanding Science.
How is science presented in the modern media? How does this shape the way we think about and understand scientific ideas and the scientific process? Focusing on the brain sciences, we will critically read several award-winning scientific works written for non-specialized audiences, including books by Dawkins, Gould, Pinker, and Sapolsky. We will also consider critiques of these works, as well as related shorter articles intended for wider audiences (e.g., from Scientific American). Finally we will examine several examples of “bad neurojournalism” in an attempt to understand what makes good and bad science reporting. No prerequisites; enrollment limited to 20 first year students. FYS LILE

CLPS 0050E. Animal Minds.
This freshman seminar examines what we can learn about the mind of an animal through observations and manipulations of that animal’s behavior. Drawing on the work of biologists, ethnologists and psychologists in the field and in the lab, we will critically evaluate the evidence that animals have minds and debate the thesis that their minds are qualitatively indistinguishable from our own. Enrollment limited to 20 first year students. FYS

CLPS 0050F. Olfaction and Human Behavior.
In this first year seminar we will explore how our sense of smell is involved in a variety of psychological processes, including: emotion, learning, memory, language and social behavior. Topics such as olfaction in health, technology and marketing will also be critically examined. Students will acquire the basics of olfactory physiology and perception-cognition through course reading, projects and discussions. Enrollment limited to 20 first year students. FYS

CLPS 0050G. Pidgins, Creoles, and the Emergence of Language.
Pidgins and creoles are language systems that arise in situations of contact between groups without a common language. Their study has informed models of language change and has inspired theorizing about the origins of language, in particular the role children play as agents of language creation and language change. In the last twenty years, however, the field has seen significant upheavals, as foundational assumptions have been challenged and in some cases overturned. This course will consider pidgins and creoles within their socio-historical context, with primary emphasis on what pidgins and creoles can tell us about language emergence and language change. Enrollment limited to 20 first year students. FYS LILE WRIT

CLPS 0050L. Anthropogenic Activity + Animals.
Human activities that affect animals and their habitats are both widespread and increasing with largely negative impacts. In this first year seminar, we will examine the effects of anthropogenic disturbances on animal behavior through reading and discussion of scientific papers and conversations with expert guests. Topics include anthropogenic feeding on wildlife; noise, light and chemical pollution on aquatic and terrestrial species; recreational land and water use; technological modernization along migration routes; deforestation, hunting, and poaching. Students conduct an independent examination of environmental disturbances on a species from their country of origin or one with special personal relevance. Limited to first years. FYS LILE WRIT

CLPS 0060. Developmental Psychology.
This course will introduce students to the broad field of developmental psychology. The goal is to provide students with an understanding of human psychological development from birth through late adolescence. We will cover biological, cognitive, perceptual, emotional, and social domains. These processes will be described within a theoretical and empirical framework.

CLPS 0100. Learning and Conditioning.
This course will introduce students to the broad field of human learning and conditioning. Emphasizes theories and data derived from studies of Pavlovian conditioning and instrumental learning with nonhuman animals, but also considers implications for human behavior (e.g., drug-dependent behaviors, eating disorders, behavior modification and psychopathologies). No prerequisites.

An examination of physiological and evolutionary mechanisms underlying species-specific behavior in both vertebrate and invertebrate animals. Topics include: evolution and mechanisms of sensory systems, modes of locomotion, orientation and navigation, communication, and cognitive capacities of animals.

CLPS 0120. Introduction to Sleep.
Uses sleep as the focal point for describing complex behavioral phenomena. How is sleep measured and defined? How does sleep differ across species? What accounts for the timing of sleep? How does sleep change with age? What are the behavioral, physiological, and cognitive concomitants of different states of sleep? How can dreaming be understood? What can go wrong with sleep? Recommended prerequisite: CLPS 0100, CLPS 0020 or NEUR 0010; or an AP course in psychology or physiology.

CLPS 0200. Human Cognition.
Introduction to theoretical issues and empirical findings motivating controversies in human cognition. Basic issues in cognition - including attention, memory, categorization, reasoning, decision making and problem solving will be examined. Emphasis will be on experimental methods and formal theories. LILE

CLPS 0210. Human Thinking and Problem-Solving.
An inter-disciplinary introduction to adult human thinking and reasoning. Covers logical thinking, computational models, reasoning and the scientific method, creativity, intelligence, visual thinking, problem solving in a group setting, and methods of teaching "thinking skills." Students will learn about research findings on these topics and will practice methods for improving their own skills.

CLPS 0220. Making Decisions.
Life is full of decisions. Some decisions are made rationally, others could be improved. This course considers the psychology of human decision-making, the analysis of optimal decision-making, and implications for individual action and social policy. Topics include: chance and preference (e.g., how do consumers weigh attributes when making purchases?); the value of information (e.g., when should physicians order expensive diagnostic tests?); risky choice (e.g., is it rational to play the lottery?).
CLPS 0330. The Grammar of English.
English probably has greater international utility and importance today than any other human language. This no-prerequisites course takes seriously the idea that we should be able to describe its structure accurately. Challenging two hundred years of myths and mistakes, it attempts to offer students a rigorous basis for understanding sentence structure. Enrollment limited to 40.

CLPS 0400. Brain Damage and the Mind.
Brain damage in human subjects can produce dramatic and highly selective impairments in cognitive functioning. This course provides an overview of the major neuropsychological disorders of perception, language, memory, thought, and action. Emphasizes the development of human information processing models for understanding the cognitive deficits observed in brain-damaged patients and the implications of neuropsychological findings for models of normal cognition.

CLPS 0410. Principles of Behavioral Neuroscience.
A lecture course that covers the bodily systems that underlie motivated behavior. Topics include the autonomic nervous system, drugs and behavior, hormones and behavior, reproductive physiology/behavior, homeostasis, biological rhythms, emotions and stress, the neurobiology of mental disorders, and biological perspectives on learning and memory. Does not cover synaptic transmission or sensory processing and perception. Prerequisite: background in psychology, neuroscience, or linguistic/cognitive science including an introductory course (CLPS 0040 COGS 0720, CLPS 0400 PSYC 0470), or NEUR 0010.

CLPS 0500. Perception and Mind.
How do the mind and the brain take physical energy such as light or sound and convert it into our perception of the world? This course examines the behavioral and biological bases of human and animal perceptual systems, including vision, audition, smell, taste, and touch. Particular emphasis is placed on high-level perception and how it relates to other cognitive systems.

Visual art can be viewed as an exploration of perceptual questions. This course considers the representation of space and time in painting and film from the viewpoint of the science of visual perception. Topics include Renaissance linear perspective, picture perception across cultures, color, form, shape, abstraction, how film editing constructs events, and why Godzilla looks phony. Slide lectures and visual exercises. LILE

CLPS 0520. Art, Music, and Science: An Introduction to Aesthetics.
Topics include: art and representation; art and the emotions; beauty, form, and aesthetic experience; and the definition of art. We will focus especially on the visual arts, though we will consider examples drawn from music as well. We will be looking throughout to understand how empirical research bears on traditional topics in the philosophy of art, drawing from empirical perception science, evolutionary biology, and cognitive neuroscience. The course will be example driven: We will try out philosophical theories against our lived reactions to many dozens of images of visual art, and against our reactions to a number of music selections.

Visual illusions are vivid examples of the mistakes our visual systems make. This interdisciplinary course is designed for art and science students with interests in visual perception to explore how and why visual processing sometimes fails. Course work will include hands-on laboratory experiments and art construction exercises. Topics will include color, brightness, and geometric illusions. Enrollment limited to 15. LILE

CLPS 0600. Child Development.
Children's behavior and development from infancy through adolescence. Major topics include learning, perception, parent-child attachment, language, intelligence, motivation, emotional development, and peer relations. Major developmental theories, including psychoanalytic, ethological, social learning, and cognitive, are considered as organizers of these phenomena and as a source of testable hypotheses.

An examination of children's thinking and cognitive development from infancy to middle childhood. Considers a range of topics including memory, reasoning, categorization, perception, and children's understanding of concepts such as space, time, number, mind, and biology. Major theories of cognitive development are described and evaluated in light of the available psychological data. LILE

CLPS 0640. Developmental Psychopathology.
A comprehensive introduction to child and adolescent psychological disorders. Focuses on risk, vulnerability, and protective factors in order to probe why some children develop significant psychological problems when others do not. Emphasis on how biological, psychological, and sociocultural factors interactively contribute to the development of psychopathology. Examines effective treatments, as well as educational and social policy implications. Prerequisite: CLPS 0010, 0020, or 0600.

CLPS 0700. Social Psychology.
Examines the theories, findings, and methods of social psychology. Topics include: social cognition (person perception, attitudes), social influence (cultural sources of attitudes, conformity), and social relations (aggression, altruism, prejudice). Students become better informed consumers of empirical research and acquire a new framework for interpreting social behavior. Applications to historic and current events. LILE

CLPS 0701. Personality.
A survey of the major perspectives (psychoanalytic, behavioral, humanistic, etc.) within theories of personality. Particular emphasis is placed on the integration of research and theory.

CLPS 0710. The Psychology and Philosophy of Happiness.
The course explores four fundamental questions about happiness: What is happiness—pleasure, life satisfaction, something else? How is happiness achieved—what are the myths and realities about what conduces to happiness? Can happiness be achieved—are we naturally well suited to be happy? Why pursue happiness—is it sufficient, or even necessary, for a good life? The course examines classic contributions from philosophy and psychology, the two disciplines that have studied happiness most extensively. Team-taught by professors from both philosophy and psychology, it invites students to compare and combine both approaches.

CLPS 0720. Thinking About the Social World.
Acting in and understanding the social world require, among other things, the process of abstraction. Abstraction broadens mental horizons, integrates new experiences, and allows communication with other people. In this course we will discuss the different ways in which abstraction has been defined in the literature and look into some surprising implications of abstraction for people's understanding of, and actions in, the social world. This is a mid-level seminar for students with introductory background to psychology, cognitive science, or cognitive neuroscience.

CLPS 0800. Language and the Mind.
Explores fundamental issues in psycholinguistics: what is the nature of language; what are its biological underpinnings; how does the mind process speech, recognize words, parse sentences, comprehend discourse; what do effects of brain injuries on language reveal about the organization of language in the mind? Syntheses of results from multiple modes of analysis — linguistic, psychological, computational, and neurophysiological — are emphasized. LILE

CLPS 0810. The Biology and Evolution of Language.
Human language is made possible by specialized anatomy and brains that can regulate speech production, complex syntax, and acquiring and using thousands of words. This course examines Darwin's theory of evolution and the archaeological and fossil records of human evolution; studies of chimpanzee communication, culture, and language which provide insights on human evolution; the physiology of human speech; and recent studies of the brain bases of human language and thought.

CLPS 0900. Quantitative Methods in Psychology.
A survey of statistical methods used in the behavioral sciences. Topics include graphical data description, probability theory, confidence intervals, principles of hypothesis testing, analysis of variance, correlation, and regression, and techniques for categorical data. Emphasizes application of statistical methods to empirical data.
CLPS 1080A. Intentionality.
The purpose of this seminar course is to familiarize students with the topic of "theory of mind" - how we understand other's mental states. In particular, we will focus on how children develop an understanding of others' intentions and beliefs. While the majority of the reading will be in developmental psychology, cognitive, social, clinical and comparative literatures will also be examined.

CLPS 1080C. Evolution of the Brain Bases of Creativity.
Humans share virtually all of our genes with chimpanzees, yet you are reading this sentence on a device that no chimpanzee could have made. For that matter, your grandparents would have been baffled had they encountered email. Creativity - the drive to think of new concepts, new ways of doing things, and new things - marks us. In this vein, we will read and discuss the findings of new studies that are exploring the neural bases and evolution of human creativity. We will also consider the alternative, that we are ruled by genes that evolved more than 50,000 years ago. Enrollment limited to 40.

CLPS 1090. Research Methods in Psychology.
This upper division laboratory course is designed to provide CLPS concentrators (psychology/cognitive science/cognitive neuroscience) with the tools to comprehend, conduct, and report on psychological research. Students will learn about the central aspects of research, including reviewing literature, formulating hypotheses, designing experiments, collecting/analyzing data, and presenting findings in written and oral reports. Lectures and laboratory exercises will survey a variety of methods to prepare students to design and execute their own research projects. Class time will be divided between lectures, discussion, labs, and student presentations. Prerequisites: CLPS 0010 or CLPS 0200 and CLPS 0900 or APMA 1650. Enrollment limited to 25.

CLPS 1091. Research Methods And Design.
This course is designed to provide CLPS concentrators (psychology/cognitive science/cognitive neuroscience) with a variety of tools needed to conduct research: sources of data, standard designs (e.g., factorial experimental, correlational, longitudinal), research ethics, and best practices of literature review (e.g., meta-analysis). The course will include lectures, laboratory exercises, data collection, statistical analysis, and presentation of findings in written and oral reports.

CLPS 1092. Psychological Theory.
An examination of types of explanations used in psychology, with an emphasis on quantitative models of perception, learning, and motivation. Students implement models on a computer and compare theoretical predictions to observed facts. No previous experience with computers assumed: students will learn to implement and develop theories based upon spreadsheets.

CLPS 1100. Animal Cognition.
A seminar focusing on the experimental analysis of animal mental processes such as perception, attention, learning, memory, and decision-making. Some specific topics include navigation, visual search, working memory, time perception and memory, song learning in birds, and concept formation. Prerequisite: advanced lab.

CLPS 1110. Behavior Modification.
Examines basic principles of learning theory as applied to the development and change of human behavior. Topics include: experimental design in clinical research, addictive behavior, fear and anxiety reduction, cognitive behavior modification, self management, child behavior modification, and clinical therapy. Prerequisites: CLPS 0701 (PSYC 0300) or CLPS 1700 (PSYC 1330). Enrollment limited to 50.

CLPS 1120. Physiological Psychology.
Research articles focusing on the neural regulation of behavior are discussed, with an emphasis on experimentation in animal models. Topics vary from year to year but may include the neural and molecular mechanisms regulating social behaviors, the mechanisms and site of action of drugs of abuse, development of neural systems, sensory information processing and genetic analysis of behavior. Prerequisites: CLPS 0410 (PSYC 0750) or NEUR 0010. Enrollment limited to 25.
CLPS 1191. Animal Behavior Laboratory.
This course is designed for students with a serious interest in animal behavior research. Topics include methods in lab and field research, enrichment programs for captive species and conditioning procedures for managing zoo and shelter animals. Prerequisites: CLPS 0900 (COGS/PSYC 0090). Enrollment limited to 12; not open to first-year students.

A laboratory course on the prediction, control, and explanation of the behavior of animals in simple environments. Prerequisite: CLPS 0900 (PSYC/COGS 0090).

CLPS 1193. Laboratory in Genes and Behavior.
Laboratory course in behavioral neuroscience designed to provide research experience in assessing effects of genetic alterations on behavior. Students examine the behavioral phenotype of a mouse model of human disease. Mice are tested on behavioral batteries to assess, for example cognitive, affective, and sensorimotor behavior. Recent classes tested models of early life stress, Fragile X Mental Retardation, and Alzheimer’s Disease. Students will test the mice, analyze the data, and prepare a manuscript suitable for publication in a scientific journal. Prerequisites: CLPS 0410 or NEUR 0010, and CLPS 0900 or instructor permission. Enrollment limited to 10; not open to first-year students. WRIT

CLPS 1194. Sleep and Chronobiology Research.
Part of a summer immersion in behavioral science research in human sleep and chronobiology. Instruction in human sleep and circadian rhythms, research techniques in basic physiology, laboratory skills, ethics of research, and basic CPR. Research seminars explore other techniques and career paths. Recommended prerequisite: CLPS 0100 is preferred; NEUR 0010 is also acceptable. Enrollment limited to 12.

Course open only to students admitted to the Sleep and Chronobiology Research Apprenticeship. Must apply here: http://www.sleepforscience.org/academic/apprenticeship.php. CLPS 1194 has a commitment from late May to Aug 2016.

CLPS 1200. Thinking.
An investigation of conceptual structure, judgment, and inferential processes. The focus is on the relation between empirical evidence, theories, and models of cognitive process and structure. Prerequisite: CLPS 0200 (COGS 0420).

CLPS 1210. Human Memory and Learning.
How does human memory work and why are some things easier to learn and remember than others? This course covers experimental and behavioral studies of human memory including long- and short-term memory for text, pictures, spatial information, and autobiographical events. Emphasis on real-world situations, including education, in which memory and learning play a role. Prerequisite: CLPS 0200 (COGS 0420).

How is human memory like a search engine? Is human knowledge like the internet? What can artificial intelligence and machine learning tell us about the mind? How can studying the mind help machine learning? This seminar explores parallels between human cognition and contemporary research in computer science, emphasizing common problems. In addition to the above, topics include simplicity, object recognition, categorization, and causality.

Our knowledge of the world is organized into concepts and categories. What is the basis of this organization? What information is used to make category judgments? How do children acquire concepts and categories? How are our concepts related to the language we speak? This course will examine these questions from an interdisciplinary perspective, combining relevant work in cognitive and developmental psychology, philosophy, linguistics, and computational modeling. Recommended prerequisite: CLPS 0200 (COGS 0420).

CLPS 1230. Seminar in Decision Making.
No description available.
CLPS 1329. Introduction to Programming for the Mind, Brain and Behavior.
This winter session course will provide an introduction to MATLAB programming for students in the life sciences with no prior programming experience. At the end of this course, students will be able to implement MATLAB functions independently to solve many common programming challenges associated with the study of the mind, brain and behavior — from conducting statistical data analyses to basic input/output functions for parsing a file to implementing their own psychophysics experiments. A life-long learning outcome is for students to develop computational thinking skills, a way of solving problems that draws on fundamental concepts borrowed from computer science.

CLPS 1310. Introduction to Phonological Theory.
Examines some of the classic and current issues regarding sound structure in the world's languages and introduces the theoretical tools needed to solve them. After an introduction to articulatory phonetics and phonemic analysis, it focuses on phonological analysis of different languages, and discusses rule-based and constraint-based approaches to phonology. Implications for language learning and language change are discussed. Prerequisite: CLPS 0030.

CLPS 1320. The Production, Perception, and Analysis of Speech.
An introduction to the basis of the acoustic analysis of speech, the anatomy and physiology of speech production, and the perception of speech. Discussion and demonstration of quantitative computer-implemented methods for speech analysis. Linguistic and cognitive theories are discussed in relation to the probable neural mechanisms and anatomy that make human speech possible. Lectures, discussion, and laboratory demonstrations.

CLPS 1330. Introduction to Syntax.
An in-depth investigation of natural language syntax, an intricate yet highly organized human cognitive system. Focuses primarily on the syntax of English as a means of illustrating the structured nature of a grammatical system, but the broader question at issue is the nature of the rule system in natural language syntax. Prerequisite: CLPS 0030 (COGS 0410).

CLPS 1340. Introduction to Semantics.
An introduction to a variety of issues in linguistic semantics and in the related philosophical literature. Topics include: the nature of semantic representations; the relationship between meaning and the world; truth-conditional and "logical" semantics; word-meaning; the interaction of semantics and pragmatics; presupposition; the interaction of semantics with syntax.

CLPS 1341. Lexical Semantics.
The representation of word meaning and generalizations about the way in which meanings are packaged into words. Topics include: "fuzzy" meanings, natural kind terms, how word meanings are decomposed. Special emphasis on how temporal properties are encoded, on the status of "thematic relations," and on how the fine-grained structure of word meanings impacts on the syntax. Recommended prerequisite: CLPS 0030 (COGS 0410).

CLPS 1342. Formal Semantics.
Model-theoretic approaches to the study of the semantics of natural languages. Develops the tools necessary for an understanding of "classical" formal semantics (the lambda calculus, intensional logic; Montague's treatment of quantification, etc.); then applies these tools to the analysis of natural language semantics; and finally turns to recent developments in formal semantic theory. Prerequisite: some familiarity with syntax or semantics or basic set theory and logic.

CLPS 1350. Introduction to Mathematical Linguistics.
Introduction to basic concepts and goals of mathematical linguistics with emphasis on implications for theories of natural languages. Investigates the properties of regular, context-free, and context-sensitive languages; categorial grammar and combinatorics and the properties of natural language in light of the results on formal grammars. Recommended prerequisite: CLPS 0030 (COGS 0410) and/or a background in basic theory and logic; familiarity with syntax is recommended.

CLPS 1360. Introduction to Corpus Linguistics.
The study of Linguistics relies on language production data. Language corpora contain various sources of such data, often annotated to include additional information such as syntactic, semantic and phonological properties. Such databases often complement or even replace data sources used in other disciplines. This class aims to train students in the use of some of the tools that are commonly used to access and evaluate data in linguistic corpora. Prerequisite: CLPS 0030. Enrollment limited to 25.

CLPS 1370. Introduction to Pragmatics.
Any time we utter a sentence in conversation, the perceived meaning of that sentence interacts with the discourse context in a rich variety of ways. On the one hand, aspects of a sentence's meaning are "filled in" or enriched by the prior conversation as well as non-linguistic context. On the other hand, utterances shape the future of the conversation in various ways too. This course is an introduction to the scientific study of such phenomena. Specific topics include: presupposition, implicature, speech acts, deixis, anaphora, (in)definiteness, and information structure. LILE

CLPS 1381. Topics in Phonetics and Phonology: Intonational Phonology.
This course is an in-depth study of intonation—the manipulation of pitch and length to signify sentence-level meaning—in English as well as in other languages. This course will have two components, which will overlap considerably. In the laboratory skills component, you will learn how to collect, transcribe, measure, and analyze intonational data in Praat (a program for acoustic analysis), while in the theoretical component, you will read about and test the claims of various theories of intonation. With these skills, you will conduct independent research over the course of the semester. The course will also cover the interface between intonation and syntax/semantics, including the realization of focus in prosody.

CLPS 1382. Sounds of the World's Languages.
This course will introduce you to phonetics: the study of the physical aspects of speech. You will learn how to produce, perceive, describe, and transcribe the sounds of the world's languages. You will learn the fundamentals of acoustic and articulatory phonetics to better understand the properties of and mechanisms behind each speech sound. You will also gain practical skills in recording and measuring acoustic data, transcribing data in the International Phonetic Alphabet (IPA), and producing both familiar and foreign sounds in isolation as well as in real and hypothetical words. Prerequisite: CLPS 0030 or equivalent.

CLPS 1383A. The Boundary of Semantics and Pragmatics.
This course will examine some recent controversies regarding the question of just what is accounted for by grammatical apparatus as opposed to what can be accounted for by "Gricean" pragmatics (i.e., inferences that listeners draw that are not encoded in the grammar). Particular attention will be paid to some topics surrounding negation, including the distribution of "Negative Polarity Items". Prerequisite: CLPS 1330, 1340, or 1341. Enrollment limited to 40.

CLPS 1383D. Topics in Syntax and Semantics: The Syntax, Semantics and Processing of Ellipsis.
Ellipsis is the phenomenon whereby a short expression is understood as a longer paraphrase. An example: "Lindsay can ski that course, but Bode can't". The second part is understood as "And Bode can't ski that course". How are such cases handled by the grammar (is there "silent linguistic material interpreted by the semantics")? And how do language users process these? These questions have been debated for decades, and because ellipsis constructions interact with many other phenomena, the analysis of this domain is central in grammatical and processing theory. This seminar examines this with respect to several constructions and theories.
CLPS 1385. Topics in Language Acquisition: Language Acquisition and Cognitive Development

What is the relationship between how we think and how we speak? This course explores the concurrent development of children's linguistic and cognitive abilities. Topics include the relationship between word meanings and concepts, the structure of the mental lexicon, pragmatic development, and the Whorfian hypothesis (whether speakers of different languages think differently). Students will read and discuss empirical and theoretical articles, and complete a set of writing assignments and problem sets. Prerequisite: CLPS 0610 or equivalent, or permission of the instructor. Appropriate for students interested in developmental/cognitive psychology, linguistics, and applied fields such as speech-language pathology.

CLPS 1387. Topics in Neurolinguistics

No description available.

CLPS 1389. Discourse Processing

Over the last decades psycholinguists have converged on a generally accepted framework for describing how humans process language at the sentence level. Much less is understood, however, about processing at the discourse level, where multiple sentences are understood to form a coherent whole. In this course we take an in-depth look at the question of discourse processing. We begin with a review of early models of discourse and narrative structure, turning next to findings from the sentence processing literature which implicate discourse structure. We consider both behavioral and neuro-imaging data in a critical analysis of past and current theories.

CLPS 1390. Linguistic Field Methods

A lab/practicum course introducing the methodologies needed to collect, manage, and interpret primary data pertaining to the phonetic, phonological, morphosyntactic, semantic, and pragmatic properties of an untested language. The course takes a hands-on approach, with students working in groups and individually with a native speaker consultant of an unfamiliar language. Students will learn how to test hypotheses about the language as well as construct grammatical descriptions. In addition, the course will cover a variety of practical, technological, interpersonal, cultural, and ethical issues typically encountered in fieldwork. Pre Requisite: CLPS 1310 and one other 1300-level course in CLPS or instructor permission.

CLPS 1400. The Neural Bases of Cognition

Research using animal models has informed and guided many of the recent advances in our understanding of the brain mechanisms underlying cognition. This seminar course will addresses related to animal models of human cognition. Students learn how different aspects of the neural bases of cognition are modeled in animals by reviewing the primary research literature. The course is divided into three sections, each addressing a different topic. Topics vary each year, but may include, for example, learning, memory, attention, decision-making, or cognitive impairment associated with neuropathology or aging. Enrollment limited to 20. Not open to first year students.

CLPS 1420. Cognitive Neuropsychology

This seminar will explore the effects of brain damage on cognitive function. The goal of cognitive neuropsychology is to understand the effects of brain pathology within the context of modern theories of cognition, and to draw inferences about normal or intact cognitive function from patterns of dysfunction observed with brain pathology. Selected papers will focus on research investigations of brain damaged populations within one or more areas of cognition (e.g., perception, memory, or attention) that address topics of current relevance. Pre Requisites: CLPS0040 or CLPS0200 or CLPS0400. CLPS0900 is strongly recommended. WRIT

CLPS 1470. Mechanisms of Motivated Decision Making

How do we make decisions? This course considers the factors and mechanisms involved in motivated decision making, as informed by cognitive, neuroscientific, and computational modeling approaches. Readings will span a range of populations (e.g., healthy adults, adults with acquired brain damage, monkeys) and methods (e.g., behavioral, genetic, pharmacological and neuroimaging studies, electrophysiological recordings). Computational models will be prominently featured as a means for formalizing decision making theories across multiple levels of analysis, some focusing on high-level cognitive computations and others on neural mechanisms. Prerequisite: CLPS 0010, 0040, 1291, 1400, 1491, 1492, or NEUR 0010. Enrollment limited to 20. Not open to first year students.

CLPS 1478. Translational Models of Neuropsychiatric Disorder

This course will be an upper level seminar course focused on reading and understanding the primary literature related to the use of animals to model human neuropsychiatric disorders. Throughout the course we will discuss the appropriateness, use, and limitations of animal models for studying human pathology. We will discuss a range of topics building from basic concepts of evolution, development, and genetics to the practice of using animals to study aging and memory function, affective pathology, and developmental disorders. Prerequisites: CLPS0010 or NEUR0010; and preferably at least one of the following: CLPS1150, CLPS1480, CLPS0400, CLPS0100, CLPS2100, NEUR1740; NEUR1540.

CLPS 1480A. Cognitive Neuroscience of Emotion

Topics discussed in this course include: visual attention, awareness, emotional perception, and emotional memory. Classes will be structured around the discussion of current papers in the literature. Active participation in class is required, including the presentation of papers from the literature. Enrollment limited to 20.

CLPS 1480B. Cognitive Aging and Dementia

This seminar examines the cognitive changes associated with normal aging and age-related dementia (e.g., Alzheimer's Disease). Topics covered will include changes in the neurocognitive systems mediating memory, perception, and attention. The course is primarily intended as an advanced seminar for junior and senior concentrators in Psychology, but is also intended for other students interested in aging and the neuropsychology of cognition. Recommended prerequisites: An introductory course in cognitive neuroscience (CLPS 0400 (COGS 0720), CLPS 0400 (PSYC 0470)) or permission of the instructor. Preference will be given to senior concentrators in Psychology and related areas. Enrollment limited to 20. WRIT

CLPS 1480C. Cognitive Control Functions of the Prefrontal Cortex

The prefrontal cortex has long been known to support higher cognitive functions, including working memory, planning, reasoning, and decision making. This seminar offers an in-depth review of recent empirical and theoretical approaches to understanding prefrontal cortex function. This year the course will focus on prefrontal contributions to the cognitive control of declarative memory. Enrollment limited to 20.

CLPS 1480D. Cognitive Neuropsychiatry

Will provide a broad survey of the field of cognitive neuropsychiatry. The approach taken is based upon the knowledge of brain-behavior-cognition relationship and allows explaining psychiatric phenomena in terms of deficits in normal cognitive mechanisms, as well as drawing conclusions about normal cognitive functioning based on patterns of impaired and intact cognition observed in clinical populations. Topics surveyed include delusions, hallucinations, social-emotional symptoms of schizophrenia, thought and language disorders, conversion disorder, obsessive-compulsive disorder, bipolar disorder, major depression, Parkinson's and Alzheimer's Disease. Prerequisite: CLPS 0040 or 0400, or instructor permission. Enrollment limited to 25 juniors, seniors and graduate students concentrating in Cognitive, Linguistic and Psychological Sciences. WRIT
This course will train students in the practice and use of functional magnetic resonance imaging (fMRI) as a cognitive neuroscience methodology. Topics covered include MRI physics, the physiological basis of the BOLD signal, experimental design, data collection, statistical analysis, and inference. A practical component of the course includes the opportunity to collect and analyze fMRI data at the Brown MRI. Prerequisites: CLPS 0040 (COGS 0720), CLPS 0400 (PSYC 0470), or NEUR 0010; and CLPS 0900 (PSYC/COGS 0090), or instructor permission. Enrollment limited to 20.

CLPS 1491. Neural Modeling Laboratory.
Numerical simulations of cognitively oriented nervous system models. Discussion of parallel, distributed, associative models: construction, simulation, implications, and use. Prerequisites: MATH 0090, 0100, or equivalent; knowledge of a computer language; some background in neuroscience or cognitive science is helpful.

CLPS 1492. Computational Cognitive Neuroscience.
We explore neural network models that bridge the gap between biology and cognition. Begins with basic biological and computational properties of individual neurons and networks of neurons. Examines specialized functions of various brain systems (e.g., prefrontal cortex, frontal cortex, hippocampus, ganglia) and their involvement in various phenomena, including perception, attention, memory, language and higher-level cognition. Includes a lab component in which students get hands on experience with graphical neural network software, allowing deeper appreciation for how these systems work. Prerequisites: CLPS 0040 or CLPS 0200 or NEUR 0010.

CLPS 1495. Affective Neuroscience.
This course will survey key topics and methods in research on the neuroscience of affect and emotion. It is ideally suited for advanced undergraduates or graduate students who have taken an introductory cognitive neuroscience and/or psychology course. This course will use a variety of cross-species behavioral and neuroscientific data to examine the structure of affect/emotion; how affective processes shape cognition and action; how cognition in turn shapes affect; and how affective reactions change within and across individuals. The course will include short lectures, in-class presentations, discussions, and written response papers.

CLPS 1500. Perception and Action.
The ecological approach treats perceiving and acting as activities of agent-environment system rather than an isolated “mind;” and offers an alternative to the prevailing computational/representational view. Topics include inferential and direct perception, perception of the 3D environment, visual control of action, dynamics of motor coordination, and self-organization of behavior. Lecture and discussion. Prerequisite (any one of the following): CLPS 0010 (PSYC 0010), CLPS 0020 (COGS 0010), CLPS 0500 (COGS/PSYC 0440), or CLPS 0510 (COGS 0110).

This course introduces students to the acoustic world, and how it affects our cognition and emotions. We will identify the physical properties of sounds that mediate our psychological responses to auditory objects (environmental sounds, speech, and music). We will explore how we focus our attention on particular sounds in the environment, how sounds affect our emotions, and how our ability to perceive and classify sounds varies over the lifespan. We will learn how to record and interpret natural soundscapes, by developing an acoustic map of campus.

CLPS 1520. Computational Vision.
An introduction to computational models of biological vision summarizing traditional approaches and providing experience with state-of-the-art methods. We will sample topics from low- and mid-level vision including fundamental aspects of image, stereo, motion, surface and color processing to high-level vision including object and action recognition as well as scene understanding. Connections to contemporary research in computer vision and computational neuroscience will be emphasized highlighting how computational models may motivate the development of new hypothesis for the design of experiments in visual perception. Prerequisite: comfort with basic linear algebra and at least one introductory course in Computer Science or programming, or instructor permission.

CLPS 1530. 3D Shape Perception.
Our ability to move in the environment, recognize and grasp objects, depends enormously on the capacity that the brain has in organizing the visual stimulation in the perceived 3D layout. 3D objects in the world project on the human retina flat images. How does the brain re-transform these flat images into a 3D representation? Enrollment limited to 40.

CLPS 1540. Perceiving and Acting in 3D.
How does visual stimulation inform the brain about the three-dimensional structure of the world? What information is important for complex organisms, like humans and other primates, to be able to successfully interact with the surrounding environment? In this course we will examine how different sources of visual information such as stereo, contours, texture gradients, shading, and optic flow contribute to the vivid experience of 3D shape by the human visual system. Moreover, connections will be made to the mechanisms that govern goal directed actions, in order to unveil the commonalities between 3D processing for conscious perception and visuomotor mappings.

CLPS 1550. The Psychology of Aversion.
Explores what is aversive to us and why. In particular, the ways in which sensory preception (e.g., smell, taste, vision), cognition, culture, personal experience and neurobiology mediate our avoidance responses will be analyzed. The purpose of avoidance from an evolutionary perspective and how the emotion of disgust is uniquely human will be a theme throughout the course. Topics will range from neuropsychological disorders to our social behavior and morality. Additionally, why we are attracted to stimuli that “should” inspire avoidance (e.g., horror movies, roller coaster rides) will be examined. Students will acquire a broad knowledge of the psychology of aversion through course readings, discussions, projects and active participation. In addition to presentations and discussion, class time activities may include completing questionnaires, watching videos and assessing various sensory stimuli. Prerequisite: CLPS 0010 (PSYC 0010), CLPS 0020 (COGS 0010), or NEUR 0010. Enrollment limited to 20 students. Not open to first year students. LILE

One of the main purposes of encoding visual information is to perform visually-guided actions to directly interact with the external world. This seminar will shed light on the behavioral and underlying neural mechanisms involved in integrating perception and cognitive processes, and converting them into action. We will also explore how visuo-motor behavior can provide a useful tool to study a wide range of conscious and unconscious cognitive processes involving the current locus of attention, the nature of language representation, spatial representation of number, and high-level decision-making. Prerequisite: CLPS 0010, CLPS 0020, or NEUR 0010. Enrollment limited to 40.

CLPS 1561. Visual Attention and Memory.
In daily life, most visual scenes are complex and crowded so that our visual system faces a daunting task of processing an enormous amount of information at a given movement. Thus, attentional mechanisms are crucial to select relevant objects/events and guide actions. In this seminar, we will understand behavioral and underlying neural mechanisms involved in visual attention and their interaction with visual cognition such as memory, learning and goal-directed actions. We will also study investigations of spared and impaired patterns of attention-based performances following brain injury. Prerequisite: CLPS 0010 or 0020.
CLPS 1570. Perceptual Learning.
This course will focus on perceptual learning and visual plasticity. The goal of this course is to understand the mechanisms of visual perceptual learning and visual and brain plasticity. Perceptual learning is defined as long-term performance improvement as a result of visual experiences. Enrollment limited to 20. Recommended prerequisites: CLPS 1291, 1500, and 1520.

CLPS 1571. Visual Consciousness.
This course will focus on consciousness related to visual perception. The goal of this course is to understand the neural correlates of visual consciousness.
1) We will learn about basic neural mechanisms of visual processing and other brain functions.
2) We will discuss philosophical and neuroscientific models of visual consciousness.
3) We will examine the roles of attention, reward, and memory in visual consciousness.
4) We will evaluate recent neuroscientific experiments with animals and humans and their potential to advance the research of consciousness.

CLPS 1580A. Visually-Guided Action and Cognitive Processes
One of the main purposes of encoding visual information is to perform visually-guided actions to directly interact with the external world. This seminar will shed light on the behavioral and underlying neural mechanisms involved in integrating perception and cognitive processes, and converting them into action. We will also explore how visuo-motor behavior can provide a useful tool to study a wide range of conscious and unconscious cognitive processes including the current focus of attention, the nature of language representation, spatial representation of number, and high-level decision-making. Prerequisite: CLPS 0010 (PSYC 0010), CLPS 0020 (COGS 0010), or NEUR 0010. Enrollment limited to 40.

CLPS 1580C. Visualizing Information.
There has been an explosion of interest in how to present information in a visual way rather than as a bunch of boring numbers. Visualizations can be outstanding at conveying information, but there have also been colossal failures. We will explore the good, the bad, and the ugly and harness knowledge of visual perception to understand why some are more successful than others. Some background in visual perception is recommended such as a CLPS or NEUR course about vision or familiarity with graphic design.

CLPS 1580D. Seminar in Spatial Cognition.
How do we perceive, learn, remember, and interact with space? This seminar explores spatial knowledge in humans, animals, and robots, its sensory and neural basis, and how it is used to navigate and think spatially. We will investigate how desert ants find their way home, Nobel prize-winning ‘place’ and ‘grid’ cells, what your cognitive map of campus is really like, differences in spatial ability, and the effects of GPS on human wayfinding.

CLPS 1590. Visualizing Vision.
This course provides hands-on experience in studying vision using computer graphics combined with visual psychophysics. Students will gain a better understanding of how images are formed, how one employs properties of image formation in the experimental study of vision, and how the perception of complex images function in biological systems. Labs will rely on matlab and several computer graphics packages (e.g. Lightwave). Enrollment limited to 20.

CLPS 1600. History and Theories of Child Development (EDUC 1710).
Interested students must register for EDUC 1710.

How do infant and preschoolers learn about the world? We will examine children's understanding of the physical world, psychological kinds, biological entities, number, objects, and space. Students are expected to read and comment on both empirical and theoretical primary source articles, to participate in weekly discussions, and complete a set of writing assignments. Prerequisites: CLPS 0600 (PSYC0810) or CLPS 0610 (COGS0630)

The acquisition of knowledge during the first year of life. Special attention to the infant's emerging concepts of space, objects, intermodal sensory connections, and speech as well as to such issues as the role of innate knowledge and the nature of the infant's concepts and categories.

CLPS 1620. Developmental Cognitive Neuroscience.
This course will examine fundamental topics in cognitive development from the point of view of the developing brain. Topics of interest will include developing abilities in perception, attention, action, object concepts, memory, learning, planning, language, and social cognition. Typical and atypical brain development will be considered. Prerequisite: One of CLPS 0600 (PSYC 0810), CLPS 0610 (COGS 0630), EDUC 0800, or permission of the instructor. Enrollment limited to 40.

CLPS 1621. The Developing Brain.
Analysis of brain development, focusing on neural substrates of psychological processes in both animals and humans. Prerequisites: CLPS 0010 (PSYC 0010) or NEUR 0010. Not open to first year students or sophomores. Instructor permission required.

CLPS 1630. Perceptual Development.
No description available.

CLPS 1640. Relationships and Human Development.
Explores formation and maintenance of relationships across childhood and early adulthood, as well as their importance for the development of social-emotional competence. Topics include: early caregiver-child relationships, peer relationships emerging in the school years, relationships with significant adults outside the family, family relationships and functioning, and marital relationships. Also considers approaches to intervention, particularly with respect to peer relationships. Instructor permission required. Enrollment limited to 20 senior or graduate-level Psychology concentrators.

CLPS 1650. Child Language Acquisition.
All normally developing children acquire language, yet there is little agreement about how this takes place. This class explores the course of language acquisition from birth to babbling and first words to the use of complex syntax, discussing philosophical, theoretical, and methodological approaches to the problem. Includes practical experience analyzing child language data. Prerequisite: CLPS 0030 (COGS 0410) or CLPS 0800 (COGS 0450), or permission of the instructor.

CLPS 1670. Cross-Cultural Perspectives on Child Development (EDUC 1580).
Interested students must register for EDUC 1580.

CLPS 1680A. Topics in Development: Social Learning.
How do we learn from other people? If a child was raised in the absence of any social interaction, what cognitive structures would s/he have? This course will focus on what and how children learn from others, including concepts like language, rituals, religion, biology. Emphasis will also be on "selective trust" - whether we learn from all informants equally or are rational in how we learn from others. Prerequisite: CLPS 0600, 0610, or 0700. Enrollment limited to 20 juniors and seniors.

CLPS 1680B. Topics in Development - Developmental Disorders.
This course will examine developmental disorders from a developmental cognitive neuroscience perspective. We will examine issues general to studying developmental disorders. What is the role of understanding typical development in examinations of atypical development? What are proper experimental strategies for studying disorder? Readings will focus on the neurobiological substrates of disorder, associated cognitive impairments, and clinical symptoms. We will then focus on specific disorders include Autism, ADHD, Dyslexia, Learning Disabilities etc. Enrollment limited to 20. Prerequisite: CLPS 0040, 0600, or 0610. WRIT
CLPS 1690. Laboratory in Developmental Psychology
Conceptual and methodological foundations of research design and analysis in developmental psychology, with particular reference to techniques commonly used in studying cognitive development. We will cover general principles of experimental design, measurement and assessment, and strategies of data analysis. Practical and ethical issues involved in conceiving, designing, executing, interpreting, and presenting research will be considered. Recommended prerequisites: CLPS 0610 (COGS 0830), and CLPS 0900 (PSYC/COGS 0090) or equivalent. Enrollment limited to 15.

CLPS 1700. Abnormal Psychology
The study of anxiety, stress, and neurotic disorders, psychosomatic disorders, deviant social behavior, affective disorders, and schizophrenia. Considers theories of etiology (causes) and methods of therapeutic treatment, case studies, experimental research, and clinical research.

CLPS 1701. Controversial Issues in Mental Health Practice
Examination of controversies involving scientific, clinical and social practices concerning mental health and illness. Topics will include: classification and diagnosis, biases in psychiatric research and practice, specific conditions (e.g., gender identity disorder, ADHD, depression), treatment issues (e.g., ECT, medicating children with psychiatric drugs), screening for mental illness in public schools, and social-legal issues (e.g., insanity defense, duty to warn, involuntary treatment). Enrollment limited to 20.

CLPS 1710. Political Psychology
This seminar explores topics at the intersection of psychology and political science. Topics include political attitudes, perceptions and behaviors. The psychology of ordinary individuals, political leaders, and groups will be studied in contexts where their interests do and do not coincide. As conflicts among these agents are particularly interesting, this course will stress psychological aspects of wars, oppression, and terrorism. Enrollment limited to 20.

CLPS 1720. Human Resilience
This course explores answers to the question of what enables some individuals to escape the worst psychological consequences of extreme personal disruption caused by a range of human-made and natural disasters. It examines personal accounts, pertinent psychological research, theoretical discussions, and the creative works of catastrophe survivors. Enrollment limited to 20.

CLPS 1730. Psychology in Business and Economics
The goal of this course is to explore emerging themes at the intersection of psychological science, business, and behavioral economics. Psychologists are primarily interested in detecting limits to human rationality, whereas economics tends to proceed within the rational-actor model. In business, questions arise of how theoretical models and empirical findings related to the practice of managerial decision-making. Investigations of power and the psychological impact of money are relatively recent additions to the suite of research topics. New methodologies, such as neuro-imaging, will be examined in the context of their reliability, predictive and construct validity. Students will design research projects using these methods, collect and analyze data, give oral presentations, and prepare a written report of their research. Prerequisites: CLPS 0701 (PSYC 0300), and CLPS 0900 (PSYC/COGS 0090) or equivalent. Enrollment limited to 27.

CLPS 1770. Thinking about the Social World
Understanding and acting in the social world require, among other things, the process of thinking in abstractions. Abstraction broadens mental horizons, integrates new experiences, and allows communication with other people. In this course we will discuss the different ways in which abstraction has been defined in the literature and look into some surprising implications of abstraction for people’s understanding of, and actions in, the social world.

CLPS 1782. The Social Self
This course will explore various factors that influence how people perceive themselves, judge others, and make decisions in a social context. Drawing from theories of egocentrism, rationality, morality, and cultural evolution, we will explore the inner workings of the social self. The course will take a primarily experimental approach to understand how individuals should behave (as prescribed by social norms and models of rationality) and how they actually behave. Students in this course will be armed with theoretical and methodological knowledge to understand the components of the social self and appreciate both accuracy and bias in self-judgments and social judgments.

CLPS 1790. Personality and Clinical Assessment
Examines methods used in the study of child and adult personality, including microanalysis of social interactions, observer report, self report, test data, and life outcome data. Standardized personality assessment instruments will be examined in the context of their reliability, predictive and construct validity. Students will design research projects using these methods, collect and analyze data, give oral presentations, and prepare a written report of their research. Prerequisites: CLPS 0010 (PSYC 0010), CLPS 0700 (PSYC 0210), and CLPS 0900 (PSYC/COGS 0090) or equivalent. Enrollment limited to 24.

CLPS 1800. Language Processing
Explores the nature of language processing with the goal of understanding how we produce and comprehend language. Topics include speech production and speech perception, lexical processing, and syntactic processing. Experimental investigations are studied in an attempt to understand the processes and mechanisms employed in the everyday use of language. Prerequisite: one of CLPS 0020 (COGS 0010), CLPS 0030 (COGS 0410), or CLPS 0800 (COGS 0450).

CLPS 1810. Syntactic Theory and Syntactic Processing
The interface between work in theoretical syntax and psycholinguistic research on syntactic processing. Consideration of how results in psycholinguistics support various models of human language processing. Recommended prerequisite: CLPS 1330 (COGS 1310).

CLPS 1820. Language and the Brain
This course will examine the neural systems underlying language processing. Major focus will be on effects of brain injury on speaking and understanding in left hemisphere-damaged patients who have aphasia, right hemisphere-damaged patients, and split-brain patients. Behavioral, electrophysiological and neuroimaging evidence will be investigated. WRIT

CLPS 1821. Neuroimaging and Language
Examines neuroimaging approaches to language processing including fMRI, PET, TMS, and ERP. Consideration of the neural systems underlying speaking and understanding. Topics include neural basis of speech, lexical/semantic, and syntactic processing, mirror neurons and language, multisensory integration, meanings of words, literacy, and special populations. Recommended: either NEUR0010, CLPS 0020 (COGS0010) or CLPS 0800 (COGS0450) and one of the following: CLPS 0040 (COGS0720), CLPS 0400 (PSYC0470), CLPS 0410 (PSYC0750), CLPS 1820 (COGS1480), CLPS 1822 (COGS1500), NEUR1030, NEUR1660, or by permission.
CLPS 1900. Core Topics in Animal and Comparative Behavior.

This course covers the evolution and development of cognitive processes in non-human species, including comparative psychology, ethology, and evolutionary theory. Topics include evolutionary biology, comparative cognition, and the evolution of language. Required of cognitive science concentrators. Enrollment limited to 20. Not open to first-year students. WRITPending.

Independent study or directed research in cognitive science. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

CLPS 1880D. Topics in Psycholinguistics: Language + Memory.

Memory is an integral part of language comprehension. Research suggests that memory follows various divisions (time, modality, task, etc.), and this course examines whether language processing follows the same divisions and to what extent it overlaps qualitatively with memory in different cognitive contexts and timescales. Students will read and discuss research on language comprehension, classic memory tasks, and computational models of memory.

CLPS 1890. Laboratory in Psycholinguistics.

An advanced course in methodological approaches to the study of psycholinguistics. Processes (e.g. with adult lexical access, sentence processing, corpus linguistics, etc.) Recommended prerequisites: CLPS 0800 (COGS 0450) and CLPS 0900 (COGS/PSYC 0090), or equivalent.

Introduction to laboratory techniques and the analysis of data relevant to physiologic and acoustic phonetics. Emphasis on the use and interpretation of wave-form and spectrum analysis, electromyography, cineradiography, high-speed motion pictures, computer modeling of oral tract output, and experimental techniques involving the perception of synthetic and natural speech.

Examines general philosophical and theoretical issues that cut across cognitive science. Each student writes a substantial paper on a topic in cognitive science. Required of cognitive science concentrators. Enrollment limited to concentrators in the 7th semester or beyond, and, by permission, to others who have significant coursework background in cognitive science.

Independent study or directed research in cognitive science. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

Required of all ScB concentrators and Honors students in psychology. Instructor permission required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.
The goal of this course is to introduce students to the study of the biological foundations of cognitive science and psychology. We will use readings from neuroanatomy, cell and molecular biology, genetics, evolutionary biology, neuroethology, and behavioral neuroscience to elucidate principles and to understand methods for exploring the neural control of complex behaviors.

CLPS 2410. Auditory Neuroscience.
An in-depth analysis of the neural bases of auditory cognition. Topics to be discussed include object perception, spatial processing, auditory memory, illusions, cocktail party phenomena, and representation of speech signals.

CLPS 2455. The Mind Asleep.
Seminar on selected topics in sleep, incorporating the core disciplines of psychology (Behavioral Neuroscience, Sensation and Perception, Cognitive Processes, and Social). Discussion based classes will examine sleep and affect/mood, dreaming, sleep and learning and memory, sensation/perception processes during sleep, effects of sleep deprivation and sleep disorders.

CLPS 2500. Core Topics in Perception.
No description available. Open to graduate students only.

CLPS 2510. Graduate Seminar in Vision.
Selected topics in vision, including optics of the eye, anatomy of the visual system, photochemistry of vision, psychophysics of color, acuity, models of color vision, and light as a visual stimulus. Specific topics vary.

CLPS 2700. Core Topics in Social Psychology.
A survey of classic and contemporary research in social psychology, including attitude formation and change, person and self perception, stereotyping, and intergroup relations. Open to graduate students only.

CLPS 2750. Seminar in Social Psychology.
No description available.

CLPS 2800. Core Topics in Language.
No description available. Open to graduate students only.

CLPS 2900. Minimum Semester in Language.
No description available.

CLPS 2904. Intermediate Language.
The course designed for students at the intermediate level or above and will cover t-tests, power analysis, correlation, simple and multiple linear regression, logistic regression, analysis or variance, non-parametric tests, randomization and bootstrapping, among others. Instructor permission required. Open to graduate students only.

CLPS 2908. Multivariate Statistical Techniques.
This course covers the basic multivariate techniques currently used in psychology and related sciences: multiple regression, logistic regression, principal components and factor analysis, multivariate analysis of variance, discriminant function analysis, and log-linear analysis. Students will learn these techniques' conceptual foundations, their proper selection for a given data set, and the interpretation of computer output from statistical analysis packages (primarily SPSS). Enrollment limited to 20 graduate students.

CLPS 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CLPS 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing a thesis.

Linguistics
LING 0030. Introduction to Linguistic Theory (CLPS 0030).
Interested students must register for CLPS 0030.

LING 0050G. Pidgins, Creoles, and the Emergence of Language (CLPS 0050G).
Interested students must register for CLPS 0050G.

LING 0330. The Grammar of English (CLPS 0330).
Interested students must register for CLPS 0330.

LING 0800. Language and the Mind (CLPS 0800).
Interested students must register for CLPS 0800.

LING 0810. The Biology and Evolution of Language (CLPS 0810).
Interested students must register for CLPS 0810.

LING 1310. Introduction to Phonological Theory (CLPS 1310).
Interested students must register for CLPS 1310.

LING 1320. The Production, Perception, and Analysis of Speech (CLPS 1320).
Interested students must register for CLPS 1320.

LING 1330. Introduction to Syntax (CLPS 1330).
Interested students must register for CLPS 1330.

LING 1332. Issues in Syntactic Theory (CLPS 1332).
Interested students must register for CLPS 1332.

LING 1340. Introduction to Semantics (CLPS 1340).
Interested students must register for CLPS 1340.

LING 1341. Lexical Semantics (CLPS 1341).
Interested students must register for CLPS 1341.

LING 1342. Formal Semantics (CLPS 1342).
Interested students must register for CLPS 1342.

LING 1350. Introduction to Mathematical Linguistics (CLPS 1350).
Interested students must register for CLPS 1350.

LING 1360. Introduction to corpus linguistics (CLPS 1360).
Interested students must register for CLPS 1360.

LING 1370. Introduction to Pragmatics (CLPS 1370).
Interested students must register for CLPS 1370.

LING 1381. Topics in Phonetics and Phonology: Intonation Phonology (CLPS 1381).
Interested students must register for CLPS 1381.

LING 1383A. The Boundary of Semantics and Pragmatics (CLPS 1383A).
Interested students must register for CLPS 1383A.

LING 1385. Topics in Language Acquisition (CLPS 1385).
Interested students must register for CLPS 1385.

LING 1387. Topics in Neurolinguistics (CLPS 1387).
Interested students must register for CLPS 1387.

LING 1389. Topics in Language Processing (CLPS 1389).
Interested students must register for CLPS 1389.

LING 1650. Child Language Acquisition (CLPS 1650).
Interested students must register for CLPS 1650.

LING 1800. Language Processing (CLPS 1800).
Interested students must register for CLPS 1800.

LING 1810. Syntactic Theory and Syntactic Processing (CLPS 1810).
Interested students must register for CLPS 1810.

LING 1820. Language and the Brain (CLPS 1820).
Interested students must register for CLPS 1820.

LING 1821. Neuroimaging and Language (CLPS 1821).
Interested students must register for CLPS 1821.

LING 1822. Subcortical Brain Bases of Language and Thought (CLPS 1822).
Interested students must register for CLPS 1822.

LING 1880A. Speech Prosody (CLPS 1880A).
Interested students must register for CLPS 1880A.

LING 1890. Laboratory in Psycholinguistics (CLPS 1890).
Interested students must register for CLPS 1890.

Interested students must register for CLPS 1891.
The Cogut Center for the Humanities

Director
Amanda S. Anderson

Brown University has long offered a unique focus and quality in the humanities, combining the preservation of knowledge with a spirit of innovation and adventure. The humanities today include ever-vital traditional disciplines such as history, philosophy, language and literary studies, and religious studies. They also include the newer disciplines of art history, musicology, the interpretive dimensions of social sciences such as anthropology and political science, and more recently, interdisciplinary initiatives such as media studies and gender and sexuality studies.

Named for Craig M. Cogut '75 and Deborah Cogut in recognition of their generous support, the Cogut Center for the Humanities was launched in the fall of 2003 as the Brown Humanities Center to support collaborative research among scholars in the humanities. Today, through its fellowship, grant, and distinguished visitors programs, and regularly scheduled events, the Cogut Center strives to:

- Foster innovative work in the humanities and related disciplines
- Sustain and nurture international perspectives at Brown in an era of increasing globalization
- Explore the history and effects of the rapid growth of technologies of information and visualization
- Examine the public role of the humanities in the context of recent challenges and pressures
- Enrich relations between the humanities and the studio and performing arts
- Investigate the re-emergence of pressing issues of ethics and aesthetics
- Reinvigorate the concept of critique and the role of critical theory in the humanities

The Cogut Center is poised on the strengths of Brown University at a moment of unique institutional distinction and growth, and at a time of particular national and global urgency. The Cogut Center is providing multiple programs to bring Brown faculty and students into regular and innovative contact with each other, as well as with national and international scholars and scholarship. In fulfilling its mission to the University and to the field of humanities, the Cogut Center supports and enhances Brown's stellar reputation in the humanities.

For additional information please visit the Center's website at: http://www.brown.edu/Departments/Humanities_Center/

Courses

**HMAN 1200. Making Choices: Ethics at the Frontier of Global Science (UNIV 1200).**
Interested students must register for UNIV 1200.

**HMAN 1305. Medical Humanities: Critical Perspectives on Illness, Healing, and Culture (ANTH 1305).**
Interested students must register for ANTH 1305.

**HMAN 1970A. Religion, Secularization, and the International.**
For the past several decades (but especially since 2001), internationalists have been increasingly preoccupied by the perceived "return of religion." Religion is often proclaimed to pose the single greatest threat to a liberal legal/political order and, less often, to be the greatest hope for that order. We will explore genealogies of the three key terms at stake in this conundrum – "religion," "secularization," and "the international." We begin from the proposition that none of these terms refer to ahistorical essences, but have been subject to continual theoretical/practical contestation/reconfiguration. We focus on that contestation as it has emerged in "modernity." Enrollment limited to 20 juniors, seniors, and graduate students.

**HMAN 1970B. The Question of the Animal.**
This course is built around the question of the animal as a difficulty posed to representation and thought at a time when animals have largely disappeared from humans' living environment, but proliferate as strange protagonists, specters or figures of ambiguity in literature and philosophy. We will consider a range of texts and films that "cast" the animal critically, that is, as a body that strains or scrambles meaning (interruption, irony, illegibility, haunting) and forces us to reconsider the work of language and narrative (indeed, of the "human"). Authors include Kafka, Coetzee, Hofmannsthal, Kofman, Chevillard, Darrieussecq, Derrida, Agamben, de Fontenay, Herzog. Enrollment limited to 20 juniors and seniors.

**HMAN 1970C. Modern Arab Thought: The Arab Renaissance.**
This course introduces students to the 19th/early 20th century Arab thought - the "Nahda" (Arab Renaissance). Through primary and secondary English texts, we will explore questions raised by thinkers of this epoch pertaining to perceived civilization crisis, and examine the diagnoses/proposals offered by them. The course underlines the changes and continuities in these concerns under the impact of dramatic socio-political events of the epoch. We will discuss the strengths/weaknesses of "Nahda" thought that continues to inform/preoccupy contemporary Arab debates on culture, democracy, gender and Islam. We will examine the significance of this legacy in today's Arab world. Enrollment limited to 20 juniors and seniors.

**HMAN 1970D. Places of Healing: Memory, Miracle, and Storytelling.**
From antiquity to our day, therapeutic landscapes such as: mineral and thermal springs; shrines and churches built at sacred springs; volcanic ash mud baths; rocky landscapes emitting odorous gasses; and ponds filled with medicinal leeches, attract health pilgrims who search for healing. Storytelling transformed these into places of memory and pilgrimage. This seminar investigates places of bodily healing and miracle from a cultural studies perspective. The case studies will be drawn from the Mediterranean world and Western Asia (including Lourdes in France, Hierapolis in Southeastern Turkey and the Agiasma churches of Byzantine Istanbul). Enrollment limited to 20 juniors and seniors.

**HMAN 1970E. The Precarious University.**
The intensification of student protest-occupy movements across the country particularly in California, and the proliferation the OWS movements across the world have rejuvenated social movements against cutbacks for the people and kickbacks for the wealthy. In this seminar, we will address the epistemic shifts and intellectual costs of these ongoing upheavals, particularly the fight against the U.S. university’s neoliberalization. We will imagine the kind of progressive university that is sustainable for the arts and humanities, and how the precarious work of artists and humanists are fundamental to 21st century global universities. Enrollment limited to 20 juniors and seniors.

**HMAN 1970F. Pain in Polish and Russian Twentieth-Century Literature.**
Does pain and reflection on pain teach us something about ourselves, the world, our relation to it? This seminar approaches the question by examining the meaning of pain in Russian/Polish literature/literary theory of the 20th century. Our concern is with pain’s resistance to language and representation. The works analyzed offer a variety of responses to problem of pain as it appears in theology, experimental medicine, discussions of materialism, the philosophy of Schopenhauer, and above all, the giants of Russian literature, Dostoevsky and Tolstoy, in whom these debates are dramatized; they also form the ground on which Russian and Polish literature meet. Enrollment limited to 20 juniors and seniors.
HMAN 1970G. International Perspectives on NGOs, Public Health, and Health Care Inequalities.
Non-governmental and other non-state organizations play an expanding role in the provision of health care across much of the globe. Growth and internationalization of the non-governmental sector, contraction of post-socialist and advanced industrial welfare states, and sub-contracting of state-funded services have all contributed. The seminar focuses on this expansion, critically assessing texts on NGOs and health and drawing comprehensively from sources across disciplinary and interdisciplinary boundaries. We will address issues of human welfare, political citizenship and identity, replacement and displacement of states, new forms of health care inequalities, and the self-concepts, missions, and roles of non-profit sector workers around the globe. Enrollment limited to 20 juniors and seniors.

Comparison, which posits a likeness between the dissimilar, is always profoundly haunted by the question of its ground and judgment. This seminar will examine the comparative logic of capitalist modernity in the works of Marx, Weber, Adorno and Horkheimer, Foucault, Heidegger, and Benjamin. We will ask the following questions: How is equivalence established between nonequivalent objects? How are actual social relations quantified and measured, and is there an ethics to modern forms of comparability? How does language reflect and produce these operations? Or, to put it differently: What are the forms through which difference "haunts" us? We will pay special attention to figures of the double and the ghost in Hoffmann and Freud. Other topics to be covered include rationalization and the disenchantment of the world, the modern uncanny, "mediauras," colonial comparison, and the ethics of incomensurability.

What happens when a particular "orthodoxy" becomes able to impose itself on others? This course examines the imposition of post-Constantinian christianism on Jews, Samaritans, other Christians (Arians, Miaphysites, etc.) and the remaining ancient Mediterranean populace (4th-7th centuries) to consider a larger cultural phenomenon. We'll draw on ancient authors and legal sources (in translation), archaeological data, and contemporary studies. Half the course entails communal exploration of the late antique Mediterranean. Student research presentations, including studies of comparable situations from other cultural and historical contexts, comprise the second half. Useful prior coursework includes: RELS 400, RELS 410, CLAS 600, CLAS 660, CLAS 1320. Enrollment limited to 20 juniors and seniors.

Why do we take pleasure in small-scale objects? What is their history and what purposes do they serve? How do the technology and the aesthetics of the small contribute to human cognition? To find answers to these and other questions, the seminar explores the cultural, literary and cognitive significance of miniatures. We will explore productive relationships between three areas of research: imaginative texts produced during the eighteenth century, the period's prolific but insufficiently studied production of small-scale versions of everyday objects, and recent developments in cognitive theory about the role of size-perception in the developing brain. Enrollment limited to 20 juniors and seniors.

In an arguably "post-secular" age, conflicts over the relationship between religion and law have moved to the forefront of international debate. In our multicultural/globalized world, such conflicts often provoke contestation over the very possibility of universal definitions of either "religion" or "law," let alone their proper relationship. Our interdisciplinary inquiries on these questions will include concrete legal disputes in domestic/international courts; theoretical debates over the construction of "religion" in fields such as anthropology, religious studies, and philosophy; historiographical controversies about the relationship between "secularization" and sovereignty, particularly in light of the legacy of colonialism. Limited to juniors, seniors, and graduate students. WRT

Concepts are usually thought of as cognitive tools, constituents of thought used for categorization/inference/memory/learning/decision-making. We shall think about them as effects of a language game whose rules change across genres, media, and discursive regimes. Looking for these rules and analyzing them comparatively, we shall ask how concepts are formed/displayed/performed, when do we need them/can we do without them. We shall read philosophers (Plato, Descartes, Kant, Heidegger, Wittgenstein, Foucault, Derrida, and Deleuze), intellectual historians (Koselleck, Skinner), literary works (Kleist, Kafka, Musil), and look at some conceptual art. Advanced juniors, seniors and graduate students welcome. Enrollment limited to 20.

Cuba today is home to writers, musicians and artists who engage with new media and a global audience against the backdrop of a socialist revolution. This seminar will explore esthetic and political dimensions of contemporary Cuban culture with authors who will speak to us directly through a video link with Casa de las Américas in Havana. Knowledge of Spanish required.

HMAN 1970S. Ethics and the Humanities.

This seminar will engage with ethical issues in a broad range of humanities disciplines. We will survey historical and thematic perspectives on ethics, and will consider the ethical implications of authorship and possession of texts and objects; translation as an ethical problem; data and open access; the perspective of the human subject; public humanities, public intellectuals and community-based research; and ethical issues in popular culture. Enrollment limited to 20. Not open to first year students or sophomores.

We'll investigate how new media technologies shape musical practices (and vice versa). Topics will include DJ cultures, digital music distribution and related intellectual property issues, digital gameplay, music videos, popular music reception, online music lessons, and virtual communities. We'll give equal attention to production, circulation, and reception practices, as well as to their increasing convergence. Readings will include both contemporary and historical studies. The course will require critical engagement with a diverse range of media, genres, and cultural contexts, encouraging students to examine their own media production and consumption practices. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970V. Pragmatic Medical Humanities.

We'll investigate how new media technologies shape musical practices (and vice versa). Topics will include DJ cultures, digital music distribution and related intellectual property issues, digital gameplay, music videos, popular music reception, online music lessons, and virtual communities. We'll give equal attention to production, circulation, and reception practices, as well as to their increasing convergence. Readings will include both contemporary and historical studies. The course will require critical engagement with a diverse range of media, genres, and cultural contexts, encouraging students to examine their own media production and consumption practices. Enrollment limited to 20. Not open to first year students or sophomores.

Concepts are usually thought of as cognitive tools, constituents of thought used for categorization/inference/memory/learning/decision-making. We shall think about them as effects of a language game whose rules change across genres, media, and discursive regimes. We shall read philosophers (Plato, Descartes, Kant, Heidegger, Wittgenstein, Foucault, Derrida, and Deleuze), intellectual historians (Koselleck, Skinner), literary works (Kleist, Kafka, Musil), and look at some conceptual art. Advanced juniors, seniors and graduate students welcome. Enrollment limited to 20.

Cuba today is home to writers, musicians and artists who engage with new media and a global audience against the backdrop of a socialist revolution. This seminar will explore esthetic and political dimensions of contemporary Cuban culture with authors who will speak to us directly through a video link with Casa de las Américas in Havana. Knowledge of Spanish required.

HMAN 1970S. Ethics and the Humanities.

This seminar will engage with ethical issues in a broad range of humanities disciplines. We will survey historical and thematic perspectives on ethics, and will consider the ethical implications of authorship and possession of texts and objects; translation as an ethical problem; data and open access; the perspective of the human subject; public humanities, public intellectuals and community-based research; and ethical issues in popular culture. Enrollment limited to 20. Not open to first year students or sophomores.

We'll investigate how new media technologies shape musical practices (and vice versa). Topics will include DJ cultures, digital music distribution and related intellectual property issues, digital gameplay, music videos, popular music reception, online music lessons, and virtual communities. We'll give equal attention to production, circulation, and reception practices, as well as to their increasing convergence. Readings will include both contemporary and historical studies. The course will require critical engagement with a diverse range of media, genres, and cultural contexts, encouraging students to examine their own media production and consumption practices. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970V. Pragmatic Medical Humanities.

The question, "What is medical humanities?" has flummoxed the very experts who ardently argue for its importance to medical education and the professional and personal growth of health care providers. The interdisciplinary nature of medical humanities, engaging in conversations with persons who possess different expertise, knowledge and approaches, provides opportunities for insight unavailable elsewhere. Students will investigate alternative meanings, interpretations and purposes embedded in the term "medical humanities." They will develop their own personal relationship to this field of study, and its utility as a tool for understanding and responding to the profound experiences of clinical medicine, illness and health. Enrollment limited to 20. Not open to first year students or sophomores. This is a half-credit course.

This seminar examines the role of disease, medicine, and health in the history of the Atlantic World. Our analysis will be centered on events that took place in Latin America, the Caribbean, and Sub-Saharan Africa, during the era of European colonial expansion (1490-1940). In these four and a half centuries, the West became the dominant force in global geopolitics and Western medicine emerged as the hegemonic form of healing worldwide. This seminar explores the complex relationship between these two historical developments. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970Y. Politics and Authority in Islamic Law and Society.

Few courses offer insight into the genesis of Islamic political theory in light of the social and historical circumstances of the medieval period. This seminar seeks to address major trends in political thought of classical Islam. In addition to reading secondary scholarship on social and political aspects of early Muslim society, we will also examine primary sources in translation (Prolegomenon, Book of Ordinances); literary genres, including official state epistles from the medieval period; and the work of Ibn Taymiyya. Finally we will address issues of authority, ethics and gender in contemporary analyses. Enrollment limited to 20. Not open to first year students or sophomores.

This course is designed to introduce students to major topics in the developing historical literature on the relationships between intellectual and economic history, and their implications for European culture, mainly in the first two centuries after Columbus and Da Gama. Enrollment limited to 20 juniors and seniors.

HMAN 1971B. Paris Archive: The Capital of the Nineteenth Century, 1848-1871

We will take as our starting-point Walter Benjamin's notes for his unfinished masterwork "The Arcades Project." The Passagenwerke comprise a massive index of citations/observations on the nature/form of the city of Paris in every aspect of its cultural/political life in the 19th/20th centuries. We will read works from which he culled his aphorisms/investigate the present status of each of his assertions/citations, with historical/contemporary readings. We will discuss the nature of historical/archival interpretation and try to bring together artifacts – textual/visual/sensorial - that might constitute a "Museum" of 19th Century Paris. Taught by Prof. Anthony Vidler. Graduate students encouraged to register. Enrollment limited to 20.

This course will support/enhance Brown's tradition in the Humanities by sharpening the focus on interdisciplinary/comparative work across cultural/linguistic boundaries. Can science/technology/medicine foster the presentation of innovative work in humanities by bringing 3D to New Media? Why do some cultural values dictate genres typically produced in 3D? What were the origins of 3D motion pictures/how might new technologies affect the distribution/visualization of 3D projects? How can 3D enrich relations between humanities and studio/performing arts? We provide Brown students with an opportunity to establish a foundation for analyzing/telling stories using stereoscopic tools, and receive basic technical experience using 3D small-format video equipment.

HMAN 1971E. Cross-Cultural Approaches to Death and Dying.

Despite the universality of death, human responses are incredibly varied. This course situates biological, medical, and psychological conceptions of death and dying in conversation with the religious and ethical perspectives that have also informed human responses to death and dying in cultural contexts. This course—team-taught by a psychologist, a scholar of religion, and two end-of-life care physicians—facilitates a more informed understanding of death-related cultural practices and a more skilled response to death-related decisions arising in the practice of medicine and in life. Limited to 20 students in Medical Humanities and graduate Humanities fields. Honors undergraduates and PLMEs may enroll with permission.

HMAN 1971K. Varieties of Secularism (RELS 1746).

Interested students must register for RELS 1746.

Interested students must register for SCSO 1701C.
HMAN 1971S. Introduction to iPhone/iPad Moviemaking Using 3-D and 4K Comparisons.
Mobile Devices are democratizing movie-making by lowering barriers to entry, enabling students to become full-fledged members of the film industry virtually overnight. This pioneering course provides the basic tools for students to create and distribute no- and low-budget live-action motion pictures with professional production values utilizing only their personal smartphones. Students will acquire the skills to plan, capture and edit short motion pictures through hands-on instruction and experimentation with low-cost accessories, including selfie-sticks, lens adapters, directional microphones and iPhone apps like Filmic Pro, Vizzywig and iMovie. Limited to junior, senior and graduate students.

HMAN 1971T. Law, Nationalism, and Colonialism.
This seminar explores the internationalism of the past century in terms of its relationship to separatist nationalism, anti-colonialism, and religious radicalism. It takes as its point of departure the dramatic political, cultural, and intellectual transformations that followed in the wake of World War I. A guiding hypothesis of the seminar is that internationalism cannot be understood apart from its complex relationship to "identity" broadly conceived – identity of local/transnational groups as well as the identity of internationalists themselves. Readings will be drawn from law/cultural studies/politics/postcolonial theory. Enrollment limited to 20. WRIT

In the 12th and 13th centuries, new ways of approaching Judaism sprung up in France and Spain that would come to be known as "kabbalah." New approaches included aspirations for mystical illumination, elaborate mythological narratives, and human history. Kabbalists radically and self-consciously departed from conventional understandings of Judaism, particularly those of medieval Aristotelian philosophers like Maimonides. They claimed to find their mythological, mystical worldview in traditional texts, from the Bible through rabbinic writings. This course introduces students to kabbalah’s founding period, focuses on primary texts in translation, especially the Zohar, the magnum opus of classical kabbalah. No prior background necessary. WRIT

Interested students must register for EDUC 1035.

HMAN 1971X. The Southern Question and the Colonial Mediterranean (ITAL 1400P).
Interested students must register for ITAL 1400P.

Interested students must register for COLT 1610R.

HMAN 1971Z. Cannibalism, Inversion, and Hybridity: Creative Disobedience in the Americas (HIAA 1870).
Interested students must register for HIAA 1870.

HMAN 1972A. Landscape and Japanese Cinema (MCM 1504X).
Interested students must register for MCM 1504X.

Interested students must register for ANTH 1556.

The study of nature has developed together with the representation of flora and fauna in Europe and the Americas. After the encounter, visual thinking remained an integral part of how knowledge was negotiated between different communities on both sides of the Atlantic—as several scientific expeditions involving artists confirm. This course, which includes field trips to museums and collections, examines connections between knowing and making, ranging from the tradition of pre-Columbian writer-painters to contemporary Latin American artist collectives. We will investigate the entangled histories of art and science as seen through the artistic productions inspired by the exuberant American land. DPLL

HMAN 1972D. Art of Criticism (ENGL 1901F).
Interested students must register for ENGL 1901F.

HMAN 1972E. Designers as Transnational Experts.
Recent global humanitarian design initiatives like Brown and RISD’s own "Design for a Better World" have roots in 20th and 19th-century transformations in the scope of design practice and in the global political and economic landscape. It was during this period that architects like Jane Drew and Constantinos Doxiadis, funded by institutions like the UN and Ford Foundation, became international consultants moving from place to place through a variety of networks. This shift rescued design by re-establishing its social project. This seminar places such design practices in historical context and follows this shift to the present. Juniors, seniors, graduate students only.

Inspiring science, art, and conservation, traded as resources, kept as hunters or pets, and eaten as meat, birds provide an excellent avenue into animal studies. This course will provide grounding in the emerging field of critical animal studies by surveying how we know and interact with one diverse and charismatic class of animals: the Aves. We will explore birds channeled through literature, visual arts, ornithology, behavioral sciences, museology, history, ethnography, and the history of science. In addition to reading and discussion, we also will experience the birds around us through a five-part indoor and outdoor "laboratory" dedicated to bird-watching skills.

The title of this course alludes to Friedrich Nietzsche’s “eternal return of the same,” which he famously called “the highest formula of affirmation,” and which later philosophers and thinkers, such as Pierre Klossowski and Martin Heidegger, would repeatedly return to. Yet Nietzsche's discovery is not new, for it infects, too, the thinking of the professional revolutionary, Louis-Auguste Blanqui, the returns of commodity production in high capitalism, and the poetic figurations of the big city found in nineteenth-century writers such as Charles Baudelaire. In this course, we will examine the problem of returns—temporal, political, economic, and poetic—in modernity.

Antiquity is often invoked to manipulate how we view current events. This course will investigate examples of this phenomenon, including the 'spectacles of destruction' of antiquities in Syria, Iraq, and Afghanistan, and the couching of the Greek economic crisis in references to Greece's classical past. We will interrogate questions of 'who owns the past?,' and of how we reckon antiquity's value; we will also investigate how scholars (archaeologists, classicists, et al.) have reacted to these contemporary events. Their stances raise important questions about the past's 'relevance' in the present, but also about the intersections between humanities and the social sciences.

HMAN 1972J. Me, Myself, and I: Exploring Senses of Self from a Multidisciplinary Perspective.
Human beings have long puzzled over how precisely to conceptualize and understand what it is we are. Questions about the nature of the self have informed the speculations of philosophy, the soteriologies of religion, the trajectories of self-cultivation in contemplative traditions, and the therapeutics of psychology. Recently, cognitive science and phenomenology have attempted to correlate abstract concepts about the self with lived experience, emphasizing how various senses of self give rise to our self-concepts. Through this course, students will engage with conceptions of self that we often take for granted by studying senses of self from multidisciplinary and cross-cultural perspectives.

HMAN 1972L. Reading Humanist Latin Texts (LATN 1120G).
Interested students must register for LATN 1120G.

HMAN 1972M. Environmental Political Thought (POLS 1824L).
Interested students must register for POLS 1824L.

HMAN 1972N. The Indian Ocean World (HIST 1979K).
Interested students must register for HIST 1979K.
HMAN 2970A. Accounting for Silence: Anthropology of Law and Narrativity.
Explores the role of law in redressing the past, specifically in cases of postwar compensation for the Second World War. We look at the convergence of two processes, the breaking of long-held silence by victims through various forms of testimony inside and outside the courtroom, and the legal process of redress. Cases for this course arise primarily from the Japanese use of wartime slave labor in East Asia. Since the 1990s, large number of Chinese and Korean war victims, such as former forced laborers and the so-called "comfort women" to name but a few, have filed lawsuits against the Japanese government and corporations. In the process, they give voice to their long silenced, traumatic experiences. Through anthropological approaches to law and testimonial practices, we shall examine such questions as: what kind of legal space is created through compensation lawsuits; what kind of "performance" is produced both inside and outside the courtroom; what kinds of power dynamics underneath the recounting of testimony; and, what does it mean to account for silence in pursuit of the politics of redress? Even though the course draws examples primarily from East Asia, students are encouraged to pursue their own choice of cases elsewhere in their final paper project. Limited to 20 graduate students.

HMAN 2970C. Concepts of Space and Time in Media Discourses.
No description available. Enrollment limited to 20 graduate students.

HMAN 2970D. Biological Issues in Cultural Theory.
Contemporary culture is increasingly preoccupied by biological themes and issues—genomes, brain images, biotechnology, the natural environment, etc.—and, not unrelatedly, by a wave of new biological determinisms: "gay genes," "God genes," mental "hardwiring," etc. At the same time, ongoing work in fields such as developmental biology, ethology, neuroscience and science studies increasingly challenges classic dualisms of nature/culture and mind/body along with traditional assumptions about the nature of biological entities and the operations of scientific knowledge. The seminar will focus on a selection of these issues and developments especially relevant to the interests of humanities scholars and students of culture and cultural theory. Enrollment limited to 20 graduate students.

HMAN 2970E. Pain, Medicine and Society.
We take on the big question of pain as an interdisciplinary enterprise, drawing on the rich and varied faculty of Brown University and Alpert Medical School. We will examine acute/chronic/physical/psychic pain, the nature of suffering, and why some might find value/solace in pain and suffering. We will examine representations of pain in literature, art and music; look at the shifting conceptions of pain and suffering across cultural/ethnic/religious communities, and the actual/perceived barriers to effective treatment of pain. Most importantly, we will foster sensitivity and impart tools that will improve our understanding and treatment of individuals suffering from pain. Enrollment limited to 20 students in Medical Humanities and graduate Humanities fields. Honors undergraduates and PLMEs may enroll with instructor permission.

HMAN 2970F. Law, Nationalism, and Colonialism.
This seminar explores the internationalism of the past century in terms of its relationship to separatist nationalism, anti-colonialism, and religious radicalism. It takes as its point of departure the dramatic political, cultural, and intellectual transformations that followed in the wake of World War I. A guiding hypothesis of the seminar is that internationalism cannot be understood apart from its complex relationship to "identity" broadly conceived -- identity of local/transnational groups as well as the identity of internationalists themselves. Readings will be drawn from law/cultural studies/politics/postcolonial theory. Enrollment limited to 20 graduate students. Advanced juniors/seniors by permission only.

HMAN 2970G. Space and Capital.
This course examines various ways Western/non-Western societies have conceptualized space, with a specific focus on the tension between capitalist/common space. We adopt the map as a lens into this question, focusing on the cadastral survey’s rise in the Modern era and on its role in parceling space into strictly bounded, individual property. Throughout the semester, we undergo an inquiry into the map’s uncritical reception in the contemporary era, understanding this development as linked to the Scientific Revolution; the role of linear perspective; the Age of Discovery’s world-as-picture; as well as to the processes of primitive accumulation, colonialism, and the nation-state. Enrollment limited to 20.

HMAN 2970L. History and Theory of Catastrophes.
This seminar proposes a philosophical history of catastrophes (large-scale disasters) and uses it as a vantage point for questioning contemporary critiques of modernity/secularization. Starting from Biblical narratives of God-made disasters, we will follow God’s role in the way north-western societies interpret/cope with catastrophes. Reading/viewing documentation of catastrophes from Defoe’s Journal of the Plague Year to Cooper’s/Block’s/Spike Lee’s reports on Hurricane Katrina, we will examine the emergence of the state as a major actor responsible for preparing for catastrophes/mitigating their effects, but often also for their generation, and discuss the globalization of catastrophes and with catastrophes as special sites of globalization. Enrollment limited to 20.

HMAN 2970M. Race, Space, and Struggle.
This seminar will examine the stark realities of spatial racialization: ghettos, slave plantations, prisons, refugee camps, and border walls, situating the creation of these spaces as violent responses to broader social/economic crises. At the same time, this course will highlight the always already existing practices of resistance by exploring how inhabitants these spaces responded to their marginalization. Because these spaces are also lived, our understanding of anti-racist struggle will encompass a broad array of everyday practices, the appropriation of space, artistic expressions of resistance, and everyday forms of cooperation/creativity, alongside more traditional forms of organized interventions. (Course prerequisites: none) Enrollment limited to 20.

HMAN 2970Q. Latin in America (LATN 2080F).
Interested students must register for LATN 2080F.

HMAN 2970R. Political Foucault.
Michel Foucault was one of greatest political thinkers of the 20th century. He was not always recognized as such, but his work has shaped the field within which critical political theory is pursued today. The seminar will follow Foucault’s thinking on power and its subjects, the state, sovereignty, government, and the political, as these concepts were developed, articulated, and experimented with during one decade of intensive research and revisions -- the nineteen seventies. Our main primary texts will be the three series of lectures Foucault delivered at the Collège de France between 1975 and 1979.

HMAN 2970T. And What About the Human? Black/Anti-Colonial Thought, Human Freedom and Emancipation?.
This course will examine the figure of the human posed in radical anti-colonial thought as a distinctive mode of thinking. Reviewing some major 20th century thinkers, Foucault, Derrida, Arendt alongside Fanon, Ceesire and Wuyter, the course will also examine the complex relationships between the figure of the human, freedom and emancipation. Graduate or undergraduate senior students only. Enrollment limited to 20.

HMAN 2970U. Antiquity and Innovation in the Hispanic Renaissance (HISP 2160N).
Interested students must register for HISP 2160N.
HMAN 2970V. Aesthetics and Architecture
Is art produced for disinterested contemplation? Then how can architecture, which fundamentally serves one of the most fundamental human interests, that for shelter from an adverse environment, count as art? This question has both motivated philosophical speculation and caused tension in architectural practice for centuries. We will approach it through texts by philosophers such as Kames, Kant, Hegel, Schopenhauer, and Wittgenstein; architects such as Vitruvius, Alberti, Loos, Wright, Corbusier, and Venturi; and critics such as Ruskin, Watkins, Vidler, and Leatherbarrow. This course is a seminar requiring oral presentation and a term paper.

HMAN 2970W. Ethics/Politics
This seminar is team-taught by Professors Amanda Anderson and Leela Gandhi. It examines the intersection of ethics and politics from the perspective of critical theory, comparative political and moral philosophy, and transnational intellectual history of the nineteenth and twentieth-centuries. We will examine antagonisms and hierarchies of ethics and politics, ethics as a political discipline, the tension between politics as an institution and as a way of life or ethos. Authors to include Arnold, Wilde, Nietzsche, Gandhi, Berlin, Arendt, Weil, Foucault, Rawls, Habermas, Shklar, Cavell, Butler.

HMAN 2970X. Political Concepts: The Balibar Edition
The seminar is dedicated to the political philosophy/theory of Étienne Balibar, a contemporary post-Marxist and post-structuralist French philosopher. The seminar will focus on the conceptual dimension of Balibar’s work through a study a small cluster of concepts with which he has been especially engaged: ideology, city, citizen and citizenship, equa-liberty, violence, politics and the political. By explicating the meaning of these concepts in Balibar’s work and their role as theoretical-political interventions, we will open the question of the political and experiment with the intellectual and creative power of conceptual analysis and its possible contribution to political theory.

HMAN 2970Y. Race and Nation in the Spanish Caribbean (AFRI 2502)
Interested students must register for AFRI 2502.

Comparative Literature
Chair
Marc Redfield
Comparative literature is the study of literature and other cultural expressions across linguistic and cultural boundaries. At Brown, the Department of Comparative Literature is distinct in its conviction that literary research and instruction must be international in character. The department performs a role similar to that of the study of international relations, but works with languages and artistic traditions, so as to understand cultures "from the inside." Both the department’s undergraduate and graduate programs are held to be among the finest in the country.

For additional information, please visit the department's website: http://www.brown.edu/Departments/Comparative_Literature/

Comparative Literature Concentration Requirements
The concentration in Comparative Literature enables students to study literature in cross-cultural perspectives. The aim of the program is to encourage students to study a varied and illustrative range of literary topics rather than the total development of a single literary tradition. True to the spirit of Brown’s New Curriculum, a concentration in Comparative Literature affords great academic freedom. For example: advanced courses in any literature department at Brown count for concentration credit; although English is commonly one of the languages that students apply to their Comparative Literature studies, basically any language—ancient or modern—supported at Brown may form part of a Comparative Literature concentration program. In essence, concentrators study a generous range of literary works—from Western cultures, both ancient and modern, to Chinese, Japanese, and Arabic—and develop a focused critical understanding of how cultures differ from one another. Comparative Literature differs from other literature concentrations largely through its international focus and its broad-gauged view of art and culture in which the study of languages is combined with the analysis of literature and literary theory. All students take a course in literary theory and have the opportunity to complete a senior essay.

Please contact Professor Stephanie Merrim (stephanie_merrim@brown.edu), the Director of Undergraduate Studies, with questions.

There are three concentration tracks in Comparative Literature, as follows:

Track 1: Concentration in Comparative Literature with two languages
- Complete prerequisites(s) for taking 1000-level courses in your two languages by Semester V (students working in non-European languages may be allowed more latitude; be sure to consult a concentration advisor about constructing an individualized plan).
- Comparative Literature 1210 (COLT 1210), Introduction to the Theory of Literature.
- TEN advanced literature courses (generally 1000-level courses), including Comparative Literature 1210 and:
  a. At least TWO courses in the literature of each of your languages, and the remainder drawn chiefly from among the offerings of Comparative Literature and English, and other national literature departments.
  b. ONE COURSE chiefly devoted to EACH of the three major literary genres: poetry, drama and narrative.
  c. ONE literature course chiefly devoted to EACH OF THREE of the following five historical periods:
    • Antiquity
    • Middle Ages
    • Renaissance/Early Modern
    • Enlightenment
    • Modern. Please note that the 19th, 20th, and 21st centuries count as one period, the Modern Period.

Track 2: Concentration in Comparative Literature with three languages
- Complete prerequisites(s) for taking 1000-level courses in your two languages by Semester V (students working in non-European languages may be allowed more latitude; be sure to consult a concentration advisor about constructing an individualized plan).
- Complete the same requirement for your third language before Semester VII (the above proviso for students working in non-European languages also holds here).
- Comparative Literature 1210 (COLT 1210), Introduction to the Theory of Literature.
- TEN advanced literature courses (generally 1000-level courses), including Comparative Literature 1210 and:
  a. At least TWO courses in the literature of each of your languages, and the remainder drawn chiefly from among the offerings of Comparative Literature and English, and other national literature departments.
  b. ONE COURSE chiefly devoted to EACH of the three major literary genres: poetry, drama and narrative.
  c. ONE literature course chiefly devoted to EACH OF THREE of the following five historical periods:
    • Antiquity
    • Middle Ages
    • Renaissance/Early Modern
    • Enlightenment
    • Modern. Please note that the 19th, 20th, and 21st centuries count as one period, the Modern Period.

Track 3: Concentration in Literary Translation
- Complete prerequisites(s) for taking 1000-level courses in your two languages by Semester V (students working in non-European
languages may be allowed more latitude; be sure to consult a concentration advisor about constructing an individualized plan).

• Comparative Literature 1210 (COLT 1210), Introduction to the Theory of Literature.

• Comparative Literature 1710 (COLT 1710A, COLT 1710C, COLT 1710D). Comparative Literature 2720 strongly urged.

• ONE course or MORE in Linguistics, drawn from among these courses: Cognitive, Linguistic and Psychological Sciences 0410, Anthropology 0800, English 1210, Hispanic Studies 1210 or an acceptable substitute.

• FIVE or SIX advanced literature courses (generally 1000-level courses), including Comparative Literature 1210 and:
  a. At least TWO courses in the literature of each of your languages, and the remainder drawn chiefly from among the offerings of Comparative Literature and English, and other national literature departments.
  b. ONE COURSE chiefly devoted to EACH of the three major literary genres: poetry, drama and narrative.
  c. ONE literature course chiefly devoted to EACH OF THREE of the following five historical periods:
     • Antiquity
     • Middle Ages
     • Renaissance/Early Modern
     • Enlightenment
     • Modern. Please note that the 19th, 20th, and 21st centuries count as one period, the Modern Period.

• TWO workshops or MORE in Creative Writing
• A senior project to consist of:
  A substantial work in translation (length will vary depending upon language and genre);
  A critical introduction outlining the method used and specific problems encountered, and commenting on the history of the original work together with other translations, if any. For thesis, the student may register for COLT 1990, which will be taken in addition to the ten required courses listed above. Successful completion of the thesis constitutes Honors. (See Guidelines for Honors Theses).

For additional information, please visit the Comparative Literature website (http://www.brown.edu/Departments/Comparative_Literature/) or see the Director of Undergraduate Studies, Professor Stephanie Merrim.

Comparative Literature Graduate Program

The department of Comparative Literature offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. While doctoral students may also earn the Master of Arts (A.M.) degree en route to the Ph.D., the department does not admit students into a terminal Master's degree program.

For more information on admission and program requirements, please visit the following website:
http://www.brown.edu/academics/gradschool/programs/comparative-literature

Courses

COLT 0510A. Best-sellers.

Study of seven novels published within the last decade that have enjoyed broad success with reading publics in different places. What pleasures of thought and imagination do we derive from these books, and how can we express clearly our responses? What is the appeal of these best-sellers first to their home audience, then to readers in other social environments and cultures? How may we reshape our own horizons of thought in order to appreciate them? Students will be encouraged to develop their skills of literary analysis, interpretation, and critical discussion. Two lectures and one discussion section per week. Several short papers, quizzes, and a final exam.

COLT 0510B. Caribbean Re-writes.

Through close readings of canonical European texts and rewritings of them in the twentieth-century Caribbean, we explore the literary possibilities and political implications of writing the old in a new language. Readings include Columbus's diaries alongside Carpentier's The Harp and the Shadow (Cuba); Shakespeare's Tempest with that of Aimé Césaire (Martinique); and Jane Eyre and Wuthering Heights alongside novels by Jean Rhys (Dominica) and Maryse Condé (Guadeloupe).

COLT 0510C. The World of Lyric Poetry.

Lyric poetry is the prime mode for conveying emotion in many cultures, from ancient times to the present day. This course will survey the variety of forms and themes from the earliest texts from Greece, Rome, China and Japan, then the glories of the Renaissance and the Tang Dynasty, then move to the challenges for lyric expression in the modern world. Enrollment limited to 20 first year students. FYS

COLT 0510D. Poetry and Music.

Explores the collaboration between poets and composers in the twentieth century. It will primarily focus on Modern Greek composers (Hadjidakis, Theodorakis, Lagios and others) and their collaboration with numerous poets (Garcia Lorca, Gatsos, Eluard, Eliot, Neruda, Ritsos and others). These works will also be examined in depth from a literary and theoretical perspective. Enrollment limited to 20 first year students. FYS LILE

COLT 0510F. Che Guevara, The Man and the Myths.

We will read Guevara’s political and philosophical writings alongside the literary, visual and filmic representations that have made him one of the twentieth century’s most iconic figures and a symbol for vastly diverging interests. From a cultural studies perspective, we will compare the development of Guevara’s theories to posthumous uses of his work and image, particularly in and in relation to present-day Cuba. Enrollment limited to 20 first year students. Instructor permission required. FYS

COLT 0510G. "The Grand Tour; or a Room with a View": Italy in the Imagination of Others.

Italy has for many decades been the place to which people traveled in order to both encounter something quite alien to their own identities and yet a place where they were supposed to find themselves, indeed to construct their proper selves. This course introduces students to some of the most important texts that describe this "grand tour." We will read texts (both literary and travelogues) alongside novels by Goethe, De Stael, Henry James, Hawthorne, Freud, among others, as well as films (such as "A Room With a View") - all in order to determine the ways in which Italy "means" for the cultural imagination of Western civilization. For first year students only. FYS

COLT 0510L. Virgil and Milton.

We will read the Aenid and Paradise Lost with interpretive patience. The study of fate, character, and poetics will be wedded to investigations of beauty, wonder, and nationhood. Enrollment limited to 20 first year students. FYS

COLT 0510K. The 1001 Nights.

Explores the origins, performance, reception, adaptation, and translation of the 1001 Nights, one of the most beloved and influential story collections in world literature. We will spend the semester in the company of genies, princes, liars, slaves, mass murderers, orientalists, and Walt Disney, and will consider the Nights in the context of its various literary, artistic, and cinematic afterlives.

COLT 0510L. What is Tragedy?

Introduction to tragedy. Readings may include Sophocles, Shakespeare, Hegel, Chekhov, Chan-wook Park, and Jia Zhangke. Enrollment limited to 20 first year students. FYS

COLT 0510M. Early Modern Selves: From Soliloquy to Self-Portrait.

We will study the early modern self through its manifestation in the soliloquy (Shakespeare), philosophical treatise (Descartes), early modern poetry, and self-portraiture (Rembrandt). After examining Hamlet's "To be or not to be" speech and other Shakespearean soliloquies as moments in which characters represent themselves in speech, we will turn to Descartes' view of man's essence as his thinking nature. We will then read metaphysical poetry to understand the influence of religion on the early modern self. Readings include Hamlet, Richard II and III, Taming of the Shrew, Discourse on Method, Meditations, and poetry by John Donne.
COLT 0510N. Shakespeare (ENGL 0310A).
Interested students must register for ENGL 0310A.

COLT 0510O. Twentieth-Century Experiments
In this course, we will read some of the most experimental and adventurous literature of the 20th century. Instead of understanding texts as mirrors of social reality, we will consider them as laboratories—spaces for testing out, working through, or mixing up new ideas, categories, and ways of seeing and feeling. We will pay special attention to 20th-century international avant-garde movements, including Futurism, Dadaism, and Surrealism, and we will explore the relation of the literary avant-garde to the avant-garde in painting, cinema, and music.

COLT 0610A. The Far Side of the Old World: Perspectives on Chinese Culture
A survey of traditional Chinese culture focusing on the major literary and artistic achievements of six major periods in Chinese history, including philosophical texts, poetry, various forms of the fine arts, and vernacular fiction and drama. A broad range of primary materials will give the student greater insight and appreciation of Chinese culture in general and also provide a foundation for further study of East Asia in other disciplines.

COLT 0610C. Banned Books
An examination of literary censorship in which we read various texts forbidden for putatively violating social, religious, and political norms in particular historical and cultural contexts. We also analyze the secondary literature surrounding the banning of these ostensibly "dangerous" texts in order to theorize questions and assumptions about the power of art and the ironies generated by these debates.

COLT 0610D. Rites of Passage
Examines a seemingly universal theme—coming of age—by focusing on texts from disparate periods and cultures. Proposes that notions of "growing up" are profoundly inflected by issues of class, gender and race, and that the literary representation of these matters changes drastically over time. Texts from the Middle Ages to the present; authors drawn from Chrétien de Troyes, Quevedo, Prévost, Balzac, Brontë, Twain, Faulkner, Vesaas, Rhys, Satrapi and Foer. Enrollment limited to 20 first year students. FYS

COLT 0610E. Crisis and Identity in Mexico, 1519-1968.
Examines four moments of crisis/critical moments for the forging of Mexican identity: the “Conquest” as viewed from both sides, the hegemonic 17th century, the Mexican Revolution, the “Mex-hippies” of the 1960s. We especially explore how key literary, historical, and essayistic writings have dealt with Mexico’s past and present, with trauma and transformation. Readings include works by Carlos Fuentes, Sor Juana Inés de la Cruz, Octavio Paz, Juan Rulfo, and on the Virgin of Guadalupe. All in English. No prerequisites. WRIT

COLT 0610G. Literature and the American Presidency
We are accustomed to engaging the American presidency as a public office approached through the prism of government, political science, and the like. This course studies the presidency through a literary lens, focusing on four presidents and three literary genres: epistolography (J. Adams and Jefferson), biography (Washington) and literary analysis (Lincoln). We will also study on video the inaugurals and farewells of more recent presidents and, finally, examine non-traditional literary forms, such as pamphlets, songs, posters, broadsides, graphics, newspapers, magazines, and original documents from various presidential elections. WRIT LILE

COLT 0610H. Renaissance Epic
Explores Renaissance attempts to renew, parody, and question the classical epic tradition. The study of poetics, narrative, and imagination will be wedded to investigations of beauty, wonder, and nationhood. Authors will include Ariosto, Tasso, Ercilla, Spenser, Camões, du Bartas, and Milton.

COLT 0610I. Introduction to Cultural Studies
We live in a cultural saturated with information. The messages we register, the meanings we deduce, and the knowledge upon which we ground our actions and choices require critical examination if we are to engage as thoughtful actors in our personal and civic lives. This class will encourage students to reflect on their initial impressions of and reactions to various media and will give them critical tools to examine how formal and thematic strategies work to shape and elicit our sympathies, our desires, our fears, and our beliefs. Focusing primarily on visual and written texts drawn from popular culture—video, print, film, and Web sources—students will practice their analytical skills by evaluating these texts in classroom discussions, several short writing assignments, and one longer essay. Reading the work of several cultural theorists, students will learn to analyze persuasive argumentation through an attention to rhetorical and framing devices and to recognize and decipher visual cues, enabling them to interpret texts and images and to produce coherent critical positions of their own. This class will prepare participants for college courses that require them to process knowledge and not simply acquire information.

COLT 0610L. Murder Ink: Narratives of Crime, Discovery, and Identity
Examines the narrative of detection, beginning with the great dramatic whodunit (and mystery of identity) Oedipus Rex. Literary texts which follow a trail of knowledge, whether to establish a fact (who killed Laius?) or reveal an identity (who is Oedipus?) follow in Sophocles’ footsteps. We read Sophocles’ intellectual children. Readings include: Hamlet, The Murders in the Rue Morgue, The Woman in White, and other classic novels and plays. We also analyze seminal films of the genre, including Laura and Vertigo. Will include the twentieth-century detective story, with particular attention to women writers and the genre of the female private eye.

COLT 0610N. Being There: Bearing Witness in Modern Times (ENGL 0710F).
Interested students must register for ENGL 0710F.

COLT 0610O. The Death of the Subject in Twentieth and Twenty-first Century Literature
Examines the condition of the subject in Western novels and plays written after 1945. Traditional markers of identity in works of literature are being eroded by globalization, split families, the invasion of science in genetics, and increased mobility. Signs of this crisis include loss of agency and individuality, various pathologies including schizophrenia, and the replacement of humans with clones. We will investigate the intricacies of the derailment of the subject and how literary form is affected in novels by Beckett, Coetzee, W. G. Sebald, Kazuo Ishiguro, Michel Houellebecq, Chuck Palahniuk, and in plays by Caryl Churchill.

COLT 0610P. Stories and Storytelling
An introduction to stories, how they are constructed, and how they are told. We will explore the role of storytellers in the creation of a story, the idea of “plot,” the forms that stories take, and the category of fiction itself—in essence, how and why stories are made, and made up. Our discussion will range from topics such as fictional forms, the acts of reading and of telling, the role of memory, and the invention of self, to questions of time and duration. Texts examined will be drawn from a variety of genres, periods, and cultures. FYS

COLT 0610S. Literature and Knowledge
What is knowledge? How do we know what we know? We will read literary texts concerned with these questions to consider how knowledge relates to power, and how deception, stupidity, and mystification force us to question what we know. Readings include Austen, Hawthorne, Melville, Flaubert, James, and Schnitzler.
COLT 0610T. Chinese Empire and Literature.
This course explores ancient and modern approaches to empire and imperialism, focusing on China from the Qin (221-206 BCE) establishment of unified empire through the Qing (1644-1911 CE) confrontation with the British and other European empires. Emphasis will be placed on the relation between imperial expansion and literary production, and the role of Chinese and non-Chinese literature in representing China's multilingual and multiethnic past. Texts include China's most famous work of historical literature, Sima Qian's Shi Jing; poems, short stories, tomb sculptures, contemporary film; as well as critical essays on empire, colonization, and cross-cultural heritage.

COLT 0610U. Altered Cinema: The Cultural Politics of Film Revision (MCM 0901R).
Interested students must register for MCM 0901R.

COLT 0610V. Claims of Fiction (ENGL 0150X).
Interested students must register for ENGL 0150X.

COLT 0610W. Getting Emotional: Passionate Theories (ENGL 0500Q).
Interested students must register for ENGL 0500Q.

COLT 0610X. Convulsive Beauty: Hysteria and the Arts.
Hysteria marks the presence of a traumatic memory that arouses wild bodily symptoms, treated psychologically by putting feeling into words. Often considered a particularly feminine ailment, hysteria has been read by feminist scholars as a deviant, desirous language of the female body. This course considers the boundaries of pain and pleasure, madness and lucidity, and the personal and the political.

COLT 0710A. Women's Words: Writing in Medieval Europe and Japan.
An introduction to women poets, dramatists, and prose writers from medieval court cultures, with an emphasis on what these authors show us about their educational, social, moral/spiritual environment and civilization. What did the pen or writing brush enable them to express and achieve? How were they able to negotiate the gaps between a male classical literary language and their own vernacular speech? Readings may include works by Christine de Pizan, Dhudouda, Heloise, Hildegard of Bingen, Hrotsvitha, Julian of Norwich, Margery Kempe, Marie de France, Murasaki Shikibu, Sei Shonagon, and Troluta plus shorter texts written by both men and women. Instructor permission required. DPLL

COLT 0710C. Introduction to Scandinavian Literature.
An introduction to major works of Scandinavian writers, painters and filmmakers over the past 150 years. Figures include Kierkegaard, Ibsen, Strindberg, Munch, Hamsun, Josephson, Sodergran, Lagerkvist, Vesaas, Cronqvist, Bergman, August and Vinterberg, as well as children's books by Astrid Lindgren and Tove Jansson. LILE

COLT 0710D. Inventing the Renaissance.
The invention of the Renaissance as a cultural formation and as a part of the western cultural imaginary. We will consider the so-called “discovery of man,” humanism and the recovery of the classical past, the production of scriptural identity or the “bibliographic ego,” courtiership, the formation of the early modern state and the discovery of the “new world” through readings of major English and continental writers of the period.

A reading of the major literary monuments, from early waka to Genji to the fiction of Oe Kenzaburō. Surveys Japanese literary production from the 8th century to the present, examining the formation of literary genres, aesthetic values, and reading habits of successive eras in the context of political, social, and cultural development. No prerequisites.

COLT 0710F. Latin America: The French Connection.
Raises questions of intertextuality between French and Latin American literature, focusing on how each represents the other. Beginning in the late nineteenth century, questions aesthetic categories of the real, the surreal and the marvelous/magical real; and literary responses to World War II and the Dirty War, the 1968 student protests in Paris and Mexico City, feminist movements, and globalization.

COLT 0710H. Mexican letras, 1519-1968.
The course approaches the history of ideas in Mexico by examining four critical moments/moments of crisis in the country's development. We focus on the issues and burdens of the past as conceptualized in historical, essayistic, and literary writings of the Conquest, the Baroque, the Mexican Revolution, and the iconoclastic 1960s. In English. LILE

COLT 0710L. Storytelling: Verbal Art as Performance.
This course offers a comparative selection of oral and written folktale from Arabic, Chinese, African, North American, and European traditions in order to study the formation and reception of storytelling in different socio-cultural contexts (Western and non-Western, contemporary and traditional). We will consider storytelling and associated performance practice in the light of a variety of theoretical disciplines (e.g., rhetoric, folklore, sociolinguistics, performance studies, literary criticism, narratology). There will be lectures, presentations, and videorecordings.

COLT 0710N. A Comparative Introduction to the Literatures of the Americas.
Considers the common links between the diverse literatures of North and South America, approached in relation to one another rather than to Eurocentric paradigms. Focuses on the treatment of such topics as the representation of the past and the self, the role of memory and the imagination, the nature of literary language, and the questions of alienation, colonialism and post-colonialism, communication versus silence, and fiction versus history in the works of selected writers from North and Latin America, including García-Márquez, Faulkner, Cortázar, Allende, Lispector, Morrison, Doctorow, Rosa, and DeLillo. Enrollment limited to 15 first year students. FYS WRIT

COLT 0710P. Women and Writing in Medieval France and Japan.
An introduction to women poets and prose writers from early court cultures, with emphasis on what these authors show us about their social environment and civilization. What did the pen or writing brush enable them to express and achieve? How were they able to negotiate the gaps between a male classical literary language and their own vernacular speech? What kinds of literary approaches and conventions were perfected by them? How did they view their personal social status? What educational, moral, and spiritual concerns did they voice? Readings: works by Murasaki Shikibu, Sei Shonagon, Heloise, Marie de France, Christin de Pizan, plus shorter texts written by both men and women between 700 and 1450 C.E.

COLT 0710Q. Odysseus in Literature.
Examines the reincarnations of the Homeric figure of Odysseus in contemporary literatures. It approaches the texts historically, culturally and literary. How is the Odyssey myth altered from culture to culture (Greece, Rome, Ireland, the Caribbean), how is it re-adapted in different historical periods, how does Odysseus change as the genre changes (epic, poetry, the novel, film, drama)?

This survey course on Japanese literature will introduce works ranging from the 7th century AD to the present. This course will provide a historical survey of classic and modern texts, while paying attention to the close relationship Japanese literature has had with visual culture from the calligraphic poems of the Heian period to the postwar influence of manga upon literature.
COLT 0710U. Leaves of Words: A Survey of Japanese Literature. While Zen, sushi and anime have become commonplaces in contemporary American parlance, Japanese literature and culture remain static enigmas, conjuring up visions of stolid-faced samurai, cherry blossoms, and post-modern dystopias. In this survey of Japanese literary works from the 8th century to the present, we will examine the development of canons of literature, both poetry and prose, and aesthetics in specific social contexts in Japanese cultural history. Also, we will consider their re-evaluations in subsequent eras, raising questions about the stability and continuity of such traditions. In addition to readings, we will briefly look at film, manga and anime.

COLT 0710V. The Arab World Writes Itself: Contemporary Arabic Literature. In his seminal work Orientalism, Edward Said paraphrases Marx, and suggests that Orientalist attitudes towards the Middle East have produced a discourse in which the East must always be spoken for, and not allowed to represent itself. Said’s argument has become even more relevant in the past decade, given the growing interest in the Middle East as a region in the US, coupled with a dearth of spaces where voices from the region can offer their own narratives. Designed as an introductory course to contemporary Arabic literature, this course includes a variety of readings in translation and films from across the Arab world; it foregoes an intense exploration of one national literature for a more varied survey of the textual output of several countries. We will attempt to situate each text within its national context and within the larger pan-Arab, regional and international context while being sensitive to the political, geographical, and historical forces that have influenced these texts, including the rise of Arab nationalism and the independence struggles of the mid-twentieth century, and immigration. We will also examine—and hopefully question—some of the discursive themes and conceptual frames that have been traditionally used to think about contemporary Arabic literature. Enrollment limited to 20. LILE

COLT 0710W. Cultures of Colonialism: Palestine/Israel. Examines the history and literary production of the Israeli-Palestinian colonial encounter from 1948 to the present. Aims to delineate the deep links between domestic culture and colonialism in Israeli-Palestine by raising questions about statehood, dispossession, and exclusion in the imaginaries of both peoples and by examining novels in relation to the ethical and political imperatives of settler-colonial dynamics. Authors include: David Grossman, Emile Habibi, Jabara I. Jabara, Sahar Khalifeh, Kanafani, Amos Oz, and A. B. Yehoshua. Sophomore seminar. Enrollment limited to 20 sophomores.

COLT 0710Z. Comedy from Athens to Hollywood. This course will look at ancient comedy from its birth in Athens and Rome through Renaissance incarnations to the 19th and 20th century, including novels and films as well as plays. We will survey the main topics of comedy, from Aristophanes’ focus on the absurdities of daily and political life in Athens to the Roman codification of a genre of everyman in love and in trouble. We will also examine how later writers and filmmakers use both traditions to give comedy its subversive power of social commentary.

COLT 0711A. Epics of India (CLAS 0820). Interested students must register for CLAS 0820.

COLT 0711B. Ishiguro, Amongst Others (ENGL 0710L). Interested students must register for ENGL 0710L.

COLT 0711C. Postcolonial Tales of Transition (ENGL 0710E). Interested students must register for ENGL 0710E.

COLT 0711D. Comparative Approaches to the Literatures of Brazil and the United States (POBS 0850). Interested students must register for POBS 0850.

COLT 0711E. Reading and Writing African Gender. In this course, we will examine ways that gender and literary genre feature in postcolonial African writing, and in its reception. We will closely read novels by four significant women authors: Mariama Bâ (Senegal), Zoe Wicomb (South Africa), Tsitsi Dangarembga (Zimbabwe), and Chimamanda Ngozi Adichie (Nigeria). We will also read short, lesser-known texts, such as Richard Rive’s “Riva” and Binyavanga Wainaina’s “The Missing Chapter,” that question boundaries of gender, genre, and sexuality.

COLT 0711F. Arabic Literature: The Qur’an to Darwish. The course offers an introduction to Arabic literature from ancient Arabian poetry to contemporary Palestinian novels. Topics include desert poetry, the Qur’an, medieval Muslim court literature, popular literature, Arabic literary theory, and the emergence of modern Western genres, with a focus on Palestinian literature as a test-case. We will engage first-hand with Imru’ al-Qays’ Qifa Nabki, al-Jahiz’s Books of Misers, Ibn Hazm’s theories about love, Mahmoud Darwish’s I Come from There, and Emile Habiby’s The Pessoptimist. All readings are in English.

COLT 0711G. The Realist Novel (Europe, America, Latin America). How did the 19th-century novel shift from its time idealistic descriptions of domestic life to realist representations of individual, psychological, social, and political “reality”? In this course on the realist novel, we will address how literary realism attempted a description of the world “as it was”: what were the social and political questions the realist novel took up? How did it conceive gender and sexuality, and how did it account for issues of social inequality, colonialism, and other types of bourgeois ideology? What national projects did non-European novels engage in, particularly in Latin America and the United States? LILE

COLT 0810A. Ancient Greek Myth in Modern Poetry. Various responses to ancient Greek myths by poets in the Western tradition, especially modern Greek. Considers how poets since 1800 have approached, rewritten, or subverted the classical version of myths, such as those of Eurycle, Helen, Orpheus, Persephone, Penelope, and Ulysses. Emphasizes the challenges posed by the past, issues of cultural and political context, and questions of gender. Readings in English.

COLT 0810C. Arthurian Tales and Romances of the Middle Ages. Why did stories of King Arthur, his knights, and their ladies fascinate writers and audiences throughout Europe? What can Arthurian quests, marvels, and love adventures tell us about successive pre-modern societies that shaped them? What are our responses to their cultural beliefs and forms of playful make-believe? Readings (in modern translation) of medieval Latin, French, English, Welsh, and German texts. LILE

COLT 0810D. City (B)Lights. Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences, including sociology, political economy, urban ecology. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images, American cities and literary works will be brought to the foreground.

COLT 0810E. Confession, Autobiography, Testimony. Does writing a life give it coherence and veracity, or create a fiction? What is the relationship between first-person narrative and truth, and between authorship and authority? How does the form of a first-person text -- a religious confession, a personal journal, a political denunciation, a collective memoir -- affect the telling? Must the reader of such an account be “you” to the teller’s “I”, and how does the intimacy of this relationship shape the experience of reading? In this course, we test the limits of self-narration against ethical and physical limits, reading first-person narratives that purport to be non-fictional. We will read accounts of different experiences -- social and sexual transgression, suffering and perpetrating violence, slavery -- and explore both the possibilities and duplicities of writing as “I”.

COLT 0810G. Equity Law Literature Philosophy
Justice, rigorously applied, yields injustice. This paradox haunted Western aspirations toward legal and political justice from antiquity to the Renaissance. It necessitated the formulation of a complementary principle, equity, whose job it was to correct or supplement the law in cases where the strict application of it would lead to unfairness. In England, equity was enforced by a separate system of law, and it was a wealthy, ambiguous term of great emotional force, with a particular appeal to Shakespeare. After its decline, Dickens and Kafka wrote two of the greatest literary works set in a world without equity.

COLT 0810H. How Not to Be a Hero.
Shakespeare wrote two great, intense plays about ancient characters who were irredeemable failures: Coriolanus and Timon of Athens. What can failure teach us? What kind of strength does a language of failure possess? We will also read the ancient sources themselves (Livy, Lucian, Plutarch), and modern adaptations of these stories (Bertolt Brecht, T. S. Eliot, Günter Grass, Wyndham Lewis).

COLT 0810I. Tales and Talemakers of the Non-Western World.
Examines many forms of storytelling in Asia, from the Epic of Gilgamesh and the Arabian Nights Entertainments to works of history and fiction in China and Japan. The material is intended to follow the evolution of non-western narratives from mythological, historical and fictional sources in a variety of cultural contexts. Topics will include myth and ritual, the problem of epic, tales of love and the fantastic, etc. DPLL LILE

COLT 0810J. The Colonial and Postcolonial Marvelous.
A celebration and critique of the marvelous in South American and related literatures (U.S., Caribbean). We follow the marvelous from European exoticizing of the New World during the colonial period to its postcolonial incarnations in "magical realism" and beyond. We attend particularly to the politics and marketing of the marvelous, in writers including Borges, Chamoiseau, Columbus, García Márquez, Fuguet. Reading in English or Spanish. DPLL WRIT

COLT 0810M. Uncanny Tales: Narratives of Repetition and Interruption.
What makes stories creepy? Close readings of short narratives with special attention to how formal and thematic elements interact to produce the effects of uncertainty, anxiety and incoherence peculiar to "the uncanny." Topics include: the representation of the self in images of the arts; the representation of speech; instabilities of identity and spatial and temporal boundaries; doubles, monsters, automata and hybrids. Texts selected from: Walpole, Shelley, Hoffmann, Kleist, Poe, Dostoyevsky, Freud, Wilde, Cortazar, Kafka, Lovecraft. LILE

COLT 0810O. Civilization and Its Discontents.
Investigates the age-old tension between order and chaos as a central dynamic in the making and interpretation of literature. Texts will be drawn from drama, fiction and poetry from Antiquity to the present. Authors include Sophocles, Shakespeare, Racine, Beckett, Prevost, Bronte, Faulkner, Morrison, Blake, Whitman, Dickinson, and Rich.

COLT 0810P. Moderns and Primitives.
Modernism has been called a 'Renaissance of the Archaic'. We will read from the major works of Anglo-American modernism (Eliot, Joyce, Lawrence, Pound), focusing on their attitudes toward the primitive and the archaic. In addition, we will examine anthropological theories from the Victorian period to Durkheim, explore primitivism in modernist music and painting, and read about recent controversies surrounding modernism and primitivism.

COLT 0810U. Lovers, Slaves, Kings and Knaves: Major Plays in Western Literature.
This course will introduce students to representative tragedies and comedies, focusing in particular upon their development as literary genres; continuities and variations of character, plot, and theme; stage and performance conventions; and the classical tradition. Readings will include Aeschylus, Sophocles, Euripides, Aristophanes, Shakespeare, Racine, Eilde, Ibsen, and Vogel.
COLT 0811M. Planes, Trains, and Automobiles: Travel and Transport in Modern Literature and the Arts.
This course studies how new modes of transportation and the experiences they enabled stood as symbols of both the fears and joys of rapid modernization in 19th- and 20th-century literature, film, and visual art. How did the speeding locomotive, the plane's aerial view, and the personal freedom of the automobile transform the ways people traversed space, experienced time, traded, and came into contact with one another? In formal terms, how did these experiences inspire innovations in the media we examine by Whitman, Kipling, Baudelaire, Marinetti, Brecht, Woolf, Huxley, Stein, Ruttman, Wegman, Picabia, Duchamp and others? No prerequisites.

COLT 0811N. Poetics of Madness: Aspects of Literary Insanity.
This course surveys a wide range of literary texts with a view to tracing the long process of transition from pre-modern to modern conceptions of madness on the one hand, and to identifying the symbolic logic and discursive modalities that underlie its respective representations on the other. Spanning several centuries of artistic preoccupation with the alienated mind, these texts will serve as points of reference in a focused exploration of the relationship between insanity and literature, as it has been shaped by social dynamics, cultural norms, philosophical ideas, and medical theories. Authors include Euripides, Erasmus, Shelley, Dostoyevsky, Stevenson, and Woolf.

COLT 0811Q. Mediterranean Cities.
Athens, Istanbul, Alexandria: three iconic cities of the Levant that will serve as points of reference in a focused exploration of East Mediterranean history and culture. Reads and discusses a number of texts that span several decades and a wide range of styles and genres – from realism to history and culture. Reads and discusses a number of texts that span several decades and a wide range of styles and genres – from realism to history and culture. Interested students must register for MCM 0901K.

Interested students must register for MCM 0901K.

COLT 0811W. The Myth of Venice in Literature: Memory, Desire and Death.
This course will explore the myth of Venice in literature: focusing on the topos of Venice in the genre of travel writing, we will study the theme of liberty and decadence associated with Venice's theatrical and political culture. Readings will include Shakespeare's The Merchant of Venice, excerpts from De Brosses's Travels through Italy, Goldoni's Memoirs, Rousseau's Confessions, and Casanova's Histoire de ma vie. We will also study the influence of these accounts on the Romantic poets (Goethe, Wordsworth, Byron, Shelley, and Musset), and modernity (Henry James's The Aspern Papers, Thomas Mann's Death in Venice, Donna Leone's Death at the Fenice).

COLT 0811Y. Great Jewish Books (JUDS 0681).
Interested students must register for JUDS 0681.

COLT 0811Z. Paradise, Periphery, Prison?: The Island in the Western Imaginary.
Paradise, periphery, or prison? The representation of the island has been described as imaginary and not actual, mythological and not geographical. Examines the fascination with islands in the western cultural imaginary. Selective readings from literature, film and historical texts focus on the ways in which island spaces have been represented in diverse social, national, imperial contexts as well as the effect of such projections on the native islanders, their visitors and often subjugators. Authors may include Homer, Plato, Marco Polo, Mandeville, Darwin, Defoe, Tournier, Kincaid, Kafka, Durrell, Seferis; theoretical works drawn from critical geography, postcolonialism, and the field of island studies.

COLT 0812A. Hamlet Post-Hamlet.
Shakespeare's Hamlet is perhaps the most widely read, performed, adapted, parodied and imitated literary text of the western tradition. In this seminar we will begin by reading/re-reading the play before turning to a number of appropriations of Shakespeare, both in the west and non-west, in order to address social and aesthetic issues including questions of meaning and interpretation, intertextuality and cultural translation. First Year Seminar. Enrollment limited to 20. FYS

COLT 0812D. Mythology of India (CLAS 0850).
Interested students must register for CLAS 0850.

COLT 0812H. Literary Bestsellers of the Islamic World.
Who read what during the golden age of Islamic civilization? What were the page-turners, must-read classics, and viral texts of the Islamic world? In this course, we will explore works of poetry, epic, satire, fantasy, and allegory such as Baha al-Din, Mutanabbi, Hafez, Nizami, Abu Nuwas, and others.

COLT 0812J. Storytellers, Editors, and Archivists in Modern Arabic Narrative.
Examines the various frame narrators who populate twentieth-century Arabic fiction, from itinerant storytellers and fastidious government clerks to reclusive sociologists and "illiterate" mothers. We'll explore how these frame narrators call attention to the processes of writing and narration themselves, thereby inviting the reader to question the selections, exclusions, and suppressions that go into the making of any narrative —historical, political, or otherwise. Our focus throughout will be on the problem of representing subjectivity in narrative form, particularly when that subjectivity has been fragmented by the experiences of colonialism, war, exile, and state oppression.

COLT 1210. Introduction to the Theory of Literature.
An historical introduction to problems of literary theory from the classical to the postmodern. Issues to be examined include mimesis, rhetoric, hermeneutics, history, psychoanalysis, formalisms and ideological criticism (questions of race, gender, sexuality, postcolonialism). Primarily for advanced undergraduates. Lectures, discussions; several short papers.

COLT 1310B. Classics of Indian Literature (CLAS 1160).
Interested students must register for CLAS 1160.

COLT 1310C. Twentieth-Century Western Theatre and Performance (TAPS 1250).
Interested students must register for TAPS 1250.

COLT 1310D. Between Gods and Beasts: The Renaissance Ovid (ENGL 1360S).
Interested students must register for ENGL 1360S.
COLT 1310G. Silk Road Fictions.
This course introduces students to East-West comparative work. We will explore the history and politics of different methods of literary comparison, and diverse definitions of East and West. In particular we will ask how assumptions of cultural contact or isolation shape the way we bring together, say, a Chinese and a Greek poem, or interpret a documentary film about modern Indonesia. Themes will include: the “Silk Road,” as a historical framework of cultural exchange across Afro-Eurasia; the “Axial Age” of independent civilizations; Orientalism; Heiltsum; Pan-Asianism. The filmmaker of The Act of Killing will visit.

COLT 1310H. Classics of Indian Literature (CLAS 1160).
Interested students must register for CLAS 1160.

COLT 1310I. Modern African Literature (ENGL1710J).
Interested students must register for ENGL 1710J.

COLT 1410A. All the World's a Stage: Seventeenth-Century Drama.
Readings of representative English and continental plays of the 17th century including Shakespeare, Jonson, Corneille, Molière, Tasso, Calderon, and others. How do dramatists represent and negotiate oppositions between art and nature, imagination and reason, myth and history, freedom and fate through dramatic form and metaphor? Why is the stage such a powerful metaphor for the world?

Explores traditional Chinese drama, which has always been a music theater, from the perspective of contemporary cultural theory, and in a comparative and interdisciplinary context. Analyzing classical plays in relation to their staging in today's regional operas, this course will first examine the dialectics of "prettiness and artistry" in traditional Chinese theater aesthetics and its implications in gender politics. It will then move on to investigate issues of cross-dressing and erotic desire in Chinese drama of the late imperial period in comparison with that of early modern England. Lastly, the ramifications of Chinese opera as a national imagination in modern cultural politics, as embodied in the play M. Butterfly, the film Farewell My Concubine, and the Beijing opera version of Turandot, will be addressed.

COLT 1410C. Chinese Theatre in the Mao Years.
This course focuses on two major issues: policing traditional theater and "model revolutionary drama" as "a new proletarian culture." The course will begin with a study of Mao Zedong's ideas on literature and art in the light of contemporary cultural theory. It will then look at examples of the "new opera" and "new history play," examining them in relation to a complex of censorship issues concerning the exercise of political power in administering human life and the body, literature and drama as political representation, and the hermeneutics of censorship.

An introduction to the dramatic literature of 18th-century England in the context of contemporary theatrical conventions and innovations. Plays read alongside treatises on acting techniques, stage design, and contemporary theatrical pamphlet-debates. The sociopolitical contexts of the London patent theaters and the coexistent "illegitimate" entertainments are explored, as well as the influential effects of Continental theatrical theory and innovation.

COLT 1410E. Japanese Theatre: from Dengaku to De Sade.
Surveys traditional Japanese theatre from the lofty medieval Nō drama to the more popular genres of Jōruri (puppet theatre) and Kabuki in the Edo period (1600-1868). Through playtexts, related secondary criticism, videotapes, and films, we will examine the function of spectacle and theatre, the problem of representation or mimesis, the notion of audience, and the relation of text to performance. Concludes with more recent examples of Japanese drama and performance.

COLT 1410F. Medieval Drama.
How drama developed in northwestern Europe between the tenth and early sixteenth century—from liturgical tropes and miracle plays to mystery cycles and morality plays, from popular feasts and minstrel performances to fool's plays, farces, and other secular comedies. Emphasis on the cultural context and social functions of dramatic games and performances in premodern Europe.

COLT 1410K. European Early Modern Drama.
An introduction to early modern drama in the French, Italian, Spanish, and English traditions. The goal is to explore a wide range of imaginative impulses in the Renaissance and Baroque periods. Readings will include plays by Corneille, Racine, Calderón, Lope de Vega, Shakespeare, Machiavelli, and Molière.

COLT 1410L. Philosophy and Tragedy.
Explores the intersection of philosophy and tragedy in western literature. Readings may include Sophocles, Plato, Aristotle, Shakespeare, Hegel, and Nietzsche.

COLT 1410M. Shakespeare and Philosophy.
Explores the relationship between Shakespeare and philosophy. Readings include philosophers who have written about Shakespeare (Hegel, Nietzsche, Cavell, and others), as well as philosophers who may illuminate interpretive problems in Shakespeare (Plato, Seneca, Spinoza, and others).

COLT 1410N. Found in Translation: The Adaptation of Literature to Film in Japan.
Contrasting the demands of the text versus the screen, we will read eight to ten works of modern Japanese literature and view the film versions of each in order to discuss the problem of translation from one medium to another. Possible works for inclusion are Rashomon, Harp of Burma, Woman in the Dunes, and The Makioka Sisters. Finally, we will consider manga (the graphic novel) and its adaptation into anime.

COLT 1410O. Shakespeare and.
Canon formation and disciplinary divisions have deformed the way in which we read Shakespeare. Frequently presented as a post-romantic singular "author," cut off from the sources, texts and genres on which he drew and the collaborators with whom he worked, Shakespeare looks reads and performs differently in relation to the rich contexts in which the plays were produced and through which they are produced today. We will read plays and other materials with attention to formal and historical questions including genre, the Shakespearean text, gender, sexuality, status, degree, and nation.

COLT 1410P. Shakespeare.
We will read a number of Shakespeare’s plays from The Comedy of Errors to The Winter’s Tale in relation to the sources, analogues, and genres (classical, continental and English) on which he drew. We will consider both formal and historical questions. Issues to be addressed include genre, the Shakespearean text, gender, sexuality, status, degree, and nation. Some attention to what has come to be called “global” Shakespeare. Written work to include a mid-term and two papers.

COLT 1410S. Classical Tragedy.
This course will read the great Greek tragedies of Aeschylus, Sophocles, and Euripides, and some Senecan tragedy. We will then read Renaissance and later tragedies that use the classical world as a setting, such as Antony and Cleopatra, Julius Caesar, and tragedies that rewrite classical themes, including O'Neill's Mourning Becomes Electra.

COLT 1410T. Tragedy from Sophocles to The Wire.
Explores tragedy from Athens to Baltimore. Readings will include Sophocles, Shakespeare, Hegel, Chekhov, Jia Zhangke, Chan-Wook Park, Marx, Trotsky, and the deindustrialized American city. Open to juniors and seniors. Instructor permission required.

COLT 1410U. Shakespeare in Perspective.
We study Shakespeare together with selections from other writers or thinkers, including those who have written about Shakespeare (e.g. Nietzsche, Emerson, Coleridge), and those who can illuminate interpretive problems in Shakespeare (e.g. Plato, Melville).

COLT 1410V. Russian Theatre and Drama (TAPS 1430).
Interested students must register for TAPS 1430.

COLT 1410Y. Shakespeare and Embodiment (ENGL 1360Z).
Interested students must register for ENGL 1360Z.
COLT 1420A. The Tale of Genji and its Legacy.
The Tale of Genji (circa 1000 CE), authored by Murasaki Shikibu, a woman of the Heian court, has been canonized over the centuries as the greatest work of Japanese literature. No work in the Japanese tradition has exerted as much literary influence as this mammoth work of prose fiction detailing the private lives of Genji, the brilliant son of the emperor, those with whom he consorts, and his descendents. We will read Genji in its entirety, along with antecedent works, other texts of the period, works influenced by Murasaki’s opus, other historical materials, and secondary commentary. There are no prerequisites for this course and it is open to all undergraduates.

In East Asian Buddhist culture, the mirror is a symbol of the mind in both its intellectual and emotional aspects. These masterworks detail the lives and loves of Prince Genji, cynosure of the medieval Japanese court, and Jia Baoju, the last hope of an influential Chinese clan during the reign of Manchus. We examine both works as well as the sources of Genji and literary aesthetics of the Tang dynasty.

COLT 1420F. Fantastic and Existentialist Literatures of Argentina, Uruguay and Brazil.
Jorge Luis Borges proclaimed that South American writers can "wield all themes" without superstition, with irreverence. This course examines the ways in which 20th century writers from Argentina, Uruguay and Brazil appropriated European fantastic and existentialist fictions, taking them in new directions. Readings, in English or original languages, include Borges, Cortázar, Onetti, Lispector. Prerequisite: previous college literature course(s).

COLT 1420G. Fictions of the Caribbean.
The Caribbean has inspired conflicting cultural and political claims, and a wealth of visual images. We will rethink the formation, representation and self-presentation of the Caribbean countries, steering our explorations through postcolonial and postmodern theory to questions of appropriation, language and identity. Readings from Columbus and Shakespeare to Danticat, Santos Febres and Kincaid; essays by Glissant, James Benítez Rojo and others.

COLT 1420K. Masterworks of Chinese Fiction.
Focuses on three acknowledged classics of Chinese fiction-Three Kingdoms, The Journey to the West, and The Dream of the Red Chamber-works which demonstrate the range of the genre as they represent historical, fantastical, and sociopsychological subjects. Topics include the role of fiction in Chinese society, the masterworks as mirrors of Chinese culture from the 14th through 18th centuries, and the comparative theory of the novel.

COLT 1420L. Modern Japanese Fiction.
Narative fiction from the Meiji Period (1868-1912) to the present in the context of modern Japanese cultural and intellectual history. In addition to more canonical writers such as Natsume Sōseki and Mori Ōgai, examines the legacy of women writers such as Higuchi Ichiyō and Enchi Fumiko; proletarian writers such as Hayama Yoshiki, Kobayashi Takijii, and Hayashi Fumiko; and more contemporary mass-audience writers such as Yoshimoto Banana and Yamada Eimi.

COLT 1420N. Postcolonial Faulkner.
How is it that Faulkner became one of the most influential North American authors in the Third World? To answer this, we read Faulkner's "The Bear" against two of his citational novels, Absalom, Absalom! and The Sound and the Fury. We then turn toward a number of Faulknerian novels from the Arab world and Latin America. We discuss theoretical texts that describe the legacies of various colonialisms.

COLT 1420Q. The Bildungsroman.
Readings of novels in the Bildungsroman tradition and the theoretical questions of the genre: the historicity and constitution of the self; problems of the representation of a life; the category of the unity of a life as a factor of identity; notions of progress, development and completion. Considerations of the successes and failures of this model. Readings to be selected from Rousseau, Chateaubriand, Sterne, Goethe, Novalis, Flaubert, Musil, Kerouac.

COLT 1420S. The Captivity Narrative.
Because the captivity narrative implies both a feminized subject and a writing subject, it provides a link among political, social, and literary phenomena common to all modern Western cultures. Examines various novels consumed by members of such cultures (including gothic romances, Bildungsroman, boys books, girls books, ethnographic journeys, and prison diaries) as versions of the captivity narrative.

COLT 1420T. The Fiction of Relationship.
Explores the manifold ways in which narrative literature sheds light on the relationships that we have in life, both knowingly and unknowingly. The novel form, with its possibilities of multiple voices and perspectives, captures the interplay between self and other that marks all lives. Authors include Laclos, Melville, Brontë, Kafka, Woolf, Faulkner, Borges, Burroughs, Vesaas, Morrison, and Coetzee.

COLT 1420U. The South: Literatures of the U.S. South and South America.
For Jorge Luis Borges, in his story of the same title, the South is a spectral region, hovering between imagination and reality. The literatures of the U.S. South and South America enact his notion of the South. We examine the remarkable similarities between the two literatures-similarities that result from literary influence and from social, cultural, and historical circumstances. Prerequisites: previous upper-level literature course(s), relevant to your studies at Brown. Instructor permission is required and will be given after second class. WRIT

COLT 1420V. Visionary Fictions.
Visionary and apocalyptic writing, subversive of modes of perception and understanding as well as of political doctrines and systems, from Blake and Novalis to mid-nineteenth century French writers (Nerval, Rimbaud, Lautréamont), Surrealism and William Burroughs’ Naked Lunch.

COLT 1420X. The European Novel From Goethe to Proust.
Readings of major European novels of the 19th century as literary reflections on philosophical questions such as aesthetic and ethical judgment, subjectivity, mimesis, memory and the novel itself as a genre. Authors include Goethe, Stendhal, Balzac, Dickens, Flaubert and Proust. Selections from Kant, Hegel, Marx, Lukács and Benjamin.

COLT 1420Y. Gigantic Fictions.
Terms such as 'epic,' 'mammoth,' 'gigantic,' and even 'loose, baggy monsters' have been coined to describe examples of literary discourse that inordinately exceed the normative boundaries of fiction. How are we to understand these narratives? What is the relation between literary gigantism and mimesis? How do 'gigantic fictions' threaten to break their literary bounds? What holds these mammoth narratives together? What impels authors to elect such a grand scope for literary representation? We explore these questions and others through close reading of several works deemed to be among the most gargantuan from authors such as Rabelais, Murasaki Shikibu, Tolstoy and Joyce.

COLT 1421F. Esthers of the Diaspora: Female Jewish Voices from Latin America (POBS 1500H).
Interested students must register for POBS 1500H.
COLT 1421G. Dickens and Others (ENGL 1511G).
Interested students must register for ENGL 1511G.

COLT 1421I. The Paternalistic Thriller and Other Studies in Colonial Fiction.
The impact of colonialism on European fiction from the rise of empire to its decline and fall, focusing on authors who wrote from direct contact with the peoples of Africa and Asia, such as Rudyard Kipling, Joseph Conrad, T. E. Lawrence, E. M. Forster, and Isak Dinesen. Topics will include romantic images of conquest, imperial ideology in literature, differing attitudes towards acculturation, and the changing symbolisms of exotic settings.

COLT 1421K. Faulkner (ENGL 1710G).
Interested students must register for ENGL 1710G.

COLT 1421L. “Terrible Beauty”: Literature and the Terrorist Imaginary (ENGL 1760I).
Interested students must register for ENGL 1760I.

Interested students must register for ENGL 1761T.

COLT 1421N. Kafka’s Writing (GRMN 1340M).
Interested students must register for GRMN 1340M.

COLT 1421O. W. G. Sebald and Some Interlocutors (ENGL 1761Q).
Interested students must register for ENGL 1761Q.

COLT 1421Q. Word and Image: Ekphrasis, the Iconic Narrative, and the Graphic Novel.
An examination of the tradition of illustrated narratives from the premodern to the modern periods: the ancient Indian epic the Ramayana, the early eighteenth-century Japanese Genji Monogatari, the medieval English Canterbury Tales, the late eighteenth-century Marriage of Heaven and Hell, as well as the contemporary graphic novel Persepolis and examples of Japanese manga. Discussion will focus on the nature of iconography and symbolism: the historical privileging of text over image; the significance of parallel visual and verbal representation and its implications for culturally-specific theories of reading. Instructor permission required.

COLT 1421R. The European Novel from Richardson to Goethe.
This course studies the rise of the novel in eighteenth-century England, France, and Germany, focusing on the development of epistolary fiction, but with side-glances at the picaresque and sentimental tradition. Texts to be read include Richardson’s Pamela, Fielding’s Shamela and Joseph Andrews, Rousseau’s Julie, Laclos’s Les liaisons dangereuses, perhaps Bernardin de Saint-Pierre’s Paul et Virginie, perhaps Sade’s Justine, and definitely Goethe’s Sorrows of Young Werther. LILE

COLT 1421S. The Poetics of Confession (ENGL 1561J).
Interested students must register for ENGL 1561J.

Sun-drenched, seductive, and timeless, the Mediterranean is an appealing location from which to ponder Europe’s debt to this cradle of western civilization. Recently, the region’s economic debt crisis has crystallized thoughts that, beginning here, a peaceful, unified Europe will come undone or be rehabilitated. The word ‘crisis’ itself hinges on a making a crucial decision, often in marking the turning point of a disease. This course examines representations of this moment through literature and film—but also in history, anthropology, journalism, and art—and in the context of other pivotal twentieth-century Mediterranean texts that marked, and anticipated, seismic shifts on the continent.

COLT 1421U. Words Like Daggers: The Epistolary Novel.
Letters as novels, novels in letters; this course traces the development of the epistolary novel, as it was cultivated in Europe from the seventeenth to the twentieth centuries. Through focused discussions of seminal, as much as fascinating, specimens of the genre, we will study the major impact that epistolary fiction had on the stylistic and conceptual evolution of the novel in general, also exploring its interactions with a range of established or shifting social structures, gender roles, discursive practices, and modes of consciousness. Authors include Montesquieu, Laclos, Goethe, Hölderlin, Stoker, Foscolo, Tabucchi, Alexandrou, and Galanaki.

COLT 1421V. Modernisms North and South: James Joyce and Roberto Bolaño.
James Joyce’s Ulysses (1922) and Roberto Bolaño’s The Savage Detectives (1998) are weighty, influential, often intimidating works that bookend literary production in the twentieth century. Both are also moving narratives about humans with different sorts of artistic, emotional, and bodily ambitions, grappling with new forms of subjective and collective life in modernity, trying to work out their own place within social, political and artistic systems. Join Stephen Dedalus, Leopold and Molly Bloom, Ulises Lima and a cast of minor characters as they make their way through the hearts, minds, memories, and nervous systems of a range of modern metropoles.

COLT 1421W. Blast from the Past: The Historical Novel.
Focusses on a popular literary genre known as the historical novel. We will discuss its defining characteristics, cultural meanings, and basic differences from other types of fiction. We will also explore larger theoretical issues that are intricately related to the development and scope of the genre: the representation of the past and its relationship to the present; the creative integration of the gaps between factual history and lived experience; and finally the complex interaction between authenticity and fictionality, exemplarity and specificity, temporality and detachment. Authors include Flaubert, Yourencar, Kadare, Pamuk, Calvino, Lampedusa, Roidis, and Galanaki.

COLT 1421X. Fairy Tales and Culture (FREN 1330A).
Interested students must register for FREN 1330A.

COLT 1422A. The Twilight Zone: Classics of Horror Fiction.
This course discusses a number of seminal works—from Gothic novels to ghost stories and vampire epics—that exploit the oldest and strongest emotion of mankind: fear. Why are authors and readers fanatically drawn to something as disturbing as horror, supernatural or not? How do the gruesome or the macabre become sources of intellectual excitement and aesthetic gratification? How can texts whose intended effect is to shock and distress compel us to confront suppressed instincts, challenge deep-rooted certainties, or reflect on things and ideas that we generally prefer to ignore? Are you brave enough to find out?

COLT 1422B. Fictions of Family in the Enlightenment European Novel.
This course will study the emergence of the genre of domestic fiction in eighteenth-century Europe with its emphasis on the construction of a family space and the establishment of a domestic economy. We will explore this question through the prism of its disfunction: focusing on the story of “domestic misfortunes” in its various forms: poor planning, reckless spending, and general mismanagement of money. We will read novels that reflect on the failures to achieve domestic bliss and offer alternatives to ill husbandry: Defoe’s Moll Flanders, Prévost’s Manon Lescaut, Richardson’s Pamela, Fielding’s Joseph Andrews, and Rousseau’s Julie, ou La Nouvelle Héloïse.

COLT 1422D. Short Forms: Major Works in a Minor Key (HISP 1330Q).
Interested students must register for HISP 1330Q.

What happened when the novel crossed the Atlantic? After its rise in Europe in the mid 18th century, the novel quickly spread and became a dominant literary genre both in the U.S. and in Latin America. In this course we will read key 19th-century novels in the European tradition; we will then discuss how this (by no means homogenous) European genre was assimilated and modified across the Atlantic. What did writers in Brazil and in the U.S. do with the genre, and how did they transform it according to national specificities? We will focus on English, French, American, and Brazilian novels. LILE

COLT 1430A. Ancient Greek Myth in Modern Poetry.
Various responses to ancient Greek myths by poets in the Western tradition, especially modern Greek poets. Considers how the classical versions of myths, such as those of Helen, Oedipus, Orpheus, Persephone, Penelope, and Ulysses, are approached, rewritten, or subverted in poetry since 1800. Emphasizes the challenges posed by the past, issues of cultural and political context, and on questions of gender. Readings in English.
COLT 1430C. Classical Japanese Poetry. A historical study of various poetic forms of waka or Japanese poetry from the 8th-century anthology, the Man'yōshū, to the advent of modern verse, including jiyūshi or free verse, in the latter part of the 19th century. Focuses on the relationship of poetry to religion, the political implications of waka, and the dominant aesthetic governing poetic conventions in different periods.

COLT 1430D. Critical Approaches to Chinese Poetry. Examination of works of Chinese poetry of several forms and periods in the context of Chinese poetic criticism. Knowledge of Chinese not required, but provisions for working with original texts will be made for students of Chinese language.

COLT 1430H. Poetry, Art, and Beauty. What does it mean to be beautiful in classical and European literature and the arts? How do poems and works of visual art embody beauty? How is the idea of beauty defined by thinkers from Plato to Benjamin and Danto? Works include Sappho, Plato, Aristotle, Catullus, Horace, Petrarach, Kant, Wordsworth, Baudelaire, Rilke, Benjamin, Stevens. Works of art considered range from the Lascaux caves through renaissance classical painters like Giotto and Raphael to contemporary installations. LILE

COLT 1430I. Poetry of Europe: Montale, Celan, Hill. The fifty years between the Second World War and the formation of the European Union was a period in which the meaning of “Europe” was placed under great strain. The class will examine the strains and debates about Europe within the lyric poetry of several literary traditions. It will take the form of close historical, formal, and critical readings of three books of poems in their entirety: Montale’s The Storm and Others (1956), Celan’s No-One’s Rose (1963), and Hill’s Canaan (1997). Enrollment limited to 25.

COLT 1430J. Readings in Poetry and Poetics. Concentrated readings of Hölderlin, Shelley, Baudelaire, and Yeats in conjunction with theoretical texts by Heidegger, Derrida, De Man, and Benjamin. Texts include poetry, essays, novels, and dramas of the poets in a critical and philosophical context. Focuses on the relationship between figurative and expository language, the limits of commentary, and the concept of criticism as repetition and translation. French or German required. Frequent writing and oral presentations.

COLT 1430K. The Classical Tradition in English Poetry. We will read a number of famous short poems from antiquity in conjunction with the major English writers who later translated, imitated, and reworked them. We will pay special attention to the question of creative innovation. We will read Horace, Theocritus, Virgil, Dryden, Pope, Tennyson, and others.

COLT 1430L. Voices of Romanticism. Readings of lyric poetry in the European Romantic tradition. Focus on problems of lyric subjectivity and representation, and the rhetoric of “voice.” Emphasis on formal features of poetry. The course will be based on close reading and frequent writing assignments. Readings from Wordsworth, Shelley, Keats, Goethe, Novalis, Hugo, Nerval, Lamartine, Baudelaire and others. Knowledge of French or German required, or by permission.

COLT 1430O. The Poetry of Childhood. Selected readings from among Rousseau, Blake, Hölderlin, Wordsworth, Baudelaire, Rimbaud, Nietzsche, Freud, Yeats, Char.

COLT 1430Q. Poetry and the Sublime (GRMN 1440C). Interested students must register for GRMN 1440C.

COLT 1430S. Latin American Death Trip (LITR 1230K). Interested students must register for LITR 1230K.

COLT 1430T. Leaves of Words: Japanese Poetry and Poetics. A historical study of various poetic forms of Japanese poetry (waka) from the 8th-century anthology, the Man'yōshū, to the advent of modern verse, including jiyūshi or free verse, in the latter part of the 19th century into the 20th century. Focuses on the relationship of poetry to society, religion, the political implications of waka, and the dominant aesthetic modes governing poetic conventions in different periods.

COLT 1430U. Measures of Poetry: A Workshop. Rhythm, intonation and their written forms measure poetic matter. This workshop introduces prosody through exercises in theory and practice: the line; metrical and stanzaic form; rhyme; music and performance; free verse; language writing; and the task of translation (form). Even monkeys, Darwin wrote, express strong feelings in different tones. Enrollment limited to 20.

COLT 1440B. Killer Love: Passion and Crime in Fiction and Film. Discusses textual and cinematic representations of romantic passion and its ambiguous relationship to religious, moral, and social norms. We will focus on extreme forms of intimacy both as a thematic choice of cultural production and as a symbolic medium of communication. Why is it that art so often explores unsanctioned emotions and deviant behaviors? What is at stake when narratives capitalize on violent manifestations of desire? In what ways is the semantics of excessive love related to conceptions of subjectivity, sociability, and sexuality? What role does it play in the creative process itself?

COLT 1440F. 1948 Photo Album: From Palestine To Israel. Why do we name the “Israeli-Palestinian conflict” as we do? The purpose of this class is to use photographs – alongside historical and literary documents—to question the framework of a “national conflict” and study its emergence as a given, unquestioned and axiomatic scheme for any historical narrative of that period. Reading archival material and post-colonial and photography theories, each week we shall study one photograph taken in 1948, reconstructing the photography event as well as its myriad relations among the protagonists involved and its after life as an archived image, to include photographed persons, photographers, editors, journalists, politicians, and more.

COLT 1440H. The Literature and Cinema of Global Organized Crime (SLAV 1500). Interested students must register for SLAV 1500.

COLT 1440L. Sharing (MCM 1203K). Interested students must register for MCM 1203K.

COLT 1440M. Lyric Genre-Benders. In this course, we will ask what constitutes poetic language and how to identify the lyric as a genre. Are there discernible traits that lyric poems share, or is poetry, like pornography, something we recognize only when we see it? We will have a special focus on how genre is related to gender, and consider the historical precedent of poetry calling readers to its defense. Discussion will revolve around essays on lyric theory both classic and contemporary, prose poems by Baudelaire and Davis, fragments by Sappho, and finally, poems by Basho, Dickinson, Rankine, and more. LILE

COLT 1610D. Critical Approaches to Chinese Poetry. Examination of works of Chinese poetry of several forms and periods in the context of Chinese poetic criticism. Knowledge of Chinese not required, but provisions for working with original texts will be made for students of Chinese language.
COLT 1610D. Theory of Lyric Poetry.
Through readings of recent critical discussions of the lyric genre, we will explore general methodological problems of literary theory. Discussions include: the role of form, structure and tropes in analyzing poetry; problems of subjectivity and voice; the relation between poetry and history; the function of reading: and the problematic "objectivity" of criticism. Readings from Hölderlin, Shelley, Baudelaire, Yeats, Jakobson, Benveniste, Riffaterre, Jauss, Johnson, De Man.

COLT 1610E. Aesthetics and Politics (ENGL 1900E).
Interested students must register for ENGL 1900E.

COLT 1610F. New Theories for a Baroque Stage (TAPS 1280N).
Interested students must register for TAPS 1280N.

COLT 1610G. Mihail Bakhtin (RUSS 1895).
Interested students must register for RUSS 1895.

COLT 1610I. Getting Emotional: Passionate Theories (ENGL 1560W).
Interested students must register for ENGL 1560W.

COLT 1610J. Holocaust Literature (JUDS 1820).
Interested students must register for JUDS 1820.

COLT 1610K. Literature and Multilingualism (GRMN 1340R).
Interested students must register for GRMN 1340R.

COLT 1610L. What is Reading?
The answers to this question will be read—deciphered—in the many "reading scenes" found throughout the history of literature or philosophy. In Plato's Phaedrus, reading thus appears caught in a network of desire and power: the dominant role—the erastes ("lover") who writes and teaches—and the passive or submissive position—the eromenos ("beloved") who reads and learns—are constantly permuted and destabilized. Hobbes' Leviathan, Melville's Moby Dick and Billy Budd, Goethe's and Valéry's Faust will lead us to question what we do when we read and reflect upon what could be called a politics of reading.

COLT 1610M. Twentieth-Century Russian Approaches to Literature: Bakhtin and the Russian Formalists (SLAV 1890).
Interested students must register for SLAV 1890.

COLT 1610N. Ecological Thought.
This course will serve as an introduction to the new interdisciplinary field of the environmental humanities. Discussing an exciting range of texts and films—from Mary Shelley, Virginia Woolf, and Arundhati Roy to Ridley Scott and Werner Herzog—we will investigate how literary and cinematic works make ecological crisis perceptible. The following topics will be central to our discussions: garbology (especially hoarding, collecting, and the relation between trash and modern poetry); "slow violence" and postcolonial environmentalism; queer ecology; biopolitics; the representation of non-human animals; the effects of 24/7 consumerism; and the political uses of ecological nostalgia, disgust, grief, and wonder.

COLT 1610P. Holocaust Literature (JUDS 1820).
Interested students must register for JUDS 1820.

COLT 1610Q. Gender Theory and Politics in France (FREN 1420C).
Interested students must register for FREN 1420C.

COLT 1610R. Visions of Liberation: African Decolonization Now?
If, as many African thinkers contend, the acquisition of formal independence did not signify liberation, it is necessary to imagine decolonization now. In "Visions of Liberation," we will examine ideas, particularly those of Césaire and Fanon, that have shaped decolonial thinking in Africa. What is the contemporary relevance of notions of freedom imagined by thinkers of the early and mid-twentieth century? How have postcolonial and post-apartheid writers conceived of freedom? What does it mean to call Mali a "postcolony" or "neocolony," or to state that South Africa is not postcolonial? Previous knowledge of the topic is not required. DPML LILE

COLT 1610S. Theory of the Novel.
The novel has been theorized as the genre of the proper name, of privatized experience, and of capitalist accumulation. Yet many novels orient us toward threshold states of perception and experience, toward objects impossible to classify or evaluate, and toward new ways of conceiving of the self and the social. In this class, we will read novels that invite us to contemplate what constitutes personhood and where its limits lie.

COLT 1610T. Critical Approaches to China.
This co-taught seminar introduces students to some of the basic interdisciplinary research tools and methodologies for the study of China. Core texts will be drawn from the ancient through contemporary periods, organized around broad themes (e.g., Classics, gender, globalization). Students from all disciplines are welcome. Some knowledge of modern or classical Chinese desirable. LILE

COLT 1610U. Women's Writing in the Arab World.
In this course, we will examine Arab women's writing through the lenses of both Arabic and Western feminist theory and criticism. Beginning with a survey of pre-modern female literary personae (the pre-Islamic elegist, the soothsayer, the mystic), we will move on to examine women writers' contributions to the early modern women's movement (‘Aisha Taymur, Marya Ziyada), modernist poetry (Nazik al-Mala’ikah, Fadwa Tuqan), the novel (Hoda Barakat, Mira al-Tahawy, Adania Shibl), and the short story (Salwa Bakr, Hanan al-Shaykh, Radwa ‘Ashur). Critical approaches will focus on grammatical gender, women's association with the oral, and structures of narrative and poetic voice.

COLT 1710A. Introduction to Literary Translation.
This is a workshop course introducing the history and theory of literary translation, with demonstrations and exercises translating poetry and prose. All languages welcome, but students must be proficient to the level of reading literature in the original language. Foreign language through 0600 or permission of the instructor.

COLT 1710B. Advanced Translation (LITR 1010F).
Interested students must register for LITR 1010F.

COLT 1710C. Literary Translation.
Exercises and investigations in the history, theory, and practice of literary translation. Prerequisite: at least one foreign-language course in literature at 1000-level (or equivalent).

COLT 1710D. Exercise in Literary Translation.
Exercises and investigations in the history, theory, and practice of literary translation. Students pursue individual projects for translation workshops. Common exercises draw on Shakespeare translation, from classic translations in Europe to unique examples like Nyere’s Swahili Caesar and current projects like Shakespeare in Modern English or The Chinese Shakespeare. Prerequisite: one foreign-language course in literature at 1000-level (or equivalent).

A consideration of various genres of women’s writing from 700 to 1450 C.E. focusing on such issues as literary conventions, the relationship to the vernacular, the role of religion in education, and questions of gender and social class. Writers may include Berthgyth, Murasaki Shikibu, Sei Shônagon, Héloïse, Marie de France, the comtesse de Dia, Ladu Ninjo, Julian of Norwich, Christine de Pisan, and various anonymous women.

COLT 1810B. Aesthetics in the Colonial Frame.
Draws together works from a wide range of contexts and genres—Enlightenment philosophy, romantic travel literature, Arabic novels and poems—to compose a conversation about aesthetics in the colonial context of Egypt. Senior Seminar.

COLT 1810C. City (B)Lights.
Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images, American cities and literary works are foregrounded.
COLT 1810E. Dwellers Amid the Clouds: the Literature of the Court.
A survey of three court traditions—Heian Japan, medieval Iceland, and early modern England—in which the relationship between the literary genres and the specific social context from which they emerge is highlighted in the form of particular literary conventions. Topics include the question of patronage, the function of particular literature as shibboleth, the idea of spectacle and play, the politics of literature, and the trope of irony as courtly emblem.

COLT 1810F. Enlightenment and Anti-Enlightenment in Eighteenth-Century Germany.
Some of the most intractable questions of contemporary philosophy were vigorously debated in eighteenth-century Germany. What are the limits of reason? Does its supposed neutrality and universalism mask its own set of prejudices? Are there any universally valid claims in truth or ethics? How, why, should Christian, Jew, and Muslim tolerate their differences? We will read literary and philosophical works by Hamann, Herder, Jacobi, Kant, Lessing, and Mendelssohn.

COLT 1810G. Fiction and History.
How the historical fiction that has flourished over the past four decades challenges the notions of objectivity and totalization, while providing alternative viewpoints for the reconstruction and reinterpretation of the past. Authors considered include Grass, Doctorow, Delillo, Garcia-Márquez, Allende, Danticat and Gordimer. Theoretical texts by White, LaCapra, Benjamin, Ricoeur, and Chartier. Films such as The Official Story and Europa, Europa will be viewed and incorporated into the discussions. Prerequisite: two previous courses in literature. Enrollment limited to 25. Instructor permission required.

COLT 1810H. Tales of Two Cities: Havana - Miami, San Juan - New York.
In this course we will compare representations of Havana and San Juan in contemporary fiction and film to literary inscriptions of Cuban Miami and Puerto Rican New York. We will explore mapping the city as mapping identity and city-writing as reconstruction and creation, viewing through the eyes of children, tourists, and urban detectives. Authors include Antonio José Ponte, Roberto G. Fernández, Mayra Santos Febres and Emesto Quiñones. Good preparation for study abroad on the Brown-in-Cuba program. Not open to first year students. DPLL LILE

COLT 1810I. Gates of Asia.
An exploration of the growth of European knowledge of Asia from the rise of the Mongol empire through the Great Game and its aftermath. Primary sources include three kinds of accounts provided by travelers who set their hearts on Asian exploration: personal narratives, official reports and dispatches, and scholarly studies of the exotic cultures. Enrollment limited to 20.

COLT 1810J. History and Aesthetic Form.
In this course, we will examine the co-articulation of theories of history with theories of language and aesthetics. Focus will be on the interdependence between an emerging interest in history and the origin of language, and approaches to literary history, genre definition, and general aesthetic categories. Readings to be selected from Vice, Rousseau, Herder, Lessing, Schiller, Hegel, Novalis, Lukacs, Adorno, Derrida and De Man.

COLT 1810L. Housing Problems.
Examines architectural figures and problems of containment and construction in a variety of literary and theoretical texts. We will consider how images of buildings structure texts and outline spaces for subjectivity. Themes include the gothic, haunted houses, foundations, ruins, walls, and doors. Texts selected from Descartes, Derrida, Goethe, Hegel, Austen, Coleridge, Poe, Baudelaire, Melville, Hawthorne, Kafka, Tschumi and Borges.

An examination of the tradition of illustrated narratives in several premodern cultures: the early 11th-century Japanese Genji Monogatari, the medieval English Canterbury Tales, and the ancient Indian epic the Māhābhārata. Discussion focuses on the nature of iconography and symbolism; the historical privileging of text over image; the significance of parallel visual and verbal representation and its implications for culturally-specific theories of reading. Seminar.

COLT 1810N. Freud: Writer and Reader.
A broad survey of Freud's writings, with particular emphasis on psychoanalysis' relevance to literary theory and cultural analysis. Readings include Freud's major works, as well as secondary sources focused on applications to literary studies.

COLT 1810O. Latin American Literature in Dialogue with France.
Complicates the question of influence in Latin American literary and intellectual self-fashioning, specifically with regard to France. Explores the productivity and peripherality of this relationship through romanticism and articulations of the real (as realism, surrealism and magical realism). Approaching the twenty-first century, considers Latin American perspectives on French theories of feminism, postmodernism and globalization. DPLL

COLT 1810P. Literature and Medicine.
The purpose of this course is to examine a number of central issues in medicine-disease, pain, trauma, madness, the image of the physician— from the distinct perspectives of the sciences and the arts. Texts will be drawn from authors such as Sophocles, Hawthorne, Gilman, Tolstoy, Kafka, Anderson, O'Neill, Hemmingway, Ionesco, Verghese, Barker, Sacks, Foucault, Sontag, Scarry, Gawande and others. Open enrollment course: lecture + section.

COLT 1810Q. Literature and Money in the Age of Paper.
Focuses on the complex and highly ambivalent relationship between literature and money in nineteenth-century European literature. Works by Poe, Balzac, Dickens, Baudelaire, Stevenson, Hardy, and Zola. Relevant philosophical writing by Smith, Marx, Nietzsche, and Derrida.

COLT 1810S. Literature and the City.
Literature's obsession with the modern city, in 19th- and 20th-century American, English, and French fiction and poetry, in writers such as Blake, Whitman, Balzac, Dickens, Baudelaire, Rimbaud, Eliot, Williams, Bellow, Morrison. Opportunities for work in other literatures and genres, e.g., in Germany, Brecht.

COLT 1810T. Literature and the Culture of Capitalism.
This course will examine the literary responses to capitalism in terms of five organizing tropes: regionalism, urbanization, consumerism, aestheticism, and modernism. Our investigation will begin sometime in the early 19th-century with the moment that consolidated conditions favorable for industrialization and conclude in the first decade of the 20th-century with literary modernism and the collapse of the cultural myths of progressive enlightenment and democracy. Readings include texts by Wordsworth, Malthus, Sue, Mayhew, Marx, H. Rider Haggard, Stowe, Carroll, Zola, Wilde, Stoker, Freud. Three papers and a final essay.

COLT 1810U. Angela's Ashes and What Went Before: Irish Immigration and LiteraryCreation.
Readings in the major works of Joyce, Beckett and Farrell, without forgetting Jonathan Swift and William Butler Yeats.

COLT 1810V. Marx and Modern Literature.
A contrastive and integrative study of the range of Marx's writings and works by writers such as Shakespeare, Dickens, Baudelaire, Flaubert, Woolf, and Stevens. Examines Marx's leading concepts in philosophy, history, economics, ideology, and aesthetics in relation to the particularities of literary forms. One or two short papers and a longer final study of a literary work chosen from the student's major field. Enrollment limited to 30.

In East Asian Buddhist culture, the mirror is a symbol of the mind in both its intellectual and emotional aspects. These masterworks detail the lives and loves of Prince Genji, cynosure of the medieval Japanese court and Jia Baoyu, the last hope of an influential Chinese clan during the reign of Manchus. We examine both works as well as the sources of Genji and literary aesthetics of the Tang dynasty. Prerequisites: COLT 0710, RELS 0040 (0088) or 0100 (0006), or permission of the instructor.
COLT 1810Y. Modern Japanese Women Writers.
An examination of women's writing from the Meiji Period (1868-1912) to the present. Readings include works from such writers as Higuchi Ichiyō, Miyamoto Yūko, Enchi Fumiko, and Tsushima. Topics include the relation of "woman" to the modern, the legacy/construction of the past, the implications of joryū bungaku (women's literature), and the problem of resistance and subversion.

COLT 1810Z. Nietzsche.
Intensive and extensive reading of Nietzsche and some of the reception that has made him so prominent in contemporary literary and cultural theory. Topics include Nietzsche's aesthetics, theory of history, the concept of the eternal return, European decadence, misogyny and anti-semitism. Texts will be selected from Nietzsche, Heidegger, Horkheimer and Adorno, Deleuze, Derrida, Irigaray, de Man, Kofman, Lacoue-Labarthe, Foucault, Hamacher, Ronell, etc.

COLT 1811B. Postcolonial Theory and Fiction.
There is hardly a place in the contemporary world which has not somehow been touched by the histories and consequences of colonialism. What does it mean, then, to speak about the postcolonial? Should the postcolonial be seen as a new periodization in the study of world literatures, a recent trend in critical theory, or another type of minority discourse involving previously colonized peoples?

COLT 1811D. Reading Revolution, Representations of Cuba, 1959-The Present.
Considers the cultural and ideological impact of the Cuban revolution inside and outside Cuba. Starting in the 1960s, texts Latin American "boom" novels, European theorists and U.S. civil rights activists. Moving to today, addresses post-Soviet Cuba's literary production and the impact of new technologies on culture, as well as political change under Raúl Castro. Fiction, film and essays by Castro, Sartre, García Márquez, Reinaldo Arenas, Antonio José Ponte, Fernando Pérez and others. Excellent preparation for the Brown-in-Cuba program. DPLL

COLT 1811F. The "Tenth Muse" Phenomenon.
The texts and contexts of women writing in English, Spanish and French, during the sixteenth and especially seventeenth centuries. Often dubbed "Tenth Muses," these first early modern women writers to gain public prominence wrote iconoclastic texts and/or epitomized socially sanctioned scripts for women. Authors include: Anne Bradstreet, Margaret Lucas Cavendish, Sor Juana, Mme de Lafayette, Maria de Zayas.

What does it mean to be beautiful in classical and European literature? How is beauty defined by thinkers from Plato to Benjamin? Readings from the classical, medieval, Renaissance, and modern periods are brought into question by works concerning the problems of aesthetics. Works by Plato, Aristotle, Horace, Augustine, Dante, Petrarch, Shakespeare, Racine, Tolstoy and others in addition to readings from the history of aesthetics from Kant through the present.

COLT 1811L. The Nordic Legacy: Ibsen, Strindberg, Munch and Bergman.
This course examines the work of four major Scandinavian artists. As key figures in the development of modern theater, painting and film, these four figures share a number of common concerns: challenging the pieties of figures in the development of modern theater, painting and film, these four

COLT 1811N. Persons and Portraits: Self in Early Modern Europe.
Challenges the presumed supremacy of the "modern subject," the sovereign rational mind personified by Descartes. Rival theories of self in Machiavelli, Luther, Montaigne, Hobbes, Pascal, and Spinoza are explored alongside the richly embodied "persons" pictured in painting (Titian, Rembrandt, Velázquez), conduct literature (Castiglione, La Rochefoucauld), drama (Milton, Molière, Calderón), psychological fiction (La Fayette), and satiric prose (La Bruyère). LILE

COLT 1811O. Modernism: From Paris to Athens, 1900s - 1950s.
The course examines Modernism as it developed in modern European cities. Apart from focusing on major venues of modernism (Zurich, Berlin, Paris) it centers on marginal geographical spaces with specific emphasis on Athens, Greece. If further explores the rise of such movements as Cubism, Futurism, Dadaism and Surrealism and proceeds to explore the reaction of Greek modernists to these movements.

COLT 1811Q. Poisonous or Prophetic? Wright's Native Son, Burrough's Naked Lunch, Derrida's Specters of Marx, and Rimbaud.

COLT 1811S. Philosophy and Literature of German Romanticism.
A fateful collaboration between philosophy and literature was centered in Germany roughly between 1788 (Schiller's Gods of Greece) and 1807 (Hege's Phenomenology of Spirit). A survey of the major literature of this period, organized thematically, will serve as an introduction to this complex phenomenon. Authors include (in translation) Fichte, Goethe, Hölderlin, Novalis, Schelling, Schiller, and Tieck. LILE

Explores the literary and filmic imagination of three Eastern Mediterranean cities, Alexandria, Istanbul, and Athens. It examines the history, culture and politics of these cities and the ways in which they emerge in literature, film, poetry and travelogues. How is the city defined in these works? How are social tensions addressed, such as those between Greeks and Turks and Arabs or between Christians, Muslims and Jews? How are thematic and historical issues resolved, such as those involving antiquity and modernity, tradition and modernization, colonialism and nationalism, religion and secularism? How are these cities defined in the works of western writers? Enrollment limited to 30. DPLL

COLT 1811U. Literature and the Arts.
Readings in the apparitions and articulations of the arts in fiction, philosophy, criticism and poetry. Focus on the interaction between language and other media, the figure of the artist, problems of expression and performance. Readings from Diderot, Hegel, Balzac, Hoffmann, Baudelaire, Poe, Nietzsche, Wagner and Mann.

COLT 1811W. Visual Obsessions: Japanese Film, Fiction, and Modernity.
The pervasiveness of visual obsessions in contemporary Japanese culture prompts us to rethink the impact of modernity in terms of visuality. Through the examination of a wide range of filmic, literary, and visual art forms produced in Japan from the 1860s to the 2000s, course explores the question of visuality as a historically and technologically conditioned way of seeing. The issues to be considered in this class include: the construction of Japanese aesthetics, orientalism, ocularcentrism, the problems of interiority and the subject, the relation between habit and the everyday, and cultural nationalism. This course will introduce important theoretical concepts about vision and modernity, asking students to interrogate these concepts through the close examination of specific Japanese texts and films discussed in class. Writers, filmmakers, and visual artists include: Tanizaki Jun'ichirō, Edogawa Rampo, Abé Kōbō, Karanaki Kōjin, Ozu Yasujirō, Kurosawa Akira, Ichikawa Kon, Suzuki Seijun, and Murakami Takashi. DPLL LILE
COLT 1811X. Marx and his Critics.
This course will focus on a close study of the work of Karl Marx and its legacy for critical theory. The first part of the course will be dedicated to a reading of Marx's most important texts, with special emphasis given to his theories of economy, of ideology, alienation and fetishism. The second part will be dedicated to a reading of some of Marx's most important readers: Lukacs, Gramsci, Althusser, Zizek and Derrida. Instructor's permission required.

COLT 1811Y. Genius and Melancholia in the Renaissance.
Explores Renaissance accounts of genius, genial inspiration, and melancholia, and their accompanying ideas of intellection and immortality. Primary materials include Dürer, Montaigne, Rabelais, Ficino, Ariosto, Erasmus, Saint Teresa, and Luther. Secondary or contemporary texts include Warburg, Panofsky, Saxl, Klibansky, Wind, Benjamin, Kierkegaard, and Sebald.

COLT 1811Z. Literature and the American Presidency.
We shall read widely in writings by, and about, selected American presidents, but also focus on the ways in which presidents have used literature as a dictional source in their own writing and thinking. We will attend also to the relationship of culture to power as evidenced in other textual media, such as film.

COLT 1812A. Literatures of Immigration.
Why do people migrate? How do literary genres, including poetry, fiction, autobiography and memoir, characterize immigrant experiences? How is the experience of "coming from somewhere else" similar and different for each subsequent generation of immigrants? How does literature indicate the impacts of migration on the culture, politics and economics of the countries of immigration and emigration? How do literatures of immigration imagine the past, present and future of networks and communities of immigrants? Focusing on twentieth-century literary texts and the socio-historical context of mass migration, the first half of the course examines immigration literature in the U.S., the second half of the course explores literatures of immigration beyond the U.S., and the course concludes with an inquiry into immigration in our presently globalizing age.

COLT 1812B. Aesthetics and Politics (ENGL 1900E).
Interested students must register for ENGL 1900E.

COLT 1812C. The Ethics of Romanticism (ENGL 1560Y).
Interested students must register for ENGL 1560Y.

COLT 1812F. Violence and Representation.
Traces diverse genealogies from which to theorize violence and its relation to aesthetics. We will identify a disciplinary philology for "violence" as a signifier within visual culture, art practice and literature; historicize key transitions in varied invocations of violence in representation; study texts (photography, film, novel, installation) that create a space where violence can be discussed as both everyday and extraordinary. Some issues to be considered: representability in moments of historical crisis (war, colonialism, genocide); the efficacy of genres and artistic movements in representing violence (tragedy, surrealism, theater of cruelty); and the violence of representation (surveillance, spectatorship, voyeurism).

COLT 1812H. "Women's Literary Make-up": Mirrors, Maquillage and the Tenth Muse.
Focuses on the problem of creative inspiration for women writers and how the pursuit of aesthetic perfection, both somatic and literary as well as their interrelation, becomes a recurring motif in women's writing from various traditions. Readings will include fiction and poetry from the English, Japanese, and Arab traditions, both modern and pre-modern. This is an undergraduate seminar open to juniors and seniors. Prerequisite: coursework in literature and at least one course in gender studies/ women's studies. Instructor permission required.

COLT 1812I. Collective Struggles and Cultural Politics in the Global South.
Traces the historical and ideological mapping of the North-South axis and the regional mythologies informed by racism, empire and nationalism. We will examine the ways in which imagined geographical hierarchies continue to shape cultural and political struggles and the vectors of globalization. Along with readings on imperial histories, liberal and neoliberal political economies, and postcolonial this class seeks to establish connections between resistant narratives and collective struggles in the Global South. We will discuss political philosophies of Marx, Gramsci, Arendt, Fanon, Harvey and Schwarz, as well as the works of Achebe, Hurston, Kincaid, Rushdie, Roy, Sembene, and Wright. First year students require instructor permission.

COLT 1812J. Poetry and Ethics.
If history is, as Charles Olson claims, a "form of attention" and we are all participants in a collective reality relative to our capacity for language use, what ethical issues come to bear on what the poet chooses to attend to—not only as subject matter but as form? Can poetic language be sufficiently responsive to the challenge of empathy? Is there an ethics of attention? Guided by philosophical texts, we shall investigate ethical possibilities in a range of world poetics. WRIT

COLT 1812K. European Intellectual and Cultural History: Exploring the Modern, 1880-1914 (HIST 1220).
Interested students must register for HIST 1220.

COLT 1812L. Erotic Desire in the Premodern Mediterranean (CLAS 1750L).
Interested students must register for CLAS 1750L.

COLT 1812N. Culture and Anarchy (ENGL 1511I).
Interested students must register for ENGL 1511I.

COLT 1812O. Lying, Cheating, and Stealing (ENGL 1760V).
Interested students must register for ENGL 1760V.

COLT 1812P. Essaying the Essay (CLAS 1120J).
Interested students must register for CLAS 1120J.

COLT 1812S. Violence and the Multiple Responses of Medieval France.
Examines violence and its representations from a variety of perspectives: literary, historical, psychological, etc. Different literary forms (11th - 13th) introduce conflicts between competing value systems, problems raised by militant religion, vendettas and the pursuit of justice. Across the gamut of appetites and emotions, violence takes a variety of shapes, producing broken hearts and broken heads. The beautiful seductiveness of violence, despite its horrors, is frequently transformed into artistic and literary expression, from the highest forms of Western tradition to the cheap exploitations of pulp fiction. What can the Middle Ages teach us about violence, yesterday and today? Not open to first year students.

COLT 1812T. On Being Bored (ENGL 1511L).
Interested students must register for ENGL 1511L.

COLT 1812U. Queer Relations: Aesthetics and Sexuality (ENGL 1900R).
Interested students must register for ENGL 1900R.

COLT 1812V. War, Anti-War, Postwar: Culture and Contestation in the Americas.
This course addresses the relationship among language, war and the arts from the mid-twentieth century on. Even as armies engage in combat around the globe, the term "war" legitimates a much broader spectrum of situations, lending them the structure of organized hostility and the moral opposition of right to wrong. From the "Cold War" to the "War on Terror", to Argentina's "Dirty War" and Cuba's "War on Imperialism", literature, cinema, visual arts and community-based projects have responded to real and rhetorical declarations of "war." Drawing from U.S. and Latin American contexts, we will explore a range of responses and challenges. DPLL

Interested students must register for RUSS 1450.

COLT 1812X. Literature and History: Russian Historical Imagination in the European Context (RUSS 1600).
Interested students must register for RUSS 1600.
COLT 1812Y. Central Europe: An Idea and its Literature (SLAV 1790). Interested students must register for SLAV 1790.

COLT 1813B. Dying God (CLAS 1930B). Interested students must register for CLAS 1930B.

COLT 1813C. Erotic Desire in the Premodern Mediterranean (CLAS 1750L). Interested students must register for CLAS 1750L.

COLT 1813D. Issues in World Literature (ENGL 1761Y). Interested students must register for ENGL 1761Y.

COLT 1813E. Chinese Women, Gender and Feminism from Historical and Transnational Perspectives (EAST 1950B). Interested students must register for EAST 1950B.

COLT 1813F. Communication Culture and Literary Politics (MCM 1503Q). Interested students must register for MCM 1503Q.

COLT 1813H. God, Sex and Grammar: Literary Ethics in Medieval Europe. What does it mean to read and write ethically? While modern culture values intellectual property, many medieval texts celebrated what we call plagiarism. On the other hand, medieval thinkers saw serious consequences in literature, which could lead authors and readers to heaven or hell. But then as now, ethics were rarely clear-cut, subject to forces as diverse as religion, sexual desire, capitalism, and even language itself. Reading some of the great authors of the period, as well as modern critical reflections, we will explore the ethical dimension of literary production in the medieval world and in our own society.

COLT 1813I. The Colonial and the Postcolonial Marvelous. A celebration and critique of the marvelous in Spanish American and related literatures (French Caribbean, Brazilian). We follow the marvelous from European exotizing of the New World during the colonial period to its postcolonial incarnations in “magical realism” and beyond. We attend particularly to the politics and marketing of the marvelous in writers including Columbus, Sor Juana Inés de la Cruz, Esquivel, Carpentier, Garcia Marquez, and Chamoiseau. Readings in English, though you may read texts in the original French, Spanish, or Portuguese.

COLT 1813K. The Problem of the Vernacular. It has been said that a language is a dialect with an army and a navy. Under what conditions do dialects, vernaculars, creoles, and slangs become mediums for literary and artistic expression? How have writers in different cultures managed the relationship between their “official” national languages and their more intimate mother tongues? This course will explore this problem in a variety of literary traditions, including Chinese, Arabic, Hindi-Urdu, Greek, Hebrew, Brazilian Portuguese, Latin and the Romance vernaculars, and a variety of modern European languages.

COLT 1813O. Adventures of the Avant-Garde. In the early years of the twentieth century, a series of artistic movements rippled across the Western hemisphere, exploding conceptions of art and culture while reconfiguring international relations. Explores those movements, from their predecessors (Baudelaire, Rimbaud, Mallarmé), through overlapping –isms (Cubism, Futurism, Constructivism, Vorticism, Expressionism, Dada, Surrealism), to avatars in the Americas. In keeping with the avant-garde’s cross-pollinating spirit, we study texts from a variety of traditions, forms, and genres: from poetry through prose to manifestoes, from painting and photography to film, music, and dance, touching on questions of translation and transatlanticity between literatures, cultures, and art-forms. Enrollment limited to 25.

COLT 1813P. Captive Imaginations: Writing Prison in the Middle Ages. Many great works of the Middle Ages were written in prison or about the experience of imprisonment. Reading some of these masterpieces, we will discover why the medieval prison was such a fruitful space for poetic creation, and how the perspective of incarcerated writers helped to shape a diversity of literary traditions. Topics will include fortune and free will, sexual and cultural difference, and the construction of the individual. We will also explore the nature of medieval systems of captivity, which differed greatly from those of modern society. Selected authors: Boethius, Mas'ud Sa'd Salman, Juan Ruiz, Chaucher, François Villon.

COLT 1813Q. Literature and Judgement. There exists a close but complex relationship between the acts of making literature and making judgments. This course will explore some of these relationships and ask, for instance: how does judgment weigh upon the literary act? how do literary considerations bear on our making judgments? what criteria are called forth in both of these moments? Texts treated will be literary, critical-analytical, legal, and cinematic, and include such authors as Arendt, Benjamin, Derrida, Freud, Henry James, Kafka, Kant, Primo Levi, Nietzsche, Tolstoy and Verga.

COLT 1813R. The Ekphrastic Mode in Contemporary Literature (ENGL 1762B). Interested students must register for ENGL 1762B.

COLT 1813V. The Cash Nexus: Economy and Literature. At a time when human existence is grounded with unprecedented conviction in a rigid set of utilitarian principles and materialistic values, the relationship between literature and various modes of economic exchange presents itself as a richly rewarding field of research. The texts we will focus on offer rare insights into the ways monetary factors affect personal identity, interpersonal relationships, and social life in general. These works reflect a diachronic tension between human interactions and financial transactions that will be the basis of our critical engagement with a series of issues and questions that are more pertinent today than ever before.

COLT 1813X. Getting Emotional: Passionate Theories (ENGL 1560W). Interested students must register for ENGL 1560W.

COLT 1814A. Fashion and Power (GNSS 1960Y). Interested students must register for GNSS 1960Y.

COLT 1814F. Erotic Desire in the Premodern Mediterranean (CLAS 1750L). Interested students must register for CLAS 1750L.

COLT 1814G. Political Commitment in Arabic Literature. This course will explore the history of and debates surrounding political consciousness and commitment in modern Arabic literature from the mid-20th century to the present. Through close readings of mainly novels, novellas, and short stories, we will ask how, why, and with what consequences Arab authors have challenged political realities with literary expression. We will trace the diverse strategies by which authors articulated their criticisms and envisioned justice grounded in their political context. Topics and themes will include socialist realism, resistance literature, alienation, self-criticism, and responses to colonialism and censorship. No knowledge of Arabic required.

COLT 1814K. Fashion + Power. Clothing is a text to be read in modernity, and artists from Baudelaire to RuPaul mobilize sartorial performativity in powerful ways. Fashion functions, for example, as a semiotic system, a mnemonic device, an erotic signifier, a tool for bourgeois self-fashioning, and an anti-normative force. In this course, students will gain familiarity with key works in the sociology of culture, and a critical vocabulary for discussing literary and cinematic style. Among our concerns: commodity fetishism; the subcultural dynamics of decadence, primitivism, and punk; queer irony and gender performativity; and vernacular aesthetic categories (glamour, coolness, cuteness, etc.).

COLT 1814L. Apartheid in Post-Apartheid South African Literature. In this course, we explore the political stances that contemporary South African writing articulates towards the apartheid regime. We bring particular attention to the textual emergence of queer subjectivities. During apartheid (1948-1994), South Africa became a global symbol of racial injustice, and several South African writers became famous for their anti-apartheid literary production. Since 1994, critics have looked for new frames in which to analyze a “new” literature. In the search for “newness,” however, we may forget to consider how the “old”—apartheid—reappears in post-apartheid literature. Authors include Zackie Achmat, K. Sello Duiker, Phaswane Mpe, and Zoe Wicomb.
COLT 1814M. Postcolonial Literature + Thought in the Middle East and North Africa.
This course examines postcolonial literature and thought in the ME and North Africa through literature, theory and film. During the early and mid-20th century, anticolonial movements transformed the region’s cultural landscape, igniting new intellectual circles and literary scenes. We will study these movements as a launching ground for regional culture, interrogating local anti-colonial thought in works by writers such as Memmi and Fanon, and examining its evolution from the 1960’s-1990’s in work from Egypt, Algeria, Tunisia, Lebanon, Syria, Israel, Morocco and Palestine. How did intellectuals and artists articulate issues like national liberation, Westernization, radical culture, feminism, Marxism and Orientalism? DPLL

COLT 1814N. The Marriage Plot.
From Shakespeare to Eugenides, via Austen, Brontë, James and Wharton, the marriage plot persists in anglo-american drama, cinema and narrative, in contradistinction with the adultery plot inherited from French medieval romance. We will study examples of the marriage plot, both fulfilled and failed, in contrast with some examples from the French tradition.

COLT 1814P. Fascinating Fascism.
This seminar examines the enduring First World fascination with fascism and above all with Nazism, not just as a historical political phenomenon, but as a cultural, literary, and cinematic topic, trope and image. The question of the commercial and ideological appeal of Nazi villains, imagery and iconography will be pursued through several contexts: the historical, psychological and ideological appeal of fascism; the trauma of the Shoah; the narrative and ideological imperatives of late-capitalist entertainment systems. Readings will engage a variety of theoretical texts (Freud, Bataille, Adorno, Sontag); films (Riefenstahl, Tarantino); novels (Dick, DeLillo, Littell).

COLT 1814Q. Species Matters: Animals in Literature, Film, and Theory.
Nonhuman animals constitute the limit against which humans define themselves: at the same time, they challenge such boundaries. Thinking about animals, then, always also means exploring our own humanity. In this course, we will draw on the vast archive of literature, philosophy, and art that engages animals in order to reconsider what and how these representations mean. Considering our complex relationships with other animals, we will address questions of ontology, aesthetics, and ethics: What makes an animal? Can animals be represented? How should animal suffering affect us?

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

Special work or preparation of honors theses under the supervision of a member of the staff. Open to honors students and to others. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 2450. Exchange Scholar Program.

COLT 2520A. City (B)Lights: Interdisciplinary Approaches to the Study of the City.

COLT 2520B. Dark and Cloudy Words: Metaphor and Poetry.
An examination of the philosophical significance of metaphor and its literary function in poetry ranging from makurakotoba in the Man’ yōshū to kenningar in Skaldic poetry, to the use of the trope in a number of modern poets. Critical writings include works by Aristotle, Ki no Tsurayuki, Shelley, Christine Brooke-Rose, Max Black, Donald Davidson, Paul Ricoeur, and Jacques Derrida.

COLT 2520C. Irony: Language and Failure.
A study in the trope of irony and the ways in which it complicates the possibility of understanding. Focus on Socratic irony, the dialogue, and Romantic irony. We will also consider the epistemological implications of irony and the role it plays in contemporary criticism. Readings from Plato, Quintillian, Diderot, Hegel, Schlegel, Kierkegaard, Baudelaire, Lukács, Booth, De Man, Rorty and Derrida.

COLT 2520D. The Literature of the Americas.
Forsaking the dominant Eurocentrism in comparative literary studies, this seminar will search for the common links between the diverse literatures of North and Latin America, approached in relation to one another rather than to “Old World” models. Authors to be considered include Margaret Atwood, Julio Cortázar, Carlos Fuentes, William Faulkner, Gabriel García-Márquez, Clarice Lispector, Machado de Assis, Toni Morrison and João Guimarães Rosa.

COLT 2520E. Dialectics of Word and Image.
Explores how proximities and interactions of text and image construct and complicate meaning. It brings together a constellation of theoretical and historical readings that have bearing on particular problems generated at the nexus of word and image. Readings by Horace, Abd al-Gahir Jurjani, Lévi-Strauss, Ricoeur, Derrida, Mitchell and others will anchor a cross-disciplinary investigation of European and non-European paradigms of the relationship between text and image in various literary and visual cultures since late antiquity. We will examine specific examples of the interaction between word and image in several Islamic manuscripts.

COLT 2520F. Theories of the Lyric.
Through readings of recent critical discussions of the lyric genre, we will explore more general methodological problems of literary theory. Questions to be raised include: the role of form, structure and tropes in analyzing poetry; problems of subjectivity and voice; the relation between poetry, history and politics; the function of reading; and the problematic “objectivity” of criticism. Readings from Jakobson, Benveniste, Jauss, Benjamin, Johnson, De Man, Lacoue-Labarthe, Agamben, Badiou and Derrida. Focus on poets Hölderlin, Baudelaire and Celan.

COLT 2540C. Romanticism and Cultural Property (ENGL 2560Y).
Interested students must register for ENGL 2560Y.

COLT 2540D. After Postmodernism: New Fictional Modes (ENGL 2760X).
Interested students must register for ENGL 2760X.

COLT 2540E. Political Romanticism (GRMN 2320E).
Interested students must register for GRMN 2320E.

COLT 2540F. Romanticism and Cultural Property (ENGL 2560Y).
Interested students must register for ENGL 2560Y.

COLT 2650A. Comparative Literature and Its Others.
Is there such a thing as comparative literacy? This course examines the relationship between text and image in various literary and visual cultures since late antiquity. We will examine specific examples of the interaction between word and image in several Islamic manuscripts.

COLT 2650C. Romantic Theory: Theirs and Ours.
Recent criticism will serve as the point of departure for looking into the relationship between literature and philosophy. Emphasis is placed on how Romantic problems inform contemporary criticism on such topics as periodization, literature and history, theory of symbol and allegory, and the relation between literature and philosophy. Texts will be selected from Benjamin, M.H. Abrams, de Man, McGann, Lacoue-Labarthe and Nancy, Chase, et al.; Fichte, Schelling, Coleridge, Wordsworth, Schlegel, Novalis.

COLT 2650D. Theory of Comparative Literature.
Designed to introduce students to some of the central theoretical issues that define the discipline of Comparative Literature through the study of twelve central texts in the field. We will begin with Erich Auerbach’s foundational text Mimesis, and end with Gayatri Spivak’s Death of a Discipline. In between the authors to be read and analyzed will be Bakhtin, Lukács, Barthes, Derrida, DeMan, Jameson, Greenblatt and others. Open to graduate students, and to undergraduates by permission of the instructor.
COLT 2650E. Theory of Lyric Poetry.
No description available.

COLT 2650F. Irony.
A study of the trope of irony and its evaluation, especially in the Romantic tradition. Focus on the epistemological implications of irony and the role it plays in the philosophical tradition and in contemporary criticism. Readings from Plato, Hegel, Schlegel, Kierkegaard, Baudelaire, Lukács, Booth, De Man, Rorty and Derrida.

COLT 2650G. Literary Readings in Aesthetic Theory.
The seminar will examine not just the major themes but also the rhetorical complexities of a number of powerful texts in the history of aesthetic theory. Authors to be considered include Plato, Aristotle, Longinus, Burke, Kant, Hegel, Nietzsche, Heidegger, Benjamin, Adorno. Literary texts will be considered in conjunction with these texts, sometimes by way of famous arguments or exchanges (e.g., Heidegger and Stai ger on Mörke).

COLT 2650H. On the Sublime (GRMN 2660A).
Interested students must register for GRMN 2660A.

COLT 2650N. Hamlet: Appropriation, Mediation, Theory (ENGL 2360X).
Interested students must register for ENGL 2360X.

COLT 2650P. Frankfurt School Critical Theory (GRMN 2661G).
Interested students must register for GRMN 2661G.

COLT 2720A. Advanced Practicum in Literary Translation.
Readings in theory of translation, and in monuments of literary translation from Renaissance times to the present, will be assigned to students needing further background in these areas. Students will each complete two projects: (1) by mid-semester, a critical treatment of a published translation or a comparison of such translations; (2) for the final seminar presentation and paper, the student's own translation into English from some literary text in a language familiar to the student.

COLT 2720B. Theory and Practice of Literary Translation.
Readings in the history and theory of translation from the Renaiss ance to the present, along with selected major examples of literature in English translation. Students will write two papers: (1) an analysis of a theoretical issue in translation, with ample attention to the historical context of that issue; and (2) either a discussion of an important translation as a criticism of the original work; or a critical comparison of several translations of an original work; or an annotated translation into English from a language familiar to the student.

COLT 2720C. Literary Translation.
Study and practice of translation as art and a potent form of literary criticism. Translation is an act of interpretation, which informs the language of the translator and the text as a whole: context, intent, and language. Discussion will include the impact of cultural difference, tone and time on translation, and the role of analytical as well as intuitive understanding of the original in the translator's endeavor.

COLT 2820B. Fiction and History.
Focuses on how the historical fiction that has flourished over the past three decades challenges the notions of objectivity and totalization, while providing alternative viewpoints for the reconstruction and reinterpretation of the past. Authors to be considered include E. L. Doctorow, Gabriel Garcia-Marquez, Günter Grass, José Saramago Isabel Allende, Lidia Jorge, Coover. Attention will also be paid to theoretical texts by Hayden White, Dominic LaCapra, Walter Benjamin, Linda Hutcheon, and Roger Chartier.

COLT 2820D. The "Tenth Muse" Phenomenon.
The texts and contexts of women writing in English, Spanish and French, during the sixteenth and especially seventeenth centuries. Often dubbed "Tenth Muse," these first early modern women writers to gain public prominence wrote iconoclastic texts and/or epitomized socially sanctioned scripts for women. Authors include: Anne Bradstreet, Margaret Lucas Cavendish, Sor Juana, Mme de Lafayette, Maria de Zayas.

COLT 2820E. What was Enlightenment?..
Emphasizes two of the Enlightenment's most durable artists-Mozart and Jane Austen-situating them in the context of other writers of their times (such as Kant, Casanova, and Adam Smith) and modern appropriations of their work (in criticism and performance). Sub-themes are desire, reason, education, and forms of otherness. Class hours include viewing time.

COLT 2820F. Latin America and Theory.
Explores the engagement of Latin American literature and criticism with non-Latin American bodies of literary and cultural theory (including poststructuralism, postcolonialism, postmodernism and cultural studies), addressing tensions between the autochthonous production of theoretical frameworks and their import from other contexts. Readings include the Latin American Subaltern Studies group, Revista de Crítica Cultural, Rama, García Cancrini, Sarlo, Richard and current new media theorists. Open to graduate students and qualified seniors.

COLT 2820H. The Politics and Aesthetics of Masochism.
Masochism is defined as a, aestheticized positive, consensual investment in power relations. As such, it directly engages the relationship between politics and aesthetic forms, but as a sexualized relationship. Masochism articulates relations of gender in ways that seem to challenge traditional structures. Readings include novels and films, as well as theoretical engagements with masochism.

COLT 2820I. Literature and the State of Exception.
This course takes as its point of departure Walter Benjamin's famous diagnosis of modernity as a paradoxical condition under which the exception has become the rule. We will consider the aesthetic and political implications of such a state of exception in nineteenth-century literature. Authors include Baudelaire, DeQuincey, Arnold, Melville, Whitman, Benjamin, Derrida, Nancy and Agamben.

COLT 2820L. Moderns and Primitives.
Major writers, artists, and theorists of European modernism put a new emphasis on the status of primitive society and archaic pre-history. We will consider the works of Durkheim, Eliot, Joyce, Picasso, and others with reference to the anthropology and ethnography of their period, and to subsequent post-colonial critique and controversy.

COLT 2820M. Discourses of the Senses.
A comparative study of a variety of discourses dealing with the relation among the senses, the arts, and the problems of comparativity, interdisciplinary, and intermediality. Topics will include ekphrasis, synaesthesis, mysticism and the theory of correspondence, the Gesamtkunstwerk, and the limits between media. Readings from Condillac, Lessing, Kant, Swedenborg, the German Romantics, Baudelaire, Wagner, Balzac, Lacoue-Labarthe, Nancy, Panofsky, Tschumi and others.

COLT 2820N. Hamlet: Appropriation, Mediation, Theory.
Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences, including sociology, political economy, urban ecology. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images. American cities and literary works are foregrounded.

COLT 2820O. Jacques Derrida's "Grammatology".
This course is an introduction to the thought of the French philosopher Jacques Derrida. We will focus on his most important work, his "Grammatology", though a series of some of his essays will also be part of the readings. Other readings will include the works of authors crucial to Derrida's thought and to an understanding of the "Grammatology": Heidegger, Nietzsche, Freud, Saussure, Rousseau and Levi-Strauss.
COLT 2820P. Aesthetics and the Eighteenth Century Subject.
The debates about taste, judgment, beauty, sentiment, and sensation in the eighteenth century gave rise to the discourse of aesthetics as we know it today, but they also exerted a powerful influence on how knowledge, virtue, and subjectivity were imagined in the post-enlightenment period. In this course, we will examine some of the founding texts of aesthetic theory from the era (including Locke, Smith, Burke, Lessing, and Kant), and then turn to consider how aesthetic questions informed and were taken up by Goethe’s narrative of subject-formation in his Bildungsroman, Wilhelm Meister’s Apprenticeship. In English.

COLT 2820Q. Culture and Politics in Cuba and the Caribbean.
Complicating standard narratives about intellectuals and the Cuban Revolution, explores writings whose relationship to the state is neither affirmative nor oppositional. Focusing on journals and on recent work in cultural theory, history, anthropology, and political science, addresses the evolution and potential of civil society; articulations of marginality; revisions of socialism and the Soviet legacy; and the mobility of theory. Spanish required.

COLT 2820R. Postcolonial Melancholia.
Figures of loss and defeat proliferate widely in the accounts of colonization, national liberation, and decolonization in South Asia, Africa, the Arab world, and the Americas. We will attend to the particularity of loss by juxtaposing readings in literature and postcolonial theory with readings on mourning and melancholia, drawn from a range of disciplines.

COLT 2820S. Poetry after Kant.
 Begins with the intensive study of a selection of writings by Immanuel Kant focused especially on force and conflict in politics and aesthetics. This study, along with relevant readings from more recent work, will provide the basis for an approach to this topic in nineteenth-century poetry. Readings of Kant (Critique of Judgment, “Toward Eternal Peace,” The Conflict of the Faculties), Walter Benjamin, Jacques Derrida, and Giorgio Agamben and will lead to several ”case studies” of nineteenth-century poetry, including works by Friedrich Hölderlin, Charles Baudelaire, and Matthew Arnold.

COLT 2820T. Universals.
Explores the status of universals in classical, Hellenistic, Scholastic, and Renaissance metaphysics. Also explores the literary implications of this philosophical problem. Readings include Plato, Aristotle, Chrysippus, Augustine, Cicero, Seneca, Abelard, Avicenna, Aquinas, Scotus, Ficino, Cusanus, Pico, and Suarez.

COLT 2820U. Literature and Judgment.
Investigates the intersections between acts of literature and acts of judgment, between language and the law. How is literature to be judged, when is it “good” or “bad”? Does literature lie, and if so, does it matter? Does it hide a crime? And, in turn: does literature provide its own particular kind of judgment, one that may make evident the very fictional status of the law? Readings span from the Bible to contemporary post-colonial readings (Rousseau, Tolstoy, Zola, Freud, Kafka, Arendt, Benjamin, Henry James, Primo Levi, Coetzee, Sadeh Hedaya).

COLT 2820V. Nietzsche, Foucault, Latour (ENGL 2900K).
Interested students must register for ENGL 2900K.

COLT 2820W. Ethical Turns (ENGL 2900N).
Interested students must register for ENGL 2900N.

COLT 2820X. Things Not Entirely Possessed: Romanticism and History (ENGL 2561B).
Interested students must register for ENGL 2561B.

COLT 2821C. From Hegel to Nietzsche: Literature as/and Philosophy (GRMN 26600).
Interested students must register for GRMN 26600.

COLT 2821L. Postcoloniality and Globalism (ENGL 2900Z).
Interested students must register for ENGL 2900Z.

COLT 2821N. Around 1948: Interdisciplinary Approaches to Global Transformation.
This seminar will look at the year 1948 across international locations and from an interdisciplinary perspective. An array of new nations states, institutions, political and cultural formations and styles emerged at this moment, with the movements of decolonization, the spread of global socialism, and aftermath of the Second World War. We will analyze these events through documents, images, philosophical texts, archives, literary texts from the era. Enrollment limited to 7.

COLT 2821O. Culture and Economy.
This seminar examines a range of approaches to the human economy: philosophical and spiritual discourses on poverty, wealth and nonmaterial values; the place of the economy in literary criticism and theory; historical and anthropological narratives of economic development, including recent challenges to Europe-centered histories of capitalism; feminist economics; debates over the definition and translation of the “economic.”

COLT 2821P. Walter Benjamin: Literary Criticism.
The seminar will trace the emergence of an idea and a practice of literary criticism in Benjamin’s writings from his early essay on Friedrich Hölderlin through his essays on Goethe, Proust, the Baroque Trauerspiel, Kafka and Baudelaire. We will pair selections from the literary works with Benjamin’s critical writing on them.

COLT 2830C. Literature and the Arts.
An investigation of the discourse of the arts in the modern European tradition. Topics include the relation between the Ancients and the Moderns, evaluations of the possibilities and limitations of differing media, the role of language in discussions of the “other” arts, and conceptions of synaesthesia and correspondence. Texts selected from Perrault, Winkelman, Lessing, Diderot, Rousseau, Kant, Hegel, Hoffman, Baudelaire, and others.

COLT 2830D. Walter Benjamin and Modern Theory.
An intensive reading of selected essays by Walter Benjamin on language, literature, aesthetics, and politics will be paired up with the study of the interpretation and impact of this work on contemporary work in literary theory and philosophy. In addition to Benjamin, we will also read Jacques Derrida, Philippe Lacoue-Labarthe, Samuel Weber, Giorgio Agamben, and Peter Fenves. German and/or French helpful but not required. Open to graduate students only.

Across a range of disciplines, “cultural translation” today stands for the dynamic interactions among cultures. Derived from cultural anthropology and linguistic translation, the metaphor of translation (already a metaphor: trans+latere, to bear across) is used increasingly to analyze how cultures are transmitted through the operations of colonial expansion, diaspora and immigration. Though cultural globalization is assumed to be a 20th century phenomenon, the result of an expansion and acceleration in the movement and exchange of ideas, commodities and capital, this seminar considers a longer historical frame for understanding cultural competition. Theoretical texts including Schleiermacher, Jakobson, Benjamin, Derrida, Spivak, and a “case study,” Shakespeare.

COLT 2830I. Histories of the Early Modern Body.
This seminar considers the production of knowledge about the body in the early modern period. The institution of science and how the emerging “science” of the body was visualized; discourses of the erotic, the scientific and the religious; the body in varied cultural performances including the blason, devotional texts, erotica, drama etc. Texts include theoretical work on gender and sexuality. Open to graduate students only.
COLT 230L. Economies of the Visual (The Reverse of Images).
In *The Time-Image*, Deleuze wrote: "Money is the reverse of all the images that the cinema shows and edits on the obverse, so that films about money are already, if implicitly, films within the film or about the film." What are the implications of this sentence for the economy of images (what Susan Buck-Morss terms their *iconomy*)? From The Big Store (Marx Brothers) to Peter Jackson’s *King Kong*, we will trace various mobilizations of the gaze, leading from the proto-cinematographic elevators and escalators to the actual developments of eye-tracking technologies, allowing for an increasing commodification of the gaze itself.

COLT 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 2990. Thesis Preparation.
For graduate students who have met the tuition requirement and are paying the Registration Fee to continue active enrollment while preparing a thesis.

**Center for Computation and Visualization**

The Center for Computation and Visualization (CCV) strives to build and foster an environment that enables teaching, learning, research, and creative undertakings that involve and rely on the use and development of advanced computing and visualization technology. CCV provides high-performance computing, highly reliable research data storage, visualization resources, physical and virtual server hosting, high-performance backup and archival services, as well as outstanding collaborative scientific support to empower computational research, scholarship, creativity, and innovation for the entire Brown community.

The computing platform comprises a 700+ high performance computing node system, some with extra large memory and some with GPUs for accelerated computing, for a total core count of over 7,000, and peak performance of roughly 125 Teraflops. A GPFS parallel filesystem provides roughly 400 Terabytes of disk storage and 40 Gigabits per second Infiniband connectivity is used for all parallel applications messaging and I/O. The storage system is integrated with a 2 Petabyte Tivoli TSM backup/ performance backup and archival services, as well as outstanding collaborative scientific support to empower computational research, scholarship, creativity, and innovation for the entire Brown community.

For additional information please visit the center’s website at: http://www.ccv.brown.edu/.

**Center for Computational Molecular Biology**

The mission of the Center for Computational Molecular Biology (CCMB) is to make breakthrough discoveries in the life sciences through the development and application of novel computational, mathematical, and statistical techniques. Research in the Center aims to exploit the opportunities from technological advances in genomics and proteomics.

For more information please visit www.brown.edu/ccmb

**Computational Biology Concentration Requirements**

Computational biology involves the analysis and discovery of biological phenomena using computational tools, and the algorithmic design and analysis of such tools. The field is widely defined and includes foundations in computer science, applied mathematics, statistics, biochemistry, molecular biology, genetics, ecology, evolution, anatomy, neuroscience, and visualization. Students may pursue a Bachelor of Arts or a Bachelor of Science. Students pursuing the ScB have the option of electing a concentration in Computational Biology with one of three focus areas: Computer Sciences, Biological Sciences, or Applied Mathematics & Statistics. Both programs require a senior capstone experience that pairs students and faculty in creative research collaborations.

**Standard program for the A.B. degree**

**Prerequisites:**

Additional course with Director approval

**Total Credits** 12

**University Writing Requirement:**

As part of Brown’s writing requirement, all students must demonstrate that they have worked on their writing both in their general studies and their concentration. There are a number of ways for Computational Biology concentrators to fulfill these requirements:

• Writing an Honors Thesis
• Taking a "WRIT" course in the final two years

**Capstone Experience**
Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision. The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor, or a 2000-level Computational Biology course.

| BIOL 1430 | Computational Theory of Molecular Evolution and Population Genetics |
| PHP 2620 | Statistical Methods in Bioinformatics, I |
| APMA 1070 | Quantitative Models of Biological Systems |
| BIOL 1465 | Human Population Genomics |

**Total Credits:** 18-20

**Honors:**

In order to be considered a candidate for honors, students will be expected to maintain an outstanding record, with no “C”s in concentration courses and with a minimum of an “A-” average in concentration courses. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters, of reading and research with a CCMB faculty member or approved advisor. Students must submit to a public defense of their theses to be open to the CCMB community.

- Students seeking honors are advised to choose a Thesis Advisor before the end of their Junior year.
- Students must complete the Registration form for Comp Bio and submit it to CCMB@BROWN.EDU.
Any deviation from these rules must be approved by the director of undergraduate studies, in consultation with the student’s advisor.

**Computational Biology Graduate Program**

The Center for Computational Molecular Biology (CCMB) offers a Ph.D. program in Computational Biology to train the next generation of scientists to perform cutting edge research in the multidisciplinary field of computational biology. During the course of their Ph.D. studies students will develop and apply novel computational, mathematical, and statistical techniques to problems in the life sciences.

The Ph.D. program in Computational Biology encompasses three individual training programs with a core of common requirements and specific requirements from individual departments of Computer Science, Molecular, Cell Biology & Biochemistry (MCB), and Ecology and Evolutionary Biology (EEB). Applicants should state a preference for one of these three programs. In addition, students interested in the intersection of Applied Mathematics and Computational Biology are encouraged to apply directly to the Applied Mathematics Ph.D. program (http://www.brown.edu/academics/applied-mathematics/graduate), and also to contact relevant CCMB faculty members.

The Computational Biology Ph.D. program assumes the following prerequisites: mathematics through intermediate calculus, linear algebra and/or discrete mathematics, demonstrated programming skill, and at least an undergraduate course in chemistry and in molecular biology. Exceptional strengths in one area may compensate for limited background in other areas, but some proficiency across the disciplines must be evident for admission.

The application process to the CCMB graduate program is run through the Graduate School (http://www.brown.edu/academics/gradschool/)

**Computer Science**

**Chair**

Ugur Cetintemel

**Vice Chair and Director of Undergraduate Studies**

Thomas W. Doeppner

**Director of Graduate Studies**

Shriram Krishnamurthi

Since our inception in 1979, the Computer Science Department at Brown has forged a path of innovative information technology research and teaching at both the undergraduate and graduate levels. From our modest beginnings as an interest group within the Divisions of Applied Mathematics and Engineering in the 1960s to its current stature as one of the nation’s leading computer science programs, the Computer Science Department has continuously produced prominent contributors in the field. Computer Science combines the intellectual challenge of a new discipline, with the excitement of an innovative and rapidly expanding technology. The department resides in Brown’s Center for Information Technology; this striking building houses many of the university’s computing activities, as well as the department’s instructional computing facilities and research labs. Faculty, staff and students are provided state-of-the-art computing facilities managed by the department’s own technical staff.

For additional information, please visit the department’s website: http://www.cs.brown.edu/

**Computer Science Concentration Requirements**

Computer science is now a critical tool for pursuing an ever-broadening range of topics, from outer space to the workings of the human mind. In most areas of science and in many liberal arts fields, cutting-edge work depends increasingly on computational approaches. The undergraduate program at Brown is designed to combine breadth in practical and theoretical computer science with depth in specialized areas. These areas range from traditional topics, such as analysis of algorithms, artificial intelligence, databases, distributed systems, graphics, mobile computing, networks, operating systems, programming languages, robotics and security, to novel areas including games and scientific visualization.

**Requirements for the Standard Track of the Sc.B. degree**

**Prerequisites (1 or 2 courses)**

<table>
<thead>
<tr>
<th>Two semesters of Calculus, for example:</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 0090 Introductory Calculus, Part I</td>
</tr>
<tr>
<td>or MATH 0100 and Introductory Calculus, Part II</td>
</tr>
<tr>
<td>or MATH 0170 Advanced Placement Calculus</td>
</tr>
</tbody>
</table>

**Concentration Requirements (15 courses)**

**Core-Computer Science:**

Select one of the following introductory course Series: 2

**Series A**

| CSCI 0150 Introduction to Object-Oriented Programming and Computer Science |
| & CSCI 0160 and Introduction to Algorithms and Data Structures |

**Series B**

| CSCI 0170 & CSCI 0180 Computer Science: An Integrated Introduction and Computer Science: An Integrated Introduction |

**Series C**

| CSCI 0190 Accelerated Introduction to Computer Science |

and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0180, an intermediate-level course, or an advanced course

Select three of the following intermediate-level courses, one of which must be math-oriented and one systems-oriented: 3

| CSCI 0220 Introduction to Discrete Structures and Probability (math) |
| CSCI 0320 Introduction to Software Engineering (systems) |
| CSCI 0330 Introduction to Computer Systems (systems) |
| CSCI 1010 Theory of Computation (math) 3 |
| CSCI 1450 Probability and Computing (math) |

**Additional Computer Science Courses:** 1

Select one theoretical computer science course: 2

| CSCI 1010 Theory of Computation 3 |
| CSCI 1510 Introduction to Cryptography and Computer Security |
| CSCI 1550 Probabilistic Methods in Computer Science |
| CSCI 1570 Design and Analysis of Algorithms |
| CSCI 1760 Multiprocessor Synchronization |
| CSCI 1950H Computational Topology |
| CSCI 1820 Algorithmic Foundations of Computational Biology |

Select one artificial intelligence course: 2

| CSCI 1410 Applied Artificial Intelligence |
| CSCI 1420 Machine Learning |
| CSCI 1430 Computer Vision |
| CSCI 1450 Probability and Computing |
| CSCI 1460 Computational Linguistics |
| CSCI 1480 Building Intelligent Robots |
| CSCI 1490 Introduction to Combinatorial Optimization |

1. Theoretical Computer Science: Includes courses that focus on the mathematical foundations of computing.
2. Artificial Intelligence: Courses that explore the design and implementation of intelligent systems.
3. Additional courses may be selected based on individual interests and the needs of the department.

For more information, visit the department's website: http://www.cs.brown.edu/
Select one computer science systems course:

- CSCI 1230 Introduction to Computer Graphics
- CSCI 1260 Compilers and Program Analysis
- CSCI 1270 Database Management Systems
- CSCI 1290 Computational Photography
- CSCI 1300 User Interfaces and User Experience
- CSCI 1310 Fundamentals of Computer Systems
- CSCI 1320 Creating Modern Web Applications
- CSCI 1340 Innovating Game Development
- CSCI 1380 Distributed Computer Systems
- CSCI 1600 Real-Time and Embedded Software
- CSCI 1660 Introduction to Computer Systems Security
- CSCI 1670 Operating Systems
- CSCI 1680 Computer Networks
- CSCI 1730 Design and Implementation of Programming Languages

Four additional advanced computer science courses. For example:

- CSCI 1250 Introduction to Computer Animation
- CSCI 1280 Intermediate 3D Computer Animation
- CSCI 1370 Virtual Reality Design for Science
- CSCI 1780 Parallel and Distributed Programming
- CSCI 1800 Cybersecurity and International Relations
- CSCI 1810 Computational Molecular Biology
- CSCI 1900 csciStartUp
- CSCI 1950A Computational Modeling and Algorithmic Thinking
- CSCI 1950B Computational Topology and Discrete Geometry
- CSCI 1950C Advanced Programming for Digital Art & Literature
- CSCI 1950K Innovating Game Development
- CSCI 1950M Advanced Practical Combinatorial Algorithms
- CSCI 1950N 2D Game Engines
- CSCI 1950Q Programming for the Humanities and Social Sciences
- CSCI 1950R Compiler Practice
- CSCI 1950T Advanced Animation Production
- CSCI 1950U Topics in 3D Game Engine Development
- CSCI 1950X Software Foundations
- CSCI 1950Y Logic for Systems
- CSCI 1950Z Computational Methods for Biology
- CSCI 1951A Data Science
- CSCI 1951B Virtual Citizens or Subjects? The Global Battle Over Governing Your Internet
- CSCI 1951C Designing Humanity Centered Robots
- CSCI 1951F Computers, Freedom and Privacy: Current Topics in Law and Policy
- CSCI 1951G Optimization Methods in Finance
- CSCI 1951H Software Security and Exploitation
- CSCI 1951J Interdisciplinary Scientific Visualization
- CSCI 1970 Individual Independent Study

A capstone course:

1. Math: Two semesters of Mathematics or Applied Mathematics beyond MATH 0100/0170. One of these courses must be a linear algebra course.
2. MATH 0520 Linear Algebra
3. MATH 0540 Honors Linear Algebra

- Normally these advanced courses must be at the 1000-level or higher, though an intermediate-level course not used to satisfy a core requirement may be used.
- These courses must include two pairs of courses with each pair forming a coherent theme. A list of pre-approved pairs may be found at the approved-pairs web page (http://cs.brown.edu/ugrad/concentrations/approvedpairs.html). You are not restricted to pairs on this list, but any pair not on the list must be approved by the director of undergraduate studies.
- Five of the eight courses must be computer science courses.
- Among the eight courses may be approved 1000-level courses in Mathematics, Applied Mathematics, Biology, Engineering, Economics, Music, Cognitive, Linguistic, and Psychological Sciences, Neuroscience, and other departments that cover material relevant to the student's concentration.
- CSCI 1450 may be used either as a math-oriented intermediate course or as an advanced course. CSCI 1450 was formerly known as CSCI 450; they are the same course and hence only one may be taken for credit. Applied Math 1650 may be used in place of CSCI 1450. However, concentration credit will be given for only one of Applied Math 1650 and CSCI 1450.

- No course may be used to satisfy more than one area requirement.
- CSCI 1010 may be used either as a math-oriented intermediate course or as an advanced course, but not both. It was formerly known as CSCI 0510.
- Capstone: a one-semester course, normally taken in the student's last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth, to produce a culminating artifact such as a paper or software project.

Requirements for the Professional Track of the Sc.B. degree.

The requirements for the professional track include all those of the standard track, as well as the following:

- Students must complete two two-to-four-month full-time professional experiences, doing work that is related to their concentration programs. Such work is normally done within an industrial organization, but may also be at a university under the supervision of a faculty member.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student's concentration advisor:

- Which courses were put to use in your summer's work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?

- Would you recommend your summer experience to other Brown students? Explain.

Requirements for the Standard Track of the A.B. degree

Prerequisites

- Two semesters of Calculus, for example:
  - MATH 0090 Introductory Calculus, Part I & MATH 0100 and Introductory Calculus, Part II
  - MATH 0170 Advanced Placement Calculus

Concentration Requirements (9 courses)

Four additional courses in computer science or related areas are required |

Total Credits

| 9 |

1. CSCI 1010 may be used as either a math-oriented intermediate course or as an advanced course, but not as both. It was formerly known as CSCI 0510.

2. Three must be advanced courses (at the 1000-level or higher), the fourth may be either an intermediate-level course not used to satisfy a core requirement or an advanced course. These three courses must include a pair of courses forming a coherent theme. A list of pre-approved pairs may be found at the approved-pairs web page (http://cs.brown.edu/ugrad/concentrations/approvedpairs.html). You are not restricted to pairs on this list, but any pair not on the list must be approved by the director of undergraduate studies.

3. CSCI 1450 was formerly known as CSCI 450: they are the same course and hence only one may be taken for credit. Applied Math 1650 may be used in place of CSCI 1450. However, concentration credit will be given for only one of Applied Math 1650 and CSCI 1450.

**Requirements for the Professional Track of the A.B. degree.**

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete two two-to-four-month full-time professional experiences, doing work that is related to their concentration programs. Such work is normally done within an industrial organization, but may also be at a university under the supervision of a faculty member.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student’s concentration advisor:

- Which courses were put to use in your summer's work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?

- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.

---

**Computer Science-Economics Concentration Requirements**

The joint Computer Science-Economics concentration exposes students to the theoretical and practical connections between computer science and economics. It prepares students for professional careers that incorporate aspects of economics and computer technology and for academic careers conducting research in areas that emphasize the overlap between the two fields. Concentrators may choose to pursue either the A.B. or the Sc.B. degree. While the A.B. degree allows students to explore the two disciplines by taking advanced courses in both departments, its smaller number of required courses is compatible with a liberal education. The Sc.B. degree achieves greater depth in both computer science and economics by requiring more courses, and it offers students the opportunity to creatively integrate both disciplines through a design requirement. In addition to courses in economics, computer science, and applied mathematics, all concentrators must fulfill the Computer Science department's writing requirement by passing a course that involves significant expository writing.

**Standard Program for the Sc.B. degree.**

</table>

and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0180, an intermediate-level CS course, or a 1000-level course.

Two of the following intermediate courses, one of which must be math-oriented and one systems-oriented.

- CSCI 1450 Probability and Computing
- CSCI 0320 Introduction to Software Engineering (systems)
- CSCI 0330 Introduction to Computer Systems (systems)
or CSCI 0310  Introduction to Computer Systems
CSCI 1010  Theory of Computation

A pair of CS courses with a coherent theme.  

An additional CS course that is either at the 1000-level or is an intermediate course not already used to satisfy concentration requirements. CSCI 1450 may not be used to satisfy this requirement.

ECON 1130  Intermediate Microeconomics  
(Mathematical)  
ECON 1210  Intermediate Macroeconomics  
ECON 1630  Econometrics I  

Three courses from the "mathematical economics" group:  

ECON 1170  Welfare Economics and Social Choice Theory  
ECON 1225  Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies  
ECON 1465  Market Design: Theory and Applications  
ECON 1470  Bargaining Theory and Applications  
ECON 1640  Econometrics II  
ECON 1650  Financial Econometrics  
ECON 1750  Investments II  
ECON 1759  Data, Statistics, Finance  
ECON 1810  Economics and Psychology  
ECON 1820  Behavioral Economics  
ECON 1850  Theory of Economic Growth  
ECON 1860  The Theory of General Equilibrium  
ECON 1870  Game Theory and Applications to Economics  

and any graduate Economics course  

Two additional 1000-level Economics courses  

Capstone Course in either Computer Science or Economics  

Total Credits  

1  

A list of pre-approved pairs may be found at the approved-pairs web page (http://www.cs.brown.edu/ugrad/concentrations/approvedpairs.html). You are not restricted to pairs on this list, but any pair not on the list must be approved by the CS director of undergraduate studies. CSCI 1450 may not be used to satisfy this requirement.

2  

Or ECON 1110, with permission.

3  

A one-semester course, normally taken in the student's last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic (preferably at the intersection of computer science and economics) in depth, to produce a culminating artifact such as a paper or software project.

**Standard Program for the A.B. degree:**

**Prerequisites (3 courses):**

MATH 0100  Introductory Calculus, Part II  
MATH 0520  Linear Algebra  
or MATH 0540  Honors Linear Algebra  
or MATH 0530  Directions: The Matrix in Computer Science  
ECON 0110  Principles of Economics

**Required Courses (13 courses):**

Select one of the following series:  

2  

CSCI 1450  Probability and Computing  
or APMA 1650  Statistical Inference I  

Series A  

CSCI 0150  Introduction to Object-Oriented Programming and Computer Science and Introduction to Algorithms and Data Structures  

ECON 1170  Welfare Economics and Social Choice Theory  
ECON 1225  Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies  
ECON 1465  Market Design: Theory and Applications  
ECON 1470  Bargaining Theory and Applications  
ECON 1640  Econometrics II  
ECON 1650  Financial Econometrics  
ECON 1750  Investments II  
ECON 1759  Data, Statistics, Finance  
ECON 1810  Economics and Psychology  
ECON 1820  Behavioral Economics  
ECON 1850  Theory of Economic Growth  
ECON 1860  The Theory of General Equilibrium  
ECON 1870  Game Theory and Applications to Economics  

Series B  

CSCI 0170  Computer Science: An Integrated Introduction  
CSCI 0180  Computer Science: An Integrated Introduction  

Series C  

CSCI 0190  Accelerated Introduction to Computer Science  

and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0180, an intermediate-level course, or a 1000-level course  

Two of the following intermediate courses, one of which must be math-oriented and one systems-oriented:  

CSCI 0220  Introduction to Discrete Structures and Probability (math)  
CSCI 0320  Introduction to Software Engineering (systems)  
CSCI 0330  Introduction to Computer Systems (systems)  
CSCI 0310  Introduction to Computer Systems  
CSCI 1010  Theory of Computation  

Two additional CS courses; at least one must be at the 1000-level. The other must either be at the 1000-level or be an intermediate course not already used to satisfy concentration requirements.  

ECON 1130  Intermediate Microeconomics  
(Mathematical)  
ECON 1210  Intermediate Macroeconomics  
ECON 1630  Econometrics I  

Three courses from the "mathematical-economics" group:  

ECON 1170  Welfare Economics and Social Choice Theory  
ECON 1225  Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies  
ECON 1465  Market Design: Theory and Applications  
ECON 1470  Bargaining Theory and Applications  
ECON 1640  Econometrics II  
ECON 1650  Financial Econometrics  
ECON 1750  Investments II  
ECON 1759  Data, Statistics, Finance  
ECON 1810  Economics and Psychology  
ECON 1820  Behavioral Economics  
ECON 1850  Theory of Economic Growth  
ECON 1860  The Theory of General Equilibrium  
ECON 1870  Game Theory and Applications to Economics  

or any graduate Economics course  

Total Credits

1  

Or ECON 1110, with permission.

**Honors**

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites.

**Professional Track**

The requirements for the professional track include all those of the standard track, as well as the following: Students must complete two two-to-four-month full-time professional experiences, doing work that is related to their concentration programs. Such work is normally done within an industrial organization, but may also be at a university under the supervision of a faculty member.
On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student's concentration advisor:

- Which courses were put to use in your summer's work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.

Applied Mathematics-Computer Science

Concentration Requirements

The Sc.B. concentration in Applied Math-Computer Science provides a foundation of basic concepts and methodology of mathematical analysis and computation and prepares students for advanced work in computer science, applied mathematics, and scientific computation. Concentrators must complete courses in mathematics, applied math, computer science, and an approved English writing course. While the concentration in Applied Math-Computer Science allows students to develop the use of quantitative methods in thinking about and solving problems, knowledge that is valuable in all walks of life, students who have completed the concentration have pursued graduate study, computer consulting and information industries, and scientific and statistical analysis careers in industry or government. This degree offers a standard track and a professional track.

Requirements for the Standard Track of the Sc.B. degree.

Prerequisites - two semesters of Calculus, for example

<table>
<thead>
<tr>

Requirements for the Professional Track of the Sc.B. degree.

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete two two-to-four-month full-time professional experiences, doing work that is related to their concentration programs. Such work is normally done within an industrial organization, but may also be at a university under the supervision of a faculty member.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student's concentration advisor:

- Which courses were put to use in your summer's work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
• Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
• Would you recommend your summer experience to other Brown students? Explain.

### Mathematics-Computer Science Concentration Requirements

Students may opt to pursue an interdisciplinary Bachelor of Science degree in Math-Computer Science, a concentration administered cooperatively between the mathematics and computer science departments. Course requirements include math- and systems-oriented computer science courses, as well as computational courses in applied math. Students must identify a series of electives that cohere around a common theme. As with other concentrations offered by the Computer Science department, students have the option to pursue the professional track (http://www.cs.brown.edu/ugrad/concentrations/professional.track.html) of the ScB program in Mathematics-Computer Science.

### Requirements for the Standard Track of the Sc.B. degree.

#### Prerequisites
Three semesters of Calculus to the level of MATH 0180, MATH 0200, or MATH 0350
MATH 0520 Linear Algebra
or MATH 0540 Honors Linear Algebra

#### Core Courses
MATH 1530 Abstract Algebra

Select one of the following series:

<table>
<thead>
<tr>
<th>Series</th>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>CSCI 0150</td>
<td>Introduction to Object-Oriented Programming and Computer Science and Introduction to Algorithms and Data Structures</td>
</tr>
<tr>
<td>&amp; CSCI 0160</td>
<td></td>
<td></td>
</tr>
<tr>
<td>B</td>
<td>CSCI 0170</td>
<td>Computer Science: An Integrated Introduction and Computer Science: An Integrated Introduction</td>
</tr>
<tr>
<td>&amp; CSCI 0180</td>
<td></td>
<td></td>
</tr>
<tr>
<td>C</td>
<td>CSCI 0190</td>
<td>Accelerated Introduction to Computer Science</td>
</tr>
</tbody>
</table>

and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0180, an intermediate-level CS course, or a 1000-level CS course

#### Core Courses
CSCI 0320 Introduction to Software Engineering
or CSCI 0330 Introduction to Computer Systems
CSCI 0220 Introduction to Discrete Structures and Probability
or CSCI 1010 Theory of Computation

Three 1000-level Mathematics courses
Three advanced courses in Computer Science
Three additional courses different from any of the above chosen from Mathematics, Computer Science, Applied Mathematics, or related areas
A capstone course in Computer Science or Mathematics

Note: CSCI 1450 may be used either in place of CSCI 220 or 510 in the core courses or as an advanced course. CSCI 1450 was formerly known as CSCI 450; they are the same course and hence only one may be taken for credit. Applied Math 1650 may be used in place of CSCI 1450. However, concentration credit will be given for only one of Applied Math 1650 and CSCI 1450.

### Computer Science Graduate Program

The department of Computer Science offers two graduate degrees in computer science. The Master of Science (Sc.M.) degree for those who wish to improve their professional competence in computer science or to prepare for further graduate study, and the Doctor of Philosophy (Ph.D) degree.

For more information on admission and program requirements, please visit the following website:
http://www.brown.edu/academics/gradschool/programs/computer-science

### Concurrent ScB (NUS) and ScM in Computational Biology (Brown University)

The School of Computing at National University of Singapore and The Department of Computer Science at Brown have established a concurrent Bachelor’s and Master’s degree program in Computational Biology. After having first completed four years of undergraduate study at National University of Singapore (NUS), qualified students will attend Brown University to complete their fifth and final year of study in computational biology. After the successful completion of requirements set forth by both
universities, the students will simultaneously earn both their Sc.B. and Sc.M. degrees. The Sc.B will be awarded by the National University of Singapore, while the Sc.M. is awarded by Brown University.

Courses

CSCI 0020. The Digital World.
Removes the mystery surrounding computers and the ever-growing digital world. Introduces a range of topics and many aspects of multimedia, along with explanations of the underlying digital technology and its relevance to our society. Other topics include artificial intelligence, IT security, ethics and the economics of computing as well as the effects of its pervasiveness in today's world. Introductory programming and analytic skills are developed through HTML, Photoshop, Excel and Python assignments. CSCI 0020 is a good introduction to a wide range of CS topics that have broad relevance in our society. No prerequisites. LILE

CSCI 0030. Introduction to Computation for the Humanities and Social Sciences.
Introduces students to the use of computation for solving problems in the social sciences and the humanities. We will investigate a series of real-world problems taken from the news, from books such as Freakonomics, and from current research. Topics covered include data gathering, analysis, and visualization; web-based interfaces; algorithms; and scripting. Enrollment limited to 20. Instructor permission required. LILE

Please go to https://docs.google.com/a/brown.edu/forms/d/1qiv9SC_KmB_yePSWbdYLclyJx_nCzz7xb3-J9U-W4/viewform to be added to the waitlist. You must use your Brown login to access the waitlist; requests to give access to non-Brown addresses will be ignored. LILE

CSCI 0040. Introduction to Scientific Computing and Problem Solving.
CSCI0040 provides an introduction to using computers to solve STEM (Science, Technology, Engineering and Mathematics) data analysis, visualization and simulation problems from engineering, neuroscience, biology, mathematics and finance. Students will access and analyze a number of "real world" data sets while becoming fluent MATLAB programmers. Other tools utilized may include Excel, Wolframalpha and Python.

By course end, students should be able to use MATLAB to solve a large variety of scientific data analysis, visualization and simulation problems. No prior programming experience is required (MATLAB is easy and fun to use).

CSCI 0080. A First Byte of Computer Science.
Introduces non-CS concentrators to the academic discipline of computer science, its thought processes, and its relevance to other fields and modern life more generally. The target audience is students who are interested in learning more about what computer science is about and the ideas it has to offer tomorrow's citizens and scholars. Topics include the basics of computation and programming, a taste of theoretical computer science and algorithms, and an introduction to codes and artificial intelligence. Although students will learn to read and understand short programs, the course will not teach or require advanced programming skills. LILE

CSCI 0081. TA Apprenticeship: Full Credit.
Being an undergraduate TA is a learning experience: one not only gets a deeper understanding of the course material, but gains management and social skills that are invaluable for one's future. Students taking this course must first be selected as an undergraduate TA for a Computer Science course, a course the student has taken and done well in. Students will work with the course's instructor on a variety of course-related topics, including preparation of material and development of assignments. Whether CSCI 0081 or its half-credit version (CSCI 0082) is taken is up to the professor of the course being TA’d. Instructor permission required.

CSCI 0082. TA Apprenticeship: Half Credit.
Being an undergraduate TA is a learning experience: one not only gets a deeper understanding of the course material, but gains management and social skills that are invaluable for one's future. Students taking this course must first be selected as an undergraduate TA for a Computer Science course, a course the student has taken and done well in. Students will work with the course's instructor on a variety of course-related topics, including preparation of material and development of assignments. Whether CSCI 0082 or its full-credit version (CSCI 0081) is taken is up to the professor of the course being TA'd. Instructor permission required.

CSCI 0100. Data Fluency for All.
This course is intended to introduce Brown students to computational techniques that data scientists use to tell stories. Data fluency encompasses both data literacy, the basics of statistics and machine learning, and data communication, which relies heavily on principles of design. Students will gain hands on experience using statistical tools such as ‘R’ to analyze real world data sets, and ‘ggplot’ to visualize them. Sample application domains include just about every field, since the only requirement is data, which there almost always are (e.g., the complete works of Shakespeare is a sample data set).

CSCI 0150. Introduction to Object-Oriented Programming and Computer Science.
Emphasizes object-oriented design and programming in Java, an effective modern technique for producing modular, reusable, internet-aware programs. Also introduces interactive computer graphics, user interface design and some fundamental data structures and algorithms. A sequence of successively more complex graphics programs, including Tetris, and culminating in a significant final project, helps provide a serious introduction to the field intended for both potential concentrators and those who may take only a single course. No prerequisites, no prior knowledge of programming required.

CSCI 0160. Introduction to Algorithms and Data Structures.
Introduces fundamental techniques for problem solving by computer that are relevant to most areas of computer science, both theoretical and applied. Algorithms and data structures for sorting, searching, graph problems, and geometric problems are covered. Programming assignments conform with the object-oriented methodology introduced in CSCI 0150. Prerequisite: CSCI 0150 or written permission.

CSCI 0170. Computer Science: An Integrated Introduction.
CSCI0170/0180 is an introductory sequence that helps students begin to develop the skills, knowledge, and confidence to solve computational problems elegantly, correctly, efficiently, and with ease. The sequence is unique in teaching both the functional and imperative programming paradigms—the first through the languages Scheme and ML in CSCI0170; the second through Java in CSCI0180. The sequence requires no previous programming experience. Indeed, few high school students are exposed to functional programming; hence even students with previous programming experience often find this sequence an invaluable part of their education.

Although students are taught to use programming languages as tools, the goal of CSCI0170/0180 is not merely to teach programming. On the contrary, the goal is to convey to students that computer science is much more than programming! All of the following fundamental computer science techniques are integrated into the course material: algorithms, data structures, analysis, problem solving, abstract reasoning, and collaboration. Concrete examples are drawn from different subareas of computer science: in 0170, from arbitrary-precision arithmetic, natural language processing, databases, and strategic games; in 0180, from discrete-event simulation, data compression, and client/server architectures.

CSCI 0180. Computer Science: An Integrated Introduction.
A continuation of CSCI 0170. Students learn to program in Java while continuing to develop their algorithmic and analytic skills. Emphasis is placed on object-oriented design, imperative programming, and the implementation and use of data structures. Examples are drawn from such areas as databases, strategy games, web programming, graphical user interfaces, route finding, and data compression. Lab work done with the assistance of TAs. Prerequisite: CSCI 0170.
CSCI 0190. Accelerated Introduction to Computer Science.
This is a one-semester introduction to computer science covering core data structures, algorithms, and analysis techniques similar to those of the two-course introductory sequences (CSCI 0150-0160 and CSCI 0170-0180), integrated with programming. Students interested in taking CSCI 0190 must register for CSCI 0170. Instructions on migrating to CSCI 0190 are in the FAQ on the CSCI 0190 web site, and will also be provided after CSCI 0170 is underway. There is no other mechanism for entry, so there is no need to request permission to enroll.

CSCI 0220. Introduction to Discrete Structures and Probability.
Seeks to place on solid foundations the most common structures of computer science, to illustrate proof techniques, to provide the background for an introductory course in computational theory, and to introduce basic concepts of probability theory. Introduces Boolean algebras, logic, set theory, elements of algebraic structures, graph theory, combinatorics, and probability. No prerequisites.

CSCI 0310. Introduction to Computer Systems.
Basic principles of computer organization. Begins with machine representation of data types and logic design, then explores architecture and operations of computer systems, including I/O, pipelining, and memory hierarchies. Uses assembly language as an intermediate abstraction to study introductory operating system and compiler concepts. Prerequisite: CSCI 0150 or CSCI 0180 or CSCI 0190.

CSCI 0320. Introduction to Software Engineering.
Techniques for designing, building, and maintaining large, scalable, and reusable systems. We will cover advanced programming techniques using Java and Javascript. Course assignments will familiarize students with software testing, relational databases, concurrency techniques such as threads, and software engineering tools like git, profilers, and debuggers. A major component of the course will be a group software project of your own design. Prerequisite: CSCI 0160, CSCI 0180 or CSCI 0190; CSCI 0220 is recommended.

CSCI 0330. Introduction to Computer Systems.
High-level computer architecture and systems programming. The course covers the organization of computer systems (in terms of storage units, caches, processors, and I/O controllers) and teaches students assembly-language programming and C-language programming. Extensive programming exercises introduce students to systems-level programming on Unix systems, as well as to multi-threaded programming with POSIX threads. Students will be introduced to the functions of operating systems. Prerequisite: CSCI 0150, 0180, or 0190.

CSCI 0510. Models of Computation.
The course introduces basic models of computation including languages, finite-state automata and Turing machines. Proves fundamental limits on computation (incomputability, the halting problem). Provides the tools to compare the hardness of computational problems (reductions). Introduces computational complexity classes (P, NP, PSPACE and others). Prerequisite: CSCI 0220 or 0450.

CSCI 0530. Directions: The Matrix in Computer Science.
Introduces vectors, matrices and their role in computer science in three components: (1) concepts, theorems, and proofs, (2) procedures and programs, (3) applications and working with data. Weekly lab sessions where students apply concepts to a real task with real data. Example labs: transformations in 2-d graphics, error-correcting codes, image compression using wavelets, synthesizing a new perspective in a photo, face recognition, news story categorization, cancer diagnosis using machine learning, matching airplanes to destinations, Google's PageRank method. Other topics as time allows. Skills in programming and prior exposure to reading and writing mathematical proofs required.

CSCI 0931. Introduction to Computation for the Humanities and Social Sciences.
Introduces students to the use of computation for solving problems in the social sciences and the humanities. We will investigate a series of real-world problems taken from the news, from books such as Freakonomics, and from current research. Topics covered include data gathering, analysis, and visualization; web-based interfaces; algorithms; and scripting. Enrollment limited to 20. Instructor permission required. LILE Please go to https://docs.google.com/a/brown.edu/forms/d/1qvl90a3KmB_yePSSSw6bYVclx_jx_nCzz7xBx3-J9U-W4/viewform to be added to the waitlist. You must use your Brown login to access the waitlist; requests to give access to non-Brown addresses will be ignored.

CSCI 1010. Theory of Computation.
The course introduces basic models of computation including languages, finite-state automata and Turing machines. Proves fundamental limits on computation (incomputability, the halting problem). Provides the tools to compare the hardness of computational problems (reductions). Introduces computational complexity classes (P, NP, PSPACE and others). Prerequisite: CSCI 0220 or 1450.

Fundamental concepts in 2D and 3D computer graphics, e.g., 2D raster graphics techniques, simple image processing, and user interface design. Focuses on geometric transformations, and 3D modeling, viewing and rendering. A sequence of assignments in C++ culminates in a simple geometric modeler and ray tracer. Prerequisite: CSCI 0160, CSCI 0180, or CSCI 0190. Some knowledge of basic linear algebra is helpful but not required. Strong object-oriented programming ability (e.g., in C++, Java or Python) is required.

CSCI 1234 is a half-credit course intended to be taken concurrently with CSCI 1230 and provides students with a greater understanding of the material by having them extend each of 1230's assignments to greater depth.

CSCI 1250. Introduction to Computer Animation.
Introduction to 3D computer animation production including story writing, production planning, modeling, shading, animation, lighting, and compositing. The first part of the course leads students through progressive exercises that build on each other to learn basic skills in 2D and 3D animation. At each step, student work is evaluated for expressiveness, technical correctness and aesthetic qualities. Students then work in groups creating a polished short animation. Emphasis on in-class critique of ongoing work which is essential to the cycle of visually evaluating work in progress, determining improvements, and implementing them for further evaluation. Please see course website for application procedure.

CSCI 1260. Compilers and Program Analysis.
Lexical analysis, syntactic analysis, semantic analysis, code generation, code optimization, translator writing systems. Prerequisites: CSCI 0220 and 0320; 0510 is recommended.

CSCI 1270. Database Management Systems.
Introduction to database structure, organization, languages, and implementation. Relational model, query languages, query processing, query optimization, normalization, file structures, concurrency control and recovery algorithms, and distributed databases. Coverage of modern applications such as the Web, but with emphasis on Database Management Systems internals. Prerequisites: CSCI 0160, CSCI 0180, or CSCI 0190. One of CSCI 0330 or CSCI 0320 is strongly recommended.

CSCI 1280. Intermediate 3D Computer Animation.
Continues work begun in CSCI 1250 with deeper exploration of technical and artistic aspects of 3D computer animation including more sophisticated shading and lighting methods and character modeling, rigging, animation, and dynamics. After a series of individual exercises, students pursue an independent topic and then, working alone or in pairs, create a polished demonstration. Emphasis is on in-class critique of ongoing work. Prerequisite: CSCI 1250. Students may contact the instructor in December for permission.
CSCI 1290. Computational Photography.
Describes the convergence of computer graphics and computer vision with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate, and interact with visual media. Topics covered: cameras, human visual perception, image processing and manipulation, image based lighting and rendering, high dynamic range, single view reconstruction, photo quality assessment, non photorealistic rendering, the use of Internet-scale data, and more. Students are encouraged to capture and process their own data. Prerequisites: previous programming experience, basic linear algebra, calculus, and probability; previous knowledge of computer graphics or computer vision. Strongly recommended: CSCI 1230, CSCI 1430, ENGN 1610.

CSCI 1300. User Interfaces and User Experience.
Topics include understanding when to use different interfaces, modeling and representing user interaction, principles of user experience design, eliciting requirements and feedback from users, methods for designing and prototyping interfaces, and user interface evaluation. Students interested in learning the process behind building a user interface and gaining hands-on experience designing a user interface should take this course. Programming experience is unnecessary. There will be weekly assignments, readings, design labs, and UI camp (new!) as a bootcamp for design tools. Registration is first-come-first-served up to 140 students; then apply for one of 60 additional spots by 8pm on September 9. Website: http://cs.brown.edu/courses/csci1300/

Covers the fundamental concepts, principles, and abstractions that underlie the design and engineering of computer systems. Topics include computer systems organization, modularity, virtualization, communications, atomicity, fault tolerance, security, and performance. Combined lectures and presentation and discussion of case studies. Several hands-on labs and written assignments, as well as a semester-long project that is incrementally worked on throughout the semester. Prerequisites: CSCI 0160, 0180, or 0190, or permission of the instructor.

This course covers all aspects of web application development, including the initial concept, user-centric design, development methodologies, front and back end development, databases, security, testing, load testing, accessibility, and deployment. There will be a substantial team project. The course is designed for students with a programming background (equiv CSCI 0320/CSCI 0330) who want to learn how to build web applications, and for students with a background in web design, including HTML and Javascript, who are interested in learning how to extend design techniques to incorporate the technologies used in modern web applications. Project teams will consist of students with both backgrounds.

CSCI 1340. Innovating Game Development.
What technologies will shape the next generation of video games? This project-centered course focuses on computational innovations for game development. Students examine innovative game technology through case studies of existing games and talks by industrial and academic game professionals. In teams, students propose and implement a project demonstrating a novel technology for gaming. Recommended: strong computational or engineering background.

Explores the visual and human-computer interaction design process for scientific applications in Brown’s immersive virtual reality Cave. Joint with RISD. Computer Science and design students learn how to work together effectively; study the process of design; learn about scientific problems; create designs; critique, evaluate, realize and iterate designs; and demonstrate final projects. Instructor permission required.

CSCI 1380. Distributed Computer Systems.
Explores the fundamental principles and practice underlying networked information systems, first we cover basic distributed computing mechanisms (e.g., naming, replication, security, etc.) and enabling middleware technologies. We then discuss how these mechanisms and technologies fit together to realize distributed databases and file systems, web-based and mobile information systems. Prerequisite: CSCI 0320 or CSCI 0330.

Practical approaches to designing intelligent systems. Topics include search and optimization, uncertainty, learning, and decision making. Application areas include natural language processing, machine vision, machine learning, and robotics. Prerequisites: CSCI 0160, CSCI 0180 or CSCI 0190; and either CSCI 0220 or one of CSCI 0450 or CSCI 1450.

We explore the theory and practice of statistical machine learning, focusing on computational methods for supervised and unsupervised data analysis. Specific topics include Bayesian and maximum likelihood parameter estimation, regularization and sparsity-promoting priors, kernel methods, the expectation maximization algorithm, and models for data with temporal or hierarchical structure. Applications to regression, categorization, clustering, and dimensionality reduction problems are illustrated by examples from vision, language, bioinformatics, and information retrieval. Prerequisites: CSCI 0040 or 0150 or 0180 or 0190; and CSCI 0450 or CSCI 1450 or APMA 1650 or MATH 1610; and CSCI 0530 or MATH 0520 or 0540; or instructor permission.

CSCI 1430. Computer Vision.
How can we program computers to understand the visual world? This course treats vision as inference from noisy and uncertain data and emphasizes probabilistic and statistical approaches. Topics may include perception of 3D scene structure from stereo, motion, and shading; segmentation and grouping; texture analysis; learning, object recognition; tracking and motion estimation. Strongly recommended: basic linear algebra, calculus, and probability.

Probability and statistics have become indispensable tools in computer science. Probabilistic methods and statistical reasoning play major roles in machine learning, cryptography, network security, communication protocols, web search engines, robotics, program verification, and more. This course introduces the basic concepts of probability and statistics, focusing on topics that are most useful in computer science applications. Topics include: modeling and solution in sample space, random variables, simple random processes and their probability distributions, Markov processes, limit theorems, and basic elements of Bayesian and frequentist statistical inference. Basic programming experience required for homework assignments. Pre-Requisites: Two semesters of college-level calculus, at the level of Math 0090 and Math 0100.

Introduction to computational linguistics (also known as natural-language processing) including the related mathematics and several programming projects. Particular topics include: language modeling (as used in e.g., speech recognition, machine translation), machine translation, part-of-speech labeling, syntactic parsing, and topic modeling. Mathematical techniques include basic probability, noisy channel models, the EM (Expectation-Maximization) algorithm, hidden Markov models, probabilistic context-free grammars, and the forward-backward algorithm. Not open to first year students.

CSCI 1480. Building Intelligent Robots.
How do robots function autonomously in dynamic, unpredictable environments? This course focuses on programming mobile robots, such as the iRobot Roomba, to perceive and act autonomously in real-world environments. The major paradigms for autonomous control and robot perception are examined and compared with robotic notions in science fiction. Prerequisite: CSCI 0150, CSCI 0170 or CSCI 0190. Recommended: CSCI 1410 or CSCI 1230.

CSCI 1490. Introduction to Combinatorial Optimization.
This course covers the algorithmic aspects of optimizing decisions in fully observable, non-changing environments. Students are introduced to state-of-the-art optimization methods such as linear programming, integer programming, local search, and constraint programming. Strongly recommended: CSCI 0160, CSCI 0180 or CSCI 0190; CSCI 0510; and CSCI 0530 or MATH 0520 or MATH 0540.
CSCI 1510. Introduction to Cryptography and Computer Security.
This course studies the tools for guaranteeing secure communication and computation in an adversarial setting. We develop notions of security and give provably secure constructions for such cryptographic objects as cryptosystems, signature schemes and pseudorandom generators. We also review the principles for secure system design. Prerequisites: CSCI 0220 and CSCI 0510.

Randomization and probabilistic techniques play an important role in modern computer science, with applications ranging from combinatorial optimization and machine learning to communications networks and secure protocols. This course introduces the most fundamental probabilistic techniques used in computer science applications, in particular in randomized algorithms, probabilistic analysis of algorithms and machine learning.
Prerequisite: Basic background in probability theory course such as CSCI 1450.

CSCI 1570. Design and Analysis of Algorithms.
A single algorithmic improvement can have a greater impact on our ability to solve a problem than ten years of incremental improvements in CPU speed. We study techniques for designing and analyzing algorithms. Typical problem areas addressed include hashing, searching, dynamic programming, graph algorithms, network flow, and optimization algorithms including linear programming. Prerequisites: CSCI 0160, CSCI 0180, or CSCI 0190, and one of CSCI 0220 or CSCI 1450.

CSCI 1580. Information Retrieval and Web Search.
Covers traditional material as well as recent advances in information retrieval (IR), the study of indexing, processing, and querying of textual data. The focus will be on newer techniques geared to hypertext documents available on the Web. Topics include efficient text indexing; Boolean and vector space retrieval models; evaluation and interface issues; Web crawling, link-based algorithms, and Web metadata; text/Web clustering, classification; text mining.

CSCI 1590. Introduction to Computational Complexity.
Introduction to serial and parallel models of computation; time and space complexity classes on these models; the circuit model of computation and its relation to serial and parallel time complexity; space-time tradeoffs on serial computers; area-time tradeoffs on the VLSI computational model; interactive and probabilistically checkable proofs; the definition of NP in terms of probabilistically checkable proofs; hardnes of approximations to solutions to NP-hard problems. Prerequisite: CSCI 0510.

CSCI 1600. Real-Time and Embedded Software.
Comprehensive introduction to the design and implementation of software for programmable embedded computing systems, those enclosed in devices such as cellular phones, game consoles, and car engines. Includes the overall embedded real-time software design and development processes, as well as aspects of embedded hardware and real-time, small-footprint operating systems. Major project component. Prerequisites: CSCI 0320 or 0330.

CSCI 1610. Building High-Performance Servers.
In depth study of modern server design. Considers architectures for building high-performance, robust, scalable, and secure network servers. We will consider all aspects of "mission-critical" servers. Topics include multithreaded and asynchronous programming techniques, database access, performance profiling, security, and redundancy. Teams will build significant projects. Prerequisite: CSCI 0320 or 0390. CSCI 1670 or 1690 is recommended.

CSCI 1620 is a half-credit laboratory course intended to be taken concurrently with CSCI 1660 and provides students with a deeper understanding of the material by doing additional assignments, which include extensions of the 1660's assignments. Instructor permission required.

This course teaches principles of computer security from an applied viewpoint and provides hands-on experience on security threats and countermeasures. Topics include code execution vulnerabilities (buffer overflow, sandboxing, mobile code), malware (trojans, viruses, and worms), access control (users, roles, policies), cryptosystems (hashing, signatures, certificates), network security (firewalls, TLS, intrusion detection, VPN), and human and social issues. Prerequisites: one of CSCI 0160 or CSCI 0180 or CSCI 0190; and CSCI 0330.

Covers not just the principles of operating systems but the intricacies of how they work. Topics include multithreaded programming, managing threads and interrupts, managing storage, processor scheduling, operating-system structure, virtualization, security, and the design of file systems (both local and distributed). Extensive examples are taken from actual systems, including Linux and Windows. Students are expected to complete both problem sets and programming assignments (in C). Prerequisite: CSCI 0330.

CSCI 1680. Computer Networks.
Covers the technologies supporting the Internet, from Ethernet and WiFi through the routing protocols that govern the flow of traffic and the web technologies that are generating most of it. A major concern is understanding the protocols used on the Internet: what the issues are, how they work, their shortcomings, and what improvements are on the horizon. Prerequisite: CSCI 0330 or consent of instructor.

CSCI 1729. Programming Languages Lab.
Half-credit course intended to be taken concurrently with CSCI 1730. Students individually implement a full programming language chosen by the course. Reinforces the concepts learned in CSCI 1730 and provides valuable experience in implementing programming languages. Corequisite: CSCI 1730.

CSCI 1730. Design and Implementation of Programming Languages.
Explores the principles of modern programming languages by implementation. Examines linguistic features, especially control operators such as first-class functions, exceptions, and continuations. Studies data and their types, including polymorphism, type inference, and type soundness. Examines compiler and run-time system topics: continuation-passing style and garbage collection. Prerequisite: CSCI 0160, CSCI 0180 or CSCI 0190. Preferred: CSCI 0220, either CSCI 0320 or CSCI 0330, and CSCI 0510.

CSCI 1760. Multiprocessor Synchronization.
This course examines the theory and practice of multiprocessor synchronization. Subjects covered include multiprocessor architecture, mutual exclusion, wait-free and lock-free synchronization, spin locks, monitors, load balancing, concurrent data structures, and transactional synchronization. Prerequisites: CSCI 0330.

CSCI 1780. Parallel and Distributed Programming.
Covers the practical aspects involved in designing, writing, tuning, and debugging software designed to run on parallel and distributed systems. Topics might include client-server computation, threads, networks of workstations, message passing, shared memory, partitioning strategies, load balancing, algorithms, remote procedure call, and synchronization techniques. Prerequisites: CSCI 0220 and either 0320 or 0360; 0510 recommended.
CSCI 1800. Cybersecurity and International Relations.
The global Internet shortens distances, makes businesses more efficient and facilitates greater social interaction. At the same time, it exposes vital national resources to exploitation and makes it easier for the international criminal element to prey on innocent Internet users. Cybersecurity is concerned with making the Internet a more secure and trustworthy environment. In this course we study this topic from the technological and policy points of view. The goal is to facilitate communication across the divide that normally characterizes the technological and policy communities. LILE WRIT

CSCI 1810. Computational Molecular Biology
High-throughput experimental approaches now allow molecular biologists to make large-scale measurements of DNA, RNA, and protein, the three fundamental molecules of the cell. The resulting datasets are often too large for manual analysis and demand computational techniques. This course introduces algorithms for sequence comparison and alignment; molecular evolution and phylogenetics; DNA/RNA sequencing and assembly; recognition of genes and regulatory elements; and RNA and protein structure. The course demonstrates how to model biological problems in terms of computer science.
Prerequisites: CSCI 0160, CSCI 0180 or CSCI 0190, or consent of instructor.

The course is devoted to computational and statistical methods as well as software tools for DNA, RNA, and protein sequence analysis. The focus is on understanding the algorithmic and mathematical foundations of the methods, the design of associated genomics software tools, as well as on their applications. Topics include: sequence alignment, genome assembly, gene prediction, regulatory genomics, and SNP's variation. The course is open to computer and mathematical sciences students as well as biological and medical students.

CSCI 1900. csciStartup.
In csciStartup, you will incorporate and run a startup. Apply as a team to be part of a prototype class to remove the mystery from starting a company and to focus entirely on a product you're passionate about. Teams will incorporate, build a product for real customers, advertise their product, and improve it week after week. We'll spend half our class meetings with individual attention to each group's progress and how to improve your offerings. Assignments will be designed to apply to any company, with enough flexibility to ensure you're always working on things that make sense for your business.

CSCI 1950A. Computational Modeling and Algorithmic Thinking.
In this course you will learn how to apply tools from statistics and computer science to build computational models of physical and biological systems. Example applications include modeling and then simulating the behavior of a collection of genes, the spread of disease in a population, a single neuron in isolation or the complex of neurons comprising the primate visual cortex.

CSCI 1950B. Computational Topology and Discrete Geometry.
This course will investigate (through a mixture od lectures and student presentations of recent papers) topics in computational topology, including Morse theory and discrete differential geometry. Other possible topics are knot polynomials, simplicial homology, and geometric probability theory. Some mathematical sophistication and programming skills required. No prerequisites.

CSCI 1950C. Advanced Programming for Digital Art & Literature.
This workshop will explore advanced tools and techniques for the creation of innovative and expressive works of digital art. Lectures will address the application of best practices from the software design community to the context of artistic practice. In the first section of the course, students will exercise their aesthetic, conceptual, and technical skills on a set of ‘mini-projects’ exploring the analysis, generation and presentation of computationally-augmented literary texts. Assignments will include web-text mining, feature extraction, grammars, generative algorithms, and statistical techniques. During the second half of the course, students will focus on a larger work of their own design, participating in regular critiques throughout the development cycle. Though assignments will focus on digital literature, a wide range of artistic media will be explored, including sound, image, video, 3D and installation. Collaboration is encouraged. Instructor permission required. Enrollment limited to 18.

We will study various algorithmic problems that arise in the study of topological phenomena, such as winding number, turning number, knot polynomials, topology of covering spaces (especially Riemann surfaces), and discrete Morse theory. The mathematical topics will be briefly introduced before we move to computations, but some a priori mathematical sophistication will make the course more valuable to the student. Prerequisite: CSCI 0160, 0180, or 0190.

CSCI 1950J. Introduction to Computational Geometry.
Geometric algorithms in two and three dimensions. Algorithmic and geometric fundamentals. Point location, convex hulls, proximity (Voronoi diagrams, Delaunay triangulations), intersections, the geometry of rectangles. Prerequisites: CSCI 0160, 0170, or 0190; and CSCI 0220.

CSCI 1950K. Innovating Game Development.
A project-centered course focused on technological, paradigm, and design innovations for game development. As teams, students will propose and implement a project demonstrating a novel technology for gaming. Examines the current state and future of game development through a seminar of speakers active in game development and research. A strong computer science or engineering background is recommended.

CSCI 1950M. Advanced Practical Combinatorial Algorithms.
We review recent as well as well-established advanced techniques in combinatorial optimization and constraint satisfaction. Students will study and individually present research papers and work on challenging software projects in small teams. Prerequisites: CSCI 0160, 0180, or 0190; and CSCI 0510; and CSCI 1490 or 2580, or instructor permission.

CSCI 1950N. 2D Game Engines.
2D Game Engines covers core techniques used in the development of the software that drives computer games and other interactive software. Projects involve building different varieties of 2D game engines as well as games that require use of the features implemented in the engines. Topics include high-level engine design, vector and raster graphics, animation, collision detection, physics, content management, and game AI. Prerequisite: CSCI 0160, 0180, or 0190.

CSCI 1950Q. Programming for the Humanities and Social Sciences.
A principled introduction to programming for students whose primary interest lies in the humanities and social sciences. Students will propose a substantial project related to their concentrations. They will learn sufficient programming skills to carry out the project, presenting it at the end of the course. The course is a continuation of CSCI 0931, "Introduction to Computation for the Humanities and Social Sciences." Prerequisite: CSCI 0931. Instructor permission required.

CSCI 1950R. Compiler Practice.
This class covers the practice of compiler writing, including lexical analysis, parsing, semantic analysis, code generation, and code optimization. Students design and implement a full compiler modularly for a modern functional language using a modern intermediate representation and modular backend. Instructor permission required.
CSCI 1950T. Advanced Animation Production.
Students will apply knowledge and skills gained in previous animation 
courses to produce a high quality short animated film as a group. 
Production will follow the industry standard pipeline that includes 
modeling, texturing, lighting, animating, rendering, and post production. 
Interested students will perform preproduction story and concept design 
prior to beginning of course. Prerequisite: CSCI 1250. Enrollment limited to 
15. Instructor permission required.

CSCI 1950U. Topics in 3D Game Engine Development.
Covers core techniques in 3D game development with an emphasis on 
engine architecture. Students independently develop their own engines 
using C++, OpenGL, and the Qt framework, then work in groups to 
create a polished game. Topics include: spatial subdivision, player 
representation, collision detection and response, game networking, GPUs, 
and OpenGL. Prerequisites: CSCI 1230 and one of CSCI 0320 or CSCI 
1950N. Enrollment limited to 25.

CSCI 1950X. Software Foundations.
Software Foundations will be a project-based course focusing on the 
challenges and techniques involved in proving non-trivial properties 
about real-world systems. We will base our exploration around formal 
development in a proof environment. Roughly half of the course will be a 
guided tutorial of proof techniques using one or more theorem provers; in 
the remainder, students will apply this knowledge to existing systems. No 
prior experience with theorem provers or proof assistants is necessary, 
but familiarity with and aptitude for functional programming will be a huge 
bonus. Prerequisite: CSCI 1730 or equivalent; mathematical maturity.

The course will focus on proving properties about systems and programs. 
We will study the distinction between programs and specifications, and 
check for whether the former obey the latter. We will work with tools that 
have extensive automation such as model constructors, model checkers, 
and proof assistants. Problems and projects will apply to real-world 
systems. Prerequisite: CSCI 0160, CSCI 0180, or CSCI 0190. Preferred 
but not required: CSCI 0220 and CSCI 0510, or instructor's permission.

CSCI 1950Z. Computational Methods for Biology.
This course will introduce algorithms from machine learning and 
combinatorial optimization with a focus on their application to biological 
data. Topics will include problems in phylogenetic inference, population 
genetics, and biological interaction networks.

CSCI 1951A. Data Science.
Mastering big data requires skills spanning a variety of disciplines: 
distributed systems over statistics, machine learning, and a deep 
understanding of a complex ecosystem of tools and platforms. Data 
Science refers to the intersection of these skills and how to transform 
data into actionable knowledge. This course provides an overview of 
techniques and tools involved and how they work together: SQL and 
NoSQL solutions for massive data management, basic algorithms for 
data mining and machine learning, information retrieval techniques, and 
visualization methods. 
Prerequisites: CSCI 0160, CSCI 0180, or CSCI 0190. One of CSCI 0330 
or CSCI 0320 strongly recommended.

CSCI 1951B. Virtual Citizens or Subjects? The Global Battle Over 
Governing Your Internet.
The Internet began as a U.S. government research project, progressed 
to an open network run by free-spirited geeks, and transitioned in the 
late 1990’s to a unique governance model in which nations, corporations, 
and civil society were supposed to all have a voice. Where are the real 
decisions being made? Who is making them? How can you and citizens 
of other nations influence these decisions? The global battle to run the 
Internet, brewing for years, has broken wide open with revelations of 
American spying on a massive scale.

CSCI 1951C. Designing Humanity Centered Robots.
Offered by Brown’s Computer Science department under the auspices of 
the Humanity Centered Robotics Initiative. It is focused on the iterative 
design process and how it can be used to develop robots for solving 
tasks that help people. It will expose students to a suite of fabrication 
and prototyping technologies sufficient for creating a functioning robotic 
system. 
https://www.youtube.com/watch?v=Dvwis_i_B78
The course has two tracks, one intended for CS concentrators, and one 
tended for non-concentrators with previous design experience. The non-
concentrator track cannot be used toward fulfilling a Computer Science 
concentration requirement.

CSCI 1951F. Computers, Freedom and Privacy: Current Topics in Law 
and Policy.
Who is the Big Brother that we most fear? Is it the NSA -- or is it Google 
and Facebook? Rapidly changing social mores and the growing problem 
of cybersecurity have all contributed to a sense that privacy is dead. While 
the laws that protect privacy and civil liberties are stuck in the analog age, 
the capabilities for mass digital surveillance continue to advance rapidly. 
This course will put current controversies in historical context and explore 
possible reforms. WRIT

CSCI 1951G. Optimization Methods in Finance.
Optimization plays an important role in financial decisions. Many 
computational finance problems ranging from asset allocation to risk 
management, from option pricing to model calibration can be solved 
efficiently using modern optimization techniques. This course discusses 
several classes of optimization problems (including linear, quadratic, 
integer, dynamic, stochastic, conic, and robust programming) encountered 
in financial models. For each problem class, after introducing the 
relevant theory and efficient solution methods, we discuss problems of 
mathematical finance that can be modeled within this problem class. 
Prerequisites: CSCI 1450 or APMA 1650, and CSCI 1570.

Independent study in various branches of Computer Science. Section 
numbers vary by instructor. Please check Banner for the correct section 
number and CRN to use when registering for this course.

CSCI 1971. Independent Study in 2D Game Engines.
2D Game Engines covers core techniques used in the development 2D 
game engines. Projects involve building different varieties of 2D game 
games as well as games that require use of the features implemented 
in the engines. Topics include high-level engine design, vector and raster 
graphics, animation, collision detection, physics, content management, 
and game AI. Prerequisite: CSCI 0160, 0180, or 0190.
CSCI 1972. Topics in 3D Game Engine Development.
Covers core techniques in 3D game development with an emphasis on engine architecture. Students independently develop their own engines using C++, OpenGL, and the Qt framework, then work in groups to create a polished game. Topics include: spatial subdivision, player representation, collision detection and response, game networking, GPUs, and OpenGL. Prerequisite: CSCI 1230 and one of the following: CSCI 0320, CSCI 0330, CSCI 1950N, or CSCI 1971.

Important current topics in computer graphics. Course includes reading and discussing current research papers, multiple assignments and preliminary projects in which students implement recent papers, and a demanding final integrative project done in small groups. Prerequisite: Instructor’s permission or both CSCI 0320 AND CSCI 1230.

CSCI 2270. Topics in Database Management.
In-depth treatment of advanced issues in database management systems. Topics vary from year to year and may include distributed databases, mobile data management, data stream processing and web-based data management. Prerequisite: CSCI 1270.

CSCI 2310. Human Factors and User Interface Design.
Covers current research issues involving the implementation, evaluation and design of user interfaces, while also providing a basic background in the fundamentals of user interface evaluation, programming, tools, and techniques. A possible topic is programming and designing device-independent interfaces. Previous topics have included the development of pervasive internet-based interfaces and software visualization. Prerequisite: Consent of instructor.

CSCI 2330. Programming Environments.
Programming tools; control and data integration; software understanding and debugging; environments for parallel and distributed programming; reverse engineering; configuration management and version control and debugging. Emphasis on current research areas. Prerequisite: Consent of instructor.

CSCI 2340. Software Engineering.
Topics in the design, specification, construction and validation of programs. Focus will be on tools to support each of these stages. Course will pay special attention to the concerns raised by the properties of modern software systems including distribution, security, component-based decomposition and implicit control. Prerequisite: CSCI 0320 or CSCI 0330.

CSCI 2370. Interdisciplinary Scientific Visualization.
How to do research on using computer graphics, visualization, and interaction applied to scientific problems. Working in small multidisciplinary groups, students identify scientific problems, propose solutions involving computational modeling and visualization, design and implement the solutions, apply them to the problems, and evaluate their success. For 2014, immersive CAVE applications will be a focus, but other interaction or visualization projects are possible. Prerequisites: all: programming experience; CS students: graphics experience; others: problem ideas. Instructor permission required.

CSCI 2410. Statistical Models in Natural-Language Understanding.
Various topics in computer understanding of natural language, primarily from a statistical point of view. Topics include: hidden Markov models, word-tagging models, probabilistic context-free grammars, syntactic disambiguation, semantic word clustering, word-sense disambiguation, machine translation and lexical semantics. Prerequisite: CSCI 1410.

CSCI 2420. Probabilistic Graphical Models.
Probabilistic graphical models provide a flexible framework for modeling large, complex, heterogeneous collections of random variables. After a brief introduction to their representational power, we provide a comprehensive survey of state-of-the-art methods for statistical learning and inference in graphical models. We discuss a range of efficient algorithms for approximate inference, including optimization-based variational methods, and simulation-based Monte Carlo methods. Several approaches to learning from data are explored, including conditional models for discriminative learning, and Bayesian methods for controlling model complexity. Programming experience required for homeworks and projects, which integrate mathematical derivations with algorithm implementations. PREREQUISITES: CSCI1420 or APMA1690.

CSCI 2430. Topics in Machine Learning.
Machine learning from the artificial intelligence perspective, with emphasis on empirical validation of learning algorithms. Different learning problems are considered, including concept learning, clustering, speed-up learning, and behavior learning. For each problem a variety of solutions are investigated, including those from symbolic AI, neural and genetic algorithms, and standard statistical methods. Prerequisite: CSCI 1410 or familiarity with basic logic and probability theory.

CSCI 2440. Game-Theoretic Artificial Intelligence.
This course surveys recent developments in an emerging area known as game-theoretic artificial intelligence (AI), which incorporates fundamental principles of game theory into AI. Research in this area is motivated by game-theoretic applications, such as auction design and voting, as well as AI application areas, such as multiagent systems. Students will conduct theoretical, empirical, and experimental investigations, asking fundamental questions such as: can the behavior of computational learning agents converge to game-theoretic equilibria? Prerequisite: Consent of instructor.

CSCI 2450. Exchange Scholar Program.

CSCI 2500A. Advanced Algorithms.
Typically, an algorithm solves one problem, whereas a well-designed data structure can help implement algorithms for a wide variety of problems. We will study the design, analysis and implementation of advanced data structures. Focus is on data structures that are fast, both theoretically and empirically. Prerequisite: CSCI 1570 or the equivalent.

CSCI 2500B. Optimization Algorithms for Planar Graphs.
Planar graphs arise in applications such as road map navigation and logistics, graph drawing and image processing. We will study graph algorithms and data structures that exploit planarity. Our focus will be on recent research results in optimization. Prerequisite: CSCI 1570 or the equivalent.

CSCI 2510. Approximation Algorithms.
Approximation Algorithms deal with NP-hard combinatorial optimization problems by efficiently constructing a suboptimal solution with some specified quality guarantees. We study techniques such as linear programming and semidefinite programming relaxations, and apply them to problems such as facility location, scheduling, bin packing, maximum satifiability or vertex cover. Prerequisite - one of the following: CSCI 1510, 1550, 1810, 1950J, 1950L, any graduate-level course on algorithms (including 2500A, 2500B, 2580).

CSCI 2520. Computational Geometry.
Algorithms and data structures for fundamental geometric problems in two and three dimensions. Topics include point location, range searching, convex hull, intersection, Voronoi diagrams, and graph drawing. Applications to computer graphics, circuit layout, information visualization, and computer-aided design are also discussed. Prerequisite: CSCI 1570 or instructor permission.

CSCI 2530. Design and Analysis of Communication Networks.
A theory seminar focusing on algorithmic and combinatorial issues related to the design and analysis of communication networks for parallel and distributed systems. Topics include packet routing, circuit switching, distributed shared memory, fault tolerance, and more. Prerequisites: CSCI 1550, 1570, or equivalent.
CSCI 2950N. Special Topics in Autonomous Robotics.
No description available.
CSCI 2950O. Topics in Brain-Computer Interfaces.
Introduces the mathematical and computational foundations of brain-computer interfaces. Statistical learning, Bayesian inference, dimensionality reduction, information theory, and other topics are presented in the context of brain interfaces based on neural implants and EEG recordings. Prerequisites: Basic knowledge of probability, statistics and linear algebra (e.g., CSCI 1550, APMA 1650, APMA 1690, or APMA 2640). Enrollment limited to 20 students.
CSCI 2950P. Special Topics in Machine Learning.
This seminar course explores current research topics in statistical machine learning. Focus varies by year, and may include Bayesian nonparametrics; models for spatial, temporal, or structured data; and variational or Monte Carlo approximations. Course meetings combine lectures with presentation and discussion of classical and contemporary research papers. Students will apply some this material to a project, ideally drawn from their own research interests.
CSCI 2950Q. Topics in Computer Vision.
This course will cover current topics in computer vision by focusing on a single real problem in computer vision. Recent courses have focused on forensic video analysis of an unsolved murder and three-dimensional object recognition for a mobile robot. Readings from the literature are integrated with group projects to solve problems beyond the state of the art. Strong mathematical skills (probability, linear algebra, calculus) and previous exposure to computer vision (e.g. CSCI 1430) are essential.
CSCI 2950R. Special Topics in Advanced Algorithms.
We will study an advanced topic in the design and analysis of algorithms. Prerequisite: CSCI 1570 or the equivalent.
CSCI 2950S. Advanced Practical Combinatorial Algorithms.
We review recent as well as well-established advanced techniques in combinatorial optimization and constraint satisfaction. Students will study and individually present research papers and work on challenging software projects in small teams. Prerequisites: CSCI 0160, 0180, or 0190; and CSCI 0510; and CSCI 1490 or 2580, or instructor permission.
CSCI 2950T. Topics in Distributed Databases and Systems.
This course explores data and resource management issues that arise in the design, implementation, and deployment of distributed computing systems by covering the state of the art in research and industry. Typical topics include cloud computing and sensor networks. Strongly recommended: CSCI 0320, CSCI 1270, or CSCI 1951A.
CSCI 2950U. Special Topics on Networking and Distributed Systems.
Explores current research topics in networking, distributed and operating systems. Specific topics may include wireless and sensor networking, Internet-scale distributed systems, cloud computing, as well as the core problems, concepts, and techniques underlying these systems. The course has two components: reading and discussion of current and classical research papers, and a research project related to the topic but ideally drawn from students' own research interests. This is a graduate-level course, undergraduates can join with the consent of the instructor.
CSCI 2950V. Topics in Applied Cryptography.
This course surveys recent developments in applied cryptography. Research in this field is motivated by privacy and security issues that arise in practice from areas like cloud computing, databases, surveillance and finance. Topics will vary each year. Pre Requisites: CSCI 1660 required, CSCI 1510 strongly recommended.
CSCI 2950W. Online Algorithms.
Decisions must often be made before the entire data is available. Online algorithms solve problems in which commitments must be made as the data is arriving. Choosing which items to evict from a cache before knowing future requests, which advertisers to consider for displaying ads alongside the result of a search, or which most representative data to store when computing statistics about a huge stream of information. We will discuss the worst-case model, which hinges against the worst possible future data, and some stochastic and game-theoretic models.
CSCI 2950X. Topics in Programming Languages and Systems.
Examines contemporary research topics in software construction from the perspectives of programming languages, software engineering and computer-aided verification. The primary goals are to understand which theory applies to which problems and to convert that theory into tools. Topics include security, modularity, and new paradigms in software composition. Prerequisite: CSCI 1730 or written permission of the instructor.
CSCI 2950Y. Theorem Proving.
This course explores computer-assisted theorem proving with the Coq Proof Assistant. The course will teach students to formally specify software and model mathematical theories. We will then study techniques for mechanically proving theorems about these Coq. Prerequisites: CSCI 1730 or CSCI 0170 and permission of the instructor.
CSCI 2950Z. Robot Learning and Autonomy.
This seminar course will cover current research topics related to perceiving and acting in the real world. These topics will be pursued through independent reading, class discussion, and project implementations. Papers covered will be drawn from robotics, computer vision, animation, machine learning, and neuroscience. Special emphasis will be given to developing autonomous control from human performance. No prerequisites.
CSCI 2951A. Robots for Education.
This course will explore the potential for robotics to engage future generations of scientists and engineers, with a particular focus on broadening participation in computing across society. Academic papers describing existing models, systems, courses, and evaluation for teaching robotics at undergraduate and secondary levels will be covered through students presentations. A group project will be conducted to find viable and accessible "off-the-shelf" technology solutions suited to teaching robotics without requiring a technical background. Instructor permission required.
CSCI 2951B. Data-Driven Vision and Graphics.
Investigates current research topics in image-based graphics and vision. We will examine data sources, features, and algorithms for understanding and manipulating visual data. We will pay special attention to methods that use crowd-sourcing or Internet-derived data. Vision topics such as scene understanding and object detection will be linked to graphics applications such as photo editing and image-based rendering. These topics will be pursued through independent reading, class discussion and presentations, and a semester long research project. Strong mathematical skills and previous imaging (vision or computational photography) courses are essential.
CSCI 2951C. Autonomous Agents and Computational Market Design.
An important area of research in artificial intelligence is how to effectively automate decision making in time-critical, information-rich environments. Electronic markets are a prime example of such environments. In this course students will create their own simulated electronic market as well as autonomous agents that trade in their market simulation. Application domains will include supply chain management, the Dutch flower auctions, and ad auctions, such as those run by Google and Facebook. Enrollment limited to 40 graduate students.
CSCI 2951E. Topics in Computer Systems Security.
This course explores advanced topics and highlights current research in computer security from a systems perspective. Topics include vulnerabilities and defenses for automotive, computing, medical, and industrial control devices, intrusion detection, botnets, secure network protocols, web spam, tracking of web users, JavaScript sandboxing, attacks and defenses for web applications, and security and privacy issues in cloud computing. Research papers and industry reports will be presented and discussed. Also, hands-on experiments and system demonstrations will be performed. CSCI 1660 or equivalent background is essential. Enrollment limited to 12. Instructor permission required.
CSCI 2951F. Learning and Sequential Decision Making.
