During the 20th century, papyrology has become the most important source for new literary texts, with three substantial discoveries in the last decade (Simonides, Empedokles, Poseidippos). Provides an introduction to the basic techniques of this comparatively young discipline: material evidence, decipherment, dating, interpretation, restoration, editing, etc. Focus on literary texts, but documentary papyri will also be examined.

Grek 1930D. Rapid Reading in Plutarch.
No description available.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Grek 2000A. Aristophanes.
No description available.

Grek 2000B. Greek Epigraphy.
An introduction to the study of Greek epigraphy. We shall examine treaties, laws, decrees and other documents, mostly from Athens but also from other parts of the Greek world. Practical issues (e.g., the actual reading of letters and the identification and dating of documents) and analytic questions (e.g., regarding historical context) will be explored.

Rapid reading of selections from Plutarch's Lives and from from his Moralia.

No description available.

Grek 2020A. Sophocles.
No description available.

Grek 2020B. Herodotus.
Books 3 to 5.

Grek 2020C. Pindar.
No description available.

Grek 2020D. Thucydides.
Books I and VIII: language, mode of thought, and methodology; how the work was composed, historical problems; supplementary sources: epigraphical, literary.

Grek 2050A. Demosthenes.
No description available.

Grek 2050B. Documents: Religious Cults and Sacred Laws.
In the first half of the course we shall read documents pertaining to the Eleusinian mysteries in Athens, including (a) two orations, Andocides 1 "On the Mysteries," and Lysias 6 "Against Andocides for impiety;" (b) a variety of inscriptions published by Clinton (in Eleusis, The Inscriptions on Stone: Documents of the Sanctuary of the Two Goddesses and Public Documents of the Deme), and (c) the grand inscription of Adnania (ca. 92 B.C., not Eleusinian but related). In the second half of the course, we shall read inscribed sacred laws from Greece and Asia Minor, from the fifth to the first century B.C.

Grek 2070A. Lucian.
The funniest and most impressive writer of Greek prose during the imperial period (not to mention the alleged inventor of science fiction), it is no wonder that Lucian was a favorite author from the Renaissance to the early 20th century. But he was also regularly reviled -- Martin Luther once thundered at Erasmus, "you ooze Lucian from every pore" (it wasn't a compliment). This class will focus on his philosophical satires and contextualize those satires within the philosophies of the second century CE. Along with primary and secondary readings -- not only from Lucian but also authors like Galen and Sextus Empiricus -- we will discuss the texts, the times, and the nature of Lucian's philosophical skepticism.

Grek 2070B. Seminar: Hellenistic Poetry.
In this seminar we will read in their original Greek version extended portions of three major Alexandrian poets' works: Apollonius of Rhodes, Callimachus, and Theocritus, supplemented by readings in Hellenistic epigrams and other texts as well as secondary literature. We will pay attention to the social, political and literary environment of third century Alexandria, where --under very special conditions-- these works were produced and received for the first time. We shall investigate the nature of the Hellenistic aesthetic, the relation of Hellenistic to archaic and classical literature, and the way Hellenistic poetry is a reflection of its time and place.

Grek 2100A. Herodotus.
No description available.

Grek 2100B. Making Memory: Simonides, Herodotus, and Greek Identity.
No description available.

Grek 2100C. Drama and the Polis.
No description available.

Grek 2100D. Ancient Literary Criticism.
Survey of ancient literary theory, with an emphasis on Greek sources. Topics to be covered include the representation of poets, the nature of inspiration, the elements of literary style, the moral and ethical uses (and dangers) of poetry, mimesis, the relationship between poetry and citizenship, literature and education, etc. We will read, in Greek, excerpts from (e.g.) Aristophanes' Frogs, Plato's writings on poetry, Aristotle's Poetics, Plutarch's How a young man should study poetry, and pseudo-Lucianus' On the Sublime. Students will be evaluated on the basis of in-class presentations, two translation exams, and a seminar paper.
GREK 2110A. Homer.
A close reading of the entire Odyssey, exploring all aspects of the poem, from its oral composition, language, and style to its background myths and social dimensions. Homer's text will be read in Greek, and extensive secondary sources in several languages will be used.

GREK 2110B. Literary Criticism in Greek Scholia.
No description available.

GREK 2110C. Plato's Republic and its Neoplatonic Reception.
A close reading of Plato's Republic together with Proclus' fifth-century CE commentary. The main focus is Plato's discussion of poetry and mimesis (books 2, 3, and 10), his appropriation of myth and dramatic technique (books 7 and 10), and Proclus' attempt at reconciling Plato with Homer, namely Plato's anti-mimetic stance with his overt theatrics and myth-making. Brings together classical writing with its post-classical readings, broaches such topics as the notion of mimesis and the reception of Plato as well as Homer in Antiquity, and introduces students to late antique allegory and what has been termed the birth of the symbol.

GREK 2110D. Greek Epigraphy.
An introduction to the study of Greek epigraphy. We shall examine treaties, laws, decrees and other documents, mostly from Athens but also from other parts of the Greek world. Practical issues (e.g., the actual reading of letters and the identification and dating of documents) and analytic questions (e.g., regarding historical context) will be explored.

GREK 2110E. Aeschines and Demosthenes, "Crowning Speeches".

GREK 2110F. Greek Palaeography and Premodern Book Cultures.
Introduction to pre-modern Greek book culture and the study of Greek literary scripts from classical antiquity to the Renaissance. Students become acquainted with the history of books, the context and agents of their production, and the transmission of Greek (classical as well as post-classical) literature. Training is provided in reading and dating different scripts and in editing ancient texts.

GREK 2110G. Political Trials: Treason and Accountability in Fourth Century Athens.
In studying trials of treason and accountability, we shall examine the democratic ideologies and political factionalism that fueled the trials and also the legal armature that rendered them possible. Our sources for the most part are speeches written by the Attic orators (Demosthenes, Aeschines, Lycourgos, Deinarchos, and Hyppereides) and include impeachment trials for treason by commission of adultery, for having the wrong dream in the Amphaireon, for leaving Athens in wartime; an accountability trial for treasonous conduct while serving on an embassy; and trials (including the prosecution of Demosthenes) for accepting bribes from Alexander's agent, Harpalos.

GREK 2120A. Graduate Seminar: Greek Autobiography: From Plato to the Middle Ages.
An exploration of autobiographical narratives written in Greek from classical to Byzantine times, focusing on the relation between changing notions of the self and the development of autobiography as a literary genre. Authors examined: Plato, Demosthenes, Nicolaus of Damascus, Marcus Aurelius, Aelius Aristides, Lucian, Gregory of Nazianzus, Libanius, Synesius, Michael Psellios, Michael Attaleiates, and Anna Comnena.

GREK 2150. Plato's Theaetetus.
See PHIL 2150I for course description.

GREK 2970. Preliminary Exam Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

GREK 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

GREK 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

Latin
LATN 0100. Essentials of the Latin Language.
An intensive two-semester approach to Latin with special emphasis on developing facility in the rapid reading of Latin literature. No previous knowledge of Latin is required.

LATN 0110. Intensive Introduction to Latin.
This course offers a rapid introduction to the Latin language and grammar. As a one-semester introduction to material often covered in two semesters, this course carries two credit hours instead on one. The workload for this course is correspondingly heavy: students may expect an average of ten hours of homework—including memorization, practice, and preparation of vocabulary and grammar—per week. There are no prerequisites for this course.

LATN 0200. Essentials of the Latin Language.
Second course in an intensive two-semester approach to Latin. Special emphasis on developing facility in the rapid reading of Latin literature. No previous knowledge of Latin is required prior to taking this two course sequence.

LATN 0300. Introduction to Latin Literature.
Introduction to Latin literature through intensive reading of major authors in prose and poetry with careful attention to grammar and style. Prerequisite: LATN 0100, 0200 or 0110 (or equivalent).

LATN 0310. Grammar Review and Composition.
Half-credit course with attention to student's individual needs.

LATN 0400. Introduction to Latin Literature.
Introduction to Latin literature through intensive reading of major authors in prose and poetry with careful attention to grammar and style. Prerequisite: LATN 0100, 0200 or 0110 (or equivalent).

LATN 0510A. Latin Mystical Writing.
We read variously in Latin those authors (Cicero, Horace, Augustine, Anselm, Hildegard) who articulate the best traditions of mysticism in the West: a longing for transcendence, alienation, unity through participation with divinity and culture. Prerequisite: A knowledge of Latin at the intermediate level (one or two years).

LATN 0510B. Medieval Latin Lyric.
Open to students with two years of Latin.

LATN 1010. Latin Lyric: Catullus and Horace.
Introduction to Latin lyric poetry through the poems of its finest representatives, Catullus and Horace. Emphasis placed on careful reading of the poems, which will be considered individually, as parts of a collection, and as representatives of the poetry we call lyric. The primary objective of the course is to improve students' ability to read Latin lyric poetry fluently, in terms of meter, grammar, syntax, and literary-critical appreciation. We will also read and discuss a selection of seminal articles on ancient lyric, and students will get experience (and guidance) writing scholarly criticism.

LATN 1020A. De Oratore.
No description available.

LATN 1020B. Cicero, Verrines.

LATN 1020C. Cicero's Republic.
As one of the only texts that articulates a "Roman" political philosophy, Cicero's De Re Publica is indispensable for students with an interest in Roman history or classical political thought. In this class, we will address the text from both these perspectives; but we will also read it as a work of literature that remakes the genre conventions of the Platonic dialogue for a Roman readership. We will also address the complex relationship between the text of De Re Publica and the troubled times in which it was written.
We study Cicero’s writings from the last months of his life, when both his own personal legacy and the fate of the Republic were at stake. During this turbulent period he produced the Philippics against his arch-enemy Mark Antony, letters offering an intimate perspective on friendship and family life, and the De Officiis, a treatise on ethical duties that became one of the most influential works of moral philosophy ever written. We read the Second Philippic, several letters, and most of De Officiis Book I in Latin, plus selections of other Philippians and all the De Officiis in English.

LATN 1040A. Virgil: Eclatues and Georgics.
Virgil, most famous as the poet of the Aeneid, began his career with two smaller masterpieces: a collection of ten bucolic poems (Eclatues) modeled on the Idylls of the Hellenistic poet Theocritus, and a didactic work on agriculture in four books, the Georgics, which found its inspiration both in Hellenistic models and in more recent Roman antecedents (including Lucretius’ De Rerum Natura) and is viewed by many as the poet’s finest achievement. We will read selections from both works, concluding with the epyllion at the end of Georgics Four, which relates the tragic love story of Orpheus and Eurydice.

LATN 1040B. Virgil: Aeneid.
Close reading of selections from all twelve books of Virgil’s epic.

LATN 1060A. Latin Prose: Further Readings in Roman Historiography.
No description available.

LATN 1060B. Sallust.
A study of the nature and themes of Roman historical writing through reading a major Roman historian’s account of the Catilinarian Conspiracy and selections from Sallust’s other works. Comparison with other authors writing on the same topics.

LATN 1060C. Sallust and Livy.
Two major Roman historians provide a basis for study of style, intent, veracity, and stature.

LATN 1060D. Sallust, Livy, and Tacitus.
Three major Roman historians provide a basis for study of style, intent, veracity, and stature.

LATN 1060E. Livy.
Close readings of Livy’s history of Rome, From the Foundation of the City. As we read selections from Books 1, 5, and 21, we will explore several historiographical aspects of Livy’s text. We will consider both the historical tradition Livy was adapting and the influence and intrusion of the Augustan regime upon Livy’s particular construction of the past. We will pay special attention to the roles played by myth, legend, and history. We will also discuss the text as literature and examine the historian’s structures and crafts his work into individual books, sets of books, and a coherent multi-volume whole.

LATN 1060F. Ovid.
Reading of selections from Ovid’s poetry, with emphasis placed both on close reading and on the texts’ engagement with poetic issues (genre and intertextuality) and with the wider political and cultural issues of Augustan Rome.

LATN 1060G. Tacitus.
Will examine the literary and historical significance of Tacitus’ Annals. In addition to reading the entire Annals in English, we will focus on books 1 and 4 of the Latin text, translating 6-8 pages per week (time permitting). We will also practice some sight-translations from book 14. In an effort to understand Tacitus’ place in the ancient historiographical tradition, we will read several secondary sources, many of which respond to (or build on) Ronald Syme’s monumental work. Not open to first year students.

LATN 1060H. Conquest: Caesar and Tacitus.
Caesar’s account of the Gallic Wars reconstructs his conquests, defeats, and ultimate victory. We will consider the great general’s aims and objectives in launching such a major military campaign and in writing a history of these endeavors. Was he simply seeking greater glory for the Roman people? After the mid-term, we will turn our critical attention to the life of another Julius: Cn. Julius Agricola, the Imperial general largely responsible for Rome’s conquest of Britain. In this moral biography of his father-in-law, Tacitus mixes panegyric and invective to reveal the less savory aspects of imperialism: Rome’s rapacity, corruption, greed, and despotism.

LATN 1060I. Senecan Tragedy.
Close reading and thorough translation of two Senecan revenge tragedies, the Medea and Thyestes. Emphasis will be on translation of the Latin, but as time permits we will also be discussing the two plays in their mythological, cultural, historical, and performance contexts. Students should already have four semesters of Latin (LATN 0400) or the equivalent.

LATN 1060J. Ovid Heroides.
Ovid’s collection of “Heroines” is comprised of fifteen elegiac “letters” from mythological heroines to the lovers who have mistreated or abandoned them, as well as three pairs of letters between heroic lovers and their beloveds. We will read selected Heroides in Latin and the remaining poems in English translation. Emphasis will be placed on close reading of the Latin and on the poems’ engagement both with poetic issues (e.g., genre and allusion) and with the wider political, social, and cultural discourses of Augustan Rome.

LATN 1060K. Seneca.
Philosopher, statesman, teacher, husband, and friend, Seneca (the Younger) was respected in his life and revered for his spectacularly Stoic death. This course will introduce students to aspects of Senecan thought, style, and influence while refining general facility with Latin.

LATN 1110A. Apuleius.
No description available.

LATN 1110B. Augustine, Confessions.
We will focus on the Christian humanism of Augustine’s Confessions, reading excerpts from the autobiographical books against the dictum found in them owed to Catullus, Cicero, Horace, Lucretius, Ovid, Sallust, and Virgil. The question of why a Christian might make use of such dictum will be answered through attention to Augustine’s training and his literary aims in writing the Confessions.

LATN 1110C. Caesar: Bellum Gallicum.
No description available.

LATN 1110D. Civil War Literature.
Reading of Latin works that deal with the reality and experience of civil war, focusing primarily on the civil war of 49-48 B.C.E.: Caesar’s Civil War, Cicero’s letters of the time, Cicero’s Caesarian orations, and selections from Suetonius and Lucan. Additional readings in translation.

LATN 1110E. Comedy.
No description available.

LATN 1110F. Fortunatus.
Wide reading in the occasional poetry of the most prolific writer of the early Middle Ages, attending to diction, meter, imagery, allusion, and paying special attention to the (homo- and hetero-) erotic pieces written to the poet’s friends.

LATN 1110G. Latin Love Elegy.
Reading of representative selections from each of the Roman elegists: Tibullus, Propertius, and Ovid. Discussion also of the origins and development of love elegy at Rome and exploration of the themes and topos that define the genre. Follows the poets’ negotiations with various discourses and ideologies in Augustan Rome: literary, social, sexual, and political.

LATN 1110H. Literature at the Court of Charlemagne.
We will read widely in the Latin literature of the eighth and ninth centuries, paying attention to genre, meter, patronage, and the shifting uses put to poetry in the decades in which Charlemagne ruled.
LATN 1110L. Lucretius.
Lucretius' De Rerum Natura, a long philosophical poem, is both a major source for Epicurean philosophical thought and an example of the ambitious Latin poetry of the late Roman Republic. We will read extensive selections from the poem in Latin. Our aim will be to make a detailed exploration of these sections through close reading of the Latin text and discussion of linguistic, literary, and cultural problems.

LATN 1110J. Petronius.
Close reading of Petronius's comic masterpiece, the Satyricon, with emphasis on questions of form, narrative technique, and literary intention.

LATN 1110K. Selections from Latin Authors: Ausonius.
We will read widely in the poetry of Ausonius, aiming for depth and breadth, but focusing especially on those poems that speak to the ways in which the poet transformed or transferred the classical Latin tradition to his successors.

LATN 1110L. Medieval Latin Lyric.
Close reading of a representative sampling of the personal poetry of the Latin Middle Ages, paying attention to what constitutes the lyric mode in the fourth through the twelfth centuries, developments in metrics, the effects of Christianity on vision and voice, the pressures of vernacular traditions, lyric rhetoric.

LATN 1110M. Plautus.
We shall read two or three plays of the comic genius of ancient Rome, with focus on Plautus' language and cultural background.

LATN 1110N. Latin Comedy: Terence.
We shall read several plays of Terence. This course is ideal for freshman who have studied Latin for three or four years in high school and who are taking their first college course and for students returning to Latin after an interval without Latin.

LATN 1110O. Roman Satire.
Survey of the genre of Roman verse satire, with special attention to Horace and Juvenal and additional readings in Lucilius and Persius.

LATN 1110P. Lucan's Civil War.
We will read selected books of Lucan's Civil War (Bellum Civile) in Latin and the poem in its entirety in English. Alongside the primary goal of refining our facility with Latin language, we will also become increasingly familiar with and sensitive to Lucan's style, his poem's place within the development of Greco-Roman epic, and the socio-political context(s) of his poem's creation (e.g. Nero and the Pisonian conspiracy). Themes to be discussed may include, but are not limited to, the grotesque, epic's both complimentary and critical relationship to empire, ambition and Roman gender constructs, and the dynamics between art and politics.

LATN 1110R. Catiline: Ciceron and Sallust.
Close readings of selections from Ciceron's Catilinarians and Sallust's Bellum Catilinæ. We will explore how two contemporary authors responded to the same historical event: the Catilinarian conspiracy. We will consider not only the differences of genre (political speech v. historical monograph), but also the ways in which each author's involvement affected the content of his presentation. Additionally, we will examine Sallust's and Ciceron's distinctive positions on Latin diction and stylistics. Prerequisite: Knowledge of elementary Latin grammar and intermediate Latin reading skills.

LATN 1110S. Catullus.
We will read all the extant poetry of Catullus with an emphasis on close reading of the Latin text and discussion of linguistic, literary, and cultural problems.

LATN 1110X. Selections from Latin Authors: Ovid, Ars Amatoria.
This course will cover Ovid's Ars Amatoria, Book One, as well as other selections from Ovid. Our aim will be a detailed exploration of this poetry through close reading of the Latin text and discussion of linguistic, literary, and cultural questions. Quizzes, exams, and a 7 to 10-page term paper will be required.

LATN 1110Y. Latin Epistolography.
Through reading letters from different periods of Roman History, students will become more familiar not only with the ways letters negotiated Roman social, political, and intellectual networks but also how Roman authors drew on epistolary conventions to compose literature in other forms. Authors to be read may include but are not limited to Cicero, Ovid, Pliny the Younger, and Fronto.

LATN 1110Z. Dying in the Republic.
For those who witnessed the bloody violence and brutal butchering of the late Republic, death and dying were everywhere. What did these Romans believe happened to the dead? Was there an afterlife? This course explores two texts (Virgil and Cicero) that deal with visions from and of the spheres beyond the realm of the living. Discussion of supplemental material from other authors, religious studies, and material evidence further develop our notions of what it meant to die in the Republic.

LATN 1120A. Literary Culture in the Latin Middle Ages.
This course will survey the genres relevant to the Latin Middle Ages (beast poetry, hymns, sequences, tropes, miracle and passion plays, prosimetrum) and older forms in their medieval incarnations (epic, lyric, elegy, pastoral). We will also do some work in manuscript production, including the interplay of visual and textual modes. Work in selected medieval vernaculars is possible for students so inclined. We will focus on the tenth through the thirteenth centuries.

LATN 1120B. Poetry at the End of the Roman World.
Edward Gibbon thought the "fame of Ausonius condemned the taste of his age." Study of the taste of Ausonius' age, surveying Latin literature written during and after the so-called fall of Rome. Focus on some masterworks of Silver Latinity as a bridge to our period. Sampling of literature from the 4th, 5th, and 6th centuries. Authors include Prudentius, Ausonius, Paulinus of Nola, Sidonius, Avitus, and Fortunatus.

LATN 1120C. Survey of Late and Medieval Latin.
A study of the masterworks of the Latin language written between 350 C.E. and 1300 C.E., with special emphasis on the 4th, 8th, and 12th centuries. The historical development of Latin literature; changes in Latin grammar, syntax, and morphology; innovations in genre, prosody, and stylistics; and the relationship of writings (manuscripts) to art and music.

LATN 1120D. Alcuin.
Alcuin lived a life of wide variety and accomplishment, not least as an important member of Charlemagne's inner circle and, like many at court, he wrote widely and in multiple genres. From his enormous output this course will focus on the large collections of poetry and letters. We will attend in both gatherings to theme, tone, style, and allusivity and, where appropriate, we will ponder alternate readings in a collection that has not been edited since the late nineteenth century.

LATN 1120E. Writing Lives in Late Antiquity: Jerome and Augustine.
This course will explore the development of new forms of biographical and autobiographical writing in Latin in the fourth and fifth centuries CE. We will focus on two monumental late ancient authors, Jerome and Augustine, and examine the way that these Christian intellectuals conceive of and express ideal lives in a newly Christian Empire. Texts will include selections of Jerome's Lives of Paul the Monk and Hilarion, his letters, and Augustine's Confessions.

LATN 1120G. Reading Humanist Latin Texts.
The course will explore in depth some important Renaissance or 'early modern' works of Latin literature, many of which have not been translated into English. As well as opening up a new field of Latin writing, the course will extend general knowledge of classical literature by involving some less commonly studied ancient sources. It will also introduce some early imprints, enabling you to consider texts directly in the original form in which they first appeared.

LATN 1150. Latin Prose Composition.
Review of the basic tenets of Latin syntax, composition, and style. English to Latin translation exercises will shore up composition skills, as we study the stylistic traits of seven Roman authors: Cato, Caesar, Cicero, Sallust, Livy, Seneca, and Tacitus. The course will proceed chronologically according to author. Class time will be spent on translation exercises and review, as well as the identification of the stylistic and syntactic characteristics of the seven authors under study.
LATN 1250. Law and Literature.
No description available.

LATN 1810. Survey of Republican Literature.
Our purposes in this survey of Latin literature are to acquire a comprehensive historical perspective on Latin poetry and prose until the end of the Republic and a sense of its phases and the dynamics of its tradition; and to read different styles of Latin poetry and prose with confidence and ease.

LATN 1820. Survey of Roman Literature II: Empire.
This course will survey the major authors of Latin literature in chronological order from Virgil.

LATN 1930A. Cicero: De Oratore.
Close reading of Cicero's De Oratore.

LATN 1930B. Ammianus Marcellinus.
In brilliant if idiosyncratic language, Ammianus Marcellinus, last of the major Latin historians, records the exciting and fateful events of his own times, the fourth century A.D., including therein his personal and dramatic involvement in events. We will chiefly read his famous account of the deeds of the emperor Julian ("the Apostate"). The course is intended for advanced students.

LATN 1970. Special Topics.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

LATN 2000A. Senecan Tragedy.

LATN 2010A. Catullus in Horace.
No description available.

LATN 2010B. Horace's Epistles.
No description available.

LATN 2010C. Ovid, Metamorphosis.
No description available.

LATN 2010D. Seminar: Roman Comedy.
We start with a couple of plays of Menander and fragments of New Comedy; we then read representative comedies of Plautus and Terence in depth.

No description available.

LATN 2010F. Ovid: Tristia.
Close examination of the eleven poems that comprise the first book of Ovid's Tristia.

LATN 2010G. Roman Agricultural Writers.
No description available.

LATN 2010H. Varro.
Survey of the works of Rome's greatest scholar, the polymath M. Terentius Varro, with focus on De Re Rustica, De Lingua Latina, Antiquitates, and the Menippean satires.

LATN 2010I. Appendix Virgiliana.
We will survey the Latin poetry of the Julio-Claudian period, focusing on collections of pseudonymous texts that have come down under the names of Virgil and others and that include epic, lyric, epigrammatic, elegiac, and other types of poetry, ranging in theme from high-flown panegyrics to raunchy Priapea. Some of these exerted great influence on later writing; some are almost unknown. We will aim for a more nuanced view of Latin poetry and Roman culture between and around the better-studied poetic texts of the period.

LATN 2010J. Terence and Reception in Donatus.
No description available.

LATN 2020F. Seminar: Ammianus Marcellinus.
No description available.

LATN 2030A. The Age of Augustus.
No description available.

LATN 2030G. Augustine: Confessions.
A close reading of selected books of the Confessions against the backdrop of its pagan and Christian sources. Part of the seminar will be devoted to re-constructing the readerly and writerly spaces Augustine inhabits, how those spaces impinge on his engagement of his sources, and what sort of readerly competencies the imply.

LATN 2030H. Graduate Seminar: Caesar, Bellum Civile.
No description available.

LATN 2040. Seminar: Roman Literature.
No description available.

LATN 2080A. Late Latin Literary Culture.
No description available.

LATN 2080B. Lucan.
No description available.

LATN 2080C. Late Latin Poetry.
We will read widely and quickly in a selection of poets (Prudentius, Claudian, Sidonius, etc.) but focus our work on the poetry of Fortunatus and Alcuin, paying attention especially to textual issues and the history of scholarship, such as it is, of select poems. Reading knowledge of French required. The seminar will convene for one week at the conference on late Latin poetry to be held in October 2011 on campus. Open to graduate students; advanced undergraduates may enroll with instructor permission.

LATN 2080D. Late Latin Poetry.
We will read selectively in the fourth (Ausonius, Prudentius) and the sixth (Fortunatus) centuries, paying attention to the ancient Latinity informing the compositional habits of these poets, and focusing on the collective writing of a commentary on one book of Fortunatus' collection. There will be regular reports and some guest lecturers.

LATN 2080F. Latin in America.
Exploration of some of the rich and extensive 'neo-Latin' writing from colonial Spanish America, with particular emphasis on poetry and literary prose from sixteenth-century Mexico, much of which has never been studied or translated. Latin satires, epigrams, bucolic poems, literary epistles and dialogues will be examined in relation to their classical models and influences – and in the context of the multicultural environment in which they were produced. As well as opening a new world of Latin, this course will familiarize you with the format of some early modern books and manuscripts, and offer a unique perspective on traditional classical literature

LATN 2080L. Latin Atlantic Epic.
This course will involve study of Latin epics produced in Europe and the Americas (1500-1780) which addressed themes particular to the discovery, conquest and colonisation of the New World.

LATN 2090A. Elegy.
No description available.

LATN 2090B. Lucretius.
In this seminar, we will read Lucretius' De rerum natura entire, and discuss it both as a work of Epicurean philosophy and as one of the world's greatest works of didactic poetry and a masterpiece of Latin literature. Background texts will be assigned from time to time.

LATN 2090C. Ovid: Exile Poetry.
No description available.
LATN 2090D. Propertius.
We will concentrate especially on the elegist's third book, which has been viewed both as a work of closure (a farewell to the erotic themes dominant in the earlier books) and as transitional (as the poet moves toward the more overtly Callimachean stance and political themes that will characterize the fourth book). While our primary interest will be literary-critical, including especially the elegist's engagement with his Roman contemporaries, we will also engage seriously with textual criticism, employing Heyworth's *Cynthia* and the new Oxford commentary on Book 3 (in addition to the other major commentaries).

LATN 2090F. Tibullus.
No description available.

LATN 2090G. Epigrams.
No description available.

LATN 2110. Seminar: Roman Satire.
No description available.

LATN 2120A. Roman Epigraphy.
A practical introduction to the study of Latin inscriptions, with emphasis on the reading, editing, and interpretation of texts on stone. Class time will be divided between discussion of various categories of texts in the light of the 'epigraphic habit', literacy, and the sociology of reading in antiquity and hands-on experience with editing inscriptions on stone.

LATN 2120B. Tacitus.
Close readings of selections from Tacitus's works, especially the *Agricola*, *Dialogue*, and *Annales*, with emphasis on style, form, and literary intention. Attention will be paid also to Tacitus's political career and the life of a senatorial historian in the age of Trajan.

LATN 2120C. Graduate Seminar: Apuleius.
No description available.

LATN 2970. Preliminary Exam Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

LATN 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor permission required.

LATN 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

**Modern Greek**

MGRK 0100. Introduction to Modern Greek.
Designed for students with little or no prior knowledge of Modern Greek. The aim is to introduce students to basic linguistic structures and develop the ability to comprehend and produce text, as well as to speak and understand speech, in a variety of contexts and registers. The course objectives are to enable students to perform a range of tasks, master a minimum core vocabulary and acquire knowledge and understanding of various forms of Greek culture.

MGRK 0110. Intensive Beginning Modern Greek.
This is an hybrid, intensive, double-credit language course that meets three days a week synchronously in a physical / remote classroom, in addition to three classroom days, in an asynchronous online environment. This proficiency and literacy-oriented, integrated-skills course is designed for students with little or no prior knowledge of Modern Greek. It places emphasis on the acquisition of the four language skills, speaking, listening, reading and writing, within a framework that fosters communicative competences, understanding of discourse and critical insights into Modern Greek societies and cultures, within their world contexts. By the end of MGRK0110, students will be able to transition to MGRK0300. In addition to language and culture-specific work, this course will support the development of transferable skills that will enable students to respond with confidence to the demands of undergraduate study.

MGRK 0200. Introduction to Modern Greek.
A continuation of MGRK 0100. New students may place into it, after special arrangement with the instructor. The course continues on an integrative skills approach and aims to develop language skills, within a framework of specific topics and functions. The course objectives are to enable students to perform a range of tasks, master a minimum core vocabulary and acquire knowledge and understanding of various forms of Greek culture.

MGRK 0300. Intermediate Modern Greek.
Develops linguistic and cultural competence and may be taken by anyone who has completed MGRK 0200 or after consultation with the instructor and/or a placement exam. It focuses on further development of the four language skills as well as knowledge and understanding of various aspects of Greek society. It employs a variety of materials, including film, digital stories, internet based sources, music, art, and literature.

MGRK 0400. Intermediate Modern Greek.
A continuation of MGRK 0300. New students may place into it, after special arrangement with the instructor. It aims to enhance language skills within a variety of registers and themes; enable the students to master, use and understand effectively essential linguistic structures; examine a variety of expressive forms within an authentic cultural context.

MGRK 0500. Advanced Modern Greek.
May be taken by students who have completed the previous sequences or by anyone who places successfully into the course. The course places emphasis on the improvement of writing and oral skills, via presentations, collaborative projects, conversations and assignments based on topics and texts, drawn from a variety of sources and cultural forms of expression.

MGRK 0600. Advanced Modern Greek.
A continuation of MGRK 0500. Students who have not taken the previous sequence may take a placement test, after consultation with the instructor. The course aims to promote range, accuracy and fluency and enable students to develop ease and spontaneity with the language. Authentic materials drawn from a range of sources inform the content of the course and include films, literature, media, testimonies, music and internet based sources. The development of transcultural competence will be an essential component of the course.

MGRK 0810. Film Classics: The Greeks on the Silver Screen.
This course examines the adaptation of classical Greek themes and figures in world cinema. Proceeding from classical texts (that will include *The Odyssey*, *The Iliad*, *Oedipus Rex*, *Medea*, *The Oresteia*), analysis of films focuses on the ways such texts are recast to comment upon very different cultural, socioeconomic, and political circumstances. How do such films aspire to be "classic" in their own right? What genres or modes follow such films' epic, or anti-epic, cycles? Considers Hollywood blockbusters (*Ulysses*, *Jason and the Argonauts*, *Troy*, *300*) as well as arthouse fare by Godard, Pasolini, Camus, Merchant, Cacoyannis, Dassin, the Coen brothers, Angelopoulos.

MGRK 0811. Travelers in Greece: from Pausanias to Shirley Valentine (CLAS 0210T).
Interested students must register for CLAS 0210T.

In the past few years, we have all experienced, most of us through the media, what has been called a migration crisis. And yet, migration as a phenomenon did not appear in 2015; it is as old as humanity, and displacement and contemporary forced migration have also a long history. In this course, we will examine the historical, material and experiential dimensions of contemporary displacement and migration. Many of the examples will be from Greece but also other parts of Mediterranean and beyond, including from the Mexico-US border. Engaged Scholarship Course.

---

**Brown University Bulletin** 335
Why do the material remnants of classical antiquity still attract public attention and exercise symbolic power? Why have such monuments been “used” by authorities and diverse social groups in the service of often totalitarian agendas? What are the cases where these monuments operate as weapons for resistance? How has colonial, racial, and national modernity shaped the way we understand and experience the materiality of the classical? Finally, how can we decolonize classical antiquity? We will use a diversity of global case studies, including modern Greece and Europe, and a variety of sources, from ethnographically derived performances to digital culture.

Sun-drenched, seductive, and timeless, the Mediterranean is an appealing location from which to ponder Europe’s debt to this cradle of western civilization. Recently, an economic debt crisis in Greece and the region stoked fears that a peaceful, unified Europe will come undone or else be rehabilitated. The word ‘crisis’ itself hinges on a making a crucial decision, often in marking the turning point of a disease. This course examines representations of this moment through literature, film, history—but also in anthropology, journalism, and art—and in relation to other twentieth-century Mediterranean texts that also anticipated seismic shifts on the continent.

This course introduces the culture, history, and politics of modern Greece. No prerequisites—all texts in English. Putting aside exceptionalist claims rooted in antiquity, the course focuses on critical moments when Greece figures in the frontline of Balkan, European, and global events in the modern period: when, as historian Mark Mazower claims, “democracy’s cradle [is] rocking the world.” Literary, filmic, and artistic representations of such moments from within and outside Greece will illuminate issues of nationalism, modernization, sovereignty, and postcoloniality. Faculty at Brown from diverse disciplines working on Greece will be invited to address such questions through their own research.

MGRK 1800. In Other Words: Translating Greece.
This is an advanced undergraduate seminar that will offer students the opportunity to build on their linguistic, cultural and critical literacies, by translating from Greek into English. Over the course of the semester we will be thinking critically about texts, their ideological, historical and social coordinates and their embedded discourses of Greekness, community, diglossia, identity and gender, among others. In addition to translating from Greek into English, we will read and discuss essays on translation, in order to consider in an informed way the issues (untranslatability?) and types of decision making associated with the practice of translation.

MGRK 1910. Special Topics in Modern Greek.
No description available.

MGRK 2200. Modern Greek for Classicists and Archaeologists.
This graduate level course promotes the acquisition and further refinement of the necessary translational and transcultural skills to prepare students in the fields of Classics and Archaeology to carry out research in Greece and Cyprus. In addition, it involves training in linguistic skills that will enable students to study closely a range of texts of relevance to these disciplines. Primary emphasis will be on the development of reading, oral and aural skills using a variety of text and web based materials, of discipline specific content but also in professional and other communicative contexts of cultural currency.

Sanskrit
SANS 0100. Elementary Sanskrit I.
This introduction to the Sanskrit language does not require prior knowledge of any language other than English. Students learn the Devanagari script and modes of transcription, the phonetics of Sanskrit, and an outline of most of its foundational grammar, with a goal of being able to begin reading classical Sanskrit literature in the original. Reading exercises are drawn from ancient and later narrative texts such as the Hitopadesha, Devaparvata, and Mahabharata.

SANS 0200. Elementary Sanskrit II.
This course continues the survey of grammar and the reading exercises of SANS 100. The second half of this course reads selected passages of the Bhagavad Gita and the beginning of the classic story of Nala and Damayanti from the Mahabharata. Prerequisite: SANS 0100.

SANS 0300. Sanskrit Epic Narrative.
Consolidates and extends the knowledge of Sanskrit grammar introduced in first year Sanskrit; acquaints students first-hand with basic themes of ancient Indian culture, and cultivates the reading and interpretive skills necessary to read epic and closely related Sanskrit narrative with comprehension and increased fluency. Prerequisite: SANS 0200.

SANS 0400. Classical Sanskrit Story Literature.
Introduces students to the more challenging Sanskrit of classical story literature and continues to extend the knowledge of Sanskrit grammar introduced in first year Sanskrit and developed in SANS 0300, as well as present basic Indian cultural themes. Prerequisite: SANS 0300.

SANS 1020. Early Sanskrit Philosophy and Religion.
Reading in Sanskrit of selections from the Upanishads, Bhagavad Gita, Dharmasstras, etc. Prerequisite: SANS 0200.

SANS 1030. The Bhagavata Purana: Text and Reception.
The Bhagavata Purana narrates the stories of Krishna and other gods and is rich with philosophical and theological discourse. Though relatively late, it became one of the most prominent religious texts, attracting many formal and informal commentaries from the 13th century into the modern period. In this course, students will apply their knowledge of the foundational grammar of language to interpret the complex, poetic language of the Bhagavata, and learn the language and idioms of scholastic Sanskrit to access the interpretations of centuries of the Purana’s audiences.

SANS 1080. The Critical Episodes of the Mahabharata.
A guided tour of the structure of the Mahabharata, “The Great Epic of India,” through the reading in Sanskrit of selected critical passages.

SANS 1100. Vedic Sanskrit.
Introduction to reading the Rig Veda and later Vedic literature, with particular attention to the grammar of Vedic Sanskrit.

SANS 1400. The Sanskrit Grammatical Tradition.
Introduction to the Sanskrit tradition of Vyakaranashastra (grammatical derivation and analysis) through reading Pñini’s Astadhyayi and commentaries upon it.

SANS 1500. Sanskrit Song and Music.
The Sanskrit language is a medium of rich traditions of song and musico-literature that inform Carnatic, Hindustani, and other classical music traditions to this day. This course will introduce students who already have a foundation in the Sanskrit language to the distinctive language of technical musico-literature and notation, as well as to the lyrical poetry set to music in these traditions. There is no requirement for students taking this course to have any background in musicology or performance, though students who do have a background in music are welcome to incorporate performance into the final project for the course.

SANS 1600. Sanskrit Poetry and Drama.
Introduction to kavya (classical Sanskrit belles lettres)–poetry, drama, and prose narrative–through the reading of authors of the Classical Period as well as works on aesthetics and commentaries upon them.

SANS 1800. Classical Schools of Indian Philosophy.
Introduction to the classical Brahminic darsanas (comprehensive, rationalized systems of philosophy and, or, theology dealing with Hermeneutics and Philosophy of Language, Logic, Metaphysics, and Ultimate Beatitude) and to corresponding Buddhist and Jain traditions through reading, in Sanskrit, of selected works. Prerequisite: SANS 0400.

In-depth study of major poetic, dramatic, epic, philosophical, religious, grammatical, medical, or astronomical texts. Topics depend on the interest of students.
Cognitive, Linguistic and Psychological Sciences

Chair
Rebecca D. Burwell

The Department of Cognitive, Linguistic & Psychological Sciences is dedicated to the multidisciplinary study of mind, brain, behavior, and language, and was formed through the merger of the Department of Cognitive and Linguistic Sciences and the Department of Psychology. Both departments have had a long and distinguished history at Brown: the Department of Psychology was created in 1892, and the Department of Cognitive and Linguistic Sciences was created in 1986 by merging the Department of Linguistics with the faculty participating in the Center for Cognitive Science. The two departments have typically taken complementary approaches to common scientific questions. State-of-the-art research on these problems requires spanning several levels of analysis using a range of approaches and methodologies, and the integration of the departments aims to create an environment in which this intellectual synthesis will flourish.

For additional information, please visit the department’s website: http://www.brown.edu/Departments/CLPS/

Cognitive Neuroscience Concentration Requirements

Cognitive neuroscience is the study of higher cognitive functions in humans and their underlying neural bases. It is an integrative area of study drawing primarily from cognitive science, psychology, neuroscience, and linguistics. There are two broad directions that can be taken in this concentration - one is behavioral/experimental and the other is computational/modeling. In both, the goal is to understand the nature of cognition from a neural perspective. The standard concentration for the Sc.B. degree requires courses on the foundations, systems level, and integrative aspects of cognitive neuroscience as well as laboratory and elective courses that fit within a particular theme or category such as general cognition, perception, language development or computational/modeling. Concentrators must also complete a senior seminar course or an independent research course. Students may also participate in the work of the Brown Institute for Brain Science, an interdisciplinary program that unites ninety faculty from eleven departments.

Standard Program for the AB degree (Effective Class of 2019)

The A.B. concentration requires 12 courses. The Sc.B concentration additionally requires 1 laboratory course and 4 approved science courses, totaling to a total of 17 required courses.

Common Core

The introductory course, “CLPS 0010 Mind, Brain, and Behavior,” surveys the broad territory of the scientific study of the mind, as uniquely represented by our department. The course maps the breadth of the science of the mind, focusing on fascinating questions, garnered insights, common commitments, and successful techniques and approaches. The course could be taken by students interested in the CLPS concentrations or as an introductory survey course at the beginning of one's college career. AP Psychology is not an acceptable equivalent for CLPS 0010.

Careers in Cognitive Neuroscience and related fields requires familiarity with statistics. Therefore, the Cognitive Neuroscience concentration requires a course in Quantitative Methods (CLPS 0900). CLPS 0900 is a prerequisite for most of the laboratory courses, so concentrators should plan to take this course by their fourth semester. The department does not grant concentration credit of AP Statistics, regardless of score. Students who feel that CLPS 0900 is too elementary can complete an approved alternative course (e.g., APMA 1650, CLPS 2906, PHP 1501, ECON 1629, APMA 1660).

Foundation

To provide students with a solid foundation of knowledge in their area of concentration and to minimize redundancy, the Cognitive Neuroscience concentration requires four foundation courses in Neuroscience, Cognitive Neuroscience, Cognitive Neuropsychology, and Computational Methods.

Electives

Each concentrator will take four additional courses that allow the student to go into depth in some of the relevant topics. Three of these courses must be 1000-level courses. Some courses designed to count as electives will often have foundation courses as prerequisites and may include laboratory courses, content courses, or seminars.

Research Methods

Another element in the Cognitive Neuroscience concentration is a research methods course that builds on the introductory statistics course (which will be a prerequisite) but exposes students to a variety of topics in research of the mind: to empirical methods (e.g., surveys, chronometry, eye tracking, brain imaging), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Alternatively, students may take an approved laboratory course.

Capstone

Concentrators will additionally take either a seminar course or an independent research course to serve as their capstone experience.

Additional requirements for Sc.B.

In line with university expectations, the Sc.B. requirements include a greater number of courses and especially science courses. The definition of “science” is flexible. A good number of those courses will be outside of CLPS, but several CLPS courses might fit into a coherent package as well. In addition, the Sc.B. degree also requires a lab course to provide these students with in-depth exposure to research methods in a particular area of the science of the mind.

Honors Requirement

An acceptable upper level Research Methods, for example CLPS 1900 or an acceptable Laboratory course (see below) will serve as a requirement for admission to the Honors program in Cognitive Neuroscience.

FOR DETAILED UPDATES, PLEASE REFER TO THE COGNITIVE, LINGUISTIC, AND PSYCHOLOGICAL SCIENCES (CLPS) UNDERGRADUATE PAGE.

Four Approved Electives: 4

Any 1000-level course in CLPS or NEUR that is not being used to fulfill another requirement and fits with a unified theme is acceptable. Themes could be any of the foundation areas or some other theme that has three available 1000-level courses, for example, language, developmental or decision-making. Courses outside CLPS and NEUR may also be acceptable if they fit with the unified theme.

One Independent Study or Approved Seminar, such as: 1

Acceptable Independent Research Courses: CLPS 1980 or NEUR 1970

Acceptable seminars: Any 1000-level seminar in CLPS or NEUR

Research Methods: 1

CLPS 1900 Research Methods And Design
CLPS 1901 Research Methods

Acceptable Laboratory courses: Any 1000-level course in CLPS or NEUR. Laboratory courses outside of CLPS or NEUR are not acceptable

Total Credits 12

Requirements for the Sc.B. degree

The Sc.B. requires all twelve of the courses required by the AB, above.

Plus five additional courses as outlined, below:

Any course that is acceptable for concentrations in APMA, BIOL, CHEM, CSCI, MATH or PHYS is acceptable as a science course

Total Credits 17

Cognitive Science Concentration Requirements

The field of Cognitive Science uses scientific methods of experimentation, computational modeling, and brain imaging to study mental abilities such as perception, action, memory, cognition, speech, and language, as well as the development and evolution of those processes. Students must become knowledgeable in four areas of emphasis: perception, cognition, language, and computational methods, as well as a set of methods relevant to Cognitive Science research. Students then create their own focus area of study, potentially integrating coursework from the Cognitive, Linguistic, and Psychological Sciences department with a diverse subset of fields including Computer Science, Neuroscience, Philosophy, Anthropology, Applied Math and Education. The A.B. program is primarily for students interested in studying human mental processes and acquiring a research orientation to the study of the mind. The Sc.B. program is designed for students who wish to develop a stronger background in Cognitive Science and requires students to engage in a specific research project in the focus area of their choosing. We recommend that prospective concentrators register for one of the gateway courses and at least one other core course in their first or second year.

Concentration Requirements (Effective, Class of 2019)

The A.B. concentration requires 12 courses. The Sc.B concentration additionally requires 1 laboratory course and 4 approved science courses, totaling to a total of 17 required courses.

Common Core

The introductory course, “CLPS 0010 Mind, Brain, and Behavior,” surveys the broad territory of the scientific study of the mind, as uniquely represented by our department. The course maps the breadth of the science of the mind, focusing on fascinating questions, garnered insights, common commitments, and successful techniques and approaches. The course could be taken by students interested in the CLPS concentrations or as an introduction at the beginning of one’s college career or as an integration after having completed a number of specialized courses in a particular concentration.

Careers in Cognitive Science and related fields requires familiarity with statistics. Therefore, the Cognitive Science concentration requires a course in Quantitative Methods (CLPS 0900). CLPS 0900 is a prerequisite for most of the laboratory courses, so concentrators should plan to take this course by their fourth semester. The department does not grant concentration credit of AP Statistics, regardless of score. Students who feel that CLPS 0900 is too elementary can complete an approved alternative course (e.g., APMA 1650, CLPS 2906).

Foundation

To provide students with a solid foundation of knowledge in their area of concentration and to minimize redundancy, the Cognitive Science concentration requires four foundation courses in Human Cognition, Perception, Language, and Computational Methods.

Electives

Each concentrator will take four additional courses that allow the student to go into depth in some of the relevant topics. These electives must include at least two courses in one of the four foundation topics (i.e., Human Cognition, Perception, Language, and Computational Methods). The courses designed to count as electives will often have foundation
courses as prerequisites and may include laboratory courses, content courses, or seminars.

**Research Methods and Capstone**

Another element in the Cognitive Science concentration is a research methods course that builds on the introductory statistics course (which will be a prerequisite) but exposes students to a variety of topics in research of the mind: to empirical methods (e.g., surveys, chronometry, eye tracking, brain imaging), to common designs (e.g., factorial experimental, correlational, longitudinal), to research ethics, and to best practices of literature review. Concentrators will additionally take either a seminar course or an independent research course to serve as their capstone experience.

**Additional requirements for Sc.B.**

In line with university expectations, the Sc.B. requirements include a greater number of courses and especially science courses. The definition of “science” is flexible. A good number of these courses will be outside of CLPS, but several CLPS courses might fit into a coherent package as well. In addition, the Sc.B. degree also requires a lab course to provide these students with in-depth exposure to research methods in a particular area of the science of the mind.

**Honors Requirement**

The Honors Program in Cognitive Science gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Cognitive Science must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a faculty mentor prior to semester 7 as well as complete certain course requirements before semester 7.

Linguistics Concentration Requirements

Language is a uniquely human capacity that enables us to communicate a limitless set of messages on any topic. While human languages can differ greatly in certain respects, all are intricate, complex, rule-governed systems. Linguistics is the scientific study of these systems, their use in communicative and other social settings, and their cognitive and neural underpinnings. The linguistics concentration at Brown gives students a background in the "core" aspects of the language system: phonetics/phonology (the study of speech sounds and their patterning), syntax (the study of combinatorics of words, phrases, and sentences), and semantics/pragmatics (the study of the meanings of words, sentences, and conversation). Beyond this, students may focus more heavily in one or more of these areas and/or explore related questions such as how children and adults learn language (language acquisition), how utterances are produced and understood in real time (psycholinguistics), or how speaking and understanding are anchored in underlying neural systems (neurolinguistics). Other areas such as historical linguistics, sociolinguistics, philosophy of language, and linguistic anthropology can also be pursued in conjunction with offerings in other departments.

Students who wish to pursue one or more aspects of Linguistics in greater depth than does the Bachelor of Arts, and to focus on some of the more technical, computational, and/or experimental areas of the field may choose to take a Bachelor of Science in Linguistics. Students will choose a focus pathway which will direct their choices. Pathways include: Language, Computation, and Information; Language, Mind, and Brain; Meaning and Logic, or one of the student's design, with approval from the concentration advisor.

A.B. Requirements (10 courses)

Prerequisite Course

<table>

<tr>
<td>CLPS 1660</td>
<td>Learning Compositional Language</td>
</tr>
<tr>
<td>CLPS 1800</td>
<td>Language Processing</td>
</tr>
<tr>
<td>CLPS 1850</td>
<td>Language Processing in Humans and Machines</td>
</tr>
</tbody>
</table>

CLPS 1890 Laboratory in Psycholinguistics or any Topics Course in Language Acquisition or Language Processing

5 additional appropriate electives forming a thematically related set to be determined in consultation with the Concentration Advisor. At least one of these must be drawn from the list of advanced courses listed below, and we strongly recommend that at least one course be an appropriate methods and a topics course. No more than 2 of these courses may be drawn from below 1000 level courses. The electives can be drawn from any of the above courses, or any of the other linguistic/language related courses in the CLPS department. Electives may also be drawn from courses in other in consultation with the Concentration Advisor; a list of courses which standardly count towards the Linguistics Concentration (provided they form part of the thematically related set) is appended below.

Advanced Courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLPS 1320</td>
<td>The Production, Perception, and Analysis of Speech</td>
</tr>
<tr>
<td>CLPS 1342</td>
<td>Compositional Semantics</td>
</tr>
<tr>
<td>CLPS 1360</td>
<td>Introduction to Corpus Linguistics</td>
</tr>
</tbody>
</table>

A course from the 1381 series (Topics in Phonetic & Phonology)

A course from the 1383 series (Topics in Syntax and Semantics). For example:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLPS 1383D</td>
<td>Topics in Syntax and Semantics</td>
</tr>
</tbody>
</table>

A course from the 1385 series (Topics in Language Acquisition)

A course from the 1387 series (Topics in Neurolinguistics)

A course from the 1389 series (Topics in Language Processing)

CLPS 1390 Linguistic Field Methods

CLPS 1880 series (Topics in Psycholinguistics)

CLPS 1890 Laboratory in Psycholinguistics
Other Courses Routinely Fulfilling Linguistics Concentration Requirements (in consultation with the Concentration Advisor):

NOTE: This is NOT an exhaustive list of courses that can be applied towards the Linguistics Concentration requirements.

ANTH 0800 Sound and Symbols: Introduction to Linguistic Anthropology
ANTH 1800 Sociolinguistics, Discourse and Dialogue
CLPS 0050M Playing with Words: The Linguistic Principles Behind Word Games and Puzzles
CLPS 1365 Historical Linguistics
CSCI 1460 Computational Linguistics
EAST 1510 Chinese: A History of the Language
EGYT 2310 History of the Ancient Egyptian Language
SLAV 1300 Sociolinguistics (with Case Studies on the Former USSR and Eastern Europe)
PHIL 0640 Logic
PHIL 1850 Philosophy of Language

Total Credits 10

1 It is recommended that students take CLPS 1310 and CLPS 1330 before higher level courses.

Honors (12 courses)
Candidates for Honors in Linguistics must meet all of the requirements above, write an Honors thesis, and take two additional courses. One course is normally CLPS 1980 (Directed Research in Cognitive, Linguistic, and Psychological Sciences) intended for work on the Honors thesis.

Three of the total 12 courses must be drawn from the advanced list above (the Directed Research course counts as one of the advanced courses). Refer to the CLPS Honors Program page for detailed information about the Linguistics Honors program.

Independent Study
Independent study is encouraged for the A.B. degree. Students should sign up for CLPS 1980 with a faculty advisor who is a member of the Department of Cognitive and Linguistic Sciences (CLPS). Arrangements should be made in Semester 6 for students expecting to do independent study during Semesters 7 and/or 8.

Do Foreign Language Courses Count?
Foreign language courses will generally not count towards the concentration requirements, except those that focus on the structure or history of the language. Students are, however, advised to gain familiarity with a foreign language, and are encouraged to take at least one course which deals with the structure of a language other than English.

ScB Requirements (16 courses)
Students who wish to pursue one or more aspects of Linguistics in greater depth than does the A.B., and to focus on some of the more technical, computational, and/or experimental areas of the field may choose to take an Sc.B in Linguistics. Students will choose a focus pathway which will direct their choices. Three possible pathways are described below in additional detail, though other pathways are possible, if approved by the concentration advisor. The core requirements are:

• One gateway course
• Four breadth requirements, one each in Phonology, Syntax, Semantics or Pragmatics, and Psycholinguistics.
• Three electives in the focus area (see individual pathways below)
• Four non-linguistic focus area electives (see individual pathways below)
• Two breadth requirements that satisfy the Linguistics AB requirement. These could serve as a secondary focus area.
• One additional linguistics course, either as additional breadth or in the focus area
• One Capstone course

Language, Computation, and Information Pathway

Gateway course 1
CLPS 0300 Introduction to Linguistics

At least one course in phonetics / phonology, such as: 1
CLPS 1310 Phonology

At least one course in syntax, such as: 1
CLPS 1330 Introduction to Syntax
CLPS 1331 Linguistic Variation and Universals

At least one course in semantics / pragmatics, such as: 1
CLPS 1341 Lexical Semantics
CLPS 1342 Compositional Semantics
CLPS 1370 Pragmatics

At least one course in psycholinguistics, such as: 1
CLPS 1360 Introduction to Corpus Linguistics
CLPS 1361 Information Theory in Language
CLPS 1800 Language Processing
CLPS 1850 Language Processing in Humans and Machines

CLPS 1890 Laboratory in Psycholinguistics

Three electives specifically in the focus area, such as: 3
CLPS 1330 Linguistic Variation and Universals
CLPS 1331 Linguistic Variation and Universals
ANTH 1800 Sociolinguistics, Discourse and Dialogue

At least one course in psycholinguistics, such as: 1
CLPS 1360 Introduction to Corpus Linguistics
CLPS 1361 Information Theory in Language
CLPS 1800 Language Processing
CLPS 1850 Language Processing in Humans and Machines

CSCI 0220 Introduction to Discrete Structures and Probability

CSCI 1460 Computational Linguistics

Four non-linguistic focus area electives, such as: 4
CLPS 0950 Introduction to programming
CLPS 2908 Multivariate Statistical Techniques
APMA 1650 Statistical Inference I
CSCI 0220 Introduction to Discrete Structures and Probability

CSCI 1410 Artificial Intelligence
CSCI 1420 Machine Learning
CSCI 1951A Data Science
PHP 1560 Statistical Programming in R
MATH 0520 Linear Algebra

Two additional courses outside the main focus that satisfy the Linguistics AB requirement, such as: 2
CLPS 1390 Linguistic Field Methods
CLPS 1331 Linguistic Variation and Universals
ANTH 1800 Sociolinguistics, Discourse and Dialogue
SLAV 1300 Sociolinguistics (with Case Studies on the Former USSR and Eastern Europe)

Or many others (see Linguistics AB for examples)

One additional class in linguistics (related or unrelated to the focus area), such as: 1
CLPS 1342 Compositional Semantics
CLPS 1850 Language Processing in Humans and Machines

One independent study / capstone requirement 1
CLPS 1970 Directed Reading in Cognitive, Linguistic, and Psychological Sciences
CLPS 1980 Directed Research in Cognitive, Linguistic, and Psychological Sciences

Total Credits 16

One independent study / capstone requirement 1

CLPS 1970 Directed Reading in Cognitive, Linguistic and Psychological Sciences

CLPS 1980 Directed Research in Cognitive, Linguistic and Psychological Sciences

Total Credits 16

Honors (17 courses)
The Honors program requires one additional elective, which will typically be a second CLPS 1980 Directed Research course during the senior year (thus leading to a full year of Directed Reading or Directed Research). Admission to the honors program requires a majority of A grades in the concentration. The student’s work will culminate in an Honors’ thesis on an approved topic (see Departmental regulations regarding Honors’ theses, which can be found at https://www.brown.edu/academics/cognitive-linguistic-psychological-sciences/honors (https://www.brown.edu/academics/cognitive-linguistic-psychological-sciences/honors/)) written under the direction of one or more faculty members, and read by a committee of at least two faculty members (one of whom may be from another department).

NOTE: Please refer to the Cognitive, Linguistic, and Psychological Sciences undergraduate Linguistics concentration page for updates not listed here.

Psychology Concentration Requirements
Psychology encompasses a range of phenomena and levels of analysis in pursuit of three goals: to deepen understanding of cognitive and neural mechanisms of sensation, perception, learning, and emotion; to probe the biological and evolutionary foundations of behavior; and to clarify the social perception and assessment of individuals and groups. Students pursuing the Bachelor of Arts or Bachelor of Science take foundation courses in the field’s major sub-disciplines, including perception, cognition, developmental, behavioral neuroscience, and social psychology. Students also take a course in quantitative methods, and select from an array of seminars on specialized topics and laboratory courses that focus on research design and state-of-the-art techniques. Students pursuing a Bachelor of Science must complete a research methods course, a laboratory course, and four additional science courses related to the same intellectual theme as the elective courses. The concentration in Psychology prepares students for careers in research, teaching, clinical psychology, business, law, and education, among others.

The A.B. concentration requires 12 courses. The Sc.B. concentration additionally requires 1 laboratory course and 4 approved science courses, totaling 17 required courses.

Common Core
The introductory course, “CLPS 0010 Mind, Brain, and Behavior,” surveys the broad territory of the scientific study of the mind as uniquely represented by our department. The territory includes neural processes, perception, learning, memory, emotion, language, social development, social judgment, personality, and mental illness. The course could be taken by students interested in the CLPS concentrations, as an introduction at the beginning of one’s college career, or as an integration after having completed a number of specialized courses in a particular concentration. AP or IB Psychology credit cannot be used as a substitute for CLPS 0010.

Careers in Psychology and related fields require familiarity with statistics. Therefore, the Psychology concentration requires a course in Quantitative Methods (CLPS 0900). CLPS 0900 is a prerequisite for most of the laboratory courses, so concentrators should plan to take this course by their fourth semester. Students may substitute APMA 1660 or PHP 1501 with the approval of a concentration advisor. The department does not grant concentration credit for AP Statistics, regardless of score.

Another element in the Psychology concentration is a course on research methods. Research Methods and Design (CLPS 1900 or CLPS 1901) is the preferred course for fulfilling this requirement. This course builds on the introductory statistics course and exposes students to a variety of topics in the psychological sciences: empirical methods (e.g., surveys, chronometry, eye tracking, brain imaging), common designs (e.g., factorial experimental, correlational, longitudinal), research ethics, and best practices of literature review. CLPS 1900/CLPS 1901 (or an approved alternative laboratory course; consult with the Psychology advisors for details) should be taken before the senior year.

Foundation courses
To provide students with a solid foundation of knowledge in their area of concentration, the Psychology concentration requires four foundation courses. Students select one course from each of the following areas: Social/Personality, Perception/Cognition, Development, and Learning/Animal Behavior/Behavioral Neuroscience. Acceptable courses are listed below.

Electives
Concentrators will select four additional courses that examine in greater depth topics of special interest to them. The CLPS courses designed to count as electives will often have foundation courses as prerequisites and may include laboratory courses, or seminars. At least two electives should be 1000-level. Students may choose up to two courses outside of CLPS as electives. Electives should fit into a coherent intellectual theme, and should be chosen in consultation with your Psychology advisor.

Capstone
Concentrators will additionally take either an advanced seminar course or an independent research course (CLPS 1970, 1980) to serve as their capstone experience. See the Psychology advisors for a list of approved seminars.

Additional requirements for Sc.B.
In line with university expectations, the Sc.B. requirements include a greater number of courses and especially science courses. The definition of “science” is flexible. Some of these courses will be outside of CLPS, but several CLPS courses might fit into a coherent package as well. In addition, the Sc.B. degree also requires a laboratory course (in addition to CLPS 1900/CLPS 1901 or its alternative) to provide these students with in-depth exposure to research methods in a particular area of the science of the mind. Lists of approved laboratory courses can be obtained from the Psychology advisors.

Honors Requirement
The Honors Program in Psychology gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member. The program also provides the opportunity for outstanding senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in Psychology must meet all of the requirements of the concentration as described above. Candidates submit their application for the program in semester 7. We encourage students to seek out a faculty mentor prior to semester 7 as well as complete certain course requirements before semester 7. This includes completion of the statistics and laboratory requirements. Please refer to the CLPS Honors Program page for detailed information about the specific requirements for the Honors program in Psychology.

FOR DETAILED UPDATES, PLEASE REFER TO THE COGNITIVE, LINGUISTIC, AND PSYCHOLOGICAL SCIENCES (CLPS) UNDERGRADUATE PAGE.

Requirements for the A.B. degree
STANDARD PROGRAM FOR THE A.B. DEGREE 1

Common Core:
CLPS 0010 Mind, Brain and Behavior: An Interdisciplinary Approach 1

CLPS 0900 Statistical Methods 1

CLPS 1900 Research Methods And Design ((or approved alternative)) 1

One approved course in Social/Personality:
CLPS 0700 Social Psychology 1
Behavioral Decision Sciences
Concentration Requirements
Leading to a Bachelor of Arts, the study of decision making at Brown covers descriptive questions like how people, institutions, and nations make judgments and decisions; normative questions about rationality, such as what constitutes the best judgments and decisions; and prescriptive questions, such as how the process of decision making can be improved to make actual decisions closer to optimal ones. By virtue of its broad interdisciplinary nature, the study of decision making covers work found in a variety of more traditional disciplines including psychology, cognitive science, economics, philosophy, computer science, and neuroscience. Professor Steven Sloman (steven_sloman@brown.edu) is the concentration advisor. Upon declaring, concentrators are also encouraged to speak with the appropriate area specialist from among those listed here (https://www.brown.edu/academics/cognitive-linguistic-psychological-sciences/behavioral-decision-sciences/).

Standard Program for the AB Degree

CLPS Classes:
CLPS 0220 Making Decisions 1
Choose one of the following: 1
CLPS 0400 Cognitive Neuroscience
CLPS 0200 Human Cognition
CLPS 0700 Social Psychology
Choose two of the following: 2
CLPS 1470 Mechanisms of Motivated Decision Making
CLPS 1495 Affective Neuroscience
CLPS 1730 Psychology in Business and Economics
CLPS 1760 The Moral Brain
CLPS 0710 The Psychology and Philosophy of Happiness

Distribution Requirements:
Select one Introductory Course from the following: 1
ECON 0110 Principles of Economics
CSCI 0040 Introduction to Scientific Computing and Problem Solving
or CSCI 0111 Computing Foundations: Data
or CSCI 0150 Introduction to Object-Oriented Programming and Computer Science
or CSCI 0170 Computer Science: An Integrated Introduction
or CSCI 0190 Accelerated Introduction to Computer Science

Select Two Advanced Courses From: 2
CSCI 1410 Artificial Intelligence
CSCI 1420 Machine Learning
ECON 1110 Intermediate Microeconomics
or ECON 1130 Intermediate Microeconomics (Mathematical)
ECON 1660 Big Data
ECON 1820 Theory of Behavioral Economics
ECON 1870 Game Theory and Applications to Economics
PHIL 1610 Decision Theory: Foundations and Applications

Methods Classes:
Choose One From the Following: 1
APMA 0650 Essential Statistics
APMA 1650 Statistical Inference I
CLPS 0900 Statistical Methods
CSCI 0100 Data Fluency for All

Behavioral Decision Sciences
Requirements Specific for the Sc.B. degree
STANDARD PROGRAM FOR THE Sc.B. DEGREE

Common Core:
CLPS 0010 Mind, Brain and Behavior: An Interdisciplinary Approach 1
CLPS 0900 Statistical Methods
CLPS 1900 Research Methods And Design ((or approved alternative))

One approved course in Social/Personality:
CLPS 0700 Social Psychology
CLPS 0701 Personality
CLPS 0710 The Psychology and Philosophy of Happiness

One approved course in Perception/Cognition:
CLPS 0200 Human Cognition
CLPS 0450 Brain Damage and the Mind
CLPS 0500 Perception and Mind

One approved course in Development:
CLPS 0600 Developmental Psychology
CLPS 0610 Children's Thinking: The Nature of Cognitive Development
CLPS 0620 Social and Moral Development

One approved course in Learning/Animal Behavior/Behavioral Neuroscience:
CLPS 0100 Learning and Conditioning
CLPS 0110 Animal Behavior
CLPS 0150 Behavioral Neuroscience: Introduction to Biological Psychiatry

Four approved Electives related to Psychology 4
Independent Study (CLPS 1970, CLPS 1980) or approved seminar 1

Total Credits 12

Four Science courses 4

Total Credits 17

1 For the current list of approved courses in all categories, see the CLPS Psychology page.
Students will choose three additional courses in consultation with a concentration advisor that will constitute an integrated specialization in some area of decision science. Any advanced course taught at Brown is eligible. Such courses might include, but are not limited to:

**Psychology and Cognitive Science**
- CLPS 0950 Introduction to Programming
- CLPS 1292 Introduction to Programming for the Mind, Brain and Behavior
- CLPS 1370 Pragmatics
- CLPS 1970 Directed Reading in Cognitive, Linguistic and Psychological Sciences

**Economics**
- ECON 1820 Theory of Behavioral Economics
- ECON 1870 Game Theory and Applications to Economics

**Applied Mathematics**
- APMA 0200 Introduction to Modelling
- APMA 1690 Computational Probability and Statistics
- APMA 2640 Theory of Probability II
- APMA 2821V Neural Dynamics: Theory and Modeling

**Philosophy**
- PHIL 0410 Moral Philosophy
- PHIL 1430 Moral Theories
- PHIL 1705 Epistemology

**Computer Science**
- CSCI 1430 Computer Vision
- CSCI 1460 Computational Linguistics
- CSCI 1951A Data Science

**Political Science**
- POLS 1090 Polarized Politics
- POLS 1150 Prosperity: The Ethics and Economics of Wealth Creation
- POLS 1470 International Negotiation and Conflict Resolution

**Public Health**
- PHP 1740 Principles of Health Behavior and Health Promotion Interventions

**Capstone:**
- 1

Fall seminar in which students write an integrative paper or do a project covering their areas of study in their senior year.

**Total Credits**

---

1 Students may not use the same course to satisfy both the Introductory and Methods course requirements.

Students will be expected to take no more than 6 courses below the 1000-level within the concentration. Students with multiple concentrations may not apply more than 2 courses from a second concentration to the AB in Behavioral Decision Sciences. No more than 2 courses can be transferred from another institution to count toward concentration credit. Students are responsible for satisfying all prerequisites for courses they plan to take.

**Honors**

The Honors Program in BDS gives undergraduates a special opportunity to carry out a research project under the direction of a faculty member that they have developed a relationship with. The program also provides the opportunity for senior concentrators to receive their undergraduate degree with Honors. Participation in the program allows students to develop an understanding of research and acquire research skills and background.

Candidates for Honors in BDS must meet all of the requirements of the BDS concentration as described above. Candidates submit their application for the program at the beginning of semester 7. We encourage students to seek out a faculty mentor prior to semester 7 and to complete their methods courses and two of their three electives before semester 7. Please refer to the CLPS Honors Program page for detailed information about the specific requirements for the Honors Program in BDS.

**Cognitive, Linguistic and Psychological Sciences Graduate Program**

The department of Cognitive, Linguistic, and Psychological Sciences is a unique multidisciplinary department that offers Doctor of Philosophy (Ph.D.) degrees in three fields: Cognitive Science, Linguistics, and Psychology. While the department offers transitional Master's degrees en route to the Ph.D., it does not accept applicants into non-Ph.D. programs.

For more information on admission and program requirements, please visit the following website:

**Cogut Institute for the Humanities**

Amanda S. Anderson

Brown University has long played a distinctive role advancing innovation and excellence in the humanities. The humanities speak to some of our most basic human activities — creative expression, interpretation, and critical reflection — and participate in the effort to address the most vital challenges of our time. The humanities at Brown today encompass specific disciplines such as history and architecture, languages, literature, music, philosophy, religious studies, and visual art. They also include the interpretive dimensions of social sciences such as anthropology, history, and political science, and interdisciplinary initiatives such as gender and sexuality studies, media studies, and the study of race and ethnicity.

Named for Craig M. Cogut '75 and Deborah Cogut in recognition of their generous support, the Cogut Institute for the Humanities was launched in the fall of 2003 as the Brown Humanities Center to support collaborative research and curricular innovation in the humanities and across the university. A rich array of programming — conferences, lecture series, and colloquia — creates a lively space of inquiry and dialogue that draws in faculty, students, and members of the larger Providence community. The Cogut Institute is home to several Initiatives and Centers, including the Early Modern World, and the French Center of Excellence.

Each year, our fellowship program brings together faculty, postdoctoral, graduate, and undergraduate scholars to explore work-in-progress in a dynamic workshop setting. The Cogut Institute administers Brown University’s Humanities Initiative, which provides for annual faculty programming funds and six faculty chairs that combine scholarly, teaching, and disciplinary distinction with collaborative projects within and beyond the humanities. Each semester, the Institute’s faculty and fellows present unique courses for undergraduate and graduate credit.
As part of its Collaborative Humanities Initiative, the Institute features undergraduate collaborative humanities courses on a research theme, method, practice, or problem that has relevance across disciplines, divisions, or schools. Additionally, the Institute offers a Doctoral Certificate in Collaborative Humanities available to students pursuing doctorates in the humanities and the humanistic social sciences. Collaboration is built into the teaching model as well as the requirements for students. Read more at https://www.brown.edu/academics/humanities/collaborative-humanities/)

The Center for the Study of the Early Modern World also administers an interdisciplinary undergraduate concentration. Information about the concentration may be found at https://www.brown.edu/academics/early-modern-world/concentration (https://www.brown.edu/academics/early-modern-world/concentration/)

More information about the Cogut Institute is available at https://www.brown.edu/academics/humanities/

Courses

HMAN 0700A. Simulating Reality: The (Curious) History and Science of Immersive Experiences (ITAL 0701).
Interested students must register for CLPS 0540.

HMAN 0700B. Psychology and Philosophy of Happiness (PHIL 0650).
Interested students must register for PHIL 0650.

HMAN 0800A. The Humanities in Context: Victimization and Voice across the Disciplines.
This seminar investigates the silent language of victims. How can marginalized groups make their voices heard? The notion of subalternity has become crucial for transdisciplinary debates in the humanities. It describes not only a predicament of social, political, and economical oppression, but also one that imposes silence. How to break this silence? The risk is that of producing a representation that enters the dominant discourse while perpetuating the subaltern's exclusion. Following the notion of subalternity from Antonio Gramsci to postcolonial studies and beyond, this seminar explores the conundrum of subaltern's representation, its theoretical implications, and several strategies to address it.

HMAN 0800B. The Art of International Relations.
From the ritual handshakes of country leaders to iconic photographs of migrants and refugees, from the use of music in combat and torture to the mobilization of art to make a better world, aesthetics informs the way international actors present themselves, portray the world, perceive others, and conceive of peace, conflict, and war. At the intersection of the humanities and social sciences, this course explores cultural practices constitutive of the diplomatic stage. From international society, transnational networks, globalization, and postcoloniality in the 20th and 21st centuries. This include theatre, literature, music, dance, images, film, television, and social media. This course may be counted as a track elective in the security track of the international and public affairs concentration.

What is a fake? Are "fake" and "authentic" absolute and antithetical categories? Who gets to decide what is authentic? Greek statues, Chinese bronzes, Maya glyphs—what gets faked and why? Have fakes always existed? Galileo’s moons, a centaur’s skeleton, Buddhas bearing swastikas—are all fakes the same? If not, how are they different? Why do people make fakes? Who wins? Who loses? This course revolves around the history of the inauthentic through a diachronic exploration of art objects and other forms of material culture. We will range widely in time and space, focusing primarily on the pre-modern.

HMAN 0900C. Heritage in the Metropolis: Remembering and Preserving the Urban Past (ARCH 0317).
Interested students must register for ARCH 0317.

HMAN 0900D. Introduction to Indigenous Politics with Pacific Islander Focus (POLS 0920B).
Interested students must register for POLS 0920B.

HMAN 0900E. Encounters: Latin America in Its Literature and Culture (HISP 0730).
Interested students must register for HISP 0730.

HMAN 0900F. The Politics of Gender in the Caribbean Novel (AFRI 0850).
Interested students must register for AFRI 0850.

HMAN 0900G. Mural Painting in Mexico (HIAA 0632).
Interested students must register for HIAA 0632.

HMAN 0900H. Queerness in Caribbean Literature (AFRI 0850).
Interested students must register for AFRI 0850.

HMAN 1000B. The Cogut Institute for the Humanities Research Seminar.
This seminar involves reading and discussing in-progress research by the annual fellows of the Cogut Institute for the Humanities, an interdisciplinary group of faculty, postdoctoral fellows, graduate students, and undergraduates engaged in extended research on a major project or honors thesis. Students read a wide range of works-in-progress, prepare questions and participate in seminar discussions, intervene as first questioners for specific sessions assigned to them in advance, and present their own work twice during the year. Admission to the course requires that students have received the Cogut Institute Undergraduate Fellowship for the year in which they enroll.

Interested students must register for UNIV 1200.

HMAN 1305. Medical Humanities: Critical Perspectives on Illness, Healing, and Culture (ANTH 1305).
Interested students must register for ANTH 1305.

HMAN 1400A. Loss, Political Activism, and Public Feelings: Between Fact and Affect (HIST 1972I).
Interested students must register for HIST 1972I.

For the past several decades (but especially since 2001), internationalists have been increasingly preoccupied by the perceived “return of religion.” Religion is often proclaimed to pose the single greatest threat to a liberal legal/political order and, less often, to be the greatest hope for that order. We will explore genealogies of the three key terms at stake in this conundrum — “religion,” “secularization,” and “the international.” We begin from the proposition that none of these terms refer to ahistorical essences, but have been subject to continual theoretical/practical contestation/construction. We focus on this contestation as it has emerged in “modernity.” Enrollment limited to 20 juniors, seniors, and graduate students.

This course is built around the question of the animal as a difficulty posed to representation and thought at a time when animals have largely disappeared from humans’ living environment, but proliferate as strange protagonists, specters or figures of ambiguity in literature and philosophy. We will consider a range of texts and films that “cast” the animal critically, that is, as a body that strains or scrambles meaning (interruption, irony, illegibility, haunting) and forces us to reconsider the work of language and narrative (indeed, of the “human”). Authors include Kafka, Coetzee, Hofmannsthal, Kofman, Chevillard, Darrieussecq, Derrida, Agamben, de Fontenay, Herzog. Enrollment limited to 20 juniors and seniors.

This course introduces students to the 19th/early 20th century Arab thought - the “Nahda” (Arab Renaissance). Through primary and secondary English texts, we will explore questions raised by thinkers of this epoch pertaining to perceived civilizational crisis, and examine the diagnoses/proposals offered by them. The course underlines the changes and continuities in these concerns under the impact of dramatic socio-political events of the epoch. We will discuss the strengths/weaknesses of “ Nahda” thought that continues to inform/preoccupy contemporary Arab debates on culture, democracy, gender and Islam. We will examine the significance of this legacy in today’s Arab world. Enrollment limited to 20 juniors and seniors.
From antiquity to our day, therapeutic landscapes such as: mineral and thermal springs; shrines and churches built at sacred springs; volcanic ash mud baths; rocky landscapes emitting odorous gasses; and ponds filled with medicinal leeches, attract health pilgrims who search for healing. Storytelling transformed these into places of memory and pilgrimage. This seminar investigates places of bodily healing and miracle from a cultural studies perspective. The case studies will be drawn from the Mediterranean world and Western Asia (including Lourdes in France, Hierapolis in Southeastern Turkey and the Agiasma churches of Byzantine Istanbul). Enrollment limited to 20 juniors and seniors.

HMAN 1970E. The Precarious University.
The intensification of student protest-occupy movements across the country particularly in California, and the proliferation the OWS movements across the world have rejuvenated social movements against cutbacks for the people and kickbacks for the wealthy. In this seminar, we will address the epistemic shifts and intellectual costs of these ongoing upheavals, particularly the fight against the U.S. university’s neoliberalization. We will imagine the kind of progressive university that is sustainable for the arts and humanities, and how the precarious work of artists and humanists are fundamental to 21st century global universities. Enrollment limited to 20 juniors and seniors.

Does pain and reflection on pain teach us something about ourselves, the world, our relation to it? This seminar approaches the question by examining the meaning of pain in Russian/Polian literature/literary theory of the 20th century. Our concern is with pain’s resistance to language and representation. The works analyzed offer a variety of responses to problem of pain as it appears in theology, experimental medicine, discussions of materialism, the philosophy of Schopenhauer, and above all, the giants of Russian literature, Dostoevsky and Tolstoy, in whom these debates are dramatized; they also form the ground on which Russian and Polish literature meet. Enrollment limited to 20 juniors and seniors.

HMAN 1970G. International Perspectives on NGOs, Public Health, and Health Care Inequalities.
Non-governmental and other non-state organizations play an expanding role in the provision of health care across much of the globe. Growth and internationalization of the non-governmental sector, contraction of post-socialist and advanced industrial welfare states, and sub-contracting of state-funded services have all contributed. The seminar focuses on this expansion, critically assessing texts on NGOs and health and drawing comprehensively from sources across disciplinary and interdisciplinary boundaries. We will address issues of human welfare, political citizenship and identity, replacement and displacement of states, new forms of health care inequalities, and the self-concepts, missions, and roles of non-profit sector workers around the globe. Enrollment limited to 20 juniors and seniors.

Comparison, which posits a likeness between the dissimilar, is always profoundly haunted by the question of its ground and judgment. This seminar will examine the comparative logic of capitalist modernity in the works of Marx, Weber, Adorno and Horkheimer, Foucault, Heidegger, and Benjamin. We will ask the following questions: How is equivalence established between nonequivalent objects? How are actual social relations quantified and measured, and is there an ethics to modern forms of comparability? How does language reflect and produce these operations? Or, to put it differently: What are the forms through which difference “haunts” us? We will pay special attention to figures of the double and the ghost in Hoffmann and Freud. Other topics to be covered include rationalization and the disenchantment of the world, the modern uncanny, “mediauras,” colonial comparison, and the ethics of incommensurability.

HMAN 1970I. Imposing Orthodoxy: “Jews,” “Pagans” and “Heretics” when Constantinian Christianity Won.
What happens when a particular ‘orthodoxy’ becomes able to impose itself on others? This course examines the imposition of post-Constantinian catholicism on Jews, Samaritans, other Christians (Arians, Miaphysites, etc.) and the remaining ancient Mediterranean populace (4th-7th centuries) to consider a larger cultural phenomenon. We’ll draw on ancient authors and legal sources (in translation), archaeological data, and contemporary studies. Half the course entails communal exploration of the late antique Mediterranean. Student research presentations, including studies of comparable situations from other cultural and historical contexts, comprise the second half. Useful prior coursework includes: RELS 400, RELS 410, CLAS 600, CLAS 660, CLAS 1320. Enrollment limited to 20 juniors and seniors.

Why do we take pleasure in small-scale objects? What is their history and what purposes do they serve? How do the technology and the aesthetics of the small contribute to human cognition? To find answers to these and other questions, the seminar explores the cultural, literary and cognitive significance of miniatures. We will explore productive relationships between three areas of research: imaginative texts produced during the eighteenth century, the period’s prolific but insufficiently studied production of small-scale versions of everyday objects, and recent developments in cognitive theory about the role of size-perception in the developing brain. Enrollment limited to 20 juniors and seniors.

In an arguably “post-secular” age, conflicts over the relationship between religion and law have moved to the forefront of international debate. In our multicultural/globalized world, such conflicts often provoke contestation over the very possibility of universal definitions of either “religion” or “law,” let alone their proper relationship. Our interdisciplinary inquiries on these questions will include concrete legal disputes in domestic/international courts; theoretical debates over the construction of “religion” in fields such as anthropology, religious studies, and philosophy; historiographical controversies about the relationship between “secularization” and sovereignty, particularly in light of the legacy of colonialism. Limited to juniors, seniors, and graduate students.

Modern aesthetics emerged in the eighteenth century at the intersection of different disciplines, discourses, cultures, and European nations. Contributors to the new field came not only from academic philosophy but also from the arts, literature, history, theology, and other fields. Aesthetics was thus and remains primary among interdisciplinary disciplines. Readings for this course will be drawn from British, German, and French authors such as Shaftesbury, Du Bos, Addison, Hutcheson, Hume, Burke, Kames, Diderot, Mendelssohn, Lessing, Kant, Schiller, and Herder. Enrollment limited to 25 juniors and seniors.

Doomsday predictions/apocalyptic themes have become commonplace. Between “End of History” theses/Mayan Calendar predictions/posthumanist theories/the Rapture, and environmental/financial collapse, it seems we are living in what many believe to be End Times. This course will examine some principal clusters of ideas around finality: posthumanism/singularity, environmental collapse, patriach survivalism, and post-politics. We will look at a number of cultural products: traditional fiction/non-fiction, blogs/podcasts/lifms. It will be less important to establish whether the Mayan calendar calculations are accurate than seeing the connections between those claims and the claims of survivalists/Rapture theorists. Taken together, what do all these claims say about this moment in history? Enrollment limited to 25.
HMAN 1970N. The Israeli-Palestinian Conflict in the Global Scene.

Dominant narratives of Israeli/Palestinian conflict obscure influential forces taking place outside the boundaries of Israel/Palestine, stories we believe are unique/historically peculiar. We will see how groups have been inspired by/have inspired both peoples’ struggles for survival/self-determination. We examine case studies revealing connectivity/reciprocity: Zionism’s inspiration for Garvey’s U.S.-back-to-Africa movement; adoption of Fanonian/Maoist/Guevarian thought in Middle East; Black Panther Party’s support for Palestinian/their endorsement of an Israeli Black Panther Party in the 1970s; South Africa/Latin America’s economic/military ties to Israel; Palestinian call for international Boycott Divestment Sanctions; and examine how struggles for self-determination negotiate between seeking territorially bounded independence/globally networked liberation, in the region/beyond. Enrollment limited to 20 juniors and seniors.

Many of today’s dissident movements adopt leaderless/self-managed practices presenting us with radically different notions of what it means to self-determine. We will situate these movements within historical struggles for autonomy. By “autonomy” we understand the quality or state of being self-governing/self-determining. By “self,” we understand not the self-originating/self-determining/rational individual constituted by Enlightenment liberal humanism, but rather, a diversity of self-defined collectivities made up of social individuals. We will consider runaway slave societies (Western Hemisphere), Operaismos (Italy), Zapatastas (Mexico), Tahrir Square’s protesters (Egypt), Occupy Movement (US), Shackdwellers (South Africa), refugee/migrant movements. Readings include Marx/Cleaver/Linebaugh/Rediker/Negri/Tonti/Virno/Berardi/Holloway/others, and documents from movements we engage. Enrollment limited to 20 juniors and seniors.

Pragmatism is a distinctive American school of thought that sees the goal of philosophy not as the apprehension of timeless truths but as a practical project of bettering individual lives and society as a whole. Pragmatists such as William James and John Dewey were devoted to deepening America’s commitment to democracy. Both saw an important place for an unconventional sort of religion in democratic life. This course explores the pragmatist thought of James, Dewey, and others, looking especially at their views on religion and politics. We will also explore the influence of pragmatism on Barack Obama. Enrollment limited to 20 juniors and seniors.

Concepts are usually thought of as cognitive tools, constituents of thought used for categorization/inference/memory/learning/decision-making. We shall think about them as effects of a language game whose rules change across genres, media, and discursive regimes. Looking for these rules and analyzing them comparatively, we shall ask how concepts are formed/displayed/performed, when do we need them/can we do without them. We shall read philosophers (Plato, Descartes, Kant, Heidegger, Wittgenstein, Foucault, Derrida, and Deleuze), intellectual historians (Koselleck, Skinner), literary works (Kleist, Kafka, Musil), and look at some conceptual art. Advanced juniors, seniors and graduate students welcome. Enrollment limited to 20.

Cuba today is home to writers, musicians and artists who engage with new media and a global audience against the backdrop of a socialist revolution. This seminar will explore esthetic and political dimensions of contemporary Cuban culture with authors who will speak to us directly through a video link with Casa de las Americas in Havana. Knowledge of Spanish required.

HMAN 1970S. Ethics and the Humanities.

This seminar will engage with ethical issues in a broad range of humanities disciplines. We will survey historical and thematic perspectives on ethics, and consider the ethical implications of authorship and possession of texts and objects; translation as an ethical problem; data and open access; the perspective of the human subject; public humanities, public intellectuals and community-based research; and ethical issues in popular culture. Enrollment limited to 20. Not open to first year students or sophomores.

We’ll investigate how new media technologies shape musical practices (and vice versa). Topics will include DJ cultures, digital music distribution and related intellectual property issues, digital gameplay, music videos, popular music reception, online music lessons, and virtual communities. We’ll give equal attention to production, circulation, and reception practices, as well as to their increasing convergence. Readings will include both contemporary and historical studies. The course will require critical engagement with a diverse range of media, genres, and cultural contexts, encouraging students to examine their own media production and consumption practices. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970V. Pragmatic Medical Humanities.

The question, “What is medical humanities?” has flummoxed the very experts who ardently argue for its importance to medical education and the professional and personal growth of health care providers. The interdisciplinary nature of medical humanities, engaging in conversations with persons who possess different expertise, knowledge and approaches, provides opportunities for insight unavailable elsewhere. Students will investigate alternative meanings, interpretations and purposes embedded in the term “medical humanities.” They will develop their own personal relationship to this term/field of study, and its utility as a tool for understanding and responding to the profound experiences of clinical medicine, illness and health. Enrollment limited to 20. Not open to first year students or sophomores. This is a half-credit course.

This seminar examines the role of disease, medicine, and health in the history of the Atlantic World. Our analysis will be centered on events that took place in Latin America, the Caribbean, and Sub-Saharan Africa, during the era of European colonial expansion (1490-1940). In these four and a half centuries, the West became the dominant force in global geopolitics and Western medicine emerged as the hegemonic form of healing worldwide. This seminar explores the complex relationship between these two historical developments. Enrollment limited to 20. Not open to first year students or sophomores.

HMAN 1970Y. Politics and Authority in Islamic Law and Society.

Few courses offer insight into the genesis of Islamic political theory in light of the social and historical circumstances of the medieval period. This seminar seeks to address major trends in political thought of classical Islam. In addition to reading secondary scholarship on social and political aspects of early Muslim society, we will also examine primary sources in translation (Prolegomenon, Book of Ordinances); literary genres, including official state epistles from the medieval period; and the work of Ibn Taymiyya. Finally we will address issues of authority, ethics and gender in contemporary analyses. Enrollment limited to 20. Not open to first year students or sophomores.

This course is designed to introduce students to major topics in the developing historical literature on the relationships between intellectual and economic history, and their implications for European culture, mainly in the first two centuries after Columbus and Da Gama. Enrollment limited to 20 juniors and seniors.

We will take as our starting-point Walter Benjamin’s notes for his unfinished masterpiece "The Arcades Project." The Passagenwerke comprise a massive index of citations/observations on the nature/form of the city of Paris in every aspect of its cultural/political life in the 19th/20th centuries. We will read works from which he culled his aphorisms/investigate the present status of each of his assertions/citations, with historical/contemporary readings. We will discuss the nature of historical/archival interpretation and try to bring together artifacts - textual/visual/sensorial - that might constitute a "Museum" of 19th Century Paris. Taught by Prof. Anthony Vidler. Graduate students encouraged to register. Enrollment limited to 20.
Interested students must register for EDUC 1035.

Social Change, 1960-present (EDUC 1035)

HMAN 1971W. Disobedience in the Americas (HIAA 1870)

Interested students must register for HIAA 1870.

HMAN 1971E. Cross-Cultural Approaches to Death and Dying.

Despite the universality of death, human responses are incredibly varied. This course situates biological, medical, and psychological conceptions of death and dying in conversation with the religious and ethical perspectives that have also informed human responses to death and dying in cultural contexts. This course—team-taught by a psychologist, a scholar of religion, and two end-of-life care physicians—facilitates a more informed understanding of death-related cultural practices and a more skilled response to death-related decisions arising in the practice of medicine and in life. Limited to 20 students in Medical Humanities and graduate Humanities fields. Honors undergraduates and PLMEs may enroll with permission.

HMAN 1971K. Varieties of Secularism (RELS 1746).

Interested students must register for RELS 1746.

Interested students must register for STS 1701C.

HMAN 1971S. Introduction to iPhone/iPad Moviemaking Using 3-D and 360 VR Comparisons.

Mobile Devices are democratizing movie-making by lowering barriers to entry, enabling students to become full-fledged members of the film industry virtually overnight. This pioneering course provides the basic tools for students to create and distribute no- and low-budget live-action motion pictures with professional production values utilizing only their personal smartphones. Students will acquire the skills to plan, capture and edit short motion pictures through hands-on instruction and experimentation with low-cost accessories, including selfie-sticks, lens adapters, directional microphones and iPhone apps like Filmic Pro, Vizzywig and iMovie. Limited to junior, senior and graduate students.

HMAN 1971T. Law, Nationalism, and Colonialism.

This seminar explores the internationalism of the past century in terms of its relationship to separatist nationalism, anti-colonialism, and religious radicalism. It takes as its point of departure the dramatic political, cultural, and intellectual transformations that followed in the wake of World War I. A guiding hypothesis of the seminar is that internationalism cannot be understood apart from its complex relationship to "identity" broadly conceived — identity of local/transnational groups as well as the identity of internationalists themselves. Readings will be drawn from law/cultural studies/politics/postcolonial theory. Enrollment limited to 20.

In the 12th and 13th centuries, new ways of approaching Judaism sprung up in France and Spain that would come to be known as "kabbalah." New approaches included aspirations for mystical illumination, elaborate mythological narratives, and human history. Kabbalists radically and self-consciously departed from conventional understandings of Judaism, particularly those of medieval Aristotelian philosophers like Maimonides. They claimed to find their mythological, mystical worldview in traditional texts, from the Bible through rabbinic writings. This course introduces students to kabbalah's founding period, focuses on primary texts in translation, especially the Zohar, the magnum opus of classical kabbalah. No prior background necessary.

Interested students must register for EDUC 1035.

HMAN 1971X. The Southern Question and the Colonial Mediterranean (ITAL 1400P).

Interested students must register for ITAL 1400P.

Interested students must register for COLT 1610R.

HMAN 1971Z. Cannibalism, Inversion, and Hybridity: Creative Disobedience in the Americas (HIAA 1870).

Interested students must register for HIAA 1870.

HMAN 1972A. Landscape and Japanese Cinema (MCM 1504X).

Interested students must register for MCM 1504X.

Interested students must register for ANTH 1556.

This course will support/enhance Brown's tradition in the Humanities to entry, enabling students to become full-fledged members of the film industry virtually overnight. This pioneering course provides the basic tools for students to create and distribute no- and low-budget live-action motion pictures with professional production values utilizing only their personal smartphones. Students will acquire the skills to plan, capture and edit short motion pictures through hands-on instruction and experimentation with low-cost accessories, including selfie-sticks, lens adapters, directional microphones and iPhone apps like Filmic Pro, Vizzywig and iMovie. Limited to junior, senior and graduate students.

HMAN 1972D. Art of Criticism (ENGL 1901F).

Interested students must register for ENGL 1901F.

The title of this course alludes to Friedrich Nietzsche’s “eternal return of the same,” which he famously called “the highest formula of affirmation,” and which later philosophers and thinkers, such as Pierre Klossowski and Martin Heidegger, would repeatedly return to. Yet Nietzsche’s discovery is not new, for it inflects, too, the thinking of the professional revolutionary, Louis-Auguste Blanqui, the returns of commodity production in high capitalism, and the poetic figurations of the big city found in nineteenth-century writers such as Charles Baudelaire. In this course, we will examine the problem of returns—temporal, political, economic, and poetic—in modernity.

HMAN 1972F. Me, Myself, and I: Exploring Senses of Self from a Multidisciplinary Perspective.

Human beings have long puzzled over how precisely to conceptualize and understand what it is we are. Questions about the nature of the self have informed the speculations of philosophy, the soteriologies of religion, the trajectories of self-cultivation in contemplative traditions, and the therapeutics of psychology. Recently, cognitive science and phenomenology have attempted to correlate abstract concepts about the self with lived experience, emphasizing how various senses of self give rise to our self-concepts. Through this course, students will engage with conceptions of self that we often take for granted by studying senses of self from multidisciplinary and cross-cultural perspectives.

Interested students must register for HISP 1330X.

Interested students must register for HISP 1330X.

HMAN 1972I. Me, Myself, and I: Exploring Senses of Self from a Multidisciplinary Perspective.

Human beings have long puzzled over how precisely to conceptualize and understand what it is we are. Questions about the nature of the self have informed the speculations of philosophy, the soteriologies of religion, the trajectories of self-cultivation in contemplative traditions, and the therapeutics of psychology. Recently, cognitive science and phenomenology have attempted to correlate abstract concepts about the self with lived experience, emphasizing how various senses of self give rise to our self-concepts. Through this course, students will engage with conceptions of self that we often take for granted by studying senses of self from multidisciplinary and cross-cultural perspectives.

Interested students must register for HIST 1979L.

HMAN 1972K. Anthropology of Climate Change (ANTH 1112).

Interested students must register for ANTH 1112.

HMAN 1972M. Environmental Political Thought (POLS 1185).

Interested students must register for POLS 1185.

HMAN 1972N. The Indian Ocean World (HIST 1979K).

Interested students must register for HIST 1979K.

Interested students must register for HISP 1330X.

Interested students must register for AFRI 1050W.
Interested students must register for POLS 1824N.

HMAN 1972T. Apartheid in Post-Apartheid South African Literature (COLT 1814L)
Interested students must register for COLT 1814L.

HMAN 1972U. Feminist Thoughts for a Heated Climate (POLS 1180).
Interested students must register for POLS 1180.

HMAN 1972V. Sex, Gender, Empire (HIST 1979F).
Interested students must register for HIST 1979F.

HMAN 1972W. Rhythm and Resistance (AFRI 1050V).
Interested students must register for AFRI 1050V.

HMAN 1972Y. Indigenous Peoples and American Law. The European colonial empires and their successor states in the Americas all developed bodies of law concerned with the indigenous peoples who preceded them. In the United States, this body of law is generally still known as “American Indian Law” or, more recently, “Federal Indian Law.” It emerged out of colonial-era juristic thinking and was adapted and transformed after the U.S. gained independence from Britain. This seminar will study both the history and structure of this body of law. It will also seek to uncover the ways the technical legal materials embody deep-rooted cultural presuppositions about indigenous peoples.

HMAN 1973A. Race, Sexuality, and Mental Disability History (AFRI 1060Z).
Interested students must register for AFRI 1060Z.

Interested students must register for POLS 1824N.

Interested students must register for MCM 1203U.

HMAN 1973D. Sports Culture and Latin America (HISP 1371B).
Interested students must register for HISP 1371B.

Interested students must register for CLAS 1120V.

Interested students must register for HIST 1979D.

HMAN 1973G. Writing Animals in the Iberian Atlantic (HISP 1331A).
Interested students must register for HISP 1331A.

HMAN 1973H. Water is Life/New Currents in the Study of Land, Water and Indigenousity (ETHN 1750H).
Interested students must register for ETHN 1750H.

Interested students must register for MCM 1505J.

Interested students must register for MCM 1204D.

HMAN 1973K. Art for an Undivided Earth: Transnational Approaches to Indigenous Activism and Art (ENGL 1711J).
Interested students must register for ENGL 1711J.

Interested students must register for POLS 1820I.

Interested students must register for HISP 1700B.

HMAN 1973Z. Ammianus Marcellinus (LATN 1930B).
Interested students must register for LATN 1930B.

HMAN 1974A. Cinema and Imperialism (MCM 1505S).
Interested students must register for MCM 1505S.

Interested students must register for ARCH 1494.

Interested students must register for AMST 1902S.

HMAN 1974D. Avicenna (PHIL 1002).
Interested students must register for PHIL 1002.

HMAN 1974E. Political Theology for the Anthropocene.
The Seminar develops a discourse in political theology for gaining insight into the catastrophes of the modern world and those associated with the Anthropocene. The political imagination embedded in a cluster of texts from the Hebrew Bible and the political theology they imply will enrich discussions in political theory about sovereignty, government, law, and violence. The seminar gives special attention to the way the modern state and other modern and contemporary institutions have come to substitute for God as authors of large scale, globalized, and planetary catastrophes. Our theoretical companions include Buber, Assman, Agamben, Arendt, Foucault, Boltanski, and Žižek.

HMAN 1974F. Anthropology in/of the Museum (ANTH 1901).
Interested students must register for ANTH 1901.

Interested students must register for HIAA 1631.

HMAN 1974H. The Human Skeleton (ANTH 1720).
Interested students must register for ANTH 1720.

Interested students must register for HIST 1978D.

HMAN 1974J. Rap as Storytelling (MUSC 1240R).
Interested students must register for MUSC 1240R.

HMAN 1974K. Governing Culture: Music and the Arts in Political Life.
The social function and governmental regulation of aesthetic life play a key role in the constitution of political regimes. This course examines debates on the arts as instruments of power, distinction, resistance, contestation, and revolution, from the early modern period to the present. The government of music, sound, noise, and silence will offer a point of comparison among absolutist monarchies, modern republics, totalitarian regimes, liberal democracies, and colonial empires. In addition to music, the course draws from political sources, theoretical works, literature, and the visual arts.

A cascading catastrophe threatens to turn the earth uninhabitable and bring our world to its end. How to think, in this context, the relation between our world, the world, and the earth? Are they known, experienced, shared with others, or being destroyed in the same way? How have their differences and convergence been affected by globalization, and affected our understanding of the “Anthropocene”? Following the news on ongoing and future climate catastrophes, the seminar addresses these and related questions through critical readings of theoretical and philosophical texts, including works by Arendt, Latour, Haraway, Povinelli, Yusuf, Moore, and Mbembe.

Solidarity between people—even between species—has never been more needed. But our culture is saturated by personality politics and ubiquitous narcissism. How can we think and organize ourselves out of this impasse? Is it shared interests or shared identities that unite us? What does freedom mean in an interconnected age? These are some of the questions that any attempt to think through the question of solidarity in the twenty-first century must encounter. Writers to consider include Marx, Arendt, Foucault, Simondon, Negri, Stuart Hall, Maurizio Lazzarato, Donna Haraway, Couze Venn, and Ruth Ozeki, among others.

Interested students must register for HISP 1371F.
Interested students must register for HIST 1962E.

The seminar presents the Hebrew Bible as a primary source for political theory. It offers readings of some highly charged theo-political episodes through which some key political concepts are explicated and problematized. Special attention is given to systemic violence, states of exception, the politics of plagues, and resistance. The readings are guided by (mostly) contemporary thinkers who contributed to the study of these concepts in non-biblical contexts. Reconstructing God’s multiple political personae and several types of biblical theocracies, the seminar questions the gap separating our putatively modern, secular political imagination from that of the political cultures documented in the Bible.

HM AN 1974R. Humans, Animals, and Machines.
This course examines the invocation of animals and machines to illuminate the meanings and limits of the human in modern American thought and culture. Our objects of analysis will range from medical experiments to popular films, primatology to video games, and Crispr babies to science fiction. Readings will consider the roles of animals and machines in the history of categories of race, gender, and bodily difference. Throughout we will examine the political, cultural, and epistemological stakes of the shifting boundaries of the natural and the unnatural, as well as the human and non-human.

HM AN 1974S. The Costs of Climate Change.
This seminar examines debates over the costs - economic, environmental, and social - of climate change. We will explore how economists attempt to solve seemingly impossible problems of valuation like: how much should we value the wellbeing of current versus future generations? How much value does the ecosystem as a whole provide? We will then survey how these numbers (sometimes) enter into environmental regulatory debates. Finally, we will study how movements fighting for environmental justice adopt - or reject - the language of economics to make claims about the morality and economics of fossil fuel producers.

Interested students must register for HIST 1978D.

HM AN 1974Z. The Creative Ensemble (TAPS 1280B).
Interested students must register for TAPS 1280B.

HM AN 1975A. Disability and Culture in the Past and Present (ANTH 1760).
Interested students must register for ANTH 1760.

HM AN 1975B. Authority, Identity, and Visual Culture in Colonial America (HIAA 1631).
Interested students must register for HIAA 1631.

Interested students must register for HISP 1371I.

HM AN 1975D. Philosophy of Biology (PHIL 1900).
Interested students must register for PHIL 1900.

HM AN 1975E. Philosophy of the Environment: Environmental Utopias (PHIL 1785).
Interested students must register for PHIL 1785.

HM AN 1975F. Censorship and the Arts.
Who decides what we read and view? Censorship has a long history in authoritarian states and religious institutions, but where else has it taken shape, today and in the past? This course engages with a series of once “banned” literary and artistic works alongside creative and legal critiques of censorship. Addressing recent forms of censorship in the arts and the political sphere - exhibit closings, book burnings, redaction, classification - and the acts of protest, whistle-blowing, and document-dumping that aim to circumvent these, the course explores ideas of public interest, national defense, and decency that underpin decisions to restrict.

This course explores 20th-century efforts to address population growth and family planning in a variety of global contexts, ranging from macro-level initiatives to individual practices. For some women, state leaders, and international experts, contraception meant sexual liberation, increased autonomy, and the reduction of economic hardship. But for others, the same biomedical technologies were associated with colonial control and efforts to reduce “undesirable” people. How is it possible for contraception to hold such expansive and contradictory meanings? In order to assess this central question, students will engage with critical theories of gender, race, class, nationalism, and decolonization.

Interested students must register for MES 1244.

HM AN 1975I. History, Nation, Popular Culture and Caribbean Politics (AFRI 1600).
Interested students must register for AFRI 1600.

HM AN 1975J. Love Hurts: Romance, Media, Masochism (MCM 1506X).
Interested students must register for MCM 1506X.

HM AN 1975K. Race, Gender, and Sexuality in Hispanophone Caribbean Literature (HISP 1331M).
Interested students must register for HISP 1331M.

HM AN 1990. Independent Study.

HM AN 2400I. Environmental Humanities.
We live in a time of immense global change and ecological rupture that poses a foundational challenge for modern society. How are we to respond to environmental crises that take place on a geological scale without papering over complex issues of social inequality, racial difference, and powerful gender norms? How might we promote the flourishing of sustainable communities that include both human and non-human, present and future beings? This collaborative seminar will address deep philosophical questions like these by exploring a range of work in environmental humanities. The readings reflect a diversity of disciplinary commitments and methodological approaches ranging from History, Anthropology, and Philosophy to Indigenous Studies and Science Studies.

HM AN 2400Q. War and the Politics of Cultural Memory (ENGL 2901D).
Interested students must register for ENGL 2901D.

HM AN 2400Z. Instruments and Instrumentalities.
What is an instrument? Today, in a variety of fields, the definitions of instrument and instrumentality are transforming. While retaining its older connotations of delegation, means to ends, and tool-use, the “instrument” now also implies bigger, messier complexes of technologies, bodies, and rationalities. In this seminar, we will think transversally across categories and contexts to consider the form and meaning of musical instruments, technical instruments, and ideas of instrumentality. Readings will draw from music, media studies, science and technology studies, sound studies, cultural studies, and related fields. This is a distributed seminar, collaboratively taught between Brown and McGill Universities.

HM AN 2401E. Retouch: The Imaginaries of Repair.
Retouch is a term often associated with repair—of a print, a photograph, a piece of cloth—while it also bespeaks the capacity to induce or to bring about what could have been unjustly left unattended, silenced, forgotten, or, on the contrary, what may have required covering, concealment, or removal (from sight). This collaborative seminar explores different gestures, modalities, and initiatives of repair and reparation, redress and restoration, return and redistribution, remedy and recuperation. Attending to the lasting structures of imperialism, racial capitalism, and gender violence, we seek ultimately to imagine and to theorize the retouch of shared worlds.
HMAN 2401F. Speed: Fast and Slow in Literature and Philosophy.
Our time is running out of time:” this is a feeling that lingers on since the advent of a modernity that allows for less and less lingering. It reaches its apex with the Anthropocene understood as maximal contrast between the deep time of geology and the short temporality of human history. Our collaborative seminar will trace the genealogy of accelerationism to futurism and nihilism, while also approaching boredom as a philosophical question. It will offer readings (slow and fast) of classics of literature that stage the (fast or slow) passing of time (Goethe’s Second Faust, Virginia Woolf’s To the Lighthouse).

HMAN 2401G. Frameworks of Antiquity: Disciplines, Discourses, Politics.
At least since decolonization, the study of antiquity has been a battleground for conflicting projects (imperial, colonial, national, indigenous, religious, feminist and queer, etc.). This seminar explores disciplinary formations that have supplied rival groups with cognitive maps, narratives of identity formation and transformation, and assets for real and symbolic capital. We will explore key disciplinary sites of debate—in archaeology, philology, philosophy, Scriptural and Classical studies, and history—concerning the distribution of groups (of people, languages, races), the establishment of spatial and temporal boundaries, and the limits of what can be argued, shown, possessed, and claimed to be true.

HMAN 2401H. Global Histories of Psychiatry and Anti-Psychiatry since 1945.
This collaborative seminar examines the global course of psychiatry and anti-psychiatry following WWII and the emergence of new critical perspectives within and beyond the discipline. Readings center the coalescing mobilization against traditional asylum psychiatry and psychiatric technologies (shock therapies, lobotomy, psychopharmaceuticals); alternative and experimental practices that challenged psychiatric expertise (including consciousness-raising groups, schizoanalysis, and the c/s/x movement); and aesthetic and cultural representations of these histories (in literature, film, visual art, and theatre). We will be especially attuned to the cross-fertilization between anti-psychiatry and other movements, including civil rights, feminism, gay liberation, disability rights, prison abolition, and anti-colonial struggles.

HMAN 2401I. On Belief.
This course enquires into belief as a form of knowledge, politics, way of life, and resource for living-together in a multi-religious world. It examines the demotion of belief in disciplines of colonial and postcolonial modernity (democracy, the shift from comparative religion to comparative linguistics, formations of ‘art.’). Contexts for accommodating belief are equally pertinent (tradition, self-care, family values, revolutionary energy). Readings are from philosophy, theology, postcolonial and critical race studies, self-help manuals, multi-media texts and performances. Topics include the history of religions, fundamentalism, tolerance, devotion, surrender, refusal, spirituality, contemplation, submission, secularism, post-secularism, religious minorities, faith-healing, magic, skepticism, martyrdom and apostasy.

HMAN 2401J. The Art of Refusal.
Contemporary theorists of the African Diaspora have articulated the concept of refusal as everyday forms of struggle often obscured by an emphasis on social movements and collective resistance. They define refusal as a fundamentally disordering practice that recenters non-sovereign forms of Black subjectivity and freedom. Black artists play an important role in helping us to understand the practice of refusal, and to envision strategies for living otherwise. This collaborative humanities seminar brings together the theorization of refusal with its enactments in contemporary art through a series of conversations with artists whose work enacts the refusal in radical and innovative forms.

HMAN 2401K. Technologies of Memory (ENGL 2901R).
Interested students must register for ENGL 2901R.

HMAN 2401L. Postcolonial Theory (ENGL 2900X).
Interested students must register for ENGL 2900X.

HMAN 2401M. Decolonial Matters: Thinking from the South.
This collaborative humanities seminar considers colonization as a material condition and focuses on decolonial practices from the south that engage the matter and materiality of things, objects, artefacts, and landscapes, from archaeological remains to museum objects, works of art, and contemporary material traces of migration and border crossing. We will interrogate the material and racial basis of the south and explore modes of thinking and practice (from indigenous perspectives to contemporary art) that can suture the relationship between objects and people. The seminar will also function as a workshop for student collaborations on decolonial experiments with material objects/sites.

HMAN 2500. Project Development Workshop.
In this capstone course, students completing the Doctoral Certificate in Collaborative Humanities pursue individual or collaborative projects, such as a dissertation chapter, an article on method/theory, or a stand-alone essay related to the larger field. The workshop provides a collaborative and supportive space in which students from different disciplines can share their work and receive and give feedback that will broaden and sharpen the framing of their projects. At the end of the semester, participants present in a Collaborative Public Workshop. Admission to the seminar requires a formal application process and the completion of two HMAN 2400 seminars.

HMAN 2970C. Concepts of Space and Time in Media Discourses.
No description available. Enrollment limited to 20 graduate students.

HMAN 2970D. Biological Issues in Cultural Theory.
Contemporary culture is increasingly preoccupied by biological themes and issues—genomes, brain images, biotechnology, the natural environment, etc.—and, not unrelatedly, by a wave of new biological determinisms: “gay genes,” “God genes,” mental “hardwiring,” etc. At the same time, ongoing work in fields such as developmental biology, ethology, neuroscience and science studies increasingly challenges classic dualisms of nature/culture and mind/body along with traditional assumptions about the nature of biological entities and the operations of scientific knowledge. The seminar will focus on a selection of these issues and developments especially relevant to the interests of humanities scholars and students of culture and cultural theory. Enrollment limited to 20 graduate students.

HMAN 2970E. Pain, Medicine and Society.
We take on the big question of pain as an interdisciplinary enterprise, drawing on the rich and varied faculty of Brown University and Alpert Medical School. We will examine acute/chronic/physical/psychic pain, the nature of suffering, and why some might find value/solace in pain and suffering. We will examine representations of pain in literature, art and music; look at the shifting conceptions of pain and suffering across cultural/ethnic/religious communities, and the actual/perceived barriers to effective treatment of pain. Most importantly, we will foster sensitivity and impart tools that will improve our understanding and treatment of individuals suffering from pain. Enrollment limited to 20 students in Medical Humanities and graduate Humanities fields. Honors undergraduates and PLMEs may enroll with instructor permission.

HMAN 2970G. Space and Capital.
This course examines various ways Western/non-Western societies have conceptualized space, with a specific focus on the tension between capitalist/common space. We adopt the map as a lens into this question, focusing on the cadastral survey’s rise in the Modern era and on its role in parceling space into strictly bounded, individual property. Throughout the semester, we undergo an inquiry into the map’s uncritical reception in the contemporary era, understanding this development as linked to the Scientific Revolution; the role of linear perspective; the Age of Discovery’s world-as-picture; as well as to the processes of primitive accumulation, colonialism, and the nation-state. Enrollment limited to 20.
HMAN 2970L. History and Theory of Catastrophes.
This seminar proposes a philosophical history of catastrophes (large-scale disasters) and uses it as a vantage point for questioning contemporary critiques of modernity/secularization. Starting from Biblical narratives of God-made disasters, we will follow God's role in the way north-western societies interpret/cope with catastrophes. Reading/viewing documentation of catastrophes from Duflo's Journal of the Plague Year/Cooper's Block/Spike Lee's reports on Hurricane Katrina, we will examine the emergence of the state as a major actor responsible for preparing for catastrophes/mitigating their effects, but often also for their generation, and discuss the globalization of catastrophes and with catastrophes as special sites of globalization. Enrollment limited to 20.

HMAN 2970M. Race, Space, and Struggle.
This seminar will examine the stark realities of spatial racialization: ghettos, slave plantations, prisons, refugee camps, and border walls, situating the creation of these spaces as violent responses to broader social/economic crises. At the same time, this course will highlight the the always already existing practices of resistance by exploring how inhabitants these spaces responded to their marginalization. Because these spaces are also lived, our understanding of anti-racist struggle will encompass a broad array of everyday practices, the appropriation of space, artistic expressions of resistance, and everyday forms of cooperation/creativity, alongside more traditional forms of organized interventions. (Course prerequisites: none) Enrollment limited to 20.

HMAN 2970Q. Latin in America (LATN 2080F).
Interested students must register for LATN 2080F.

HMAN 2970R. Political Foucault.
Michel Foucault was one of greatest political thinkers of the 20th century. He was not always recognized as such, but his work has shaped the field within which critical political theory is pursued today. The seminar will follow Foucault’s thinking on power and its subjects, the state, sovereignty, government, and the political, as these concepts were developed, articulated, and experimented with during one decade of intensive research and revisions -- the nineteen seventies. Our main primary texts will be the three series of lectures Foucault delivered at the Collège de France between 1975 and 1979.

HMAN 2970T. And What About the Human? Black/Anti-Colonial Thought, Human Freedom and Emancipation?
This course will examine the figure of the human posed in radical anti-colonial thought as a distinctive mode of thinking. Reviewing some major 20th century thinkers, Foucault, Derrida, Arendt alongside Fanon, Césaire and Winteler, the course will also examine the complex relationships between the figure of the human, freedom and emancipation. Graduate or undergraduate senior students only. Enrollment limited to 20.

HMAN 2970U. Antiquity and Innovation in the Hispanic Renaissance (HISP 2160N).
Interested students must register for HISP 2160N.

The seminar is dedicated to the political philosophy/theory of Étienne Balibar, a contemporary post-Marxist and post-structuralist French philosopher. The seminar will focus on the conceptual dimension of Balibar’s work through a study a small cluster of concepts with which he has been especially engaged: ideology, city, citizen and citizenship, equa-liberty, violence, politics and the political. By explicating the meaning of these concepts in Balibar’s work and their role as political interventions, we will open the question of the political and experiment with the intellectual and creative power of conceptual analysis and its possible contribution to political theory.

HMAN 2970Y. Race and Nation in the Spanish Caribbean (AFRI 2502).
Interested students must register for AFRI 2502.

HMAN 2970Z. Logos, tekhn#, philosophia.
Today, Western thinking forms the technoscientific apparatus of societies of hyper-control, built on the foundation of ubiquitous and reticular computing. This amounts to what Martin Heidegger called Gestell, which imposes itself as the digitalized merging of science and technology. We find ourselves confronted forcefully (as what the Greeks called ubirs) with the question of the status of technics with respect to knowledge in all its forms. It has become crucial to understand how and why from its birth, with Plato, philosophy has made technics unthinkable thereby establishing the unthought that then comes to constitute the threat of the Anthropocene.

HMAN 2971C. Decolonial Methodology: Pedagogy for a New Era of Dissent and Resistance.
The seminar will focus on the ways to develop and nurture a decolonial methodology that is intersectional, anti-racist, anti-capitalist and anti-imperialist. The aim is to produce a space of trust that allows debating hard questions and challenging our own assumptions, and encouraging collective thinking and cooperative learning.

HMAN 2971E. Kinds of Others.
Multiple “Others,” from the ancient barbaria to the contemporary and queer, from the abnormal to the colonial subject, from the Jew to the black have been widely studied in the humanities and social sciences. The seminar addresses this proliferation of others and explores the role of the Other in the economy of the self, the religious community, or the nation. We will experiment with different principles for classifying this variety of kinds of others and modes of othering. The typological approach will guide a double survey: of philosophical conceptions of otherness, and of modes of constructing kinds of others.

HMAN 2971F. Radical Borders (HISP 2520R).
Interested students must register for HISP 2520R.

HMAN 2971G. The Coming Apocalypse: Between the Earth and the World.
A cascading catastrophe threatens to turn the earth uninhabitable and bring our world to its end. How to think, in this context, the relation between our world, the world, and the earth? Are they known, experienced, shared with others, or being destroyed in the same way? How have their difference and convergence been affected by globalization, and affect our understanding of “the Anthropocene”? Following environmental news, the seminar addresses these and related questions through literary, theoretical, and philosophical texts, including works by Nietzsche, Heidegger, Arendt, Derrida, Nancy, Latour, Haraway, Povinelli, Coates, and Mbembe. Open to juniors and seniors with instructor permission.

HMAN 2971H. Solidarities: Sharing Freedom, Inventing Futures.
Solidarity between people—even between species—has never been more needed. But our culture is saturated by personality politics and ubiquitous narcissism. How can we think and organize ourselves out of this impasse? Is it shared interests or shared identities that unite us? What does freedom mean in an interconnected age? These are some of the questions that any attempt to think through the question of solidarity in the twenty-first century must encounter. Writers to consider include Marx, Arendt, Foucault, Simondon, Negri, Stuart Hall, Maurizio Lazzarato, Donna Haraway, Couze Venn, and Ruth Ozeki, among others. Open to juniors and seniors with instructor permission.

Comparative Literature

Chair
Susan Bernstein
Comparative literature is the study of literature and other cultural expressions across linguistic and cultural boundaries. At Brown, the Department of Comparative Literature is distinct in its conviction that literary research and instruction must be international in character. The department performs a role similar to that of the study of international relations, but works with languages and artistic traditions, so as to understand cultures “from the inside.” Both the department’s undergraduate and graduate programs are held to be among the finest in the country.
Comparative Literature Concentration Requirements

The concentration in Comparative Literature enables students to study an illustrative range of literary topics and to develop a focused critical understanding of how cultures differ from one another and what those differences mean. Our courses provide opportunities to engage with literary works across linguistic and cultural boundaries, exploring the traditions and innovations of the literatures of the world.

In the spirit of Brown’s Open Curriculum, a concentration in Comparative Literature affords great academic freedom. Advanced literature courses from any literature department at Brown count for concentration credit. Any language—ancient or modern—supported at Brown may form part of a Comparative Literature concentration program. All students take a course in literary theory and have the opportunity to complete a senior essay.

There are three concentration tracks and requirements:

- Track 1: Comparative Literature in Two Languages
- Track 2: Comparative Literature in Three Languages
- Track 3: Literary Translation

Genre and Period Requirements for all concentrators:

- One course in each literary genre (poetry, narrative, and drama/film)
- Courses must cover at least three different historical periods (such as, Antiquity; Middle Ages; Renaissance/Early Modern; Enlightenment; Modern: 19th-21st centuries).

Track 1: Concentration in Comparative Literature in two languages

Ten literature courses including:

- COLT 1210 Introduction to the Theory of Literature
- At least two advanced (1000-level) courses in each of the two literatures chosen
- At least five courses from Comparative Literature and other literature departments (up to two 100-level courses may count in this category).

Examples of courses that may fulfill the requirements, above, include but are not limited to the following. Students are encouraged to discuss class choices with their advisor.

**Track 3: Concentration in Literary Translation**

Ten courses including:

- COLT 1210 Introduction to the Theory of Literature
- COLT 1710 Literary Translation
- At least one course in linguistics (including COLT 2720 Literary Translation and history of the language courses).
- At least one workshop in Literary Arts
- A least two advanced (1000-level) courses in each of the two literatures chosen
- At least two courses from Comparative Literature and other literature departments (up to two 100-level courses may count in this category).
- A senior thesis, eligible for Honors, consisting of substantial work in translation with a critical introduction. Completing a thesis is required of all Track 3 students but does not guarantee departmental honors.

Examples of courses that may fulfill the requirements, above, include but are not limited to the following courses. Students are encouraged to discuss class choices with their advisor.

**Notes:**

**Prerequisites in languages:**

Students must demonstrate proficiency in the languages of their selected literatures. We recommend that prerequisite(s) for taking 1000-level courses in their languages be completed by Semester V. Students working in non-European languages may be allowed more latitude; be sure to be sure to consult a concentration advisor about constructing an individualized plan.

**Selecting literature courses in your language areas:**

Readings must normally be in the original language. If English is one of your languages, courses need to be devoted chiefly to literature originally written in English.

**Honors in Comparative Literature**

Students in all tracks may earn honors in the concentration by successfully completing a thesis that is granted honors upon submission. Completing a thesis in any track does not guarantee departmental honors. Honors are granted upon the recommendation of the two thesis readers.

- **Tracks 1 & 2.** Theses are analytical studies of literary topics, comparative in nature, based upon research, and usually between 50 and 100 pages. They are usually composed of 3 chapters, with an introduction and a conclusion. Students are expected to choose a topic that involves work in each of the literatures of their concentration in the original language.

- **Track 3.** Theses consist of a substantial work in translation with a critical introduction outlining the method used and specific problems encountered, and commenting on the history of the original work together with other translations, if any.

(See detailed Guidelines for Honors Theses [http://www.brown.edu/academics/comparative-literature/undergraduate-program/honors-thesis/] in Comparative Literature on Departmental website).

**Capstone option**

Students in Tracks 1 & 2 not taking Honors are urged, but not required, to complete a senior essay, which may be less extensive in scope and length than the Honors thesis but which should constitute an integration of some aspect of their study.

**Transfer of Credits:**

Two courses per semester of study abroad may be applied to the concentration, up to a total of four courses (for two semesters abroad). A maximum of five courses from external venues (study abroad; transfer credits from other institutions, including summer study) may be applied to the concentration.

**Joint or Double Concentration:**

Joint or double concentration programs may also be arranged. Students may also combine a concentration in Comparative Literature with a teaching certificate in English or a modern language. A student interested in such a program should consult the advisor in the Education Department ([http://www.brown.edu/academics/education/]) and the advisor in Comparative Literature as early as possible (preferably by Semester V). In accordance with University policy, double concentrators are allowed a maximum overlap of two courses between concentrations.

**Comparative Literature Graduate Program**

The department of Comparative Literature offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. While doctoral students may also earn the Master of Arts (A.M.) degree en route to the Ph.D., the department does not admit students to a terminal Master's degree program.

For more information on admission and program requirements, please visit the following website:

**Courses**

**COLT 0510A. Best-sellers.**

Study of seven novels published within the last decade that have enjoyed broad success with reading publics in different places. What pleasures of thought and imagination do we derive from these books, and how can we express clearly our responses? What is the appeal of these best-sellers first to their home audience, then to readers in other social environments and cultures? How may we reshape our own horizons of thought in order to appreciate them? Students will be encouraged to develop their skills of literary analysis, interpretation, and critical discussion. Two lectures and one discussion section per week. Several short papers, quizzes, and a final exam.

**COLT 0510B. Caribbean Re-writes.**

Through close readings of canonical European texts and rewritings of them in the twentieth-century Caribbean, we explore the literary possibilities and political implications of writing the old in a new language. Readings include Columbus's diaries alongside Carpentier's *The Harp and the Shadow* (Cuba); Shakespeare's *Tempest* with that of Aimé Césaire (Martinique); and *Jane Eyre* and *Wuthering Heights* alongside novels by Jean Rhys (Dominica) and Maryse Condé (Guadeloupe).

**COLT 0510C. The World of Lyric Poetry.**

Lyric poetry is the prime mode for conveying emotion in many cultures, from ancient times to the present day. This course will survey the variety of forms and themes from the earliest texts from Greece, Rome, China and Japan, then the glories of the Renaissance and the Tang Dynasty, then move to the challenges for lyric expression in the modern world. Enrollment limited to 19 first-year students.

**COLT 0510D. Poetry and Music.**

Explores the collaboration between poets and composers in the twentieth century. It will primarily focus on Modern Greek composers (Hadjidakis, Theodorakis, Lagios and others) and their collaboration with numerous poets (Garcia Lorca, Gatsos, Eluard, Elytis, Neruda, Ritsos and others). These works will also be examined in depth from a literary and theoretical perspective. Enrollment limited to 19 first year students.
Che Guevara and Fidel Castro are among the twentieth century’s most iconic figures, thanks to their roles in the Cuban Revolution and in anti-imperialist struggles across the globe. They are also among the most divisive, eliciting passionate disapproval among some and strong admiration among others. In this seminar, we will read Guevara and Castro’s speeches and writings alongside literary, visual and cinematic representations of them, paying particular attention to the ways in which their lives and deaths have generated distinct interpretations, in Cuba and beyond. Open only to first-year students.

COLT 0510G. "The Grand Tour; or a Room with a View": Italy in the Imagination of Others.
Italy has for many decades been the place to which people traveled in order to both encounter something quite alien to their own identities and yet a place where they were supposed to find themselves, indeed to construct their proper selves. This course introduces students to some of the most important texts that describe this "grand tour." We will read texts (both literary and travelogues by Goethe, De Stael, Henry James, Hawthorne, Freud, among others, as well as view films (such as "A Room With a View") - all in order to determine the ways in which Italy "means" for the cultural imagination of Western civilization. For first year students only.

COLT 0510I. Introduction to Cultural Studies
We are accustomed to engaging the American presidency as a public office approached through the prism of government, political science, and the like. This course studies the presidency through a literary lens, focusing on four presidents and three literary genres: epistolography (J. Adams and Jefferson), biography (Washington) and literary analysis (Lincoln). We will also study video the inaugurals and farewells of more recent presidents and, finally, examine non-traditional literary forms, such as pamphlets, songs, posters, broadsides, graphics, newspapers, magazines, and original documents from various presidential elections.

COLT 0610H. Renaissance Epic
Examines a seemingly universal theme-coming of age-by focusing on texts from disparate periods and cultures. Proposes that notions of "growing up" are profoundly inflected by issues of class, gender and race, and that the literary representation of these matters changes drastically over time. Texts from the Middle Ages to the present; authors drawn from Chrétien de Troyes, Quevedo, Prévost, Balzac, Bronté, Twain, Faulkner, Vesaas, Rhys, Satrapi and Foer. Enrollment limited to 19 first year students.

COLT 0610I. Introduction to Cultural Studies
We live in a cultural saturated with information. The messages we register, the meanings we deduce, and the knowledge upon which we ground our actions and choices require critical examination if we are to engage as thoughtful actors in our personal and civic lives. This class will encourage students to reflect on their initial impressions of and reactions to various cultural texts and images and to produce coherent critical positions of their own. This class will prepare participants for college courses that require them to process knowledge and not simply acquire information.
COLT 0610L. Murder Ink: Narratives of Crime, Discovery, and Identity
Examines the narrative of detection, beginning with the great dramatic who-dunit (and mystery of identity) Oedipus Rex. Literary texts which follow a trail of knowledge, whether to establish a fact (who killed Laius?) or reveal an identity (who is Oedipus?) follow in Sophocles' footsteps. We read Sophocles' intellectual children. Readings include: Hamlet, The Murders in the Rue Morgue, The Woman in White, and other classic novels and plays. We also analyze seminal films of the genre, including Laura and Vertigo. Will include the twentieth-century detective story, with particular attention to women writers and the genre of the female private eye.

COLT 0610N. Being There: Bearing Witness in Modern Times (ENGL 0710F).
Interested students must register for ENGL 0710F.

COLT 0610O. The Death of the Subject in Twentieth and Twenty-first Century Literature.
Examines the condition of the subject in Western novels and plays written after 1945. Traditional markers of identity in works of literature are being eroded by globalization, split families, the invasion of science in genetics, and increased mobility. Signs of this crisis include loss of agency and individuality, various pathologies including schizophrenia, and the replacement of humans with clones. We will investigate the intricacies of the denialment of the subject and how literary form is affected in novels by Beckett, Coetzee, W. G. Sebald, Kazuo Ishiguro, Michel Houellebecq, Chuck Palahniuk, and in plays by Caryl Churchill.

COLT 0610P. Stories and Storytelling.
An introduction to stories, how they are constructed, and how they are told. We will explore the role of storytellers in the creation of a story, the idea of "plot," the forms that stories take, and the category of fiction itself—in essence, how and why stories are made, and made up. Our discussion will range from topics such as fictional forms, the acts of reading and of telling, the role of memory, and the invention of self, to questions of time and duration. Texts examined will be drawn from a variety of genres, periods, and cultures.

COLT 0610Q. Before Wikipedia.
How did humans organize knowledge before Wikipedia? This course explores the fascinating history of encyclopedic texts, archives, and databases in various cultural contexts. We consider issues of book history, the classification of knowledge, and the obsession to collect, compile, and document everything knowable and unknowable in both real and fictional encyclopedias.

COLT 0610S. Literature and Knowledge.
What is knowledge? How do we know what we know? We will read literary texts concerned with these questions to consider how knowledge relates to power, and how deception, stupidity, and mystification force us to question what we know. Readings include Austen, Hawthorne, Melville, Flaubert, James, and Schnitzler.

COLT 0610T. Chinese Empire and Literature.
This course explores ancient and modern approaches to empire and imperialism, focusing on China from the Qin (221-206 BCE) establishment of unified empire through the Qing (1644-1911 CE) confrontation with the British and other European empires. Emphasis will be placed on the relationship between imperial expansion and literary production, and the role of Chinese and non-Chinese literature in representing China's multilingual and multiethnic past. Texts include China's most famous work of historical literature, Sima Qian's Shiji; poems, short stories, tomb sculptures, contemporary film; as well as critical essays on empire, colonization, and cross-cultural heritage.

COLT 0610U. Altered Cinema: The Cultural Politics of Film Revision (MCM 0901R).
Interested students must register for MCM 0901R.

COLT 0610V. Claims of Fiction (ENGL 0150X).
Interested students must register for ENGL 0150X.

COLT 0610W. Getting Emotional: Passionate Theories (ENGL 0500Q).
Interested students must register for ENGL 0500Q.

COLT 0610Y. Women's Writing in the Arab World.
This course examines Arab women's writing through the lenses of both Arabic and Western feminist theory and criticism. Beginning with a survey of pre-modern female literary personae in Arabic (the elegist, the mystic, the singing slave), we will then examine major figures in the early modern feminist movement, modernist poetry, autobiography, film, and the novel. No Arabic required; supplemental Arabic section may be offered at the discretion of the professor. Texts by Etel Adnan, Salwa Bakr, Hoda Barakat, Asia Djebar, Nazik al-Malaika, Alifa Rifaat, Hanan al-Shaykh, Mira al-Tahawy, Fadwa Tuqan, Adania Shibib. Films by Mofida Tiatli, Annemarie Jacir.

COLT 0610Z. Intersections of Race and Culture in the West.
This course will introduce students to ways in which knowledge, power and race have been interrelated in understandings of culture and in the writing and reception of literature. Beginning in antiquity, we will trace a history of political, ethnic, and social groups' perceptions and categorizations of each other and of shifts in the definitions of "race" and "culture" as concepts. We will then consider changing ideas of alliance, belonging and power, in the context of contemporary American and global politics. The course will draw from readings across various languages, and from the work and lectures of several guest speakers.

COLT 0611B. Global Detective Fiction.
Though often marginalized as unserious or lowly "genre fiction," the detective plot has interested and influenced literary figures ranging from Jorge Luis Borges and Thomas Pynchon to Tzvetan Todorov and Frederic Jameson. In this course, we examine both the origins and the afterlives of the detective plot in fiction from around the world. We focus especially on the figure of the detective as reader and the commentaries detective fiction offers on reading itself. After beginning with "classics" by Poe, Conan Doyle, Chesterton, Chandler, we move on to examine select novels and stories from Europe, the Middle East, the Americas, and Africa. At the end of the course, students will write a 10 to 15-page research paper on a topic of their choosing OR a detective story (or other creative project developed in consultation with the professor) of their own authorship.

COLT 0611C. Literature and Judgment.
Investigates the intersections between acts of literature and acts of judgment, between language and the law. How is literature to be judged, when is it "good" or "bad"? Does literature lie, and if so, does it matter? Does it hide a crime? And, in turn: does literature provide its own particular kind of judgment, one that may make evident the very fictional status of the law? Readings span from the Bible to contemporary post-colonial readings (Rousseau, Tolstoy, Zola, Freud, Kafka, Arendt, Benjamin, Henry James, Primo Levi, Coetzee, Sadegh Hedayaat).

COLT 0710A. Women's Words: Writing in Medieval Europe and Japan.
An introduction to women poets, dramatists, and prose writers from medieval court cultures, with an emphasis on what these authors show us about their educational, social, moral/spiritual environment and civilization. What did the pen or writing brush enable them to express and achieve? How were they able to negotiate the gaps between a male classical literary language and their own vernacular speech? Readings may include works by Christine de Pizan, Dhuoda, Heloise, Hildegard of Bingen, Hirostsvibha, Julian of Norwich, Margery Kempe, Marie de France, Murasaki Shikibu, Sei Shonagon, and Trotula plus shorter texts written by both men and women. Instructor permission required.

COLT 0710B. Very Short Poetry: From Tanka to Twitter.
Though implicit and explicit claims have been made for the novel as a universal form, the novel does not match the very short poem in terms of ubiquity across history and cultures. Reading a set of very short poems each week, we will move across ages and continents, from Greek and Latin epigrams to the Japanese "haiku" and its precursors, from the early modern sonnet to experiments with poetic constraints in the computer age. Primary sources will be juxtaposed to touchstones of theory, neat ideas, and provocative essays. All readings available in translation as well as in the original.
COLT 0710C. Introduction to Scandinavian Literature
An introduction to major works of Scandinavian writers, painters and filmmakers over the past 150 years. Figures include Kierkegaard, Ibsen, Strindberg, Munch, Hamsun, Josephson, Södergran, Lagerkvist, Vesaas, Cronqvist, Bergman, August and Vinterberg, as well as children's books by Astrid Lindgren and Tove Jansson.

COLT 0710D. Inventing the Renaissance
The invention of the Renaissance as a cultural formation and as a part of the western cultural imaginary. We will consider the so-called "discovery of man," humanism and the recovery of the classical past, the production of scriptural identity or the "bibliographic ego," courtiership, the formation of the early modern state and the discovery of the "new world" through readings of major English and continental writers of the period.

COLT 0710E. Japanese Literature and Society: Historical Survey of Japanese Literature
A reading of the major literary monuments, from early waka to Genji to the fiction of #e Kenzabur#. Surveys Japanese literary production from the 8th century to the present, examining the formation of literary genres, aesthetic values, and reading habits of successive eras in the context of political, social, and cultural development. No prerequisites.

COLT 0710F. Latin America: The French Connection
Raises questions of intertextuality between French and Latin American literature, focusing on how each represents the other. Beginning in the late nineteenth century, questions aesthetic categories of the real, the surreal and the marvelous/magical real; and literary responses to World War II and the Dirty War, the 1968 student protests in Paris and Mexico City, feminist movements, and globalization.

COLT 0710H. Mexican letras, 1519-1968
The course approaches the history of ideas in Mexico by examining four critical moments/moments of crisis in the country's development. We focus on the issues and burdens of the past as conceptualized in historical, essayistic, and literary writings of the Conquest, the Baroque, the Mexican Revolution, and the iconoclastic 1960s. In English.

COLT 0710L. New Worlds: Reading Spaces and Places in Colonial Latin America
An interdisciplinary journey-combining history, literature, art, film, architecture, cartography-through representations of the many worlds that comprised the colonial Hispanic New World. We traverse the parasitical Antilles, the U.S. Southwest, Tenochtitlan/Mexico City, Lima, Potosi. We read European, indigenous, and Creole writers, including: Columbus, Las Casas, Bernal Diaz, Aztec poets, Guaman Poma, Sor Juana. In English. Excellent preparation for study abroad in Latin America. Enrollment limited to 19 first year students.

COLT 0710L. Storytelling: Verbal Art as Performance
This course offers a comparative selection of oral and written folktales from Arabic, Chinese, African, North American, and European traditions in translation in order to study the formation and reception of storytelling in different socio-cultural contexts (Western and non-Western, contemporary and traditional). We will consider storytelling and associated performance practice in the light of a variety of theoretical disciplines (e.g., rhetoric, folklore, sociolinguistics, performance studies, literary criticism, narratology). There will be lectures, presentations, and videorecordings.

COLT 0710N. A Comparative Introduction to the Literatures of the Americas
Considers the common links between the diverse literatures of North and South America, approached in relation to one another rather than to Eurocentric paradigms. Focuses on the treatment of such topics as the representation of the past and the self, the role of memory and the imagination, the nature of literary language, and the questions of alienation, colonialism and post-colonialism, communication versus silence, and fiction versus history in the works of selected writers from North and Latin America, including Garcia-Marquez, Faulkner, Cortazar, Allende, Lispector, Morrison, Doctorow, Rosa, and Delillo. Enrollment limited to 15 first year students.

COLT 0710P. Women and Writing in Medieval France and Japan.
An introduction to women poets and prose writers from early court cultures, with emphasis on what these authors show us about their social environment and civilization. What did the pen or writing brush enable them to express and achieve? How were they able to negotiate the gaps between a male classical literary language and their own vernacular speech? What kinds of literary approaches and conventions were perfected by them? How did they view their personal social status? What educational, moral, and spiritual concerns did they voice? Readings: works by Murasaki Shikibu, Sei Shônagon, Heloise, Marie de France, Christin de Pizan, plus shorter texts written by both men and women between 700 and 1450 C.E.

COLT 0710Q. The Odyssey in Literature and Film
Examines reincarnations of the Homeric figure of Odysseus in contemporary literatures and film as modernist figure, postcolonial subject, and existentialist hero. How is the Odysseus myth altered from culture to culture (Greece, Rome, Ireland, the Caribbean)? How is it re-visionsed in different historical periods and from different perspectives (feminist, Marxist, postcolonial) and genres (epic, poetry, the novel, film, drama)? Major authors include Homer, Virgil, Tennyson, Joyce, Kazantzakis, Cavafy, Seferis, Atwood, Walcott; criticism by Bakhtin, Edith Hall, Adorno, Derrida. Films include works by Angelopoulos, the Coen brothers; Singer’s Usual Suspects. Mendes’ James Bond offering Skyfall, and Kubrick’s 2001: Space Odyssey.

COLT 0710S. Words and Images: A Survey of Japanese Literature
This survey course on Japanese literature will introduce works ranging from the 7th century AD to the present. This course will provide a historical survey of classic and modern texts, while paying attention to the close relationship Japanese literature has had with visual culture from the calligraphic poems of the Heian period to the postwar influence of manga upon literature.

COLT 0710U. Leaves of Words: A Survey of Japanese Literature
While Zen, sushi and anime have become commonplaces in contemporary American parlance, Japanese literature and culture remain static enigmas, conjuring up visions of stoic-faced samurai, cherry blossoms, and post-modern dystopias. In this survey of Japanese literary works from the 8th century to the present, we will examine the development of canons of literature, both poetry and prose, and aesthetics in specific social contexts in Japanese cultural history. Also, we will consider their re-evaluations in subsequent eras, raising questions about the stability and continuity of such traditions. In addition to readings, we will briefly look at film, manga and anime.

COLT 0710V. The Arab World Writes Itself: Contemporary Arabic Literature
In his seminal work Orientalism, Edward Said paraphrases Marx, and suggests that Orientalist attitudes towards the Middle East have produced a discourse in which the East must always be spoken for, and not allowed to represent itself. Said’s argument has become even more relevant in the past decade, given the growing interest in the Middle East as a region in the US, coupled with a dearth of spaces where voices from the region can offer their own narratives. Designed as an introductory course to contemporary Arabic Literature, this course includes a variety of readings in translation and films from across the Arab world; it foregoes an intense exploration of one national literature for a more varied survey of the textual output of several countries. We will attempt to situate each literature within its national context and within the larger pan-Arab, regional and international context while being sensitive to the political, geographical, and historical factors that have influenced these texts, including the rise of Arab nationalism and the independence struggles of the mid-twentieth century, and immigration. We will also examine--and hopefully question--some of the discursive themes and conceptual frames that have been traditionally used to think about contemporary Arabic literature. Enrollment limited to 20.
COLT 0710W. Cultures of Colonialism: Palestine/Israel.
Examines the history and literary production of the Israeli-Palestinian colonial encounter from 1948 to the present. Aims to delineate the deep links between domestic culture and colonialism in Israel-Palestine by raising questions about statehood, dispossession, and exclusion in the imaginaries of both peoples and by examining novels in relation to the ethical and political imperatives of settler-colonial dynamics. Authors include: David Grossman, Emile Habibi, Jabra I. Jabra, Sahar Khalafiah, Kanafani, Amos Oz, and A. B. Yehoshua. Sophomore seminar. Enrollment limited to 20 sophomores.

COLT 0710X. Fan Fiction.
What is imitation (sincerest form of flattery) to literary canons? Vergil’s Aeneid appropriated Aeneas from the Iliad. Joyce’s Ulysses modernized the Odyssey. Admiration as a source of inspiration is a major force in the evolution of fiction. “Fan Fiction” explores intriguing characters in greater detail and new contexts, allowing them new lives in contemporary imagination. This course presents pairs or sets of works that are explicitly linked by the intimate relation of imitation. Classic readings will be paired with their mostly contemporary updates, including Pride and Prejudice/Murder at Pemberley, Heart of Darkness/State of Wonder, and Monkey/Trickster Monkey.

COLT 0710Z. Comedy from Athens to Hollywood.
This course will look at ancient comedy from its birth in Athens and Rome through Renaissance incarnations to the 19th and 20th century, including novels and films as well as plays. We will survey the main topics of comedy, from Aristophanes’ focus on the absurdities of daily and political life in Athens to the Roman codification of a genre of everyman in love and in trouble. We will also examine how later writers and filmmakers use both traditions to give comedy its subversive power of social commentary.

COLT 0711A. Epics of India (CLAS 0820).
Interested students must register for CLAS 0820.

COLT 0711B. Ishiguro, Amongst Others (ENGL 0710L).
Interested students must register for ENGL 0710L.

COLT 0711C. Postcolonial Tales of Transition (ENGL 0710E).
Interested students must register for ENGL 0710E.

COLT 0711D. Comparative Approaches to the Literatures of Brazil and the United States (POBS 0850).
Interested students must register for POBS 0850.

COLT 0711E. Reading and Writing African Gender.
In this course, we will examine ways that gender and literary genre figure in postcolonial African writing, and in its reception. We will closely read novels by four significant women authors: Mariama Bâ (Senegal), Zoe Wicomb (South Africa), Teisí Dangarembga (Zimbabwe), and Chimamanda Ngozi Adichie (Nigeria). We will also read short, lesser-known texts, such as Richard Rive’s “Riva” and Binyavanga Wainaina’s “The Missing Chapter,” that question boundaries of gender, genre, and sexuality.

COLT 0711F. Arabic Literature: The Qur’an to Darwish.
The course offers an introduction to Arabic literature from ancient Arabic poetry to contemporary Palestinian novels. Topics include desert poetry, the Qur’an, medieval Muslim court literature, popular literature, Arabic literary theory, and the emergence of modern Western genres, with a focus on Palestinian literature as a test-case. We will engage first-hand with Irum al-Qays’ Ola Nabi, al-Jarah’s Books of Misers, Ibn Hazm’s theories about love, Mahmoud Darwish’s I Come from There, and Emile Habiby’s The Pessoptimist. All readings are in English.

COLT 0711G. The Realist Novel (Europe, America, Latin America).
How did the 19th-century novel shift from at times idealistic descriptions of domestic life to realist representations of individual, psychological, social, and political “reality”? In this course on the realist novel, we will address how literature and realism attempted a description of the world “as it was” -- what were the social and political questions the realist novel took up? How did it conceive gender and sexuality, and how did it account for issues of social inequality, colonialism, and other types of bourgeois ideology? What national projects did non-European novels engage in, particularly in Latin America and the United States?

COLT 0711H. The Arabic Novel.
This course offers students both a foundation in the “classics” of Arabic fiction and a foray into recent experimentations with form and language. We’ll spend the first half of the semester with Egyptian Nobel laureate Naguib Mahfouz, tracing his evolution from Victor Hugo-esque chronicler of life in Cairo to Faulknerian experimentalist. We’ll then examine the works of authors who deemed themselves “post-Mahfouzian,” including Gamal al-Ghitani, Sonallah Ibrahim, Elias Khoury, and Hanan al-Shaykh. Students will emerge with a transnational, inclusive understanding of the Middle East glimpsed through the region’s literature. No Arabic necessary; students with Arabic may read in the original.

COLT 0711J. The Art of Revolution in Latin America.
This course considers the role of the arts—visual, literature, music, film, and performance—in Latin American social movements. We will study the work of artists and activists in the Mexican Revolution, Cuban Revolution, Nicaraguan Revolution, South American dictatorship resistances, and contemporary social movements such as the Chilean student movement and narco-trafficking. We will trace the use of the arts in organizing, social critique, collective action, and propaganda, and how they have shaped ideology and culture in Latin America and beyond.

COLT 0711K. Arab Voices beyond the Middle East: Cultural Encounters in Europe and the Americas.
This course introduces students to literature by Arabs writing outside of their country of origin and in relation to a new cultural landscape, in the US, Britain, Canada, and Brazil. We will explore, through poems, short stories, novels, films, and music, the themes of exile, assimilation, gender, sexuality and war in transnational and transcultural contexts. Authors include: Rawi Haje, Etdl Adnan, Rabih Alameddine, Ahdaf Sueif, and Saad Elkhadem.

COLT 0711L. Off the Beaten Path: A Survey of Modern Aphdal Literature (EAST 0800).
Interested students must register for EAST 0800.

COLT 0711O. Off the Beaten Path: The Diversity of Modern Japanese Literature.
An introduction to major and minor works of Japanese literature produced during the Japanese Empire and in post-WWII Japan. Canonical writers include Tanizaki Junichiro, Higuchi Ichiyo and Kawabata Yasunari, as well as contemporary novelists Ogawa Yoko, Murata Sayaka and others, including women, queers, revolutionaries and Japan-resident Koreans. Close reading skills will be emphasized, as well as an understanding of how literature has generated knowledge about race, ethnicity, gender, class and their intersections.

COLT 0711Q. Writing Love in Korean Literature.
This course looks at literature to explore how intimacy, passion and commitment have been socially sanctioned and redefined in Korea. From Yi Dynasty tales to modern-day webtoons, we will explore the roles different genres have played in the generation of forms of human affect that are themselves intimately tied to Korea’s tumultuous history. What does it mean to love, and to write about love, under the conditions of Neo-Confucianism, empire, war, national division, authoritarianism, and the neoliberal marketplace? No prerequisites.

COLT 0810A. Ancient Greek Myth in Modern Poetry.
Various responses to ancient Greek myths by poets in the Western tradition, especially modern Greek. Considers how poets since 1800 have approached, rewritten, or subverted the classical version of myths, such as those of Euridyce, Helen, Orpheus, Perssephone, Penelope, and Ulysses. Emphasizes the challenges posed by the past, issues of cultural and political context, and questions of gender. Readings in English.

COLT 0810C. Arthurian Tales and Romances of the Middle Ages.
Why did stories of King Arthur, his knights, and their ladies fascinate writers and audiences throughout Europe? What can Arthurian quests, marvels, and love adventures tell us about successive pre-modern societies that shaped them? What are our responses to their cultural beliefs and forms of playful make-believe? Readings (in modern translation) of medieval Latin, French, English, Welsh, and German texts.
COLT 0810D. City (B)Lights
Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences, including sociology, political economy, urban ecology. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images, American cities and literary works will be brought to the foreground.

COLT 0810E. Confession, Autobiography, Testimony. Does writing a life give it coherence and veracity, or create a fiction? What is the relationship between first-person narrative and truth, and between authorship and authority? How does the form of a first-person text -- a religious confession, a personal journal, a political denunciation, a collective memoir -- affect the telling? Must the reader of such an account be "you" to the teller's "I", and how does the intimacy of this relationship shape the experience of reading? In this course, we test the limits of self-narration against ethical and physical limits, reading first-person narratives that purport to be non-fictional. We will read accounts of different experiences -- social and sexual transgression, suffering and perpetrating violence, slavery -- and explore both the possibilities and duplicities of writing as "I".

COLT 0810G. Equity Law Literature Philosophy. Justice, rigorously applied, yields injustice. This paradox haunted Western aspirations toward legal and political justice from antiquity to the Renaissance. It necessitated the formulation of a complementary principle, equity, whose job it was to correct or supplement the law in cases where the strict application of it would lead to unfairness. In England, equity was enforced by a separate system of law, and it was a weighty, ambiguous term of great emotional force, with a particular appeal to Shakespeare. After its decline, Dickens and Kafka wrote two of the greatest literary works set in a world without equity.

COLT 0810H. How Not to Be a Hero. One of Shakespeare's greatest plays is about a character who was an irredeemable failure: Coriolanus. What can failure teach us? What kind of strength does a language of failure possess? We will read the ancient sources themselves (Livy, Lucian, Plutarch), and modern adaptations of these stories (Bertolt Brecht, T. S. Eliot, Günter Grass). We will also look at other "exemplary" failures who inspired Shakespeare and later literature, including Lucullus and Timon.

COLT 0810I. Tales and Talemakers of the Non-Western World. Examines many forms of storytelling in Asia, from the Epic of Gilgamesh and the Arabian Nights Entertainments to works of history and fiction in China and Japan. The material is intended to follow the evolution of non-western narratives from mythological, historical and fictional sources in a variety of cultural contexts. Topics will include myth and ritual, the problem of epic, tales of love and the fantastic, etc.

COLT 0810J. The Colonial and Postcolonial Marvelous. A celebration and critique of the marvelous in South American and related literatures (U.S., Caribbean). We follow the marvelous from European exoticizing of the New World during the colonial period to its postcolonial incarnations in 'magical realism' and beyond. We attend particularly to the politics and marketing of the marvelous, in writers including Borges, Chamoiseau, Columbus, García Márquez, Fuguet. Reading in English or Spanish.

COLT 0810L. The Pursuit of Happiness. This course will study the emergence of the modern concept of happiness from the ancient ideal of the "good life" to the notion of "pursuit of happiness" as an "inalienable right." We will trace the development of this concept in the early modern period and read representations of the search for happiness in a variety of literary, philosophical, and political texts (including the American and the Haitian Declarations of Independence and the French Declaration of Rights). Readings will include oriental and fairy tales, novels, and essays (by Mme d'Aulnoy, Mme du Chatelet, Montesquieu, Johnson, Fielding, Voltaire, and Rousseau, among others). Enrollment limited to 19 first year students.

COLT 0810M. Uncanny Tales: Narratives of Repetition and Interruption. What makes stories creepy? Close readings of short narratives with special attention to how formal and thematic elements interact to produce the effects of uncertainty, anxiety and incoherence peculiar to "the uncanny." Topics include: the representation of the self in images of the arts; the representation of speech; instabilities of identity and spatial and temporal boundaries; doubles, monsters, automata and hybrids. Texts selected from: Walpole, Shelley, Hoffmann, Kleist, Poe, Dostoyevsky, Freud, Wilde, Cortazar, Kafka, Lovecraft.

COLT 0810O. Civilization and Its Discontents. Investigates the age-old tension between order and chaos as a central dynamic in the making and interpretation of literature. Texts will be drawn from drama, fiction and poetry from Antiquity to the present. Authors include Sophocles, Shakespeare, Racine, Beckett, Prevost, Bronte, Faulkner, Morrison, Blake, Whitman, Dickinson, and Rich.

COLT 0810P. Moderns and Primitives. Modernism has been called a 'Renaissance of the Archaic': We will read from the major works of Anglo-American modernism (Eliot, Joyce, Lawrence, Pound), focusing on their attitudes toward the primitive and the archaic. In addition, we will examine anthropological theories from the Victorian period to Durkheim, explore primitivism in modernist music and painting, and read about recent controversies surrounding modernism and primitivism.

COLT 0810U. Lovers, Slaves, Kings and Knaves: Major Plays in Western Literature. This course will introduce students to representative tragedies and comedies, focusing in particular upon their development as literary genres; continuities and variations of character, plot, and theme; stage and performance conventions; and the classical tradition. Readings will include Aeschylus, Sophocles, Euripides, Aristophanes, Shakespeare, Racine, Eilde, Ibsen, and Vogel.

COLT 0810W. Caribbean Fiction. Through fiction and film originally in Spanish, French or English and theories of the postcolonial and postmodern, we explore how images of the Caribbean have been constructed and complicated: as lands of abundance, scenes of historical violence and natural disaster, destinations for colonial and modern-day tourists. Readings include Carpenter, Benitez Rojo, Santos Febres, Chamoiseau, Condé, Kincaid, Brathwaite.

COLT 0810X. European Renaissances. Just what is the European renaissance and when and how did it happen and who decided? Let's look at the renaissances of Petrarch, Boccaccio, and Giotto, of Erasmu, and Thomas More and Holbein, of Machiavelli and Castiglione and Raphael. Are these renaissances intellectual, aesthetic, visual, rhetorical? Did they happen in the fourteenth century, the fifteenth, the sixteenth? Or in the nineteenth when they were first clearly described?

COLT 0810Z. Myth and Literature. Authors throughout the ages have been fascinated by ancient mythology and have incorporated elements of it into their texts, often modifying commenting on or even destroying the original myth in the process. This course will investigate the values, dangers and limitations of myth-making using in literature. Primary texts will include major works by Milton, Goethe, Kleist, Racine and Kafka. Texts will be supplemented by secondary readings and multimedia elements. Students will learn to question and engage critically with the historical, cultural, literary and scientific frontiers that separate myth and reality. Assignments will include two short papers and a final paper.
Interested students must register for ENGL 0700F.

COLT 0811C. Belonging and Displacement: Cross-Cultural Identities (POBS 0810).
Interested students must register for POBS 0810.

COLT 0811F. Writing War (ENGL 0100M).
Interested students must register for ENGL 0100M.

COLT 0811G. Literature, Trauma, and War (ENGL 0500L).
Interested students must register for ENGL 0500L.

COLT 0811H. Monuments and Monsters: Greek Literature and Archaeology.
Surveys Greek archaeology from the Bronze Age to the Hellenistic period, and reads Greek literature roughly contemporary with the archaeological period surveyed, with an emphasis on epic and drama. No previous knowledge or prerequisites needed.

COLT 0811I. Classical Mythology and the Western Tradition.
Reads classical texts that expound the fundamental mythological stories and elements of the Western tradition, then will read selected texts from the Renaissance through the twentieth century that utilize these myths. Ancient texts covered will include the Epic of Gilgamesh, Hesiod’s Theogony and Works and Days, Ovid’s Metamorphoses, and plays by Aeschylus, Sophocles, and Euripides. Later texts will include Shakespeare's Venus and Adonis and Rape of Lucrece, Milton’s “Lycidas,” and lyric poetry by Keats, Shelley, Browning, Swinburne, Rilke, Auden, and Yeats. This course is suitable for anyone wishing to understand the classical background to Western literature.

COLT 0811M. Planes, Trains, and Automobiles: Travel and Transport in Modern Literature and the Arts.
This course studies how modes of transportation and the experiences they enabled stood as symbols of both the fears and joys of rapid modernization in 19th- and 20th-century literature, film, and visual art. How did the speeding locomotive, the plane’s aerial view, and the personal freedom of the automobile transform the ways people traversed space, experienced time, traded, and came into contact with one another? In formal terms, how did these experiences inspire innovations in the media we examine by Whitman, Kipling, Baudelaire, Marinetti, Brecht, Woolf, Huxley, Stein, Ruttman, Wegman, Picabia, Duchamp and others? No prerequisites.

COLT 0811N. Poetics of Madness: Aspects of Literary Insanity.
This course surveys a wide range of literary texts with a view to tracing the long process of transition from pre-modern to modern conceptions of madness on the one hand, and to identifying the symbolic logic and discursive modalities that underlie its respective representations on the other. Spanning several centuries of artistic preoccupation with the alienated mind, these texts will serve as points of reference in a focused exploration of the relationship between insanity and literature, as it has been shaped by social dynamics, cultural norms, philosophical ideas, and medical theories. Authors include Euripides, Erasmus, Shelley, Dostoyevsky, Stevenson, and Woolf.

COLT 0811Q. Mediterranean Cities.
Athens, Istanbul, Alexandria: three iconic cities of the Levant that will serve as points of reference in a focused exploration of East Mediterranean history and culture. Reads and discusses a number of texts that span several decades and a wide range of styles and genres – from realism to postmodernism and from autobiography to thriller – but exhibit a common interest in the urban landscape and its relationship to basic aspects of human existence: identity and ideology, memory and desire, isolation and connection, hope and fear, life and death. Authors include Theotokas, Seferis, Taksits, Durrell, Mahfouz, Kharrat, Tanpinar, Shafak, Altun.

Interested students must register for MCM 0901K.

COLT 0811W. The Myth of Venice in Literature: Memory, Desire and Death.
This course will explore the myth of Venice in literature: focusing on the topos of Venice in the genre of travel writing, we will study the theme of liberty and decadence associated with Venice’s theatrical and political culture. Readings will include Shakespeare’s The Merchant of Venice, excerpts from De Brosses’s Travels through Italy, Goldoni’s Memoirs, Rousseau’s Confessions, and Casanova’s Histoire de ma vie. We will also study the influence of these accounts on the Romantic poets (Goethe, Wordsworth, Byron, Shelley, and Musset), and modernity (Henry James’s The Aspern Papers, Thomas Mann’s Death in Venice, Donna Leone’s Death at the Fenice).

COLT 0811Y. Great Jewish Books (JUDS 0681).
Interested students must register for JUDS 0681.

COLT 0811Z. Paradise, Periphery, Prison?: The Island in the Western Imaginary.
Paradise, periphery, or prison? The representation of the island has been described as imaginary and not actual, mythological and not geographical. Examines the fascination with islands in the western cultural imaginary. Selective readings from literature, film and historical texts focus on ways in which island spaces have been represented in diverse social, national, imperial contexts as well as the effect of such projections on the native islanders, their visitors and often subjugators. Authors may include Homer, Plato, Marco Polo, Mandeville, Darwin, Defoe, Tournier, Kincaid, Kafka, Durrell, Seferis; theoretical works drawn from critical geography, postcolonialism, and the field of island studies.

COLT 0812A. Hamlet Post-Hamlet.
Shakespeare’s Hamlet is perhaps the most widely read, performed, adapted, parodied and imitated literary text of the western tradition. In this seminar we will begin by reading/re-reading the play before turning to a number of appropriations of Shakespeare, both in the west and non-west, in order to address social and aesthetic issues including questions of meaning and interpretation, intertextuality and cultural translation. First Year Seminar. Enrollment limited to 19.

COLT 0812B. What is Colonialism? Archives, Texts and Images.
Through a close reading of a variety of texts and images from 16th-19th century we will study the transformation of lands and people into appropriable objects and the formation of political regimes in and through different colonial projects. We will follow the encoding of slavery in literary works, in the corpus of laws, in travelers’ visual renditions and in the bodies of people. We will use the archive as a source and a site for the production of knowledge. Students will create small textual and visual archives around different topics, and will use them in writing their final work.

COLT 0812D. Mythology of India (CLAS 0850).
Interested students must register for CLAS 0850.

COLT 0812E. God and Poetry (JUDS 0820).
Interested students must register for JUDS 0820.

COLT 0812G. The Palestinian-Israeli Conflict in History, Literature, Film.
An examination of the Palestinian-Israeli conflict through the lens of cultural production. The course will explore the history of the conflict, from the 1947 partition of Palestine to the second Intifada in 2005, through major literary works and films juxtaposed with cultural and historical texts. We will discuss the way that literature and film provide us with humanistic and counterhegemonic narratives, interrogating issues such as nationalism, ethnicity, gender, colonialism, collective trauma and cultural resistance. Exploring the tension between historic and aesthetic production, we will look at how literary and cinematic works challenge, re-imagine and supplement political accounts of the conflict.

COLT 0812K. Film Classics: The Greeks on the Silver Screen (MGRK 0810).
Interested students must register for MGRK 0810.

COLT 0812M. Hamlet Post-Hamlet (ENGL 0150Z).
Interested students must register for ENGL 0150Z.
Interested students must register for ENGL 1360.

**COLT 0812P. Banned Books of Middle East.**
From Danish cartoons and fatwas to student protests and the stabbings of a Nobel laureate, in this course we will study several literary scandals that have rocked the Middle East since the mid-twentieth century. Our focus will be not only on the content and form of the texts themselves, but also on the historical, political, social, and cultural circumstances in which literature comes to have meaning for particular social and religious communities. Texts by Naguib Mahfouz, Sonallah Ibrahim, Salman Rushdie, Ahmed Naji, Mohammed Choukri, Magdy al-Shafee, Susan Abulhawa.

Interested students must register for MGRK 0810.

**COLT 1210. Introduction to the Theory of Literature.**
An historical introduction to problems of literary theory from the classical to the postmodern. Issues to be examined include mimesis, rhetoric, hermeneutics, history, psychoanalysis, formalisms and ideological criticism (questions of race, gender, sexuality, postcolonialism). Primarily for advanced undergraduates. Lectures, discussions; several short papers.

**COLT 1310B. Classics of Indian Literature (CLAS 1160).**
Interested students must register for CLAS 1160.

**COLT 1310C. Twentieth-Century Western Theatre and Performance (TAPS 1250).**
Interested students must register for TAPS 1250.

**COLT 1310D. Between Gods and Beasts: The Renaissance Ovid (ENGL 1360S).**
Interested students must register for ENGL 1360S.

**COLT 1310E. A Classical Islamic Education: Readings in Arabic Literature.**
This seminar introduces students to the essential texts of a classical education in the Arabic-Islamic world. What works of poetry, literary criticism, belles-lettres, prose, biography, geography, history, and other disciplines were considered staples of a well-rounded education in medieval Baghdad, Cairo, Damascus, or Fez? Emphasis will be placed on close and patient readings of primary sources. At least three years of Arabic required.

**COLT 1310G. Silk Road Fictions.**
This course introduces students to East-West comparative work. We will explore the history and politics of different methods of literary comparison, and diverse definitions of East and West. In particular we will ask how assumptions of cultural contact or isolation shape the way we bring together, say, a Chinese and a Greek poem, or interpret a documentary film about modern Indonesia. Themes will include: the "Silk Road," as a historical framework of cultural exchange across Afro-Eurasia; the "Axial Age" of independent civilizations; Orientalism; Hellenism; Pan-Asianism. The filmmaker of The Act of Killing will visit.

**COLT 1310H. Classics of Indian Literature (CLAS 1160).**
Interested students must register for CLAS 1160.

**COLT 1310I. Modern African Literature (ENGL1710J).**
Interested students must register for ENGL 1710J.

**COLT 1310K. History of the Romance Languages (FREN 1020B).**
Interested students must register for FREN 1020B.

**COLT 1310L. Political Commitment in Modern Arabic Literature.**
This course will explore the history of and debates surrounding political consciousness and commitment in modern Arabic literature. We will trace the diverse literary strategies by which authors, living under difficult political circumstances, expressed their criticisms and envisioned social and political justice. Beginning in the mid-20th century and continuing to the present, we will read and discuss landmark works of Arabic fiction in translation, and the debates that surround them. Authors include: Etel Adnan, Sonallah Ibrahim, Sahar Khalifeh, Tayeb Salih, and Hasan Blasim.

**COLT 1310N. Global Modernism and Crisis.**
The early twentieth century was marked by a proliferation of crises in politics, the economy, language, indeed in the very fabric of society. This interdisciplinary course will insist on the global dimension of crisis, analyzing how modernist artists in the metropolis and the periphery represented this situation in different, yet overlapping ways. We will also examine how modernist works provide unique ways of thinking about what is lost in a moment of crisis and what potential may arise out of it. Authors will include: Eliot, Huidobro, Dos Passos, Woolf, Galvão, Arti and Faulkner.

**COLT 1310P. Silk Road Fictions (EAST 1310).**
Interested students must register for EAST 1310.

**COLT 1310Q. Film Classics: The Greeks on the Silver Screen (MGRK 0810).**
Interested students must register for MGRK 0810.

**COLT 1310R. Film Classics: The Greeks on the Silver Screen (MGRK 0810).**
Interested students must register for MGRK 0810.

**COLT 1310S. Film Classics: The Greeks on the Silver Screen (MGRK 0810).**
Interested students must register for MGRK 0810.

**COLT 1410A. All the World’s a Stage: Seventeenth-Century Drama.**
Readings of representative English and continental plays of the 17th century including Shakespeare, Jonson, Corneille, Molière, Tasso, Calderon, and others. How do dramatists represent and negotiate oppositions between art and nature, imagination and reason, myth and history, freedom and fate through dramatic form and metaphor? Why is the stage such a powerful metaphor for the world?

**COLT 1410B. Chinese Opera: Aesthetics and Politics of the Performing Body.**
Explores traditional Chinese drama, which has always been a music theater, from the perspective of contemporary cultural theory, and in a comparative and interdisciplinary context. Analyzing classical plays in relation to their staging in today’s regional operas, this course will first examine the dialectics of “prettiness and artistry” in traditional Chinese theater aesthetics and its implications in gender politics. It will then move on to investigate issues of cross-dressing and erotic desire in Chinese drama of the late imperial period in comparison with that of early modern England. Lastly, the ramifications of Chinese opera as a national imagination in modern cultural politics, as embodied in the play M. Butterfly, the film Farewell My Concubine, and the Beijing opera version of Turandot, will be addressed.

**COLT 1410C. Chinese Theatre in the Mao Years.**
This course focuses on two major issues: policing traditional theater and "model revolutionary drama" as “a new proletarian culture.” The course will begin with a study of Mao Zedong’s ideas on literature and art in the light of contemporary cultural theory. It will then look at examples of the "new opera" and "new history play," examining them in relation to a complex of censorship issues concerning the exercise of political power in administering human life and the body, literature and drama as political representation, and the hermeneutics of censorship.

**COLT 1410D. Dramatic Literature and Theoretical Practice in Eighteenth-Century England.**
An introduction to the dramatic literature of 18th-century England in the context of contemporary theatrical conventions and innovations. Plays read alongside treatises on acting techniques, stage design, and contemporary theatrical pamphlet-debates. The sociopolitical contexts of the London patent theaters and the coexistent "illegitimate" entertainments are explored, as well as the influential effects of Continental theatrical theory and innovation.

**COLT 1410E. Japanese Theatre: from Dengaku to De Sade.**
Surveys traditional Japanese theatre from the lofty medieval Nō drama to the more popular genres of Jōruri (puppet theatre) and Kabuki in the Edo period (1600-1868). Through playscripts, related secondary criticism, videotapes, and films, we will examine the function of spectacle and theatre, the problem of representation or mimesis, the notion of audience, and the relation of text to performance. Concludes with more recent examples of Japanese drama and performance.
COLT 1410F. Medieval Drama.
How drama developed in northwestern Europe between the tenth and
early sixteenth century—from liturgical tropes and miracle plays to mystery
cycles and morality plays, from popular feasts and minstrel performances
to fool's plays, farces, and other secular comedies. Emphasis on the
cultural context and social functions of dramatic games and performances
in premodern Europe.

COLT 1410K. European Early Modern Drama.
An introduction to early modern drama in the French, Italian, Spanish,
and English traditions. The goal is to explore a wide range of imaginative
impulses in the Renaissance and Baroque periods. Readings will include plays
by Corneille, Racine, Calderón, Lope de Vega, Shakespeare, Machiavelli,
and Molière.

COLT 1410L. Philosophy and Tragedy.
Explores the intersection of philosophy and tragedy in western literature.
Readings may include Sophocles, Plato, Aristotle, Shakespeare, Hegel,
and Nietzsche.

COLT 1410M. Shakespeare and Philosophy.
Explores the relationship between Shakespeare and philosophy. Readings
include philosophers who have written about Shakespeare (Hegel,
Nietzsche, Cavell, and others), as well as philosophers who may illuminate
interpretive problems in Shakespeare (Plato, Seneca, Spinoza, and
others).

COLT 1410N. Found in Translation: The Adaptation of Literature to
Film in Japan.
Contrasting the demands of the text versus the screen, we will read eight
to ten works of modern Japanese literature and view the film versions
of each in order to discuss the problem of translation from one medium
to another. Possible works for inclusion are Rashomon, Harp of Burma,
Woman in the Dunes, and The Makioka Sisters. Finally, we will consider
manga (the graphic novel) and its adaptation into anime.

COLT 1410O. Shakespeare and
Canon formation and disciplinary divisions have deformed the way in
which we read Shakespeare. Frequently presented as a post-romantic
singular “author,” cut off from the sources, texts and genres on which he
drew and the collaborators with whom he worked, Shakespeare looks,
reads and performs differently in relation to the rich contexts in which the
plays were produced and through which they are produced today. We
will read plays and other materials with attention to formal and historical
questions including genre, the Shakespearean text, gender, sexuality,
status, degree, and nation.

COLT 1410P. Shakespeare.
We will read a number of Shakespeare’s plays from The Comedy of
Errors to The Winter’s Tale in relation to the sources, analogues, and
genres (classical, continental and English) on which he drew. We will
consider both formal and historical questions. Issues to be addressed
include genre, the Shakespearean text, gender, sexuality, status, degree,
and nation. Some attention to what has come to be called “global”
Shakespeare. Written work to include a mid-term and two papers.

COLT 1410S. Classical Tragedy.
This course will read the great Greek tragedies of Aeschylus, Sophocles,
and Euripides, and some Senecan tragedy. We will then read
Renaissance and later tragedies that use the classical world as a setting,
such as Antony and Cleopatra, Julius Caesar, and tragedies that rewrite
classical themes, including O’Neill’s Mourning Becomes Electra.

COLT 1410T. Tragedy from Sophocles to
The Wire.
Explores tragedy from Athens to Baltimore. Readings will include
Sophocles, Shakespeare, Hegel, Chekhov, Jia Zhangke,Chan-Wook
Park, Marx, Trotsky, and the deindustrialized American city. Open
to juniors and seniors. Instructor permission required.

COLT 1410U. Shakespeare in Perspective.
We study Shakespeare together with selections from other writers or
thinkers, including those who have written about Shakespeare (e.g.
Nietzsche, Emerson, Coleridge), and those who can illuminate interpretive
problems in Shakespeare (e.g. Plato, Melville).

COLT 1410V. Russian Theatre and Drama (TAPS 1430).
Interested students must register for TAPS 1430.

COLT 1410Y. Shakespeare and Embodiment (ENGL 1360Z).
Interested students must register for ENGL 1360Z.

COLT 1411B. Theater and Revolution.
This class explores how theater and dramatic literature question and
shape our understanding of “revolution” as a radical turn, incursive rupture,
and profound shift in the way we perceive and organize our social and
cultural life. How does drama accompany revolutionary movements, and
how do revolutions compel political theater to transform itself? Readings
include Aristophanes’ Lysistrata, Shakespeare’s Coriolanus, Büchner’s
Danton’s Death, Brecht’s Life of Galileo, and Parks’s The America Play.
We will analyze plays and performances, write our own dramatic scenes,
and discuss key concepts of theater theory and practice.

COLT 1411D. Antigones.
As one of the most revised and interpreted works around the globe,
Sophocles’ Antigone invites a comparison of adaptations across cultural
contexts. This course examines how the play’s exploration of citizenship,
law, gender, family, and resistance to authority has shaped philosophical
conceptions of tragedy and speaks to contemporary political issues. We
will consider reimaginings of Antigone under apartheid laws in South
Africa, the Mexican drug war, and in the age of ISIS. The class is designed
as a workshop where students will study versions of Antigone (theoretical
texts, dramatic literature, poetry, visual art) and engage in adaptation,
translation, and performance.

COLT 1420A. The Tale of Genji and its Legacy.
The Tale of Genji (circa 1000 CE), authored by Murasaki Shikibu, a
woman of the Heian court, has been canonized over the centuries as the
greatest work of Japanese literature. No work in the Japanese tradition
has exerted as much literary influence as this mammoth work of prose
fiction detailing the private lives of Genji, the brilliant son of the emperor,
theo with whom he consorts, and his descendants. We will read Genji
in its entirety, along with antecedent works, other texts of the period, works
influenced by Murasaki’s opus, other historical materials, and secondary
commentary. There are no prerequisites for this course and it is open to all
undergraduates.

COLT 1420B. A Mirror for the Romantic: The Tale of Genji and The
Story of the Stone.
In East Asian Buddhist culture, the mirror is a symbol of the mind in both
its intellectual and emotional aspects. These masterworks detail the lives
and loves of Prince Genji, cynosure of the medieval Japanese court,
and Jia Baoyu, the last hope of an influential Chinese clan during the reign of
Manchus. We examine both works as well as the sources of Genji and
literary aesthetics of the Tang dynasty.

COLT 1420E. The Nineteenth-Century Novel (ENGL 15611).
Interested students must register for ENGL 15611.

COLT 1420F. Fantastic and Existentialist Literatures of Argentina,
Uruguay and Brazil.
Jorge Luis Borges proclaimed that South American writers can “wield all
themes” without superstition, with irreverence. This course examines the
ways in which 20th century writers from Argentina, Uruguay and Brazil
appropriated European fantastic and existentialist fictions, taking them in
new directions. Readings, in English or original languages, include Borges,
Cortázar, Onetti, Lispector. Prerequisite: previous college literature
course(s).
COLT 1420G. Fictions of the Caribbean.
The Caribbean has inspired conflicting cultural and political claims, and a wealth of visual images. We will rethink the formation, representation and self-presentation of the Caribbean countries, steering our explorations through postcolonial and postmodern theory to questions of appropriation, language and identity. Readings from Columbus and Shakespeare to Danticat, Santos Febres and Kincaid; essays by Glissant, James Benitez Rojo and others.

COLT 1420K. Masterworks of Chinese Fiction.
Focuses on three acknowledged classics of Chinese fiction: Three Kingdoms, The Journey to the West, and The Dream of the Red Chamber. We then turn toward a number of Faulknerian novels consumed by members of such cultures (including gothic romance), and the changing symbolism of exotic settings. The literatures of the Caribbean countries, steering our explorations through postcolonial and postmodern theory to questions of appropriation, language and identity. Readings from Columbus and Shakespeare to Danticat, Santos Febres and Kincaid; essays by Glissant, James Benitez Rojo and others.

COLT 1420L. Modern Japanese Fiction.
Narrative fiction from the Meiji Period (1868-1912) to the present in the context of modern Japanese cultural and intellectual history. In addition to more canonical writers such as Natsume Soseki and Mori Ogai, we examine the legacy of women writers such as Higuchi Ichiyô and Enchi Fumiko; proletariat writers such as Hayama Yoshiki, Kobayashi Takiji, and Hayashi Fumiko; and more contemporary mass-audience writers such as Yoshimoto Banana and Yamada Eimi.

COLT 1420N. Postcolonial Faulkner.
How is it that Faulkner became one of the most influential North American authors in the Third World? To answer this, we read Faulkner's 'The Bear' against two of his citational novels, Absalom, Absalom! and The Sound and the Fury. We then turn toward a number of Faulknerian novels from the Arab world and Latin America. We discuss theoretical texts that describe the legacies of various colonialisms.

COLT 1420O. Proust, Joyce and Faulkner.
A reading of three major Modernist authors, with a focus on the following issues: role of the artist, representation of consciousness, weight of the past. Texts include substantial portions of Proust's Recherche, Joyce's Portrait and Ulysses, Faulkner's Sound and the Fury, Light in August and Absalom, Absalom! Prior background in these authors desirable, especially Ulysses.

COLT 1420Q. The Bildungsroman.
Readings of novels in the Bildungsroman tradition and the theoretical questions of the genre: the historicity and constitution of the self; problems of the representation of a life; the category of the unity of a life as a factor of identity; notions of progress, development and completion. Considerations of the successes and failures of this model. Readings to be selected from Rousseau, Chateaubriand, Sterne, Goethe, Novalis, Flaubert, Musil, Kerouac.

COLT 1420S. The Captivity Narrative.
Because the captivity narrative implies both a feminized subject and a writing subject, it provides a link among political, social, and literary phenomena common to all modern Western cultures. Examines various novels consumed by members of such cultures (including gothic romances, Bildungsromanen, boys books, girls books, ethnographic journeys, and prison diaries) as versions of the captivity narrative.

COLT 1420T. The Fiction of Relationship.
Explores the manifold ways in which narrative literature sheds light on the relationships that we have in life, both knowingly and unknowingly. The novel form, with its possibilities of multiple voices and perspectives, captures the interplay between self and other that marks all lives. Authors include Laclos, Melville, Brontë, Kafka, Woolf, Faulkner, Borges, Burroughs, Vesaas, Morrison, and Coetzee.

COLT 1420U. The South: Literatures of the U.S. South and South America.
For Jorge Luis Borges, in his story of the same title, the South is a spectral region, hovering between imagination and reality. The literatures of the U.S. South and South America enact his notion of the South. We examine the remarkable similarities between the two literatures-similarities that result from literary influence and from social, cultural, and historical circumstances. Prerequisites: previous upper-level literature course(s), relevant to your studies at Brown. Instructor permission is required and will be given after second class.

COLT 1420V. Visionary Fictions.
Visionary and apocalyptic writing, subversive of modes of perception and understanding as well as of political doctrines and systems, from Blake and Novalis to mid-nineteenth century French writers (Nerval, Rimbaud, Lautréamont), Surrealism and William Burroughs' Naked Lunch.

COLT 1421F. Esthers of the Diaspora: Female Jewish Voices from Latin America (POBS 1500H).
Interested students must register for POBS 1500H.

COLT 1421G. Dickens and Others (ENGL 1511G).
Interested students must register for ENGL 1511G.

COLT 1421I. The Paternalistic Thriller and Other Studies in Colonial Fiction.
The impact of colonialism on European fiction from the rise of empire to its decline and fall, focusing on authors who wrote from direct contact with the peoples of Africa and Asia, such as Rudyard Kipling, Joseph Conrad, T. E. Lawrence, E. M. Forster, and Isak Dinesen. Topics will include romantic images of conquest, imperial ideology in literature, differing attitudes towards acculturation, and the changing symbolism of exotic settings.

COLT 1421K. Faulkner (ENGL 1710G).
Interested students must register for ENGL 1710G.

COLT 1421L. "Terrible Beauty": Literature and the Terrorist Imaginary (ENGL 1760I).
Interested students must register for ENGL 1760I.

Interested students must register for ENGL 1761T.

COLT 1421N. Kafka's Writing (GRMN 1340M).
Interested students must register for GRMN 1340M.

COLT 1421O. W. G. Sebald and Some Interlocutors (ENGL 1761Q).
Interested students must register for ENGL 1761Q.
COLT 1421Q. Word and Image:  *Ekphrasis, the Iconic Narrative, and the Graphic Novel.*
An examination of the tradition of illustrated narratives from the pre-modern to the modern periods: the ancient Indian epic the *Ramayana*, the early eleventh-century Japanese *Genji Monogatari*, the medieval English *Canterbury Tales*, the late eighteenth century *Marriage of Heaven and Hell*, as well as the contemporary graphic novel *Persepolis* and examples of Japanese manga. Discussion will focus on the nature of iconography and symbolism; the historical privileging of text over image; the significance of parallel visual and verbal representation and its implications for culturally-specific theories of reading. Instructor permission required.

COLT 1421R. The European Novel from Richardson to Goethe.
This course studies the rise of the novel in eighteenth-century England, France, and Germany, focusing on the development of epistolary fiction, but with side-glances at the picturesque and sentimental tradition. Texts to be read include Richardson's *Pamela*, Fielding's *Shamela* and Joseph Andrews, Rousseau's Julie, Laclos's *Les liaisons dangereuses*, perhaps Bernard de Saint-Pierre's *Paul et Virginie*, perhaps Sade's Justine, and definitely Goethe's *Sorrow of Young Werther*.

COLT 1421S. The Poetics of Confession (ENGL 1561J).
Interested students must register for ENGL 1561J.

Sun-drenched, seductive, and timeless, the Mediterranean is an appealing location from which to ponder Europe's debt to this cradle of western civilization. Recently, the region's economic debt crisis has crystallized thoughts that, beginning here, a peaceful, unified Europe will come undone or be rehabilitated. The word 'crisis' itself hinges on a making a crucial decision, often in marking the turning point of a disease. This course examines representations of this moment through literature and film—but also in history, anthropology, journalism, and art—and in the context of other pivotal twentieth-century Mediterranean texts that marked, and anticipated, seismic shifts on the continent.

COLT 1421U. Words Like Daggers: The Epistolary Novel.
Letters as novels, novels in letters: this course traces the development of the epistolary novel, as it was cultivated in Europe from the seventeenth to the twentieth centuries. Through focused discussions of seminal, as much as fascinating, specimens of the genre, we will study the major impact that epistolary fiction had on the stylistic and conceptual evolution of the novel in general, also exploring its interactions with a range of established or shifting social structures, gender roles, discursive practices, and modes of consciousness. Authors include Montesquieu, Laclos, Goethe, Hölderlin, Stoker, Foscolo, Tabucchi, Alexandreux, and Galanaki.

COLT 1421V. Modernisms North and South: James Joyce and Roberto Bolaño.
James Joyce's *Ulysses* (1922) and Roberto Bolaño's *The Savage Detectives* (1998) are weighty, influential, often intimidating works that bookended literary production in the twentieth century. Both are also moving narratives about humans with different sorts of artistic, emotional, and bodily ambitions, grappling with new forms of subjective and collective life in modernity, trying to work out their own place within social, political and artistic systems. Join Stephen Dedalus, Leopold and Molly Bloom, Ulises Lima and a cast of minor characters as they make their way through the hearts, minds, memories, and nervous systems of a range of modern metropoles.

COLT 1421W. Blast from the Past: The Historical Novel.
Focuses on a popular literary genre known as the historical novel. We will discuss its defining characteristics, cultural meanings, and basic differences from other types of fiction. We will also explore larger theoretical issues that are intricately related to the development and scope of the genre: the representation of the past and its relationship to the present; the creative integration of the gaps between factual history and lived experience; and finally the complex interaction between authenticity and fictionality, exemplarily and specificity, temporality and detachment. Authors include Flaubert, Youcenar, Kadare, Pamuk, Calvino, Lampedusa, Reisdis, and Galanaki.

COLT 1421X. Fairy Tales and Culture (FREN 1330A).
Interested students must register for FREN 1330A.

COLT 1421Y. The Twilight Zone: Classics of Horror Fiction.
This course discusses a number of seminal works—from Gothic novels to ghost stories and vampire epics—that exploit the oldest and strongest emotion of mankind: fear. Why are authors and readers fanatically drawn to something as disturbing as horror, supernatural or not? How do the gruesome or the macabre become sources of intellectual excitement and aesthetic gratification? How can texts whose intended effect is to shock and distress compel us to confront suppressed instincts, challenge deep-rooted certainties, or reflect on things and ideas that we generally prefer to ignore? Are you brave enough to find out?

COLT 1421Z. Family Fictions in the Enlightenment.
This course will study the changing representation of the family in the literature, art and culture of Enlightenment Europe. We will analyze the critique of traditional models of the family and the construction of an ideal of domesticity based on new concepts of childhood, education and marriage. We will read stories of "domestic misfortunes" as well as proposals for alternative solutions to "ill husbandry." Readings will include novels, plays, theoretical texts and visual documents (paintings and caricatures).

COLT 1422A. The 19th-Century Novel: Transatlantic Perspectives.
What happened when the novel crossed the Atlantic? After its rise in Europe in the mid 18th century, the novel quickly spread and became a dominant literary genre both in the U.S. and in Latin America. In this course we will read key 19th-century novels in the European tradition; we will then discuss how this (by no means homogenous) European genre was assimilated and modified across the Atlantic. What did writers in Brazil and in the U.S. do with the genre, and how did they transform it according to national specificities? We will focus on English, French, American, and Brazilian novels.

COLT 1422B. Short Forms: Major Works in a Minor Key (HISP 1330Q).
Interested students must register for HISP 1330Q.

COLT 1422C. Medieval Fictions: On Debts, Crises, and the Ends of Europe (MGRK 1230).
Interested students must register for MGRK 1230.

This course will examine how the modernist novel is not only about alienation—estrangement from others, the meaninglessness of existence, the divorce of private self from public life—but also incorporates alienation into its narrative structures. Through the close analysis of novels by European and Latin American authors (Kafka, Camus, Woolf, Onetti, Rulfo and Di Benedetto), we will consider alienation from a variety of angles: as a formal problem for narrative; as an existential situation; an experience of history and the past; and as a condition related to the uneven global economy.

COLT 1422E. Reading the Short Story.
This course invites students to explore the pleasurable challenges of close reading within the context of a compressed form, the modern short story. Select works from the nineteenth century on wards—many of them masterpieces, some hidden gems from around the world—will help us question what we think they mean and how we know this. We will develop practices and techniques for articulating such quandaries even as we observe how sociocultural themes, theories of interpretation, and literary movements intertwine with expressions of the self and the politics of identity. No prerequisites. Open to all undergraduates.
COLT 1422N. Peasant-Boom-Slum: The Latin American Novel. Despite being associated with peasants and agricultural goods, Latin America has become the most urbanized region in the world. In this course, we will analyze novels that attempt to make sense of Latin American society in relation to this chaotic and rapid historical transformation. Beginning with nineteenth-century writers who called on civilization to conquer the barbaric countryside, we move to the so-called "Boom" novels of the twentieth century that ambiguously questioned the authoritarian and destructive impulses of this modernizing project, and conclude with contemporary authors who reflect on the utter collapse of modernization. In these novels, we will see that the topic of the city and the countryside becomes a powerful framework for imagining and thinking through issues of indigeneity, gender, industrialization, memory and dictatorship. Authors: Borges, Arlt, Galvão, Ruíllo, Fuentes, Vargas Llosa, Arguedas, Lispector, Bolano, and Aira.

COLT 1430A. Ancient Greek Myth in Modern Poetry. Various responses to ancient Greek myths by poets in the Western tradition, especially modern Greek poets. Considers how the classical version of myths, such as those of Helen, Oedipus, Orpheus, Persephon, Penelope, and Ulysses, are approached, rewritten, or subverted in poetry since 1800. Emphasizes the challenges posed by the past, issues of cultural and political context, and on questions of gender. Readings in English.

COLT 1430B. Art and Exemplarity in Medieval and Early Modern Literature. In this course we will cover a selection of Classical, Medieval and Early Modern works from various linguistic traditions (English, French, Italian, Portuguese, and Spanish), which feature literary representations of art, especially via scenes that are ekphrastic in nature (the description of Achilles's shield in Homer's Iliad, for instance), and via textual moments that use exemplary ekphrastic scenes as a point of departure for larger commentaries on: the nature of art, the role of the artist, and the reception of works of art along with their attendant socculturational impact. Taking moments of renegotiation, critique, and resistance towards dominant hierarchies as a helpful framework, along with texts that explicitly situate themselves against the exemplary model from which they are drawing, we will give special attention to race and gender by examining the artistic representation of marginalized bodies that are explicitly gendered or racialized in the literary texts in which they appear. We will also look at race and gender in select works from Medieval and Early Modern artists.

COLT 1430C. Classical Japanese Poetry. A historical study of various poetic forms of waka or Japanese poetry from the 8th-century anthology, the Man'yoshu, to the advent of modern verse, including jiyushi or free verse, in the latter part of the 19th century. Focuses on the relationship of poetry to religion, the political implications of waka, and the dominant aesthetic governing poetic conventions in different periods.

COLT 1430D. Critical Approaches to Chinese Poetry. Examination of works of Chinese poetry of several forms and periods in the context of Chinese poetic criticism. Knowledge of Chinese not required, but provisions for working with original texts will be made for students of Chinese language.

COLT 1430H. Poetry, Art, and Beauty. What does it mean to be beautiful in classical and European literature and the arts? How do poems and works of visual art embody beauty? How is the idea of beauty defined by thinkers from Plato to Benjamin and beyond? We will examine such recurring themes as love, loss, and longing; war, exile, and homeland; cultural heritage (turath) and creative innovation (ibda'); gender and genre. All readings in Arabic; at least three years Arabic language study (or equivalent) required for enrollment.

COLT 1431B. Modern Arabic Poetry. An advanced course with readings in modernist Arabic poetry, beginning with the so-called neo-classical poets and proceeding through Romanticism and Modernism, from Egypt to Lebanon, Palestine, Iraq, and beyond. We will examine such recurring themes as love, loss, and longing; war, exile, and homeland; cultural heritage (turath) and creative innovation (ibda'); gender and genre. All readings in Arabic; at least three years Arabic language study (or equivalent) required for enrollment.

COLT 1431C. Poets, Poetry, and Politics. The award of the 2016 Nobel Prize for Literature to Bob Dylan ignited a lively debate about who is, and who is not, a poet. Historically, who were deemed poets, what was their function? What do their poems do and why do they matter? Do they foment revolution or "make nothing happen," as Auden once wrote? How does the poet aspire to a unique, individual voice even as he or she may (be seen to) best represent a constituency? This course relates the poetic act to political action and interrogates the commonly aired contention that politics makes for bad poetry.
COLT 1431D. Reading Modernist Poetry.
The period between 1880 and 1950, generally known as the age of Modernism, saw profound changes at every level of Western society, including politics, war, religion, and art. In this course, we will examine how various poets in Europe and beyond responded to and helped shape these changes through their art. Emphasis will be on reading for form as well as theme and socio-historical context, and on poetry as performance. Authors may include Yeats, H.D., Hughes, Rilke, Lasker-Schüler, Celan, Apollinaire, Césaire, Montale, Ungaretti, Blok, Akhmatova, Lorca, and Neruda. Knowledge of at least one non-English language highly recommended.

COLT 1431E. Loss in Modern Arabic Literature.
This course examines the literary expression of and response to various forms of loss, including military defeat, diaspora, and prison confinement in Arabic poems, short stories, and novelias from the 20th century through the post-Arab Spring. We explore how texts reimagine social and political geographies through diverse poetic and narrative techniques to enrich our understanding of the region and of central debates in its literary tradition. Though the topics may seem quite grim, we will find that many of the readings render forms of loss into aesthetics of beauty or empowerment. No knowledge of Arabic necessary.

COLT 1431F. Reading Modernist Poetry.
The period between 1880 and 1950, generally known as the age of Modernism, saw profound changes at every level of Western society, including politics, war, religion, and art. In this course, we will examine how various poets in Europe and beyond responded to and helped shape these changes through their art. Emphasis will be on reading for form as well as theme and socio-historical context, and on poetry as performance. Authors may include Yeats, H.D., Hughes, Rilke, Lasker-Schüler, Celan, Apollinaire, Césaire, Montale, Ungaretti, Blok, Akhmatova, Lorca, and Neruda. Knowledge of at least one non-English language highly recommended.

COLT 1440B. Killer Love: Passion and Crime in Fiction and Film.
Discusses textual and cinematic representations of criminal passion and its ambiguous relationship to religious, moral, and social norms. We will focus on extreme forms of intimacy both as a thematic choice of cultural production and as a symbolic medium of communication. Why is it that art so often explores unsanctioned emotions and deviant behaviors? What is at stake when narratives capitalize on violent manifestations of desire? In what ways is the semantics of excessive love related to conceptions of subjectivity, sociability, and sexuality? What role does it play in the creative process itself?

COLT 1440F. 1948 Photo Album: From Palestine To Israel.
Why do we name the "Israeli-Palestinian conflict" as we do? The purpose of this class is to use photographs – alongside historical and literary documents—to question the framework of a "national conflict" and study its emergence as a given, unquestioned and axiomatic scheme for any historical narrative of that period. Reading archival material and post-colonial and photography theories, each week we will study one photograph taken in 1948, reconstructing the photography event as well as its myriad relations among the protagonists involved and its after life as an archived image, to include photographed persons, photographers, editors, journalists, politicians, and more.

COLT 1440H. The Literature and Cinema of Global Organized Crime (SLAV 1500).
Interested students must register for SLAV 1500.

COLT 1440K. Israeli-Palestinian Conflict: Contested Narratives (UNIV 1001).
Interested students must register for UNIV 1001.

COLT 1440M. Lyric Genre-Benders.
In this course, we will ask what constitutes poetic language and how to identify the lyric as a genre. Are there discernible traits that lyric poems share, or is poetry, like pornography, something we recognize only when we see it? We will have a special focus on how genre is related to gender, and consider the historical precedent of poetry calling readers to its defense. Discussion will revolve around essays on lyric theory both classic and contemporary, prose poems by Baudelaire and Davis, fragments by Sapnho, and finally, poems by Basho, Dickinson, Rankine, and more.

COLT 1440P. Nationalism and Transnationalism in Film and Fiction.
Reports of the demise of nationalism always seem greatly exaggerated. How are notions of transnationalism dependent on rewriting the nation? This course revises films of world cinema acclaimed for their national cachet from a transnational perspective and in dialogue with their literary intertexts. We will study these films’ fictional narration, cinematic articulation, and critical reception and consider how they signify in multinational networks of funding, distribution, production, conception, and critical reception. Students will analyze the political, ethical, and artistic stakes of confronting difference as both a located and universal stance or commodity. Films and texts chosen from across the globe.

COLT 1440Q. Stranger Things: The German Novella (GRMN 1440X).
Interested students must register for GRMN 1440X.

COLT 1440S. Images d’une guerre sans nom: the Algerian War in Literature and Film (FREN 1410R).
Interested students must register for FREN 1410R.

COLT 1440T. Cinema’s Bodies.
The course explores the cinematic construction of bodies, female, male, animal and others. They are not standing alone as they are framed, cut, exposed, veiled, enlarged, distorted and gendered. The body is screened at the screen and composed into an imaginary image of beauty, death, sex, work. Cinematic devices like close-up, camera angle, light etc. transform bodies into the body of the film and its specific style, from which they can't be subtracted. This leads to the question of the spectator’s body as screen for the filmic body and the many theoretical explorations to the embodied visions cinema entails and stimulates.

COLT 1440U. The Listener (Literature, Theory, Film).
Listening is not only the supposedly peaceful, welcoming activity that verges on mere receptive passivity. Listening or not listening also has to do with the exercise of power and this is the reason why we have a responsibility as listeners. In order to explore what could be described as the politics of listening, we will follow multiple paths that will lead us from the strategies of listening in concert venues to the medical practice of auscultation and the generalization of surveillance techniques. Our seminar will interweave readings in literature or theory (Kafka, Nietzsche, Calvino, Foucault, Chekhov, Freud, Deleuze…) and screenings of selected filmic scenes.

COLT 1440X. Shéhérazades: Depicting the "Oriental" in Modern French Culture.
Centered around the storied figure of Shéhérazade, this course explores literary and visual representations of “oriental” women in France from the 18th century to the contemporary period. Structured in a chronological and thematic manner, the course confronts students with highly influential orientalist depictions of women (including Voltaire, Loti, and Delacroix), as well as postcolonial and feminist responses to orientalism. Primary sources will be supplemented with theoretical readings from Edward Said, Fatima Mernissi and Joan Scott among others, in order to question the evolution and relevance of “orientalism” in France today and articulate the enduringly complex relation between imperialism and gender.

COLT 1440Z. Poets on Poetry.
How do poets think about poetry? How might their ideas differ from those of professional theorists and critics? In this course we will look at the variety of ways in which poets throughout history have written about their craft, from essays and letters, to poems, translations, and writing guides. In addition to discussing issues surrounding the theory, composition, and ethics of poetry, students will write poems of their own, according to the “rules” of famous poets like Edgar Allan Poe and John Keats. Authors may include Celan, Gander, Hayes, Horace, Lorde, Montale, Moore, Neruda, Pound, Shelley, Swensen.

COLT 1610A. The Sublime (ENGL 1901N).
Interested students must register for ENGL 1901N.

COLT 1610B. Irony.
COLT 1610C. Japanese Aesthetics and Poetics. Focuses on the historical development of aesthetic values and their relation to social culture, religion, and national identity in Japan from the Nara period to the 20th century, with particular emphasis on the literary arts. Readings from Fujiwara Teika, Zemi Motokoyo, Sen no Rikyû, Okakura Tenshin, and others. A background in critical theory/philosophy and in East Asian studies helpful.

COLT 1610D. Theory of Lyric Poetry. Through readings of recent critical discussions of the lyric genre, we will explore general methodological problems of literary theory. Discussions include: the role of form, structure, and tropes in analysis; "tropes"; "genre"; problems of subjectivity and voice; the relation between poetry and history; the function of reading: and the problematic "objectivity" of criticism. Readings from Hölderlin, Shelley, Baudelaire, Yeats, Jakobson, Benveniste, Riffaterre, Jauss, Johnson, De Man.

COLT 1610E. Aesthetics and Politics (ENGL 1900E). Interested students must register for ENGL 1900E.

COLT 1610F. New Theories for a Baroque Stage (TAPS 1280N). Interested students must register for TAPS 1280N.

COLT 1610G. Mihail Bakhtin (RUSS 1895). Interested students must register for RUSS 1895.

COLT 1610I. Getting Emotional: Passionate Theories (ENGL 1560W). Interested students must register for ENGL 1560W.

COLT 1610J. Holocaust Literature (JUDS 1820). Interested students must register for JUDS 1820.

COLT 1610L. What is Reading?. The answers to this question will be read—deciphered—in the many "reading scenes" found throughout the history of literature or philosophy. In Plato's Phaedrus, reading thus appears caught in a network of desire and power: the dominant role—the erases ("lover") who writes and teaches—and the passive or submissive position—the enmencial ("beloved") who reads and learns—are constantly permuted and destabilized. Hobbes's Leviathan, Melville's Moby Dick and Billy Budd, Goethe's and Valéry's Faust will lead us to question what we do when we read and reflect upon what could be called a politics of reading.

COLT 1610M. Twentieth-Century Russian Approaches to Literature: Bakhtin and the Russian Formalists (SLAV 1890). Interested students must register for SLAV 1890.

COLT 1610N. Ecological Thought. This course will serve as an introduction to the new interdisciplinary field of the environmental humanities. Discussing an exciting range of texts and films—from Mary Shelley, Virginia Woolf, and Arundhati Roy to Ridley Scott and Werner Herzog—we will investigate how literary and cinematic works make ecological crisis perceptible. The following topics will be explored: (a) how do these texts radical and how does their radicalness opens paths of refusal, care and repair of and in shared worlds; (b) how do the authors engage with identities made and remade by displacement and catastrophe, and how imagination, fabulation, remembrance and reclamation of never-completely-lost worlds are mobilized to question these identities, borders and injustices they produce. We will read texts by Ella Shohat, Houria Bouteldja, Saidiya Hartman, Susan Strymcovics, Anarkata, Aliyjah Abdur-Rahman, Lilal Levy and others.

COLT 1610O. Of Friends and Enemies. "And so will believe in our stellar friendship, though we should have to be terrestrial enemies to one another," Nietzsche says. How are friendship and enmity construed in the Western traditions? What are the philosophical and ethical implications of dividing one's personal, cultural, and political world into friends and enemies? What is the elusive relation between friendship and community, hospitality, war, and mourning? We will scrutinize the history and theory of friendship and enmity through close readings of writers such as Plato, Aristotle, Cicero, Montaigne, Kant, Emerson, Nietzsche, Freud, Heidegger, Schmitt, Blanchot, Nancy, and Derrida. Students from diverse fields welcome.

COLT 1610T. Introduction to Literary Translation. This is a workshop course introducing the history and theory of literary translation, with demonstrations and exercises translating poetry and prose. All languages welcome, but students must be proficient to the level of reading literature in the original language. Foreign language through 0600 or permission of the instructor.

COLT 1610U. Gender, Sexuality, and Culture in the Modern Middle East. An introduction to women's and gender studies in the Middle East, with a particular focus on Arabic literature and film. We will begin by laying critical foundations for discussing gender issues in the Middle East, with readings on Orientalism, the hareem, and the veil. Other units include: pre-modern female literary personae, gender and revolution, women writing war, feminism and class, colonialism and culture.

COLT 1610V. The Promise of Being: Heidegger for Beginners. "The most thought-provoking thing in our thought-provoking time is," Martin Heidegger writes, "that we are still not thinking." Our undergraduate seminar will study, slowly and carefully, some of Heidegger's most fascinating and challenging paths of thinking, especially as they relate to questions of Being and our being-in-the-world. We will encounter his unique engagements with art and literature, his critique of modern technology, his reflections on what it means to "dwell" somewhere, his views on finitude and death, and his notion of being "on the way" toward language. No previous familiarity with Heidegger is assumed; curious students from diverse fields welcome.

COLT 1610W. Whites, White Jews and Us: Radical Black, Arab & Jewish Thinkers. Inspired by Houria Bouteldja's book White, Jews and Us, which we will read in class, we will read authors who are engaged with generations of (forced) displacement and concomitant fraught cartographies. The class will proceed along lines drawn by two questions: (a) what makes these texts radical and how does their radicalness opens paths of refusal, care and repair of and in shared worlds; (b) how do these authors engage with identities made and remade by displacement and catastrophe, and how imagination, fabulation, remembrance and reclamation of never-completely-lost worlds are mobilized to question these identities, borders and injustices they produce. We will read texts by Ella Shohat, Houria Bouteldja, Saidiya Hartman, Susan Strymcovics, Anarkata, Aliyjah Abdur-Rahman, Lilal Levy and others.

COLT 1710A. Introduction to Literary Translation. This is a workshop course introducing the history and theory of literary translation, with demonstrations and exercises translating poetry and prose. All languages welcome, but students must be proficient to the level of reading literature in the original language. Foreign language through 0600 or permission of the instructor.

COLT 1710B. Advanced Translation (LITR 1010F). Interested students must register for LITR 1010F.

COLT 1710C. Literary Translation Workshop. The primary focus of this course is the practice of literary translation as an art. Using the workshop format, each student will complete a project by the end of the semester. Examples and theoretical texts will illuminate the historical, ethical, cultural, political, and aesthetic values that underlie every translation, keeping an eye towards opening up the field beyond inherited practices to consider the contemporary implications of our choices, intentions, and purposes in translation. Open to all levels. Heritage speakers are welcome, collaboration is permitted, and an open-spirited approach to this developing and fascinating practice is strongly recommended.

COLT 1710D. Theory of Lyric Poetry. Through readings of recent critical discussions of the lyric genre, we will explore general methodological problems of literary theory. Discussions include: the role of form, structure, and tropes in analysis; "tropes"; "genre"; problems of subjectivity and voice; the relation between poetry and history; the function of reading: and the problematic "objectivity" of criticism. Readings from Hölderlin, Shelley, Baudelaire, Yeats, Jakobson, Benveniste, Riffaterre, Jauss, Johnson, De Man.

COLT 1710E. Aesthetics and Politics (ENGL 1900E). Interested students must register for ENGL 1900E.

COLT 1710F. New Theories for a Baroque Stage (TAPS 1280N). Interested students must register for TAPS 1280N.

COLT 1710G. Mihail Bakhtin (RUSS 1895). Interested students must register for RUSS 1895.

COLT 1710I. Getting Emotional: Passionate Theories (ENGL 1560W). Interested students must register for ENGL 1560W.

COLT 1710J. Holocaust Literature (JUDS 1820). Interested students must register for JUDS 1820.

COLT 1710L. What is Reading?. The answers to this question will be read—deciphered—in the many "reading scenes" found throughout the history of literature or philosophy. In Plato's Phaedrus, reading thus appears caught in a network of desire and power: the dominant role—the erases ("lover") who writes and teaches—and the passive or submissive position—the enmencial ("beloved") who reads and learns—are constantly permuted and destabilized. Hobbes's Leviathan, Melville's Moby Dick and Billy Budd, Goethe's and Valéry's Faust will lead us to question what we do when we read and reflect upon what could be called a politics of reading.

COLT 1710M. Twentieth-Century Russian Approaches to Literature: Bakhtin and the Russian Formalists (SLAV 1890). Interested students must register for SLAV 1890.

COLT 1710N. Ecological Thought. This course will serve as an introduction to the new interdisciplinary field of the environmental humanities. Discussing an exciting range of texts and films—from Mary Shelley, Virginia Woolf, and Arundhati Roy to Ridley Scott and Werner Herzog—we will investigate how literary and cinematic works make ecological crisis perceptible. The following topics will be central to our discussions: garbology (especially hoarding, collecting, and the relation between trash and modern poetry); "slow violence" and postcolonial environmentalism; queer ecology; biopolitics; the representation of non-human animals; the effects of 24/7 consumerism; and the political uses of ecological nostalgia, disgust, grief, and wonder.

COLT 1710P. Holocaust Literature (JUDS 1820). Interested students must register for JUDS 1820.

COLT 1710Q. Gender Theory and Politics in France (FREN 1420C). Interested students must register for FREN 1420C.

COLT 1710R. Visions of Liberation: African Decolonization Now?. If, as many African thinkers contend, the acquisition of formal national independence did not signify liberation, it is necessary to imagine decolonization now. In "Visions of Liberation," we will examine ideas, particularly those of Césaire and Fanon, that have shaped decolonial thinking in Africa. What is the contemporary relevance of notions of freedom imagined by thinkers of the early and mid-twentieth century? How have postcolonial and post-apartheid writers conceived of freedom? What does it mean to call Mail a "postcolony" or "neocolony," or to state that South Africa is not postcolonial? Previous knowledge of the topic is not required.
COLT 1710D. Exercises in Literary Translation.
Exercises and investigations in the history, theory, and practice of literary translation. Students pursue individual projects for translation workshops. Common exercises draw on Shakespeare translation, from classic translations in Europe to unique examples like Nyerere’s Swahili Caesar and current projects like Shakespeare in Modern English or The Chinese Shakespeare. Prerequisite: one foreign-language course in literature at 1000-level (or equivalent).

A consideration of various genres of women's writing from 700 to 1450 C.E., focusing on such issues as literary conventions, the relationship to the vernacular, the role of religion in education, and questions of gender and social class. Writers may include Berthghyt, Murasaki Shikibu, Sei Shōnagon, Héloïse, Marie de France, the comtesse de Dia, Ladu Nij#, Julian of Norwich, Christine de Pisan, and various anonymous women.

COLT 1810B. Aesthetics in the Colonial Frame.
Draws together works from a wide range of contexts and genres: Enlightenment philosophy, romantic travel literature, Arabic novels and poems to compose a conversation about aesthetics in the colonial context of Egypt. Senior Seminar.

COLT 1810C. City (B)Lights.
Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images, American cities and literary works are foregrounded.

COLT 1810E. Dwellers Amid the Clouds: the Literature of the Court.
A survey of three court traditions—Heian Japan, medieval Iceland, and early modern England—in which the relationship between the literary genres and the specific social context from which they emerge is highlighted in the form of particular literary conventions. Topics include the question of patronage, the function of particular literature as shibboleth, the idea of spectacle and play, the politics of literature, and the trope of irony as courtly emblem.

COLT 1810F. Enlightenment and Anti-Enlightenment in Eighteenth-Century Germany.
Some of the most intractable questions of contemporary philosophy were vigorously debated in eighteenth-century Germany. What are the limit of reason? Does its supposed neutrality and universality mask its own set of prejudices? Are there any universally valid claims in truth or ethics? How, why, should Christian, Jew, and Muslim tolerate their differences? We will read literary and philosophical works by Hamann, Herder, Jacobi, Kant, Lessing, and Mendelssohn.

COLT 1810G. Fiction and History.
How the historical fiction that has flourished over the past four decades challenges the notions of objectivity and totalization, while providing alternative viewpoints for the reconstruction and reinterpretation of the past. Authors considered include Grass, Doctorow, Delillo, García Márquez, Allende, Danticat and Gordimer. Theoretical texts by White, LaCapra, Benjamin, Ricoeur, and Chartier. Films such as The Official Story and Europa, Europa will be viewed and incorporated into the discussions. Prerequisite: two previous courses in literature. Enrollment limited to 25. Instructor permission required.

COLT 1810H. Tales of Two Cities: Havana - Miami, San Juan - New York.
In this course we will compare representations of Havana and San Juan in contemporary fiction and film to literary inscriptions of Cuban Miami and Puerto Rican New York. We will explore mapping the city as mapping identity and city-writing as reconstruction and creation, viewing through the eyes of children, tourists, and urban detectives. Authors include Antonio José Ponte, Roberto G. Fernández, Mayra Santos Febres and Ernesto Quíñones. Good preparation for study abroad on the Brown-in-Cuba program. Not open to first year students.

COLT 1810I. Gates of Asia.
An exploration of the growth of European knowledge of Asia from the rise of the Mongol empire through the Great Game and its aftermath. Primary sources include three kinds of accounts provided by travelers who set their hearts on Asian exploration: personal narratives, official reports and dispatches, and scholarly studies of the exotic cultures. Enrollment limited to 20.

COLT 1810J. History and Aesthetic Form.
In this course, we will examine the co-articulation of theories of history with theories of language and aesthetics. Focus will be on the interdependence between an emerging interest in history and the origin of language, and approaches to literary history, genre definition, and general aesthetic categories. Readings to be selected from Vice, Rousseau, Herder, Lessing, Schiller, Negel, Novalis, Lukacs, Adorno, Derrida and De Man.

COLT 1810L. Housing Problems.
Examines architectural figures and problems of containment and construction in a variety of literary and theoretical texts. We will consider how images of buildings structure texts and outline spaces for subjectivity. Themes include the gothic, haunted houses, foundations, ruins, walls, and doors. Texts selected from Descartes, Derrida, Goethe, Hegel, Austen, Coleridge, Poe, Baudelaire, Melville, Hawthorne, Kafka, Tschumi and Borges.

An examination of the tradition of illustrated narratives in several premodern cultures: the early 11th-century Japanese Genji Monogatari, the medieval English Canterbury Tales, and the ancient Indian epic the Mahābhārata. Discussion focuses on the nature of iconography and symbolism; the historical privileging of text over image; the significance of parallel visual and verbal representation and its implications for culturally-specific theories of reading. Seminar.

COLT 1810N. Freud: Writer and Reader.
A broad survey of Freud's writings, with particular emphasis on psychoanalysis' relevance to literary theory and cultural analysis. Readings include Freud's major works, as well as secondary sources focused on applications to literary studies.

COLT 1810O. Latin American Literature in Dialogue with France.
Complicates the question of influence in Latin American literary and intellectual self-fashioning, specifically with regard to France. Explores the productivity and perplexity of this relationship through romanticism and articulations of the real (as realism, surrealism and magical realism). Approaching the twenty-first century, considers Latin American perspectives on French theories of feminism, postmodernism and globalization.

COLT 1810P. Literature and Medicine.
The purpose of this course is to examine a number of central issues in medicine-disease, pain, trauma, madness, the image of the physician— from the distinct perspectives of the sciences and the arts. Texts will be drawn from authors such as Sophocles, Hawthorne, Gilman, Tolstoy, Kafka, Anderson, O'Neill, Hemingway, Ionesco, Verghese, Barker, Sacks, Foucault, Sontag, Scarry, Gawande and others. Open enrollment course: lecture + section.

COLT 1810Q. Literature and Money in the Age of Paper.
Focuses on the complex and highly ambivalent relationship between literature and money in nineteenth-century European literature. Works by Poe, Balzac, Dickens, Baudelaire, Stevenson, Hardy, and Zola. Relevant philosophical writing by Smith, Marx, Nietzsche, and Derrida.

COLT 1810S. Literature and the City.
Literature's obsession with the modern city, in 19th- and 20th-century American, English, and French fiction and poetry, in writers such as Blake, Whitman, Balzac, Dickens, Baudelaire, Rimbaud, Eliot, Williams, Bellow, Morrison. Opportunities for work in other literatures and genres, e.g., in Germany, Brecht.
COLT 1810T. Literature and the Culture of Capitalism.
This course will examine the literary responses to capitalism in terms of five organizing tropes: regionalism, urbanization, consumerism, aestheticism, and modernism. Our investigation will begin sometime in the early 19th-century with the moment that consolidated conditions favorable for industrialization and conclude in the first decade of the 20th-century with literary modernism and the collapse of the cultural myths of progressive enlightenment and democracy. Readings include texts by Wordsworth, Thucydides, Marx, H. Rider Haggard, Stowe, Carroll, Zola, Wilde, Stoker, Freud. Three papers and a final essay.

COLT 1810U. Angela’s Ashes and What Went Before: Irish Immigration and Literary Creation.
Readings in the major works of Joyce, Beckett and Farrell, without forgetting Jonathan Swift and William Butler Yeats.

COLT 1810V. Marx and Modern Literature.
A contrastive and integrative study of the range of Marx’s writings and works by writers such as Shakespeare, Dickens, Balzac, Flaubert, Woolf, and Stevens. Examines Marx’s leading concepts in philosophy, history, economics, ideology, and aesthetics in relation to the particularities of literary forms. One or two short papers and a longer final study of a literary work chosen from the student's major field. Enrollment limited to 30.

In East Asian Buddhist culture, the mirror is a symbol of the mind in both its intellectual and emotional aspects. These masterworks detail the lives and loves of Prince Genji, cynosure of the medieval Japanese court and Jia Baoyu, the last hope of an influential Chinese clan during the reign of Manchu. We examine both works as well as the sources of Genji and literary aesthetics of the Tang dynasty. Prerequisites: COLT 0710, RELS 0040 (0088) or 0100 (0006), or permission of the instructor.

COLT 1811F. The "Tenth Muse" Phenomenon.
The texts and contexts of women writing in English, Spanish and French, during the sixteenth and especially seventeenth centuries. Often dubbed "Tenth Muses," these first early modern women writers to gain public prominence wrote iconoclastic texts and/or epitomized socially sanctioned scripts for women. Authors include: Anne Bradstreet, Margaret Lucas Cavendish, Sor Juana, Mme de Lafayette, Maria de Zayas.

What does it mean to be beautiful in classical and European literature? How is beauty defined by thinkers from Plato to Benjamin? Readings from the classical, medieval, Renaissance, and modern periods are brought into question by works concerning the problems of aesthetics. Works by Plato, Aristotle, Horace, Augustine, Dante, Petrarch, Shakespeare, Racine, Tolstoy and others in addition to readings from the history of aesthetics from Kant through the present.

COLT 1811I. The Nordic Legacy: Ibsen, Strindberg, Munch and Bergman.
The course examines the work of four major Scandinavian artists. As key figures in the development of modern theater, painting, and film, these four figures share a number of common concerns: challenging the pictures of bourgeois mores; reconceiving the relations between the sexes; moving from the social to the metaphysical; undermining the unitary view of the self; and forging an artistic "language" through which the in-dwelling power of the psyche can be revealed.

COLT 1811L. Travel, Tourism, Trafficking through the Ages.
Why go away to find ourselves? How does the self constitute itself "elsewhere"? This course considers the genre of travel writing and its theory: how are roots, routes, and rootlessness treated in diverse racial, spiritual, sexual, national, and imperial encounters. Today, when cosmopolitan tourists, intellectuals, or exotic and erotic adventurers share the same beach as downtrodden, abject refugees and their traffickers, what are the cultural, ethical and political implications of leisurely seeking out (self-) discovery, disappearing authenticity, and commodified otherness? Readings include Herodotus, Equiano, Chateaubriand, Kingsley, Montagu, Darwin, Twain, Miller, Durrell, Baldwin, Phillips, Iyer, Houellebecq, Woolf, Thompson, Theroux, Baudrillard.

COLT 1811N. Persons and Portraits: Self in Early Modern Europe.
Challenges the presumed supremacy of the "modern subject," the sovereign rational mind personified by Descartes. Rival theories of self and subject, from the social to the metaphysical; undermining the unitary view of the self, from the social to the metaphysical; undermining the unitary view of the self; and forging an artistic "language" through which the in-dwelling power of the psyche can be revealed.

COLT 1811O. Poisonous or Prophetic?: Wright's Native Son, Burrough's Naked Lunch, Derrida's Specters of Marx, and Rimbaud.
COLT 1811S. Philosophy and Literature of German Romanticism.
A fateful collaboration between philosophy and literature was centered in Germany roughly between 1788 (Schiller's 'Gods of Greece') and 1807 (Hegel's *Phenomenology of Spirit*). A survey of the major literature of this period, organized thematically, will serve as an introduction to this complex phenomenon. Authors include (in translation) Fichte, Goethe, Hölderlin, Novalis, Schelling, Schiller, and Tieck.

Explores the literary and filmic imagination of three Eastern Mediterranean cities, Alexandria, Istanbul, and Athens. It examines the history, culture and politics of these cities and the ways in which they emerge in literature, film, poetry and travelogues. How is the city defined in these works? How are social tensions addressed, such as those between Greeks and Turks and Arabs or between Christians, Muslims and Jews? How are thematic and historical issues resolved, such as those involving antiquity and modernity, tradition and modernization, colonialism and nationalism, religion and secularism? How are these cities defined in the works of western writers? Enrollment limited to 30.

COLT 1811U. Literature and the Arts
Readings in the apparitions and articulations of the arts in fiction, philosophy, criticism and poetry. Focus on the interaction between language and other media, the figure of the artist, problems of expression and performance. Readings from Diderot, Heidegger, Balzac, Hoffmann, Baudelaire, Poe, Nietzsche, Wagner and Mann.

COLT 1811W. Visual Obsessions: Japanese Film, Fiction, and Modernity.
The pervasiveness of visual obsessions in contemporary Japanese culture prompts us to rethink the impact of modernity in terms of visuality. Through the examination of a wide range of filmic, literary, and visual art forms produced in Japan from the 1920s to the 2000s, this course explores the question of visuality as a historically and technologically conditioned way of seeing. The issues to be considered in this class include: the construction of "Japanese" aesthetics, orientalism, ocularcentrism, the problems of interiority and the subject, the relation between habit and the everyday, and cultural nationalism. This course will introduce important theoretical concepts about vision and modernity, asking students to interrogate these concepts through the close examination of specific Japanese texts and films discussed in class. Writers, filmmakers, and visual artists include: Tanizaki Jun'ichirō, Edogawa Rampo, Abé Kōbō, Karatani Kōjin, Ozu Yasujirō, Kurosawa Akira, Ichikawa Kon, Suzuki Seijun, and Murakami Takashi.

COLT 1811X. Marx and his Critics.
This course will focus on a close study of the work of Karl Marx and its legacy for critical theory. The first part of the course will be dedicated to a reading of Marx's most important texts, with special emphasis given to his theories of economy, of ideology, alienation and fetishism. The second part will be dedicated to a reading of some of Marx's most important readers: Lukacs, Gramsci, Althusser, Zizek and Derrida. Instructor's permission required.

COLT 1811Y. Genius and Melancholia in the Renaissance.
Explores Renaissance accounts of genius, genial inspiration, and melancholy, and their accompanying ideas of intellect and immortality. Primary materials include Dürer, Montaigne, Rabelais, Ficino, Ariosto, Erasmus, Saint Teresa, and Luther. Secondary or contemporary texts include Warburg, Panofsky, Saxl, Klubansky, Wind, Benjamin, Kierkegaard, and Sebald.

COLT 1811Z. Literature and the American Presidency.
We shall read widely in writings by, and about, selected American presidents, but also focus on the ways in which presidents have used literature as a discursive source in their own writing and thinking. We will attend also to the relationship of culture to power as evidenced in other textual media, such as film.

COLT 1812A. Literatures of Immigration.
Why do people migrate? How do literary genres, including poetry, fiction, autobiography and memoir, characterize immigrant experiences? How is the experience of "coming from somewhere else" similar and different for each subsequent generation of immigrants? How does literature indicate the impacts of migration on the culture, politics and economics of the countries of immigration and emigration? How do literatures of immigration imagine the past, present and future of networks and communities of immigrants? Focusing on twentieth-century literary texts and the socio-historical context of mass migration, the first half of the course examines immigration literature in the U.S., the second half of the course explores literatures of immigration beyond the U.S., and the course concludes with an inquiry into immigration in our presently globalizing age.

COLT 1812B. Aesthetics and Politics (ENGL 1900E).
Interested students must register for ENGL 1900E.

COLT 1812C. The Ethics of Romanticism (ENGL 1560Y).
Interested students must register for ENGL 1560Y.

COLT 1812D. Violence and Representation.
Traces diverse genealogies from which to theorize violence and its relation to aesthetics. We will identify a disciplinary philology for "violence" as a signifier within visual culture, art practice and literature; historicize key transitions in varied invocations of violence in representation; study texts (photography, film, novel, installation) that create a space where violence can be discussed as both everyday and extraordinary. Some issues to be considered: representability in moments of historical crisis (war, colonialism, genocide); the efficacy of genres and artistic movements in representing violence (tragedy, surrealism, theater of cruelty); and the violence of representation (surveillance, spectatorship, voyeurism).

COLT 1812H. "Women's Literary Make-up": Mirrors, Maquillage and the Tenth Muse.
Focuses on the problem of creative inspiration for women writers and how the pursuit of aesthetic perfection, both somatic and literary as well as their interrelation, becomes a recurring motif in women's writing from various traditions. Readings will include fiction and poetry from the English, Japanese, and Arab traditions, both modern and pre-modern. This is an undergraduate seminar open to juniors and seniors. Prerequisite: coursework in literature and at least one course in gender studies/ women's studies. Instructor permission required.

COLT 1812I. Collective Struggles and Cultural Politics in the Global South.
Traces the historical and ideological mapping of the North-South axis and the regional mythologies informed by racism, empire and nationalism. We will examine the ways in which imagined geographical hierarchies continue to shape cultural and political struggles and the vectors of globalization. Along with readings on imperial histories, liberal and neoliberal political economies, and postcolonialism this class seeks to establish connections between resistant narratives and collective struggles in the Global South. We will discuss political philosophies of Marx, Gramsci, Arendt, Fanon, Harvey and Schwarz, as well as the works of Achebe, Hurston, Kincaid, Rushdie, Roy, Sembene, and Wright. First year students require instructor permission.

COLT 1812J. Poetry and Ethics.
If history is, as Charles Olson claims, a "form of attention" and we are all participants in a collective reality relative to our capacity for language use, what ethical issues come to bear on what the poet chooses to attend to—not only as subject matter but as form? Can poetic language be sufficiently responsive to the challenge of empathy? Is there an ethics of attention? Guided by philosophical texts, we shall investigate ethical possibilities in a range of world poetries.

COLT 1812K. European Intellectual and Cultural History: Exploring the Modern, 1880-1914 (HIST 1220).
Interested students must register for HIST 1220.

COLT 1812M. Erotic Desire in the Premodern Mediterranean (CLAS 1750L).
Interested students must register for CLAS 1750L.

COLT 1812N. Culture and Anarchy (ENGL 1511F).
Interested students must register for ENGL 1511F.
COLT 1812O. Lying, Cheating, and Stealing (ENGL 1760V). Interested students must register for ENGL 1760V.

COLT 1812P. Essaying the Essay (CLAS 1120J). Interested students must register for CLAS 1120J.

COLT 1812S. Violence and the Multiple Responses of Medieval France. Examine violence and its representations from a variety of perspectives: literary, historical, psychological, etc. Different literary forms (11th - 13th) introduce conflicts between competing value systems, problems raised by militant religion, vendettas and the pursuit of justice. Across the gamut of appetites and emotions, violence takes a variety of shapes, producing broken hearts and broken heads. The beautiful seductiveness of violence, despite its horrors, is frequently transformed into artistic and literary expression, from the highest forms of Western tradition to the cheap exploitations of pulp fiction. What can the Middle Ages teach us about violence, yesterday and today? Not open to first year students.

COLT 1812T. On Being Bored (ENGL 1511L). Interested students must register for ENGL 1511L.

COLT 1812U. Queer Relations: Aesthetics and Sexuality (ENGL 1900R). Interested students must register for ENGL 1900R.

COLT 1812V. War, Anti-War, Postwar: Culture and Contestation in the Americas. This course addresses the relationship among language, war and the arts from the mid-twentieth century on. Even as armies engage in combat around the globe, the term "war" continues to be a much broader spectrum of situations, lending it the structure of organized hostility and the moral opposition of right to wrong. From the "Cold War" to the "War on Terror", to Argentina's "Dirty War" and Cuba's "War on Imperialism", literature, cinema, visual arts and community-based projects have responded to real and rhetorical declarations of "war." Drawing from U.S. and Latin American contexts, we will explore a range of responses and challenges.

COLT 1812X. Literature and History: Russian Historical Imaginasion in the European Context (RUSS 1600). Interested students must register for RUSS 1600.

COLT 1812Y. Central Europe: An Idea and its Literature (SLAV 1790). Interested students must register for SLAV 1790.

COLT 1813A. The Colonial and the Postcolonial Marvelous. A celebration and critique of the marvelous—as the strange, wondrous, magical, or unreal—as it has been wielded in Spanish American and related literatures (French Caribbean, Brazilian). We follow the marvelous from European exoticizing of the New World during the colonial period to its postcolonial incarnations in "magical realism" and beyond. We attend particularly to the political, ideological, social, and commercial implications of the marvelous in writers including Carpenter, Chamoiseau, Columbus, Esquivel, Sor Juana Inés de la Cruz, and García Márquez. Readings in English, though you may read texts in the original French, Spanish, or Portuguese.

COLT 1813B. Dying God (CLAS 1930B). Interested students must register for CLAS 1930B.

COLT 1813C. Erotic Desire in the Premodern Mediterranean (CLAS 1750L). Interested students must register for CLAS 1750L.

COLT 1813D. Issues in World Literature (ENGL 1761Y). Interested students must register for ENGL 1761Y.

COLT 1813E. Chinese Women, Gender and Feminism from Historical and Transnational Perspectives (EAST 1950B). Interested students must register for EAST 1950B.

COLT 1813F. Communication Culture and Literary Politics (MCM 1503Q). Interested students must register for MCM 1503Q.

COLT 1813H. God, Sex and Grammar: Literary Ethics in Medieval Europe. What does it mean to read and write ethically? While modern culture values intellectual property, many medieval texts celebrated what we call plagiarism. On the other hand, medieval thinkers saw serious consequences in literature, which could lead authors and readers to heaven or hell. But then as now, ethics were rarely clear-cut, subject to forces as diverse as religion, sexual desire, capitalism, and even language itself. Reading some of the great authors of the period, as well as modern critical reflections, we will explore the ethical dimension of literary production in the medieval world and in our own society.
COLT 1813Q. Literature and Judgement
There exists a close but complex relationship between the acts of making literature and making judgments. This course will explore some of these relationships and ask, for instance: how does judgment weigh upon the literary act? how do literary considerations bear on our making judgments? what criteria are called forth in both of these moments? Texts treated will be literary, critical-analytical, legal, and cinematic, and include such authors as Arendt, Benjamin, Derrida, Freud, Henry James, Kafka, Kant, Primo Levi, Nietzsche, Tolstoy and Verga.

COLT 1813R. The Ekphrastic Mode in Contemporary Literature (ENGL 1762B)
Interested students must register for ENGL 1762B.

COLT 1813V. The Cash Nexus: Economy and Literature
At a time when human existence is grounded with unprecedented conviction in a rigid set of utilitarian principles and materialistic values, the relationship between literature and various modes of economic exchange presents itself as a richly rewarding field of research. The texts we will focus on offer rare insights into the ways monetary factors affect personal identity, interpersonal relationships, and social life in general. These works reflect a diachronic tension between human interactions and financial transactions that will be the basis of our critical engagement with a series of issues and questions that are more pertinent today than ever before.

COLT 1813X. Getting Emotional: Passionate Theories (ENGL 1560W)
Interested students must register for ENGL 1560W.

COLT 1813Z. Soil: The Earth and Environmental Writing
Why do people fight over soil? In an increasingly urbanized world, how have the ways we talk about soil, earth, and land shifted? In this class, we will explore the politics and aesthetics of writing about soil in its particular relations to ecology, homeland, geography, and race. Readings include Homer’s Odyssey, Derek Walcott’s Omeros, and ecological criticism from ancient China to Rachel Carson and Ramachandra Guha and beyond. Limited to 20.

COLT 1814A. Fashion and Power (GNSS 1960Y)
Interested students must register for GNSS 1960Y.

COLT 1814D. East-West Encounters: Politics and Fictions of Orientalism
We will explore the myth of the East that develops in Europe during the Enlightenment in the wake of the extremely popular and influential translations of The Thousand and One Nights (Alf Layla wa Layla) in the early eighteenth century. We will focus on narratives of the encounter between East and West, on the discovery and construction of the Oriental “Other,” and on its representation in the literary and visual culture of the Enlightenment. Particular attention will be paid to the figure of Shahrazad and the theme of the harem. We will study some modern versions of the Arabian Nights.

COLT 1814F. Erotic Desire in the Premodern Mediterranean (CLAS 1750L)
Interested students must register for CLAS 1750L.

COLT 1814G. Political Commitment in Arabic Literature
This course will explore the history of and debates surrounding political consciousness and commitment in modern Arabic literature from the mid-20th century to the present. Through close readings of mainly novels, novellas, and short stories, we will ask how, why, and with what consequences Arab authors have challenged political realities with literary expression. We will trace the diverse strategies by which authors articulated their criticisms and envisioned justice grounded in their political context. Topics and themes will include socialist realism, resistance literature, alienation, self-criticism, and responses to colonialism and censorship. No knowledge of Arabic required.

COLT 1814L. Apartheid in Post-Apartheid South African Literature
In this course, we explore the political stances that contemporary South African writing articulates towards the apartheid regime. We bring particular attention to the textual emergence of queer subjectivities. During apartheid (1948-1994), South Africa became a global symbol of racial injustice, and several South African writers became famous for their anti-apartheid literary production. Since 1994, critics have looked for new frames in which to analyze a “new” literature. In the search for “newness,” however, we may forget to consider how the “old”—apartheid—reappears in post-apartheid literature. Authors include Zackie Achmat, K. Sello Duiker, Phaswane Mpe, and Zoe Wicomb.

COLT 1814M. Postcolonial Literature + Thought in the Middle East and North Africa.
This course examines postcolonial literature and thought in the ME and North Africa through literature, theory and film. During the early and mid-20th century, anticolonial movements transformed the region’s cultural landscape, igniting new intellectual circles and literary scenes. We will study these movements as a launching ground for regional culture, interrogating local anti-colonial thought in works by writers such as Memmi and Fanon, and examining its evolution from the 1960’s-1990’s in works from Egypt, Algeria, Tunisia, Lebanon, Syria, Israel, Morocco and Palestine. How did intellectuals and artists articulate issues like national liberation, Westernization, radically new culture, feminism, Marxism and Orientalism?

COLT 1814Q. Species Matters: Animals in Literature, Film, and Theory
Nonhuman animals constitute the limit against which humans define themselves; at the same time, they challenge such boundaries. Thinking about animals, then, always also means exploring our own humanity. In this course, we will draw on the vast archive of literature, philosophy, and art that engages animals in order to reconsider what and how these representations mean. Considering our complex relationships with other animals, we will address questions of ontology, aesthetics, and ethics: What makes an animal? Can animals be represented? How should animal suffering affect us?
COLT 1814U. Politics of Reading.
What do we do when we read? And do we even do something, or, as Blanchot suggests, do we rather let be? While being true to Michel de Certeau’s plea for a “politics of reading” and an “autonomy of the reader”, we will question its binary logic (active vs. passive): 1. by looking closely at the (de)construction of a “sovereign reader” in Hobbes’ Leviathan; 2. by analyzing the reading imperative—“Read!”—as it is staged in Plato’s and, above all, in Sade’s erotic; 3. by taking seriously Walter Benjamin’s paradoxical intuition that one should “read what was never written”.

COLT 1814Y. Posthumanism and the Ends of Man.
Have we ever been human? As mechanical implants, virtual extensions, and organic interdependencies challenge self-contained conceptualizations of human being, posthumanist theories invite us to rethink our self-understanding. In this course, we will explore the human as a fluid category in perpetual motion. Focusing on female and gender nonconforming bodies, which have traditionally been situated at the limits of the human, we will analyze the critical potential of hybrids, androids, and cyborgs. Readings among others by Ovid, the Brothers Grimm, E.T.A. Hoffmann, Han Kang, and Octavia Butler; films will include Metropolis, Mad Max: Fury Road, and the series West World.

COLT 1815A. Apocalypse.
The End of the World is central to the Abrahamic faiths. From the Jewish sources, through Christian and Islamic tradition until the present day, the idea of the End of World is decisive for the understanding of major events in history, such as the birth of Islam or Modernity. Through readings across the religious and the secular traditions starting with the Torah and ending with Steve Bannon and ISIS.

COLT 1815F. Memory, Commemoration, Testimony.
In this course we will study problems of remembering and forgetting in a variety of texts including poetry, philosophy, psychoanalysis, memoirs, public monuments, memory studies and trauma theory. We will explore the roles of language and representation in dealing with the past, the temporality of the self, the operation of the unconscious, the memorial and the monument. We will also look at the politics of memory in relation to the cultural traumas of slavery, the Holocaust, Viet Nam and 9/11. Readings from Rousseau, Hegel, Wordsworth, Proust, Derrida and de Man; Freud, Caruth, Saidiya Hartman, Segalen; Arendt and Reznikoff.

COLT 1815G. Repetition: Kierkegaard, Nietzsche, Freud (GRMN 1200D).
Interested students must register for GRMN 1200D.

COLT 1815I. Torn Halves of Modernism.
This course analyzes the constitutive contradictions of modernist works from a global perspective. We will address, for instance, tensions between the periphery and the metropolis, city and countryside, realism and modernism, aesthetic autonomy, commodification and political commitment. We will also examine these questions across various media: novels, poetry, photography, architecture and film. Readings include works by Dos Passos, Faulkner, Döblin, Manuel Maples Arce, Roberto Arlt, Patricia Galvão.

COLT 1815O. Modern Greece in the World (MGRK 1240).
Interested students must register for MGRK 1240.

Interested students must register for HMAN 1974L.

COLT 1815T. Censorship and the Arts (HMAN 1975F).
Interested students must register for HMAN 1975F.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 1890. Group Independent Study.
Section numbers vary by instructor. Please see the registration staff for the correct section number to use when registering for this course.

Special work or preparation of honors theses under the supervision of a member of the staff. Open to honors students and to others. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 2450. Exchange Scholar Program.

COLT 2520A. City (B)Lights: Interdisciplinary Approaches to the Study of the City.
Literary texts from the U.S., England, France, and Germany, together with substantial readings in the social sciences and selected works of art and cinema. Intended as a laboratory for interdisciplinary studies in an expansive educational spectrum for humanities Ph.Ds.

COLT 2520B. Dark and Cloudy Words: Metaphor and Poetry.
An examination of the philosophical significance of metaphor and its literary function in poetry ranging from makurakotoba in the Man’ y#sh# to kenningar in Skaldic poetry, to the use of the trope in a number of modern poets. Critical writings include works by Aristotle, Ki no Tsurayuki, Shelley, Christine Brooke-Rose, Max Black, Donald Davidson, Paul Ricoeur, and Jacques Derrida.

COLT 2520C. Irony: Language and Failure.
A study in the trope of irony and the ways in which it complicates the possibility of understanding. Focus on Socratic irony, the dialogue, and Romantic irony. We will also consider the epistemological implications of irony and the role it plays in contemporary criticism. Readings from Plato, Quintillian, Diderot, Hegel, Schlegel, Kierkegaard, Baudelaire, Lukács, Booth, De Man, Rorty and Derrida.

COLT 2520D. The Literature of the Americas.
Forsaking the dominant Eurocentrism in comparative literary studies, this seminar will search for the common links between the diverse literatures of North and Latin America, approached in relation to one another rather than to “Old World” models. Authors to be considered include Margaret Atwood, Julio Cortázar, Carlos Fuentes, William Faulkner, Gabriel García-Márquez, Clarice Lispector, Machado de Assis, Toni Morrison and João Guimarães Rosa.

COLT 2520E. Dialectics of Word and Image.
Explores how proximities and interactions of text and image construct and complicate meaning. It brings together a constellation of theoretical and historical readings that have bearing on particular problems generated at the nexus of word and image. Readings by Horace, Abd al-Qahir Jurjani, Lévi-Strauss, Ricoeur, Derrida, Mitchell and others will anchor a cross-disciplinary investigation of European and non-European paradigms of the relationship between text and image in various literary and visual cultures since late antiquity. We will examine specific examples of the interaction between word and image in several Islamic manuscripts.

COLT 2520F. Theories of the Lyric.
Through readings of recent critical discussions of the lyric genre, we will explore more general methodological problems of literary theory. Questions to be raised include: the role of form, structure and tropes in analyzing poetry; problems of subjectivity and voice; the relation between poetry, history and politics; the function of reading; and the problematic “objectivity” of criticism. Readings from Jakobson, Benveniste, Jauss, Benjamin, Johnson, De Man, Lacoue-Labarthe, Agamben, Badiou and Derrida. Focus on poets Hölderlin, Baudelaire and Celan.

COLT 2520J. Matter Measures.
This class will explore comparative approaches to meter, rhythm and prosody in poetry, explore historical and contemporary critical debates from European, classical, Arabic and Chinese traditions, as well as the poetry that inspired them. Topics may include: gendered notions of meter; racialized politics of rhythm; cross-cultural encounters of prosodic traditions; free verse, sprung rhythm, visual and verbal patterning; prose poetry; orality; and rhythm in translation. Students will delve into their own languages, periods and traditions through the exploration of others and through some practical, collaborative in-class exercises and assignments.

COLT 2540C. Romanticism and Cultural Property (ENGL 2560Y).
Interested students must register for ENGL 2560Y.
COLT 2540D. After Postmodernism: New Fictional Modes (ENGL 2760X).
Interested students must register for ENGL 2760X.

COLT 2540E. Political Romanticism (GRMN 2320E).
Interested students must register for GRMN 2320E.

COLT 2540F. Romanticism and Cultural Property (ENGL 2560Y).
Interested students must register for ENGL 2560Y.

COLT 2540M. Latin American Existential Literature (HISP 2520L).
Interested students must register for HISP 2520L.

COLT 2650A. Comparative Literature and its Others.
Is there such a thing as comparative literacy? This course examines the history and practices of Comparative Literature as a major discipline, including its self-conceptualizations, its relations with national literatures and with other disciplines, and its evolving methods of reading. Texts include literary as well as theoretical ones.

COLT 2650B. Speed: Fast and Slow in Literature and Philosophy.
“Our time is running out of time.” This is a feeling that lingers on since the advent of a modernity that allows for less and less lingering. It reaches its apex with the Anthropocene understood as maximal contrast between the deep time of geology and the short temporality of human history. Our collaborative seminar will trace the genealogy of accelerationism to futurism and nihilism, while also approaching boredom as a philosophical question. It will offer readings (slow and fast) of classics of literature that stage the (fast or slow) passing of time (Goethe’s Second Faust, Virginia Woolf’s To the Lighthouse).

COLT 2650C. Romantic Theory: Theirs and Ours.
Recent criticism will serve as the point of departure for looking into the relation of literary criticism to its Romantic history. Emphasis on how “Romantic” problems inform contemporary criticism on such topics as periodization, literature and history, theory of symbol and allegory, and the relation between literature and philosophy. Texts will be selected from Benjamin, M.H. Abrams, de Man, McGann, Lacoue-Labarthe and Nancy, Chase, et al.; Fichte, Schelling, Coleridge, Wordsworth, Schlegel, Novalis.

COLT 2650D. Theory of Comparative Literature.
Designed to introduce students to some of the central theoretical issues that define the discipline of Comparative Literature through the study of twelve central texts in the field. We will begin with Erich Auerbach’s foundational text Mimesis, and end with Gayatri Spivak’s Death of a Discipline. In between the authors to be read and analyzed will be Bakhin, Lukacs, Barthes, Derrida, DeMan, Jameson, Greenblatt and others. Open to graduate students, and to undergraduates by permission of the instructor.

COLT 2650E. Theory of Lyric Poetry.
No description available.

COLT 2650F. Irony.
A study of the trope of irony and its evaluation, especially in the Romantic tradition. Focus on the epistemological implications of irony and the role it plays in the philosophical tradition and in contemporary criticism. Readings from Plato, Hegel, Schlegel, Kierkegaard, Baudelaire, Lukács, Booth, De Man, Rorty and Derrida.

COLT 2650G. Literary Readings in Aesthetic Theory.
The seminar will examine not just the major themes but also the rhetorical complexities of a number of powerful texts in the history of aesthetic theory. Authors to be considered include Plato, Aristotle, Longinus, Burke, Kant, Hegel, Nietzsche, Heidegger, Benjamin, Adorno. Literary texts will be considered in conjunction with these texts, sometimes by way of famous arguments or exchanges (e.g., Heidegger and Staiger on Mörke).

COLT 2650H. On the Sublime (GRMN 2660A).
Interested students must register for GRMN 2660A.

COLT 2650N. Hamlet: Appropriation, Mediation, Theory (ENGL 2360X).
Interested students must register for ENGL 2360X.

COLT 2650T. Foundations of Literary Theory (POBS 2600C).
Interested students must register for POBS 2600C.

COLT 2650U. Theory, Technics, Religion (ENGL 2901K).
Interested students must register for ENGL 2901K.

COLT 2650V. Italian Theory: In and Out (HMAN 2400U).
Interested students must register for HMAN 2400U.

COLT 2650W. Vision and Visualization in Literature: The Rhetoric of Mimesis (CLAS 2110K).
Interested students must register for CLAS 2110K.

COLT 2650X. Police, Strike, Justice: Revisiting Walter Benjamin’s “Critique of Violence” (GRMN 2662F).
Interested students must register for GRMN 2662F.

COLT 2720A. Advanced Practicum in Literary Translation.
Readings in theory of translation, and in monuments of literary translation from Renaissance times to the present, will be assigned to students needing further background in these areas. Students will each complete two projects: (1) by mid-semester, a critical treatment of a published translation or a comparison of such translations; (2) for the final seminar presentation and paper, the student’s own translation into English from some literary text in a language familiar to the student.

COLT 2720B. Theory and Practice of Literary Translation.
Readings in the history and theory of translation from the Renaissance to the present, along with selected major examples of literature in English translation. Students will write two papers: (1) an analysis of a theoretical issue in translation, with ample attention to the historical context of that issue; and (2) either a discussion of an important translation as a criticism of the original work; or a critical comparison of several translations of an original work; or an annotated translation into English of a literary text from a language familiar to the student.

COLT 2720C. Literary Translation.
Study and practice of translation as art and a potent form of literary criticism. Translation is an act of interpretation, which informs the language of the translator and the text as a whole: context, intent, and language. Discussion will include the impact of cultural difference, tone and time on translation, and the role of analytical as well as intuitive understanding of the original in the translator’s endeavor.

COLT 2720D. Translation: Theory and Practice.
This seminar will address the theory and practice of translation, and their place in the Humanities. Essays by translators, authors and scholars will be drawn from a range of languages and contexts, as will literary and historical texts. Each participating student will work on a substantial translation project over the course of the semester. The seminar is open only to graduate students; a strong knowledge of at least one language other than English is required.

COLT 2820A. New Directions for Comparative Literature.
In this seminar we will read a number of recent critical and theoretical works (not limited to the humanities) which may fruitfully suggest new directions for literary studies. Our readings may include topics such as the new history of capitalism, sociological approaches to the modern choice architecture of emotions, recent philosophy of science, border studies and migration, decolonization, ecocriticism and public humanities. Participants will be expected to contribute to the syllabus according to their own research interests.

COLT 2820B. Fiction and History.
Focuses on how the historical fiction that has flourished over the past three decades challenges the notions of objectivity and totalization, while providing alternative viewpoints for the reconstruction and reinterpretation of the past. Authors to be considered include E. L. Doctorow, Gabriel García-Marquez, Günter Grass, José Saramago Isabel Allende, Lidia Jorge, Coover. Attention will also be paid to theoretical texts by Hayden White, Dominick LaCapra, Walter Benjamin, Linda Hutcheon, and Roger Chartier.

COLT 2820D. The “Tenth Muse” Phenomenon.
The texts and contexts of women writing in English, Spanish and French, during the sixteenth and especially seventeenth centuries. Often dubbed “Tenth Muses,” these first early modern women writers to gain public prominence wrote iconoclastic texts and/or epitomized socially sanctioned scripts for women. Authors include: Anne Bradstreet, Margaret Lucas Cavendish, Sor Juana, Mme de Lafayette, Maria de Zayas.
COLT 2820E. What was Enlightenment?. Emphasizes two of the Enlightenment’s most durable artists—Mozart and Jane Austen—situating them in the context of other writers of their times (such as Kant, Casanova, and Adam Smith) and modern appropriations of their work (in criticism and performance). Sub-themes are desire, reason, education, and forms of otherness. Class hours include viewing time.

COLT 2820F. Latin America and Theory. Explores the engagement of Latin American literary and criticism with non-Latin American bodies of literary and cultural theory (including poststructuralism, postcolonialism, postmodernism and cultural studies), addressing tensions between the autochthonous production of theoretical frameworks and their import from other contexts. Readings include the Latin American Subaltern Studies group, Revista de Crítica Cultural, Rama, García Canclini, Sarlo, Richard and current new media theorists. Open to graduate students and qualified seniors.

COLT 2820H. The Politics and Aesthetics of Masochism. Masochism is defined as a, aestheticized positive, consensual investment in power relations. As such, it directly engages the relationship between politics and aesthetic forms, but as a sexualized relationship. Masochism articulates relations of gender in ways that seem to challenge traditional structures. Readings include novels and films, as well as theoretical engagements with masochism.

COLT 2820I. Literature and the State of Exception. This course takes as its point of departure Walter Benjamin’s famous diagnosis of modernity as a paradoxical condition under which the exception has become the rule. We will consider the aesthetic and political implications of such a state of exception in nineteenth-century literature. Authors include Baudelaire, DeQuincey, Arnold, Melville, Whitman, Benjamin, Derrida, Nancy and Agamben.

COLT 2820J. Moderns and Primitives. Major writers, artists, and theorists of European modernism put a new emphasis on the status of primitive society and archaic pre-history. We will consider the works of Durkheim, Eliot, Joyce, Picasso, and others with reference to the anthropology and ethnography of their period, and to subsequent post-colonial critique and controversy.

COLT 2820K. Discourses of the Senses. A comparative study of a variety of discourses dealing with the relation among the senses, the arts, and the problems of comparativity, interdisciplinarity, and intermediarity. Topics will include ekphrasis, synaesthesia, mysticism and the theory of correspondence, the Gesamtkunstwerk, and the limits between media. Readings from Condillac, Lessing, Kant, Swedenborg, the German Romantics, Baudelaire, Wagner, Balzac, Lacoue-Labarthe, Nancy, Panofsky, Tschumi and others.

COLT 2820L. City (B)Lights. Interdisciplinary explorations of the modern urban experience featuring social sciences, literature and film. Convergences and differences in the presentation of urban life in literature, film, the visual arts, urban planning, and social sciences, including sociology, political economy, urban ecology. City populations, bureaucracy, power groups, alienation, urban crowds, the city as site of the surreal, are central themes. Against the background of classic European urban images. American cities and literary works are foregrounded.

COLT 2820M. Jacques Derrida’s of Grammatology. This course is an introduction to the thought of the French philosopher Jacques Derrida. We will focus on his most important work, his "Grammatology", though a series of some of his essays will also be part of the readings. Other readings will include the works of authors crucial to Derrida's thought and to an understanding of the "Grammatology": Heidegger, Nietzsche, Freud, Saussure, Rousseau and Levi-Strauss.

COLT 2820N. City (B)Lights. Explores the engagement of Latin American literary and criticism with non-Latin American bodies of literary and cultural theory (including poststructuralism, postcolonialism, postmodernism and cultural studies), addressing tensions between the autochthonous production of theoretical frameworks and their import from other contexts. Readings include the Latin American Subaltern Studies group, Revista de Crítica Cultural, Rama, García Canclini, Sarlo, Richard and current new media theorists. Open to graduate students and qualified seniors.

COLT 2820P. Aesthetics and the Eighteenth Century Subject. The debates about taste, judgment, beauty, sentiment, and sensation in the eighteenth century gave rise to the discourse of aesthetics as we know it today, but they also exerted a powerful influence on how knowledge, virtue, and subjectivity were imagined in the post-enlightenment period. In this course, we will examine some of the founding texts of aesthetic theory from the era (including Locke, Smith, Burke, Lessing, and Kant), and then turn to consider how aesthetic questions informed and were taken up by Goethe’s narrative of subject-formation in his Bildungsroman, Wilhelm Meister’s Apprenticeship. In English.

COLT 2820Q. Culture and Politics in Cuba and the Caribbean. Complicating standard narratives about intellectuals and the Cuban Revolution, explores writings whose relationship to the state is neither affirmative nor oppositional. Focusing on journals and on recent work in cultural history, history, anthropology, and political science, addresses the evolution and potential of civil society; articulations of marginality; revisions of socialism and the Soviet legacy; and the mobility of theory. Spanish required.

COLT 2820R. Postcolonial Melancholia. Figures of loss and defeat proliferate widely in the accounts of colonization, national liberation, and decolonization in South Asia, Africa, the Arab world, and the Americas. We will attend to the particularity of loss by juxtaposing readings in literature and postcolonial theory with readings on mourning and melancholia, drawn from a range of disciplines.

COLT 2820S. Poetry after Kant. Begins with the intensive study of a selection of writings by Immanuel Kant focused especially on force and conflict in politics and aesthetics. This study, along with relevant readings from more recent work, will provide the basis for an approach to this topic in nineteenth-century poetry. Readings of Kant (Critique of Judgment, “Toward Eternal Peace,” The Conflict of the Faculties), Walter Benjamin, Jacques Derrida, and Giorgio Agamben and will lead to several “case studies” of nineteenth-century poetry, including works by Friedrich Hölderlin, Charles Baudelaire, and Matthew Arnold.

COLT 2820U. Literature and Judgment. Investigates the intersections between acts of literature and acts of judgment, between language and the law. How is literature to be judged, when is it “good” or “bad”? Does literature lie, and if so, does it matter? Does it hide a crime? And, in turn: does literature provide its own particular kind of judgment, one that may make evident the very fictional status of the law? Readings span from the Bible to contemporary post-colonial readings (Rousseau, Tolstoy, Zola, Freud, Kafka, Arendt, Benjamin, Henry James, Primo Levi, Coetzee, Sadegh Hedaya).

COLT 2820V. Nietzsche, Foucault, Latour (ENGL 2900K). Interested students must register for ENGL 2900K.

COLT 2820W. Ethical Turns (ENGL 2900N). Interested students must register for ENGL 2900N.

COLT 2820X. Things Not Entirely Possessed: Romanticism and History (ENGL 2561B). Interested students must register for ENGL 2561B.

COLT 2821A. From Hegel to Nietzsche: Literature as/and Philosophy (GRMN 26600). Interested students must register for GRMN 26600.

COLT 2821B. Postcoloniality and Globalism (ENGL 2900Z). Interested students must register for ENGL 2900Z.

COLT 2821X. Approaches to the Han Dynasty. This graduate seminar aims to give students a grounding in both traditional and recent approaches to Han dynasty literature, culture, and history. We will look at both excavated and received traditions from a range of disciplinary perspectives (philology, archaeology, history, comparative literature). Reading knowledge of classical and modern Chinese required.
COLT 2821Z. Objects of (and in) Animation (MCM 2120H).
Interested students must register for MCM 2120H.

COLT 2822B. Introduction to Italian Studies (ITAL 2100).
Interested students must register for ITAL 2100.

Interested students must register for GRMN 2661T.

COLT 2830B. Frameworks of Antiquity: Disciplines, Discourses, Politics.
At least since decolonization, the study of antiquity has been a battleground for conflicting projects (imperial, colonial, national, indigenous, religious, feminist and queer, etc.). This seminar explores disciplinary formations that have supplied rival groups with cognitive maps, narratives of identity formation and transformation, and assets for real and symbolic capital. We will explore key disciplinary sites of debate—in archaeology, philology, philosophy, Scriptural and Classical studies, and history—concerning the distribution of groups (of people, languages, races), the establishment of spatial and temporal boundaries, and the limits of what can be argued, shown, possessed, and claimed to be true.

COLT 2830C. Literature and the Arts.
An investigation of the discourse of the arts in the modern European tradition. Topics include the relation between the Ancients and the Moderns, evaluations of the possibilities and limitations of differing media, the role of language in discussions of the "other" arts, and conceptions of synaesthesia and correspondence. Texts selected from Perrault, Winckelmann, Lessing, Diderot, Rousseau, Kant, Hegel, Hoffman, Baudelaire, and others.

COLT 2830D. Retouch: The Imaginaries of Repair (HMAN 2401E).
Interested students must register for HMAN 2401E.

COLT 2830F. Walter Benjamin and Modern Theory.
An intensive reading of selected essays by Walter Benjamin on language, literature, aesthetics, and politics will be paired up with the study of the interpretation and impact of this work on contemporary work in literary theory and philosophy. In addition to Benjamin, we will also read Jacques Derrida, Philippe Lacoue-Labarthe, Samuel Weber, Giorgio Agamben, and Peter Fenves. German and/or French helpful but not required. Open to graduate students only.

Across a range of disciplines, "cultural translation" today stands for the dynamic interactions among cultures. Derived from cultural anthropology and linguistic translation, the metaphor of translation (already a metaphor: trans-+latere, to bear across) is used increasingly to analyze how cultures are transmitted through the operations of colonial expansion, diaspora and immigration. Though cultural globalization is assumed to be a 20th century phenomenon, the result of an expansion and acceleration in the movement and exchange of ideas, commodities and capital, this seminar considers a longer historical frame for understanding cultural competition. Theoretical texts including Schleiermacher, Jakobson, Benjamin, Derrida, Spivak, and a "case study," Shakespeare.

COLT 2830I. Histories of the Early Modern Body.
This seminar considers the production of knowledge about the body in the early modern period. The institution of science and how the emerging "science" of the body was visualized; discourses of the erotic, the scientific and the religious; the body in varied cultural performances including the blason, devotional texts, erotica, drama etc. Texts include theoretical work on gender and sexuality. Open to graduate students only.

COLT 2830L. Economies of the Visual (The Reverse of Images).
In The Time-Image, Deleuze wrote: "Money is the reverse of all the images that the cinema shows and edits on the obverse, so that films about money are already, if implicitly, films within the film or about the film." What are the implications of this sentence for the economy of images (what Susan Buck-Morss terms their economy)? From The Big Store (Marx Brothers) to Peter Jackson’s King Kong, we will trace various mobilizations of the gaze, leading from the proto-cinematographic elevators and escalators to the actual developments of eye-tracking technologies, allowing for an increasing commodification of the gaze itself.

COLT 2830P. The History of Wonder in Colonial Spanish American Lettres (HISP 2350H).
Interested students must register for HISP 2350H.

COLT 2900. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

COLT 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

Center for Computation and Visualization

The Center for Computation and Visualization (CCV) strives to build and foster an environment that enables teaching, learning, research, and creative undertakings that involve and rely on the use and development of advanced computing and visualization technology. CCV provides high-performance computing, highly reliable research data storage, visualization resources, physical and virtual server hosting, high-performance backup and archival services, as well as outstanding collaborative scientific support to empower computational research, scholarship, creativity, and innovation for the entire Brown community.

The computing platform comprises a 700+ high performance computing node system, some with extra large memory and some with GPUs for accelerated computing, for a total core count of over 7,000, and peak performance of roughly 125 Teraflops. A GPFS parallel filesystem provides roughly 400 Terabytes of disk storage and 40 Gigabits per second Infiniband connectivity is used for all parallel applications messaging and I/O. The storage system is integrated with a 2 Petabyte Tivoli TSM backup/archival system. CCV also maintains a high end visualization lab with large scale immersive visualization capabilities. This includes a fully immersive 360 degree YURT, a 3-wall Cave system, and a multi-projector stereo flat display wall. Custom visualization solutions for software and hardware needs are available.

For additional information please visit the center’s website at: http://www.ccv.brown.edu/.

Center for Computational Molecular Biology

The prime intellectual mission of Brown University’s Center for Computational Molecular Biology (CCMB) (https://www.brown.edu/academics/computational-molecular-biology/) is to promote the development, implementation and application of analytical and computational methods to foundational questions in the biological and medical sciences. The research programs of the Core Faculty in CCMB lie fundamentally at the intersection of computer science, evolutionary biology, mathematics, and molecular and cellular biology.

Biological questions that currently unite the CCMB Core and Associate Faculty are: How do genotypes and genes interact to produce phenotypes, and how does this happen from womb to tomb? What drives the formation, maintenance and evolutionary transformations of communities of organisms over time? Quantitative questions that currently unite the CCMB faculty are: how can we design powerful algorithms to make sense of the massive amounts of data produced in the genomic era? What principles are required for a theoretical framework to completely model cellular systems?

The research challenges at the heart of CCMB are a rich source of mathematical problems motivated by the complex nature of genomes, disease processes and evolutionary relationships. These challenges are both multi-scale (with units of interest ranging from molecules to communities of organisms) and large-scale (data-intensive, due to advances in sequencing technologies). Thus, CCMB rounds out the broader landscape of research in methodological development at Brown University by partnering with and complementing the Data Science Initiative (https://www.brown.edu/initiatives/data-science/) and the Brown Center for Biomedical Informatics. (https://www.brown.edu/academics/)
Computational Biology Concentration Requirements

Computational biology involves the analysis and discovery of biological phenomena using computational tools, and the algorithmic design and analysis of such tools. The field is widely defined and includes foundations in computer science, applied mathematics, statistics, biochemistry, molecular biology, genetics, ecology, evolution, anatomy, neuroscience, and visualization.

Students may pursue a Bachelor of Arts or a Bachelor of Science. Students pursuing the ScB have the option of electing a concentration in Computational Biology with one of three focus areas: Computer Sciences, Biological Sciences, or Applied Mathematics & Statistics. Both programs require a senior capstone experience that pairs students and faculty in creative research collaborations.

Additional course with Director approval

Total Credits 15

University Writing Requirement:

As part of Brown’s writing requirement, all students must demonstrate that they have worked on their writing both in their general studies and their concentration. There are a number of ways for Computational Biology concentrators to fulfill these requirements:

- Writing an Honors Thesis
- Taking a "WRIT" course in the final two years

Capstone Experience

Students enrolled in the computational biology concentration will complete a research project in their senior year under faculty supervision. The themes of such projects evolve with the field and the technology, but should represent a synthesis of the various specialties of the program. The requirements are either one semester of reading and research with a CCMB Faculty member or approved advisor, or a 2000-level Computational Biology course.

**General Core Requirements: Probability & Statistics**

- APMA 1650 or CSCI 1450: Statistical Inference I 1
- MATH 1610 or MATH 1620: Probability

**General Core Requirements: Computational Biology**

- CSCI 1810: Computational Molecular Biology 1
- APMA 1080: Inference in Genomics and Molecular Biology 1

**Capstone Experience**

- BIOL 1950/1960: Directed Research/Independent Study 1
- CSCI 1970: Individual Independent Study 1

**Six courses in one of the following three tracks:** 6

**Computer Science Track:**

- Three of the following:
  - CSCI 1230: Introduction to Computer Graphics
  - CSCI 1270: Database Management Systems
  - CSCI 1410: Artificial Intelligence
  - CSCI 1550: Probabilistic Methods in Computer Science
  - CSCI 1570: Design and Analysis of Algorithms
  - or other Computer Science courses approved by the concentration advisor

- Three of the following:
  - CSCI 0330: Introduction to Computer Systems
  - CSCI 0320: Introduction to Software Engineering
  - CSCI 1820: Algorithmic Foundations of Computational Biology

- PHP 2620: Statistical Methods in Bioinformatics, I
- APMA 1660: Statistical Inference II
- BIOL 1430: Foundations of Population Genetics
- BIOL 1465: Human Population Genomics
- APMA 1690: Computational Probability and Statistics

**Biological Sciences track**

- At least four courses comprising a coherent theme in one of the following areas: Biochemistry, Ecology, Evolution, or Neurobiology.

- AND select two courses from the following:
  - CSCI 1820: Algorithmic Foundations of Computational Biology
  - PHP 2620: Statistical Methods in Bioinformatics, I
  - APMA 1660: Statistical Inference II
  - BIOL 1430: Foundations of Population Genetics
  - BIOL 1465: Human Population Genomics

**Applied Mathematics & Statistics Track:**

- At least three courses from the following:
  - APMA 1660: Statistical Inference II
  - APMA 1690: Computational Probability and Statistics
  - CSCI 1410: Artificial Intelligence
  - APMA 0340 & APMA 0330: Methods of Applied Mathematics II and Methods of Applied Mathematics I

**Total Credits:** 21-23

**Honors:**

- In order to be considered a candidate for honors, students will be expected to maintain an outstanding record, with no "C's" in concentration courses and with a minimum of an "A-" average in concentration courses. In addition, students should take at least one semester, and are strongly encouraged to take 2 semesters, of reading and research with a CCMB faculty member or approved advisor. Students must submit to a public defense of their theses to be open to the CCMB community.
  - Students seeking honors are advised to choose a Thesis Advisor prior to the end of their Junior year.
  - Students must complete the Registration form for Comp Bio and submit it to CCMB@BROWN.EDU

Any deviation from these rules must be approved by the director of undergraduate studies, in consultation with the student's advisor.

**Computational Biology Graduate Program**

The Center for Computational Molecular Biology (CCMB) offers Ph.D. degrees in Computational Biology to train the next generation of scientists to perform cutting edge research in the multidisciplinary field of Computational Biology. During the course of their Ph.D. studies students will develop and apply novel computational, mathematical, and statistical techniques to problems in the life sciences. Students in this program must achieve mastery in three areas - computational science, molecular biology, and probability and statistical inference - through a common core of studies that spans and integrates these areas.

The Ph.D. program in Computational Biology draws on course offerings from the disciplines of the Center’s Core faculty members. These areas are Applied Mathematics (APMA), Computer Science (CSCI), the Division of Biology and Medicine (BioMed), Brown Center for Biomedical Informatics (BCBI), and the School of Public Health/Biostats (SPH). Our faculty and Director of Graduate Studies (DGS) work with each student to develop the best plan of coursework and research rotations to meet the student’s goals in their research focus and satisfy the University’s requirements for graduation.

Applicants should state a preference for at least one of these areas in their personal statement or elsewhere in their application. In addition, students interested in the intersection of Applied Mathematics and Computational Biology are encouraged to apply directly to the Applied Mathematics Ph.D. program (http://www.brown.edu/academics/applied-mathematics/ graduate/), and also to contact relevant CCMB faculty members (https://www.brown.edu/academics/computational-molecular-biology/about/people/faculty-and-staff/).

Our PhD program assumes the following prerequisites: mathematics through intermediate calculus, linear algebra and discrete mathematics,
demonstrated programming skill, and at least one undergraduate course in chemistry and in molecular biology. Exceptional strengths in one area may compensate for limited background in other areas, but some proficiency across the disciplines must be evident for admission.

- FAQ (http://brown.edu/academics/computational-molecular-biology/frequently-asked-questions/)

The application process to the CCMB graduate program is run through the Graduate School (http://www.brown.edu/academics/gradschool/)

Computer Science

Ugur Cetintemel

Vice Chair and Director of Undergraduate Studies
Thomas W. Doeppner

Director of Graduate Studies
David H. Laidlaw

Since our inception in 1979, the Computer Science Department at Brown has forged a path of innovative information technology research and teaching at both the undergraduate and graduate levels. From our modest beginnings as an interest group within the Divisions of Applied Mathematics and Engineering in the 1960s to its current stature as one of the nation’s leading computer science programs, the Computer Science Department has continuously produced prominent contributors in the field. Computer Science combines the intellectual challenge of a new discipline with the excitement of an innovative and rapidly expanding technology. The department resides in Brown’s Center for Information Technology; this striking building houses many of the university’s computing activities, as well as the department’s instructional computing facilities and research labs. Faculty, staff and students are provided state-of-the-art computing facilities.

We are a diverse community of scholars engaged in all aspects of research, teaching and mentoring in computer science and its related interdisciplinary disciplines. Realizing the importance of computing and algorithmic thinking in so many scientific, social and technological endeavors, we collaborate extensively with colleagues in archaeology, applied mathematics, biology, cognitive and linguistic sciences, economics, engineering, mathematics, medicine, physics and neuroscience.

Our undergraduate offerings reflect the department’s multidisciplinary orientations, with joint concentrations in mathematics, applied mathematics, computational biology and economics. We have strong undergraduate research groups and a long history of involving undergraduates in projects that span disciplinary boundaries.

For additional information, please visit the department’s website: http://www.cs.brown.edu/

Computer Science Concentration Requirements

Computer science is now a critical tool for pursuing an ever-broadening range of topics, from outer space to the workings of the human mind. In most areas of science and in many liberal arts fields, cutting-edge work depends increasingly on computational approaches. The undergraduate program at Brown is designed to combine breadth in practical and theoretical computer science with depth in specialized areas. These areas range from traditional topics, such as analysis of algorithms, artificial intelligence, databases, distributed systems, graphics, mobile computing, networks, operating systems, programming languages, robotics and security, to novel areas including games and scientific visualization.

Our requirements are built on a collection of pathways, each representing a well defined area within computer science. Concentrators interested in particular areas can choose the courses included in particular pathways. Conversely, concentrators who are unsure of their area of interest but who have particularly enjoyed certain courses can choose pathways that include these concentrations. Students may not use more than two CSCI 1970 courses to complete the requirements for the Sc.B. and one CSCI 1970 course for the A.B. requirements.

Requirements for the Standard Track of the Sc.B. degree

Thirteen CS courses numbered 0220 or higher. 13

## Two complete pathways (at least one core course from each)

- Each requires two 1000-level courses as well as one-to-three intermediate courses
- One of the courses used in one pathway must be a capstone course (defined below) 2
- The core and related courses used in one pathway may not overlap with those used in another
- 2000-level courses beyond those explicitly mentioned may also be used toward the concentration. They will be considered to be part of the same pathway as their thematically-related 1000-level courses
- Additional intermediate courses so that a total of five are taken, with at least one from each of the three categories
- One additional 1000-level course that is neither a core nor a related course for the pathways used above
- No more than four arts, humanities, and social science oriented CS courses (currently CSCI 1250, 1280, 1370, 1800, 1805, and 1870) may be used for concentration credit.
**Intermediate Courses**

Students must complete the intermediate courses defined for the pathway they choose. In addition, ScB students must take at least one course from each intermediate course category to ensure they span all areas. Taking additional courses beyond those listed for the pathway may be required.

VISUAL COMPUTING: studies the creation, interaction, and analysis of images and visual information, including animation and games

Core Courses
- CSCI 1230 Introduction to Computer Graphics
- or CSCI 1250 Introduction to Computer Animation
- or CSCI 1280 Intermediate 3D Computer Animation
- or CSCI 1290 Computational Photography
- or CSCI 1300 User Interfaces and User Experience
- or CSCI 1370 Virtual Reality Design for Science
- or CSCI 1430 Computer Vision
- or CSCI 1950T Advanced Animation Production

Related Courses
- CSCI 1950N 2D Game Engines
- or CSCI 1470 Deep Learning
- or CSCI 1950U Topics in 3D Game Engine Development
- or ENGN 1610 Image Understanding
- or CLPS 1520 Computational Vision
- or DATA 1200 Reality remix - Experimental VR

Intermediate Courses
- CSCI 0320 Introduction to Software Engineering
- or CSCI 0330 Introduction to Computer Systems
- MATH 0520 Linear Algebra
- or MATH 0540 Honors Linear Algebra
- or CSCI 0530 Coding the Matrix: An Introduction to Linear Algebra for Computer Science

COMPUTER ARCHITECTURE: studies the design, construction, and analysis of computer architecture and hardware

Core Courses
- ENGN 1630 Digital Electronics Systems Design
- or ENGN 1640 Design of Computing Systems
- or ENGN 1650 Embedded Microprocessor Design

Related Courses
- CSCI 1600 Real-Time and Embedded Software
- or CSCI 1760 Multiprocessor Synchronization
- or ENGN 1600 Design and Implementation of Digital Integrated Circuits

Intermediate Course
- CSCI 0330 Introduction to Computer Systems
- or CSCI 0300 Fundamentals of Computer Systems

COMPUTATIONAL BIOLOGY: studies the foundations and applications of algorithms for analyzing biological data and processes

Core Courses
- CSCI 1810 Computational Molecular Biology
- CSCI 1820 Algorithmic Foundations of Computational Biology
- CSCI 1850 Deep Learning in Genomics

Related Courses
- CSCI 1420 Machine Learning
- or CSCI 1430 Computer Vision
- or CSCI 1951A Data Science
- or CLPS 1520 Computational Vision
- CSCI 1470 Deep Learning

Intermediate Courses
- CSCI 0220 Introduction to Discrete Structures and Probability
- or CSCI 1010 Theory of Computation
A.B. degree

Requirements for the Standard Track of the A.B. degree

Prerequisites (0-3 courses)

Students must complete or place out of second semester calculus.

<table>

</tr>
</tbody>
</table>

Seven CS courses numbered 0220 or higher

## Additional intermediate courses so that a total of three are taken with at least one in each of two different intermediate-course categories (see the ScB requirements for a listing of these categories)

## One additional 1000-level course that is neither a core nor a related course for the pathways used above

## Of the remaining two courses, at least one must be at the 1000-level or higher (i.e., one may be an intermediate course not otherwise used as part of the concentration). One course may be an approved 1000-level course from another department. Unless explicitly stated in a pathway, such non-CS courses may not be used as part of pathways.

## No more than two arts, humanities, and social science oriented CS courses (currently CSCI 1250, 1280, 1370, 1800, 1805, and 1870) may be used for concentration credit.

¹ Students wishing to go directly from CSCI 0111 to CSCI 0180 (without CSCI 0112) will need to successfully complete additional exercises to receive an instructor override code for CSCI 0180.

Requirements for the Professional Track of the both the Sc. B. and A.B. degrees.

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete full-time professional experiences doing work that is related to their concentration programs, totaling 2-6 months, whereby each internship must be at least one month in duration in cases where students choose to do more than one internship experience. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Internships that take place between the end of the fall and the start of the spring semesters cannot be used to fulfill this requirement.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student’s concentration advisor:

- Which courses were put to use in your summer’s work? Which topics, in particular, were important?
• In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
• Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
• What did you learn from the experience that probably could not have been picked up from course work?
• Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
• Would you recommend your summer experience to other Brown students? Explain.

Honors
Honors candidates must have earned A’s or S-with-distinction in 2/3 (rounding up) of the courses used towards the concentration, excluding introductory-sequence courses (CS courses numbered 0200 or below) and the calculus prerequisite (unless that course is also used as an intermediate math course in CS requirements).

Computer Science-Economics Concentration Requirements
The joint Computer Science-Economics concentration exposes students to the theoretical and practical connections between computer science and economics. It prepares students for professional careers that incorporate aspects of economics and computer technology and for academic careers conducting research in areas that emphasize the overlap between the two fields. Concentrators may choose to pursue either the A.B. or the Sc.B. degree. While the A.B. degree allows students to explore the two disciplines by taking advanced courses in both departments, its smaller number of required courses is compatible with a liberal education. The Sc.B. degree achieves greater depth in both computer science and economics by requiring more courses, and it offers students the opportunity to creatively integrate both disciplines through a design requirement. In addition to courses in economics, computer science, and applied mathematics, all concentrators must fulfill the Computer Science department’s writing requirement by passing a course that involves significant expository writing.

Prerequisites (3 courses):

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>

<tr>
<td></td>
<td>ECON 1860</td>
<td>The Theory of General Equilibrium</td>
</tr>
<tr>
<td></td>
<td>ECON 1870</td>
<td>Game Theory and Applications to Economics</td>
</tr>
</tbody>
</table>

Taking into account the above requirements, students must select a total of 21 courses to complete the Computer Science-Economics concentration.
One capstone course in either CS or Economics: a one-semester course, normally taken in the student’s last semester undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic (preferably at the intersection of computer science and economics) in depth, to produce a culminating artifact such as a paper or software project. A senior thesis, which involved two semesters of work, may count as a capstone.

### Total Credits: 17

1. APMA 1650 or APMA 1655 may be used in place of CSCI 1450 in CS pathway requirements. However, concentration credit will be given for only one of APMA 1650, APMA 1655, and CSCI 1450.
2. CSCI 1010 may be used either as a math-oriented intermediate course or as an advanced course. CSCI 1010 was formerly known as CSCI 0510: They are the same course and hence only one may be taken for credit.
3. CS Pathways can be found on the Pathways (https://cs.brown.edu/degrees/undergrad/concentration-requirements/pathways-for-undergraduate-and-masters-students) page.
4. Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.
5. Students may use either ECON 1070 or ECON 1090 toward the concentration, but not both. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

### Standard Program for the A.B. degree:

#### Prerequisites (3 courses):
- MATH 0100 Introductory Calculus, Part II
- MATH 0520 Linear Algebra
- or MATH 0540 Honors Linear Algebra
- or CSCI 0530 Coding the Matrix: An Introduction to Linear Algebra for Computer Science
- ECON 0110 Principles of Economics

#### Required Courses: 13 courses: 7 Computer Science and 6 Economics

<table>
<thead>
<tr>
<th>Series A</th>
<th>CSCI 0150 &amp; CSCI 0160</th>
<th>Introduction to Object-Oriented Programming and Computer Science and Introduction to Algorithms and Data Structures</th>
</tr>
</thead>
<tbody>
<tr>
<td>Series B</td>
<td>CSCI 0170 &amp; CSCI 0180</td>
<td>Computer Science: An Integrated Introduction and Computer Science: An Integrated Introduction</td>
</tr>
<tr>
<td>Series C</td>
<td>CSCI 0190</td>
<td>Accelerated Introduction to Computer Science (and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0180, an intermediate-level course, or a 1000-level course)</td>
</tr>
<tr>
<td>Series D</td>
<td>CSCI 0111 &amp; CSCI 0180</td>
<td>Computing Foundations: Data and Computer Science: An Integrated Introduction</td>
</tr>
</tbody>
</table>

Two of the following intermediate courses, one of which must be math-oriented and one systems-oriented:

| CSCI 0220 | Introduction to Discrete Structures and Probability (math) |
| CSCI 0320 | Introduction to Software Engineering (systems) |
| CSCI 0330 | Introduction to Computer Systems (systems) |
| or CSCI 0300 | Fundamentals of Computer Systems |
| CSCI 1010 | Theory of Computation (math) |

Two additional CS courses; at least one must be at the 1000-level. The other must either be at the 1000-level or be an intermediate course not already used to satisfy concentration requirements. CSCI 1450 may not be used to satisfy this requirement.

| ECON 1130 | Intermediate Microeconomics (Mathematical) |
| ECON 1210 | Intermediate Macroeconomics |
| ECON 1630 | Mathematical Econometrics I |
| ECON 1170 | Welfare Economics and Social Choice Theory |
| ECON 1225 | Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies |
| ECON 1255 | Unemployment: Models and Policies |
| ECON 1460 | Industrial Organization (Mathematical) |
| ECON 1470 | Bargaining Theory and Applications |
| ECON 1490 | Designing Internet Marketplaces |
| ECON 1640 | Mathematical Econometrics II |
| ECON 1545 | Topics in Macroeconomics, Development and International Economics |
| ECON 1660 | Big Data |
| ECON 1670 | Advanced Topics in Econometrics |
| ECON 1750 | Investments II |
| ECON 1805 | Economics in the Laboratory |
| ECON 1820 | Theory of Behavioral Economics |
| ECON 1850 | Theory of Economic Growth |
| ECON 1860 | The Theory of General Equilibrium |
| ECON 1870 | Game Theory and Applications to Economics |

or any graduate Economics course

### Total Credits: 13

1. Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.
2. CSCI 1951K can be counted as one of them, if it has not been used to satisfy a concentration requirement.
3. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

### Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments’ websites. If the primary thesis advisor belongs to Economics (Computer Science), then students
must have a reader in the Computer Science (respectively, Economics) department.

**Professional Track**

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete full-time professional experiences doing work that is related to their concentration programs, totaling 2-6 months, whereby each internship must be at least one month in duration in cases where students choose to do more than one internship experience. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Internships that take place between the end of the fall and the start of the spring semesters cannot be used to fulfill this requirement.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student's concentration advisor:

- Which courses were put to use in your summer's work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.

---

**Applied Mathematics-Computer Science Concentration Requirements**

The Sc.B. concentration in Applied Math-Computer Science provides a foundation of basic concepts and methodology of mathematical analysis and computation and prepares students for advanced work in computer science, applied mathematics, and scientific computation. Concentrators must complete courses in mathematics, applied math, computer science, and an approved English writing course. While the concentration in Applied Math-Computer Science allows students to develop the use of quantitative methods in thinking about and solving problems, knowledge that is valuable in all walks of life, students who have completed the concentration have pursued graduate study, computer consulting and information industries, and scientific and statistical analysis careers in industry or government. This degree offers a standard track and a professional track.

**Requirements for the Standard Track of the Sc.B. degree.**

**Prerequisites - two semesters of Calculus, for example**

<table>

<td>Statistical Inference I</td>
</tr>
</tbody>
</table>

Three 1000-level Computer Science courses. Two of these courses and the intermediate courses must satisfy one of the CS pathways. Non-CSCI courses are not allowed, even if they are approved as part of a CS pathway or allowed as part of a pure CS concentration. At most one of the three courses can be a designated arts, humanities, or social science oriented CS course (which includes CSCI 1250, 1280, 1370, 1800, 1805, 1870), but see here [https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-requirements-2020/new-scbb-requirements/](https://cs.brown.edu/degrees/undergrad/concentrating-in-cs/concentration-requirements-2020/new-scbb-requirements/) for the current list.

Three 1000-level Applied Mathematics courses approved by the concentration advisor, of which two should constitute a standard sequence or address a common theme. Typical sequences include: APMA 1200/1210 and APMA 1650 or 1655/1660. APMA 1910 cannot be used as an elective.
A capstone course: a one-semester course, taken in the student’s last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth, to produce a culminating artifact such as a paper or software project. The title and abstract of the artifact, along with the student’s and faculty-sponsor’s names, will be placed in the CS website. The inclusion of a relevant image or system diagram is strongly encouraged. The complete text of the best artifacts of each class will be featured on the CS website. A senior thesis, which involves two semesters of work, may count as a capstone.

Note: CSCI 1010 and 1450 may be used either as a math-oriented intermediate courses or as advanced courses. CSCI 1010 was formerly known as CSCI 510: they are the same course and hence only one may be taken for credit. CSCI 1450 was formerly known as CSCI 450: they are the same course and hence only one may be taken for credit. Applied Math 1650 or 1655 may be used in place of CSCI 1450. However, concentration credit will be given for only one of Applied Math 1650, 1655, and CSCI 1450.

### Total Credits

### Requirements for the Professional Track of the Sc.B. degree.

The requirements for the professional tracks include all those of each of the standard tracks, as well as the following:

- Students must complete full-time professional experiences doing work that is related to their concentration programs, totaling 2-6 months, whereby each internship must be at least one month in duration in cases where students choose to do more than one internship experience. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Internships that take place between the end of the fall and the start of the spring semesters cannot be used to fulfill this requirement.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience, to be approved by the student’s concentration advisor:

- Which courses were put to use in your summer’s work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.

### Mathematics-Computer Science Concentration Requirements

Students may opt to pursue an interdisciplinary Bachelor of Science degree in Math-Computer Science, a concentration administered cooperatively between the mathematics and computer science departments. Course requirements include math- and systems-oriented computer science courses, as well as computational courses in applied math. Students must identify a series of electives that cohere around a common theme. As with other concentrations offered by the Computer Science department, students have the option to pursue the professional track ([http://www.cs.brown.edu/ugrad/concentrations/professional.track.html](http://www.cs.brown.edu/ugrad/concentrations/professional.track.html)) of the ScB program in Mathematics-Computer Science.

#### Three 1000-level Mathematics courses | 3
#### Three advanced courses in Computer Science | 3
#### Three additional courses different from any of the above chosen from Mathematics, Computer Science, Applied Mathematics, or related areas | 3
A capstone course in Computer Science or Mathematics  

Total Credits 19  

1. Students wishing to go directly from CSCI 0111 to CSCI 0180 (without CSCI 0112) will need to successfully complete additional exercises to receive an instructor override code for CSCI 0180. In 2020-21, these exercises will be offered within CSCI 0111. Students from prior CSCI 0111 offerings should contact Professor Fisler to arrange to do this work.  

2. These courses must be at the 1000-level or higher. Two of these courses and the intermediate courses must satisfy one of the CS pathways (https://cs.brown.edu/degrees/undergrad/concentration-requirements/pathways-for-undergraduate-and-masters-students/).  

3. Note: CSCI 1010 may be used either as a math-oriented intermediate course or as an advanced course. CSCI 1010 was formerly known as CSCI 510: they are the same course and hence only one may be taken for credit. CSCI 1450 was formerly known as CSCI 450: they are the same course and hence only one may be taken for credit. Applied Math 1650 or 1655 may be used in place of CSCI 1450 in CS pathway requirements (https://cs.brown.edu/degrees/undergrad/concentration-requirements/pathways-for-undergraduate-and-masters-students/). However, concentration credit will be given for only one of Applied Math 1650, 1655, and CSCI 1450.  

4. These must be approved by a concentration advisor.  

5. A one-semester course, taken in the student's last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth, to produce a culminating artifact such as a paper or software project. The title and abstract of the artifact, along with the student's and faculty-sponsor's names, will be placed in the CS website. The inclusion of a relevant image or system diagram is strongly encouraged. The complete text of the best artifacts of each class will be featured on the CS website. A senior thesis, which involves two semesters of work, may count as a capstone (https://cs.brown.edu/degrees/undergrad/concentration/capstone/).  

Requirements for the Professional Track of the Sc.B. degree.  

The requirements for the professional track include all those of the standard track, as well as the following:  

Students must complete full-time professional experiences doing work that is related to their concentration programs, totaling 2-6 months, whereby each internship must be at least one month in duration in cases where students choose to do more than one internship experience. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Internships that take place between the end of the fall and the start of the spring semesters cannot be used to fulfill this requirement.  

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student's concentration advisor:  

- Which courses were put to use in your summer’s work? Which topics, in particular, were important?  
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?  
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?  
- What did you learn from the experience that probably could not have been picked up from course work?  
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.  
- Would you recommend your summer experience to other Brown students? Explain.  

Computer Science Graduate Program  

The department of Computer Science offers two graduate degrees in computer science. The Master of Science (Sc.M.) degree for those who wish to improve their professional competence in computer science or to prepare for further graduate study, and the Doctor of Philosophy (Ph.D.) degree.  

For more information on admission, please visit the following website: http://www.brown.edu/academics/gradschool/programs/computer-science/  

Ph.D. Requirements  

Requirements for the Ph.D. program can be found at https://cs.brown.edu/degrees/doctoral/reqs/reqs_phd.2015.pdf  

Requirements for the Masters Degree  

The requirements consist of a basic component and an advanced component. All courses must be at the 1000 level or higher. All courses must be completed with a grade of B or better.  

Students who started the program in September 2020 or later must also complete UNIV 2020 “Professional Development”. It is a half-credit, tuition-free course. International students must take the course in person (not online) during their first semester of residence in the program. Other students may take it at any time.  

The courses in student's program must be approved by the director of the Master's program (as well as by the student's advisor).  

Basic Component  

The basic component consists of six courses. None of these courses may be reading and research courses such as CSCI 1970 and CSCI 2980.  

The six courses are chosen as follows:  

- Two must be CS courses that form a pathway (see the explanation of pathways at https://cs.brown.edu/degrees/undergrad/concentration-requirements/pathways-for-undergraduate-and-masters-students/).  
- One must be a CS course in an area that's not listed in the chosen pathway (it must not be a core course, must not be a grad course, and must not be a related course of the pathway).  
- The three additional courses must be in CS or related and must be approved by your advisor or the director of graduate studies (master's). Getting this approval will require you to show that the courses are relevant to your CS interests. In general, the more non-CS courses you wish to take, the stronger your justification must be.  

Advanced Component  

The advanced component requires the student to complete one of the following six options. Reading and research courses (such as CSCI 2980) may be used as part of options 1, 2, 3, and 4, but not as part of options 5 and 6. An “advanced course,” as used below, is either a 2000-level CS courses or a 1000-level CS courses that includes a Master's supplement. Master's supplement are nominally half-credit courses, but students may do the work of these courses without officially registering for them. Examples of such supplements are CSCI 1234 (supplementing CSCI 1230), CSCI 1690 (supplementing CSCI 1670), and CSCI 1729 (supplementing CSCI 1730).  

“Internships”, as used below, must be approved by the student's advisor and are paid work in the area of the student's master's studies. They may be full, or part time. A full-time internship must last at least two months but no more than four months. A part-time internship must last at least four months but no more than six months. Normally the internship will be performed between the student's second and third semesters in the program.  

The six options are:
Rationale

Students entering the Master's program typically have one of two goals: they intend to pursue research in Computer Science and are preparing themselves to enter Ph.D. programs, or they intend to become professional computer scientists and pursue careers in industry. In both cases, students should take collections of courses that not only give them strength in particular areas of Computer Science, but also include complementary areas that familiarize them with other ways of thinking about the field. For example, a student whose interests are in the practical aspects of designing computer systems should certainly take courses in this area, but should also be exposed to the mindset of theoretical computer science. In a rapidly changing discipline, there is much cross-fertilization among areas and students should have some experience in doing advanced work in areas not directly related to their own.

A student whose goal is a research career should become involved as quickly as possible with a research group as part of their Master's studies, and demonstrate and learn about research by participating in it. The resulting thesis or project report will serve to establish her or his suitability for entering a Ph.D. program.

A student whose goal is to be a professional computer scientist should have some professional experience as part of her or his preparation. A certain amount of coursework is required before a student can qualify for a pedagogically useful internship. Students with limited experience in Computer Science should take a few advanced Computer Science courses before embarking on an internship. Other students, particularly those whose undergraduate degrees were at Brown, will have had internship experiences while undergraduates. Internships provide insights for subsequent courses and project work at Brown. Students without such experiences are at a disadvantage with respect to their peers. Thus we strongly encourage students who have not had such experience to choose one of options 2, 4, and 6, for which internships are required.

Note that these internships are not courses and the work is not evaluated as it would be for a course. Students' advisors will assist them in choosing and obtaining internships, but it is up to students themselves to ensure that they get as much benefit as possible from their experiences. They must be able to take advantage of these experiences while completing their Master's projects – we expect as high-quality work from them as we do from students who entered the program with prior internship experiences.

A Master's degree normally requires three to four semesters of full-time study, depending upon one's preparation.

Concurrent ScB (NUS) and ScM in Computational Biology (Brown University)

The School of Computing at National University of Singapore and The Department of Computer Science at Brown have established a concurrent Bachelor’s and Master’s degree program in Computational Biology. After having first completed four years of under-graduate study at National University of Singapore (NUS), qualified students will attend Brown University to complete their fifth and final year of study in computational biology. After the successful completion of requirements set forth by both universities, the students will simultaneously earn both their Sc.B. and Sc.M. degrees. The Sc.B will be awarded by the National University of Singapore, while the Sc.M. is awarded by Brown University.

Cybersecurity Graduate Program

Requirements for the Master of Science in Cybersecurity

Choose from either the Computer Science Track or the Policy Track

Computer Science Track:

Required Courses:

CSCI 1360 Human Factors in Cybersecurity 1
CSCI 1660 Introduction to Computer Systems Security 1
CSCI 1860 Cybersecurity Law and Policy 1

Select Three Track courses: 3

CSCI 1310 Fundamentals of Computer Systems
CSCI 1510 Introduction to Cryptography and Computer Security
CSCI 1650 Software Security and Exploitation
CSCI 1670 Operating Systems
CSCI 1680 Computer Networks
CSCI 1690 Operating Systems Laboratory
CSCI 1730 Design and Implementation of Programming Languages
CSCI 2390 Privacy-Conscious Computer Systems
CSCI 2590 Advanced Topics in Cryptography
CSCI 2950V Topics in Applied Cryptography
CSCI 2951E Topics in Computer Systems Security
CSCI 2951U Topics in Software Security

Select Two Elective Courses: 2

CSCI 1010 Theory of Computation
CSCI 1270 Database Management Systems
CSCI 1300 User Interfaces and User Experience
CSCI 1380 Distributed Computer Systems
CSCI 1410 Artificial Intelligence
CSCI 1420 Machine Learning
CSCI 1450 Advanced Introduction to Probability for Computing and Data Science
CSCI 1470 Deep Learning
CSCI 1570 Design and Analysis of Algorithms

CSCI 1800 Cybersecurity and International Relations
CSCI 1805 Computers, Freedom and Privacy
CSCI 1870 Cybersecurity Ethics
CSCI 1951R Introduction to Robotics
CSCI 2980 Reading and Research

Other appropriate courses are possible with the approval of the Director of Graduate Studies and the instructor if you’ve satisfied their prerequisites.

Policy Track:

Required Courses:

CSCI 1360 Human Factors in Cybersecurity 1
CSCI 1860 Cybersecurity Law and Policy 1
CSCI 1880 Introduction to Computer Security 1

Select Three Track courses: 3

CSCI 1970 Individual Independent Study
CSCI 2001 Applied Cryptography and Data Privacy
CSCI 2002 Privacy and Data Protection
IAPA 1201 Cybersecurity: Strategy and Policy

Other appropriate courses are possible with the approval of the Director of Graduate Studies and the instructor if you’ve satisfied their prerequisites.

Select Two Elective Courses: 2

CSCI 0020 The Digital World
CSCI 0100 Data Fluency for All
CSCI 0111 Computing Foundations: Data
CSCI 0112 Computing Foundations: Program Organization
CSCI 1300 User Interfaces and User Experience
CSCI 1800 Cybersecurity and International Relations
CSCI 1805 Computers, Freedom and Privacy
CSCI 1870 Cybersecurity Ethics
CSCI 1951L Blockchains and Cryptocurrencies

Courses

CSCI 0020. The Digital World.

Removes the mystery surrounding computers and the ever-growing digital world. Introduces a range of topics and many aspects of multimedia, along with explanations of the underlying digital technology and its relevance to our society. Other topics include artificial intelligence, IT security, ethics and the economics of computing as well as the effects of its pervasiveness in today’s world. Introductory programming and analytic skills are developed through Excel, HTML, CSS, Javascript, and Python assignments. CSCI0020 is a good introduction to a wide range of CS topics that have broad relevance in our society. No prerequisites. Cannot be taken to fulfill CS Concentration.

CSCI 0030. Introduction to Computation for the Humanities and Social Sciences.

Introduces students to the use of computation for solving problems in the social sciences and the humanities. We will investigate a series of real-world problems taken from the news, from books such as Freakonomics, and from current research. Topics covered include data gathering, analysis, and visualization; web-based interfaces; algorithms; and scripting. Enrollment limited to 20. Instructor permission required.
CSCI 0040. Introduction to Scientific Computing and Problem Solving
CSCI 0040 provides an introduction to using computers to solve STEM (Science, Technology, Engineering and Mathematics) data analysis, visualization and simulation problems from engineering, neuroscience, biology, mathematics and finance.

Students will access and analyze a number of "real world" data sets while becoming fluent MATLAB programmers. Other tools utilized may include Excel, Wolframalpha and Python.

By course end, students should be able to use MATLAB to solve a large variety of scientific data analysis, visualization and simulation problems.

No prior programming experience is required (MATLAB is easy and fun to use).

CSCI 0050. A Data-Centric Introduction to Programming

An introduction to computer programming with a focus on skills needed for data-intensive applications. Topics include core constructs for processing both tabular and structured data; decomposing problems into programming tasks; data structures; algorithms; and testing programs for correct behavior.

CSCI 0060. Practical System Skills

An introduction to develop hands-on-computing skills necessary to comfortably work within a UNIX-like operating system. Topics include the shell, its filesystem, bash scripting, SSH, version control, as well as how to locally develop, deploy and publish a website. https://cs.brown.edu/courses/csci0060/

CSCI 0080. A First Byte of Computer Science

Introduces non-CS concentrators to the academic discipline of computer science, its thought processes, and its relevance to other fields and modern life more generally. The target audience is students who are interested in learning more about what computer science is about and the ideas it has to offer tomorrow's citizens and scholars. Topics include the basics of computation and programming, a taste of theoretical computer science and algorithms, and an introduction to codes and artificial intelligence. Although students will learn to read and understand short programs, the course will not teach or require advanced programming skills.

CSCI 0081. TA Apprenticeship: Full Credit

Being an undergraduate TA is a learning experience: one not only gets a deeper understanding of the course material, but gains management and social skills that are invaluable for one's future. Students taking this course must first be selected as an undergraduate TA for a Computer Science course, a course the student has taken and done well in. Students will work with the course's instructor on a variety of course-related topics, including preparation of material and development of assignments. Whether CSCI 0081 or its half-credit version (CSCI 0082) is taken is up to the instructor of the course being TA'd. Instructor permission required.

CSCI 0082. TA Apprenticeship: Half Credit

Being an undergraduate TA is a learning experience: one not only gets a deeper understanding of the course material, but gains management and social skills that are invaluable for one's future. Students taking this course must first be selected as an undergraduate TA for a Computer Science course, a course the student has taken and done well in. Students will work with the course's instructor on a variety of course-related topics, including preparation of material and development of assignments. Whether CSCI 0082 or its full-credit version (CSCI 0081) is taken is up to the instructor of the course being TA'd. Instructor permission required.

CSCI 0100. Data Fluency for All

This course is intended to introduce Brown students to computational techniques that data scientists use to tell stories. Data fluency encompasses both data literacy, the basics of statistics and machine learning, and data communication, which relies heavily on principles of design. Students will gain hands on experience using statistical tools such as 'R' to analyze real world data sets, and 'ggplot' to visualize them. Sample application domains include just about every field, since the only requirement is data, which there almost always are (e.g., the complete works of Shakespeare is a sample data set).

CSCI 0111. Computing Foundations: Data

An introduction to computing and programming that focuses on understanding and manipulating data. Students will learn to write programs to process both tabular and structured data, to assess programs both experimentally and theoretically, to apply basic data science concepts, and to discuss big ideas around the communication, use, and social impacts of digital information. Designed for both concentrators and non-concentrators; this is the first course in either a two- or three-course introductory sequence leading into advanced CS courses. Programming assignments will be smaller scale than in CSCI 0150/0170, thus allowing students time to practice programming and discuss computational ideas in a broader context.

CSCI 0112. Computing Foundations: Program Organization

Explores how organization of programs, data, and algorithms affects metrics such as time performance, space usage, social impacts, and data privacy. Students will learn how to choose between candidate data structures for a problem, how to write programs over several standard data structures, how to assess the quality of programs (from theoretical, practical, and social perspectives), and how to apply their skills to computational problems that could arise in a variety of fields. The course will teach object-oriented programming, in combination with basic functional and imperative programming concepts. The course is designed for both concentrators and non-concentrators. Prerequisite: CSCI 0111

CSCI 0130. User Interfaces and User Experience

Topics include understanding when to use different interfaces, modeling and representing user interaction, principles of user experience design, eliciting requirements and feedback from users, methods for designing and prototyping interfaces, and user interface evaluation. Students interested in learning the process behind building a user interface and gaining hands-on experience designing a user interface should take this course. Programming experience is unnecessary. There will be assignments, readings, and design labs. CSCI 0130 is the same lecture, labs, and readings as CSCI 1300 but half of the assignments will be different (CSCI 1300 will have assignments with computer science prerequisites). Website: http://cs.brown.edu/courses/csci1300/

CSCI 0150. Introduction to Object-Oriented Programming and Computer Science

Introduces programming in Java (a modern, widely-used programming language), interactive 2D computer graphics, and some fundamental data structures and algorithms. Students learn by programming a sequence of interactive graphics programs which gradually increase in complexity, including Doodle Jump, Tetris (http://basililweb.techhouse.org/), and a significant final project. Lectures are supplemented by skits performed by the UTAs (Undergraduate Teaching Assistants) to teach course concepts and for a bit of added entertainment! This course is intended for both potential concentrators and those who may take only a single course. There are NO prerequisites, and no prior knowledge of programming is required, though students who do have prior programming experience are also encouraged to take the course!

CSCI 0160. Introduction to Algorithms and Data Structures

Introduces fundamental techniques for problem solving by computer that are relevant to most areas of computer science, both theoretical and applied. Algorithms and data structures for sorting, searching, graph problems, and geometric problems are covered. Programming assignments conform with the object-oriented methodology introduced in CSCI 0150. Prerequisite: CSCI 0150 or written permission.
CSCI 0170. Computer Science: An Integrated Introduction.
CSCI0170/0180 is an introductory sequence that helps students begin to develop the skills, knowledge, and confidence to solve computational problems elegantly, correctly, efficiently, and with ease. The sequence is unique in teaching both the functional and imperative programming paradigms—the first through the languages Scheme and ML in CSCI0170; the second through Java in CSCI0180. The sequence requires no previous programming experience. Indeed, few high school students are exposed to functional programming; hence even students with previous programming experience often find this sequence an invaluable part of their education.

Although students are taught to use programming languages as tools, the goal of CSCI0170/0180 is not merely to teach programming. On the contrary, the goal is to convey to students that computer science is much more than programming! All of the following fundamental computer science techniques are integrated into the course material: algorithms, data structures, analysis, problem solving, abstract reasoning, and collaboration. Concrete examples are drawn from different subareas of computer science: in 0170, from arbitrary-precision arithmetic, natural language processing, databases, and strategic games; in 0180, from discrete-event simulation, data compression, and client/server architectures.

CSCI 0180. Computer Science: An Integrated Introduction.
A continuation of CSCI 0170. Students learn to program in Java while continuing to develop their algorithmic and analytic skills. Emphasis is placed on object-oriented design, imperative programming, and the implementation and use of data structures. Examples are drawn from such areas as databases, strategy games, web programming, graphical user interfaces, route finding, and data compression. Lab work done with the assistance of TAs. Prerequisite: CSCI 0112, 0170, or CSCI 0190. CSCI 0111 can be used if additional work is done and with the instructor's permission.

CSCI 0190. Accelerated Introduction to Computer Science.
A one-semester introduction to CS covering programming integrated with core data structures, algorithms, and analysis techniques, similar to the two-course introductory sequences (CSCI 0150-0160 and CSCI 0170-0180). Students wishing to take CSCI 0190 must pass a sequence of online placement assignments. Though the placement process is most appropriate for students who have had some prior programming experience, it is self-contained so all are welcome to try learning the provided material and attempting placement. Placement information will be available by June 1st at http://cs.brown.edu/courses/csci0190/. Students who do not successfully pass the placement process won't be allowed to register.

CSCI 0200. Program Design with Data Structures and Algorithms.
Students extend their program-design skills while learning multiple data structures, common graph algorithms, different forms of societal impacts from programs, how to analyze programs for performance, and how to work effectively with multiple styles of programming languages. Examples and course projects draw from several areas of computer science to help students identify their broader interests within the field. There will be a required weekly lab session involving hands-on work with course material. Prerequisite: CSCI 0112, CSCI 0150, 0170, or CSCI 0190. In addition, CSCI 0111 can be used with both additional work and the instructor's permission. The first two weeks of the course will be taught as at least two parallel tracks based on which prerequisite course a student has taken.

CSCI 0220. Introduction to Discrete Structures and Probability.
Seeks to place on solid foundations the most common structures of computer science, to illustrate proof techniques, to provide the background for an introductory course in computational theory, and to introduce basic concepts of probability theory. Introduces Boolean algebras, logic, set theory, elements of algebraic structures, graph theory, combinatorics, and probability. No prerequisites.

Covers fundamental concepts, principles, and abstractions that underlie the design and engineering of computer systems. Students will learn how a computer works, how to write safe and performant systems software, and what systems abstractions support today's complex, high-performance systems developed in industry. Specific topics include machine organization, systems programming and performance, key concepts of operating systems, isolation, security, virtualization, concurrent programming, and the basics of distributed systems. Combined lectures, labs, and several hands-on projects involving programming exercises in C/C++.
Prerequisites: CSCI 0160, 0180, or 0190; or permission of the instructor.

CSCI 0310. Introduction to Computer Systems.
Principles of computer organization. Begins with machine representation of data types and logic design, then explores architecture and operations of computer systems, including I/O, pipelining, and memory hierarchies. Uses assembly language as an intermediate abstraction to study introductory operating system and compiler concepts.
Prerequisite: CSCI 0150 or CSCI 0180 or CSCI 0190.

CSCI 0320. Introduction to Software Engineering.
Techniques for designing, building, and maintaining large, scalable, and reusable systems. We will cover advanced programming techniques using Java and Javascript. Course assignments will familiarize students with software testing, relational databases, concurrency techniques such as threads, and software engineering tools like git, profilers, and debuggers. A major component of the course will be a group software project of your own design.
Prerequisite: CSCI 0160, CSCI 0180 or CSCI 0190; CSCI 0220 is recommended.

CSCI 0330. Introduction to Computer Systems.
High-level computer architecture and systems programming. The course covers the organization of computer systems (in terms of storage units, caches, processors, and I/O controllers) and teaches students assembly-language programming and C-language programming. Extensive programming exercises introduce students to systems-level programming on Unix systems, as well as to multi-threaded programming with POSIX threads. Students will be introduced to the functions of operating systems. Prerequisite: CSCI 0160, 0180, or 0190.

CSCI 0530. Coding the Matrix: An Introduction to Linear Algebra for Computer Science.
Introduces vectors, matrices and their role in computer science in three components: (1) concepts, theorems, and proofs, (2) procedures and programs, (3) applications and working with data. Weekly lab sessions where students apply concepts to a real task with real data. Example laboratory transformations in 2-D graphics, error-correcting codes, image compression using wavelets, synthesizing a new perspective in a photo, face recognition, news story categorization, cancer diagnosis using machine learning, matching airplanes to destinations, Google's PageRank method. Other topics as time allows. Skills in programming and prior exposure to reading and writing mathematical proofs required.

CSCI 1010. Theory of Computation.
The course introduces basic models of computation including languages, finite-state automata and Turing machines. Proves fundamental limits on computation (incomputability, the halting problem). Provides the tools to compare the hardness of computational problems (reductions). Introduces computational complexity classes (P, NP, PSPACE and others).
Prerequisite: CSCI0220 or CSCI1450 or CSCI1550 or APMA1650/1655 or CSCI1570

This course will cover cryptographic concepts such as data privacy, encryption, authentication, digital signatures, differential privacy, privacy-enhancing technologies, secure computation, and electronic money. The emphasis will be on how to use cryptographic systems correctly in a larger context, rather than on the mathematical details of how they work; although we will cover some of those details too, on a high level. This course will be aimed at practicing and aspiring poets, economists, software engineers, law and policy wonks, and business tycoons. No prerequisites.
CSCI 1230. Introduction to Computer Graphics. Fundamentals concepts in 2D and 3D computer graphics, e.g., 2D raster graphics techniques and simple image processing. Focuses on geometric transformations, and 3D modeling, viewing and rendering. A sequence of assignments in C++ culminates in a simple geometric modeler and ray tracer. Prerequisite: CSCI 0160, CSCI 0180, CSCI 0190, or CSCI 0200. Some knowledge of basic linear algebra is helpful but not required. Strong object-oriented programming ability (e.g., in C++, Java or Python) is required.

CSCI 1234. Computer Graphics Lab. CSCI 1234 is a half-credit course intended to be taken concurrently with CSCI 1230 and provides students with a greater understanding of the material by having them extend each of 1230's assignments to greater depth.

CSCI 1250. Introduction to Computer Animation. Introduction to 3D computer animation production including story writing, production planning, modeling, shading, animation, lighting, and compositing. The first part of the course leads students through progressive exercises that build on each other to learn basic skills in 2D and 3D animation. At each step, student work is evaluated for expressiveness, technical correctness and aesthetic qualities. Students then work in groups creating a polished short animation. Emphasis on in-class critique of ongoing work which is essential to the cycle of visually evaluating work in progress, determining improvements, and implementing them for further evaluation. Please see course website for application procedure.

CSCI 1260. Compilers and Program Analysis. Lexical analysis, syntactic analysis, semantic analysis, code generation, code optimization, compiler writer systems. Prerequisites: CSCI 0220, or CSCI 0320, or CSCI 0300, or CSCI 0330, or CSCI 1310, or CSCI 1330.

CSCI 1270. Database Management Systems. Introduction to database structure, organization, languages, and implementation. Relational model, query languages, query processing, query optimization, normalization, file structures, concurrency control and recovery algorithms, and distributed databases. Coverage of modern applications such as the Web, but with emphasis on Database Management Systems internals. Prerequisites: CSCI 0160, CSCI 0180, or CSCI 0190. One of CSCI 0300, 0330 or CSCI 0320 is strongly recommended.

CSCI 1280. Intermediate 3D Computer Animation. Continues work begun in CSCI 1250 with deeper exploration of technical and artistic aspects of 3D computer animation including more sophisticated shading and lighting methods and character modeling, rigging, animation, and dynamics. After a series of individual exercises, students pursue an independent topic and then, working alone or in pairs, create a polished demonstration. Emphasis is on in-class critique of ongoing work. Prerequisite: CSCI 1250. Students may contact the instructor in December for permission.

CSCI 1290. Computational Photography. Describes the convergence of computer graphics and computer vision with photography. Its goal is to overcome the limitations of traditional photography using computational techniques to enhance the way we capture, manipulate, and interact with visual media. Topics covered: cameras, human visual perception, image processing and manipulation, image based lighting and rendering, high dynamic range, single view reconstruction, photo quality assessment, non photorealistic rendering, the use of Internet-scale data, and more. Students are encouraged to capture and process their own data. Prerequisites: previous programming experience, basic linear algebra, calculus, and probability; previous knowledge of computer graphics or computer vision. Strongly recommended: CSCI 1230, CSCI 1430, ENGN 1610.

CSCI 1300. User Interfaces and User Experience. Have you ever walked into a door thinking that you were supposed to pull instead of push? Have you ever been stuck on a website, not sure how to proceed next? Learn when to use different interfaces, how to model and represent user interaction, how to elicit requirements and feedback from users, as well as the principles of user experience design, methods for designing and prototyping interfaces, and user interface evaluation. Students interested in both learning the process behind building an effective interface and gaining hands-on experience designing a user interface should take this course. There will be assignments, readings, and studios, where students will have the opportunity to work alongside TAs and interact with industry guests as they learn critical tools for interface and web design. Website: http://cs.brown.edu/courses/csci1300/

CSCI 1310. Fundamentals of Computer Systems. Covers fundamental concepts, principles, and abstractions that underlie the design and engineering of computer systems, with reference to applications of these concepts in industry. Topics include machine organization, systems programming and performance, key concepts of operating systems, isolation, security, virtualization, concurrent programming, and the basics of distributed systems. Combined lectures, case studies, labs, and several hands-on projects involving programming exercises. This course is intended for Computer Science Master's students only. Anyone else wanting to take the course should contact the instructor.

CSCI 1320. Creating Modern Web & Mobile Applications. This course covers all aspects of web application development, including initial concept, user-centric design, development methodologies, front and back end development, databases, security, testing, load testing, accessibility, and deployment. There will be a substantial team project. The course is designed for students with a programming background (equiv CSCI 0320/CSCI 0330/CSCI 0300) who want to learn how to build web applications, and for students with a background in web design, including HTML and Javascript, who are interested in learning how to extend design techniques to incorporate the technologies needed in modern web applications. Project teams will consist of students with both backgrounds.

CSCI 1330. Computer Systems. High-level computer architecture and systems programming. The course covers the organization of computer systems (in terms of storage units, caches, processors, and I/O controllers) and teaches students assembly-language programming and C-language programming. Extensive programming exercises introduce students to systems-level programming on Linux systems, as well as to multi-threaded programming with POSIX threads. Students will be introduced to the functions of operating systems. Enrollment limited to Master's students only.

CSCI 1340. Innovating Game Development. What technologies will shape the next generation of videos? This project-centered course focuses on computational innovations for game development. Students examine innovative game technology through case studies of existing games and talks by industrial and academic game professionals. In teams, students propose and implement a project demonstrating a novel technology for gaming. Recommended: strong computational or engineering background.

CSCI 1360. Human Factors in Cybersecurity. This course is designed to push you to think about cybersecurity as an idea with both physical and virtual elements. Throughout the course, we will examine the value of information, the importance of users, and the difficult balance between security and usability. The ultimate goal of this course is to give you the intellectual and scientific framework you need to create systems that are both secure and efficient to use. The course focuses on usable security practices, but also looks deeply at the way our society influences security.
Explores the visual and human-computer interaction design process for scientific applications in Brown's immersive virtual reality Cave. Joint with RISD. Computer Science and design students learn how to work together effectively; study the process of design; learn about scientific problems; create designs applications; critique, evaluate, realize and iterate designs; and demonstrate final projects. Instructor permission required.

CSCI 1380. Distributed Computer Systems. 
Explores the fundamental principles and practice underlying networked information systems, first we cover basic distributed computing mechanisms (e.g., naming, replication, security, etc.) and enabling middleware technologies. We then discuss how these mechanisms and technologies fit together to realize distributed databases and file systems, web-based and mobile information systems. Prerequisite: CSCI 0300, CSCI 0320, CSCI 0330, CSCI 1310 or CSCI 1330.

CSCI 1410. Artificial Intelligence. 
Algorithms and representations used in artificial intelligence. Introduction and implementation of algorithms for search, planning, perception, knowledge representation, logic, probabilistic representation and reasoning, robotics and machine learning.

How can artificial systems learn from examples and discover information buried in data? We explore the theory and practice of statistical machine learning, focusing on computational methods for supervised and unsupervised learning. Specific topics include empirical risk minimization, probably approximately correct learning, kernel methods, neural networks, maximum likelihood estimation, the expectation maximization algorithm, and principal component analysis. This course also aims to expose students to relevant ethical and societal considerations related to machine learning that may arise in practice. Please contact the instructor for information about the waitlist.

CSCI 1430. Computer Vision. 
How can we program computers to understand the visual world? This course treats vision as inference from noisy and uncertain data and emphasizes probabilistic and statistical approaches. Topics may include perception of 3D scene structure from stereo, motion, and shading; segmentation and grouping; texture analysis; learning, object recognition; tracking and motion estimation. Strongly recommended: basic linear algebra, calculus, and probability.

CSCI 1440. Algorithmic Game Theory. 
This course examines topics in game theory and mechanism design from a computer scientist's perspective. Through the lens of computation, the focus is the design and analysis of systems utilized by self-interested agents. Students will investigate how the potential for strategic agent behavior can/should influence system design, and the ramifications of conflicts of interest between system designers and participating agents. Emphasis on computational tractability is paramount, so that simple designs are often preferred to optimal. Students will learn to analyze competing designs using the tools of theoretical computer science, and empirical tools, such as empirical game-theoretic analysis. Application areas include computational advertising, wireless spectrum, and prediction markets.

CSCI 1450. Advanced Introduction to Probability for Computing and Data Science. 
Probability and statistics have become indispensable tools in computer science. Probabilistic methods and statistical reasoning play major roles in machine learning, cryptography, network security, communication protocols, web search engines, robotics, program verification, and more. This course introduces the basic concepts of probability and statistics, focusing on topics that are most useful in computer science applications. Topics include: modeling and solution in sample space, random variables, simple random processes and their probability distributions, Markov processes, limit theorems, and basic elements of Bayesian and frequentist statistical inference. Basic programming experience required for homework assignments.

Students cannot get concentration credit for both CSCI 1450 and APMA 1650/ APMA 1655.

The application of computational methods to problems in natural-language processing. In particular we examine techniques due to recent advances in deep learning: word embeddings, recurrent neural networks (e.g., LSTMs), sequence-to-sequence models, and generative adversarial networks (GANs). Programming projects include parsing, machine translation, question answering, and chat-bots. The prerequisite of CS 1470 (or the equivalent background) is very important.

Deep Learning belongs to a broader family of machine learning methods. It is a particular version of artificial neural networks -- a version that emphasizes learning representation with multiple layers of networks. Deep Learning, plus the specialized techniques that it has inspired (e.g. convolutional neural networks, recurrent neural networks, and transformers), have led to rapid improvements in many applications, such as computer vision, machine learning, sound understanding, and robotics. This course intends to give students an overview of the prominent techniques of Deep Learning and its applications in computer vision, language understanding, and other areas. It also aims at providing hands-on practice of implementing deep learning algorithms in Python.

CSCI 1480. Building Intelligent Robots. 
How do robots function autonomously in dynamic, unpredictable environments? This course focuses on programming mobile robots, such as the iRobot Roomba, to perceive and act autonomously in real-world environments. The major paradigms for autonomous control and robot perception are examined and compared with robotic notions in science fiction. Prerequisite: CSCI 0150, CSCI 0170 or CSCI 0190. Recommended: CSCI 1410 or CSCI 1230.

CSCI 1490. Introduction to Combinatorial Optimization. 
This course covers the algorithmic aspects of optimizing decisions in fully observable, non-changing environments. Students are introduced to state-of-the-art optimization methods such as linear programming, integer programming, local search, and constraint programming. Strongly recommended: CSCI 0160, CSCI 0180 or CSCI 0190; CSCI 0510; and CSCI 0530 or MATH 0520 or MATH 0540.

CSCI 1510. Introduction to Cryptography and Computer Security. 
This course studies the tools for guaranteeing safe communication and computation in an adversarial setting. We develop notions of security and give provably secure constructions for such cryptographic objects as cryptosystems, signature schemes and pseudorandom generators. We also review the principles for secure system design. Prerequisites: CSCI 0220, and either CSCI 0510 or CSCI 1010.

Randomization and probabilistic techniques play an important role in modern computer science, with applications ranging from combinatorial optimization and machine learning to communications networks, and secure protocols. This course introduces the most fundamental probabilistic techniques used in computer science applications, in particular in randomized algorithms, probabilistic analysis of algorithms and machine learning.

Prerequisite: Basic background in probability theory course such as CSCI 1450.

CSCI 1570. Design and Analysis of Algorithms. 
A single algorithmic improvement can have a greater impact on our ability to solve a problem than ten years of incremental improvements in CPU speed. We study techniques for designing and analyzing algorithms. Typical problem areas addressed include hashing, searching, dynamic programming, graph algorithms, network flow, and optimization algorithms including linear programming. Prerequisites: CSCI 0160, CSCI 0180, or CSCI 0190, and one of CSCI 0220, CSCI 1010, CSCI 1450, MATH 0750, MATH 1010, MATH 1530.

Half-credit course intended to be taken with CSCI 1570. Students will explore each topic in greater depth by collaboratively solving homework problems that will reinforce valuable new perspectives on the material. Corequisite: CSCI 1570.
CSCI 1580. Information Retrieval and Web Search.
Covers traditional material as well as recent advances in information retrieval (IR), the study of indexing, processing, and querying of textual data. The focus will be on newer techniques geared to hypertext documents available on the World Wide Web. Topics include efficient text indexing; Boolean and vector space retrieval models; evaluation and interface issues; Web crawling, link-based algorithms, and Web metadata; text/Web clustering, classification; text mining.

CSCI 1590. Introduction to Computational Complexity.
Introduction to serial and parallel models of computation; time and space complexity classes on these models; the circuit model of computation and its relation to serial and parallel time complexity; space-time tradeoffs on serial computers; area-time tradeoffs on the VLSI computational model; interactive and probabilistically checkable proofs; the definition of NP in terms of probabilistically checkable proofs; hardness of approximations to solutions to NP-hard problems. Prerequisite: CSCI 0510.

CSCI 1600. Real-Time and Embedded Software.
Comprehensive introduction to the design and implementation of software for programmable embedded computing systems, in applications such as Internet of Things, transportation, and mobile. Includes the overall embedded real-time software design and development processes, with a focus on engineering for reliability. Major project component. Prerequisites: one of CSCI 0300, CSCI 0320, CSCI 0330, CSCI 1310, or CSCI 1330.

CSCI 1610. Building High-Performance Servers.
In-depth study of modern server design. Considers architectures for building high-performance, robust, scalable, and secure network servers. We will consider all aspects of "mission-critical" servers. Topics include multithreaded and asynchronous programming techniques, database access, performance profiling, security, and redundancy. Teams will build significant projects. Prerequisite: CSCI 0320 or 0360. CSCI 1670 or 1680 is recommended.

CSCI 1620 is a half-credit laboratory course intended to be taken concurrently with CSCI 1660 and provides students with a deeper understanding of the material by doing additional assignments, which include extensions of the 1660's assignments. Instructor permission required.

CSCI 1650. Software Security and Exploitation.
CSCI 1650 covers software exploitation techniques and state-of-the-art mechanisms for hardening software. The course begins with a summary of prevalent software defects, typically found in applications written in memory unsafe languages, like C/C++, and proceeds with studying traditional and modern exploitation techniques, ranging from classical code injection and code reuse to the latest goodies (e.g., JIT-ROP). For the most part, it focuses on defenses against certain vulnerability classes and the way(s) to bypass them. Students will be introduced to advanced software exploitation techniques and countermeasures, and study (in depth) the boundaries and effectiveness of standard hardening mechanisms, such as address space randomization and stack and heap protections.

This course teaches principles of computer security from an applied viewpoint and provides hands-on experience on security threats and countermeasures. Topics include code execution vulnerabilities (buffer overflow, sandboxing, mobile code), malware (trojans, viruses, and worms), access control (users, roles, policies), cryptosystems (hashing, signatures, certificates), network security (firewalls, TLS, intrusion detection, VPN), and human and social issues. Prerequisites: one of (CSCI 0160, 0180, or 0190) and (CSCI 0300, 0330, 1310, or 1330).

Covers not just the principles of operating systems but the intricacies of how they work. Topics include multithreaded programming, managing threads and interrupts, managing storage, processor scheduling, operating-system structure, virtualization, security, and the design of file systems (both local and distributed). Extensive examples are taken from actual systems, including Linux and Windows. Students are expected to complete both problem sets and programming assignments (in C). Prerequisite: CSCI 0330.

CSCI 1680. Computer Networks.
Covers the technologies supporting the Internet, from Ethernet and WiFi through the routing protocols that govern the flow of traffic and the web technologies that are generating most of it. A major concern is understanding the protocols used on the Internet: what the issues are, how they work, their shortcomings, and what improvements are on the horizon. Prerequisite: CSCI 0330 or consent of instructor.

CSCI 1690. Operating Systems Laboratory.
Half-credit course intended to be taken with CSCI 1670. Students individually write a simple operating system in C. Serves to reinforce the concepts learned in 1670 and provides valuable experience in systems programming. Corequisite: CSCI 1670.

CSCI 1710. Logic for Systems.
The course will focus on proving properties about systems and programs. We will study the distinction between programs and specifications, and check for whether the former obey the latter. We will work with tools that have extensive automation such as model constructors, model checkers, and proof assistants. Problems and projects will apply to real-world systems. Prerequisite: CSCI 0180, CSCI 0190, or CSCI 0190. Preferred but not required: CSCI 0220 and CSCI 1010, or instructor's permission.

CSCI 1729. Programming Languages Lab.
Half-credit course intended to be taken concurrently with CSCI 1730. Students individually implement a full programming language chosen by the course. Reinforces the concepts learned in 1730 and provides valuable experience in implementing programming languages. Corequisite: CSCI 1730.

CSCI 1730. Design and Implementation of Programming Languages.
Explores the design principles of modern programming languages through implementation, comparison, and reflection. Examines a variety of linguistic features that impact both control and data. Topics vary by year; more information on the course home page. Prerequisite: CSCI 0160, CSCI 0180 or CSCI 0190.

CSCI 1760. Multiprocessor Synchronization.
This course examines the theory and practice of multiprocessor synchronization. Subjects covered include multiprocessor architecture, mutual exclusion, wait-free and lock-free synchronization, spin locks, monitors, load balancing, concurrent data structures, and transactional synchronization. Prerequisites: CSCI 0330.

CSCI 1780. Parallel and Distributed Programming.
Covers the practical aspects involved in designing, writing, tuning, and debugging software designed to run on parallel and distributed systems. Topics might include client-server computation, threads, networks of workstations, message passing, shared memory, partitioning strategies, load balancing, algorithms, remote procedure call, and synchronization techniques. Prerequisites: CSCI 0220 and either 0320 or 0360; 0510 recommended.

CSCI 1800. Cybersecurity and International Relations.
The global Internet shortens distances, makes businesses more efficient and facilitates greater social interaction. At the same time, it exposes vital national resources to exploitation and makes it easier for the international criminal element to prey on innocent Internet users. Cybersecurity is concerned with making the Internet a more secure and trustworthy environment. In this course we study this topic from the technological and policy points of view. The goal is to facilitate communication across the divide that normally characterizes the technological and policy communities.
Who is the Big Brother that we most fear? Is it the NSA -- or is it Google and Facebook? Rapidly changing social mores and the growing problem of cybersecurity have all contributed to a sense that privacy is dead. Laws protecting privacy and civil liberties are stuck in the analog age, while the capabilities for mass digital surveillance continue to advance rapidly. This course will examine a variety of informational privacy and technology issues. A major theme: the historical and contemporary struggle to bring surveillance under democratic control to protect against abuses of privacy, civil liberties and human rights.

CSCI 1810. Computational Molecular Biology
High-throughput experimental approaches now allow molecular biologists to make large-scale measurements of DNA, RNA, and protein, the three fundamental molecules of the cell. The resulting datasets are often too large for manual analysis and demand computational techniques. This course introduces algorithms for sequence comparison and alignment; molecular evolution and phylogenetics; DNA/RNA sequencing and assembly; recognition of genes and regulatory elements; and RNA and protein structure. The course demonstrates how to model biological problems in terms of computer science.
Prerequisites: CSCI 0160, CSCI 0180 or CSCI 0190, or consent of instructor.

The course is devoted to computational and statistical methods as well as software tools for DNA, RNA, and protein sequence analysis. The focus is on understanding the algorithmic and mathematical foundations of the methods, the design of associated genomics software tools, as well as on their applications. Topics include: sequence alignment, genome assembly, gene prediction, regulatory genomics, and SNP's variation. The course is open to computer and mathematical sciences students as well as biological and medical students.

CSCI 1850. Deep Learning in Genomics.
Deep learning models have achieved impressive performance in fields like computer vision and NLP. The collection of vast quantities of biological data naturally leads to the question -- can deep learning help us understand genomics? We will cover deep learning models like Autoencoders and Convolutional Neural Networks and how have they been applied to solve problems in genomics. We will learn about different biological datasets, interpretation methods that help explain predictions, and what unique challenges are presented by the data in this field. Critical thinking and learning from the practical application of models to data are expected outcomes.

Course description: Cybersecurity and cyber conflict pose unique legal and policy challenges for governments, companies and citizens. The way those problems are resolved will shape the future of the internet. This course will examine cybersecurity as a legal and policy problem. How can government and society address network and computer insecurity while upholding privacy, civil liberties and other fundamental values?

CSCI 1870. Cybersecurity Ethics.
This timely, topical course offers a comprehensive examination of ethical questions in cybersecurity. These issues pervade numerous, diverse aspects of the economy and society in the Information Age, from human rights to international trade. Students will learn about these topics, beginning first with acquaintance with the dominant ethical frameworks of the 20th and 21st centuries, then employing these frameworks to understand, analyze, and develop solutions for leading ethical problems in cybersecurity. The things that you learn in this course will stay with you and inform your personal and professional lives.

CSCI 1900. csciStartup.
In csciStartup, you will incorporate and run a startup. Apply as a team to be part of a prototype class to remove the mystery from starting a company and to focus entirely on a product you're passionate about. Teams will incorporate, build a product for real customers, advertise their product, and improve it week after week. We'll spend half our class meetings with individual attention to each group's progress and how to improve your offerings. Assignments will be designed to apply to any company, with enough flexibility to ensure you're always working on things that make sense for your business.

CSCI 1950A. Computational Modeling and Algorithmic Thinking.
In this course you will learn how to apply tools from statistics and computer science to build computational models of physical and biological systems. Example applications include modeling and then simulating the behavior of a collection of genes, the spread of disease in a population, a single neuron in isolation or the complex of neurons comprising the primate visual cortex.

CSCI 1950B. Computational Topology and Discrete Geometry.
This course will investigate (through a mixture of lectures and student presentations of recent papers) topics in computational topology, including Morse theory and discrete differential geometry. Other possible topics are knot polynomials, simplicial homology, and geometric probability theory. Some mathematical sophistication and programming skills required. No prerequisites.

We will study various algorithmic problems that arise in the study of topological phenomena, such as winding number, turning number, knot polynomials, topology of covering spaces (especially Riemann surfaces), and discrete Morse theory. The mathematical topics will be briefly introduced before we move to computations, but some a priori mathematical sophistication will make the course more valuable to the student. Prerequisite: CSCI 0160, 0180, or 0190.

CSCI 1950J. Introduction to Computational Geometry.
Geometric algorithms in two and three dimensions. Algorithmic and geometric fundamentals. Point location, convex hulls, proximity (Voronoi diagrams, Delaunay triangulations), intersections, the geometry of rectangles. Prerequisites: CSCI 0160, 0170, or 0190; and CSCI 0220.

CSCI 1950K. Innovating Game Development.
A project-centered course focused on technological, paradigm, and design innovations for game development. As teams, students will propose and implement a project demonstrating a novel technology for gaming. Examines the current state and future of game development through a seminar of speakers active in game development and research. A strong computer science or engineering background is recommended.

CSCI 1950M. Advanced Practical Combinatorial Algorithms.
We review recent as well as well-established advanced techniques in combinatorial optimization and constraint satisfaction. Students will study and individually present research papers and work on challenging software projects in small teams. Prerequisites: CSCI 0160, 0180, or 0190; and CSCI 0510; and CSCI 1490 or 2580, or instructor permission.

CSCI 1950N. 2D Game Engines.
2D Game Engines covers core techniques used in the development of the software that drives computer games and other interactive software. Projects involve building different varieties of 2D game engines as well as games that require use of the features implemented in the engines. Topics include high-level engine design, vector and raster graphics, animation, collision detection, physics, content management, and game AI. Prerequisite: CSCI 0160, 0180, or 0190. This course has also been offered as DISP CSCI1971. Students interested in an override should request on through Courses@Brown. Priority will be given to both seniors and juniors.

CSCI 1950R. Compiler Practice.
This class covers the practice of compiler writing, including lexical analysis, parsing, semantic analysis, code generation, and code optimization. Students design and implement a full compiler modularly for a modern functional language using a modern intermediate representation and modular backend. Instructor permission required.
CSCI 1950T. Advanced Animation Production

Students will apply knowledge and skills gained in previous animation courses to produce a high quality short animated film as a group. Production will follow the industry standard pipeline that includes modeling, texturing, lighting, animating, rendering, and post production. Interested students will perform preproduction story and concept design prior to beginning of course. Prerequisite: CSCI 1250. Enrollment limited to 15. Instructor permission required.

CSCI 1950U. Topics in 3D Game Engine Development

Covers core techniques in 3D game development with an emphasis on engine architecture. Students independently develop their own engines using C++, OpenGL and the Qt framework, then work in groups to create a polished game. Topics include: spatial subdivision, player representation, collision detection and response, game networking, GPUs, and OpenGL. Prerequisites: CSCI 1230 and one of CSCI 0320 or CSCI 1950N. Enrollment limited to 25.

CSCI 1950X. Software Foundations

Software Foundations will be a project-based course focusing on the challenges and techniques involved in proving non-trivial properties about real-world systems. We will base our exploration around formal development in a proof environment. Roughly half of the course will be a guided tutorial of proof techniques using one or more theorem provers; in the remainder, students will apply this knowledge to existing systems. No prior experience with theorem provers or proof assistants is necessary, but familiarity with and aptitude for functional programming will be a huge bonus. Prerequisite: CSCI 1750 or equivalent; mathematical maturity.

CSCI 1950Z. Computational Methods for Biology

This course will introduce algorithms from machine learning and combinatorial optimization with a focus on their application to biological data. Topics will include problems in phylogenetic inference, population genetics, and biological interaction networks.

CSCI 1951A. Data Science

Mastering big data requires skills spanning a variety of disciplines: distributed systems over statistics, machine learning, and a deep understanding of a complex ecosystem of tools and platforms. Data Science refers to the intersection of these skills and how to transform data into actionable knowledge. This course provides an overview of techniques and tools involved and how they work together: SQL and NoSQL solutions for massive data management, basic algorithms for data mining and machine learning, information retrieval techniques, and visualization methods. Prerequisites: CSCI 0160, CSCI 0180, or CSCI 0190. One of CSCI 0300, 0330, CSCI 0320, 1310 or 1330 strongly recommended.

CSCI 1951B. Virtual Citizens or Subjects? The Global Battle Over Governing Your Internet

The Internet began as a U.S. government research project, progressed to an open network run by free-spirited geeks, and transitioned in the late 1990’s to a unique governance model in which nations, corporations, and civil society were supposed to all have a voice. Where are the real decisions being made? Who is making them? How can you and citizens of other nations influence these decisions? The global battle to run the Internet, brewing for years, has broken wide open with revelations of American spying on a massive scale.

CSCI 1951C. Designing Humanity Centered Robots

This semester we will explore how emerging technologies might shape our lives in the near future, as we design and build working prototypes. We will proceed from a set of questions that will complement a deep immersion in design process and creative practice. We will explore the “how” and “why” of designing new technologies. The course will help students build a portfolio of design projects that are in response to various design strategies such as Human Centered Design, Speculative Design, Critical Design, and Design Fiction, as well as developing skills for iterative prototyping and participatory critique. Students interested in registering should sign up here: https://docs.google.com/forms/d/e/1FAIpQLSdvo0o4lCpj552ZubZQTXdVRfBmmncHbT8egriwPOcWcbRiy6A/viewform

CSCI 1951G. Optimization Methods in Finance

Optimization plays an important role in financial decisions. Many computational finance problems ranging from asset allocation to risk management, from option pricing to model calibration can be solved efficiently using modern optimization techniques. This course discusses several classes of optimization problems (including linear, quadratic, integer, dynamic, stochastic, conic, and robust programming) encountered in financial models. For each problem class, after introducing the relevant theory and efficient solution methods, we discuss problems of mathematical finance that can be modeled within this problem class. Prerequisites: CSCI 1450 or APMA 1650, and CSCI 1570.

CSCI 1951I. CS for Social Change

Working in a studio environment to iteratively design, build, and test technical projects in partnership with different social change organizations, students will be placed in small teams to collaboratively work on projects that will range from developing a chatbot to aid community engagement to conducting geospatial data analytics. We will also reflect on our positionality and ethics in engaging in social impact work and what it practically means to leverage technology to create social change on an everyday basis. Enrollment limited to 12. Entry to this course is through application only: https://docs.google.com/forms/d/1wmCbmB6dpO10-FCjHE50fHgxAOOGyCE8m1d71JUW/edit

CSCI 1951J. Interdisciplinary Scientific Visualization

Students will learn about solving scientific problems using computer graphics and visualization. Projects will involve the solution of scientific problems using computer graphics, modeling, and visualization. Working in small groups, students will identify scientific problems, propose solutions involving computational modeling and visualization, evaluate the proposals, design and implement the solutions, apply them to the problems, evaluate their success, and report on results. Example projects might include interactive software systems, immersive virtual reality cave applications, quantitative analysis tools, or new applications of existing visualization methods. The focus will be on applications in the new virtual reality cave.

CSCI 1951L. Blockchains and Cryptocurrencies

Introduction to modern blockchain-based systems. Topics covered include consensus and distributed computing, examples cryptocurrencies, programming smart contracts, privacy and secrecy, transfer networks, atomic swaps and transactions, non-currency applications of blockchains, and legal and social implications. Students will do a programming project and a term project.

CSCI 1951N. VR+X, The Potential of Virtual Reality to Transform Nearly Everything

This course introduces students to the history, present, and future possibilities of virtual reality (VR) with a focus on addressing the question: What is the transformative potential of virtual reality? We’ll critically evaluate a variety of applications in fields as varied as healthcare, architecture, education, and storytelling. Students will learn discovery and design thinking processes of a kind that can lead to the development of VR solutions. Students will create a design concept for a VR use case in a field of their choosing.

CSCI 1951P. Design of Robotic Systems (ENGN 1931I)

Interested students must register for ENGN 1931I.

CSCI 1951R. Introduction to Robotics

Each student will learn to program a small quad-rotor helicopter. We will provide each student with their own robot for the duration of the course. The course will cover PID controllers for stable flight, localization with a camera, mapping, and autonomous planning. At the end of the course, the goal is for students to understand the basic concepts of a mobile robot and aerial vehicle. Enrollment by instructor permission.
CSCI 1951T. Surveying VR Data Visualization Software for Research.
In a collaborative group effort, this course will search out, install, test, and critically evaluate VR software that supports data visualization for researchers. We will target several specific types of data, including volumetric data, and remote sensing data. We will investigate the capabilities of software for head-mounted displays (HMDs), big-metal displays like caves and the yurt, and, as a baseline, desktop displays. Software evaluation will include web research, hands-on case studies, and surveying. Results will be documented in a courses wiki.

CSCI 1951V. Hypertext/Hypermedia: The Web Was Not the Beginning and the Web Is Not the End.
A "hypertext/hypermedia" system is used for creating, linking, exploring, annotating, and searching for information. Designed 30+ years ago, the Web is a global hypertext system but represents only a small part of past visions. Students will explore hypertext’s history through hands-on use and demonstrations of systems from the 1970s onward, identifying still-uncommon features. They will study architecture and design of hypermedia systems, examining topics such as relationship modeling, permanence, collaboration, searching, and societal impact. Web programming projects throughout the semester -- using modern MERN full stack technology -- will culminate in group projects creating hypertext/hypermedia systems of the future. Prerequisites: An introductory CS sequence or equivalent experience

A huge quantity of data is worth little unless we can extract insights from it. Yet, the large quantities mean that classic algorithms (running in linear, quadratic or even more time) can be infeasible in practice. We must instead turn to new algorithmic approaches and paradigms, which allow us to answer valuable questions about our data in runtime that is still feasible even when the data set is Facebook-sized. Surprisingly, to answer many computational and statistical questions, sometimes there is no need to read/store every piece of data! This course focuses on this exciting "sublinear" algorithmic regime. We will study practical algorithms, making clever use of randomness with strong theoretical guarantees
Prerequisites: (CS22 or equivalent); (CS145 or APMA1650/1655 or equivalent); (CS157 or CS155). Mathematical maturity is essential: this is a theory course with proofs.
ReCOMMended: CS155

CSCI 1951X. Formal Proof and Verification.
Proof assistants are tools that are used to check the correctness of programs. Unlike tools like model checkers and SAT solvers, proof assistants are highly interactive. Machine-checked formal proofs lead to trustworthy programs and fully specified reliable mathematics. This course introduces students to the theory and use of proof assistants, using the system Lean. We will use Lean to verify properties of functional programs and theorems from pure mathematics. We will learn the theory of deductive reasoning and the logic that these tools are based on. Text: "The Hitchhiker’s Guide to Logical Verification" by Blanchette et al.
Prerequisites: CSCI 1710 Logic for Systems or a proof-based mathematics course. Basic familiarity with functional programming (e.g. Haskell, ML) is helpful but not required.

CSCI 1951Y. The Robots Are Coming! The Robots Are Coming!
(ENGN 1931U).
Interested students must register for ENGN 1931U.

CSCI 1952V. Algorithms for the People.
Computer science has transformed every aspect of society, including communication, transportation, commerce, finance, and health. The revolution enabled by computing has been extraordinarily valuable. The largest tech companies generate almost a trillion dollars a year and employ millions of people. But technology does not affect everyone in the same way. In this seminar, we will examine how new technologies, ranging from facial recognition to drones, are affecting marginalized communities.

Individual independent study in various branches of Computer Science. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CSCI 1971. Independent Study in 2D Game Engines.
2D Game Engines covers core techniques used in the development 2D game engines. Projects involve building different varieties of 2D game engines as well as games that require use of the features implemented in the engines. Topics include high-level engine design, vector and raster graphics, animation, collision detection, physics, content management, and game AI. Prerequisite: CSCI 0160, 0180, or 0190.

CSCI 1972. Topics in 3D Game Engine Development.
Covers core techniques in 3D game development with an emphasis on engine architecture. Students independently develop their own engines using C++, OpenGL, and the Qt framework, then work in groups to create a polished game. Topics include: spatial subdivision, player representation, collision detection and response, game networking, GPUs, and OpenGL. Prerequisite: CSCI 1230 and one of the following: CSCI 0320, CSCI 0330, CSCI 1950N, OR CSCI 1971.

What does it mean to conduct research in computer science, and how might we be most effective at it? To help begin a fruitful career in CS research, this class will cover the philosophy and practice of forming ideas, executing research, presenting outcomes, and understanding and contributing to our community. The aim is to kick-start your time at Brown CS by being the ‘missing semester’ on how to be a PhD student, and by peeling back the curtain on why CS academia works like this to help you make the most of your time. Discussions include: motivating, pitching, and funding research; finding, reading, and reviewing research; selecting research areas and forming hypotheses; designing, performing, and evaluating research; communicating research; research collaborations; and research ethics. We will learn together through presentations, activities, discussions, plus readings and assignments out of class.

CSCI 2240 explores several key areas of 3D graphics—rendering, geometry processing, optimization, and simulation—taking a sophisticated approach to each. This year, we are looking to improve the course’s coverage of optimization by adding more lecture content on the topic (optimization theory, methods for solving (sparse) linear systems, etc.) and by designing a new assignment (likely 3D as-rigid-as-possible shape manipulation).
Prerequisite: Instructor’s permission or CSCI 1230.

CSCI 2270. Topics in Database Management.
In-depth treatment of advanced issues in database management systems. Topics vary from year to year and may include distributed databases, mobile data management, data stream processing and web-based data management. Prerequisite: CSCI 1270.

CSCI 2300. Human-Computer Interaction Seminar.
Covers methods for conducting research in human-computer interaction (HCI). Topics will be pursued through independent reading, assignments, and class discussion. Comprises four assignments that apply to HCI research methods and push the envelope, which are designed to be meaningful and have the potential to be widely visible or to be published. Students will gain the background necessary to perform research in HCI and the skills to conduct human-centric research. There will be little content about user interfaces, but students will find some topics in CSCI 1300 relevant. Students should have taken CSCI 1300 or make a case for their interest.

CSCI 2310. Human Factors and User Interface Design.
Covers current research issues involving the implementation, evaluation and design of user interfaces, while also providing a basic background in the fundamentals of user interface evaluation, programming, tools, and techniques. A possible topic is programming and designing device-independent interfaces. Previous topics have included the development of pervasive internet-based interfaces and software visualization.
Prerequisite: Consent of instructor.

CSCI 2330. Programming Environments.
Programming tools; control and data integration; software understanding and debugging; environments for parallel and distributed programming; reverse engineering; configuration management and version control and debugging. Emphasis on current research areas. Prerequisite: consent of instructor.
CSCI 2440. Software Engineering.
Topics in the design, specification, construction and validation of programs. Focus will be on tools to support each of these stages. Course will pay special attention to the concerns raised by the properties of modern software systems including distribution, security, component-based decomposition and implicit control. Prerequisite: CSCI 0320 or CSCI 0330.

CSCI 2370. Interdisciplinary Scientific Visualization.
Learn how to do research on using computer graphics, visualization, and interaction applied to scientific problems. Working in small multidisciplinary groups, students identify scientific problems, propose solutions involving computational modeling and visualization, design and implement the solutions, apply them to the problems, and evaluate their success. Prerequisites: programming experience, some graphics experience, problem ideas. Instructor permission required.

CSCI 2390. Privacy-Conscious Computer Systems.
We will examine research papers on distributed system design, privacy-preserving, and secure computing techniques, and discuss how to apply these ideas in practice. The goal is to understand if, and how we can better protect the sensitive data we entrust to computer systems, both against leaks and against unauthorized or unethical use. We will look at web services, datacenter systems, distributed communication systems, and machine learning systems. During class, you will present and discuss papers, finish a set of hands-on assignments, work on a research project, and present your project at the end of the semester.

CSCI 2410. Statistical Models in Natural-Language Understanding.
Various topics in computer understanding of natural language, primarily from a statistical point of view. Topics include: hidden Markov models, word-tagging models, probabilistic context-free grammars, syntactic disambiguation, semantic word clustering, word-sense disambiguation, machine translation and lexical semantics. Prerequisite: CSCI 1410.

CSCI 2420. Probabilistic Graphical Models.
Probabilistic graphical models provide a flexible framework for modeling large, complex, heterogeneous collections of random variables. After a brief introduction to their representational power, we provide a comprehensive survey of state-of-the-art methods for statistical learning and inference in graphical models. We discuss a range of efficient algorithms for approximate inference, including optimization-based variational methods, and simulation-based Monte Carlo methods. Several approaches to learning from data are explored, including conditional models for discriminative learning, and Bayesian methods for controlling model complexity. Programming experience required for homeworks and projects, which integrate mathematical derivations with algorithm implementations. PREREQUISITES: CSCI1420 or APMA1690.

CSCI 2430. Topics in Machine Learning.
Machine learning from the artificial intelligence perspective, with emphasis on empirical validation of learning algorithms. Different learning problems are considered, including concept learning, clustering, speed-up learning, and behavior learning. For each problem a variety of solutions are investigated, including those from symbolic AI, neural and genetic algorithms, and standard statistical methods. Prerequisite: CSCI 1410 or familiarity with basic logic and probability theory.

CSCI 2440. Advanced Algorithmic Game Theory.
This course examines topics in game theory and mechanism design from a computer scientist’s perspective. Through the lens of computation, the focus is the design and analysis of systems utilized by self-interested agents. Students will investigate how the potential for strategic agent behavior can/should influence system design, and the ramifications of conflicts of interest between system designers and participating agents. Emphasis on computational tractability is paramount, so that simple designs are often preferred to optimal. Students will learn to analyze competing designs using the tools of theoretical computer science, and empirical tools, such as empirical game-theoretic analysis. Application areas include computational advertising, wireless spectrum, and prediction markets.

CSCI 2450. Exchange Scholar Program.
Deep Learning belongs to a broader family of machine learning methods. It is a particular version of artificial neural networks that emphasizes learning representation with multiple layers of networks. Deep Learning, plus the specialized techniques that it has inspired (e.g. convolutional neural networks, recurrent neural networks, and transformers), have led to rapid improvements in many applications, such as computer vision, machine learning, sound understanding, and robotics. This course gives students an overview of the prominent techniques of Deep Learning and its applications in computer vision, language understanding, and other areas. It also provides hands-on practice of implementing deep learning algorithms in Python. A final project will implement an advanced piece of work in one of these areas. Prerequisites: basic programming: (CSCI 0150, 0170, 0190); linear algebra: (CSCI 0530, MATH 0520, 0540); stats/probability: (CSCI 0220, 1450, 0450, MATH 1610, APMA 1650, 1655).

CSCI 2500A. Advanced Algorithms.
Typically, an algorithm solves one problem, whereas a well-designed data structure can help implement algorithms for a wide variety of problems. We will study the design, analysis and implementation of advanced data structures. Focus is on data structures that are fast, both theoretically and empirically. Prerequisite: CSCI 1570 or the equivalent.

CSCI 2500B. Optimization Algorithms for Planar Graphs.
Planar graphs arise in applications such as road map navigation and logistics, graph drawing and image processing. We will study graph algorithms and data structures that exploit planarity. Our focus will be on recent research results in optimization. Prerequisite: CSCI 1570 or the equivalent.

CSCI 2510. Approximation Algorithms.
Approximation Algorithms deal with NP-hard combinatorial optimization problems by efficiently constructing a suboptimal solution with some specified quality guarantees. We study techniques such as linear programming and semidefinite programming relaxations, and apply them to problems such as facility location, scheduling, bin packing, maximum satisfiability or vertex cover. Prerequisite - one of the following: CSCI 1510, 1550, 1810, 1950J, 1950L, any graduate-level course on algorithms (including 2500A, 2500B, 2580).

CSCI 2520. Computational Geometry.
Algorithms and data structures for fundamental geometric problems in two and three dimensions. Topics include point location, range searching, convex hull, intersection, Voronoi diagrams, and graph drawing. Applications to computer graphics, circuit layout, information visualization, and computer-aided design are also discussed. Prerequisite: CSCI 1570 or instructor permission.

CSCI 2530. Design and Analysis of Communication Networks.
A theory seminar focusing on algorithmic and combinatorial issues related to the design and analysis of communication networks for parallel and distributed systems. Topics include packet routing, circuit switching, distributed shared memory, fault tolerance, and more. Prerequisites: CSCI 1550, 1570, or equivalent.

CSCI 2531. Internet and Web Algorithms.
This advanced graduate course/seminar focuses on the mathematical foundations of algorithms for handling large amounts of data over networks. We'll read and discuss recent papers in information retrieval, search engines, link analysis, probabilistic modeling of the web and social networks, and more. Recommended: CSCI 1550 and CSCI 1570, or equivalent courses.

Advanced topics in applications of probabilistic methods in design and analysis of algorithms, in particular to randomized algorithms and probabilistic analysis of algorithms. Topics include the Markov chains Monte Carlo method, martingales, entropy as a measure for information and randomness, and more. Prerequisite: CSCI 1450. Recommended but not required: CSCI 1570.
Theoretical foundations of parallel algorithms. Analysis of the most important models of parallel computation, such as directed-acyclic computation graphs, shared memory and networks, and standard data-exchange schemes (common address space and message-passing). Algorithmic techniques with numerous examples are cast mostly in the data-parallel framework. Finally, limitations to parallelizability (P-completeness) are analyzed. The content of the course is likely to change as technology evolves.

CSCI 2560. Advanced Complexity
Advanced topics in computational complexity, such as: the polynomial hierarchy, interactive proofs, pseudorandomness, derandomization, probabilistically checkable proofs.

CSCI 2570. Introduction to Nanocomputing
Nanoscale technologies employing materials whose smallest dimension is on the order of a few nanometers are expected to replace lithography in the design of chips. We give an introduction to computational nanotechnologies and explore problems presented by their stochastic nature. Nanotechnologies based on the use of DNA and semiconducting materials will be explored. Prerequisite: CSCI 0510.

CSCI 2580. Solving Hard Problems in Combinatorial Optimization: Theory and Systems
The theory of combinatorial optimization and how it is embodied in practical systems. Explores issues encountered in implementing such systems. Emphasizes the wide variety of techniques and methodologies available, including integer programming, local search, constraint programming, and approximation algorithms. Problems addressed may include: scheduling, coloring, traveling salesman tours, and resource allocation. Prerequisites: CSCI 0320 and basic knowledge of linear algebra.

CSCI 2590. Advanced Topics in Cryptography
Seminar-style course on advanced topics in cryptography. Example topics are zero-knowledge proofs, multi-party computation, extractors in cryptography, universal composability, anonymous credentials and ecash, interplay of cryptography and game theory. May be repeated for credit. Prerequisite: CSCI 1510 or permission of the instructor.

CSCI 2730. Programming Language Theory
Theoretical models for the semantics of programming languages and the verification of programs. Topics will be drawn from operational semantics, denotational semantics, type theory and static analyses. Recommended prerequisite: CSCI 1730, CSCI 1950Y or instructor permission.

CSCI 2750. Topics in Parallel and Distributed Computing
CSCI 2750 is a graduate seminar that will consider an advanced topic (to be determined) in distributed computing. May be repeated for credit.

CSCI 2810. Advanced Computational Molecular Biology
High-throughput experimental approaches now allow molecular biologists to make large-scale measurements of DNA, RNA, and protein, the three fundamental molecules of the cell. The resulting datasets are often too large for manual analysis and demand computational techniques. This course introduces algorithms for sequence comparison and alignment; molecular evolution and phylogenetics; DNA/RNA sequencing and assembly; recognition of genes and regulatory elements; and RNA and protein structure. The course demonstrates how to model biological problems in terms of computer science.

CSCI 2820. Advanced Algorithms in Computational Biology and Medical Bioinformatics
Devoted to computational problems and methods in the emerging field of Medical Bioinformatics where genomics, computational biology and bioinformatics impact medical research. We will present challenging problems and solutions in three areas: Disease Associations, Protein Folding and Immunogenomics. This course is open to graduate students and advanced undergraduates with Computational or Life Science backgrounds. Prior background in Biology is not required.

CSCI 2890. Comprehensive Examination Preparation
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

CSCI 2950. Topics in Computational Biology
This course will investigate active and emerging research areas in computational biology. Topics include cancer genomics; genome rearrangements and assembly; and protein and regulatory interaction networks. The course will be a mixture of lectures and student presentations of recent conference and journal papers.

CSCI 2950D. Sensor Data Management
Sensor networks combine sensing, computing, actuation, and communication in a single infrastructure that allows us to observe and respond to phenomena in the physical and cyber world. The sensors range from tiny "smart dusts" to dime-sized RFID tags and large-scale weather sensors. This course will cover the state-of-the art in designing and building sensor networks, focusing on issues that revolve around data and resource management. No prerequisites.

CSCI 2950E. Stochastic Optimization
This advanced graduate course/seminar will focus on optimization under uncertainty, or optimization problems where some of the constraints include random (stochastic) components. Most practical optimization problems are stochastic (subject to future market conditions, weather, faults, etc.), and there has been substantial research (both theoretical and experimental) in efficient solution for such problems. We'll read and discuss some of the recent works in this area.

CSCI 2950F. Implementing Web-Based Software Systems
CSCI 2950G. Large-Scale Networked Systems
Explores widely-distributed systems that take advantage of resources throughout the Internet. The systems leverage their large size and geographic diversity to provide bandwidth scalability, rapid responses, fault-tolerance, high-availability and diverse data collection. Topics include overlay networks, peer-to-peer systems, content distribution networks, distributed file systems and wide-scale measurement systems.

CSCI 2950H. Advanced Cryptography
CSCI 2950I. Computational Models of the Neocortex
This course addresses the problem of modeling the perceptual neocortex using probabilistic graphical models, including Bayesian and Markov networks, and extensions to model time and change such as hidden Markov models and dynamic Bayesian networks. The emphasis is on problems of learning, inference, and attention. Sources include the literature in computational and cognitive neuroscience, machine learning, and other fields that bear on how biological and engineered systems make sense of the world. Prerequisites: basic probability theory, algorithms and statistics.

CSCI 2950J. Cognition, Human-Computer Interaction and Visual Analysis
In this graduate seminar we will learn about models of human cognition and perception, and explore potential implications of the models on how computers and humans can interact effectively when performing scientific analyses. Participants will be responsible for reading assigned materials, taking turns guiding discussions of the readings, and preparing a final paper and presentation. It is recommended that participants have some background in at least one of the areas of study.

CSCI 2950K. Special Topics in Computational Linguistics
Every year will cover a different topic in computational linguistics, from a statistical point of view, including parsing, machine translation, conference, summarization, etc. Prerequisites: CSCI 1460 or permission of the instructor.

CSCI 2950M. Computer Science, Algorithms and Economics
Course investigates the interplay of economic theory and computer science. It is suitable for advanced senior undergraduates and graduate students. We will study topics such as: algorithms for selfish routing; competitive combinatorial auctions; Multicast cost sharing and cooperative games; graphical models for games; and related topics. This course will be organized around the presentation of recent research papers. Prerequisite: CSCI 1570 or equivalent.

CSCI 2950N. Special Topics in Autonomous Robotics
No description available.
CSCI 2950O. Topics in Brain-Computer Interfaces.
This course introduces the mathematical and computational foundations of brain-computer interfaces. Statistical learning, Bayesian inference, dimensionality reduction, information theory, and other topics are presented in the context of brain interfaces based on neural implants and EEG recordings. Prerequisites: Basic knowledge of probability, statistics and linear algebra (e.g., CSCI 1550, APMA 1650, APMA 1690, or APMA 2640). Enrollment limited to 20 students.

CSCI 2950P. Special Topics in Machine Learning.
This seminar course explores current research topics in statistical machine learning. Focus varies by year, and may include Bayesian nonparametrics; models for spatial, temporal, or structured data; and variational or Monte Carlo approximations. Course meetings combine lectures with presentation and discussion of classical and contemporary research papers. Students will apply some of this material to a project, ideally drawn from their own research interests.

CSCI 2950Q. Topics in Computer Vision.
This course will cover current topics in computer vision by focusing on a single real problem in computer vision. Recent courses have focused on forensic video analysis of an unsolved murder and three-dimensional object recognition for a mobile robot. Readings from the literature are integrated with group projects to solve problems beyond the state of the art. Strong mathematical skills (probability, linear algebra, calculus) and previous exposure to computer vision (e.g. CSCI 1430) are essential.

CSCI 2950R. Special Topics in Advanced Algorithms.
We will study an advanced topic in the design and analysis of algorithms. Prerequisite: CSCI 1570 or the equivalent.

CSCI 2950S. Advanced Practical Combinatorial Algorithms.
We review recent as well as well-established advanced techniques in combinatorial optimization and constraint satisfaction. Students will study and individually present research papers and work on challenging software projects in small teams. Prerequisites: CSCI 0160, 0180, or 0190; and CSCI 0510; and CSCI 1490 or 2580, or instructor permission.

CSCI 2950T. Topics in Distributed Databases and Systems.
This course explores data and resource management issues that arise in the design, implementation, and deployment of distributed computing systems by covering the state of the art in research and industry. Typical topics include cloud computing and sensor networks. Strongly recommended; CSCI 0320, CSCI 1270, or CSCI 1951A.

CSCI 2950U. Special Topics on Networking and Distributed Systems.
Explores current research topics in networking, distributed and operating systems. Specific topics may include wireless and sensor networking, Internet-scale distributed systems, cloud computing, as well as the core problems, concepts, and techniques underlying these systems. The course has two components: reading and discussion of current and classical research papers, and a research project related to the topic but ideally drawn from students' own research interests. This is a graduate-level course, undergrads must join with the consent of the instructor.

CSCI 2950V. Topics in Applied Cryptography.
This course surveys recent developments in applied cryptography. Research in this field is motivated by privacy and security issues that arise in practice from areas like cloud computing, databases, surveillance, and finance. Topics will vary each year. Pre Requisites: CSCI 1660 and CSCI 1510 recommended or instructor permission. This year's theme is cryptography for social good.

CSCI 2950W. Online Algorithms.
Decisions must often be made before the entire data is available. Online algorithms solve problems in which commitments must be made as the data is arriving. Choosing which items to evict from a cache before knowing future requests, which advertisers to consider for displaying ads alongside the result of a search, or which most representative data to store when computing statistics about a huge stream of information. We will discuss the worst-case model, which hinges against the worst possible future data, and some stochastic and game-theoretic models.

CSCI 2950X. Topics in Programming Languages and Systems.
Examines contemporary research topics in software construction from the perspectives of programming languages, software engineering and computer-aided verification. The primary goals are to understand which theory applies to which problems and to convert that theory into tools. Topics include security, modularity, and new paradigms in software composition. Prerequisite: CSCI 1730 or written permission of the instructor.

CSCI 2950Y. Theorem Proving.
This course explores computer-assisted theorem proving with the Coq Proof Assistant. The course will teach students to formally specify software and model mathematical theories. We will then study techniques for mechanically proving theorems about these Coq. Prerequisites: CSCI 1730 or CSCI 0170 and permission of the instructor.

CSCI 2950Z. Robot Learning and Autonomy.
This seminar course will cover current research topics related to perceiving and acting in the real world. These topics will be pursued through independent reading, class discussion, and project implementations. Papers covered will be drawn from robotics, computer vision, animation, machine learning, and neuroscience. Special emphasis will be given to developing autonomous control from human performance. No prerequisites.

CSCI 2951A. Robots for Education.
This seminar will explore the potential for robotics to engage future generations of scientists and engineers, with a particular focus on broadening participation in computing across society. Academic papers describing existing models, systems, courses, and evaluation for teaching robotics at undergraduate and secondary levels will be covered through student presentations. A group project will be conducted to find viable and accessible “off-the-shelf” technology solutions suited to teaching robotics without requiring a technical background. Instructor permission required.

CSCI 2951B. Data-Driven Vision and Graphics.
Investigates current research topics in image-based graphics and vision. We will examine data sources, features, and algorithms for understanding and manipulating visual data. We will pay special attention to methods that use crowd-sourcing or Internet-derived data. Vision topics such as scene understanding and object detection will be linked to graphics applications such as photo editing and image-based rendering. These topics will be pursued through independent reading, class discussion and presentations, and a semester long research project. Strong mathematical skills and previous imaging (vision or computational photography) courses are essential.

CSCI 2951C. Autonomous Agents and Computational Market Design.
An important area of research in artificial intelligence is how to effectively automate decision making in time-critical, information-rich environments. Electronic markets are a prime example of such environments. In this course students will create their own simulated electronic market as well as autonomous agents that trade in their market simulation. Application domains will include supply chain management, the Dutch flower auctions, and ad auctions, such as those run by Google and Facebook. Enrollment limited to 40 graduate students.

CSCI 2951E. Topics in Computer Systems Security.
This course explores advanced topics and highlights current research in computer security from a systems perspective. Topics include vulnerabilities and defenses for automotive, computing, medical, and industrial control devices, intrusion detection, botnets, secure network protocols, web spam, tracking of web users, JavaScript sandboxing, attacks and defenses for web applications, and security and privacy issues in cloud computing. Research papers and industry reports will be presented and discussed. Also, hands-on experiments and system demonstrations will be performed. CSCI 1660 or equivalent background is essential. Enrollment limited to 12. Instructor permission required.
CSCI 2951F. Learning and Sequential Decision Making.
The course explores automated decision making from a computer-science perspective. It examines efficient algorithms, where they exist, for single agent and multiagent planning as well as approaches to learning near-optimal decisions from experience. Topics will include Markov decision processes, stochastic and repeated games, partially observable Markov decision processes, and reinforcement learning. Of particular interest will be issues of generalization, exploration, and representation. Participants should have taken a graduate-level computer science course and should have some exposure to machine learning from a previous computer-science class or seminar; check with instructor if not sure. Recommended Prerequisites: CSCI 1950F or CSCI 1420

CSCI 2951I. Computer Vision for Graphics and Interaction.
Computer vision reconstructs real world information from image and video data; computer graphics synthesizes dynamic virtual worlds; interaction lets us explore these worlds; and machine learning allows us to map between domains across vision, graphics, and interaction. In visual computing, these fields converge to exploit both models of visual appearance and databases of examples to generate and interact with new images. This enables applications from the seemingly simple, like semantic photo editing, to the seemingly science fiction, like mixed reality. In this seminar, we will discover the state-of-the-art algorithmic contributions in computer vision which make this possible. Please join us!

CSCI 2951K. Topics in Collaborative Robotics.
Practical approaches to designing intelligent systems. Topics include search and optimization, uncertainty, learning, and decision making. Application areas include natural language processing, machine vision, machine learning, and robotics. Prerequisite: CSCI 1410, 1420, 1460, 1480, or 1950F; or instructor permission.

CSCI 2951M. Advanced Algorithms Seminar.
Students in this course will read, present, and discuss recent breakthrough papers on the topic of algorithms, and the related areas needed to analyze algorithms. This course is aimed at current and potential future graduate students who want to gain technical depth and perspective on the field of algorithms. Topics will roughly alternate by year, with even years emphasizing fundamental techniques, and odd years emphasizing applications such as machine learning. Suggested prerequisites: CSCI 1570 and mathematical maturity. Instructor permission required. Enrollment will be limited to 24 students, based on an application that will be described on the first day of class. Ideal students will have a mix of the following: 1) motivation to learn how to read papers, 2) technical skills and background, 3) willingness to participate and contribute to discussions.

CSCI 2951N. Advanced Algorithms in Computational Biology.
This is a full-lecture, graduate course on algorithms and biomedical applications. The Foundations lectures are an introduction to the biological and medical genomics application areas. Each Algorithm section is devoted to an algorithmic method presented in rigorous depth, followed by an important open problem in the application area, together with the current most effective algorithmic solutions to the problem. Graduate students and advanced undergraduates in computational and mathematical sciences and engineering are welcome. Biological, life sciences and medical students and faculty are welcome as well and will be able to participate more in the applications areas.

CSCI 2951O. Foundations of Prescriptive Analytics.
We are undoubtedly in the middle of an Analytics Revolution that enabled turning huge amounts data into insights, and insights into predictions about the future. At its final frontiers, Prescriptive Analytics is aimed at identifying the best possible action to take given the constraints and the objective. To that end, this course provides students with a comprehensive overview of the theory and practice of how to apply Prescriptive Analytics through optimization technology. A wide variety of state-of-the-art techniques are studied including: Boolean Satisfiability, Constraint Programming, Linear Programming, Integer Programming, Local Search Meta-Heuristics, and Large-Scale Optimization. Pre Requisites: One of CSCI 0300, 0320, CSCI 0330, CSCI 1310, OR CSCI 1330 and recommended: one of CSCI 0530, CSCI 1570, MATH 0520 or MATH 0540.

CSCI 2951S. Distributed Computing through Combinatorial Topology.
Although computer science itself is based on discrete mathematics, combinatorial topology and its applications may still be unfamiliar to many computer scientists. For this reason, this course provides a self-contained, elementary introduction to the concepts from combinatorial topology needed to analyze distributed computing. Conversely, while the systems and models used here are standard in computer science, they may be unfamiliar to students with a background in pure or applied mathematics. For this reason, this course also provides a self-contained, elementary description of standard notions of distributed computing. CSCI 0220 required, CSCI 1760 recommended

CSCI 2951T. Data-Driven Computer Vision.
Investigates current research topics in data-driven object detection, scene recognition, and image-based graphics. We will examine data sources, features, and algorithms useful for understanding and manipulating visual data. We will pay special attention to methods that harness large-scale or Internet-derived data. There will be an overview of the current crowdsourcing techniques used to acquire massive image datasets. Vision topics such as scene understanding and object detection will be linked to graphics applications such as photo editing. These topics will be pursued through independent reading, class discussion and presentations, and projects involving current research problems in Computer Vision.

This course investigates the state-of-the-art in software exploitation and defense. Specifically, the course is structured as a seminar where students present research papers to their peers. We will begin with a summary of prevalent software defects, typically found in applications written in memory unsafe languages, and proceed to surveying what we are up against: traditional and modern exploitation techniques, ranging from classical code injection and code reuse up to the newest goodies (JIT-ROP, Blind ROP). For the bulk part, we will focus on the latest advances in protection mechanisms, mitigation techniques, and tools against modern vulnerability classes and exploitation methods.

CSCI 2951X. Reintegrating AI.
The goal of AI has been to build complete intelligent agents, yet the field has been fragmented into a collection of problem-specific areas of study. We will spend an hour lecture covering a new approach to integrating existing AI subfields into a single agent architecture, and remainders of the semester on self-directed, semester-long research projects. Grading based on a mid-semester project proposal, and a substantial open-ended final project. The projects will be multi-disciplinary in nature but students will have the opportunity to work in small groups, so they need not necessarily have expertise in the relevant areas. Graduate students welcome; undergraduates need instructor permission to enroll.

CSCI 2951Z. Advanced Algorithmic Game Theory.
This course examines topics in game theory from a computer scientist's perspective. Through the lens of computation, it will focus on the design and analysis of systems involving self-interested agents, investigating how strategic behavior should influence algorithm design, which game-theoretic solution concepts are practical to implement, and the ramifications of conflicts of interest between system designers and participating agents. Students will create their own automated trading agents for various simulated market games. Topics include: auctions and mechanism design, equilibria, and learning. For graduate credit, students will complete additional homework exercises, and a significant programming project.

CSCI 2952C. Learning with Limited and No Labeled Data.
As machine learning is deployed more widely, researchers and practitioners keep running into a fundamental problem: how do we get enough labeled data? This seminar course will survey research on learning when only limited labeled data is available. Topics covered include weak supervision, semi-supervised learning, active learning, transfer learning, and few-shot learning. Students will lead discussions on classic and recent research papers, and work in teams on final research projects. Previous experience in machine learning is required through CSCI 1420 or equivalent research experience.
CSCI 2952F. Distributed Systems at Scale: Microservices Management.
This seminar investigates and explores cutting edge challenges and issues in the emerging Microservices paradigm. Microservices are a specific cloud paradigm for enabling distributed systems and applications at scale. In particular, this course builds on the foundations provided by the initial distributed systems, networking and operating systems offering (i.e., CSCI 1380, CSCI 1680, CSCI 1670) and explores how these concepts are used to realize, manage, and orchestrate microservices. The course is driven by materials from academic conferences and industrial blogs. The industrial blogs will provide context and motivation for different problems. The academic reasons will provide a deep dive into the technical details: we will focus on reading, analyzing, critiquing and brainstorming academic papers. Students taking this class should be familiar with reading academic literature, performing critical analysis, and working on open ended problems with undefined solutions. More information: http://cs.brown.edu/courses/info/csci2952f/

CSCI 2952G. Deep Learning in Genomics.
Deep learning models have achieved impressive performance in fields like computer vision and NLP. Given an adequate amount of data, these models can extract meaningful representations to perform accurate predictions. The collection of vast quantities of biological data naturally leads to the question -- can deep learning help us understand genomics? In this seminar-style class, we will cover the recent research literature trying to answer this question. We will learn how state-of-the-art models like CNNs, RNNs, GCNs, GANs, etc. have been applied to solve significant problems in genomics and what unique challenges are presented by the data in this field.

CSCI 2952H. Recent Progress in Reinforcement Learning.
Reinforcement learning is a framework for studying machines that interact with a sequential environment to achieve a goal. In the past decade, the RL framework has gained a lot of attention owing to its intriguing success in solving problems in complicated domains such as games, robotics, and dialog systems. We observe continual growth in the number of RL papers published in major machine-learning conferences. This growth calls for a careful investigation of the recent progress in the field. By reading selections of the current RL literature, this graduate-level course examines some of the latest theoretical and empirical progress in the field.

CSCI 2952I. Language Processing in Humans and Machines.
Understanding language requires transforming sequences of sounds into words, combining words into meaningful thoughts, and incorporating thoughts into an ongoing discourse. Psychologists and linguists have been trying to reverse-engineer how humans do this so easily, at the speed of conversation. In parallel, computer scientists have been trying to engineer machines to solve the same problems, leading to products like Siri and Alexa. This class will explore how these two kinds of research can help each other, bringing recent insights from machine learning into the study of human language processing, and insights from human processing into the architectures of machine language systems. For CS students: Machine Learning, Deep Learning, Computational Linguistics (or comparable experience). For CLPS students: At least one of CLPS 0200, 0300, 0800, or 1800

CSCI 2952J. Topics in 3D Computer Vision and Deep Learning.
We live in a world that spans 3 dimensions. Cameras and sensors image the 3D world by projecting to a 2D plane. How can we recover the 3D world back from these images? What techniques can we use to process 3D data? In this course we will study computer vision and machine learning techniques to recover 3D information of the world from images, and process and understand 3D data. We will learn about classical computer vision techniques but focus on cutting-edge deep learning methods. The techniques we study are widely used, for instance, in self-driving cars and smartphone AR face filter apps.

This seminar is aimed at current and potential future graduate students who want to gain technical depth and perspective on the field of statistical machine learning. Students will read, present, and discuss some of the original papers that had a transformative impact on the development of machine learning. Topics will range from mathematical foundations, to major algorithmic, and breakthrough works on deep learning and its applications in vision and NLP. Ideal students will have a mix of: 1) motivation to learn how to read, present and evaluate technical papers, 2) mathematical maturity and basic ML background, 3) willingness to participate and contribute to discussions. Enrollment will be limited, and will be finalized after the first class. No formal prerequisite.

CSCI 2952N. Advanced Topics in Deep Learning.
Prepares graduate students with the knowledge they need to apply Deep Learning techniques for their own research. There has been tremendous success in developing unified neural architectures that achieve state-of-the-art performance on language understanding (GPT-3), visual perception (ViT), and even protein structure prediction (AlphaFold). We plan to understand how they work, and how the success of such unified models can give rise to further developments on self-supervised learning, a technique that trains machine learning models without requiring labeled data; and multimodal learning, a technique that utilizes multiple input sources, such as vision, audio, and text. We will study recent attempts to interpret these models, thus revealing potential risks on model bias. Paper reading, student presentations, and invited guest lectures. Students required to work on a final project that explores a novel direction along the line of the papers we cover.

CSCI 2952O. A Practical Introduction to Advanced 3D Robot Perception.
This course is aimed at preparing graduate students and senior undergrads to do advanced work at the intersection of two important and popular fields: computer vision and robotics. The course will focus on the latest advances through lectures, readings, and discussion groups. The lectures and readings will be designed to represent a mix of classical techniques as well as the most recent advances in the two fields. The unique highlight of this course is the inclusion of a practical component: students will have to implement a project that combines computer vision and robotics by using cameras and a real robot arm. Students will form teams for this project and have exclusive access to a camera and a small robot arm both of which can be interfaced with the students’ laptops. Prereqs: One of CSCI 1430, CSCI 1470, CSCI 1951R, CSCI 1230.

CSCI 2955. The Design and Analysis of Trading Agents.
The Dutch Flower Auctions (DFA) clear over 100,000 auctions per day, each lasting on average between 3 and 5 seconds! This semester, we'll study the mechanism through which the DFA distribute 2/3 of the world's flowers, focusing on both the sellers' and buyers' decision-making processes. More generally, we'll research ways to automate and optimize decision-making in time-critical, information-rich environments, like the DFA. Undergraduate students require instructor permission, and should have already completed CSCI 0190, or CSCI 0150 and CSCI 0160, or CSCI 0170 and CSCI 0180.

CSCI 2956A. Design of Agents for Bidding in Sponsored Search Auctions.
This course investigates the new field of sponsored search auctions. Although students will be exposed to the field from the point of view of both the search engine and the advertiser, the course's focus is on advertiser's bidding algorithms. The students will implement novel bidding agents, and the course will culminate in a competition among the students' agents. Undergraduate students who obtained permission from the instructor or completed CSCI 0910, or CSCI 0150 and CSCI 0160, or CSCI 0170 and CSCI 0180 can register for the course. CSCI 1410 is a co-requisite.

CSCI 2956R. Multiplicative-Weights/Packing-Covering Method for Approximating Linear and Semidefinite Programs.
We will study the method called, variously, multiplicative weights and packing-covering. We will in particular investigate the use of this method for finding approximately optimal solutions to linear programs and semidefinite programs. Prerequisite: A graduate-level course on algorithms. Enrollment limited to 10. Instructor permission required.
CSCI 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CSCI 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

CSCI XLIST. Courses of Interest to Concentrators in Computer Science.

Data Science Initiative

Director
Sohini Ramachandran

Director of Graduate Studies
Samuel S. Watson

Brown University's Data Science Initiative serves as a campus hub for research and education in data science. Engaging partners across campus and beyond, the DSI's mission is to facilitate and conduct both domain-driven and fundamental research in data science, increase data fluency and educate the next generation of data scientists, and ultimately explore the impact of the data revolution on culture, society, and social justice. We envision our role in the university and beyond as something to build over time, with the flexibility to meet the changing needs of Brown's students and research community.

The Master's Program in Data Science (Master of Science, ScM) prepares students from a wide range of disciplinary backgrounds for distinctive careers in data science. Rooted in a research collaboration between four strong academic departments (Applied Mathematics, Biostatistics, Computer Science, and Mathematics), the Master's Program offers a unique and rigorous education for people building careers in data science and/or big data management.

For additional information, please visit the initiative's website: http://dsi.brown.edu/

Data Science Graduate Program

Master of Science in Data Science

The Data Science Initiative at Brown offers a new master's program (ScM) that will prepare students from a wide range of disciplinary backgrounds for distinctive careers in Data Science. Rooted in a research collaboration among four very strong academic departments (Applied Mathematics, Biostatistics, Computer Science, and Mathematics), the master's program will offer a rigorous, distinctive, and attractive education for people building careers in Data Science and/or in Big Data Management. The program's main goal is to provide a fundamental understanding of the methods and algorithms of Data Science. Such an understanding will be achieved through a study of relevant topics in mathematics, statistics and computer science, including machine learning, data mining, security and privacy, visualization, and data management. The program will also provide experience in important, frontline data-science problems in a variety of fields, and introduce students to ethical and societal considerations surrounding data science and its applications.

The program's course structure, including the capstone experience, will ensure that the students meet the goals of acquiring and integrating foundational knowledge for data science, applying this understanding in relation to specific problems, and appreciating the broader ramifications of data-driven approaches to human activity. Moreover, our strong industry partnerships will help you better learn about industry's needs and directions, and will expose you to novel and unique opportunities. In addition, several professors from all across the different department's groups work closely with industry (regional and beyond) and the government, so you will be able to sharpen your skills here on problems that bring research ideas and methods to bear on problems of practical value.

The program will be conducted over one academic year plus one summer, with the option for an additional pre-program summer for students who lack one or more of the basic prerequisites. The regular program includes two semesters of coursework and a one-summer (5-10 week) capstone project focused on data analysis in a particular application area.

There are nine credits unites required to pass the program: four in each of the academic year semesters, and one (the capstone experience) in the summer. The nine credit-units divide as follows:

1. 3 credits in mathematical and statistical foundations,
2. 3 credits in data and computational science,
3. 1 credit in societal implications and opportunities,
4. 1 elective credit to be drawn from a wide range of focused applications or deeper theoretical exploration, and
5. 1 credit capstone experience.

We also offer an option as a 5th Year Master's Program if you are an undergraduate at Brown. This allows you to substitute maximally 2 credits with courses you have already taken.

1. For their capstone experience, students will work on a project with real data, potentially in any one of the areas covered by the elective course. A faculty member from one of the four departments will oversee the capstone course, although each student may collaborate with an additional faculty member, postdoc, or industry partner on his/her project.

For more information on admission and program requirements, please visit the following website: https://www.brown.edu/academics/gradschool/programs/data-science (https://www.brown.edu/academics/gradschool/programs/data-science/)

Courses

DATA 0080. Data, Ethics and Society.
A course on the social, political, and philosophical issues raised by the theory and practice of data science. Explores how data science is transforming not only our sense of science and scientific knowledge, but our sense of ourselves and our communities and our commitments concerning human affairs and institutions generally. Students will examine the field of data science in light of perspectives provided by the philosophy of science and technology, the sociology of knowledge, and science studies, and explore the consequences of data science for life in the first half of the 21st century. Fulfills requirement for Certificate in Data Fluency.
DATA 0200. Data Science Fluency.
As data science becomes more visible, are you curious about its unique amalgamation of computer programming, statistics, and visualizing or storytelling? Are you wondering how these areas fit together and what a data scientist does? This course offers all students regardless of background the opportunity for hands-on data science experience, following a data science process from an initial research question, through data analysis, to the storytelling of the data. Along the way, you will learn about the ethical considerations of working with data, and become more aware of societal impacts of data science. Course does not count toward CS concentration requirements.

As more students engage in data science there is a need to provide guidance on conducting basic statistical analysis in Python. This course will provide a non-specialist overview of introductory statistics along with specific skills on how to conduct basic exploratory data analysis in Python. In addition, students will learn how to conduct simple linear modules using the Statsmodels package in Python. Student learning would be assessed through hands-on Python coding activities and written interpretation of statistical reports.

An introduction to the mathematical methods of data science through a combination of computational exploration, visualization, and theory. Students will learn scientific computing basics, topics in numerical linear algebra, mathematical probability (probability spaces, expectation, conditioning, common distributions, law of large numbers and the central limit theorem), statistics (point estimation, confidence intervals, hypothesis testing, maximum likelihood estimation, density estimation, bootstrapping, and cross-validation), and machine learning (regression, classification, and dimensionality reduction, including neural networks, principal component analysis, and unsupervised learning).

DATA 1030. Hands-on Data Science.
Develops all aspects of the machine learning pipeline: data acquisition and cleaning, handling missing data, exploratory data analysis, visualization, feature engineering, modeling, interpretation, presentation in the context of real-world datasets. Fundamental considerations for data analysis are emphasized (the bias-variance tradeoff, training, validation, testing). Classical models and techniques for classification and regression are included (linear and logistic regression with regularization, support vector machines, decision trees, random forests, XGBoost). Uses the Python data science ecosystem (e.g., sklearn, pandas, matplotlib). Prerequisites: A course equivalent to CSCI 0505, CSCI 0150 or CSCI 0170 are strongly recommended.

DATA 1050. Data Engineering.
Provides an introduction to computer science and programming for data science. Coverage includes data structures, algorithms, analysis of algorithms, algorithmic complexity, programming using test-driven design, code organization, and version control. Additional topics include SQL, no-SQL, and graph databases, distributed computing, and web technologies.

DATA 1150. Data Science Fellows.
Data science is growing fast, with tools, approaches, and results evolving rapidly. This course is for students with some familiarity with data science tools and skills, seeking to apply these skills and teach others how to implement and interpret data science. Working in conjunction with a faculty sponsor, this course teaches students communication skills, how to determine the needs (requirements) for a project, and how to teach data science to peers. These valuable agile skills will be an incredible advantage moving forward in your professional development. Interested students should complete the initial application form below to express interest. Override requests will be granted only to students by instructor approval.

DATA 1200. Reality Remix - Experimental VR.
This course pursues collaborative experimentation with virtual and augmented reality (AR and VR). The class will work as a team to pursue research (survey of VR/AR experiences, scientific and critical literature review), reconnaissance (identifying VR/AR resources on campus, in Providence and the region), design (VR/AR prototyping). Research findings are documented in a class wiki. The course makes use of Brown Arts Initiative facilities in the Granoff Center where an existing VR laboratory will be expanded through the course of the semester based on student needs. Class culminates in the release the class wiki as a resource for the Brown community.

A modern introduction to inferential methods for regression analysis and statistical learning, with an emphasis on application in practical settings in the context of learning relationships from observed data. Topics will include basics of linear regression, variable selection and dimension reduction, and approaches to nonlinear regression. Extensions to other data structures such as longitudinal data and the fundamentals of causal inference will also be introduced.

DATA 2040. Deep Learning and Special Topics in Data Science.
A hands-on introduction to neural networks, reinforcement learning, and related topics. Students will learn the theory of neural networks, including common optimization methods, activation and loss functions, regularization methods, and architectures. Topics include model interpretability, connections to other machine learning models, and computational considerations. Students will analyze a variety of real-world problems and data types, including image and natural language data.

DATA 2050. Data Science Practicum.
The capstone experience is a hands-on thesis project that entails an in-depth study of a current problem in data science. Students will synthesize their knowledge of probability and statistics, machine learning, and data and computational science. A faculty member from one of the four core DSI departments (Applied Mathematics, Biostatistics, Computer Science, Mathematics) will oversee the capstone course. Students may collaborate with an additional faculty member, postdoc, or industry partner on projects. DATA 1010 and DATA 1030 are recommended pre-requisites.

DATA 2080. Data and Society.
A course on the social, political, and philosophical issues raised by the theory and practice of data science. Explores how data science is transforming not only our sense of science and scientific knowledge, but our sense of ourselves and our communities and our commitments concerning human affairs and institutions generally. Students will examine the field of data science in light of perspectives provided by the philosophy of science and technology, the sociology of knowledge, and science studies, and explore the consequences of data science for life in the first half of the 21st century.

DATA 2110. Topics in Econometrics.
This course will begin with a survey of the literature on identification using instrumental variables, including identification bounds, conditional moment restrictions, and function control approaches. The next part of class will cover some of the theoretical foundations of machine learning, including regularization and data-driven choice of tuning parameters. We will discuss in some detail the canonical normal means model, Gaussian process priors, (empirical) Bayes estimation, and reproducing kernel Hilbert space norms. We will finally cover some selected additional topics in machine learning, including (deep) neural nets, text as data (topics models), multi-armed bandits, and data visualization.

Lefschetz Center for Dynamical Systems

The Lefschetz Center for Dynamical Systems at Brown University promotes research in dynamical systems interpreted in its broadest sense as the study of evolving systems, including partial differential and functional equations, stochastic processes and finite-dimensional systems. Interactions and collaborations among its members and other scientists, engineers and mathematicians have made the Lefschetz Center for
Dynamical Systems one of the leading groups in dynamical systems and control theory. The Lefschetz Center for Dynamical Systems originated in 1964, when a large group of mathematicians and control theorists came to Brown from the Research Institute for Advanced Studies (RIAS) in Baltimore. Solomon Lefschetz (http://www.nasonline.org/publications/biographical-memoirs/memoir-pdfs/lefschetz-solomon.pdf) (1884-1972), its first director, was one of the most outstanding mathematicians of this century. The Center has been privileged to name itself in his honor for these many years.

For additional information please visit the center’s website at: http://www.brown.edu/research/projects/dynamical-systems/home/.

Early Cultures

Chair
Susan Ashbrook Harvey

The Program in Early Cultures (until recently called the Program in Ancient Studies) was founded in the late 1970s, when faculty in various academic units sought new ways to foster collaboration and promote the study of ancient civilizations among Brown’s students. It is a Program of rich traditions at Brown that seeks to bring together all those at Brown (faculty, graduate students, undergraduates, and staff) who are interested in the cultures, religions, and histories of ancient civilizations. Geographically, the “ancient world” represented at Brown comprises early China and India, West Asia (Mesopotamia, Iran, Anatolia, and Israel), Egypt, the Mediterranean (especially Greece and Italy), the early Islamic and Byzantine worlds as well as the Pre-Columbian Mesoamerican civilizations.

For additional information, please visit the department’s website: http://www.brown.edu/Departments/Early_Cultures/

Courses

ERLY 0680. Judaism, Christianity, and the Bible (JUDS 0680). Interested students must register for JUDS 0680.

ERLY 0990. Concepts of the Self in Classical Indian Literature (CLAS 0990). Interested students must register for CLAS 0990.

ERLY 1000A. Writing History in the Ancient World.
The Greeks and Romans created the Western tradition of historiography as a genre of literature and historical reflection. The seminar will focus on the great historians from Herodotus to Tacitus and examine what purpose they pursued in writing history, investigate the origins of historical writing, and look at forms of historical reflection and writing in other ancient civilizations. Instructor permission required.

ERLY 1000B. Geography, Ethnography, and Perceptions of the World in Antiquity.
Curious about the shape and limits of the earth and the variety of cultures, ancient Greeks and Romans explored and described the world, drew maps, and interpreted the customs of others in fascinating ways. We will discuss relevant texts (Homer, Herodotus, Strabo, Tacitus, etc., in translation) and compare the Graeco-Roman world with that of other ancient civilizations (China, Mesopotamia, Aztecs).

ERLY 1000C. Epic and History in the Ancient and Medieval Worlds.
This seminar will focus on the question of preservation, transformation, and distortion of historical memory in epic poetry from various parts of the ancient Mesopotamian, Hittite, Greek, and Roman) and medieval (German, French, Hispanic, and Slavic) worlds. Additional issues to be discussed include orality and literacy, cultural memory, and the social function of poetry in changing conditions. Texts in translation.

ERLY 1000D. Highways and Byways in Antiquity.
No description available.

ERLY 1000E. The Gift in Antiquity (RELS 1880A).
Interested students must register for RELS 1880A.

ERLY 1120G. The Idea of Self (CLAS 1120G).
Interested students must register for CLAS 1120G.

From the blood-soaked amphitheaters of the Roman Empire to tattooing and other forms of body modification, this course will explore how people, ancient and modern, view animals and what looking at animals reveals about what it means to be human. Examining evidence from a variety of disciplines (archaeology, religious studies, history, philosophy, art, and literature), we will investigate the problematic boundary between “man” and “animal” and challenge the presumed superiority of the “human”.

In the past, as in the present, humans and animals were city dwellers, living side by side in urban environments. This course will focus on five ancient cities – in India, China, Egypt, Italy and Mexico – to examine the places where human and animal lives intersected in these early metropolises. We will explore how these complex relationships had a pervasive influence on nearly every aspect of urban life: from religious practices, to city planning, to entertainment, to health.

ERLY 1410. Ancient Egyptian Literature (EGYT 1410).
Interested students must register for EGYT 1410.

ERLY 1420. Ancient Egyptian Religion and Magic (EGYT 1420).
Interested students must register for EGYT 1420.

ERLY 1750K. Madwomen and Lovers (CLAS 1750K).
Interested students must register for CLAS 1750K.

Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Required of seniors in the honors program. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ERLY 2110F. Greek Palaeography and Premodern Book Cultures (GREK 2110F).
Interested students must register for GREK 2110F.

Earth, Environmental and Planetary Sciences

Chair
Greg Hirth

Students in Earth, Environmental, and Planetary Sciences develop a comprehensive grasp of principles as well as an ability to think critically and creatively. Formal instruction places an emphasis on fundamental principles, processes, and recent developments, using lecture, seminar, laboratory, colloquium, and field trip formats. Undergraduates as well as graduate students have opportunities to carry out research in current fields of interest.

The principal research fields of the department are geochemistry, mineral physics, igneous petrology; geophysics, structural geology, tectonophysics; environmental science, hydrology; paleoceanography, paleoclimatology, sedimentology; and planetary geosciences. Emphasis in these different areas varies, but includes experimental, theoretical, and observational approaches as well as applications to field problems. Field studies of specific problems are encouraged rather than field mapping for its own sake. Interdisciplinary study with other departments and divisions is encouraged.

For additional information, please visit the department’s website: http://www.brown.edu/academics/earth-environmental-planetary-sciences/

Geological Sciences Concentration Requirements

Geosciences is a highly interdisciplinary concentration employing principles from physics, chemistry, and biology to understand the structure
of the Earth and other planetary bodies. Concentrators can study Earth and planetary interiors, including the formation of rocks and minerals, movement of the Earth’s tectonic plates, and the circulation of the planets’ core and mantle. Other areas emphasize surface processes, such as the movement and storage of water. This concentration is a good choice for students who seek a broad scientific understanding of the processes that shape the physical world around us.

Both AB and ScB degrees are offered; the ScB requires more (19) courses, including a research course. DEEPS provides a highly collaborative learning environment that emphasizes process-oriented, hands-on approaches in the classroom, in labs and on field trips. There are many opportunities for students to do research working with faculty, graduate students, and researchers. The degree builds students’ skills in critical thinking, written and oral communication, data analysis and modeling, and applying systems approaches to problem solving, which prepare students for a wide variety of careers.

### Standard program for the A.B. degree

This program provides a broad introduction to the geological sciences. Recommended for students seeking a liberal education and a general understanding of Earth processes and Earth history. Especially attractive for double concentrations, such as geology and economics as a career path to law or business, or geology and English as a career path to journalism or technical writing.

Total Credits: 19

1. Advanced placement may be substituted for the first semester of physics.

### Geology-Biology Concentration Requirements

Students in Geology-Biology apply principles from geology, biology, chemistry, and physics to understand how major components of the Earth, such as its atmosphere and oceans, interact with and sustain life in the past, present, and into the future. Many courses emphasize climate change, environmental pollution, and biogeochemistry, so this concentration is a good one for students interested in studying the environmental. Other areas emphasize Earth history, including climate change, extinction events, and the Earth's sedimentary record to investigate environmental change.

Both AB and ScB degrees are offered; the ScB requires more (19) courses, including a research course. DEEPS provides a highly collaborative learning environment that emphasizes process-oriented, hands-on approaches in the classroom, in labs and on field trips. There are many opportunities for students to do research working with faculty, graduate students, and researchers. The degree builds students’ skills in critical thinking, written and oral communication, data analysis and modeling, and applying systems approaches to problem solving, which prepare students for a wide variety of careers.

### Standard program for the A.B. degree

This program provides a broad introduction to the geologic and biologic processes that shape the Earth and our environment. It is recommended for students seeking a liberal education and a general understanding of Earth processes, including the evolution of climate and the environment, global environmental change and Earth history. The program prepares students for careers in environmental science, geology, ecology, oceanography, and global change.

Total Credits: 19

1. Advanced placement may be substituted for the first semester of physics.
ENGN 0040 Dynamics and Vibrations (or higher)
MATH 0090 Introductory Calculus, Part I (or higher)
PHYS 0050 Foundations of Mechanics (or higher)

**Ten Concentration courses**

**EEPS 0220** Earth Processes 1
**EEPS 0240** Earth: Evolution of a Habitable Planet 1
**EEPS 1240** Stratigraphy and Sedimentation 1
**EEPS 0230** Geochemistry: Earth and Planetary Materials and Processes 1
  or **EEPS 0250** Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction

Select three upper level Biology courses such as: 3

**BIOL 0410** Invertebrate Zoology
**BIOL 0420** Principles of Ecology
**BIOL 0430** The Evolution of Plant Diversity
**BIOL 0480** Evolutionary Biology
**BIOL 1470** Conservation Biology
**BIOL 1480** Terrestrial Biogeochemistry and the Functioning of Ecosystems

Three upper level EEPS courses such as: 3

**EEPS 0850** Weather and Climate
**EEPS 1120** Paleoceanography
**EEPS 1130** Ocean Biogeochemical Cycles
**EEPS 1150** Limnology: The Study of Lakes
**EEPS 1310** Global Water Cycle
**EEPS 1320** Introduction to Geographic Information Systems for Environmental Applications
**EEPS 1330** Global Environmental Remote Sensing
**EEPS 1370** Environmental Geochemistry
**EEPS 1430** Principles of Planetary Climate
**EEPS 1615** The Environmental Policy Process

Three upper level science or math courses with approval from the concentration advisor 3

**EEPS 1970** Individual Study of Geologic Problems (Senior Research Thesis) 1

**Total Credits** 19

**Geology-Chemistry Concentration Requirements**

Geochemistry involves two different emphases. Low-temperature geochemistry involves study of chemical and biochemical processes on and near Earth's surface, including land, oceans and freshwater bodies, and how the geochemical record reflects climate conditions. High-temperature geochemistry includes study of formation and evolution of the Earth and other planets, magma formation and properties, volcanic activity, and metamorphism. The AB degree requires a total of 14 courses, including 5 geoscience courses and 4 chemistry courses, and a few supporting math and physics courses. The ScB degree requires a total of 20 courses, including 7 geoscience courses and 4 chemistry courses, either with an organic or an inorganic focus, plus some supporting math and physics courses and one research course. Geoscience courses emphasize a process-oriented approach, with hands-on experiences in labs and on field trips. There is a strong emphasis on active and collaborative learning, and on practice in communication. There are many opportunities for students to do research work for pay during the academic year or in the summer, in areas such as experimental studies of magma formation, and analyzing lunar rock samples for water content.

**Standard program for the Sc.B. degree**

This program is recommended for students interested in graduate study and careers in the Earth, Environmental, or Biological Sciences. It is relevant for students interested in environmental science, paleoclimate, Earth systems science, biogeochemistry, oceanography, or paleobiology.

**Five basic supporting science courses**

**BIOL 0200** The Foundation of Living Systems (or equivalent) 1
**CHEM 0330** Equilibrium, Rate, and Structure (or equivalent) 1

Three courses to build quantitative skills: 3

**APMA 0330** Methods of Applied Mathematics I (or higher)
**BIOL 0495** Statistical Analysis of Biological Data
**CSCI 0170** Computer Science: An Integrated Introduction (or higher)
**ENGN 0040** Dynamics and Vibrations (or higher)
**MATH 0090** Introductory Calculus, Part I (or higher)
**PHYS 0050** Foundations of Mechanics (or higher)

**Fourteen (14) concentration courses**

**EEPS 0220** Earth Processes 1
**EEPS 0240** Earth: Evolution of a Habitable Planet 1
**EEPS 1240** Stratigraphy and Sedimentation 1
**EEPS 0230** Geochemistry: Earth and Planetary Materials and Processes 1
  or **EEPS 0250** Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction

**Three upper level BIOL courses such as:** 3

**BIOL 0410** Invertebrate Zoology
**BIOL 0420** Principles of Ecology
**BIOL 0430** The Evolution of Plant Diversity
**BIOL 0480** Evolutionary Biology
**BIOL 1470** Conservation Biology
**BIOL 1480** Terrestrial Biogeochemistry and the Functioning of Ecosystems

**Total Credits** 19
Standard program for the Sc.B. degree

This program is recommended for students interested in graduate study and careers in geochemistry and related fields.

Total Credits: 19
The department of Geological Sciences offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. For more information on admission and program requirements, please visit the following website:
http://www.brown.edu/academics/gradschool/programs/geological-sciences/ (http://www.brown.edu/academics/gradschool/programs/geological-sciences/)

### Courses

**EEPS 0010. Face of the Earth.**
Study of Earth’s surface (e.g., mountains, rivers, shorelines) and processes which have created and modify it (e.g., glaciation, floods, volcanism, plate tectonics, earthquakes). The goals are to increase appreciation and enjoyment of our natural surroundings and provide a better understanding of environmental problems, natural resources, land use, and geologic hazards. Four labs, plus a field trip. For nonscience concentrators (science concentrators should take EEPS 0220). Students MUST register for both components of this course (the lecture and one of the labs) during the SAME registration session. Enrollment limited to 100.

**EEPS 0011. Geology in the Real World: Intersections Between Geology and Society.**
Do you know how the Earth and its processes affect you? If you want to learn how geology influences the lives of everyone on Earth, this is the class for you. We will use case studies, like the Tohoku earthquake that displaced 200,000 people, to guide our exploration. Along the way, you will learn to critically evaluate how science is presented in the media. Ten years from now you might not remember how to tell gneiss from schist, but because of this class you should be able to tell your neighbor how geology affects the lives of everyone in the world.

---

### Standard program for the Sc.B. degree

This program is recommended for students interested in graduate study and careers in geophysics, climate science and related fields. Students will be prepared to understand and use models, make measurements, and use theories of the processes studied in these fields. Some course requirements may be flexible based on consultation with concentration advisor.

**Five supporting science courses:**

- CHEM 0330 Equilibrium, Rate, and Structure
- A course involving mechanics such as:
  - PHYS 0050 Foundations of Mechanics
  - PHYS 0070 Analytical Mechanics
  - ENGN 0040 Dynamics and Vibrations or equivalent

**Fourteen Concentration Courses:**

- EEPS 0220 Earth Processes
- EEPS 0230 Geochemistry: Earth and Planetary Materials and Processes
- or EEPS 0240 Earth: Evolution of a Habitable Planet
- EEPS 0250 Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction
- or EEPS 0350 Mathematical Methods of Fluid
- EEPS 1430 Principles of Planetary Climate
- EEPS 1610 Solid Earth Geophysics

Three upper level EEPS courses from:

- EEPS 1310 Global Water Cycle
- EEPS 1410 Mineralogy
- EEPS 1420 Petrology
- EEPS 1450 Structural Geology
- EEPS 1510 Introduction to Atmospheric Dynamics
- EEPS 1520 Ocean Circulation and Climate
- EEPS 1620 Continuum Physics of the Solid Earth

One additional upper-level science or math course with approval from the concentration advisor

**Total Credits**: 14

---

### Geological Sciences Graduate Program

One additional EEPS course such as:

- EEPS 0850 Weather and Climate
- EEPS 1130 Ocean Biogeochemical Cycles
- EEPS 1330 Global Environmental Remote Sensing
- EEPS 1560 Global Tectonics
- EEPS 1650 Earthquake Seismology
- EEPS 1810 Physics of Planetary Evolution
- EEPS 1820 Geophysical Fluid Dynamics: Rotating, Stratified Turbulence Edition

or any EEPS course listed above

Three courses in physics or engineering such as:

- PHYS 0060 Foundations of Electromagnetism and Modern Physics
- PHYS 0470 Electricity and Magnetism
- PHYS 0500 Advanced Classical Mechanics
- PHYS 1600 Computational Physics
- ENGN 0310 Mechanics of Solids and Structures
- ENGN 0490 Fundamentals of Environmental Engineering
- ENGN 0510 Electricity and Magnetism
- ENGN 0810 Fluid Mechanics
- ENGN 1370 Advanced Engineering Mechanics

One additional upper-level science or math course with approval from the concentration advisor

EEPS 1970 Individual Study of Geologic Problems

**Total Credits**: 19
EEPS 0030. Climate and Climate Change.
This course is designed to provide students with an understanding of the climate system on Earth, changes in Earth's climate over time, and interactions between climate change and human society. Topics will include: global energy balance; the structure, composition and role of the atmosphere and oceans; the influence of the global carbon cycle on climate; the social, economic and political drivers of earth, urban, and landscape processes; and the role of natural and anthropogenic variability driven by natural feedbacks, land-use changes, and climate change. Enrollment limited to 19 first year students.

EEPS 0050. Mars, Moon, and the Earth.
Space exploration has revealed an astonishing array of surface features on the planets and their satellites. Why are atmospheres on the planets different from Earth's atmosphere? Do other planets represent our past or future environment? Is there life on other planets? The planets and their histories are compared to gain insight and a new perspective on planet Earth.

EEPS 0070. Introduction to Oceanography.
Examines the ocean's role in Earth's global environment, emphasizing the dynamical interaction of the ocean with the atmosphere, biosphere, hydrosphere, cryosphere, and lithosphere. Focus on physical/chemical/biological systems' interconnections needed to understand natural and anthropogenic variability on various time and space scales, from El Niño to global warming. Three lectures, written exercises on oceanographic problems; two field trips to study estuarine and coastal processes.

EEPS 0160B. Global Change: Ecology and Climate.
Examines ways in which global change will affect ecosystems, considering how temperature, rainfall, and land use can modify the distribution of organisms in the future, and reduce biodiversity. Examine how biotic feedbacks to global change can modify climate change through their effects on the carbon cycle, absorption of sunlight at the land surface, and retention of water in soils. Enrollment limited to 19 first year students.

EEPS 0160C. Global Environmental Change.
Examination of evidence that supports or refutes various perspectives on global environmental change, with a foundation in the principles that govern the fundamental underlying processes. Example topics include climate change (warming, cooling, neutral), population growth (how many, how fast), and loss of natural resources (diversity). Topics explored through selected readings from the natural and social sciences. Enrollment limited to 19 first year students.

EEPS 0160D. Living Within the Landscape.
Physical processes that shape the Earth's surface provide an inescapable context for human activity. We will examine the physical principles that govern erosion and sedimentation, slope stability, river and coastal flooding, and groundwater flow, and analyze how these processes affect land-use philosophies and decision-making. Enrollment limited to 19 first year students.

EEPS 0160E. Volcanoes, Windows into the Deep Earth.
Examines the physical and chemical principles controlling the generation of volcanoes and their different styles of eruption. Investigates what, why volcanoes occur, and what volcanic lavas can tell us about the composition and evolution of the Earth and other planets. Evaluates volcanic hazards and their environmental impacts and the economic benefits and cultural aspects of volcanism. Two-day field trip. Enrollment limited to 19 first year students.

The shapes of plants and animals, of mountains and shorelines arise because nature dissipates energy as rapidly as possible. These morphological patterns allow description of the "energy" landscape that produced them. Societies and economies show temporal and spatial patterns as well; does the "flow rate" of ideas and of money cause these patterns? We will explore just how "entropy rules." CAP course. Enrollment limited to 19 first year students.

EEPS 0160G. Energy Resources.
Most of our energy comes directly from the Earth - predominantly as fossil fuels, but also from geothermal, wind, and hydro sources. Developing technologies for alternative energy such as solar, nuclear, biomass and fuel cells also rely on Earth resources. The potential for these energy sources will be discussed. The science behind their utilization and environmental impact (e.g. carbon sequestration and nuclear waste disposal) will be introduced and the trade-offs in making decisions for the future will be explored. CAP course. Enrollment limited to 19 first year students.

EEPS 0160H. Chicken Little or Armageddon? Past and Future Cosmic Threats.
Explore the probability of the next impact on the Earth and assess the possible consequences through historic times (incidents), folklore/legends, examples in recent geological time (last 10 million years), and the catastrophic consequences 65 million years ago. Strategies for searching and possible mitigation of the next "big one" will be considered. This seminar will explore the realities of various predictions, consider public policy, investigate strategies for prevention, and assess the role of the press in shaping perceptions. Enrollment limited to 19 first year students.

EEPS 0160I. Diamonds.
Examines both the science and human history of diamonds, and shows how they have interacted over the years. Investigates where diamonds are formed in nature and what they tell us about the Earth. At the same time, explores the role diamonds have played in our history and culture. Enrollment limited to 12 first year students.

EEPS 0160J. The Natural History of Great Writers: From Goethe to Steinbeck.
Many great and influential writers have also been natural historians. This course examines selections from the writing of such authors as the romantic and naturalist Johann Wolfgang von Goethe, the rationalist Benedict de Spinoza, the intuitive thermodynamicist William Blake, the naturalist novelist John Steinbeck, the lepidopterist novelist Vladimir Nabokov, the amateur paleontologist Arthur Conan Doyle, the proto-ecologist Henry David Thoreau, and the philosopher and sociologist Herbert Spencer. We will examine in a modern scientific context how facts and theories of natural history informed their writing and influenced their worldviews. Specific topics in this seminar will include: man's place in nature and the importance of the discovery of this deep time perspective, Darwinian evolution and its impact on sociology, and the emerging science of ecology in 19th century American literature. Enrollment limited to 19 first year students.

EEPS 0160L. Apocalypse Now: Fact or Fiction?
This FYS will focus on major concepts in earth and planetary sciences as depicted through the destruction of Earth and other worlds, both real and fictional, in media. Focus on depictions of apocalypses and assess their feasibility based on lectures, readings, and discussions of the evolution of Earth, the Solar System, and the Universe. Types of apocalypses covered may include planetary collisions and impacts, disturbance of planetary magnetic fields, alien biological warfare, supernovae, catastrophic climate change, ice ages, lithospheric rifting, and other phenomena. Learning and Teaching Goals • Basic introduction to Solar System and Universe formation and evolution • Basic introduction to earth and planetary sciences, including some simple calculations • Ability to scientifically evaluate depictions of earth and planetary sciences in the media • Understanding of realistic events that could destroy planetary bodies and their host civilizations • Collaboration and team-building skills • Presentation and observation-backed argument skills • Execution and evaluation of good communication.

EEPS 0160M. Natural Disasters.
This First Year Seminar will explore natural disasters: the physical processes that cause them, and their effects on human life. Types of natural disasters covered include earthquakes, volcanoes, tsunamis, hurricanes, tornadoes, and floods. We will explore how and why natural disasters disproportionately affect low-income and minority communities. The focus of the course will be case studies of specific disasters, allowing us to discuss both the science of natural hazards and the vulnerability of human populations to those hazards.
EEPS 0160N. Monsters of the Abyss: Oceanography and Sea Tales.
We will read from the logbooks of Cook, Darwin, Wallace, and Nansen. Their discoveries and expeditions inspired and were inspired by fiction that we will also read, including Moby Dick and 20,000 Leagues Under the Sea. The daring successes and cannibalistic dooms of the Essex, Beagle, Terror, Challenger, and Fram inspired 19th century writers to imagine what lay far across and deep beneath the oceans. These retellings--fictional, narrative, and scientific--helped formulate and fund further research. Who risks their life for a bird, a map, a widow, or an eclipse? How would these scientists and their ideas do today? Enrollment limited to 19 first year students.

EEPS 0160P. From Human Migration to Solving Crimes: The World of Forensic Isotopes.
Chemistry, and isotopic systems in particular, have wide-ranging applications that include unraveling the history of human migration, human diet, the role of trading and coins in antiquity, nuclear forensics, combating counterfeit pharmaceuticals, food fraud, illegal logging and animal trade, to missing person investigations. Even the age of Jupiter can be estimated based on isotopes! This course will review basic concepts in isotopes (what are isotopes and how are they measured?) with emphasis on practical applications and how isotopes are used to address questions relevant to ancient and modern societies. This course consists of lectures, readings and discussion of recent articles on forensic isotope applications, and a final project (short paper and presentation) selected by the student.

EEPS 0160S. Assembling Rhode Island.
Rhode Island has existed as a state in the U.S. for over 200 years, but the land itself is the product of hundreds of millions of years of rich geologic history. As a participant in this First Year Seminar, you will engage with introductory principles of geology toward an understanding of the tectonic history of Rhode Island as well as the geological processes that presently influence and modify its landscape. The basis of our investigation of Rhode Island geology will come from observations made over a series of afternoon-long field trips to geological points of interest in the state and nearby.

EEPS 0220. Earth Processes.
Introduction to the physical and chemical processes that shape the Earth’s surface, govern the structure of its interior, cause natural hazards and affect the human environment. Topics include interior processes (plate tectonics, mountain building, volcanism, earthquakes, and flow of solid rocks) and environmental processes (climate change, atmospheric and oceanic circulation, flow of rivers, glaciers, and groundwater). Lectures complemented by three to four labs, informal small-group study sessions, and two field trips. Collaborative learning is encouraged. Intended for science concentrators or those wishing analytical exploration of these topics. Enrollment limited to 100.

This course is an introduction to the formation of minerals and rocks, and the physico-chemical processes acting during planetary evolution. Topics include: Earth formation and differentiation, determination of age and origin of volcanic, crustal and mantle rocks using their elemental compositions and radiogenic and stable isotopes. Weekly laboratory. Intended for science concentrators. Lab times TBD. Prerequisites: no prerequisites.

Introduces Earth’s surface environment evolution - climate, chemistry, and physical makeup. Uses Earth’s carbon cycle to understand solar, tectonic, and biological cycles’ interactions. Examines the origin of the sedimentary record, dating of the geological record, chemistry and life on early Earth, and the nature of feedbacks that maintain the "habitable" range on Earth. Two field trips; five laboratories arranged.

EEPS 0250. Computational Approaches to Modelling and Quantitative Analysis in Natural Sciences: An Introduction.
Application of numerical analysis to mathematical modelling in the natural sciences including topics such as ground water and glacier flow, earthquakes, climate models, phase equilibrium, and population dynamics. Numerical methods will include the solution of linear algebraic systems of equations, numerical integration, solution of differential equations, time series analysis, statistical data analysis tools. Development of computer programming skills in the Matlab programming environment. Suggested prerequisites: MATH 0090, 0100; PHYS 0030, 0040, or 0050, 0060.

EEPS 0300. Sustainability of Earth Resources.
Fossil fuels are not the only Earth resource we rely on in great quantities. Over 1.5 billion cell phones are made yearly; each using 64 different elements, at least 12 of which are currently irreplaceable. Iron, copper, nickel, rare earth elements, and even sand, are all key components of our modern world that we extract from the Earth. How much are left? How environmentally damaging is it to extract them? Are there alternative extraction methods, or alternative materials? Can they be recycled? What part of your world would you be willing to give up to reduce environmental impacts?

EEPS 0310. Fossil Record.
Integrated view of the history of life: biogeochemical cycles, biodiversity, evolution by natural selection, ecology, and physiology along a multiplicity of scales from the microbial to the planetary, as recorded in the fossil record. Attention is given to how biotic systems, in contrast to just physical systems, have changed through time maintaining the chemical and thermodynamic non-equilibrium state of the Earth’s surface. Two lectures per week; several labs including dissections for paleobiological comparisons and one field trip to fossil localities and museum collections in Connecticut and Massachusetts. Prerequisites: EEPS 0220 or 0230 or 0240, BIOL 0200, or instructor permission.

Intended for undergraduates concentrating in geological and physical sciences or engineering, especially those interested in the quantitative study of Earth. Problem sets will cover common approaches to quantify the dynamics and chemistry of solids and fluids in nature. Mathematical topics to be introduced include linear algebra, vectors and tensors, differential equations, dynamical systems, eigenvalues and eigenvectors, empirical orthogonal functions, fractals, chaos, and statistics. Applications include waves in the oceans, atmosphere, and solid earth, convective and conductive heat flow, reaction rates, gravitational potential energy, Newton’s laws on a rotating planet, measuring coastlines and ranges, and dating errors in stratigraphy.

Qualitative introduction to the dynamics of watersheds and groundwater flow from an intuitive perspective. Lays the foundations for understanding the physical mechanisms by which water is transported throughout a hydrologic system. Provides background for future studies, but is primarily designed to enable informed citizens to thoughtfully critique water management practices and public policy. Pre-college math and physics background is expected.

EEPS 0810. Planetary Geology.
This introductory level course will examine the evolution of our Solar System and the geology of planetary bodies, including Mercury, Venus, the Moon, Mars, asteroids, and the moons of Jupiter and Saturn. We will discuss the origin of the Solar System from a geological perspective and explore how scientists combine observations from extraterrestrial samples such as meteorites with data returned by satellites and rovers to develop and test hypotheses related to planetary evolution. Emphasis will be on comparing geologic processes on these bodies to well-understood processes on Earth, results from past, current, and upcoming planetary missions, and the future of human and robotic exploration of space.
EEPS 0830. Water in Our World.  
This course will focus on understanding natural and societal dimensions of the water cycle. The coming century will see substantial pressure on global water resources owing to increasing human demand, alteration of river systems, and climate change. The first half of the course introduces fundamental concepts in physical hydrological science, and the second explores human modifications and environmental problems associated with a perturbed water cycle. The topical sequence of the class will progress first through different components of the water cycle (e.g. precipitation, evaporation, runoff), followed by different ways in which humans use and depend upon freshwater resources.

EEPS 0850. Weather and Climate.  
Weather phenomena occur on short time scales, and form the basis for understanding climate, the study of changes over longer time scales. This course aims to provide an understanding of the processes that drive weather patterns, the general circulation of the atmosphere, and climate on Earth. Topics include the structure and composition of the atmosphere, sources of energy that drive atmospheric processes, weather forecasting, the hydrological cycle, forces that create severe weather, the influence of humans on the atmosphere, and factors that influence climate, climate variability and climate change. Recommend courses or equivalent: MATH 0090, MATH 0100, PHYS 0050.

EEPS 1110. Estuarine Oceanography.  
Examines physical, chemical, and biological characteristics of local estuaries using field measurements, analysis of field data, and interpretation of processes; field investigation results will be prepared as a cooperative class report. Topics include: tidal and circulation processes, salinity and freshwater fluxes, watershed pollutants, estuary flushing rates, and estuary ecosystems. Primarily for students with experience in the sciences. MATH 0090, 0100, or equivalent, recommended. Enrollment limited to 20.

Labs will be held on Fridays from 1-5pm, with fieldwork through mid-October.

EEPS 1120. Paleoceanography.  
An examination of the Cenozoic history of the world ocean with attention to the processes which have acted to change its circulation, climate, geometry, and biology. Develops a strategy to use marine sediments and microfossils to identify and understand past variations in the oceans. Class projects analyze and interpret various types of paleoceanographic data. Laboratory arranged. Offered alternate years.

EEPS 1130. Ocean Biogeochemical Cycles.  
A quantitative treatment of the cycling of biologically important elements in the world ocean. Special attention paid to the carbon system in the ocean and the role that organisms, in conjunction with ocean circulation, play in regulating the carbon dioxide content of the atmosphere through exchange with the surface ocean. For science concentrators. Offered alternate years. Prerequisite: CHEM 0330 or equivalent, or instructor permission.

EEPS 1150. Limnology: The Study of Lakes.  
This course will provide an interdisciplinary overview of the physics, chemistry, biology, and geology of lakes. Areas of emphasis will include the origin of lake basins, water circulation patterns, heat and water budgets, biogeochemical processes, lake ecosystems, and the stratigraphic record of lakes. We will also discuss human and climatic impacts on lakes. Prerequisites: EEPS 0220 and 0240, or instructor permission. Enrollment limited to 20.

EEPS 1240. Stratigraphy and Sedimentation.  
Introduction to depositional environments and processes responsible for formation of sedimentary rocks. Major sedimentary environments in the Recent are discussed, general models are proposed, and stratigraphic sequences in older sediments are examined in the light of these models. The Phanerozoic stratigraphic record is examined from the perspective of Earth system history. Laboratory arranged. Prerequisites: EEPS 0220 or 0240, or instructor permission.

The goal of this class is to understand the physical principles and processes of the global water cycle. Topics include the climatic importance of water, circulation of atmospheric water vapor, formation of rain and snow, availability of soil water, plant-water relations, mass balance of glaciers, and ongoing and expected changes in the water cycle. Additional goals: become familiar with the current research literature, practice clear and concise science writing, and to use simple programming in Python to plot and analyze actual data sets.

Students are expected to have taken at least one geology-related course. Programming experience recommended, but not necessary.

EEPS 1320. Introduction to Geographic Information Systems for Environmental Applications.  
An introduction to basic geographic information system (GIS) concepts, and the utilization and application of geospatial data for analysis. Topics will include data structures and management, coordinate systems and projections, data creation, obtaining spatial data from outside sources, georeferencing and address-matching, model building and batch geoprocessing, and performing fundamental spatial analysis techniques such as overlay, extraction, and interpolation, viewsheds, and hot spot analysis among others. Concepts are presented via online videos (Canvas) and put into practice through weekly hands-on laboratory exercises utilizing the GIS software product ArcGIS 10.x and ArcGIS Pro (ESRI, Inc.). Two presentations by each student are required - a case study, and an original research project employing the methods learned. A public poster session on the original research project culminates the term. If unable to pre-register, a wait list will be used to fill openings on a first come, first serve basis. S/NC.

Introduction to physical principles of remote sensing across electromagnetic spectrum and application to the study of Earth's systems (oceans, atmosphere, and land). Topics: interaction of light with materials, imaging principles and interpretation, methods of data analysis. Laboratory work in digital image analysis, classification, and multi-temporal studies. One field trip to Block Island. Recommended preparation courses: MATH 0090, 0100; PHYS 0060; and background courses in natural sciences.

EEPS 1370. Environmental Geochemistry.  
The course will examine the biogeochemical cycling, fate and transport of chemicals in the atmospheric and aquatic environments. Topics such as chemical weathering, natural water pollution and remediation, acid deposition, global warming and air pollution will be examined through natural ecosystem examples from rivers, lakes, estuaries, and ocean. Field trips and laboratory arranged. Prerequisites: CHEM 0090, or equivalent, or instructor permission.

EEPS 1380. Environmental Stable Isotopes.  
Introduction to the concepts, analytical methods, theory and environmental applications of stable H, O, C, N and S isotopes. Emphasis will be placed on theory and applications of light isotopes in paleoclimatic studies, environmental hydrogeology and biogeochemistry. Prerequisites: CHEM 0090, 0100, EEPS 0220 or 0230 recommended, or instructor permission.

This course is designed to introduce students a variety of physical and chemical processes that shape and sculpt the surfaces of solid planetary bodies (asteroid, comets, moons, & terrestrial planets). We will learn how the ways mountains can form and how their topography is supported (Is Venus’ 11 km high Maxwell Montes the result of a rising mantle plume? among other questions). This course will cover the processes of faulting, tectonics, volcanism, impact cratering, landslides, and weathering from wind, and water. These processes will be explored from a physical quantitative perspective.
EEPS 1410. Mineralogy.
Introduction to mineralogical processes on Earth and the terrestrial planets. Topics include: crystallography; crystal chemistry; fundamentals of mineralogical thermodynamics and kinetics; mineral defects and their dynamics; physicochemical properties of minerals and magmas. Laboratory study devoted to analytical techniques for minerals/materials analysis: X-ray and electron diffraction; reflectance spectrometry; transmitted optical microscopy; electron microscopy; X-ray spectrometry. In addition to Earth scientists, the course should be of interest to chemical/materials engineering and chemistry concentrators. Prerequisites: EEPS 0230, CHEM 0100 or 0330 or equivalent, or permission of instructor.

EEPS 1420. Petrology.
Introduction to the origin and evolution of igneous rocks. Topics include: physical properties of magma, thermodynamics and phase equilibria, igneous rocks and their classification, magmatic processes, trace elements and isotopes, basalts and layered intrusions, survey of lunar and planetary petrology. Prerequisites: EEPS 1410, or instructor permission.

EEPS 1430. Principles of Planetary Climate.
This course provides the physical building blocks for understanding planetary climate. Topics include thermodynamics applied to planetary atmosphere, basic radiative transfer, energy balance in the atmosphere, and climate variability. In-class exercises and homework problems are designed to strengthen the understanding of basic concepts and to improve problem-solving skills.

EEPS 1450. Structural Geology.
Introduction to the geometry, kinematics and mechanics of rocks deformed by brittle fracture or faulting and ductile solid state flow, on scales from microscopic to mountain ranges. The emphasis is on using concepts to interpret the formation, strain history and rheology of deformed rocks in terms of the operative grain-scale processes, material properties and environmental conditions. Weekly 2 hour lab involving hands-on experience closely related to class topics. Two field trips. Prerequisites: EEPS 0220 or instructor permission.

EEPS 1510. Introduction to Atmospheric Dynamics.
The objective of EEPS 1510 is to understand the fundamental physical principles that govern the motion of the atmosphere. Students will explore the dynamics of the atmosphere and the mathematical laws governing weather and climate. Topics include the fundamental equations of motion in rotating fluids, hydrostatic, geostrophic and thermal wind balance, and vorticity, as applied to phenomena, including sea breezes, planetary waves, midlatitude cyclones, fronts, and the global general circulation. The emphasis will be on physical interpretation of the equations but facility with vector calculus is critical. Enrollment limited to 30.

EEPS 1520. Ocean Circulation and Climate
Examines physical oceanography, processes, and dynamics of the global ocean to understand circulation patterns and how they relate to ocean biology, chemistry, climate change. Assignments address ocean's role in the climate system; ocean observations and models; the origin, distribution, and dynamics of large-scale ocean circulation and water masses; energy and freshwater budgets; and variability of the coupled system on seasonal to centennial timescales e.g. El Niño. Intended for geological and physical sciences undergraduate and graduate students with quantitative skills and an interest in oceans, climate, paleoclimate. Pre-requisites: EEPS 0250, EEPS 0350, PHYS 0720, or APMA 0180. Offered alternate years.

EEPS 1550. Global Tectonics.
Plate tectonic theory and the evolution of continents and the seafloor. Emphasis on the structure and tectonics of western U.S. considering geological, geophysical, and geochemical constraints as well as direct geodetic observations of plate motions from GPS measurements. Prerequisite: EEPS 0220 and 0230. Three or more of EEPS 0220, 0230, 1240, 1410, 1420, 1450 and 1610 are recommended.

EEPS 1580. Quantitative Elements of Physical Hydrology.
Physical hydrology with emphasis on fundamental physical principles and mathematical tools. Topics include precipitation, surface runoff, groundwater flow, water quality and contaminant transport. Prerequisites: APMA 0340; and ENGN 0510 or PHYS 0470; ENGN 0810 is recommended; or instructor permission.

A quantitative overview of selected topics at the advanced undergraduate and beginning graduate student level of analytical and numerical models for simulating surface runoff, groundwater flow and contaminant migration. While participants will employ computers and scientific visualization to implement the material, no prior computing experience is expected. Non-concentrators encouraged. No exams. Prerequisites: PHYS 0470, or ENGN 0510.

EEPS 1590A. Quantitative Modeling of Hydrologic Processes.
A quantitative overview of selected topics at the advanced undergraduate, beginning graduate student level of analytical and numerical models for simulating surface runoff, groundwater flow and contaminant migration. While participants will employ computers and scientific visualization to implement the material, no prior computing experience is expected. Non-concentrators encouraged. No exams. Prerequisites: PHYS 0070, or ENGN 0510.

EEPS 1600. Environmental and Engineering Geophysics.
A hands-on introduction to non-invasive geophysical methods applied to subsurface investigations of soil and bedrock conditions, groundwater, geotechnical engineering, forensics, archaeology and other environmental applications. Students will use ground penetrating radar, seismic, gravity resistivity, electromagnetic and magnetic methods in the field one afternoon a week to investigate relevant environmental and geotechnical problems. A background in geology is not expected. Prerequisites: APMA 0340 and PHYS 0470, or ENGN 0510, or instructor permission.

EEPS 1610. Solid Earth Geophysics.
A survey of basic geophysical techniques for determining the structure and dynamics of Earth's interior. Topics include: global structure from seismic waves; gravity, magnetic field, and shape of the Earth; thermal processes within the Earth; structure of continental and oceanic lithosphere. Recommended courses: EEPS 0220, PHYS 0470, APMA 0330. No prerequisites.

EEPS 1615. The Environmental Policy Process.
The diminishing quality of Earth's systems and resources carries profound implications for the fulfillment of human rights and aspirations. But even as Western knowledge systems understand better the intrinsic interdependencies between humans and the non-human, policy gridlock persists. Indeed, scientific findings are regularly contested on political grounds. The purpose of this course is to learn how to apply diverse knowledges from Indigenous to Modern to map the relevant policy in problems at the intersection of human rights and environmental integrity, and to develop approaches to address them in ways that are creative, effective, responsible and just. Enrollment limited to 10.

EEPS 1620. Continuum Physics of the Solid Earth.
Physics of the Earth with emphasis on fundamental physical principles and mathematical tools. Topics include application of: conductive and convective heat transfer to cooling of the Earth; potential theory to interpretation of gravity anomalies; solid mechanics to deformation of Earth's lithosphere; fluid mechanics to flow in the Earth's interior and in porous media. Recommended courses: EEPS 0220; APMA 0340; PHYS 0470 or ENGN 0510.

EEPS 1630. Introduction to Quantitative Glaciology.
This class will focus on a quantitative understanding of glaciers. Topics will include glacier mass balance, energy balance in glaciers, ice deformation physics, glacier hydrology, subglacial mechanics, ice sheet stability, and planetary glaciology. Emphasis will be on a theoretical understanding of what physical processes are important for glaciers and how to make predictions of their long-term behavior. Primary course objective: To learn how to quantitatively understand glacier processes. Specific learning goals: - Gain a quantitative understanding of how glaciers behave and why - Gain an understanding of which processes are important and how to model them - Learn how to reason quantitatively about the Earth and make predictions Pre Requisites: MATH0180 and PHYS0505, or equivalents. Some exposure to either partial differential equations (e.g., APMA0340, MATH1120, PHYS0720) or continuum physics (e.g., EEPS1620, ENGN1570) is suggested but not mandatory. Interested students are encouraged to come discuss for clarification and additional details.
EEPS 1650. Earthquake Seismology

This course is an introduction to seismology that focuses on the seismic waves generated by earthquakes, and how the information contained in these waves can be used to understand earthquake processes and the structure of the Earth. We will discuss applications of seismology that address earthquake hazards and other societal issues. Recommended courses: EEPS 1610; or EEPS 0220 and experience with differential equations; or the equivalent. Offered in alternate years.

Geologic applications of remotely sensed information derived from interaction of electromagnetic radiation (X-ray, gamma-ray, visible, near-IR, mid-IR, radar) with geologic materials. Applications emphasize remote geochemical analyses for both terrestrial and extraterrestrial environments. Several spectroscopy and image processing labs. EEPS 1410 (Mineralogy), PHYS 0060, or equivalent recommended.

EEPS 1745. Planetary System Design: A Team Project Course

Introduction to the research process for planetary systems. This upper-level undergraduate course includes a lecture phase that covers an overview of planetary science, the research project(s) to be pursued, problem-solving, scientific writing, communications, and diversity and bias in the field of planetary science. Subsequently, students experience the latest practices in planetary research by forming sub-project teams and collectively designing and planning a research project. Effective team and communication skills are emphasized. Scientific writing and presentations are required throughout, culminating in the final paper and public presentation. This course has been submitted for special collaborative research & scholarly experiences (COEX). The following courses are recommended (and/or permission of the Professor): MATH 0090, MATH 1000, PHYS 0030, PHYS 0040 or PHYS 0050, PHYS 0060 or PHYS 0070; and, EEPS 0250, EEPS 0220,EEPS 1610, EEPS 1810, or EEPS 1950H.

EEPS 1810. Physics of Planetary Evolution

The course will explore and expose students to the fundamental physics necessary to understand how planetary bodies evolve. The evolution of planetary bodies will be discussed on the basis of geological and geophysical evidence derived from exploration of the Solar System. This course will study the physical processes responsible for and that occur as a consequence of differentiation and deformation of planetary bodies. Includes the study of physical processes responsible for volcanism and deformation on the surface as well as the state and structure of the interior of planets.

EEPS 1820. Geophysical Fluid Dynamics: Rotating, Stratified Turbulence Edition

Explores theories of the large-scale ocean and atmosphere, including quasigeostrophic, planetary geostrophic, and shallow water equations. Topics will vary to focus on features of the general circulation and climate system (e.g. thermocline, westward intensification, jet stream dynamics, polar vortex, meridional overturning circulation), instabilities and waves (e.g. gravity, Rossby, and Kelvin), or rotating stratified turbulence. May be repeated with permission of instructor. Pre-requisites: EEPS 0350 or PHYS 0720 or APMA 0340 and EEPS 1510 or EEPS 1520.

EEPS 1950B. Atmospheric Chemistry

Earth’s atmosphere touches everything on the surface of our planet has evolved, from the first signs of life on land and in the oceans to today’s This seminar course will provide students with an understanding of the chemical and physical processes that determine the composition of the atmosphere and its implications for climate, ecosystems, and human welfare. Topics to be covered include basic measures of the atmosphere; photosynthesis and reaction kinetics; atmospheric transport of trace species; stratospheric ozone chemistry; tropospheric hydrocarbon chemistry; oxidizing power and nitrogen, oxygen, sulfur, and carbon cycles; chemistry-climate-biosphere interactions; aerosols, smog, and acid rain.

EEPS 1950C. Planetary Materials

A comparative planetology course that examines the origin and evolution of materials on the Earth, Moon, and Mars through sample analyses, spacecraft observations, and modeling approaches. Recommended courses: EEPS 1410, 1420. No prerequisites.

EEPS 1950D. Field and Tectonics Seminar

Development of field mapping and interpretive skills used in the evolution of complex orogenic terranes. Structural field mapping is carried out in highly deformed metamorphic and igneous rocks in the New England Appalachians, the site of a continental collision associated with the formation of the supercontinent Pangea. Expected: EEPS 0230 and EEPS 1450, or equivalent, and field mapping experience (generally a summer geological mapping course). Students are required to arrive one week prior to the start of classes for the beginning of field work. Instructor permission required.

EEPS 1950F. Geomicrobiology

Microbes were the predominant form of life for most of Earth’s history and continue to drive many of the elemental cycles that sustain life in our contemporary biosphere. By taking this course students will learn about the phylogenetic and metabolic diversity of microbes in the environment and their influence on global biogeochemical cycles. Students will gain hands-on experience with molecular and environmental microbiological techniques and the bioinformatics tools required to analyze and interpret the resulting data. There are 2 sections or topical areas: Phylogenetic and ecological diversity of microbes; Microbial and metabolic diversity of biogeochemical cycling. Prerequisite: BIOL 0415 or 1460 or 1480 or EEPS 1130. Enrollment limited to 12. Instructor permission required.

EEPS 1950G. Astrophysical and Dynamical Processes in Planetary Sciences

Astrophysical and Dynamical Processes in Planetary Sciences is a course that challenges students to use physical and geophysical analysis to construct a quantitative understanding of the formation and evolution of the Sun, the solar system’s planets and small bodies, and extrasolar planets. The goal is to provide senior undergraduate and first-year graduate students with core knowledge of facts and current theories in the planetary sciences. Through lectures, problem sets, and exams, the students will construct quantitative framework on which to evaluate, and place into context, hypotheses and theories discussed in upper-level graduate courses. Prerequisites: MATH 0100; and one of EEPS 0050, PHYS 0210, 0220, or 0270. APMA 0330 is desirable but not required.

EEPS 1960A. Rheology of the Crust and Mantle

Introduces the principals of rock mechanics and uses them to describe brittle and ductile deformation processes in the crust and mantle. Each topic will review experimental constraints on deformation mechanisms and introduce the theories that support their application to geological conditions. Analyze microstructural observations in real rocks to link what is learned in the lab to what actually is seen in the Earth. Topics to be covered include: brittle fracture and crack propagation, frictional sliding, the brittle/plastic transition, viscous deformation mechanisms, microstructural analysis of deformed rocks, and the scaling and extrapolation of laboratory flow laws. The class will also feature a field trip to well-exposed crustal faults and shear zones. Several class periods and a class project will focus on microstructural observations of rocks collected during the field trip. Pre-requisite: EEPS 1450 or permission of instructor. Enrollment limited to 20.

EEPS 1960B. Special Topics in Geological Sciences: Physical Hydrology

Physical Hydrology is the description of processes that involve the transport of aqueous fluids in the subsurface of the Planets. We will learn about the principle that govern the motion of these fluids and the common approaches to describe their dynamics in terms of governing equations. The goal of the course is to be introduced to flows in porous media, as well as transport of heat, chemical species and multiphase flows (unsaturated aquifers). We will discuss applications from geothermal energy extraction, CO2 geological sequestration strategies and reactive transport, such as those encountered for pollutant remediation and sediment diagenesis.
EEPS 1960C. Planetary Petrology
This course is intended for undergraduate and graduate students who have some background in mineralogy and petrology and who are interested in the origin and evolution of igneous rocks from Earth, the Moon and Mars. Topics include: phase equilibria, melting and crystallization, mantle plumes and related igneous rocks, komatitites, lunar petrology, Martian meteorites, and petrogenesis.

The shapes of plants and animals, of mountains and shorelines arise because nature dissipates energy as rapidly as possible. These morphological patterns allow description of the energy “landscape” that produced them. Societies and economies show temporal and spatial patterns as well: does the “flow rate” of ideas and of money cause these patterns? We will explore just how “entropy rules.” Enrollment limited to 16. Instructor permission required.

This course is a practical introduction to Earth Sciences curriculum design and teaching with a strong “learning by teaching” component. Students will learn about the principles and best practices of science education and communication and will teach a theme-driven ten-lesson Earth Science module previously designed by DEEPS students in collaboration with participating teachers from Providence Public Schools in two elementary public schools. After each lesson students will receive feedback and will analyze and discuss their teaching process during class meetings. In the second part of the course students will apply the experience they gained to design a new module outline.

EEPS 1960H. The Early Earth.
Primary focus on evolution of the solid Earth (core, mantle, crust) but will also include discussion of the Archean hydrosphere, atmosphere and biosphere. Reading and discussing current literature, with lectures. Intended for graduate students and upper level undergraduates with advanced petrology and/or geophysics. Enrollment limited to 20.

EEPS 1960J. Reactions and Rheology: Chemical and Mechanical Kinetics in Mineral Systems.
Characterization of atomic diffusion and dislocation motion responsible for chemical and physical reactions and plastic rheology in ionic solids. Topics include: point-defect thermodynamics; atomic diffusion (physical and mathematical); solid-solution formation; solid-state compound formation; dislocation structures; grain boundary structure and chemical segregation; plastic rheology. Recommended three or more of EEPS 1410, EEPS 1420, or EEPS 0410, ENGR 1410, or CHEM 0330, CHEM 1060. Enrollment limited to 20.

Consideration of quantitative models of the cycling of carbon between various reservoirs near Earth’s surface. Topics include: mass balance models of carbon sedimentation; carbon chemistry in the ocean; exchange of carbon between atmosphere, ocean, and biosphere; and consumption of carbon in weathering reactions with rocks. Special emphasis will be placed on the use of isotopic tracers (δ13C, 14C) to estimate present and past dynamics of the carbon cycle. Instructor’s permission required. Enrollment limited to 20.

EEPS 1960L. Foundational Readings in the Earth Sciences.
This class focuses on the reading and discussion of a number of foundational and highly influential papers in the Earth sciences. Topics of papers will cover all aspects of Earth science, including the age of the Earth, plate tectonics, the discovery of planets, climate change, and chaos. The focus of writing assignments and discussion will be on gaining an appreciation for what sets these contributions apart from other science of that time and will include brief discussions about why the authors of the papers are not representative of a diverse world population. Specific Learning Goals: (A) Improving critical thinking and evaluation of groundbreaking ideas; (B) Understanding the scientific context in which breakthroughs are made; (C) Improving communication (written and oral); (D) Understanding the changing diversity of scientists in historical context.

EEPS 1960M. Lab and Field Methods in Hydrology.
A series of hands-on opportunities for students to characterize the hydrologic properties of soils and simple hydrologic systems in the lab, combined with selected outdoor exercises using standard hydrologic tools in the field. High school math and physics recommended. Enrollment limited to 20.

EEPS 1960Z. Physical Volcanology.
One semester is required for seniors in Sc.B. and honors program. Course work includes preparation of a thesis. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Enrollment is restricted to undergraduates only.

EEPS 2300. Mathematical and Computational Earth Sciences.
For graduate students interested in quantitative study of the Earth in geological, physical, or engineering sciences. Mathematical topics to be introduced include tensor analysis, asymptotic and perurbation analysis of differential equations, numerical integration of differential equations, basis functions and pattern recognition, fractals and multifractals, and statistics. Applications will vary by offering, but examples include: statistics of turbulence and earthquakes, advection-reaction-diffusion systems, boundary layers, development of shocks and singularities, climate change, carbon sensitivity, and dimensional reduction of geophysical data. Intensive review of introductory mathematical methods through leading discussions in a lower level class. Earth, fluid, or solid science background recommended.

Strategies and the physical principles behind the quantitative extraction of geophysical and biophysical properties from remotely sensed data. Emphasis on radiative transfer theory and modeling of spectra and spectral mixes from optical constants. Advanced methods of digital image processing. Methods of integrating remotely sensed data into a GIS framework will be introduced. Recommended preparation course: EEPS 1330 or 1710; MATH 0100; PHYS 0600.

EEPS 2350. Quaternary Climatology Seminar.
Discussion of current problems in paleoclimatology and global climate change. Students analyze the primary literature, and do original analyses of their own on published data. Topics include: theories of ice ages, millennial-scale climate variability, the influence of greenhouse gases and radiative forcing on climate, and historical and future climate changes. Prerequisites: graduate student status; or EEPS 0240 and 1240; or instructor permission.

Emphasizes kinetic theories and their geological applications. Topics include: rate laws of chemical reaction, rates of chemical weathering; fundamentals of diffusion, nucleation, crystal growth, and dissolution; transport theory. Recommended prerequisite: EEPS 2460 or equivalent.

EEPS 2430. Igneous Petrology.
Study of mineral equilibria in igneous rocks in relation to theoretical and experimental studies in silicate systems. Principles of the origin and evolution of igneous rocks in space and time. Offered alternate years.

EEPS 2440. Petrogenesis Metamorphic Rocks.
Study of metamorphic rocks with emphasis on mineral equilibria, metasomatic facies, and metamorphic facies series. Topics include: metasomatism, mobile components, partial anatexis, and petrogenetic grids. Prerequisite: EEPS 2460. Offered alternate years.

EEPS 2450. Exchange Scholar Program.
EEPS 2460. Phase Equilibria.
Principles of thermodynamics and phase equilibria in unary, binary, ternary, and multicomponent systems using analytical and graphical methods. Other topics include: solution theory, equations of state, and thermodynamics of surfaces.
EEPS 2520. Numerical Geodynamics
Numerical methods for the solution of continuum physics problems arising in geophysics and geology: Basic theoretical formulations and algorithms implementing finite element, finite difference, and boundary element methods are developed. Applications include problems in viscous and plastic flow, elasticity, and heat and mass transport discussed within a geological framework. Course consists of lectures and a computer project applying the methods and concepts considered to a scientifically significant problem. Recommended: APMA 0330, 0340; ENGN 1750. Offered alternate years.

EEPS 2630. Interpretation Theory in Geophysics
Use basic statistical theory and its matrix algebra representation and modern approaches for the optimum design of experiments, constructing model solutions to measurements, and describing nonuniqueness in models, with particular emphasis on generalized linear-inverse techniques. Introduction to stochastic processes and prediction. Recommended courses: EEPS 1610; MATH 0290, 0520, or APMA 0330, 0340, and computer programming skills. Offered alternate years.

EEPS 2650. Advanced Seismology
The theory of modern seismology will be applied to imaging of Earth structure (from local to global scales) and determination of earthquake source models. Topics include elastic wave propagation, representation theorems, seismic tomography, moment tensors, source-time functions, and models of fault rupture. Offered alternate years.

EEPS 2730. Isotope Geochemistry
A survey course emphasizing fundamental principles in isotope geochemistry, including nuclear systematics, nucleosynthesis, geochronological and stable isotope systems, and the application of radiogenic and stable isotopic tracers to geological problems.

EEPS 2800. The Chemistry and Mineralogy of Mars
Examination of the chemical and mineralogical composition of Mars as revealed from meteorites and spacecraft missions. Example topics include: SNC meteorites, origin and evolution of the crust, alteration processes, remote near- and thermal-infrared observations, remote gamma-ray and neutron measurements, and petrology of surface materials. Recommended courses: EEPS 1410, 1420, 1710, or equivalent. No prerequisites.

EEPS 2810. Planetary Science Seminar
New data for the Moon and Mercury from recent missions (including Chandrayaan-1, Lunar Reconnaissance Orbiter, GRAIL and MESSENGER) permit new insights into “The Crater to Basin Transition on the Moon and Mercury”. In this seminar course we will examine this transition using these new data and recent developments in cratering theory and modeling. The course will feature research from the NASA SSERVI activity. Prerequisites: Instructor permission.

EEPS 2840. Asteroids and Meteorites
Compositional and petrographic characteristics of meteorites are examined along with the physical and compositional diversity of asteroids and other small bodies of the solar system. Possible links between specific types of asteroids and meteorite groups will be evaluated in the context of early solar system evolution. Data from spacecraft encounters with asteroids will be critically reviewed.

EEPS 2850. Regolith Processes
Particulate material (regoliths) and soils develop on every planetary surface. Physical and chemical alteration of the uppermost surface results from interwoven active processes of specific environments. Understanding these processes and products is central to interpreting data returned from planetary surfaces. Regoliths reflect surface history over a variety of time scales. Several planetary environments are examined in detail. Prerequisites: EEPS 1410, 1710, 2880, or instructor permission.

EEPS 2860. Planetary Volcanology
An examination of volcanism using observations of features and deposits on planetary bodies, comparing them to predictions from the theory of magma ascent and emplacement. Attention to the influence of different variables (e.g. gravity, composition, temperature, pressure and atmospheric effects). The history of planetary volcanism, its relation to thermal evolution, and comparative planetary volcanology are also addressed. Offered alternate years.

EEPS 2870. Planetary Evolution — Origin/Evolution of the Moon: Touchstone for Understanding Planets
The Moon forms a fundamental baseline for our understanding of the origin of planets and their early evolution, in terms of primary and secondary crustal formation, core and mantle formation and evolution, magnetism, impact basins, and global tectonics. A major goal of this course is to identify major outstanding questions and scientific and exploration goals for future robotic and human exploration missions to the Moon. Sponsored by NASA SSERVI, the lecture series is jointly organized by SSERVI teams at Brown University and the Lunar and Planetary Institute in Houston with many affiliated SSERVI institutes participating.

EEPS 2880. Planetary Cratering
Impact cratering is arguably the most pervasive geologic process in the solar system. This course will study the physical process of impact cratering and its place in planetary science. The course will take a process oriented approach to understanding impact cratering with firm foundations in geologic observation and impact experiments. To explore the extreme process of impact cratering, we will use continuum/rock mechanics, thermodynamics, numerical modeling, experiments, and observations. Principal topics will include the formation of craters from contact of the projectile to final crater morphology; shock metamorphism; impact ejecta and products; cratered terrains; impacts and planetary evolution; and impact hazards.

EEPS 2910A. Problems in Antarctic Dry Valley Geoscience
The Antarctic Dry Valleys represent an extreme hyperarid polar desert environment. Their geomorphology records the range of processes operating in these environments, preserving a record of climate change of millions of years. Major microenvironments are studied at the micro-, meso-, and macro-scale through literature review, field analyses, and research projects. Exobiological themes and climate change on Mars will be assessed.

EEPS 2910B. Advanced Remote Sensing and Geographical Information Systems (GIS)
Strategies and the physical principles behind the quantitative extraction of geophysical and biophysical measurements from remotely sensed data. Advanced methods of digital image processing and data integration. Introduction to Geographical Information Systems (GIS) and methods of integrating remotely sensed data into a GIS framework. Prerequisites: EEPS 1330 or 1710; MATH 0100; PHYS 0060; or permission of the instructor.

EEPS 2910C. The Global Nitrogen Cycle
This seminar course will survey the literature and discuss aspects of the marine, atmosphere, biosphere and geologic cycles of reactive nitrogen. Topics include general evaluation of the N cycle in these systems and records of changes in the N cycle through time, particularly on relevant climate change timescales.

EEPS 2910E. Miocene: Prelude to the Ice Ages and Analogue to Future Climate Change
The Miocene Epoch (~23 to 5 Ma) was characterized by a variety of interconnected changes including the tectonic evolution of various ocean gateways, changes in surface and deep-ocean circulation patterns and evolving ocean and atmospheric chemistry. In the Middle Miocene, these conditions resulted in reduced pole-to-equator temperature gradients and global mean annual surface temperatures of ~18°C, equivalent to warming predicted for the next century. These evolving conditions in the Late Miocene set the stage for the initiation of high amplitude northern hemisphere glacial cycles. Study of Miocene climate will yield insight into mechanisms relevant to past and future climate change.
EEPS 2910F. Earthquake Mechanics, Rheology and Rock Friction.
Reading current literature, class discussion, lectures to explore current research in fault mechanics and rheology. Time in the lab examining microstructures in both experimental and natural samples. Topics will include: (1) Deformation mechanisms associated with slow slip and tremor; (2) Grain-size evolution processes and their geophysical implications; (3) Grain-size sensitive deformation processes and their geophysical implications. Prior to each class, students will submit (via email) at least 2 questions about the assigned reading. After class, there will be 3 or 4 questions to answer on topics covered in the reading and during class discussion.

EEPS 2910G. Dynamics of Ice Sheets and Glaciers.

EEPS 2910I. Marine Geophysical Techniques.

EEPS 2910M. The Changing Arctic.
What is the fate of the Arctic and high latitude regions in a warming world? This course explores how the Arctic is changing and its implications to the physical, natural, and social systems. This class will provide a comprehensive overview of the Arctic and synthesize the latest scientific findings from an array of readings/reports. Topics covered will include changes in: snow, freshwater, ice, permafrost, sea level rise, shipping routes, Arctic policy and governance, and identify how these changes are impacting Arctic-dwelling communities and adaptation strategies available. Instructor override required. Email samiah_moustafa@brown.edu with a statement of interest, year and concentration.

The goal of this course is to introduce students to our current understanding of how planetary systems form and evolve. We will focus on the physical theories describing how the structures of planetary systems develop and how planets, moons, and other heavenly bodies form. We will also consider the relationship between these theories and observations (astronomical, geophysical, cosmochemical) of the Solar System and extrasolar planetary systems. This will include some discussion how the Solar System fits into our understanding of the veritable menagerie of planetary systems.

EEPS 2910T. Lattice Boltzmann Modeling in Natural Sciences.
Introduction to the lattice Boltzmann method for solving problems such as diffusion in complex media, fluid dynamics, porous and reactive transport, multiphase flows, and the propagation of waves. The course will cover an introduction to Boltzmann theory and the discretization of the equations on the lattices, the implementation of various solvers (diffusion, Navier-Stokes equations...) and application to problems in Natural Sciences and Engineering. This course will be divided between lectures and coding practice and has a final project designed by the student.

EEPS 2910Z. Trace Element Geochemistry.
A course on the abundance, distribution, and fractionation of trace elements in geochemical systems. Potential topics include (1) abundance of trace elements in Earth, Mars, and the Moon; (2) partitioning of trace elements between two phases (solid-liquid or solid-solid); (3) fractionation of trace elements during partial melting and crystallization; and (4) applications of trace elements and selected isotopes to geochemical problems. Expected background: This course is intended for students who have some background in geochemistry (EEPS 2730 or equivalent) or petrology (EEPS 1420 or equivalent) and who are interested in using trace elements to study petrologic and geochemical problems. Although the course is not math intensive, knowledge of calculus and ordinary differential equation are useful. Prior experience with computer programming is a plus.

EEPS 2920B. Special Topics: Ocean Worlds.

EEPS 2920C. The Sedimentary Rock Cycle of Mars and Earth.
This course consists of a mixture of instructor and student-led discussions on topics related to the sedimentary rock cycle on Mars as viewed through the lens of how we understand such processes on Earth. Topics: sediment transport and deposition, erosion processes and rates, lithification + diagenesis, water-rock interaction, and cyclic in strata. Major goal: Assess how the sedimentary rock record of Mars can be used to understand changes in depositional processes and environmental conditions through time. Results from Mars satellite and rover data will be discussed, with an emphasis on fundamental processes as understood from detailed studies of Earths sedimentary rock record. Prerequisite: Undergraduate level sedimentology/stratigraphy, or permission of instructor.

EEPS 2920D. Introduction to Geochemical Modeling.
Continuum descriptions of mass transfer in geochemical cycles. Topics include: fundamentals of diffusive and advective mass transfer, kinetics of weathering and early diagenesis, fluid flow in the Earth's crust and mantle, trace elements and isotopes in magmatic processes. Recommended: CHEM 0330, EEPS 1610 and APMA 0330, 0340.

EEPS 2920E. Introduction to Organic Geochemistry.
Mainly literature critiques and seminars, supplemented by introductory lectures. Topics include organic biomarkers, analytical methodologies, natural macromolecules, stable isotope ratios of biomarkers, application of organic geochemistry in studies of climatic and environmental change, fossil fuel exploration, and applied environmental research.

Emphasizes kinetic theories and their geological applications. Topics include: fundamentals of diffusion in crystals and melts, theories of nucleation and crystal growth, kinetics of melting and dissolving, theory of phase transformation. Prerequisite: EEPS 2460 or equivalent.

EEPS 2920G. Special Topics in Geological Sciences: Exoplanet Seminar.
The goal of this course is to introduce students to the study of planets orbiting other stars. Learning outcomes: Recognize the methods for detection and characterization of exoplanets, and the information these methods provide about exoplanetary systems Discuss planet properties that can be derived from observational methods Summarize our understanding of exoplanet populations Recognize cutting edge work being done in the field of exoplanets – such as the search for exomoons, habitability, and biosignatures Recall updated facilities (both ground and space based) for future exoplanet studies Assessment of journal articles and synthesizing material across sources Completion of an independent project on an outstanding question in exoplanet science

EEPS 2920H. Past Variations in the Global Carbon Cycle.
This course will examine variations in the earth's carbon cycle over multiple time scales. We will examine geological tools that measure rates of carbon storage and release, especially over the past one million years. Special emphasis will be given to monitoring rates of past biological carbon storage.

EEPS 2920I. Special Topics: Dynamics of Tropical Climate and Ecosystem.

EEPS 2920J. The Source of Liquid Water in the Nochian History of Mars.

EEPS 2920L. Evolution of the Moon II.
A seminar on the thermal and chemical evolution of the Moon. In this part II of lunar seminar, we will focus more on petrological and geochemical observations of lunar samples, terrestrial layered intrusions, related geophysical observations, and lunar petrogenesis. Prerequisite: EEPS 1420, 2730, or 2920K.
EEPS 2920N. Problems Antarctic Dry Valley Geoscience.
The Antarctic Dry Valleys represent an extreme hyperarid polar desert environment. Their geomorphology records the range of processes operating in these environments, preserving a record of climate change over millions of years. Major microenvironments are studied at the micro-, meso-, and macro-scale through literature review, field analyses, and research projects. Exobiological themes and climate change on Mars will be assessed.

EEPS 2920O. Physics of Melt Migration.
A seminar course focusing on the physical processes and geochemical consequences of melt migration in the mantle. Topics include, but are not limited to: flow in porous media; compaction; adiabatic melting and melt-rock reaction; instabilities in melt migration; melt generation beneath mid-ocean ridge; and melt migration in other tectonic environments. Recommended course: EEPS 1620. Enrollment limited to 15. S/NC

EEPS 2920P. Special Topics in Geological Sciences: Geological History of Mars.
In many ways, Mars is the most Earth-like planet in the Solar System and may have once had a climate conducive to the origin and evolution of life. We will trace the geologic history of Mars (atmospheric, climatic, eolian, fluvial, lacustrine, oceanic, volcanic, impact crater, tectonic, interior evolution) from the present back through the Amazonian, Hesperian, Noachian and pre-Noachian to the origin of Mars, examining the main themes in its evolution in order to provide a comparative framework for the other terrestrial planets and satellites.

EEPS 2920Q. Rheological Boundaries in the Earth.
The properties of lower crust control the coupling of mantle convection to shallow crustal dynamics, post-seismic creep and the chemical evolution of the Earth. On Earth we have xenoliths and exhumed lower crustal rocks to study and relate to geophysical, experimental and theoretical investigations. We will explore these avenues of research with the goal of synthesizing our understanding of the behavior of lower crust on Earth as well as other terrestrial planets.

EEPS 2920R. Evolution of the Moon.
Petrological, geochemical, and geophysical observations, physical and chemical processes relevant to the formation and evolution of the Moon.

EEPS 2920S. Continental Cratons.
The focus of this course is the formation, evolution, and structure of continental cratons. These topics will be explored through a survey of the observational constraints on cratons, including seismology, gravity, heat flow, geochemistry, and petrology. The use of dynamical models to investigate the assembly, destruction, and long-term stability of cratons will also be considered.

EEPS 2920T. Science Applications of Lunar Spectroscopy.
This course will focus on current science issues that are addressed with new lunar orbital or laboratory spectroscopy data. Each participant must identify a specific science topic (and data source) to be pursued and brought to completion during the term. Format will be seminar with very active participation by all attending. At the beginning of the term each participant will describe their chosen research topic. Subsequent sessions will critically examine issues that are associated with each topic in an iterative fashion, focusing on progress made, problems faced, solutions designed, insights found, and finally completed project. Prerequisites: EEPS 1710 and confirmation with instructor about the project.

EEPS 2920U. Climate Variations.
This course will examine the geologic record of lake basins on decadal to million-year time-scales. Students will gain hands-on experience with techniques in paleolimnology including sediment core acquisition, sediment description, petrography, sedimentology and environmental analysis, geochemistry, basic core scanning, and age determination, modeling, and time series analysis. The biotic content and interpretation of fossils will be stressed. The course will also cover theoretical aspects of paleolimnology and more specialized techniques according to student interests through student-led discussions and a course project on regional lake sediments. Graduate students only; enrollment limited to 20.

EEPS 2920V. Terrestrial Nitrogen and Carbon Cycling.
This course will examine aboveground/belowground processes in the context of the global nitrogen and carbon cycles, and the impacts of both natural and anthropogenic disturbances. It will include discussion of processes such as (de)nitrification, N-fixation, respiration, photosynthesis, and decomposition and their relationship to soil properties; the coupling of N and C cycles in soils related to climate change and increasing N deposition. It will include emphasis on emerging new techniques to quantify N and C processes in the laboratory, field and through modeling, and field trip investigating current field studies. Prerequisites: BIOL 1480 or EEPS 1130 or equivalent biogeochemistry course. Enrollment limited to 15.

This seminar will examine regional-scale climate model scenarios for past and future climate change in Southern New England. Reliable estimates of the trajectory and variability of climate change are needed to address specific climate impacts, adaptations, and mitigations. Global climate model simulations, based on a range of IPCC greenhouse gas scenarios, need to be “downscaled” to achieve useful regional resolution. Understanding the generation of these high-resolution “downscaled” climate scenarios and compiling a number of observed and modeled climate variables to assess the robustness and reliability of climate scenarios for Southern New England is the goal of the seminar.

EEPS 2920Z. The Evolution of Lacustrine Ecosystems.
EEPS 2980. Research in Geological Sciences.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Enrollment is restricted to graduate students only.

EEPS 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

East Asian Studies

Chair
Beverly Bossler

The 21st century has turned to Asia as a center of international trade, culture, and critical inquiry. The Department of East Asian Studies offers Brown students a window into this vitally important corner of the world, whose civilizations reach back several millennia and whose cultural and economic ties extend throughout the globe. A vibrant community of teachers and undergraduates who work closely together in the spirit of free inquiry, the Department of East Asian Studies embodies Brown's unique mission "to serve the community, the nation and the world."
The Department offers several tiers of instruction in Chinese, Japanese and Korean, with courses designed to accommodate students ranging from those who have never taken a class in the language before, to those hoping to hone their abilities at the highest levels. East Asian Studies also offers Brown students the opportunity to explore the visual, textual and religious cultures of East Asia through introductory and advanced courses on literature, film, pilgrimage and translation, among others.

For additional information, please visit the department's website: http://www.brown.edu/academics/east-asian-studies/

East Asian Studies Concentration Requirements

East Asian Studies is a multidisciplinary concentration designed for students wishing to attain reasonable fluency in Chinese, Japanese, or Korean with specialized exposure to selected East Asian subjects. It serves students with two types of interests: those who aim to pursue active professional careers related to the East Asia region; and those who want to pursue graduate study in the humanities or social sciences with particular emphasis on China, Japan or Korea. Students in East Asian Studies will gain language proficiency and familiarity with East Asia
through advanced courses in a variety of disciplines. Concentrators are strongly encouraged, but not required, to study in East Asia for one or two semesters. The concentration requires students to demonstrate a basic proficiency in Chinese, Japanese, or Korean.

The Language Requirement

The concentration requires students to demonstrate a basic proficiency in Chinese, Japanese, or Korean. For the purposes of the concentration, proficiency is determined to be consistent with successful completion of the Department’s third-year course sequence in Chinese, Japanese, or Korean (0500-0600), or its equivalent. Native speakers of these languages may, for example, demonstrate competency such that language courses may be unnecessary. Department language instructors may also determine that course work completed at one of the language-intensive study abroad programs attended by our undergraduates is comparable to courses offered at Brown. Up to three upper level (700-999) may count as electives for concentration credit.

Note that we do not equate completion of third-year Chinese, Japanese, or Korean with fluency in these languages. Rather, we believe that students who have demonstrated the skills associated with third-year Chinese, Japanese, or Korean have acquired a foundational understanding of the languages’ grammars, vocabularies, and conversational patterns, such that they are able to make themselves understood in everyday situations, and to understand both spoken and written communication.

For the purposes of the concentration, language courses through the third-year are treated as an accompanying requirement.

Language Prerequisites (demonstrating proficiency through the third-year or 0600 level in one of the three languages below)

**Chinese**
- CHIN 0100 & CHIN 0200: Basic Chinese
- CHIN 0300 & CHIN 0400: Intermediate Chinese
- CHIN 0350 & CHIN 0450: Elementary to Intermediate Chinese for Advanced Beginners and Advanced Chinese for Heritage Learners
- CHIN 0500 & CHIN 0600: Advanced Modern Chinese I and Advanced Modern Chinese I

**Japanese**
- JAPN 0100 & JAPN 0200: Basic Japanese and Basic Japanese

**Korean**
- KREA 0100 & KREA 0200: Korean and Korean
- KREA 0300 & KREA 0400: Intermediate Korean and Intermediate Korean
- KREA 0500 & KREA 0600: Advanced Korean and Advanced Korean
- KREA 0920B: Business Korean

Language Electives (language courses that may be counted for concentration credit)

**Chinese**
- CHIN 0700 & CHIN 0800: Advanced Modern Chinese II and Advanced Modern Chinese II (either course may be taken for one semester)
- CHIN 0920D: Business Chinese
- CHIN 1040: Modern Chinese Literature

**Japanese**
- JAPN 0700 & JAPN 0800: Advanced Japanese II

**Korean**
- KREA 0920A: Business Korean

Electives

The concentration requires that students complete a total of eight electives tied to their course of study, which may be defined in linguistic, chronological, thematic, or cultural terms. Students should choose their courses with the following three requirements in mind.

- **EAST Requirement:** At least three of the eight electives must be East Asian Studies (EAST) courses at any level; Chinese (CHIN), Japanese (JAPN), or Korean (KREA) courses at the 1000-level and above may also count toward this requirement.
- **Breadth Requirement:** At least one of the eight electives must focus on an East Asian country or culture other than those associated with the language the student is using to satisfy the concentration’s language requirement. A concentrator studying Chinese, for example, must choose at least one course that focuses on Korea and/or Japan.
- **Senior Seminar Requirement:** At least one of the eight elective courses must be an advanced research seminar, taken in the senior year.

As is common for interdisciplinary concentrations, a wide range of courses, including many taught by faculty in other departments, may be counted toward the concentration. These include courses offered by East Asian Studies faculty, faculty with courtesy appointments in the Department, and courses with a significant focus on East Asia offered in such disciplines as American Studies, Art History, Economics, International Relations, and many others.

1. China-centric
2. Japan-centric
3. Korea-centric
4. East Asia-centric

Advanced Research Seminars

At least one of the eight elective courses must be an advanced research seminar, taken in the senior year. The research seminar will normally provide students with the opportunity to develop a project or paper focusing on one or more of their areas of inquiry within the concentration. Students are strongly encouraged to find ways to incorporate the use of Chinese, Japanese or Korean language materials in their research and learning in these courses. Courses falling into this category include the East Asian Studies 1950 series as well as designated seminars offered by faculty in such departments as History, Religious Studies, and Comparative Literature among others. The Department will provide a list of pre-approved advanced seminars every semester. Students wishing to add courses to that list must submit their requests in writing to the Director of Undergraduate Studies at the start of the semester.

Honors

East Asian Studies offers qualified students, in their senior year, the opportunity to undertake a sustained research and writing project that, ideally, will result not merely in a long term paper, but in a piece of original scholarship. To enroll in the Honors Program, the student must be a senior East Asian Studies concentrator, and have earned an A or an S with Distinction in the majority of courses for the concentration. Candidates for Honors are required to have developed a competence in an East Asian language sufficient to allow them to use East Asian language materials in carrying out their research. Students must also successfully obtain the support of at least two faculty members who will agree to serve as primary and secondary advisors for the thesis. Prospective writers submit a thesis prospectus, brief bibliography, and completed application forms (with signatures), ordinarily late in the student’s six semester, to the Director of Undergraduate Studies, who provides the final permission to proceed. Synopses of successful thesis proposals will be distributed to Department faculty.

Thesis writers enroll in advisor-specific sections of the thesis-writing course EAST 1930 (Fall) and EAST 1940 (Spring), meet regularly with their advisors over the course of both semesters, and submit final versions of their theses to the Department in mid-April. Advisors and students are required to provide updates of their progress to the Director of Undergraduate Studies at regular intervals.

The completed thesis is evaluated for Honors by the thesis director and by a second reader. In case of a difference of judgment between the two readers, a third opinion may be sought. The awarding of Honors in East Asian Studies will occur only if the Honors Thesis receives a final grade of A. If an A is not received, the student will still receive academic credit for EAST 1930-1940. Students are notified in mid-May whether the Department has recommended the awarding of Honors. Copies of readers' comments are provided to the student.

All graduating concentrators will present the results of their senior theses in the department’s Senior Project Forum. The Forum will usually take place at the end of the spring semester, but may also occur at the end of the fall semester to accommodate mid-year graduates.

Double Concentrations

Students who are interested in developing a double concentration, including East Asian Studies as one of the two concentrations, should bear in mind that normally no more than two courses may be double-counted toward satisfying the course requirements of either of the two concentration programs involved.

Study Abroad

Concentrators are strongly encouraged, but not required, to study in East Asia for one or two semesters during their undergraduate years. Course credits earned abroad are generally transferable to Brown. However, a maximum of three courses taken abroad, of genuine intellectual substance and significantly related to East Asian Studies, may be considered for concentration credit.

Summary of requirements:

- Language study through the level of 0600 or the equivalent of Chinese, Japanese, or Korean
- Eight elective courses:
  - At least three of the eight must be East Asian Studies (EAST) courses at any level or Chinese (CHIN), Japanese (JAPN), or Korean (KREA) courses at the 1000-level and above
  - At least one of the eight electives must focus on an East Asian country or culture other than those associated with the language the student is using to satisfy the concentration's language requirement. A concentrator studying China, for example, would choose at least one course that focuses on Korea and/or Japan.
  - At least one of the eight must be an advanced research seminar, taken in the senior year.

Courses

Chinese

CHIN 0100. Basic Chinese.
A year-long introduction to Standard Chinese (Mandarin). Speaking, reading, writing, and grammar. Five classroom meetings weekly. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of course work in CHIN 0200 covers the entire year and is recorded as the final grade for both semesters.

CHIN 0150. Advanced Beginning Chinese.
A year-long intensive course designed for students with some prior knowledge of Chinese. Designed to enhance listening, speaking, reading, and writing skills. Five classroom meetings weekly. Placement interview required. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of the course work in CHIN 0250 covers the entire year and is recorded as the final grade for both semesters.

CHIN 0200. Basic Chinese.
A year-long introduction to Standard Chinese (Mandarin). Speaking, reading, writing, and grammar. Five classroom meetings weekly. Placement interview required. This is the second half of a year-long course. Students must have taken CHIN 0100 to receive credit for this course. The final grade for this course will become the final grade for CHIN 0100. If CHIN 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing.

CHIN 0250. Advanced Beginning Chinese.
A year-long intensive course designed for students with some prior knowledge of Chinese. Designed to enhance listening, speaking, reading, and writing skills. Five classroom meetings weekly. Placement interview required. This is the second half of a year-long course. Students must have taken CHIN 0150 to receive credit for this course. The final grade for this course will become the final grade for CHIN 0150. If CHIN 0150 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing.

CHIN 0300. Intermediate Chinese.
An intermediate course in Standard Chinese designed to further communicative competence and to develop reading and writing skills. Five classroom meetings weekly. Prerequisite: CHIN 0200 or permission of instructor.

This course is designed to enhance listening, speaking, reading, and writing skills for Chinese heritage students who have some prior knowledge of Chinese. Five classroom meetings weekly. Placement interview required.

CHIN 0400. Intermediate Chinese.
An intermediate course in Standard Chinese designed to further communicative competence and to develop reading and writing skills. Five classroom meetings weekly. Prerequisite: CHIN 0300 or permission of instructor.
CHIN 0450. Advanced Chinese for Heritage Learners. This course is primarily designed for Chinese heritage students who have successfully completed CHIN 0350. If you have not taken CHIN 0350, please contact the instructor for a proficiency evaluation. Upon completing this course, you can take CHIN 0700 or equivalent, i.e. courses that have a prerequisite of CHIN 0600. This is an advanced-level course offering comprehensive work on all four language skills, with a focus on developing your ability to use sophisticated grammatical structures, vocabulary, and improving your reading and speaking skills. Materials used in this course will include a textbook, supplementary articles, and video clips.

CHIN 0500. Advanced Modern Chinese I. An advanced course designed to enable students to read authentic materials. Students enhance their listening, speaking, reading, and writing skills; improve their narrative and descriptive abilities; and learn to express abstract ideas both orally and in writing. Five classroom meetings weekly. Prerequisite: CHIN 0250 or CHIN 0400 or permission of instructor.

CHIN 0600. Advanced Modern Chinese I. An advanced course designed to enable students to read authentic materials. Students enhance their listening, speaking, reading, and writing skills; improve their narrative and descriptive abilities; and learn to express abstract ideas both orally and in writing. Five classroom meetings weekly. Prerequisite: CHIN 0500 or permission of instructor.

CHIN 0700. Advanced Modern Chinese II. This course is designed to enhance the Chinese proficiency of those who have taken Advanced Modern Chinese I (CHIN 0600) or the equivalent. All four language skills are emphasized through selected authentic materials. At the end of the year, students should be able to express their ideas with sophistication and nuance. Drills on complex sentence patterns will be conducted when necessary. Prerequisite: CHIN 0600 or permission of instructor.

CHIN 0800. Advanced Modern Chinese II. See Advanced Modern Chinese II (CHIN 0700) for course description. Prerequisite: CHIN 0700 or permission of instructor.

CHIN 0910A. Academic Chinese I. This course trains students to read texts in order to improve language skills and acquire the ability to do research in academic fields. Through reading and discussing literature, newspaper and magazine articles, and academic writings, students will gain a better understanding of traditional and modern China. Prerequisite: CHIN 0800 or permission of instructor.

CHIN 0910B. Introduction to Classical Chinese. This course aims to build on basic knowledge of reading Classical Chinese grammar, syntax, and vocabulary, and to catch a glimpse of ancient Chinese wisdom. The class will use modern Chinese (Mandarin) to discuss classical texts. Readings are original works of prose and poetry dating from the 2nd to 12th century. Prerequisite: CHIN 0800 or permission of instructor.

CHIN 0910C. Introduction to Modern Chinese Prose. Students will pursue their ability to appreciate and use various Chinese writing styles by reading and analyzing modern Chinese prose classics. Classes include lecture, discussion and group or individual presentations. By the end of the semester, students will be familiar with the development of modern Chinese prose, understand the language and meaning of each text, be comfortable with different writing styles and techniques, and have a deeper understanding of Chinese thought, society, and culture via the writers and their masterpieces. Conducted in Mandarin; designed for students with advanced language skills. Prerequisites: CHIN 0800 or the equivalent.

CHIN 0913. Life, Trends, and History of Modern China. This course is designed to continue developing students’ all four language skills through studying authentic materials of different forms (e.g. literature and films) and genres (e.g. stories and argumentative articles). Through the course readings, we will study how daily life in modern day China has been impacted by important past and current trends, traditions, social values and political policies. The course will offer intensive speaking and writing practice. Prerequisite: Chinese 0800 or equivalent.

CHIN 0920B. Classical Chinese. This course aims to build on basic knowledge of reading Classical Chinese grammar, syntax, and vocabulary. The class will use modern Chinese (Mandarin) to discuss classical texts. Readings are original works of prose and poetry dating from the 2nd to 12th century CE. Prerequisite: CHIN 0910B. Instructor permission required.

CHIN 0920C. The Changing Face of China: Advanced Reading in Chinese Media. This course is designed to help students develop advanced reading proficiency and formal oral and writing communication skills. Students will listen and read up-to-date news, reports and commentaries from various Chinese media sources, such as TV broadcasts, newspapers, magazines, and websites. Through reading and discussion, students will gain a better understanding of a wide range of current issues in a rapidly changing China, including economics, politics, education and popular culture. Class format varies from lecture, discussion, debate, and group and/or individual presentations. Prerequisites: CHIN 0800 or the equivalent.

CHIN 0920D. Business Chinese. Business Chinese focuses on practical language skills that are most useful in business interactions in Chinese-speaking communities. Classroom activities are largely based on authentic documents and correspondence as well as a textbook. Through intensive practice in the listening, speaking, reading and writing of the Chinese language for business purposes, this course aims at enhancing students’ linguistic knowledge in a business context. Classes are conducted in Chinese. Prerequisite: CHIN 0800 or instructor permission. Enrollment limited to 18.

CHIN 0920E. Two Sides of the Coin: Advanced Chinese Conversation. Many of us know about the trolley scenario- would you kill one to save five? What do you think about organ trade- is it immoral for people to buy organs from the poor in order to save lives? What is your stance on the Affirmative Action? Did you know China has similar laws? The goal of this course is to develop your listening and speaking skills in Chinese by way of exploring morally debatable issues. Class materials will cover a broad range of topics and will not be limited to those unique to China. Prerequisite is CHIN 0600 or equivalent.

CHIN 0920G. Chinese Language in the Big Screen. This course is designed for advanced Chinese language students who have completed CHIN 0600 or equivalent. You will gain language and culture proficiency through studying different genres of movies that reflect Chinese history, social issues and Chinese people’s values. The primary objective of this course is to further develop your language proficiency in meaningful and entertaining contexts. By conducting research into the films, creating video summary, and sharing your work with your fellow students, you will build up your interpretive and presentational skills. In place of a final written exam, you will be asked to produce a mini-film.

CHIN 0920H. Chinese Language and Culture. This course is designed for advanced learners of Chinese to enhance their language proficiency, as well as to grasp essential skills to observe and appreciate Chinese culture from the perspective of language, especially through Chinese radicals, idioms, proverbs, taboos, verses, vernacular language and internet language. The teaching methods in this course include lecture, case studies, and heuristic approach etc. After taking this course, students are expected to have much deeper understanding of Chinese language and culture and be able to use the language in a near native and artistic way.

CHIN 1010. Stories from the Chinese Empire: Scholars, Demons and Swindlers. This bilingual course introduces the culture and society of late imperial China by reading short stories, novels, prose essays between 1368 and 1911. To maintain students’ language skills, the lecture is primary in Mandarin aided by English explanation. Students can choose to complete the assignments in either English or Chinese. The course explores the interwoven spectacular fantasy and societal reality of the imperial China. A chronological exposure to different cultural practice and social structures is organized under three rubrics, namely, scholar-official as social elite; merchants and courtseans as mobile agents; and criminals and demons as outcast.
CHIN 1040. Modern Chinese Literature.
Introduces students to the most representative writers in 20th century China. Emphasizes textual and historical analyses. Major issues include Westernization, nationalism, revolution, class, gender, and literary innovations. Designated primarily as a literature course, rather than language class, and conducted entirely in Mandarin Chinese. Prerequisite: CHIN 0800. Instructor permission required.

CHIN 1910. Independent Study.
Reading materials for research in Chinese. Sections numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

CHIN 2450. Exchange Scholar Program.

East Asian Studies

EAST 0010. Beyond Orientalism: Understanding “East Asia”.
This course explores the cultural and ideological foundations of the region we call “East Asia,” from prehistoric times to 1500. After interrogating the colonial origins of the Euro-American concept of “East Asia,” we will examine the historical distinctions, interactions, and mutual influences that shaped the regions and peoples now associated with the countries of China, Japan, and Korea. In addition to systems of status and political power, the course will expose students to the rich religious, literary, and artistic traditions developed within and across the East Asian region.

Interested students must register for RELS 0040.

EAST 0100. Introduction to Buddhism (RELS 0100).
Interested students must register for RELS 0100.

EAST 0100V. Beginning Vietnamese.
This course is the first half of a year-long introduction to Vietnamese designed for absolute beginners or students with very little prior of Vietnamese. It aims to build up a solid foundation of pronunciation and grammar for your Vietnamese language studies and allow you to feel confident in communicating about everyday situations. This course will get you speaking, listening, writing, reading, and understanding aspects of Vietnamese culture through authentic conversations, language presentation, and extensive practice and review.

Interested students must register for ARCH 0160.

This course is an introduction to Japanese culture and aesthetics as represented in pre-modern literature, drama, tea practices, landscape and the fine arts. Recurring themes include Japanese attitudes toward the natural world; traditional conceptions of beauty; and the function of ritual in artistic cultivation. The course is designed for students who have no previous exposure to Japanese studies at the college level; no prerequisites.

EAST 0290E. Engaged Buddhism (RELS 0290E).
Interested students must register for RELS 0290E.

EAST 0300V. Intermediate Vietnamese.
This course is designed for students who have completed the second semester of Vietnamese EAST 0200V or have an equivalent level of proficiency. This course will expand your structures and knowledge of the Vietnamese language and multifaceted culture through idioms, proverbs, dialogues, and stories. Classroom activities and practices will help you communicate effectively and absorb meaning through speaking, listening, reading, and writing.

EAST 0310. Japan’s Floating World.
An introduction to visual, literary, and dramatic expressions of Japan’s moral and aesthetic values in the early modern period (17th-19th centuries). We will seek to identify recurring intellectual and cultural patterns, as illustrated in woodblock prints, Kabuki, puppet theatre, and popular fiction, with an eye to connections with later popular culture. Course materials are primary readings in translation, secondary scholarship, and audiovisual works. No previous knowledge of Japan or Japanese language is expected.

EAST 0350. Empire and its Aftermath: Modern Culture in Japan and the Koreas.
This course introduces the modern cultures of Japan and Korea through an examination of events, artifacts, and cultural practices. With a broad understanding of culture as a general process of artistic and intellectual development, as a body of material artifacts, and as a social practice of ordinary life, attention will be brought to the relationship of high culture, popular media and political activism to the abiding structures of empire. Topics covered may include: early colonial fiction, the re-creation of tradition, the proletarian arts, myth in the DPRK, ethnic minority experience, the globalization of popular culture, girls’ culture, and translational activism.

EAST 0380. Introduction to Premodern Japanese Literature.
This course examines major works of Japanese literature from the 10th through the 19th century. We will read prose, poetry, and theater written for audiences ranging from the imperial court of the Heian Era to medieval Buddhist monks or the urban masses of the Tokugawa Era. We will discuss the socio-historical context of the works, and consider the religious, ideological and aesthetic trends that influenced their creation. Active participation will be an important factor in the evaluation of students. There is no prerequisite for this class, and no previous knowledge of film or Japanese language is required.

EAST 0406. Foreign Bodies in Japan, 600–1600.
Foreign bodies move through premodern Japanese literature. Fictional tales are set into motion by a Parhaean physiognomist, a Persian lumberjack, and a princess from the moon. Kihitan eschatologists persuaded aristocrats to commission countless sculptures of Indian physiques and contributed to Murasaki Shikibu’s existential gloom. Noble anatomies were covered by imported robes and exotic perfumes; dramaturgs danced like Turkic “khan.” This survey traces foreign bodies’ impact on literary culture from the arrival of literate Korean émigrés in the 600s until the arrival of Portuguese missionaries in the 1500s. We will also theorize our own role as foreign bodies vis-à-vis the corpus. Readings in translation. No previous knowledge of Japanese language or culture required.

“This world, / to what should I compare it? / The white wake / of a rowboat / that rows off into daybreak.” In their privileged tdium, Heian period (794–1185) elites were engrossed in virtual realities, captivated by fictions, and preoccupied by the evanescence of “this world” (yo no naka). Like us, they lost themselves in dimly glowing screens (byōbu) and endless, episodic plotlines (monogatari). Are fictions tantamount to falsehoods, inherently immoral? What makes them less real than the reality we inhabit? Alongside recent theories of “worldedness,” we survey classical Japanese efforts to gain purchase on reality and escape into the virtual. Readings in translation. No previous knowledge of Japanese language or culture required.

EAST 0408. The Erotic Family: Sex, Money and Intimacy in Japan.
This course explores the nexus between sexuality, money and kinship across Japanese history. Divided into five units (Monastic Ribaldry, the Floating World, Queer Samurai, Erotic-Grotesque-Nonsense, and Nightwork) we will look at texts featuring milk siblings, concubines, boy lovers, mistresses, dandy beauties, and sex workers to understand how cultural meanings have been attached to different forms of intimacy over time. Emphasizing relationships that fall outside of the nuclear family, texts to be considered include early scrolls, woodblock prints, fiction, films, as well as writings by sex workers and lgbtq+ activists. Students will read primary sources as well as scholarly works.

EAST 0410. Introduction to East Asian Civilization: China (HIST 0410).
Interested students must register for HIST 0410.
EAST 0500. Childhood and Culture in Japan.
This seminar offers students an interdisciplinary look at how children became central to social life in modern Japan. What set of historical and philosophical conditions made childhood newly visible in the late 19th century? How has the relationship between the marketplace and childhood evolved over the past hundred years? How have class, gender, ethnicity and sexuality informed the ways childhood has been experienced? Students will analyze different cultural texts for and about children (early fairy tales, comic books, propaganda, film) in relation to critical essays drawn from a variety of disciplines.

Youth contribute greatly to Korea’s brand and GNP (BTS, Black Pink), yet suffer from the OECD countries’ highest youth unemployment rate. Abroad, Korean youth are a silenced “model minority,” mediating assimilation and parental pressures. Introducing modern history, from Confucianism, education, politics, militarism, immigration, to adoption, this interdisciplinary course will analyze recent media (Kdramas, Minari, Minor Feelings) mirroring identity production today, but through the eyes of Korea’s youth and their complicated relationship to Korean society.
We will study compressed modernity, cram schools, gender, the cult of masculinity, the church, the LGBTQ community, eSports, youth mental health, and post-graduation futurities.

EAST 0520. Sex, Gender, and Society in Imperial China.
This course examines the changing nature of gender relations across China’s imperial period, from roughly 200 BCE to the early twentieth century. From early cosmological ideas about yin and yang, to the policies of the Qing dynasty in the late 19th century, we will see how gender relations intersected with philosophical ideals, political agendas, religious values, and economic developments. We will examine the kinds of choices that were available to men and women at various points in time, and explore the ways that they navigated those choices to construct meaningful lives.

Korea has a long and rich history that often goes underappreciated in the U.S. and other parts of the world. At the same time, studying Korea provides a unique vantage point for understanding major processes in East Asia and the world, both in the past and the present. The aim of this introductory course is to use illuminating aspects of the Korean historical experience to set the path for an educational journey that encompasses not only learning about the Korean past, but also expanding our ability to approach cultural histories, as well as national cultures in general.

EAST 0531. Complicating Korean History: Topics and Issues.
Korea is known for its musicians, serene palaces, and North Korea. Under these ubiquitous stereotypes, however, it has an even more fascinating culture and history, punctuated by numerous invasions, colonialism, and division. In this inter-disciplinary survey course, we explore various facets of Korea North and South, from foundation myths to contemporary life and address Korean history broadly, examining key debates around origins, colonialism, and modernity as they move chronologically through major cultural, political, economic moments that inform Korean identity, arriving at the particulars of North and South Korea today, from daily life, gender, the diaspora, to KPop, and consider peninsular futurity.

Covering the broad sweep of Korean modernity and contemporary history, this course will introduce and debate the most fundamental and contested issues in Korea today. In this theme-based course, students will have the opportunity to consider and debate these topics in an informed and balanced context which takes into account several perspectives of debate, through informed lectures and historical insights. These conversations will equip students to negotiate Korean identity and politics within a larger global context, beyond the Korean nation into the boardrooms of global corporate entities, the United Nations conference and other professional environments, outside the ivory tower.

EAST 0533. Beyond Gangnam Style: Seoul, Dislocation, and the Search for Place.
Seoul has become a celebrated cultural hub both within Asia and globally. However, underneath the glitter of modernity visible in the urban sprawl of Seoul’s “Gangnam Style” are forgotten stories, stratified claims, and a tumultuous history covering 35 years of Japanese rule, a war, and the ongoing presence of 28,500 American troops. This course will take an interdisciplinary approach to Seoul incorporating history, urban culture, literature and visual media, and engage key concepts informing the burgeoning field of Korean studies. Attention will be given to contestations over space, IT infrastructure, architectural spaces, and the emergence of new subjectivities.

EAST 0534. Patriots, Communists, and Traitors in Modern Korea.
Korean history and politics is polarized by labels of “patriot,” “traitor,” “right wing,” and “communist.” Considering global capitalism and its complicity with colonialism, this course will examine Korea following the 1917 Bolshevik Revolution and 1919 post-Wilsonian moments, and understand how these international events changed domestic politics. Through close readings of key historical documents, we will uncover the colonial origins of Korean Communism and radicalism, which both still hold great influence on the popular imagination and effect contemporary society in the two Koreas in complicated ways.

This is a class for those who want to use popular music as a tool to more deeply understand contemporary Korea. We will address Korean popular music from the turn of the twentieth century to the latest K-pop hits, while noting the ways that the changing musical tastes of Korean people are linked to historical shifts on the Korean peninsula as well as music and performance related trends that influenced Korea from abroad. Class will use abundant music and video clips, incorporate discussions based on readings, and require student analysis that connects popular music to its context.

EAST 0610A. The Far Side of the Old World: Perspectives on Chinese Culture (COLT 0610A).
Interested students must register for COLT 0610A.

Social and political organization, as well as the evolution and implications of beliefs and practices associated with race, culture and tradition. Participants will work with primary sources and scholarly analysis from diverse disciplinary perspectives. Enrollment limited to 19 first year students.

EAST 0670. After the Fall of the U.S. in Vietnam: Perspectives on Vietnamese Culture (COLT 0670).

Interested students must register for COLT 0710U.

An introduction to major and minor works of Japanese literature produced during the Japanese Empire as well as in post-WWII Japan. Covered writers include canonical novelists such as Tanizaki Junichiro, Kawabata Yasunari, and Oe Kenzaburo, as well as writers lesser known outside of Japan today, including women, queers, revolutionaries and colonial/resident Koreans.

Interested students must register for JAPN 0910D.

EAST 0950A. Turning Japanese: Constructing Nation, Race and Culture in Modern Japan.
This first year seminar focuses on Japan’s experiences with historical processes and concepts which have transformed the modern world. These include the creation of the nation as the fundamental structure for social and political organization, as well as the evolution and implications of beliefs and practices associated with race, culture and tradition.
EAST 0950B. The Floating World.
An exploration of selected literary, artistic, and religious works with an eye to understanding Japanese culture and thought of the early modern period (1600-1868). Materials include merchant tracts, samurai codes, Buddhist sermons, Confucian disquisitions, woodblock prints, drama, and fiction. No prerequisites. Enrollment limited to 19 first year students.

EAST 0950C. Reading China: Texts and Contexts.
An introduction to Chinese lit., focusing on its translation and circulation outside of China from the 17th c. to the present. A variety of texts are examined, considering the various ways translation shapes Western conceptions of China. Begins by discussing how Chinese lit. has been construed as particularly difficult to translate, explores ways in which the translation and circulation of early Chinese classics was animated by interests in ancient Chinese wisdom, and considers the recent emergence of a global notion of Chinese literature and culture. Concludes by comparing histories: translations of Chinese drama into European languages and their adaptation within China. Enrollment limited to 19 first year students.

EAST 1010. From Basho to Banana: Four Centuries of Japanese Literature.
This course explores classic writers of Japanese literature written between 1600 and 2000. We will focus on both the specificity of Japanese genre as well as the historical, social relations that have shaped them--Edo merchant culture, modernism, the avant-garde, mass culture and postmodernism, among others. Writers covered will include Iha Saikaku, Jippensha Ikku, Higuchi Ichiyo, Natsume Soseki, Akutagawa Ryunosuke, Tanizaki Junichiro and Yoshimoto Banana. No prerequisites.

EAST 1030. Words on Things: Literature and Material Culture in Early Modern China.
This course examines Chinese literary representation of artifacts written between 1000 to 1900 CE. Our discussion will highlight international trade and the transforming science and technology in early modern China. The course aims to guide students to conduct inter-artistic analysis as a means to decipher the political, religious, gendered, and technical significance embedded in literary representation of material objects. To emphasize a comparative perspective, we will also draw on scholarship outside of the field of Chinese literature. We will explore artifacts in the following categories: illustration, painting and calligraphy, seals, ceramics, furniture, and textile.

EAST 1050. The Chinese Novel.
The purpose of this course is to help us see how the Chinese novel took shape from popular sources, such as storytelling and drama, how the novel drew on history as well as legend, and how its authors and editors express a distinct world view. The class will cover the "masterworks" of the Chinese novel. Through intensive reading, students can explore notions of the hero and heroism, moral action and, more broadly, history and literature from a comparative perspective. All readings are in English translation. Limited to 20 freshmen and sophomores, or by instructor permission.

EAST 1060. Manly Men, Womanly Women, and Other Variations: The Quest for Becoming in Pre-Modern Chinese Lit.
In this, we will study representative works of Chinese poetry, historical narrative, fiction, and drama, translated into English, in order to understand how Chinese people through the ages approached the task of defining what it means to be human—what constitutes an ideal person, how the ideal changes with the person’s sex, and the degree to which individuals shape and are shaped by the collective they live in. We will read these texts as works of art while also using them to compose a picture of Chinese society as it evolved from the earliest times to the end of the Imperial era.

EAST 1070. China Modern: An Introduction to the Literature of Twentieth-Century China.
A general introduction to modern and contemporary Chinese literature from the May Fourth Movement to contemporary Taiwan and the People’s Republic of China. Emphasizes reading of literary works in relation to topics such as cultural tradition, modernity, nationalism, revolution, class, gender, region, cultural commodification, and literary innovations. Readings in English. No previous knowledge of Chinese required.

EAST 1100. Korean Culture and Film.
This course aims to introduce and explore various aspects of Korean history, culture and society. Students are expected to develop a comprehensive understanding of Korean culture by examining contemporary films that pertain to issues such as national identity, history, international relations, religion, Korean life style, and family life. Enrollment limited to 20.

EAST 1120K. Skeptical Traditions East and West (CLAS 1120K).
Interested students must register for CLAS 1120K.

This course focuses on Japanese and Korean women's literature from the modern period, giving particular attention to the historical issues and the narrative strategies that play out in celebrated works of women's fiction. The goal of the class is to deepen our understanding of the universal and particular aspects of women's writing in Japan and Korea and at the same time to learn an idiom with which to talk about literary form. Previous coursework in East Asian Studies or Literary Studies is suggested but not required. Instructor permission required.

EAST 1190. Literature and Science in Early Modern China.
This course explores the relations between Chinese literature and the studies of nature and technological know-how from 1368 to 1911. Introducing recent insight in the history of science and technology, the course challenges students to re-define science in the context of the changing Confucian curriculum, the booming market economy, and the multiethnic empire. The course investigates the ways in which the form and content of poetry, novel, and essays transformed because of their appropriation of knowledge about medicine, handicraft, and foreign lands. Topics include: encyclopedias for merchants, carpenters’ spell, auto-fiction of Confucian engineers, novel medicine, and so on.

EAST 1202E. Extreme Asian Cinema: Contemporary Genre Cinemas in an East Asian Context (MCM 1202E).
Interested students must register for MCM 1202E.

EAST 1210. Imagining Modern China.
This course introduces students to the literary and cultural milestones in twentieth-century China, highlighting the capacity of literature as a form of historical engagement and ethical reasoning. Featuring masterpieces by mainland Chinese as well as Sinophone and ethnic minority writers, translation works and critically acclaimed films, the course unpacks the multivalence of Chinese literary and cultural modernity as well as that of the very term “China.” Issues for discussion include translation and intercultural encounters, nationalism, tradition, gender, the revolutionary legacy, cultural identity, diaspora, and literary citizenship. All readings and discussions are in English.

EAST 1230. Edo Woodblock Printing.
This course provides an introduction to Japanese art and cultural history through a survey of woodblock print media from its emergence in the mid-17th century to the end of the early modern era. Topics for consideration include East Asian pictorial traditions, the publishing industry, censorship, social identity, and specialist print communities. The course will track the development of Japanese woodblock printing from its origins in printed books and monochrome prints, and the transition to hand-coloring and multi-colored printing that facilitated a highly nuanced media form, via the publishing industry’s shifting relationship with the authorities, and influences from China and the West.

This is a critical introduction to the history of mainland Chinese film. It focuses on three dimensions of cinematic practice: the historical context of film productions, the specific context/form of each film, and the critical reception of Chinese films in film studies. Important themes such as nation, visual modernity, cinematic narrative, and commercialism will be studied across the three dimensions.
EAST 1280. Introduction to Japanese Cinema
This course examines the cinema of Japan, from the 1930s to the present. Students will learn to “read” film as a visual text through a study of the basics of film editing and shot composition and will gain an understanding of cinema as art form, commercial product, and ideological tool through selected articles on film theory and published analyses of the assigned films. In addition, we will place the films within their specific context through a study of Japanese history, religious thought, and cultural trends.

EAST 1290. The Korea “Brand”: Understanding KPop, Film, and Culture of the Two Koreas in the Global Context
The global media has recently showcased two newsworthy events related to Korea: BTS at the 2018 BMAs, and the Inter-Korea Summit. This course examines the arrival of “Korea” globally, from the West’s fascination with the North Korean nuclear crises, to the hype around KPop, KFilm, cosmetics, food, and eSports. We will question the fascination with NK in US media outlets, versus its treatment in SK media. The ways in which the particular, local, and authentic, within Korean cultural production negotiates the global market is of particular interest.

EAST 1291. Korean Film and Culture: The Appeal of Korean Film
This introductory course offers an overview of Korean film production from its colonial beginnings to the present, linking film with major historical, political and cultural events or shifts over the past century. Topically organized, the course will explore issues of cultural identity in the ways that the domestic movie industry has interacted with the foreign filmic audience. Focusing on how film narratives can influence (rather than reflect) social reality, we will analyze the imagination and construction of national identity and cultural tradition (and its critique) across these films.

EAST 1292. Asia Extreme: Beauty and Violence in Korean Media
Korean films are often identifiable within two distinct tropes – the beautiful, tranquil Orient and a violent, frenetic hyper-modernity. Koreans, however, grapple with identifying themselves and their modern experiences differently beyond how the international community and the “West” sees them – as the exotic “East.” Seeking to understand and complicate this dichotomy, we will explore how Korea has struggled to hone and complicate national identity (their critique, their futurities) through film, and examine how Korea has been struggling since the 1990s to overcome the national in the face of globalization and cosmopolitanism to address the local and the liminal.

EAST 1293. Two Koreas.
This course aims to look beyond larger regional politics and the security issues to the “invisible” North Korea – its culture, everyday life, films, and literature, within the general parameters of peninsular Korean history. We will begin with a detailed look into the formation of the North and South Korean states, and will continue on, focusing on the cultural and political history of North Korea. Most effort will be given, however, to dismantling conventional media coverage and representations, and to understanding how symbols, propaganda and media have affected the lives of millions of North Koreans in their everyday lived experiences.

EAST 1305. Status, Power, and Identity in Mid-Imperial China.
This course explores the intersections of social status, political power, and ethnic identities in China from 220-1368. We examine what we mean by “China” when that region was ruled by multiple, often “non-Chinese” regimes; how foreign influences such as Buddhism changed indigenous Chinese thought and institutions; how economic prosperity undercut aristocratic power structures and created new social and moral ideals; and how foreign invasion affected the economy, institutions, and cultural identity of the region. Throughout the course, we consider how social and political change, as well as class and gender position, conditioned individuals’ views of themselves and their world.

EAST 1306. (Re)imagining the Modern World: China from 1840s to the Present
From Wei Yuan’s Illustrated Treatise on the Maritime Kingdoms to Kang Youwei’s Book of Great Harmony; from 1920s eugenics discourse and racial improvement to 1930s Shanghai cosmopolitanism; and from socialist internationalism and third worldism to post-Mao universal humanism and global market citizenship, China has constantly interacted with global forces, producing different visions of world order through its successive political, cultural, and economic revolutions in the modern era. This seminar studies the content, trajectory, and significance of China’s political and cultural constructions and (re)imaginations of the modern world since the late Qing period (1840s). Primary course materials are gathered from a wide range of genres and media including philosophy, history, political essays, literature, art, and film. Secondary research publications also cover a variety of disciplines such as history, political science, economics, cultural theory, and media studies.

EAST 1310. Silk Road Fictions
The course introduces students to cross-cultural comparative work, and to critical issues in East-West studies in particular. We will base our conversations on a set of texts related to the interconnected histories and hybrid cultures of the ancient Afro-Eurasian Silk Roads. Readings will include ancient travel accounts (e.g., the Chinese novel Journey to the West, Marco Polo); modern fiction and film (e.g., Inoue Yasushi, Wole Soyinka); and modern critical approaches to the study of linguistic and literary-cultural contact (e.g., Lydia Liu, Emily Apter, Mikhail Bakhtin, Edward Said). Topics will include bilingual texts, loanwords, race and heritage, Orientalism. No prior knowledge of the topic is expected and all texts will be available in English.

EAST 1370. Performances in the Asias (TAPS 1270)
Interested students must register for TAPS 1270.

EAST 1400. The Floating World: Early Modern Japanese Culture
This course treats major trends in Japanese thought and culture of the Tokugawa period (1600-1868), including debates among Confucian scholars; merchant culture; samurai ethics; the popularization of Buddhism; and the rise of nativism in the late period. Emphasis is on reading and analysis of primary texts in translation. Required: a course in East Asian culture or religion. Recommended but not required: RELS 0120. Enrollment limited to 20.

EAST 1410N. Lost in Translation: The Adaptation of Literature to Film in Japan (COLT 1410N)
Interested students must register for COLT 1410N.

EAST 1415A. Classical Daoist Thought (RELS 1415A)
Interested students must register for RELS 1415A.

EAST 1420. The Confucian Mind
This course explores the Neo-Confucian tradition, a pervasive influence in the intellectual, educational, and political life of China, Korea, and Japan from late medieval through early modern times. Emphasis is on conceptions of the mind and their implications for moral cultivation and social action; the legacy of Confucian values in modern East Asia may also be considered. Readings are primary texts in translation and selected secondary works; the format is primarily discussion. Recommended prerequisite: RELS 0040. Not open to first year students. Enrollment limited to 20.

EAST 1430. Classics of East Asian Buddhism (RELS 1430). Interested students must register for RELS 1430.

Interested students must register for COLT 1430C.

EAST 1430T. Leaves of Words: Japanese Poetry and Poetics (COLT 1430T).
Interested students must register for COLT 1430T.

Interested students must register for RELS 1440.
This course traces the historical evolution of modern Chinese, commonly known as Mandarin. We will examine the uniqueness of Chinese characters, and explore their relationship to other features of the language, including word formation, phonology, grammar, and dialects. The goal will be to understand the manner by which the written script has become so central to the development of Chinese civilization.

EAST 1510A. China's Late Empires (HIST 1510A).
Interested students must register for HIST 1510A.

EAST 1530. Modern Korea (HIST 1530).
Interested students must register for HIST 1530.

EAST 1540. Power, Profit, and Pillage: The Rise and Fall of Trading Kingdoms in Asia (ANTH 1540).
Interested students must register for ANTH 1540.

EAST 1700. Global Korea: Modernity, Nation, and Belonging.
In this course we will explore important issues in the study of contemporary Korean society and ask how those themes can help us to better understand processes of globalization in East Asia and beyond. Although the Koreas are relatively small countries in Asia, their history of colonialism, the Korean War, coming of age in the Cold War, and struggling to rise to the top of the global stage makes them a productive region of the world for thinking about themes such as globalization, nationalism, belonging and modernity. We will look at issues such as the Korean diaspora, immigration, plastic surgery, and the “Korean Wave” of film, TV and music.

EAST 1701. Transnational Koreas: Gender, Family, and Sexuality.
From an economic basket case in 1963 to a successful producer of global cultural products such as Samsung phones and the “Korean Wave,” South Korea has become the envy of many developing nations. What are the gender and sexual politics that undergird this neoliberal success story? Utilizing the analytical lens of “gender,” “sexuality,” and “family,” this course will confront and interrogate the hypermasculine Korean state and its hetero-gendering of Korean citizenship by examining issues ranging from the cosmetic surgery boom for women and military conscription for men to the ongoing controversy around “comfort women” (military sex slaves for the Japanese imperial army).

Interested students must register for COLT 1810X.

EAST 1811L. Travel and Tourism through the Ages (COLT 1811L).
Interested students must register for COLT 1811L.

EAST 1880A. Lao Tzu and Huai-nan Tzu.
This seminar will approach early Taoist thought through the study of important essays from the Han dynasty compendium, the Huai-nan Tzu and will discuss the historical and philosophical origins of Lao Tzu’s Tao te ching, heretofore acknowledged as the foundational text of the Taoist tradition.

EAST 1880C. Zen Meditation in China, Korea, and Japan.
An intensive study of the origin and development of Zen Meditation in China, Korea and Japan featuring historical origins in Indian Mahayana Buddhism and Chinese Daoism. Historical and social contextualization will be balanced by first-person investigations. Both kôan and silent illumination styles will be studied in depth. Weekly seminars will study representative texts in translation; labs will experiment with meditation techniques directly drawn from the readings. Students MUST register for the lecture section and a lab. Prerequisites: RELS 0100, RELS 0500, UNIV 0540; or instructor’s permission.

EAST 1880D. Early Daoist Syncretism: Zhuang Zi and Huainan Zi.
The final phase of the classical Daoist tradition has been called “syncretist” by Graham, “Huang-Lao” by Lin. It is the version of Daoism carried into the Han dynasty and the one that transmitted the tradition’s earlier works. Casting a broad net we will examine a variety of works from this critical phase including the “Techniques of the Mind” texts in the Guaci collection, the so-called “Huang-Lao” silk manuscripts from the Han tomb at Mawangdui, certain chapters of the Lushi chunqin, and selections from the Zhuangzi and Huainanzi. We will examine the ways in which cosmology, self-cultivation, and political thought coalesce in these works.

EAST 1910. Independent Study.
Sections numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 1930. Reading and Writing of the Honors Thesis.
Prior admission to honors candidacy required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 1936. Memory and Justice in East Asia.
How does history affect the present, the political, the social, and the personal around East Asia? What are the social mechanisms and frameworks of affect and knowledge that have shaped historical memories of humiliation, violence, trauma, and culpability? This seminar focuses on several key topics to explore modern modes of remembering and justice seeking including: mapping memory; imperialism and the museum; wartime conduct and war crimes trials; political violence and transitional justice; and grassroots organizing, community justice, ritual actions, and other non-state memory work. Final projects can be web portfolios or podcasts on an event or phenomenon of your choice.

EAST 1940. Reading and Writing of the Honors Thesis.
Prior admission to honors candidacy required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 1940A. Crafting Early Modern China: Handicraft, Witchcraft and Statecraft.
This course examines how Chinese cultural industry was shaped by socio-political institutions and religious practice between 1400 and 1900 CE. The course highlights the concept of craft, broadly understood as the ways of making artifacts and building social community by using environmental resources and through micro-political negotiations in everyday life. The course aims to equip students in ways to decipher the political, religious and gendered significance embedded in cultural products, including literature and decorative arts. We will explore artifacts from the following categories: literary illustration, painting and calligraphy, seals, ceramics, furniture, and textiles. Prerequisites: None.

EAST 1950B. Chinese Women, Gender and Feminism from Historical and Transnational Perspectives.
This seminar course is designed to critically re-evaluate (re)presentations of Chinese women, gender, and feminism in historical, literary, and academic discourses. It examines a diverse body of texts produced through different historical periods and in different geopolitical locations. It emphasizes gender as both a historical construct(s) among competing discourses and as a material process of individual embodiment and disembodiment. The goal of the course is to help advanced students understand Chinese history from a distinctly gendered perspective, to recognize women’s roles in history and writing, and to develop a reflective, cross-cultural approach to gender, politics, and the self.
Course focuses on mainland Chinese cultural and media production since the mid 1980's, when China began transforming itself culturally and economically into a capitalist society with socialist characteristics. Traditional values, socialist legacy, commercial forces, and globalization have all played significant roles in the ongoing transformation. The goal of the course is to examine the complex interactions among diverse historical forces in a rapidly changing China. Course taught in Mandarin Chinese.

This seminar/workshop discusses a broad range of narrative arts produced over the past 100 years in Japan, and practices the art of translating them. Drawing rigor from the field of linguistics and translation theory, we shall make central to our effort of analyzing Japanese cultural productions an attentiveness to the historicity of language and a self-consciousness of our roles as cultural interpreters. While the course will focus on mid-20th century Japanese short fiction, we will also work on poetry, music, manga, animation, and film, depending on the interests of enrolled students. Pre-requisites: JAPN 0600 or equivalent. Instructor permission required.

EAST 1950I. Revolution and Culture, East Asia and Beyond.
This seminar investigates cultural practices enacted with the aim of social change. Topics include the Soviet avant-garde, race and the American cultural front, gender and proletarian literature in Japan and colonial Korea, as well as issues of propaganda and struggle in the DPRK and China. Instructor permission required.

A study of the Chinese story in its social and historical context. The seminar will survey the broad story stereotypes and consider their earlier sources in the classical tale, storytelling, drama, and ritual. All readings are in English translation.

EAST 1950N. The Love Letter, Fiction and Desire.
A study of the art of the love letter in China of the 16th to 18th centuries. The circulation of letter-writing manuals fueled the rise of letter fiction in China, as it did in Europe in the same period. The seminar will explore how desire serves as a motive for writing to someone far away, an element of the plot, and an end in itself, in comparative and theoretical perspectives. All readings are in English. Enrollment limited to 20.

EAST 1950O. The Art of Dissent.
This seminar investigates the relationship between activism and art in early modern and 20th century Japan and Korea. Historical topics to be discussed in relation to works of fiction, biography, poetry, film and graphic art include the Freedom and People's Rights Movement, Japanese anarchism, pre-WWI communism, feminism, the Kwangju Uprising and the Minjung Munhak Movement.

EAST 1950P. Attachment to Objects in Chinese Literature.
A seminar investigating interactions between objects and literary composition in China of the 12th to 16th century, exploring 3 core issues: 1st, what do writers about objects reveal about notions of literary art and artifice? 2nd, in what ways are material artifacts endowed with aesthetic and personal meaning? 3rd, what literary and extra-literary factors shaped exchanges of poetry and gift-giving as linked forms of social intercourse? Readings in English translation. Instructor permission required.

A survey of the evolution of major forms of Chinese lyric poetry beginning with the Shijing (Book of Songs), the breakthrough to 5-character verse in the Han Dynasty, landscape (shanshui) and field and garden (tianyuan) poetry of the 6 Dynasties, and the flowering of the shi form during the Tang Dynasty. Readings will be in Chinese, discussions in English. Previous study of classical Chinese or permission of the Instructor required.

EAST 1950U. South Korean Cinema: From Golden Age to Korean Wave.
This seminar explores the cinema of South Korea, proceeding chronologically and thematically, interrogating the key problematics of gender and genre. We will think about cinema's role—as a medium for visual storytelling and as a site for producing cultural norms and values—in assessing the consequences of historical events and in helping to construct official histories. Across films from Korean cinema's "golden age" (1950's and 60's) to post-authoritarian realist cinema to the contemporary era of globalized, transnational genre films, we will map the questions, themes, and debates on the formation and effects of South Korea's cinematic imaginary of nation. Enrollment limited to 20 juniors and seniors.

EAST 1950V. Contemporary Film and Media Cultures in East Asia.
This course visits postwar film and television cultures in East Asia as part of a larger narrative of contemporary media production and consumption. How can thinking about films' relationship with other media enhance our understanding of contemporary popular culture? How does it help us re-imagine narrative issues such as textuality, production, and representation? How does understanding the rich contexts of audience interaction with media affect our approaches to reading and meaning-making? To explore these questions, we will consider postwar Chinese and Japanese films, popular fiction, literature, television dramas, as well as manga/anime.

EAST 1950X. Queer Japan: Culture, History and Sexuality.
This seminar investigates cultural practices enacted by Japanese gays and lesbians, or otherwise related to same-sex attraction. How have sexual identities traditionally been constructed in Japan, and how has the modern period transformed them? How has same-sex sexuality become figured in the Japanese art, literature and popular culture of the 20th century: and how have the forces of a global LGBT culture interacted with the specific experiences of a same-sex community in Japan? This class explores questions about queer history, writing and cultural practice by looking at particular moments in the Japanese past and present.

“Chinese opera” denotes several hundred regional variations of a performance art form that comprises sung arias with musical accompaniment, spoken dialogue, stylized movements, and elaborate costumes and make-up. Originating in the elite leisure spaces of early modern China, the best known versions of this art form are Peking opera and Kun opera. We will examine drama texts from the Yuan dynasty to the present, learn about the aesthetics and politics of these textual and performance traditions, and consider theater culture within its social, economic, and historical contexts. Prerequisite: Previous study of literature or theater at the college level.

EAST 1951A. Prose of the World: Understanding Late Imperial China through Fiction and Belles-Lettres.
This course introduces the culture and society of late imperial China through fiction and prose written between 1368 and 1911. The course aims to analyze literary work as the interface of social development and cultural renovation. A chronological exposure to various geographical regions is structured under three conceptual frameworks: cultural belatedness as abundant historical reference; early modernity as commercialization; and pre-modern China encountering the world. The balanced selection of readings in four major literary genres, written by male and female authors, cover topics including: social uprising, the imperial court, civil examination, diplomacy, urban market, travel, religious cult, and courtesan culture. Prerequisites: None.

EAST 1951B. From Desktop to Stage: Drama and Performance in Late Imperial China.
This course examines the multiple social and aesthetic functions of late imperial Chinese theatre between 1368 and 1840: theatre as lyrical self-expression, political action, ideological propaganda, and/or religious ritual. Close examination of translated plays and their sociohistorical contexts are combined with multimedia approaches that explore woodblock illustration, stage adaptation, and film related to the selected plays. The course covers topics that range from literati masterpieces, theatrical training, props and costumes, regional theatres, to women's ballads. Prerequisites: Some knowledge of Chinese history is preferred but not mandated.
EAST 1951C. Picturing Korea: History and Memory in South Korean Cinema
South Korean films have recently shown a thematic preoccupation with the nation’s tumultuous history by presenting diverse stories of past event and experience. They have also rendered different ways to address the issues related to important social developments and cultural phenomena. The aim of this seminar is to think about cinema’s role as a medium for visual storytelling and as a site for producing historical imaginations. Prior coursework on film and media and/or the history of East Asia is required, and students are expected to have a firm grounding in the methods of critical reading, textual analysis, and scholarly argumentation.

EAST 1951D. The Two Koreas, 1945-Present.
This seminar examines the Cold War in North and South Korea through literature, music, and film. How do aesthetic works explore this historical trauma and ideological rift? Beginning with the major historical writings on the formation of two Koreas, we will look at shifting cultural discourses in postwar East Asia through key junctures. In particular, we will focus on Korean responses to the legacy of Japanese colonialism, industries of popular culture, and memories of ideological war. In the study of Cold War divisions, we will also explore the possibilities of inter-cultural dialogues and regional reintegration.

EAST 1990. Senior Reading and Research: Selected Topics.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EAST 2450. Exchange Scholar Program.

EAST XLIST. Courses of Interest to Concentrators.
Fall 2021
East Asian Studies is a highly interdisciplinary concentration. The following courses in other departments can be taken for concentration credit. Please check the listing of the appropriate department for the time and location of each course.

Religious Studies
RELX 0800 Japan: Nature, Ritual, and the Arts

Japanese

JAPN 0100. Basic Japanese.
Introduction to Japanese language. Emphasizes the attainment of good spoken control of Japanese and develops a foundation of literacy. No prerequisites. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of the course work in JAPN 0200 covers the entire year and is recorded as the final grade for both semesters. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

Designed for those who have had high-school Japanese or other Japanese language experience. An opportunity to organize previous knowledge of Japanese and develop a firm basis of spoken and written Japanese. Prerequisite: Reading and writing knowledge of Hiragana, Katakana, and some Kanji. Placement test required. This is the second half of a year-long course. Students must have taken JAPN 0150 to receive credit for this course. The final grade for this course will become the final grade for JAPN 0100. If JAPN 0150 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

JAPN 0200. Basic Japanese.
Introduction to Japanese language. Emphasizes the attainment of good spoken control of Japanese and develops a foundation of literacy. This is the second half of a year-long course. Students must have taken JAPN 0100 to receive credit for this course. The final grade for this course will become the final grade for JAPN 0100. If JAPN 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

Designed for those who have had high-school Japanese or other Japanese language experience. An opportunity to organize previous knowledge of Japanese and develop a firm basis of spoken and written Japanese. Prerequisite: Reading and writing knowledge of Hiragana, Katakana, and some Kanji. Placement test required. This is the second half of a year-long course. Students must have taken JAPN 0150 to receive credit for this course. This final grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade submitted at the end of the course work in JAPN 0250 covers the entire year and is recorded as the final grade for both semesters. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

Further practice of patterns and structures of the language. Readings are introduced on aspects of Japanese culture and society to develop reading and writing skills, enhance vocabulary, and provide points of departure for conversation in Japanese. Prerequisite: JAPN 0200 or equivalent. The East Asian Studies department wishes to provide language instruction to all interested students. If you are unable to register for this course due to enrollment limits but are dedicated to learning Japanese, please contact the instructor via email.

See Intermediate Japanese (JAPN 0300) for course description. Prerequisite: JAPN 0300 or equivalent. Enrollment limited to 18.

JAPN 0500. Advanced Japanese I.
Continued practice in reading, writing, and speaking. Emphasizes the development of reading proficiency and speaking in cultural contexts. Students read actual articles and selections from Japanese newspapers. Course includes translation, with writing and discussion in Japanese. Films and video tapes are shown as supplementary materials. Prerequisite: JAPN 0400 or equivalent.

JAPN 0600. Advanced Japanese I.
See Advanced Japanese I (JAPN 0500) for course description.

JAPN 0700. Advanced Japanese II.
Reading of articles from Japan’s press with discussion in Japanese. Focuses on explanations and drills on the fine points in grammar and vocabulary as well as on the practice of writing in various styles. Movies and video tapes are used as supplementary materials. Prerequisite: JAPN 0600 or equivalent.

JAPN 0800. Advanced Japanese II.
See Advanced Japanese II (JAPN 0700) for course description.

JAPN 0910A. Classical Japanese.
This is an introductory course to pre-modern Japanese. It will explore the lifestyle and philosophy of samurai in 17th century Japan through reading the book, Gorin no Sho. The book comprises Miyamoto Musashi’s thoughts on swordplay, winning, and mind training. The course includes reading background information in English and viewing films and dramas. Enrollment limited to 20.
The goal of this course is to develop the ability to use Japanese source materials for research in social sciences. Course covers lifestyles in two contrasting cities, Tokyo and Kyoto. Topics include topography, environmental issues, houses, urban life-styles, and natural habitation. We will ask questions: why houses are so compact in cities; why crows and boars pick on garbage, etc. Information sources are films, videos, and websites in addition to textbooks. Prerequisite: JAPN 0600 or equivalent. Enrollment limited to 20.

JAPN 0910C. Japanese Linguistics.
This course will provide a structural overview of the Japanese language. Students will learn how to develop skills for analyzing the language through looking at sounds, meaning, and grammar. Topics include linguistic analysis of various sentence structures that students often find difficult to use, learning to choose words and sentences in appropriate situations, looking at the relation between language and culture.

A traditional Japanese readings course with content both canonical and unconventional. It allows students with three years of Japanese to read from a diverse selection of 20th century Japanese novels, short stories and graphic novels. Our main focus will be on understanding the original Japanese, but some translation into English will be involved as well. In addition to selections from well-known modernists such as Natsume Soseki, Tanizaki Jun’ichi and Mishima Yukio, readings may also include works by Edogawa Rampo, Inagaki Taruho, Yoshiya Nobuko, Yamaji Ebine, Hoshi Shin’ichi. Murakami Ryu, and others to be determined by student interest. All readings in Japanese. Prerequisite: JAPN 0600 or instructor permission.

JAPN 0910E. Advanced Reading for Research.
This is an advanced reading course. Class activities include reading and translation of scholarly articles in the fields of students’ interests, and of selected writings in humanities and social sciences in general or in broad perspectives. Readings include literary essays, fiction and short stories, articles from major newspapers, weekly and monthly journals/magazines. Prerequisite JAPN0600 Advanced Japanese II.

JAPN 0920A. Business Japanese.
Designed to teach post-advanced level Japanese language, with the focus on effective oral and written communication in business situations, this course emphasizes vocabulary building in the areas of business and economics, use of formal expressions, business writing, and conversation and presentation skills, as well as familiarizing students with Japanese corporate culture, protocol, and interpersonal relationships. Prerequisite: JAPN 0700 or equivalent. Enrollment limited to 20. Instructor permission required.

JAPN 0920B. Modern Japanese Poetry.
This course is an introduction to modern Japanese poetry, which includes pre-war and post-war poetic forms. We will explore issues of modernity and identity as well as poetics through a close examination of several poems each week. We will work on translations of the poems as part of the exercise of reading. The course includes reading background information in English. No prerequisites required.

JAPN 0920C. Japanese Language and Society through Contemporary Film.
This course aims at further development of your linguistic proficiency and broadening your knowledge of Japanese language, culture, and society by studying contemporary Japanese film through the lens of social justice. Films are selected from a wide range of genres: mainstream blockbusters, documentaries, and anime. Our discussions will focus on the cinematic treatment of diversity and social justice in Japan, including issues related to racial/ethnic and sexual minorities in Japan (Ainu, burakumin, Okinawan, Zainichi, “Half”, LGBTQ), gender discrimination, economic inequality, and mental/physical disability. Prerequisites: JAPN 0700 or equivalent. Japanese heritage language speakers with instructor’s consent.

JAPN 1010. Readings in Contemporary Japanese Fiction.
Introduces contemporary short stories and novellas by award winning writers published after 2000. Authors include Yoko Ogawa, Natsuo Kirino, Jiro Asada, Bin Konno. We will analyze why the great many readers are drawn into these literary works through socio cultural background of urban communities. Prerequisites: JAPN0700 or instructor permission.

Introduces a linguistic analysis of Japanese language to attain an overview of structure and a foundation for understanding how grammar relates to various modes of communication. Topics include discourse analysis, pragmatics, communicative intention, communication strategies, and intercultural communication gaps. Linguistic data is drawn from films and fiction. Prerequisite: basic knowledge of Japanese grammar, vocabulary, and linguistics. Enrollment limited to 20.

JAPN 1910. Independent Study.
Reading materials for research in Japanese. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

This advanced Japanese literature class offers students the chance to read works of modern Japanese literature in dialogue with important works of criticism as we work our way through each decade of the 20th century. Readings will be in both Japanese and English. We will consider both the formal properties of fiction and the historical pressures of gender, ethnicity, class, imperialism and globalization. Authors vary depending on student interest, but often include writers such as Natsume Soseki, Abe Kobo, Ch’oe Ch’ung-hi, Kono Taeko, and Kawakami Hiromi as well as celebrated Japanese critics such as Maeda Ai and Komori Yoiichi.

Korean

KREA 0100. Korean.
Begins with an introduction to the Korean writing system (Hangul) and focuses on building communicative competence in modern Korean in the four language modalities (listening, speaking, reading, writing). Provides a foundation for later work in spoken and written Korean. Five classroom hours per week. No prerequisite. Enrollment limited to 18. This is the first half of a year-long course whose first semester grade is normally a temporary one. Neither semester may be elected independently without special written permission. The final grade for this course will become the final grade for KREA 0100. If KREA 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the department and the Committee on Academic Standing.

KREA 0200. Korean.
Begins with an introduction to the Korean writing system (Hangul) and focuses on building communicative competence in modern Korean in the four language modalities (listening, speaking, reading, writing). Provides a foundation for later work in spoken and written Korean. Six classroom hours per week. Enrollment limited to 18. This is the second half of a year-long course. Students must have taken KREA 0100 to receive credit for this course. The final grade for this course will become the final grade for KREA 0100. If KREA 0100 was taken for credit then this course must be taken for credit; if taken as an audit, this course must also be taken as an audit. Exceptions to this policy must be approved by both the academic department and the Committee on Academic Standing.

KREA 0300. Intermediate Korean.
An intermediate course in Korean designed to further communicative competence in spoken Korean and to provide additional reading practice in stylistically higher level materials that are progressively integrated into the given dialogues. Discussions on various aspects of Korean culture and society. Five classroom hours per week. Prerequisite: KREA 0200 or instructor permission.

See Intermediate Korean (KREA 0300) for course description. Prerequisite: KREA 0100-0200 or equivalent.
## KREA 0500. Advanced Korean
Aims to help students develop an advanced level of communicative competence, with special focus on enhancing their reading comprehension, essay writing, and discourse (discussion and presentation) skills. Authentic reading materials from a variety of sources will be used to introduce various topics and issues pertaining to Korean society and culture, thus students' cultural understanding will also be enhanced. Prerequisite: KREA 0400 or equivalent or permission of instructor.

## KREA 0600. Advanced Korean
See Advanced Korean (KREA 0500) for course description. Prerequisite: KREA 0500 or equivalent or permission of instructor.

## KREA 0910B. Media Korean
Develop linguistic competence and deepen cultural understanding through exposure to a variety of media sources. Built on the Content-based Instruction model and Genre-based Approach. Discuss current Korean affairs and core issues of culture based on assigned materials. Develop reading and listening comprehension skills through pre-class activities, oral proficiency through in-class discussion and presentation, and writing proficiency through assigned essays and writings, in addition to various integrative tasks. Tuesday classes will focus on comprehending the text and source materials, Thursday classes will focus on related tasks and activities. Enrollment limited to 20. Conducted entirely in Korean.

## KREA 0920A. Korean Culture and Society
Develops oral proficiency in Korean language through a variety of readings on Korean culture and society. By reading about and discussing important aspects and core issues of Korea, students enhance their speaking competence and cultural understanding. Prerequisites: KREA 0300 and 0400 or permission of instructor. Enrollment limited to: 15.

## KREA 0920B. Business Korean
For students who are interested in Korean culture in general and business culture in particular, and in improving their Korean language skills in a business context. The course not only focuses on business and economy-related words and expressions, but also on developing learners' confidence in business writing, conversation and presentations in Korean. Enrollment limited to 15. Prerequisite: KREA 0600 or instructor's permission.

## KREA 0920D. The Korean Vision: A Debate
The contemporary Korean society has undergone significant transformation in the past few decades, not only on the personal level, such as changes in personal life style and family structure, but also on the public level, such as economic development and political affairs. Various issues due to these changes have sparked a much heated debate within Korean society. This course will look into some of these major controversial issues with texts and media materials. Through this content-oriented advanced level language course, students will be able to improve their Korean language proficiency, as well as deepen their understanding of Korean culture and society. Prerequisite: KREA 0600. Enrollment limit to 18. Will replace current KREA 0900 course in schedule for Fall 2016.

## KREA 1090. Translating Korean: Fiction, Poetry & Film
This class explores the theory and practice of translation in the context of Korean cultural production. Each week we shall grapple with a particular issue in translation studies in dialogue with a Korean-language text. By the end of this course students should be able to locate the tools necessary to carry out translations from Korean to English, to demonstrate an understanding of translation as a craft with its own standards, responsibilities, and complexities, and to have completed a significant translation project themselves. Learners of the Korean language who have completed Korean 600 as well as native speakers of Korean are welcome.

## KREA 1910. Independent Study
Reading materials for research in Korean. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

Interested students must register for EAST 1950W.

## Economics
### Chair
John N. Friedman

Economics is a social science that analyzes how people, businesses, and governments make the best of limited resources, and how they make choices when faced with tradeoffs. Microeconomics studies these decision-makers and the markets in which they interact, while macroeconomics studies the workings of the economy as a whole. Economics provides tools for understanding public policy issues like inequality, poverty, education, health, taxes, trade, regulation, and the environment.

For additional information, please visit the department's website: http://www.brown.edu/Departments/Economics/

### Economics Concentration Requirements
Economics is the study of how individuals, businesses, and governments allocate resources to satisfy their objectives. The study of economics helps students understand markets, firms, financial organizations, and public debate about economic policy, including taxation, government expenditure, trade, globalization, health, and welfare. The concentration in Economics prepares students for graduate study in fields such as business and law, for graduate study leading to teaching and research in economics, and can be a stepping-stone to employment in business, finance, non-profit, and government organizations. Students may choose the standard concentration or the business track, both of which have a corresponding professional track.

Students are required to begin with ECON 0110, an introductory course that stresses current economic issues, and the concepts and principles of economic analysis, Intermediate level courses in microeconomics (ECON 1110 or ECON 1130), macroeconomics (ECON 1210), and econometrics (ECON 1620 followed by ECON 1629 or ECON 1630 ) round out the list of foundation courses for the concentration. Economics concentrators must also fulfill a math requirement (ECON 0170).

The economics department sponsors a number of concentration options. The most popular is the standard economics concentration, described below. The standard concentration has an optional Business Economics track, also described below. Three additional concentration options are administered jointly with other departments and are described separately under their respective titles. They are the concentrations in applied mathematics–economics, mathematical-economics , and computer science–economics. The first two are especially recommended for students interested in graduate study in economics.

The department offers many of the required courses in an interdepartmental concentration called Business, Entrepreneurship and Organizations (BEO). BEO is jointly run by the departments of economics and sociology, and the school of engineering. BEO has three possible "tracks," of which the business economics track is most closely related to economics. The BEO concentration and all of its current BEO track offerings remain in place through the class of 2023, after which it will be discontinued. Please contact the BEO administrator for more details, including information about advising in that concentration.

### Standard Economics Concentration

</table>

Total Credits  12

1 Students who place out of ECON 0110 on the basis of qualifying scores on the AP, IB, or A-level exams must take an additional 1000-level course (6 instead of 5).
2 Econ 1460 counts toward the concentration if previously taken (it is not being offered in the near future).
3 Students can satisfy the mathematics requirement with qualifying scores on the AP, IB, or A-level exams (but not the Math department’s self placement exam). Note that certain advanced economics courses may impose additional math prerequisites.
4 Students may use either ECON 1070 or ECON 1090 toward the concentration, but not both. Note that ECON 1960 (thesis course) and ECON 1970 (independent research) does not count toward the concentration.

All concentrators in economics programs are encouraged to consult their concentration advisors regularly. Economics concentrators who wish to study abroad should consult first with the department transfer credit advisor.

### Honors

To graduate with honors, students must satisfy the following requirements by the end of Junior year:

- Complete at least 70% of the courses required for the concentration.
- Have earned a grade of "A" or "S with Distinction" in at least 70% of grades earned in the economics concentration (excluding courses transferred to Brown without a grade, and those taken spring 2020). Since S with Distinctions do not appear on the internal academic record or the official transcript, the department will consult directly with the Registrar's Office to confirm a student's grades in concentration courses.
- Secure a faculty thesis advisor in the economics department.

#### During Senior year, thesis writers must:

- Enroll in ECON 1970 with their thesis advisor in the fall and spring semesters (Note that ECON 1970 does not count toward the concentration).
- Submit a thesis proposal to their thesis advisor and the Director of Undergraduate Studies by September 15.
- Submit their work in progress to their thesis advisor by December 20.
- Depending on the nature of the thesis work, the thesis advisor may require the student to successfully complete one or more courses from among the data methods (https://economics.brown.edu/academics/undergraduate/concentrations/combined/course-groupings/), mathematical economics (https://economics.brown.edu/academics/undergraduate/concentrations/combined/course-groupings/) and/or financial economics (https://economics.brown.edu/academics/undergraduate/concentrations/combined/course-groupings/) course groups in the fall of senior year, if they have not already done so.
- Complete an honors thesis by the deadline agreed upon with their advisor and obtain the final approval of their advisor by April 2.
- Thesis writers are encouraged, but not required, to participate in the departmental Honors Thesis Presentation session held in May.

### Professional Track

In addition to fulfilling the other concentration requirements, students on the Professional Track must complete 2-6 months of full-time professional work related to their concentration, with a given internship or job lasting at least one month. International students must declare the professional track of their concentration in order for U.S. based internships to qualify for Curricular Practical Training (CPT). Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Professional experiences completed over winter break cannot be used to fulfill this requirement. On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience, to be approved by their concentration advisor.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience, to be approved by the student's concentration advisor:
International students must declare the professional track of their concentration in order for U.S. based internships to qualify for Curricular Practical Training (CPT). In addition to their other concentration requirements, students must complete two two-to-four month full time professional experiences, doing work that is related to their concentration program. Such work is normally done at a company or a non profit, but may also be at a university under the supervision of a faculty member. Upon completion of each profession experience, the student must write a reflective essay on ASK, to be approved by their concentration advisor.

**Applied Mathematics-Economics Concentration Requirements**

The Applied Mathematics-Economics concentration is designed to reflect the mathematical and statistical nature of modern economic theory and empirical research. This concentration has two tracks. The first is the advanced economics track, which is intended to prepare students for graduate study in economics. The second is the mathematical finance track, which is intended to prepare students for graduate study in finance, or for careers in finance or financial engineering. Both tracks have A.B. degree versions and Sc.B. degree versions, as well as a Professional track option.

**Standard Program for the A.B. degree (Advanced Economics track):**

**Prerequisites:**
- MATH 0100 Introductory Calculus, Part II
- MATH 0520 Linear Algebra

**Course Requirements:**

ECON 1825 Behavioral Economics and Public Policy
ECON 1830 Behavioral Finance
One additional 1000-level economics course.  

Total Credits  
1

1 No course may be used to simultaneously satisfy (a) and (b).
2 APMA 0330 and APMA 0340 may be substituted with advisor approval, but these are no longer being offered.
3 Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.
4 No course may be used to simultaneously satisfy the "mathematical economics" and the "data methods" requirements.
5 Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.
6 Requires written approval of the Director of Undergraduate Studies in Economics. APMA 1910 is not permitted.

Standard program for the Sc.B. degree (Advanced Economics track):

Total Credits 16
1. No course may be used to simultaneously satisfy (a) and (b).

2. APMA 0330 and APMA 0340 may be substituted with advisor approval, but these are no longer being offered.

3. Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.

4. No course may be used to simultaneously satisfy the "mathematical economics" and the "data methods" requirements.

5. Students may use either ECON 1070 or ECON 1090 toward the concentration, but not both. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

6. Requires written approval of the Director of Undergraduate Studies in Economics. APMA 1910 is not permitted.

**Standard program for the A.B. degree (Mathematical Finance track):**

**Prerequisites:**
- MATH 0100 Introductory Calculus, Part II
- MATH 0520 Linear Algebra

**Course Requirements: 13 Courses: 6 Applied Math and 7 Economics**

**Applied Mathematics Requirements**
1. APMA 0350 & APMA 0360 Applied Ordinary Differential Equations and Applied Partial Differential Equations

Select one of the following:
- APMA 0160 Introduction to Scientific Computing (preferred)
- APMA 0200 Introduction to Modelling
- CSCI 0111 Computing Foundations: Data
- CSCI 0150 Introduction to Object-Oriented Programming and Computer Science
- CSCI 0170 Computer Science: An Integrated Introduction
- CSCI 0190 Accelerated Introduction to Computer Science
- APMA 1200 Operations Research: Probabilistic Models
- APMA 1650 Statistical Inference I
- or APMA 1655 Honors Statistical Inference I

Select one of the following:
- APMA 1160 An Introduction to Numerical Optimization
- APMA 1180 Introduction to Numerical Solution of Differential Equations
- APMA 1210 Operations Research: Deterministic Models
- APMA 1330 Applied Partial Differential Equations II
- APMA 1360 Applied Dynamical Systems
- APMA 1660 Statistical Inference II
- APMA 1670 Statistical Analysis of Time Series
- APMA 1680 Nonparametric Statistics
- APMA 1690 Computational Probability and Statistics
- APMA 1710 Information Theory
- APMA 1720 Monte Carlo Simulation with Applications to Finance (preferred)
- APMA 1740 Recent Applications of Probability and Statistics
- APMA 1860 Graphs and Networks

**Economics Requirements:**
- ECON 1130 Intermediate Microeconomics (Mathematical)
- ECON 1210 Intermediate Macroeconomics
- ECON 1630 Mathematical Econometrics I
- Select two 1000-level courses from the "financial economics" group:
  - ECON 1710 Investments I
  - ECON 1720 Corporate Finance
  - ECON 1730 Venture Capital, Private Equity, and Entrepreneurship
  - ECON 1750 Investments II
  - ECON 1760 Financial Institutions
  - ECON 1780 Advanced Topics in Corporate Finance
  - ECON 1830 Behavioral Finance

Select one 1000-level course from the "mathematical economics" group:
- ECON 1170 Welfare Economics and Social Choice Theory
- ECON 1225 Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies
- ECON 1255 Unemployment: Models and Policies
- ECON 1460 Industrial Organization (Mathematical)
- ECON 1470 Bargaining Theory and Applications
- ECON 1490 Designing Internet Marketplaces
- ECON 1510 The Theory of General Equilibrium
- ECON 1545 Topics in Macroeconomics, Development and International Economics
- ECON 1640 Mathematical Econometrics II
- ECON 1660 Big Data
- ECON 1670 Advanced Topics in Econometrics
- ECON 1750 Investments II
- ECON 1805 Economics in the Laboratory
- ECON 1820 Theory of Behavioral Economics
- ECON 1850 Theory of Economic Growth
- ECON 1870 Game Theory and Applications to Economics

Select one 1000-level course from the "data methods" group:
- ECON 1301 Economics of Education I
- ECON 1310 Labor Economics
- ECON 1315 Health, Education, and Social Policy
- ECON 1340 Economics of Global Warming
- ECON 1355 Environmental Issues in Development Economics
- ECON 1360 Health Economics
- ECON 1375 Inequality of Opportunity in the US
- ECON 1400 The Economics of Mass Media
- ECON 1430 The Economics of Social Policy
- ECON 1480 Public Economics
- ECON 1510 Economic Development
- ECON 1530 Health, Hunger and the Household in Developing Countries
- ECON 1629 Applied Research Methods for Economists
- ECON 1640 Mathematical Econometrics II
- ECON 1660 Big Data
- ECON 1825 Behavioral Economics and Public Policy
ECON 1830 Behavioral Finance

Total Credits: 13

1. APMA 0330 and APMA 0340 may be substituted with advisor approval, but these are no longer being offered.

2. No course may be used to simultaneously satisfy the "mathematical economics" and the "data methods" requirements.

3. Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.

4. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

5. Requires written approval of the Director of Undergraduate Studies in Economics. APMA 1910 is not permitted.

Standard program for the Sc.B. degree (Mathematical Finance track):

Prerequisites:
- MATH 0100 Introductory Calculus, Part II
- MATH 0520 Linear Algebra

Course Requirements: 16 courses: 7 Applied Math and 9 Economics

Applied Mathematics requirements:
(a) APMA 0350 & APMA 0360 Applied Ordinary Differential Equations and Applied Partial Differential Equations I
(b) Select one of the following:
   - APMA 1650 Operations Research: Probabilistic Models
   - APMA 1655 Honors Statistical Inference I

Select two of the following:
- APMA 1160 An Introduction to Numerical Optimization
- APMA 1180 Introduction to Numerical Solution of Differential Equations
- APMA 1210 Operations Research: Deterministic Models
- APMA 1330 Applied Partial Differential Equations II
- APMA 1360 Applied Dynamical Systems
- APMA 1660 Statistical Inference II
- APMA 1670 Statistical Analysis of Time Series
- APMA 1680 Nonparametric Statistics
- APMA 1690 Computational Probability and Statistics
- APMA 1710 Information Theory
- APMA 1720 Monte Carlo Simulation with Applications to Finance (preferred)
- APMA 1740 Recent Applications of Probability and Statistics
- APMA 1860 Graphs and Networks
- MATH 1010 Analysis: Functions of One Variable
- APMA 193X, 194X Senior Seminar series, depending on topic

Economics Requirements:
- ECON 1130 Intermediate Microeconomics (Mathematical)
- ECON 1210 Intermediate Macroeconomics
- ECON 1630 Mathematical Econometrics I
- Select three 1000-level courses from the "financial economics" group:
  - ECON 1710 Investments I
  - ECON 1720 Corporate Finance
  - ECON 1730 Venture Capital, Private Equity, and Entrepreneurship
  - ECON 1750 Investments II
  - ECON 1760 Financial Institutions
  - ECON 1780 Advanced Topics in Corporate Finance
  - ECON 1830 Behavioral Finance
- Select two 1000-level courses from the "mathematical economics" group:
  - ECON 1170 Welfare Economics and Social Choice Theory
  - ECON 1225 Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies
  - ECON 1255 Unemployment: Models and Policies
  - ECON 1460 Industrial Organization (Mathematical)
  - ECON 1470 Bargaining Theory and Applications
  - ECON 1490 Designing Internet Marketplaces
  - ECON 1545 Topics in Macroeconomics, Development and International Economics
  - ECON 1640 Mathematical Econometrics II
  - ECON 1660 Big Data
  - ECON 1670 Advanced Topics in Econometrics
  - ECON 1750 Investments II
  - ECON 1805 Economics in the Laboratory
  - ECON 1825 Behavioral Economics and Public Policy

Select one 1000-level course from the "data methods" group:
- ECON 1301 Economics of Education I
- ECON 1310 Labor Economics
- ECON 1315 Health, Education, and Social Policy
- ECON 1340 Economics of Global Warming
- ECON 1355 Environmental Issues in Development Economics
- ECON 1360 Health Economics
- ECON 1375 Inequality of Opportunity in the US
- ECON 1400 The Economics of Mass Media
- ECON 1430 The Economics of Social Policy
- ECON 1480 Public Economics
- ECON 1510 Economic Development
- ECON 1530 Health, Hunger and the Household in Developing Countries
- ECON 1629 Applied Research Methods for Economists
- ECON 1640 Mathematical Econometrics II
- ECON 1660 Big Data
- ECON 1670 Advanced Topics in Econometrics
- ECON 1825 Behavioral Economics and Public Policy
ECON 1830  Behavioral Finance

Total Credits 16

1. APMA 0330 and APMA 0340 may be substituted with advisor approval, but these are no longer being offered.
2. No course may be used to simultaneously satisfy the “mathematical economics” and the “data methods” requirements.
3. Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.
4. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.
5. Requires written approval of the Director of Undergraduate Studies in Economics. APMA 1910 is not permitted.

Honors

Applied Math-Economics concentrators who wish to pursue honors must find a primary faculty thesis advisor in either Economics or Applied Math. They will be held to the Honors requirements of their advisor’s department. Joint concentrators in Applied Mathematics-Economics with an Economics thesis advisor should follow the requirements published here (https://economics.brown.edu/academics/undergraduate/honors-and-capstones/thesis/), while concentrators with an Applied Math thesis advisor should follow the requirements published here (https://www.brown.edu/academics/applied-mathematics/undergraduate-program/honors/).

Professional Track

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete full-time professional experiences doing work that is related to their concentration programs, totaling 2-6 months, whereby each internship must be at least one month in duration in cases where students choose to do more than one internship experience. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Internships that take place between the end of the fall and the start of the spring semesters cannot be used to fulfill this requirement.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience, to be approved by the student’s concentration advisor.

- Which courses were put to use in your summer’s work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.

Computer Science-Economics Concentration Requirements

The joint Computer Science-Economics concentration exposes students to the theoretical and practical connections between computer science and economics. It prepares students for professional careers that incorporate aspects of economics and computer technology and for academic careers conducting research in areas that emphasize the overlap between the two fields. Concentrators may choose to pursue either the A.B. or the Sc.B. degree. While the A.B. degree allows students to explore the two disciplines by taking advanced courses in both departments, its smaller number of required courses is compatible with a liberal education. The Sc.B. degree achieves greater depth in both computer science and economics by requiring more courses, and it offers students the opportunity to creatively integrate both disciplines through a design requirement. In addition to courses in economics, computer science, and applied mathematics, all concentrators must fulfill the Computer Science department’s writing requirement by passing a course that involves significant expository writing.

Prerequisites (3 courses):

</table>

Two additional 1000-level Economics courses excluding 1620, 1960, 1970: 2

One capstone course in either CS or Economics: a one-semester course, normally taken in the student’s last semester undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic (preferably at the intersection of computer science and economics) in depth, to produce a culminating artifact such as a paper or software project. A senior thesis, which involved two semesters of work, may count as a capstone.

Total Credits: 17

1 APMA 1650 or APMA 1655 may be used in place of CSCI 1450 in CS pathway requirements. However, concentration credit will be given for only one of APMA 1500, APMA 1550, and CSCI 1450.

2 CSCI 1010 may be used either as a math-oriented intermediate course or as an advanced course. CSCI 1010 was formerly known as CSCI 0510. They are the same course and hence only one may be taken for credit.

3 CS Pathways can be found on the Pathways (https://cs.brown.edu/degrees/undergrad/concentration-requirements/pathways-for-undergraduate-and-masters-students) page.

4 Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.

5 Students may use either ECON 1070 or ECON 1090 toward the concentration, but not both. Note that ECON 1820, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1620 and 1960 can be used for university credit and up to two 1970s may be used for university credit.

### Standard Program for the A.B. degree:

**Prerequisites (3 courses):**

- MATH 0100 Introductory Calculus, Part II
- MATH 0520 Linear Algebra
- or MATH 0540 Honors Linear Algebra
- or CSCI 0530 Coding the Matrix: An Introduction to Linear Algebra for Computer Science

**Required Courses: 13 courses: 7 Computer Science and 6 Economics**

Select one of the following series:

#### Series A

- CSCI 0150 Introduction to Object-Oriented Programming and Computer Science
- & CSCI 0160 Introduction to Algorithms and Data Structures

#### Series B

- CSCI 0170 Computer Science: An Integrated Introduction
- & CSCI 0180 Computer Science: An Integrated Introduction

#### Series C

- CSCI 0190 Accelerated Introduction to Computer Science (and an additional CS course not otherwise used to satisfy a concentration requirement; this course may be CSCI 0180, an intermediate-level course, or a 1000-level course)

#### Series D

- CSCI 0111 Computing Foundations: Data and Computer Science: An Integrated Introduction
- & CSCI 0180 Computing Foundations: Data and Computer Science: An Integrated Introduction

Two of the following intermediate courses, one of which must be math-oriented and one systems-oriented:

- CSCI 0220 Introduction to Discrete Structures and Probability (math)
- CSCI 0320 Introduction to Software Engineering (systems)
- CSCI 0330 Introduction to Computer Systems (systems)
- or CSCI 0300 Fundamentals of Computer Systems (math)
- CSCI 1010 Theory of Computation (math)

Two additional CS courses; at least one must be at the 1000-level. The other must either be at the 1000-level or be an intermediate course not already used to satisfy concentration requirements. CSCI 1450 may not be used to satisfy this requirement.

- ECON 1130 Intermediate Microeconomics (Mathematical)
- ECON 1210 Intermediate Macroeconomics
- ECON 1630 Mathematical Econometrics I

Three courses from the “mathematical-economics” group:

- ECON 1170 Welfare Economics and Social Choice Theory
- ECON 1225 Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies
- ECON 1255 Unemployment: Models and Policies
- ECON 1460 Industrial Organization (Mathematical)
- ECON 1470 Bargaining Theory and Applications
- ECON 1490 Designing Internet Marketplaces
- ECON 1640 Mathematical Econometrics II
- ECON 1545 Topics in Macroeconomics, Development and International Economics
- ECON 1660 Big Data
- ECON 1670 Advanced Topics in Econometrics
ECON 1750 Investments II
ECON 1805 Economics in the Laboratory
ECON 1820 Theory of Behavioral Economics
ECON 1850 Theory of Economic Growth
ECON 1860 The Theory of General Equilibrium
ECON 1870 Game Theory and Applications to Economics

or any graduate Economics course

Total Credits 13

1 Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required.

2 CSCI 1951K can be counted as one of them, if it has not been used to satisfy the computer science requirements of the concentration and if the student has taken either ECON 1470 or ECON 1870.

3 Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, 1960 and 1970 can be used for university credit and up to two 1970s may be used for university credit.

Honors

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments' websites. If the primary thesis advisor belongs to Economics (Computer Science), then students must have a reader in the Computer Science (respectively, Economics) department.

Professional Track

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete full-time professional experiences doing work that is related to their concentration programs, totaling 2-6 months, whereby each internship must be at least one month in duration in cases where students choose to do more than one internship experience. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Internships that take place between the end of the fall and the start of the spring semesters cannot be used to fulfill this requirement.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student's concentration advisor:

- Which courses were put to use in your summer's work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.

Mathematics-Economics Concentration Requirements

The Mathematics Economics concentration is designed to give a background in economic theory plus the mathematical tools needed to analyze and develop additional theoretical constructions. The emphasis is on the abstract theory itself. Students may choose either the standard or the professional track, both award a Bachelor of Arts degree.

Standard Mathematics-Economics Concentration

Economics Graduate Program

The department of Economics offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree. Ph.D. students can earn the A.M. on the way to the Ph.D. or can receive the A.M. if they choose not to complete the Ph.D. program. The A.M. requires passing eight courses in the areas of Microeconomics, Macroeconomics, and Econometrics. Effective the 2020-21 academic year the department will also offers a Post-Baccalaureate Certificate in Economics to select cohort of students working as Research Associates within Economics.

For more information on admission and program requirements, please visit the following website:
http://www.brown.edu/academics/gradschool/programs/economics (http://www.brown.edu/academics/gradschool/programs/economics/)

Courses

ECON 0110. Principles of Economics.
Extensive coverage of economic issues, institutions, and terminology, plus an introduction to economic analysis and its application to current social problems. Required for all economics concentrators. Prerequisite for ECON 1110, 1130, 1210 and 1620. Serves as a general course for students who will take no other economics courses and want a broad introduction to the discipline. Weekly one-hour conference required.

ECON 0170. Essential Mathematics for Economics.
This course teaches the mathematical skills useful for upper level Economics classes. Emphasis is on acquisition of tools, problem solving, intuition, and applications rather than proofs.

This course satisfies the mathematics requirement for the Economics concentration, but does not serve as a prerequisite for upper level courses in Math, Applied Math, or other departments. Students planning further courses in those areas should take MATH 1000 or MATH 1070 (which also satisfy the Economics concentration requirement) instead. Ideally, ECON 0170 should be taken before ECON 1110, or at least simultaneously.

ECON 0180A. Using Big Data to Solve Economic and Social Problems.
This course will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as those with more experience. Topics include equality of opportunity, education, racial disparities, effects of the COVID-19 pandemic, health care, climate change, criminal justice, and tax policy. In order to be eligible, first year students would have to turn in the homework assignment and attend the first class.

ECON 0180D. The Power of Data (and its Limits).
Open any newspaper, any magazine, any academic journal, you’ll find claims which rely on data. Government policies, economic data, health recommendations – all of these are based on some underlying data analysis. Data used in this context has enormous power, but it also has limits. Understanding these limits is key to using – but not mis-using – the power of data.

This first-year seminar will focus on understanding where data comes from, what we can learn from it, and what the limitations are. The course will emphasize policy-relevant economic and public health applications.

| MATH 1610 | Probability |
| MATH 1620 | Mathematical Statistics |
| APMA 1650 | Statistical Inference I |

**Analysis - one of the following:**

| MATH 1010 | Analysis: Functions of One Variable |
| MATH 1130 | Functions Of Several Variables |
| MATH 1140 | Functions Of Several Variables |

| Differential Equations - one of the following: |
| MATH 1110 | Ordinary Differential Equations |
| MATH 1120 | Partial Differential Equations |

One additional course from the Probability, Analysis, and Differential Equations courses listed above

**Total Credits 14**

1. Or ECON 1110 with permission. For students matriculating at Brown in Fall 2021 or later, note that if ECON 1110 is used, then one additional course from the mathematical-economics group will be required
2. No course may be “double-counted” to satisfy both the mathematical-economics and data methods requirement.
3. Students may use either ECON 1070 or ECON 1090 toward the concentration, but not both. Note that ECON 1620, ECON 1960, and ECON 1970 (independent study) cannot be used for concentration credit. However, ECON 1620 and ECON 1960 can be used for university credit and up to two 1970s may be used for university credit.
4. MATH 1130 is a prerequisite for MATH 1140.

**Honors:**

Students who meet stated requirements are eligible to write an honors thesis in their senior year. Students should consult the listed honors requirements of whichever of the two departments their primary thesis advisor belongs to, at the respective departments’ websites.

**Professional Track:**

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete full-time professional experiences doing work that is related to their concentration programs, totalling 2-6 months, whereby each internship must be at least one month in duration in cases where students choose to do more than one internship experience. Such work is normally done at a company, but may also be at a university under the supervision of a faculty member. Internships that take place between the end of the fall and the start of the spring semesters cannot be used to fulfill this requirement.

On completion of each professional experience, the student must write and upload to ASK a reflective essay about the experience addressing the following prompts, to be approved by the student’s concentration advisor:

- Which courses were put to use in your summer’s work? Which topics, in particular, were important?
- In retrospect, which courses should you have taken before embarking on your summer experience? What are the topics from these courses that would have helped you over the summer if you had been more familiar with them?
- Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
- What did you learn from the experience that probably could not have been picked up from course work?
- Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
- Would you recommend your summer experience to other Brown students? Explain.

For more information about admission, program requirements, please visit the following website:
http://www.brown.edu/academics/gradschool/programs/economics

ECON 0180E. The Economics of Higher Education.
Some of the most important and controversial policy issues we face today concern higher education—such as whether college should be free, college debt should be forgiven, Federal Pell Grants should be increased, and colleges should embrace online instruction. This seminar will provide students with the skills and knowledge needed to understand and analyze these issues and is structured in two parts. In Part 1 (Basics), students will be given a grounding in how the U.S. system of higher education is structured and financed. Part 2 (Issues) will take a data-driven approach to assessing key questions about higher education, with applications to state and national policy issues. Guest speakers will occasionally visit the seminar to share their expertise with the class.

In order to be eligible, first year students would have to turn in the homework assignment and attend the first class.

See Class Notes for additional information

ECON 0200. 20th Century Political Economy.
This course covers major debates in the 20th century political economy, starting with the Bolshevik Revolution and the Treatise of Versailles. We examine the Great Depression, the New Deal, and Postwar economic planning in the US and UK. We turn to consider important periods in the second half of the 20th century, including Indian Economic Planning, Bretton Woods, and inflation in the 1970s. The course ends with a consideration of trade, trade deficits, sovereign debt crises, and austerity.

The aim is to develop an understanding of both sides of key debates in political economy.

ECON 0300. Health Disparities.
This seminar will examine the causes and consequences of racial and ethnic disparities in health in the United States, and their relationship to economic disparities. Although the course will be taught primarily from an economics perspective, it will draw on literature from sociology, demography and epidemiology. Enrollment determined by lottery.

This course will thoroughly investigate the nature of free inquiry and social restraints on public discourse, beginning with Plato and culminating with some contemporary case studies. We will explore ideas concerning freedom of expression and conscience, including the role of the individual, the dissent, and the state. The course will be divided into two parts. In the first part, we’ll look at texts -- ancient and modern -- dealing with these issues. In the second part, we turn to case studies, exploring issues which are so contentious that the manner in which they are discussed is subject to various measures of ‘political correctness’ that potentially amount to restrictions on freedom of inquiry.

A course designed primarily for students who do not plan to concentrate in economics but who seek a basic understanding of the economics of less developed countries, including savings and investment, health and education, agriculture and employment, and interactions with the world economy, including trade, international capital flows, aid, and migration.

ECON 0520. The Economics of Gender Equality and Development.
This course shows how an economics lens can be useful in understanding disparities in gender outcomes; how these disparities evolve over the development process; why closing gender gaps matters for development; and the roles of public policies and private action. Among the outcomes examined are human capital, access to economic opportunities, and agency or the ability to make choices and take actions. We will use the tools of economics think about how individuals and families make decisions, respond to opportunities generated by markets, and are affected by the parameters outlined by both formal and informal institutions and social norms.

Basic accounting theory and practice. Accounting procedures for various forms of business organizations.

Brown has partnered with Hult International Business School (https://www.hult.edu/lp/hult-brown-bootcamp/) for this program - renowned for its skill-focused approach to education and commitment to learning by doing. This course meets from May 24-July 27, 2021. The Business Fundamentals Bootcamp enables you to learn and practice the fundamental skills needed for innovation within a business setting. Rapidly evolving labor markets in the Age of AI place a premium on your ability to articulate, analyze, assess, and execute on innovative ideas. You will learn new business concepts in the areas of Marketing & Branding, Financial Acumen, and New Product Planning. You will integrate these skills by applying them to a growth challenge for an international food company - Grupo Bimbo ($15B Revenues, Household Brands: Thomas’ Muffins, SaraLee, Entenmanns). Throughout the course, you will test your business hypotheses and iterate your ideas. On a weekly basis you will turn concepts learned into practical skills, working in teams. The program culminates with a competitive pitch to company executives. Faculty will challenge and support you with practice opportunities -- individually and in collaborative teams. Your faculty for this immersive experience will be a combination of Brown faculty, Hult faculty, senior executives and practitioners, and coaches.

ECON 1070. Race, Crime, and Punishment in America.
This new course will use the perspectives of economics to examine the causes and consequences of high levels of incarceration in the United States, especially as it relates to the social disadvantage of African Americans. Quantitative analysis will be used sparingly. Students will be evaluated based on three short writing assignments. Issues examined include: racial disparities in punishment; the impact of crime on communities; policing and race relations in American cities; stereotypes and the economics of crime; the governing of prisons and the limits of punishment.

ECON 1090. Introduction to Game Theory.
This course introduces students to game theory, the study of interactive decision making. Students will learn about major solution concepts, gaining a critical understanding of their meaning and limitations, as well as an ability to compute them. Game theory will then be applied to gain insight into a wide range of issues.

ECON 1110. Intermediate Microeconomics.
Tools for use in microeconomic analysis, with some public policy applications. Theory of consumer demand, theories of the firm, market behavior, welfare economics, and general equilibrium.

ECON 1130. Intermediate Microeconomics (Mathematical).
Microeconomic theory: Theories of the consumer and firm, competitive equilibrium, factor markets, imperfect competition, game theory, welfare economics, general equilibrium. May not be taken in addition to ECON 1110.

Advanced microeconomic theory class for undergraduates. Building on the intermediate microeconomics course, the approach is more formal and mathematically more rigorous, presenting arguments and expecting students to carefully develop techniques in order to understand and produce logical proofs. Topics include the efficiency and coalitional stability properties of markets, as well as other mechanisms to allocate resources. Market failures are discussed, including advanced treatments of externalities, public goods, and asymmetric information. The second part of the course will discuss a number of topics in social choice theory, including different normative criteria of compensation, life and death choices, majority voting, Arrow’s impossibility theorem.
ECON 1200. History of Economic Thought. This course covers the history of modern (20th century) economics and economic thinking from the marginal revolution through the first half of the 20th century. The aim will be to develop an understanding of the origin and evolution of central concepts in economic theory, including subjective utility, marginal analysis, competitive markets, examine methodological disputes over positivism and formalism, and the development of general competitive equilibrium. We will consider the emergence of certain subfields in modern economics, and end with a discussion of the relevance of these ideas for economics in the 21st century.

ECON 1225. Advanced Macroeconomics: Monetary, Fiscal, and Stabilization Policies. The course is concerned with macroeconomic policy in the US, with special focus on the recent economic crisis. The main objective of the course is to introduce students to the type of models and methods used in current research in macroeconomics both in the scholarly literature but also in the practice of central banks and major policy institutions. Events of the financial crisis and the economic recession of 2007-2009 will serve to illustrate the challenges confronted by macroeconomic analysis.

ECON 1255. Unemployment: Models and Policies. This course will cover research topics related to unemployment, focusing on the models used to describe unemployment and the policies used to tackle unemployment. It will address the following questions: Why does unemployment exist? Why does unemployment vary across countries? Why does unemployment vary over time? What is the socially optimal level of unemployment? How should unemployment insurance, monetary policy, and fiscal policy respond to an increase in unemployment during a recession?

ECON 1300. Education, the Economy and School Reform (EDUC1600). Interested students must register for EDUC 1150.

ECON 1301. Economics of Education I. This course teaches students how to use microeconomics to analyze a broad array of education policy issues. The departure of this course from ECON 1110 is the emphasis on studying microeconomics in applied settings, and in particular, using microeconomic concepts to think about, analyze, and solve policy questions in education.

ECON 1305. Economics of Education: Research. This course will cover academic research in the Economics of Education. Topics include production of student achievement, measuring student achievement, funding of public education, and school choice and school vouchers.

ECON 1315. Health, Education, and Social Policy. The goal of the course is to help students to use economic theory and modern empirical methodology to think critically about the relative costs and benefits of health and education policies. By the end of the course students should feel comfortable critically evaluating proposals meant to increase human capital through school reforms, increased access to health care, or improved health environments.

ECON 1340. Economics of Global Warming. The problem of global warming can be usefully be described with the following simple economic model. We face a tradeoff between current consumption, future consumption, and future climate, have preferences over consumption and future climate and would like to choose our optimal climate/consumption bundle. This course is organized around filling in the details required to make this model useful, characterizing the optimal climate/consumption path suggested by the model, and finally, investigating policies to achieve the optimal path.

ECON 1350. Environmental Economics and Policy. This course considers environmental issues through an economic lens. It is loosely arranged around four questions: why are markets so powerful? Why do markets frequently fail to deliver environmental goods? Can markets be harnessed to deliver environmental goods? If so, why don’t we do that?

ECON 1355. Environmental Issues in Development Economics. Examines environmental issues in developing countries, including air and water pollution, land use change, energy use, and the extraction of natural resources. Uses microeconomic models of households and firms, linking household/firm decision-making on environmental issues to choices in labor, land, and product markets. Develops basic empirical techniques through exercises and a project. For readings, relies exclusively on recent research to illustrate the roles of econometrics and economic theory in confronting problems at the nexus of the environment, poverty, and economic development.

ECON 1360. Health Economics. This course introduces students to the issues, theory and practice of health economics in the US. Topics include the economic determinants of health, the market for medical care, the market for health insurance and the role of the government in health care. Course work includes data analyses using the program STATA.

ECON 1370. Race and Inequality in the United States. We examine racial inequality in the United States, focusing on economic, political, social and historical aspects. Topics include urban poverty, employment discrimination, crime and the criminal justice system, affirmative action, immigration, and low wage labor markets. Black/white relations in the US are the principle but not exclusive concern.

ECON 1375. Inequality of Opportunity in the US. This course examines empirical evidence on inequality of opportunity in the US. We cover recent work in economics that measures the importance of parents, schools, health care, neighborhoods, income, and race in determining children’s long-term labor market success, and implications of these findings for US public policy. We will also place the empirical work in historical and philosophical context and cover a variety of statistical issues.

ECON 1385. Intergenerational Poverty in America. In the US, the children of poor parents are eight times more likely to grow up to be poor than the children of high-income parents. What accounts for this? In this course we try to answer this question by examining how poverty influences child development and, ultimately, their income and wellbeing in adulthood. We will begin the course with an overview of poverty and intergenerational mobility in America, looking at historical trends and placing the US in international context. To understand why poverty is persistent across generations in the US, we begin with the economic model of skill formation in childhood. We then consider the extent of research explaining how a number of factors explain the intergenerational persistence of poverty, including parental time, pollution, infant and child health, the justice system, neighborhoods, stress, and preschool/education systems.

ECON 1390. Inequality of Income, Wealth, and Health in the United States. Inequality of income, wealth, and health, with a focus on the United States. Topics include measurement of inequality, mobility, and poverty; the mapping from individual characteristics to income and wealth; transmission of economic status between generations; the division of national income between capital and labor; factors causing the rise in inequality in the United States since 1980; including technological change and globalization; differential trends in life expectancy, morbidity, and health behaviors among income groups; government policies that impact inequality, including progressive taxation, the minimum wage, support of unionization, public education, and immigration policy; and the political economy of redistributive policies.
ECON 1400. The Economics of Mass Media.  
The mass media shape our culture and politics but are also shaped by their economic incentives. In this course we will use tools from microeconomics and econometrics to study the effects of mass media on economic, social and political behavior, and to study the factors that shape media content and availability. We will develop implications for business and public policy. Students will complete weekly readings, bi-weekly assignments, a take-home midterm, and a final paper and presentation. Class time will be devoted to a mix of lecture and discussion of readings and lecture topics.

ECON 1410. Urban Economics.  
The first part of the course covers the set of conceptual and mathematical models widely used to understand economic activity both between and within cities. The second part of the course examines various urban policy issues including urban transportation, housing, urban poverty, segregation and crime. The course makes extensive use of empirical evidence taken primarily from the United States.

ECON 1420. Industrial Organization.  
A study of industry structure and firm conduct and its economic/antitrust implications. Theoretical and empirical examinations of strategic firm interactions in oligopolistic markets, dominant firm behaviors, and entry deterrence by incumbents. Economics of innovation: research and development activities and government patent policies. Network effects, and why market share critical mass matters for firm survival in certain markets.

ECON 1430. The Economics of Social Policy.  
This course will cover research topics in the economics of social policy. The course will focus on understanding the context for key social policies in health, education, social welfare and other areas as well as understanding the methods that economists use to generate causal impacts of these policies.

ECON 1440. The Economic Analysis of Political Behavior.  
Slow economic growth, controversial policy, and over a decade of continuous war have led many to question the extent to which government is a force for the common good. Blame is often assigned to specific politicians or ideological perspectives. Public choice economics instead analyzes the incentive structure within which political decisions take place, seeking to uncover the forces guiding the behavior of voters, legislators, judges, and other political agents. This course will examine the insights and limitations of the public choice perspective in the context of electoral politics, legislation, bureaucracy and regulation, and constitutional rules.

Positive and normative study of the organizations that comprise and the institutional structures that characterize a modern mixed market economy. Theoretical efficiency and potential limitations of private enterprises and markets including (a) why some market actors are organizations (e.g., companies), (b) effort elicitation problems in organizations, (c) the problem of cooperation in traditional versus behavioral economics, and (d) alternative kinds of organization (including proprietorships, corporations, nonprofits, government agencies). Roles of government, and problems of government failure, including the collective action problem of democracy. State-market balance and contemporary controversies over the economic system in light of the 2008 financial crisis.

ECON 1460. Industrial Organization (Mathematical).  
A more mathematical treatment of industry structure, firm conduct, and economic/antitrust implications. Theoretical and empirical examinations of strategic firm interactions in oligopolistic markets, dominant firm behaviors, and entry deterrence by incumbents. Economics of innovation: research and development activities and government patent policies. This course uses mathematical methods from intermediate microeconomics, including game theory, and from econometrics, including regression analysis.

ECON 1465. Antitrust and Competition.  
Antitrust law shapes competition through public policy based on economics and economic incentives. In this course we will use tools from microeconomics, econometrics, and industrial organization to learn about Antitrust policy and regulation of competition in the marketplace. We will learn about antitrust through the context of economics and Antitrust cases over the past century. Students will complete weekly readings, and a final paper. Class time will be devoted to a mix of lecture and discussion of readings and lecture topics.

Bargaining theory is emerging as an important area within the general rubric of game theory. Emphasis is on providing a relatively elementary version of the theory in order to make it accessible to a large number of students. Covers introductory concepts in game theory, strategic and axiomatic theories of bargaining and their connections, applications to competitive markets, strikes, etc.

ECON 1480. Public Economics.  
This course is an introduction to the economics of the public sector. We will cover theoretical and empirical tools of public economics and apply these tools to a wide range of issues including externalities, public goods, collective choice, social insurance, redistribution and taxation. The course will focus on questions such as: What should government do? How much should governments insure individuals against misfortune? How much should governments redistribute resources from high-income to low-income households? Throughout the course we will emphasize real-world empirical applications rather than hypothetical examples.

ECON 1490. Designing Internet Marketplaces.  
How has the digital economy changed market interactions? The goal of this course is to help you think critically, using economic theory, about the future of the digital economy. What are important economic activities now being conducted digitally? How has digital implementation of these activities changed economists’ classical views and assumptions? What are ways in which we can use economics to engineer “better” digital markets? We will focus on several real-world markets (eg. eBay, Airbnb, Google advertising, Uber, Tinder, TaskRabbit) and topics (eg. market entry, pricing, search, auctions, matching, reputation, peer-to-peer platform design).

ECON 1500. Current Global Macroeconomic Challenges.  
We will study some of the most important macroeconomic challenges that the world faces today including secular stagnation, inequality, COVID-19, climate change, fiscal sustainability. This course aspires to make you a better economist and a better citizen of the world. We will talk about the “big stuff” that really matters, the economic forces that shape the lives of billions of people — including your own. By the end of the course, you will feel more comfortable evaluating economic policy aimed at tackling complex real-world economic issues that are riddled with tradeoffs and uncertainty.

ECON 1510. Economic Development.  
This course is an introduction to development economics and related policy questions. It discusses the measurement of poverty and inequality; growth; population change; health and education; resource allocation and gender; land and agriculture; and credit, insurance, and savings. The course provides a theoretical framework for the economic analysis of specific problems associated with developing economies, and introduces empirical methods used to evaluate policies aimed at solving these problems. By the end of the class, students will be able to discuss some of the “hot topics” in development, like microfinance, family planning, or the problem of “missing women” in South-East Asia.

ECON 1530. Health, Hunger and the Household in Developing Countries.  
Microeconomic analysis of household behavior in low income societies emphasizing the economic determinants of health and nutrition and the evaluation of policy. The relationship among health, nutrition, fertility, savings, schooling, labor productivity, wage determination, and gender-based inequality. Emphasizes theoretically-based empirical research.
ECON 1540. International Trade.

ECON 1545. Topics in Macroeconomics, Development and International Economics.
This class is a senior seminar that covers selected topics at the intersection of macroeconomics, economic development and international trade. The leading theme of the class is the determinants of the observed cross-country differences in income per capita and growth rates. We will consider a wide range of theories to explain such disparities in economic outcomes, with a special focus on theories that stress problems in financial markets. We will also study the role of wealth inequality. We may also cover structural change, the link between volatility, diversification and development, and selected topics in international trade.

ECON 1550. International Finance.
The balance of payments; identification and measurement of surpluses and deficits; international monetary standards; the role of gold and paper money; government policies; free versus fixed exchange rates; international capital movements; war and inflation; the International Monetary Fund.

ECON 1560. Economic Growth.
A theoretical and empirical examination of economic growth and income differences among countries. Focuses on both the historical experience of countries that are currently rich and the process of catch-up among poor countries. Topics include population growth, accumulation of physical and human capital, technological change, natural resources, income distribution, geography, government, and culture.

ECON 1565. Income Inequality.
This course examines the macroeconomic dimensions of income inequality. How much of national income is paid to capital and how much to labor? What determines the gap in wages between workers with different skill levels, as well as variation in wages within skill groups? How have changes in technology, openness to trade, government policy, and the quantities of factors of production contributed to changes in these relative returns? What determines the aggregate quantities of different factors of production as well as their distribution among individuals? How does inequality feed back to affect macroeconomic stability and long term growth?

ECON 1570. The Economics of Latin Americans.
This course introduces students to the economic study of Latin Americans (both in the US and abroad). Topics include the determinants of economic development, institutions and growth, imperialism, conflict, immigration and discrimination.

ECON 1590. The Economy of China since 1949.
This course examines the organization, structure, and performance of the economy of China. Emphasis is placed on the changing economic system including the roles of planning and markets and government economic strategy and policies. The pre-reform period (1949-78) receives attention especially as it influences developments in the market-oriented reform period since 1978. Topics include rural and urban development, industrialization and structural change, rural-urban migration, income inequality and growth, the role of international trade and investment. Both analytical and descriptive methods are used.

ECON 1600. Education, the Economy and School Reform.
This seminar examines the linkages between educational achievement and economic outcomes for individuals and nations. We study a range of system, organizational, and personnel reforms in education by reviewing the empirical evidence and debating which reforms hold promise for improving public education and closing persistent achievement gaps. Understanding and critiquing the experimental, quasi-experimental and descriptive research methods used in the empirical literature will play a central role in the course.

ECON 1620. Introduction to Econometrics.

This class will cover the basics of applied research in economics. We will cover how we use economic theory to formulate a hypothesis to test and how we use data to test our hypothesis. As part of the coursework, students will be exposed to topics across multiple fields of applied economic research (e.g. health, labor, political economy, urban economics, development, etc.) that can be explored in greater detail in more advanced classes. Students will read and discuss papers published in professional journals and perform data analysis.

ECON 1630. Mathematical Econometrics I.
Advanced introduction to econometrics with applications in finance and economics. How to formulate and test economic questions of interest. The multivariate linear regression model is treated in detail, including tests of the model’s underlying assumptions. Other topics include: asymptotic analysis, instrumental variable estimation, and likelihood analysis. Convergence concepts and matrix algebra are used extensively.

ECON 1640. Mathematical Econometrics II.
Continuation of ECON 1630 with an emphasis on econometric modeling and applications. Includes applied topics from labor, finance, and macroeconomics.

Financial time series, for example, asset returns, options and interest rates, possess a number of stylized features that are analyzed using a specific set of econometric models. This course deals with an introduction to such models. It discusses time series models for analyzing asset returns and interest rates, (GARCH) models to explain volatility, models to explain extreme events which are used for the Value at Risk and models for options prices.

ECON 1660. Big Data.
The spread of information technology has lead to the generation of vast amounts of data on human behavior. This course explores ways to use this data to better understand the societies in which we live. The course weaves together methods from machine learning (OLS, LASSO, trees) and economics (reduced form causal inference, economic theory, structural modeling) to answer real world questions in a sequence of projects. We will use these projects as a backdrop to weigh the importance of causality, precision, and computational efficiency. Knowledge of basic econometrics and programming is assumed.

ECON 1670. Advanced Topics in Econometrics.
This class will present advanced topics in Econometrics. The focus will be on cross-sectional methods; the class will start with some basic results needed for any advanced econometrics work, before giving an introduction to asymptotic and identification techniques and concepts, with some applications.

ECON 1680. Machine Learning, Text Analysis, and Economics.
Economists need advanced methods to study data that is complex, high-dimensional, and unstructured. This course highlights key challenges of working with such data in economics and what machine learning and text analysis methods can be used to address them. We will cover applications of unsupervised and supervised learning for both numerical and text data. Students will leave the course with a machine learning project and a text analysis project that will function as a research portfolio they can show future employers or graduate programs. Lectures will introduce students to new material and include discussions of current economics research using machine learning and text analysis methods. Recitation sessions will alternate between two types: first, will be applied exercises demonstrating methods covered in class, and second, will focus on developing writing assignments and providing peer feedback.

ECON 1710. Investments I.
The function and operation of asset markets; the determinants of the prices of stocks, bonds, options, and futures; the relations between risk, return, and investment management; the capital asset pricing model, normative portfolio management, and market efficiency.
**ECON 1720. Corporate Finance.**
A study of theories of decision-making within corporations, with empirical evidence as background. Topics include capital budgeting, risk, securities issuance, capital structure, dividend policy, compensation policy, mergers and acquisitions, leveraged buyouts and corporate restructuring.

**ECON 1730. Venture Capital, Private Equity, and Entrepreneurship.**
This course will use a combination of lectures and case discussions to prepare students to make decisions, both as entrepreneurs and venture capitalists, regarding the financing of rapidly growing firms. The course will focus on the following five areas:
1. Business valuation
2. Financing
3. Venture Capital Industry
4. Employment
5. Exit

**ECON 1740. Mathematical Finance.**
The course is an introduction to both the economics and the mathematics of finance. Concentrating on the probabilistic theory of continuous arbitrage pricing of financial derivatives, it provides full treatment of Black-Scholes option pricing and its extensions to the case of stochastic volatility and VIX derivatives. More generally, the techniques of change of measure and risk-neutralization are extensively studied, including in the context of fixed-income securities. Finally, implications for financial econometrics (stochastic volatility processes, models of stochastic discount factors) are briefly discussed.

**ECON 1750. Investments II.**
Individual securities: forwards, futures, options and basic derivatives, pricing conditions. Financial markets: main empirical features, equity premium and risk-free rate puzzles, consumption based asset pricing models, stock market participation, international diversification, and topics in behavioral finance.

**ECON 1760. Financial Institutions.**
This course analyzes the role of financial institutions in allocating resources, managing risk, and exerting corporate governance over firms. After studying interest rate determination, the risk and term structure of interest rates, derivatives, and the role of central banks, it takes an international perspective in examining the emergence, operation, and regulation of financial institutions, especially banks.

**ECON 1770. Fixed Income Securities.**
The fixed income market is much larger than the stock market in the U.S. Topics covered in this course include basic fixed income securities, term structure, hedging interest rate risk, investment strategies, fixed income derivatives, mortgage-backed securities and asset-backed securities.

**ECON 1780. Advanced Topics in Corporate Finance.**
This advanced, case-based seminar is focused on delving deeply into several key pillars of corporate finance: valuation, financing, cash management, and, importantly, business ethics. We will build upon concepts presented in earlier finance courses, in particular, ECON 1710 and ECON 1720, and will use MBA-level cases to explore in much greater detail several concepts introduced in these classes. This course is rigorous - we will be analyzing at least one case each week and qualitative and quantitative case write-ups will be required throughout the semester, as well as a comprehensive final project. We will have guest speakers throughout the semester.

**ECON 1805. Economics in the Laboratory.**
There is a growing literature on experimental economics, which sheds light on whether the predictions of economic theory materialize in controlled, laboratory settings. We will start by studying the methodology of experimental economics. We then examine a range of classic and more recent topics that have been taken to the laboratory. Topics of interest will include fairness, bargaining, behavior in games and the impact of repeated interactions, rationality of decision-making, and the impact of communication, among others.

**ECON 1820. Theory of Behavioral Economics.**
This course provides a formal introduction to behavioral economics, focusing mostly on individual decision making. For different choice domains, we start by analyzing the behavior implied by benchmark models used by economists (e.g. rational choice, expected utility, exponential discounting). Experimental and empirical evidence is then used to highlight some limitations of these models, and to motivate new models that have been introduced to account for these violations. We will cover, for instance, models of limited attention, non-expected utility, and hyperbolic discounting.

**ECON 1825. Behavioral Economics and Public Policy.**
This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economic. The course will emphasize careful interpretation and production of new evidence on relevant departures, formalizing this evidence into models that can generate sharp predictions using traditional economic approaches, and exploring implications of those models for public policy.

**ECON 1830. Behavioral Finance.**
Over the past several decades, the field of finance has developed a successful paradigm based on the notions that investors and managers are generally rational and that the prices of securities are generally “efficient.” In recent years, however, theoretical and empirical research has shown this paradigm to be insufficient in describing the various features of actual financial markets. In this course we will examine how the insights of behavioral finance complement the traditional paradigm and shed light on the behavior of asset prices, corporate finance, financial crises, and other phenomena.

**ECON 1850. Theory of Economic Growth.**
Analysis of the fundamental elements that determine economic growth. It examines the role of technological progress, population growth, income inequality, and government policy in the determination of (a) the pattern of economic development within a country, and (b) sustainable differences in per capita income and growth rates across countries.

**ECON 1860. The Theory of General Equilibrium.**
Existence and efficiency of equilibria for a competitive economy; comparative statistics; time and uncertainty.

**ECON 1870. Game Theory and Applications to Economics.**

**ECON 1960. Honors Tutorial for Economics Majors.**
Students intending to write an honors thesis in economics must register for this class. The goal is to help students with the process of identifying and defining feasible topics, investigating relevant background literature, framing hypotheses, and planning the structure of their thesis. Each student must find a thesis advisor with interests related to their topic and plan to enroll in ECON 1970 during the final semester of senior year. Note this course does not count toward Economics concentration credit.

**ECON 1970. Independent Research.**
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

**ECON 2010. Mathematics for Economists.**
Techniques of mathematical analysis useful in economic theory and econometrics. Linear algebra, constrained maximization, difference and differential equations, calculus of variations.
This course introduces students to basic concepts in software engineering and scientific computing as preparation for conducting frontier research in all fields of economics. Topics in software engineering will include version control, automation, abstraction, parallel processing, and object-oriented programming. Topics in scientific computing and numerical methods will include programming basics, floating-point arithmetic, numerical differentiation and integration, equation-solving, and numerical optimization. Coding will be in Python and applications will focus on topics likely to arise in economics research. Key concepts will be introduced in interactive lectures and reinforced in in-class group work and at-home assignments.

ECON 2030. Introduction to Econometrics I.
The probabilistic and statistical basis of inference in econometrics.

ECON 2040. Econometric Methods.
Applications of mathematical statistics in economics. The nature of economic observations, cross-section and time series analysis, the analysis of variance and regression analysis, problems of estimation.

ECON 2050. Microeconomics I.
Decision theory: consumer's and producer's theory; general competitive equilibrium and welfare economics: the Arrow-Debreu-McKenzie model; social choice and implementation.

ECON 2060. Microeconomics II.
Economics of imperfect information: expected utility, risk and risk aversion, optimization under uncertainty, moral hazard, and self-selection problems. Economics of imperfect competition: monopoly; price discrimination; monopolistic competition; market structure in single shot, repeated and stage games; and vertical differentiation.

ECON 2070. Macroeconomics I.
Consumption and saving, under both certainty and uncertainty; theory of economic growth; real business cycles; investment; and asset pricing.

ECON 2080. Macroeconomics II.
Money, inflation, economic fluctuations and nominal rigidities, monetary and fiscal policy, investment, unemployment, and search and coordination failure.

ECON 2090. Topics in Microeconomics: Decision Theory and Evidence.
Decision theory is the use of axiomatic techniques to understand the observable implications of models of choice. It is central to the incorporation of psychological insights into economics, and provides a vital link between theory and experimental economics. This course covers standard economic models of choice in different domains - choice under risk, choice under uncertainty and intertemporal choice. It looks at key topics from behavioral economics: choice with incomplete information, reference dependent preferences, temptation and self control, the Allais paradox, ambiguity aversion and neuroeconomics. In each case it relates the predictions of theory to experimental data on behavior.

ECON 2110D. Topics on Game Theory.
No description available.

ECON 2110. Topics in Macroeconomics.
Business cycle analysis with an emphasis on heterogeneous-agent economics and the interaction between business cycles and economic growth.

The purpose of this course is to develop formal tools for building formal, theoretical economic models to support empirical research. This class is aimed at graduate students conducting applied research who have begun conducting independent research. The class will first introduce and review important topics from game theory used in constructing models, but with an applied focus, taking into account common data restrictions and limitations. Emphasis will be placed on tools which can be used to complement existing research goals. Students will be expected to participate in class discussions, weekly assignments, and presentations/reviews of existing papers. Class time will be split between lectures and group discussions/presentations. The main deliverable for the course is to add a formal modeling section to an existing/ongoing independent research project.

ECON 2150. Market Design.
This is a theoretical course in market design, specifically studying the theory and applications of matching. It is designed for students interested in market and mechanism design, and may also be of interest to students interested in utilizing applied theory in their research. The course will begin with an overview of matching markets, but will quickly move to recent advances and open research topics.

ECON 2160. Risk, Uncertainty, and Information.
Advanced topics in the theories of risk, uncertainty and information, including the following: Decision making under uncertainty: expected and non-expected utility, measures of risk aversion, stochastic dominance. Models with a small number of agents: optimal risk-sharing, the principal-agent paradigm, contracts. Models with a large number of agents: asymmetric information in centralized and decentralized markets. Implementation theory.

In this course we will survey some classic theoretical papers published post-1980, drawn from a variety of fields in economics. Our emphasis will be on mastering modeling techniques in these papers, with an eye toward applying those techniques to new problems. The papers fall within the broad areas of industrial organization, information economics and the theory of incentives.

ECON 2190A. Cooperative Game Theory.
No description available.

ECON 2190B. General Equilibrium Theory.
No description available.

ECON 2190C. Topics in Economic Theory.
No description available.

ECON 2190D. Topics on Game Theory.
First, we will discuss the several elements that characterize a two-sided matching market and the concept of setwise-stability versus core. Then, we will model several of these markets (one-to-one, many-to-one and many-to-many, in the discrete and continuous cases) under the game-theoretic approach and will define for all of them the stability concept, establishing its relationship with the core and the competitive equilibrium concepts. Afterwards, we will introduce the theory of stable matching model by focusing on both the cooperative and non-cooperative aspects of the one-to-one matching markets.

ECON 2190E. Topics in Economics: Economics and Psychology.
This course is about the challenges that economic theorists face in their quest for economic models in which decision makers have a "richer psychology" than prescribed by textbook models. The enrichment takes two forms: (i) broadening the set of considerations that affect decision makers' behavior beyond simple, material self-interest; (ii) relaxing the standard assumption that agents have unlimited ability to perceive and analyze economic environments, and that they reason about uncertainty as "Bayesian statisticians". Special emphasis will be put on the implications of "psychologically richer" models on market behavior.

ECON 2210. Political Economy I.
An introduction to political economy, focusing especially on the political economy of institutions and development. Its purpose is to give a good command of the basic tools of the area and to introduce at least some of the frontier research topics. The readings will be approximately evenly divided between theoretical and empirical approaches.
ECON 2260. Political Economy I.
This first course in political economy provides theoretical and empirical coverage of the application of economic analysis to political behavior and institutions. This course is designed for students wishing to specialize in political economy but may also be useful for students specializing in related areas, such as development economics and macroeconomics. After starting with a basic overview of candidates and voters, we then turn to specific topics in the areas of electoral systems, legacies and legislative bargaining, the role of the media, local public finance, and fiscal federalism.

ECON 2270. Political Economy II.
This is the second course in the political economy sequence. It continues the theoretical and empirical coverage of the political economy course to political behavior and institutions. This course is designed for students wishing to specialize in political economy. A variety of topics will be covered paying special attention to the formation of skills necessary to become a producer of research and moving away from being just a consumer.

ECON 2310. Labor Economics.
This course teaches core topics in labor economics including labor supply, labor demand, simple search models, and a series of additional selected topics. The primary focus will be on linking theoretical models to tests in the empirical literature. We will typically cover papers and topics in detail, rather than survey the literature. When required, we also cover tools in applied econometrics.

ECON 2320. Applied Methods.
This course examines identification issues in empirical microeconomics. The focus on the sensible application of econometric methods to empirical problems in economics and policy research. The course examines issues that arise when analyzing non-experimental data and provides a guide for tools that are useful for applied research. By the end of the course, students should have a firm grasp of the types of research designs and methods that can lead to convincing analysis and be comfortable working with large-scale data sets.

ECON 2330. Topics in Labor Economics.
The course introduces students to procedures used to extract evidence from data and to perform rigorous causal inference in order to evaluate public policy on issues such as schooling, the return to education and from data and to perform rigorous causal inference in order to evaluate public policy on issues such as schooling, the return to education and the evolution of inequality. In addition to these descriptives, it focuses on the fetal origins of disease, non-marital and teen fertility, the evolution of gaps in human capital, models of parental investment, pre-school environments, the impact of income and in-kind transfer programs on child health and well-being, neighborhood influences, adolescent risky behavior.

ECON 2350. Inequality and Social Policy.
This is a survey course about economic and social inequality with a focus on the applied methods used to examine inequality. The course will provide a broad perspective on the causes and consequences of inequality, develop an understanding of the data and methods used to measure and analyze changes in income and wellbeing, and review selected topics relating to anti-poverty and social policy programs.

ECON 2350B. Inequality and Public Policies.
This course on economic inequality provides an overview of the most recent empirical research on the extent, the anatomy and the historical evolution of inequality. In addition to these descriptives, it focuses on the causes of inequality, covering research designs from the research frontier. The course also covers the role of government policies, such as anti-poverty programs and progressive taxes on income and on capital, in affecting inequality.

ECON 2360. Economics of Health and Population.
This course is designed to do the following three things: 1) build on your knowledge of the methodological problems and approaches in applied microeconomics with applications from the health economics literature; 2) survey the major topics in Health Economics, and 3) better prepare you to write an empirical microeconomics thesis. By the end of this course you should understand how to draw credible inference using non-experimental data and be able to contribute to public policy debates regarding health and medical care in the US.

ECON 2370. Inequality: Theory and Evidence.
This course uses economic theory to study the problems of inequality. The emphasis is two-fold: (1) to explain persistent resource disparities between individuals or social groups; and, (2) to assess the welfare effects of various equality-promoting policies. Topics include racial stereotypes, residential segregation, distributive justice, incentive effects of preferential policies, dysfunctional identity, and endogenous inequality due to the structure of production and exchange.

ECON 2380. The Economics of Children and Families.
We will consider the current research in economic behavior related to children, child health, and child economic and social well-being. We begin with the model of human capital development and the technology of skill formation and then proceed to empirical work. Individual topics covered will include: models of human capital and the technology of skill formation, the fetal origins of disease, non-marital and teen fertility, the evolution of gaps in human capital, models of parental investment, pre-school environments, the impact of income and in-kind transfer programs on child health and well-being, neighborhood influences, adolescent risky behavior.

ECON 2410. Urbanization.
The first part of the course covers social interactions, productivity spillovers, systems of cities models, urban growth, and rural-urban migration. The second part of the course covers topics such as durable housing, land market regulation and exclusion, and local political economy. Besides covering basic theoretical models, emphasis is placed on working through recent empirical papers on both the USA and developing countries. Prerequisites: ECON 2050 and 2060.

ECON 2420. The Structure of Cities.
This course covers standard urban land use theory, urban transportation, sorting across political jurisdictions, hedonics, housing, segregation and crime. Empirical examples are taken primarily from the United States. After taking the course, students will have an understanding of standard urban theory and of empirical evidence on various important applied urban topics. In addition, students will gain practical experience in manipulating spatial data sets and simulating urban models.

ECON 2450. Exchange Scholar Program.
ECON 2470. Industrial Organization.
The focus of this course will be on empirical models for understanding the interactions between firms and consumers in imperfectly competitive markets. Lectures and problem sets will teach canonical models and methods; class discussion will focus on applications of these methods, especially applications outside of traditional areas of industrial organization. Students who take this class will be prepared to conduct research in industrial organization or to “export” methods from industrial organization to other areas of applied microeconomics.

ECON 2480. Public Economics.
Theoretical and empirical analysis of the role of government in private economies. Topics include welfare economics, public goods, externalities, income redistribution, tax revenues, public choice, and fiscal federalism.

ECON 2485. Public Economics I.
This course covers core issues in the design of optimal government policies, and the empirical analysis of those policies in the world. In addition, this course will familiarize students with the basic empirical methods and theoretical models in applied microeconomics. Emphasis is placed on connecting theory to data to inform economic policy. Specific topics include efficiency costs and incidence of taxation, income and corporate taxation, optimal tax theory, tax expenditures and tax-based transfer programs, welfare analysis in behavioral models, and social security and retirement policy.

ECON 2490. Public Finance II.
This course examines empirical work on (1) individual taxation and (2) human capital production. The goal of the course will be to provide graduate students with an overview of recent empirical methods and findings in these areas, and to identify promising research questions for their own work.
ECON 2510. Economic Development I.
This course covers issues related to labor, land, and natural resource markets in developing countries, in partial and general equilibrium settings. Topics covered include: The agricultural household model, under complete and incomplete market assumptions; household and individual labor supply, migration, self-employment, and the informal sector; rental market frictions and sharecropping arrangements; and environmental externalities (e.g., pollution, water usage, etc.), and sustainable development. The two development courses (2510 and 2520) may be taken in any order. Students doing development as a major field are expected to complete both.

ECON 2520. Economic Development II.
This course explores questions around history, learning, industry, infrastructure, credit, savings, and behavioral economics in developing societies. It also considers how large, new datasets (‘big data’) can be used to understand and improve the lives of the poor. The two development courses (2510 and 2520) may be taken in any order. Students doing development as a major field are expected to complete both.

ECON 2530. Behavioral and Experimental Economics.
An introduction to the methodology of experimental economics with an emphasis on experiments designed to illuminate problems in organizational design and emergence of institutions, and experiments investigating the operation of social and social-psychological elements of preference such as altruism, inequality aversion, reciprocity, trust, concern for relative standing, envy, and willingness to punish norm violators. Experiments studied will include ones based on the prisoners’ dilemma, dictator game, ultimatum game, and especially the voluntary contribution mechanism (public goods game) and the trust game. Junior and seniors in the APMA-Economics, Math-Economics and CS-Economics may enroll with instructor’s permission.

ECON 2580. International Trade.
General equilibrium analysis of the theory of international trade and trade policy under perfect competition; trade under imperfect competition; strategic trade policy; trade and growth; and the political economy of trade policy determination. Empirical analysis of trade theories and policy. Additional topics include the theory of preferential trading areas, trade and labor, and the analytics of trade policy reform.

ECON 2590. Topics in International Economics.
Advanced theoretical and empirical research topics in international economics emphasizing positive and normative analysis of trade, trade policy and international trading agreements, policy reform and stabilization, exchange rate determination, sovereign debt and currency crises and optimum currency areas.

ECON 2600. Bayesian and Structural Econometrics.
This course will cover a number of topics in Bayesian econometrics and estimation of structural dynamic discrete choice models. The Bayesian econometrics part of the course will start with introductory textbook material (Geweke, 2005, Contemporary Bayesian Econometrics and Statistics, denoted by G). A list of 11 topics with corresponding readings is given below. Topics 1-5 will be covered. If time permits, a subset of topics 6-11 determined by interests of the course participants will be covered as well. Readings marked with asterisk * are not required.

ECON 2610. Applied Econometrics.
Topics in applied econometrics. Both cross-sectional and time series issues will be discussed. Special emphasis will be placed on the link between econometric theory and empirical work.

ECON 2620. Topics in Econometrics.
This course will begin with a survey of the literature on identification using instrumental variables, including identification bounds, conditional moment restrictions, and control function approaches. The next part of class will cover some of the theoretical foundations of machine learning, including regularization and data-driven choice of tuning parameters. We will discuss in some detail the canonical normal means model, Gaussian process priors, (empirical) Bayes estimation, and reproducing kernel Hilbert space norms. We will finally cover some selected additional topics in machine learning, including (deep) neural nets, text as data (topics models), multi-armed bandits, and data visualization.

ECON 2630. Econometric Theory.
Standard and generalized linear models, simultaneous equations, maximum likelihood, Bayesian inference, panel data, nonlinear models, asymptotic theory, discrete choice, and limited dependent variable models.

ECON 2640. Microeconometrics.
Topics in microeconometrics treated from a modern Bayesian perspective. Limited and qualitative dependent variables, selectivity bias, duration models, panel data.

ECON 2660. Recent Advances in the Generalized Method of Moments.
Method of Moments (GMM) and Empirical Likelihood (EL). Kernel methods for density and regression estimation. Optimal instruments and local EL. Applications to non-linear time series models, Euler equations and asset pricing.

ECON 2800. Macroeconomic Slack.
This course will cover research topics related to macroeconomic slack, both on the labor market (unemployment) and on the product market (idleness). It will address the following questions: Why does slack exist at the macroeconomic level? Why does slack vary over time? And how is this related to price flexibility or rigidity? What is the socially optimal level of slack? How should monetary policy respond to fluctuations in slack over the business cycle? How should fiscal policy respond to fluctuations in slack over the business cycle? What happens to slack at the zero lower bound?

ECON 2820. Discrete Dynamical Systems and Application to Intertemporal Economics.
This course will focus on the qualitative analysis of discrete dynamical systems and their application for Intertemporal Economics.

ECON 2830. Economic Growth and Comparative Development.
This course will explore the origins of the vast inequality in income per capita across countries, regions and ethnic groups. It will analyze the determinants of growth process over the entire course of human history and will examine the role of deeply-rooted geographical, institutional, cultural, and genetic factors in the observed pattern of uneven development across the globe.

ECON 2840. Empirical Analysis of Economic Growth.
Examines economic growth, focusing on the effects of technological change, fertility, income inequality, and government policy.

ECON 2850. Theory of Innovation-Based Growth.
Issues concerning innovation-based growth theory, including scale effects and effects of research and development versus capital accumulation. Interactions between growth and phenomena such as fluctuations, unemployment, natural resources, competition, regulation, patent policy, and international trade.

ECON 2860. Comparative Development.
Weighing the shadow of history on contemporary economic performance occupies an increasing part of the agenda among growth and development economists. This course will focus on recent contributions in the literature of the historical determinants of comparative development paying particular attention on how to integrate the use of Geographic Information Systems (GIS) in the research inquiry. The goal is to get you thinking about the big historical processes that have shaped the modern world. We will go over background concepts, critically review recent works and talk about new research designs, like that of spatial regression discontinuity.

ECON 2890C. Topics in Macro and Monetary Economics.
This is a graduate class that covers selected topics at the intersection of macroeconomics and monetary economics, for students in the second year of the PhD and above. The leading theme of the class is the current economic crisis and how it can be modeled. The syllabus is evolving.
ECON 2980D. Topics in Macroeconomics, Development and Trade.
This is a graduate class that covers selected topics at the intersection of macroeconomics, economic development and trade, for students in the second year of the PhD and above. The leading theme of the class is the determinants of the observed cross-country differences in income per capita and growth rates, with a focus on the long run. We start by reviewing theories where factor markets function perfectly and only aggregates matter. We then move to non-aggregative theories, placing special emphasis on theories of financial frictions. We spend some time studying the stochastic growth model with partially uninsurable idiosyncratic risk.

ECON 2920A. Advanced Econometrics - Microeconometrics from a Semiparametric Perspective.
This course is concerned with a rigorous, state-of-the-art introduction to Micro-econometrics. In particular, we will review many of the more recent contributions in Microeconometric Theory. While the focus of this course is theoretical, we will also be concerned with applications and the applicability of these methods. More specifically, we will consider nonparametric regression and density estimation methods, as well as methods and models for binary and categorical dependent variables, for limited dependent variables in general, and for models of selection. We will also discuss more general nonparametric IV models. Prerequisites are: Introductory Econometrics (at the level of Wooldridge (2002)).

ECON 2920B. Topics in Game Theory.
No description available.

ECON 2930. Workshop in Applied Economics.
No description available.

ECON 2950. Workshop in Econometrics.
No description available.

ECON 2960. Workshop in Macroeconomics and Related Topics.
No description available.

ECON 2970. Workshop in Economic Theory.
No description available.

ECON 2971. Race and Inequality Seminar.
This is a workshop primarily for graduate students and faculty in the Department of Economics where original research on issues of race and inequality are presented by external visitors, along with Brown faculty and graduate students. No course credit.

ECON 2980. Reading and Research.
Individual research projects. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

ECON 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

Education
Chair
John P. Papay
Rigorous coursework, real-world experience and a particular focus on urban education are all at the forefront of Brown's graduate and undergraduate education curricula. Both inside and outside the classroom, students learn how they can make a positive impact on education systems through teaching, research, and policy. Our degree programs center questions relevant for creating vibrant urban schools that prioritize inclusion and celebrate diversity. Thanks to carefully forged partnerships with schools, civic leaders and non-profit organizations in Providence, students at the graduate and undergraduate levels have ample opportunity for practice-based experiences in classrooms and boardrooms — making for a more meaningful and engaging learning experience.

- **3 Electives**: 3 credits
- **1 Experiential Component**: 0 credits

**Total Credits**: 10

### Honors

Concentrators seeking to graduate with honors must apply for honors candidacy by the end of their sixth semester. Successful candidates must meet all requirements for the concentration; maintain a minimum grade average that includes more A's than B's in Education courses (a B must be counterbalanced by two A's); and successfully complete EDUC 1900 (fall) and EDUC 1991 (spring), in which they write a senior thesis under the guidance of a thesis advisor. Honors are awarded on the basis of thesis quality, and students whose theses meet or exceed the standards established in the Department Rubric will earn honors upon graduation.

More information about writing an Honors thesis can be found on our website: [https://education.brown.edu/academics/undergraduate/honors](https://education.brown.edu/academics/undergraduate/honors/).

### Concurrent Baccalaureate/Master of Arts in Teaching Degree

Since AY 2020-2021, the Education Department offers a concurrent degree program. Brown undergraduates can apply to earn both the MAT degree and a B.A. or B.S. in a subject field (English, history, math, biology, chemistry, physics, engineering and allied concentrations) in 5 years.

Brown undergraduates apply through the Education Department during their junior year. During the first four years, candidates must complete all baccalaureate requirements and may take up to two of the required graduate courses. In the fifth year, students complete the remaining required graduate courses, including the one-year teaching residency. The minimum requirements to complete both degrees is 36 credits, from which a maximum of two may count toward the concurrent baccalaureate/MAT degree.

### Engaged Scholars Program

The Engaged Scholars Program ([http://brown.edu/go/engagedscholars/](http://brown.edu/go/engagedscholars/)) (ESP) in Education is intended for Education Studies concentrators interested in making connections between their concentration curriculum and long-term engagement, including internships, public service, humanitarian and development work, school-based education work, social service in education, or other forms of community and clinical involvement. The program combines preparation, experience, and reflection to provide students with opportunities to integrate academic learning and social engagement. (Note: This program is separate from the department's required experiential component). Students can learn more about the program and its requirements on the ESP in Education website ([https://education.brown.edu/academics/undergraduate/engaged-scholars-program/](https://education.brown.edu/academics/undergraduate/engaged-scholars-program/)).

### Education Graduate Program

The Department of Education offers two graduate programs: a Master of Arts in Teaching (M.A.T.) and a Master of Arts (A.M.) in Urban Education Policy.

#### MAT Program Information and Requirements

The MAT program offers a master's degree in one of four secondary education disciplines: English, social studies, science (biology, chemistry, or physics/engineering), or mathematics. The MAT program has an intensive one-year, full-time format, beginning with a summer semester in June and ending the following May. The program is certification-eligible for Rhode Island state teacher certification in secondary education (grades 7-12). Rhode Island is a member of the Interstate Certification Compact (ICC) ([http://www.ride.ri.gov/TeachersAdministrators/EducatorCertification.aspx](http://www.ride.ri.gov/TeachersAdministrators/EducatorCertification.aspx)), which has reciprocal agreements with 44 states.

MAT program graduate students complete 8 credits in total, consisting of a mix of one-credit and half-credit courses, including the summer practicum and academic-year student teaching.

### English - MAT

The following plan of study is required of all secondary English MAT students:

Urban Education Policy Program Information and Requirements

Urban Education Policy (UEP) program graduate students complete nine (9) courses in total, including a required nine-month internship that counts as one course.

UEP students must complete the following eight (8) core courses:

EDUC 2320 Quantitative Research Methods and Data Analysis
EDUC 2330 Urban Education Policy: System and Governance
EDUC 2350 Economic Analysis and Urban Education Policy
EDUC 2360 Policy Analysis and Program Evaluation for Education
EDUC 2367 Strategic Management of School Organizations
EDUC 2380 UEP Internship Seminar
EDUC 2385 Education Inequality and Community Assets: Contexts and Change
EDUC 2390 Race and Democracy in Urban Education Policy

UEP Electives

In addition to the eight courses listed above, UEP students must complete one elective, approved by the student's faculty advisor, in areas that can include public policy, schools and school reform, social contexts of education, economic analysis, urban politics, quantitative analysis, research methods, schools and communities, and organization and leadership.
For more information on the A.M. in Urban Education Policy admission and program requirements, please visit the following website:

https://education.brown.edu/academics/graduate/urban-education-policy-am

Courses

This course examines the purpose, structure, and challenges of the American educational system as well as the experiences of the diverse learners and teachers within the system. It also explores how educational institutions have served to create social mobility and opportunity, but also to perpetuate inequality across race, class, gender, and other axes of difference. The course requires no prior knowledge.

EDUC 0405. New Faces, New Challenges: Immigrant Students in U.S. Schools.
What challenges do immigrant students face in adapting to a new system of education? This course examines the educational experiences of immigrant youth and their families. Readings include key contributions by scholars across disciplines, as well as a selection of memoirs and films about the pathways newcomers take in navigating school and transforming them. Enrollment limited to 19 first year students.

EDUC 0410A. New Faces, New Challenges: Immigrant Students in U.S. Schools.
What challenges do immigrant students face in adapting to a new system of education? By comparing and contrasting the perspectives education stakeholders—students, teachers, administrators, and parents—this course examines a number of key contributions to the study of the immigrant experience in education, as well as a selection of memoirs and films about the pathways these newcomers take in navigating school and transforming their developing identities. Enrollment limited to 19 first year students.

Introduces perspectives on education based in history, economics, sociology, and political science. Students engage foundational texts in each of these fields, using the insights gained to examine controversial issues in American education policy, including policies to address ethnic disparities in student achievement, test-based accountability, class-size reduction, and school choice. Enrollment limited to 19 first year students.

EDUC 0410G. The Afterschool Hours.
The family and the school are seen as the two primary institutions of childhood. But what about the space in between? Over the course of the twentieth century—one compulsory schooling became law—the way American children occupied the hours between school and home became ever more important. This course examines the literature on how youth should “best” spend their afterschool time. Looking at enrichment courses, sports, work, leisure, and more, this class introduces you to the social science method of interviewing as you learn to undertake your own original research and reflect on how you spent your own afterschool hours.

Education lies at the center of some of the most important—and most heated—policy debates in the United States today. Policymakers argue over a whole host of topics: what role should the government play in schooling? How should schools best educate students to succeed in the 21st century economy? Do schools reproduce structural racism and inequality in society, or are they engines of opportunity and social mobility? Should students get to choose the school they attend? In this seminar, we will examine a range of current policy debates in education using an interdisciplinary approach. The study of education sits at the intersection of many social science disciplines. We will analyze these debates from the perspective of historians, sociologists, political scientists, and economists. Enrollment is limited to 19 first year students.

EDUC 0508. Theory and Practice of Engaged Scholarship (SOC 0310).
Interested students must register for SOC 0310.

EDUC 0520. Adolescent Literature.
This introductory seminar presents an overview of the historical, socio-cultural, academic, and political issues that provide context for the use and availability of adolescent literature today. Ideas that figure prominently in the course are: connections between reading and democracy and decolonizing the school curriculum. Particular attention focuses on reading engagement for adolescents, the availability of “own voices” texts, access to literacy and fluency through adolescent literature, and issues of censorship in American public school classrooms and libraries. Students in this course will develop an understanding of the place of adolescent literature in today’s curriculum debates as well as a background in choosing, reading, and analyzing the literature itself. Students design curriculum for new texts. Assignments include short weekly assignments, discussion board posts, multimedia assignments, curriculum development projects, and final paper and exhibition.

EDUC 0530. Fieldwork and Seminar in Secondary Education.
The goals of this course are: (1) to view schools in a broad context to better understand current national debates about education; (2) to investigate the structures, institutions, practices, and attitudes that enable, maintain, or mitigate disparities in education; (3) to incorporate school-based observations as a source of insights into the complexities of teaching and learning; (4) to provide structured opportunities for reflecting on the relationship between our class and real-world experiences, with the goals of deepening the understanding of course content and exploring questions of identity, agency, and social responsibility; and (5) to provide an opportunity to explore the profession of teaching.

EDUC 0540. Language and Education Policy in Multilingual Contexts.
Millions of children around the world, especially in low- and middle-income countries, begin school learning in a language to which they have had little exposure. Children who learn and are assessed in a language different from that spoken at home or in their community are more likely to drop out of school and demonstrate lower learning outcomes than their peers, on average. Designing multilingual education systems, however, is not always feasible or desirable and requires a different set of resources than monolingual systems. This course explores how multilingual countries and communities design and implement language policies, and the major factors at play when increasing the number of languages used in a school system.

EDUC 0620. Juveniles for Justice: Youth Civic Engagement and Activism.
This course examines the meaning of youth activism in terms of individual civic development and collective social transformation. Guiding questions include: How does youth civic engagement affect youth’s understandings of themselves, their civic identity, and belonging? How do youth engage in their communities? What effect does this engagement have? What are the barriers and bridges to engagement? Is civic engagement a universal good? The course uses ethnographic cases to explore: 1) how time, place, and social context affect youth’s engagement and notions of citizenship and 2) what transferable insights about citizenship, engagement, and change can be gleaned from study across contexts.

Using primary and secondary sources in history, education, and law this course will explore the landmark Supreme Court case of Brown v. Board of Education which ruled school segregation was unconstitutional and the legal and policy efforts to desegregate schools and promote educational equity that followed it. We will consider the meaning, successes, and failures of school integration, the legacy of Brown for education, and consider the meaning of “equal educational” opportunity in the past and present.
EDUC 0620. Cradle of Inequality: The Role of Families, Schools, and Neighborhoods.
In this Sophomore Seminar, we will examine contours of inequality that begin in early childhood and accumulate over time, with particular focus on issues of race, class, and gender. Moreover, we will examine how these factors matter in early childhood and the role of families, schools, and neighborhoods in shaping, ameliorating, and propagating larger inequalities. Through our reading and active discussion, we will develop answers to questions that motivate much inquiry into inequality: Who gets what, and why?

EDUC 0750. Evidence and Method in Education Research.
Understanding evidence is critical to engaging as citizens and leaders the 21st century. This is particularly true in education research, policy, and practice. Recent years have seen an explosion of empirical education research, requirements that policies be evidence-based, and rapid expansion of the use of evidence in school settings. This course will introduce students to a range of methods used to generate evidence in education. It is a required course in the Education concentration.

EDUC 0800. Introduction to Human Development and Education.
Introduces students to the study of human development and education from infancy through young adulthood. This course provides a broad overview of scientific and theoretical understanding of how children develop and how research is generated in the field. Major topics include biological foundations, cognition, language, emotion, social skills, and moral understanding based on developmental theories and empirical research. We will attend to variations in cultural, ethnic, gender, socioeconomic, and other forms of human diversity in social contexts (e.g., family and schools) and how the person-context fit may influence children's developmental trajectories. The course also covers educational contexts, processes, and outcomes.

EDUC 0815. The Craft of Teaching.
What is the "craft of teaching"? A wide variety of texts are used to investigate the complexity of teaching and learning. Considering current problems as well as reform initiatives, we examine teaching and learning in America from the perspectives of history, public policy, critical theory, sociology, and the arts. Weekly journals and reading critiques; group teaching project; final paper.

EDUC 0820. Politics and Public Education.
Who exercises power in public education? This course examines the key institutions (e.g., school districts, states, Congress, and the courts) and actors (e.g., parents, teachers, interest groups, and the general public) shaping American K-12 education in order to understand recent policy trends and their consequences for students. Major policies discussed include school finance, textbook adoption, school accountability, and school choice. Particular attention is given to the federal No Child Left Behind Act of 2001 and debates over its reauthorization. Previous coursework in American politics or public policy is suggested but not required.

What does it mean to be a teenager? Is it an age-based or social-role based distinction? Is teen angst a universal phenomenon? Do parents really just not understand? Both an individual and a collective perspective on adolescence are used to provide an understanding of how this life stage is differently experienced by youth cross-culturally. Readings include theoretical and empirical papers from such areas as psychology, sociology, anthropology, and education. We examine how local context and salient axes of social difference affect both the cultural construction of what adolescence means and how individual youth navigate their everyday lives.

EDUC 0830. Sociology of Education.
While the United States educational system is widely considered the main institution through which the nation delivers on its promise of social mobility, sociologists have long recognized that schools exacerbate – or even produce – social inequality. This course provides an introduction to the application of sociology to questions of education, with a focus on the United States education system. We will ask questions such as: What do schools teach besides academics? How do social class, gender, and racial/ethnic relations shape student experiences? How can we address critical social issues through education policy?

EDUC 0835. Comparative Education.
This course will explore education across the Global South—from adult literacy NGOs in Brazil to Syrian refugees in Turkey, to post-genocide Rwandan classrooms. While initially the international community was concerned with access to education, the main goal now is quality education, especially beyond the primary school level. Readings range from official documents by international organizations, writings by sociologists, historians, political scientists, and anthropologists.

This course seeks to understand, analyze, and criticize sport—seen here as one of the primary institutions in the lives of Americans. Working from the basis of sporting events in the Durkheimian sense of symbolic community, we will elevate them to the status of educational and religious institutions in our everyday lives (as we interrogate them and see them in relation to these, and other, institutions as well). Using the primary lenses of gender and race, this class examines sports at five different levels—professional, Olympic, NCAA, scholastic, and youth—to understand how athletics have impacted, and will continue to impact, American society.

EDUC 0900. Fieldwork and Seminar in Secondary Education.
The goals of this course are: (1) to view schools in a broad context to better understand current national debates about education; (2) to investigate the structures, institutions, practices, and attitudes that enable, maintain, or mitigate disparities in education; (3) to incorporate school-based observations as a source of insights into the complexities of teaching and learning; (4) to provide structured opportunities for reflecting on the relationship between our class and real-world experiences, with the goals of deepening the understanding of course content and exploring questions of identity, agency, and social responsibility; and (5) to provide an opportunity to explore the profession of teaching.

EDUC 1010. The Craft of Teaching.
What is the "craft of teaching"? A wide variety of texts are used to investigate the complexity of teaching and learning. Considering current problems as well as reform initiatives, we examine teaching and learning in America from the perspectives of history, public policy, critical theory, sociology, and the arts. Weekly journals and reading critiques; final portfolio presented to the class.

EDUC 1030. Comparative Education.
This course will explore education across the Global South—from adult literacy NGOs in Brazil to Syrian refugees in Turkey, to post-genocide Rwandan classrooms. While initially the international community was concerned with access to education, the main goal now is quality education, especially beyond the primary school level. Readings range from official documents by international organizations, writings by sociologists, historians, political scientists, and anthropologists. Enrollment limited to 40.

EDUC 1040. Sociology of Education.
While the United States educational system is widely considered the main institution through which the nation delivers on its promise of social mobility, sociologists have long recognized that schools exacerbate – or even produce – social inequality. This course provides an introduction to the application of sociology to questions of education, with a focus on the United States education system. We will ask questions such as: What do schools teach besides academics? How do social class, gender, and racial/ethnic relations shape student experiences? How can we address critical social issues through education policy?
EDUC 1045. Sociology of Higher Education. American higher education has often been characterized as the great equalizer and, thus, as one of the foundational pillars of the American Dream. In this course students will develop a sociological understanding of higher education, primarily in the United States. Using both theory and empirical evidence, we will explore issues relating to the impact of social factors on higher education. Particular attention will be paid to the role that higher education plays in promoting social mobility as well as social reproduction. Throughout we will ponder what policies might best fulfill the promise of higher education in the U.S.

EDUC 1050. History of African-American Education. This course will examine the history of African-American education with particular emphasis on the twentieth century. We will explore African-Americans’ experiences with schooling under slavery and segregation, the struggle for desegregation and equity North and South, and the place of education in African-Americans’ quest for equal rights. We will also consider how the African-American experience with public schooling makes us rethink major narratives of American education, democracy, and equality of opportunity and how an historical understanding of these issues may help us engage contemporary debates.

EDUC 1060. Politics and Public Education. Who exercises power in public education? This course examines the key institutions (e.g., school districts, states, Congress, and the courts) and actors (e.g., parents, teachers, interest groups, and the general public) shaping American K-12 education in order to understand recent policy trends and their consequences for students. Major policies discussed include school finance, textbook adoption, school accountability, and school choice. Particular attention is given to the federal No Child Left Behind Act of 2001 and debates over its reauthorization. Previous coursework in American politics or public policy is suggested but not required.

EDUC 1090. Adolescent Literature. What are teens and tweens reading? What should they read? Do books that adults view as “trashy” ruin kids’ literary sensibilities? Provide access to the wider world of academic discourse? How can reading adolescent literature provide adolescents with a path toward holding a reader identity? This course will present a general overview of the historical, socio-cultural, academic, and political issues that provide context for the use and availability of adolescent literature today. It presents a strong introduction to contemporary texts that interest adolescents inside and outside of the classroom. Particular attention is paid to issues of reading engagement for striving adolescent readers, issues of access to literacy through adolescent literature, ways that adolescent literature can be paired with the classics, and issues of censorship in American public school classrooms and public libraries. Students in this course will walk away with an understanding of the place of adolescent literature in today’s debates as well as a background in choosing, reading, and analyzing the literature itself. Written assignments include weekly reading responses, an annotated bibliography, and a short, 3-5 page paper. There is a substantial amount of independent self-selected reading as well as one collaborative group project with a presentation.

EDUC 1150. Education, the Economy and School Reform. This seminar examines the linkages between educational achievement and economic outcomes for individuals and nations. We study a range of system, organizational, and personnel reforms in education by reviewing the empirical evidence and debating which reforms hold promise for improving public education and closing persistent achievement gaps. Understanding and critiquing the experimental, quasi-experimental and descriptive research methods used in the empirical literature will play a central role in the course. Prerequisites: Education and PP concentrators, EDUC 1130 and EDUC 1110 (or equivalent); Economics concentrators, ECON 1110 or ECON 1130, and ECON 1620. Enrollment limited to 20.

EDUC 1190. Family Engagement in Education. How do families from diverse backgrounds support their children’s schooling? What does research tell us about how families influence their children’s development and educational processes? Students in this course will examine theories and research findings related to family engagement in education drawing from various social science studies. The course offers an in-depth look at focal topics across diverse groups, such as parental beliefs and practices, family processes in sociocultural contexts, immigrant families, and elements and programs that promote family-school partnerships. This course involves students’ fieldwork and engagement in the community.

EDUC 1215. Race Making and the US University. In his groundbreaking book “Ebony and Ivy” author Craig Steven Wilder takes a historical approach to uncover the intricate relationship between slavery, race, and the founding of the earliest universities in the US. Knowing that the foundations of many universities in the US are rooted in ties to the TransAtlantic slave trade and/or land dispossession from Indigenous People, we cannot be surprised when the remnants of this racist past show up in the present day within the walls of colleges and universities.

EDUC 1225. The American Teacher: How Policy Shapes the Profession. Teachers are critical for transforming schools and changing trajectories of students’ lives; our experiences as students and research underscores their importance in changing students’ academic trajectories. We tend to think of teachers as doing their work alone, but they are part of a greater education ecosystem. In this course, we will examine the constraints - those imposed by principals, district policy, and state and federal law - under which teachers work. What can policy makers consider as they work to improve the experience students have in the classroom, especially as we ensure that our most vulnerable students have the most effective teachers?

EDUC 1230. Applied Statistics for Ed Research and Policy Analysis. This course provides an accelerated introduction to applied statistics for conducting quantitative research in the social sciences, with a focus on education policy. Students will become acquainted with the fundamentals of probability, statistical inference, data visualization, and multivariate regression. Concepts and methods are taught using real-world examples with multiple opportunities for students to apply these methods in practice. The course uses the statistical software program, STATA.

EDUC 1235. Higher Education in the United States: History, Challenges and New Directions. This course will survey the United States’ multi-century higher education history, focusing on the modern university since 1990 and its context of rapidly changing influences including globalization, technology, funding sources, civic wellbeing, economic development and individual success. Students will explore a multitude of competing demands and “stressors” as well as a wide spectrum of learning “solutions” both within traditional higher education and emerging from a new marketplace, engaging as academic entrepreneurs and proposing ideas and models for education that address the changing needs of society. What form(s) should higher education offer students beginning their college years in ~2050?

EDUC 1240. Qualitative Methods. Designed for sophomores or juniors concentrating in education studies, but also open to other undergraduates interested in qualitative research methods. Through readings, class exercises and discussions, and written assignments, examines issues related to the nature of the qualitative research methods that are commonly used in education, psychology, anthropology, and sociology.
EDUC 1250. Policy Implementation in Education
This course provides an analytical foundation for students who are interested in education policy implementation, with particular emphasis on racial and economic equity. We begin by centering the importance of school equity in the lived experiences of students on the margins. From there, we draw on social science research to examine the strengths and limitations of education governance structures at the federal, state, and local level that dictate how policy is implemented. We, then, examine major policy reform issues through the lens of evidence-based research. Ultimately we explore ways to generate governance and policy solutions in order to improve schools in our most vulnerable communities.

EDUC 1265. Comparative Education Systems: Governance and Policy
Public education is a core responsibility of government in all nations around the world. This course examines similarities and differences in the way nations organize their public education systems. Who controls education policy, such as curriculum, staffing, and funding? Do children have equal rights to public education? How do nations formulate and enforce equal education opportunity? Is social and racial justice a priority in public education? What is the role of school districts? In addressing these issues, we will pay particular attention to cross-national differences in the centralized versus decentralized governing structure. Students will engage in a country-specific (non U.S.) team project that focuses on a key policy challenge, such as equity, quality, accountability, or innovation. A final, country-specific (non U.S.), research paper will focus on a specific area of governance, management, or funding that needs capacity building or improvement.

EDUC 1270. Adolescence in Social Context
What does it mean to be a teenager? Is it an age-based or social-role based distinction? Is teen angst a universal phenomenon? Do parents really just not understand? Both an individual and a collective perspective on adolescence are used to provide an understanding of how this life stage is differently experienced by youth cross-culturally. Readings include theoretical and empirical papers from such areas as psychology, sociology, anthropology, and education. We examine how local context and salient axes of social difference affect both the cultural construction of what adolescence means and how individual youth navigate their everyday lives.

EDUC 1289. Cross-Cultural Perspectives on Child Development
This course will focus on the role of culture in child development from infancy to young adulthood. Contemporary theories and empirical research will be reviewed to examine various topics and domains of development. Major topics include childrearing, parental beliefs and parenting styles, cognition, self, affect, moral development, views of intelligence, knowledge, and learning, and beliefs about school. Prior course work in psychology or human development in education is required, such as EDUC 0300, EDUC 0800, CLPS 0610 or CLPS 0620. Instructor permission required.

EDUC 1300. Schools as Sites of Social Welfare: An Exploration of the Role of Social Workers in Schools
This course offers an orientation to schools as a nexus for social workers engaging with youth. Students in this course will gain a nuanced perspective and understanding of the needs of marginalized youth and come to understand schools as sites of social welfare. Students will dissect some of the challenges that young people in schools encounter throughout their lived experiences such as educational disabilities and learning challenges, healthcare disparities, and the challenges of living in poverty. Students will evaluate schools as sites of intervention where social workers collaborate with other professionals at the micro and macro level to improve youth conditions related to human development in order to enhance educational achievement and overall well-being.

EDUC 1310. Inside Higher Ed: Sex, Class, and Admissions
This course introduces students to the sociological study of higher education in the United States. In this seminar, our primary focus will be to engage with the current debates, issues, and problems associated with higher education. Among the questions we will explore are: What is hook-up culture, and can you “opt-out”? What is the purpose of higher education, and how does our background impact how we answer this question? Who are the biggest beneficiaries of affirmative action? Are legacy students and athletes advantaged in the admissions process? Which students are most likely to participate in class discussion? And how does gender matter for who does and does not participate? Who is best served by higher education institutions?
This class is not just about reading research. You will be required to actively discuss and reflect on your collegiate experiences with your classmates.

EDUC 1330. Social Psychology of Race, Class, and Gender
Focuses on the social construction of race, class, and gender and how this construction influences an individual’s perception of self and other individuals. Topics include identity development, achievement, motivation, and sociopolitical development.

EDUC 1380. Language and Education Policy in Multilingual Contexts
Children who are assessed in a language different from that spoken at home demonstrate lower learning outcomes than their peers. This course explores how multilingual countries and communities design and implement language policies, and the major factors at play when increasing the number of languages used in a school system, via three main learning objectives: develop foundational concepts related to language in education policies, apply them critically to specific contexts, and develop research and writing skills necessary for policy and practice work. Students will explore systems around the world, with attention to the policy cycle from design to implementation.

EDUC 1430. Social Psychology of Race, Class, and Gender
Focuses on the social construction of race, class, and gender and how this construction influences an individual’s perception of self and other individuals. Topics include identity development, achievement, motivation, and sociopolitical development. Enrollment limited to 30.

EDUC 1450. The Psychology of Teaching and Learning
This seminar course surveys and critically appraises foundational theories of teaching and learning. As we learn about various theories and the theorists behind them, we consider their effect on our construction of students’ learning and teachers’ practice. Through reading research in educational psychology and other disciplines, we will examine topics such as learning- and teaching-related beliefs and behaviors, cognitive and socioemotional processes, and motivation that can be applied to teaching approaches and classroom environments. Special attention will be given to sociocultural contexts that affect learning processes and experiences of diverse students. In doing so, we see how these theoretical paradigms are refined with respect to difference, diversity, and intersectionality.

EDUC 1490. Discipline and Punish: Historical Insights on School Punishment
School discipline has played a key function in broader efforts to maintain social order. This seminar traces historic processes and recurrent themes that have contributed to the punitive direction of school discipline reform. We will take seriously factors such as race, gender and class in the school punishment phenomenon and consider how reformers, students, and educators have experienced and shaped policies related to punishment and criminality. We will also consider debates surrounding, discipline reform, and police abolition in schools. By the end of the course students should be able to engage with the historical and theoretical debates, synthesize claims made in readings and evaluate evidence used in the text. Relatedly students will be expected to effectively communicate and make analytic connections in writing and in class discussions.
EDUC 1520. Ethnic Studies & Education.
This course examines and bridges the origins, epistemologies, key concepts, and central questions of the academic field of Ethnic Studies with key questions and issues in the field of education. The course begins with an examination of key events in early U.S. History and the historical and contemporary struggle for Ethnic Studies through a comparative, multiracial lens, followed by analyses of contemporary issues faced by practitioners working in 21st century educational contexts.

EDUC 1580. Cross-Cultural Perspectives on Child Development.
Focus on role of culture in child development, infancy to young adulthood. Reviews contemporary theories and empirical research to examine various age periods and domains of development. Major topics: infant care, parenting, socialization, gender roles, cognition, moral development, affect, adolescence, and education and schooling in formal and informal settings. Enrollment limited to 50.

EDUC 1600. Education, the Economy and School Reform.
This seminar examines the linkages between educational achievement and economic outcomes for individuals and nations. We study a range of system, organizational, and personnel reforms in education by reviewing the empirical evidence and debating which reforms hold promise for improving public education and closing persistent achievement gaps. Understanding and critiquing the experimental, quasi-experimental and descriptive research methods used in the empirical literature will play a central role in the course. Prerequisites: Education and PP concentrators, EDUC 0840 and EDUC 1230 (or equivalent); Economics concentrators, ECON 1110 or ECON 1130, and ECON 1620. Enrollment limited to 20.

EDUC 1615. Introduction to Community-Based Participatory Research in Education.
Using community based participatory research, students in this course will learn a research method that interrogates issues of positionality, power, and equity. Community-based participatory research removes research solely from the realm of academia and engages the community in every part of the research project by centering the voices and perspectives of community members. Central to the course and the method of research are issues of power, trust, reform, ethics, and community partnership. Students in this course will work directly with community organizations to understand the problems of the organization, identify research questions that the organization seeks to understand, and highlight a research plan. Partnership, collaboration, and consultancy are central to every phase of this type of research. Student researchers will conclude by providing recommendations to the community organizations.

EDUC 1620. Urban Schools in Historical Perspective.
Why did urban schools, widely viewed as the best in the nation in the early twentieth century, become a “problem” to be solved by its end? How have urban schools been shaped by social, economic, and political transformations in cities and by other public policies? How have urban schools changed over time? This course will ask these and other questions to explore how historical perspective can help us better understand urban schools today. We will analyze the impact of changes in demographics, urban renewal and suburban development, the political economy of cities, educational expectations, and demands for equity.

EDUC 1635. Education, Racial Equity and Democratic Innovation.
Education, Racial Equity, and Democratic Innovation is an advanced seminar that will combine theory and practice. Students will develop a basic understanding of what makes a society democratic. They will also explore the complicated relationship between democratization and racial injustice. Meanwhile, they will assess the triangular relationship between democracy, racial justice, and educational equity. Ultimately, each student will be expected to produce their own empirically-supported idea for applying democratic innovation to urban schools.

EDUC 1645. Moral Development and Education.
This course focuses on the acquisition of moral values within the home, school, and peer groups. We will examine contending approaches to moral development and its fostering. Topics include the philosophical underpinnings of moral theory, the cognitive and behavioral dynamics of moral growth, the values climate of contemporary American society, and the role of education in the moral development of children. We will also consider cultural, ethnic, and gender differences. Prerequisite of one of the following courses: EDUC0300, EDUC0400, EDUC0520, EDUC0800, EDUC0850, EDUC0880, EDUC1289, EDUC1660, EDUC1670, EDUC1675, CLPS0610, CLPS0620, or equivalent. Enrollment is limited to 20 students.

EDUC 1650. Policy Implementation in Education.
This course offers an "analytical foundation" for students interested in public policy implementation, with particular emphasis on education. Drawing on social science research, the course examines strengths and limitations of several frameworks, including the "policy typology" school of thought, the rational actor paradigm, the institutional analysis, the bargain model, the organizational-bureaucratic model, and the "consumer choice" perspective. Enrollment limited to 20.

EDUC 1655. Human Development and Education in East Asia.
This course examines human development and education in East Asia, mainly China, Japan, and South Korea, using comparative and sociocultural perspectives. Topics include cultural beliefs and practices related to learning; school and students' educational experiences; academic and socioemotional development; family socialization; globalization and educational systems. Students will also examine diversity, inequality, and marginalization in educational processes across and within these countries. The course draws on a range of contemporary studies from interdisciplinary social science fields, such as psychology, sociology, and anthropology.

EDUC 1660. Social Context of Learning and Development.
This course focuses on the social environment that contributes to the development of children’s minds, language, self, affect, relationships with others, beliefs about learning, experience with attitudes toward school. The course covers the period from birth through young adulthood. Topics include child development and learning under the influences of family, peers, community, school, and immigration, culture, race/ethnicity, and SES. We will review theoretical frameworks and empirical research and discuss implications for education. Prior coursework in human development, education, and psychology is required, such as EDUC 0300, EDUC 0400, EDUC 0620, EDUC 0800, EDUC 0850, EDUC 1289, CLPS 0610, CLPS 0620, or equivalents. Enrollment is limited to 20 students.

EDUC 1670. Juveniles for Justice: Youth Civic Engagement and Activism.
This course examines the meaning of youth activism in terms of individual civic development and collective social transformation. Guiding questions include: How does youth civic engagement affect youth’s understanding of themselves, their civic identity, and belonging? How do youth engage in their communities? What effect does this engagement have? What are the barriers and bridges to engagement? Is civic engagement a universal good? The course uses ethnographic cases to explore: 1) how time, place, and social context affect youth’s engagement and notions of citizenship and 2) what transferable insights about citizenship, engagement, and change can be gleaned from study across contexts.

EDUC 1675. The Psychology of Teaching and Learning.
This seminar course surveys and critically appraises foundational theories of teaching and learning. As we learn about various theories and the theorists behind them, we consider their effect on our construction of students’ learning and teachers’ practice. Through reading research in educational psychology and other disciplines, we will examine topics such as learning- and teaching-related beliefs and behaviors, cognitive and socioemotional processes, and motivation that can be applied to teaching approaches and classroom environments. Special attention will be given to sociocultural contexts that affect learning processes and experiences of diverse students. In doing so, we see how these theoretical paradigms are refined with respect to difference, diversity, and intersectionality.
EDUC 1680. Histories of Race and Education in the United States. Students in this course will explore the interconnections between race and education throughout the history of the United States. Students will investigate 1) how race and racism have shaped education policy and practice throughout American history; 2) the development of white supremacy, anti-Black racism, and other forms of systemic racism within schools; 3) the ways in which BIPOC parents, teachers, students, and reformers have engaged in antiracist activism both within and through educational contexts. Students will complete a final project that helps answer the essential question: how can these histories help promote antiracist educational reform in America today?

EDUC 1685. Is the US University (As Is) Worth Saving?: (Re)Imagining Alternative Forms of Higher Education. What is the university? Is it a site of state-making or state-breaking? Does it educate or indoctrinate? In these times when everything is being examined from a different perspective, is the US university as it is currently constituted worth saving as is? Question making is just as important as answer seeking, and in this seminar, we use these questions (and others) as a guide to examining and re-imagining what US higher education can look like through deconstructing what and where higher education is currently. The course includes readings, reflections, class discussions, and a project based final and examines scholarship from thinkers such as Paulo Freire, James Baldwin, Toni Morrison and others. What could radical (re)imagining of the university create?

EDUC 1690. Literacy, Community, and the Arts: Theory into Practice. An exploration of ways to improve student literacy skills through the performing arts in area schools. Students read about the theory and practice of literacy and the arts, research national and local initiatives, engage in arts activities, and spend time in area classrooms working with local teachers and artists to draft curriculum materials to be used in summer and school-year programs.

EDUC 1695. What's AntiBlackness Doing in a "Nice Field Like Education". This course considers the foundational texts that constitute the study of anti-Blackness and explores how these theoretical constructs can be applied to educational contexts, policies, reforms, and practices. We will consider the following questions: How does anti-Blackness build up and depart from other forms of racial analysis such as Critical Race Theory,? How have themes of anti-Blackness weaved through Black activists, educators’ and scholars’ critiques of education; Lastly, how might the study of anti-blackness provide a foundation for imagining more humane educational practices for all students?

EDUC 1730. American Higher Education in Historical Context. A study of 350 years of American higher education. The first part traces the growth and development of American higher education from premodern college to the modern research university. The second part examines issues facing higher education today and places them in historical context. Particular attention is given to: the evolution of curriculum; professionalism; student life; and the often competing priorities of teaching, research and service.

EDUC 1760A. Beauty Pageants as an American Institution. Beauty pageants are often ridiculed, and even vilified, in American society. Yet their lasting power—from "There She Is" to Toddlers & Tiaras to pageant waves—is undeniable. What accounts for their enduring power? This course draws on inter-disciplinary scholarship to examine how and why pageantry and American femininity have become linked in the public consciousness as they transformed from beauty contests to the largest source of scholarship money available to women in this country. We will examine how pageantry intersects with major institutions—education, politics, and media.

EDUC 1850. Moral Development and Education. Examines contending approaches to moral development and its fostering in the home, school and peer group. Topics include philosophical underpinnings of moral theory, cognitive and behavioral dynamics of moral growth, values climate of contemporary American society, the role of schooling, and variations attributable to culture and gender. Prerequisites: EDUC 0800, 1270, or 1710, or CLPS 0610 (COGS 0630), or CLPS 0600 (PSYC 0810). Enrollment limited to 30.

EDUC 1860. Social Context of Learning and Development. Focuses on the social environment that contributes to the development of children's minds, language, self-understanding, relations with others, affect, and attitudes toward learning. Examines the period from birth through young adulthood. Topics include children's social interactions, parental expectations and socialization practices, and the influences of family, peers, school, and media. Prerequisites: EDUC 0800, EDUC 1270, EDUC 1430, EDUC 1580, EDUC 1710, CLPS 0610 (COGS 0630), or equivalent. Enrollment limited to 30.

EDUC 1870. Education and Human Development in East Asia. This course examines education and human development in East Asia, mainly China, Japan, and South Korea, using international and comparative perspectives. We will examine the role of educational systems and key contexts such as family, school, and globalization in the development and educational processes of children and adolescents. We will also explore culturally unique concepts, diversity, and inequality in educational processes across and within these countries. The course draws on a range of contemporary studies from interdisciplinary social science fields, some of them theoretical and many of them empirical (both qualitative and quantitative).

EDUC 1890. Family Engagement in Education. How do families from diverse backgrounds support their children's schooling? What does research tell us about how families influence their children's development and educational processes? Students in this course will examine theories and research findings related to family engagement in education drawing from various social science studies. The course offers an in-depth look at focal topics across diverse groups, such as parental beliefs and practices, family processes in sociocultural contexts, immigrant families, and elements and programs that promote family-school partnerships. This course involves students' fieldwork and engagement in the community.

EDUC 1900. Senior Seminar. Required of and reserved for seniors of the Education Studies Concentration as a culminating experience of your Concentration. Our foundational and methodological courses introduced you to the basic themes and research in the field, and upper-level courses typically focused on particular topics in greater depth. Your decision to be an Education Studies concentrator was likely related to one or more of the central themes of the field of education (e.g., human development, education policy and history, culture, race/ethnicity, gender, social justice, etc.). We hope to build on these learning experiences, broadening and deepening your learning across different areas of education.

EDUC 1970. Independent Study. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EDUC 1990. Independent Reading and Research. Supervised reading and/or research for education concentrators who are preparing an honors thesis. Written permission from the honors advisor required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EDUC 1991. Independent Reading and Research. Supervised reading and/or research for education concentrators who are preparing an honors thesis. Written permission from the honors advisor required. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EDUC 2060A. Methods of Teaching: English. S/NC.

EDUC 2060B. Methods of Teaching: History and Social Studies. S/NC.
Topics covered include the political context for policy research, social program impacts. It aims to make students critical consumers of policy analysis with an emphasis on econometric strategies for measuring educational outcomes. This course offers an overview of education policy for special education, and teaching English Language Learners. Topics include: current theory and practice in the three areas, legal requirements for special education, planning for differentiated instruction, assessment and diagnosis of student skill levels, measuring and reporting student achievement, adapting content for ELLs, selecting and working with texts, and effective vocabulary instruction. Open to MAT students only. S/NC.

EDUC 2110. Summer Practicum and Analysis. Introduces MAT students to elementary school students through work in a unique summer enrichment program for inner city Providence children: Summer Prep readings and seminar meetings focus on arts education, introductions to the teaching of literacy, math and science; curriculum and lesson planning; creating a community of learners; issues of diversity; and physical education. S/NC.

EDUC 2320. Quantitative Research Methods and Data Analysis. The goal of this course is to provide students in the Urban Education Policy course with a foundation and understanding of basic statistical analyses so that they will be able to design and carry out their own research and will be able to use data to inform education policy and practice.

EDUC 2330. Urban Education Policy: System and Governance. This course is a requirement for students of the MA in Urban Education Policy program. It examines the system, structure, and governance of urban education policy. It will explore how urban school systems are organized, how urban education policies are made and implemented, and the political realities behind urban policy change. Students will develop an understanding of the landscape of contemporary education policy. The course will include team-based policy projects.

EDUC 2350. Economic Analysis and Urban Education Policy. This course introduces students to the main economic theories and related applied work that inform education policy analysis by combining economic theory, econometric studies, and education and institutional literature in an examination of current issues in U.S. education, particularly those issues that are most relevant to urban education. We begin by examining key concepts and theories from microeconomics, labor economics, and public economics that are most relevant for studying questions in education. After laying this theoretical foundation, we examine how these theories can illuminate and aid policy analysis around key topics in U.S. education. Open to graduate students only.

EDUC 2360. Policy Analysis and Program Evaluation for Education. Informed education policymaking requires reliable information about the causal effects of government programs and other factors shaping educational outcomes. This course offers an overview of education policy analysis with an emphasis on econometric strategies for measuring program impacts. It aims to make students critical consumers of policy evaluations and to equip them with tools to conduct their own research. Topics covered include the political context for policy research, social experiments, alternative strategies for making causal inferences, and cost-benefit analysis. Prerequisites: EDUC 1110, POLS 1600, SOC 1100, or written permission of the instructor.

EDUC 2367. Strategic Management of School Organizations. This course will develop a range of professional, leadership, and management skills, build knowledge and understanding about how organizations work, and offer a place for critical reflection about the internship experience. It will employ case studies of organizations and reforms and draw from the experience of practitioners from the field.

EDUC 2370. Internship. Students in the Urban Education Policy Master's Program participate in year-long internships in organizations that focus on urban education policy. Each student works with his or her site supervisor to develop a job description for the internship that allows the student to learn from and contribute to the work of the host organization.

EDUC 2380. UEP Internship Seminar. Students in the Urban Education Policy master's program participate in year-long internships in organizations that focus on urban education policy. Each student works with his or her site supervisor to develop a job description for the internship that allows the student to learn from and contribute to the work of the host organization. This corresponding seminar will explore identity in leadership and study what leadership practices, skills, competencies and dispositions are required to succeed at social change work, both at the internship site and in educational organizations where students may work in after Brown.

EDUC 2385. Education Inequality and Community Assets: Contexts and Change. Designed for graduate students in the Urban Education Policy A.M. and the Master of Arts in Teaching programs, this course focuses on understanding the dynamic social, cultural, and community conditions shaping America's diverse classrooms. We do so through reading and engaging in anthropological and sociological scholarship on issues like immigrant students, hidden scripts of gender and sexuality in secondary schools, social class and tracking, and ethno-racial discrepancies in discipline. By reading works focused on close observation of students, teachers, and families, students will learn to identify, describe, and evaluate how socio-cultural and socio-economic factors impact learning, student outcomes, and teaching.

EDUC 2390. Race and Democracy in Urban Education Policy. This course will provide a broad introduction to contemporary education policy centered on issues of race/ethnicity and ideas of democracy. Students will begin by engaging theories of democracy and theories of race. The course will then transition to analyzing major education policy debates such as: school desegregation, school finance, teacher evaluation, curriculum development standards, accountability, educator policies (collective bargaining, certification), special education, and the current policy landscape. The course will include final group projects where students apply the theoretical concepts to strategies for school reform, with the neighboring school districts as cases.

EDUC 2450. Exchange Scholar Program.

EDUC 2500. Foundations of Teaching and Learning. This course surveys and critically appraises foundational theories of teaching and learning. As MAT students learn about these theories and the theorists behind them, we consider their effect on our construction of youth's learning and teachers' practice. Through reading ethnographic and qualitative research, we will examine how sociocultural contexts and differences affect how youth learn and how teachers teach. In this way, we see how theoretical paradigms are refined by the experiences of diverse learners and teachers.

EDUC 2510A. Educational Theory and Practice in Teaching English 1. This course is designed to help MAT students make connections between the theory and the practice of teaching English in the secondary schools. This fast-paced summer course includes a Brown Summer High School practicum teaching experience in the morning and an intensive methods class that accompanies it in the afternoon. The class will focus on high leverage practices for teaching English and visible learning for literacy, particularly in the heterogeneous untracked high school classroom. This workshop-based class focuses specifically on methods for creating a constructivist, student-centered English classroom with high school students from diverse backgrounds in the mainstream classroom.
EDUC 2510B. Educational Theory and Practice I: Social Studies.
This course is designed to provide MAT students with an opportunity to wrestle with the tensions and possibilities embedded in the struggle to bridge educational theory with practice in secondary social studies classrooms. The summer course is an intensive theory- and practice-based experience that is intimately linked with a Brown Summer High School teaching practicum. The practicum, in combination with daily methods classes, will begin the process of developing culturally responsive lessons that integrate the multiple dimensions of social studies: Civics & Government, Historical Perspectives, Geography, and Economics.

This course is designed to provide experiences and resources that will support the development of science MAT students. Through interactive activities, readings, and class discussions, the class, as a component to student teaching during Brown Summer High School, will explore key elements and challenges of secondary science teaching and provide a foundation for continued growth and reflection throughout the students' teaching careers. Some of the main topics discussed in this course are national and state science standards, reform-based approaches to instruction and assessment, unit/lesson planning, the use of technology in science teaching, and laboratory safety.

EDUC 2510D. Educational Theory and Practice in Teaching Mathematics I.
This course is designed to provide a clinical experience and resources that will support the development of math MAT students teaching at Brown Summer High School. Through interactive activities, readings, and class discussions, the class will explore key elements and challenges of secondary mathematics teaching and provide a foundation for continued growth and reflection throughout the students' teaching careers. Topics will include standards, reform-based approaches to instruction and assessment (including fostering mathematical thinking in students through use of active pedagogy), unit/lesson planning, analyzing student work to improve teacher practice, and the use of technology in mathematics teaching.

EDUC 2515. Learning Theory and Special Populations.
This course will provide MAT students with an understanding of factors and responsibilities as you work collaboratively with students, professionals, and parents to establish appropriate educational supports student success and achievement. We will explore the various categories of human exceptionality and their variations; review the main laws and policies that inform your work with exceptional students; study Individualized Education Programs and 504 plans and their implications for instruction; study the Universal Design for Learning (UDL) framework for differentiation; discuss different models for collaborations with school professionals and parent; and access research and resources that support your work with these students.

EDUC 2520A. Educational Theory and Practice in Teaching English II.
This course is designed to accompany MAT students' one-semester fall practicum teaching placement. This field-based course uses the Rhode Island Professional Teaching Standards and the aligned rubric of Danielson's Framework for Teaching as a guiding standard as well as an central assessment mechanism. ETP II integrates theory and practice with standards-based instruction for the culturally relevant classroom. Students will bring their experiences and questions about teaching and learning directly from teaching and/or observations at field sites so the class can address those questions using discussion, research and inquiry. Artifacts of instruction, practice, and assessment will be examined and analyzed.

EDUC 2520B. Educational Theory and Practice in Teaching Social Studies II.
This course provides opportunities for social studies MAT students to meet the Rhode Island Professional Teacher Standards (RIPTS) and the National Council of the Social Studies Preservice teacher standards. In this particular semester, the objectives are to be able to develop standards-based lesson plans and activities for your students that are culturally responsive in social studies based on your knowledge of students and how they learn; use an evaluation framework to distinguish curriculum quality; and successfully revise curriculum as necessary in order to align with the RI GSEs and meet the needs of your students in a culturally responsive way.

EDUC 2520C. Educational Theory and Practice for Science II.
This course provides opportunities for science MATs to meet the Rhode Island Professional Teacher Standards (RIPTS) and the National Science Teacher Association Preservice science teacher standards. In this particular semester, the objectives are to be able to develop standards-based lesson plans and activities for your students that are culturally responsive in science based on your knowledge of students and how they learn; use an evaluation framework to distinguish curriculum quality; and successfully revise curriculum as necessary in order to meet the needs of your students in a culturally responsive way.

EDUC 2520D. Educational Theory and Practice in Teaching Mathematics II.
This course is designed to provide a space for math MAT candidates in their fall placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching mathematics in middle and high school levels. Continuing from our summer work, this course delves more deeply into thinking about what it means to be culturally responsive in particular aspects of curriculum and instruction; CCSS math standards, how students learn, approaches to student-centered mathematics instruction, and choosing and revising curriculum materials. Students will explore what it means to be culturally responsive in each of these areas.

In this course, students enrolled in the MAT program will build on the knowledge of instructional design that they developed in the summer. MAT candidates will delve more deeply into the Universal by Design (KUbD) design process and consider its relationship to the Sheltered Instruction Observation Protocol (SIOP) Model. Additionally, students will work with the Technology, Pedagogy and Content Knowledge (TPACK) Model which will support their ability to deliberately integrate developmentally appropriate technology into their plans in order to positively impact student learning.

This course is designed to accompany the English MAT spring semester student teaching placement, with an aim to connect research with an experience, workshop, or record of practice to help students understand, implement, question and revise the practice in their own classrooms. Particular areas of focus include independent teaching in the linguistically and culturally diverse high school English classroom; practices for setting up the heterogeneous high school English classroom; classroom management; diagnostic assessment of student learning; understanding your position as a teacher and the context of your school; creating a professional learning community; and methods of teaching English with technology.

EDUC 2530B. Educational Theory and Practice in Teaching Social Studies III.
This course is a continuation of Educational Theory and Practice I and 2, designed to provide a space for social studies MAT candidates in their spring student teaching placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching social studies in middle and high school levels. Building on the work we did in the summer and the fall, this course delves more deeply into thinking about what it means to be culturally responsive in particular aspects of curriculum and instruction.
EDUC 2530C. Educational Theory and Practice in Teaching Science III.
This course for science MAT candidates is a continuation of Educational Theory and Practice 1 and 2. It is designed to provide a space for candidates in their spring student teaching placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching science in middle and high school levels. Continuing from the work done in the summer and the fall, this course delves more deeply into thinking about what it means to be culturally responsive in developing science assessments and in approaching discourse, modeling and mathematical representations.

EDUC 2530D. Educational Theory and Practice in Teaching Mathematics III.
This course is a continuation of Educational Theory and Practice 1 and 2. It is designed to provide a space for math MAT candidates in their spring student teaching placement to develop their pedagogical content knowledge of culturally responsive teaching as it pertains specifically to teaching mathematics in middle and high school levels. Continuing from the work we did in the summer and the fall, this course delves more deeply into thinking about what it means to be culturally responsive in curriculum and instruction, particularly in approaches to discourse, assessment, and interdisciplinary connections.

EDUC 2535. Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines I.
This half of a year-long course prepares preservice teachers in the MAT program to teach emerging bilingual students/English learners through sheltered instruction in the mainstream classroom and meet students’ linguistic, academic, and socio-emotional needs. New teachers must learn how to understand and include the experiences of linguistically diverse and multilingual students in their teaching. Additionally, preservice teachers must learn the nature of language acquisition and how specialized instruction can support this development. Through analysis of case studies, participants will also learn to plan and deliver high quality instruction that is differentiated to meet the needs of English learners.

EDUC 2545. Teaching Literacy and Language to Emerging Bilinguals Across the Disciplines II.
This second half of a year-long course prepares preservice teachers in the MAT program to teach emerging bilingual students/English learners through sheltered instruction in the mainstream classroom and meet students’ linguistic, academic, and socio-emotional needs. New teachers must learn how to understand and include the experiences of linguistically diverse and multilingual students in their teaching. Additionally, preservice teachers must learn the nature of language acquisition and how specialized instruction can support this development. Through analysis of case studies, participants will also learn to plan and deliver high quality instruction that is differentiated to meet the needs of English learners.

EDUC 2555. Assessment and Using Data to Support Student Learning.
This course will provide a space for enrolled MAT degree candidates to learn theories related to assessment that are closely tied to their student teaching practical experience and also establish effective ways to measure their impact on student learning. The course will prepare students to explain concepts related to assessment; design formative and summative assessment systems through the UDL Framework; analyze the results of assessment tasks/data and utilize them to inform instructional decisions; and evaluate current and future trends in educational assessment.

EDUC 2565. Practicum and Seminar I.
This clinical experience and seminar, held off-campus at student teaching sites, provides the practical component of the MAT fall semester that will allow MAT students to merge theory and practice. The main goals for this semester are for practicum students to familiarize themselves with their school context, students and community; develop an understanding of how school context and learning about students inform planning curriculum; be aware of the policies and initiatives you are responsible for in the role of a teacher; form professional relationships with your colleagues, students, and families; and begin instructing in a co-teaching model.

EDUC 2575. Student Teaching and Seminar.
This off-campus student teaching clinical experience and seminar, held at student teaching sites, provides the practical component of MAT students’ winter and spring semester that will allow students to merge theory and practice and gain proficiency in the domains outlined by the Framework for Teachers. This will be accomplished by taking on the full responsibilities of a teacher for selected secondary classes in your placement school with the guidance of your mentor teacher and your supervisor as well as attending meetings and other programs teachers are required to attend for your placement site.

EDUC 2980. Studies in Education.
Independent study; must be arranged in advance. Section numbers vary by instructor. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EDUC 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

Egyptology and Assyriology
Child
Matthew T. Rutz
The Department of Egyptology and Assyriology is designed to explore the histories, languages, cultures, and sciences of ancient Egypt, Mesopotamia, and their neighbors. These regions, sometimes known collectively as the Ancient Near East, have a long history stretching back to the formation of the first complex societies and the invention of writing. As a field of higher learning, Egyptology and Assyriology are represented at most of the world’s great universities. Their establishment at Brown, beginning the 2005-06 academic year, is a product of Brown’s Plan for Academic Enrichment, a commitment to higher learning in the humanities and the sciences. Faculty in the department teach undergraduate and graduate courses in Egyptology, Assyriology and the History of Ancient Science. For additional information, please visit the department’s website: http://www.brown.edu/academics/egyptology/

Egyptology and Assyriology Concentration Requirements
The concentration in Egyptology and Assyriology offers students a choice of two tracks: Assyriology or Egyptology. The department promotes collaborations with other academic units at Brown devoted to the study of antiquity including Archaeology, Classics, Judaic Studies, and Religious Studies. Egyptology and Assyriology also collaborates with Brown’s Joukowsky Institute for Archaeology and the Ancient World.

Assyriology Track
Also known as the Near East or Middle East, Western Asia includes present-day Iraq, Syria, Turkey, and other neighboring states, a broad geographic area that was connected in antiquity with the wider world—the Mediterranean, North Africa, the Arabian Peninsula, Central Asia, and the Asian subcontinent. Students will be exposed to the critical study of the ancient cultures of this region (ca. 3400 B.C.E.—100 C.E.) using the tools of archaeology, epigraphy, and historical inquiry. A variety of interdisciplinary, comparative, and theoretical approaches will be introduced to give students the tools and methods to explore this region’s ancient languages and literatures, political and socio-economic modes of organization, art and architecture, religious traditions and other systems of knowledge, such as early science.

The Assyriology (ASYR) track requires a total of at least ten (10) courses that are determined in the following way:

Introduction courses:

| ASYR 0800 | The Cradle of Civilization? An Introduction to the Ancient Near East |
| ARCH 1600 | Archaeologies of the Near East |
ASYR 1000  Introduction to Akkadian
ASYR 1010  Intermediate Akkadian

Foundational Courses (at least one course from each of the following three areas):

History and Culture of Ancient Western Asia: ¹
   ASYR 1100  Imagining the Gods: Myths and Myth-making in Ancient Mesopotamia (WRIT)
   ASYR 1300  The Age of Empires: The Ancient Near East in the First Millennium BC
   ASYR 1500  Ancient Babylonian Magic and Medicine
   ASYR 2310B  Assyriology I (WRIT)
   ASYR 2310C  Assyriology II (WRIT)
   ASYR 2600  Topics in Cuneiform Studies

Archaeology of Ancient Western Asia: ¹
   ARCH 1200F  City and the Festival: Cult Practices and Architectural Production in the Ancient Near East (WRIT)
   ARCH 1200I  Material Worlds: Art and Agency in the Near East and Africa
   ARCH 1810  Under the Tower of Babel: Archaeology, Politics, and Identity in the Modern Middle East (WRIT)
   ARCH 2010C  Architecture, Body and Performance in the Ancient Near Eastern World (WRIT)
   ARCH 2300  The Rise of the State in the Near East

Depth Requirement: At least two additional courses offered in ASYR or ARCH dealing with ancient Western Asia. These courses must be approved by the undergraduate concentration advisor.

Breadth Requirement: At least one course offered in EGYT or ARCH on the archaeology, art, history, culture, or language of ancient Egypt.

Elective: At least one elective course on the ancient world broadly defined. Usually this course will be offered in Assyriology, Anthropology, Archaeology, Classics, Comparative Literature, East Asian Studies, Egyptology, History, History of Art and Architecture, Judaic Studies, Philosophy, or Religious Studies. The elective course must be approved by the undergraduate concentration advisor.

Total Credits ¹

1  This list contains possible offerings but should not be considered exhaustive.

Egyptology Track

The Egyptology track requires a total of at least ten courses. Six of these must be taken by all concentrators, but the remaining four can be chosen from a fairly broad range of courses, to suit individual interests.

Introductory Courses: ⁶

EGYT 1310 & EGYT 1320  Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian I) and Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian II)

EGYT 1430 & EGYT 1440  History of Egypt I and History of Egypt II ¹

Depth Courses:

EGYT 1330  Selections from Middle Egyptian Hieroglyphic Texts

EGYT 1410  Ancient Egyptian Literature ²

Breadth Course - Any course covering the ancient Near East or Mediterranean world outside Egypt, such as:
   ASYR 0800  The Cradle of Civilization? An Introduction to the Ancient Near East
or ARCH 1600  Archaeologies of the Near East

Elective Course: Any course germane to ancient Egypt or the ancient Near East or Mediterranean world. Alternative and elective courses must be approved by the undergraduate concentration advisor. Such courses will normally be offered by Egyptology and Assyriology, the Joukowsky Institute for Archaeology and the Ancient World, Religious Studies, Classics, Judaic Studies, Anthropology, History of Art and Architecture, History, or Philosophy. Concentrators are welcome to take most courses offered by Egyptology and Assyriology (EGYT and ASYR), Archaeology (ARCH), or related departments, though some may require the instructor’s approval. Concentrators should consult with the concentration advisor to discuss the courses most suitable to their interests.

Total Credits ¹

1  Required for all students pursuing the Egyptology track.
2  Or an EGYT or ARCH course in material culture.

Capstone

All concentrators in Egyptology and Assyriology are required to complete a capstone project. The project can take many forms, but the common feature shared among all possible projects will be a public presentation. Typically in the final semester before graduating, the concentrator will give this capstone presentation before faculty, fellow students, and other interested audiences. If the concentrator is writing an undergraduate honors thesis, the procedure for which is detailed below, this work should provide the content for the capstone presentation. Students not writing an honors thesis will base their presentation on a research project more in depth than a class project, though the topic may stem from a course project or paper. The format of the presentation may vary; suggestions range from an illustrated lecture to a video or an installation presented with discussion. Both the content and the format of the capstone project should be discussed with and agreed upon by the concentration advisor no later than the end of the first semester of the senior year.

Honors in Egyptology and Assyriology

1. Becoming an honors candidate

Students who wish to consider pursuing honors should meet with the Undergraduate Concentration Advisor in the first half of their sixth semester.

Eligibility is dependent on:

• Being in good standing
• Having completed at least two thirds of the concentration requirements by the end of the sixth semester
• Having earned two thirds “quality grades” in courses counted towards the concentration. A "quality grade" is defined as a grade of “A” or a grade of “S” accompanied by a course performance report indicating a performance at the “A” standard.

To pursue honors candidacy, eligible students must:

• Secure a faculty advisor and discuss plans for the proposed thesis project well before the established deadline; this can be done by email when a student is abroad.
• Prepare a thesis prospectus (see below).

1
In order to receive honors a student must be found to have:

- Submit the prospectus to the advisor, one other proposed faculty reader (at least one of the readers must be in the department) and the department chair no later than the first week of the seventh semester.

The structure of a thesis prospectus:

An honors thesis in Egyptology or Assyriology is a substantial piece of research with some degree of originality that demonstrates the student's ability to frame an appropriate question and deal critically with the range of original and secondary sources. A thesis prospectus is a short analytical document consisting of several parts. It will normally include a concise and focused research question; a justification for that question that demonstrates familiarity with previous research on the topic; a project description that includes a discussion of the types of evidence available and appropriate to answering the proposed question; a discussion of methods of collecting and analyzing that evidence; a conclusion that returns to the research question and assures the reader that the project will add value to our understanding of the topic; and a bibliography. The prospectus will ordinarily be in the range of 5-7 pages in length, exclusive of bibliography. The prospectus will include proper citations throughout.

Determination of whether or not a student may pursue the proposed project will be made on review of the prospectus by the readers and department chair. Prospectuses will be evaluated on the following scale:

1. No concerns about the viability of the project.
2. No concerns about the viability of the project, but minor weaknesses in the execution of the prospectus.
3. Concerns about the viability of the project, but willingness to reevaluate a revised prospectus submitted within two weeks of receipt of evaluation.
4. Reservations that the prospectus does not describe an honors-worthy project.
5. Poorly conceived and shoddy work.

Prospectuses will be returned to the student with this numerical evaluation and comments one week after submission of the prospectus. A prospectus must receive an evaluation of 1 or 2 prior to the third week of the seventh semester for a student to be admitted to the honors track. Students who submit an original prospectus that is graded 4 or 5 will not be permitted to rework the prospectus for the second submission.

2. Developing, completing and submitting the honors project

Once accepted as honors candidates, students will pursue a course of study that goes beyond what is expected of a regular concentrator. This includes:

- Enrollment in two semesters of independent study in Egyptology or Assyriology (these do not fulfill course requirements towards the concentration).
- Twice-monthly meetings with the thesis advisor and once-monthly meetings with the second reader. These meetings will be scheduled at the beginning of each term.
- Submission of a comprehensive outline to both readers no later than October 15 (for May graduates)
- Regular submission of drafts. Partial draft including at least one summary of at least one chapter or section is due before Reading Period of the seventh semester.
- A complete draft is due to both readers no later than March 15 (for May graduates).
- The revised final thesis is due in both electronic and physical form to both readers and department chair April 5 (for May graduates).

Failure to meet any deadline will result in automatic termination of the honors process. No extensions will be granted. If a thesis is turned in late but before the end of the term, credit and grade for the Independent Study may still be granted.

3. Evaluating the submitted work of honors candidates

In order to receive honors a student must be found to have:

- Remained in good academic standing throughout the academic year.
- Not violated the Academic Code of Conduct during honors candidacy.
- Complete or be about to complete all concentration requirements.

- Produced a thesis that is judged by the readers to meet the department's expectations for honors work (see below), and turned it in by the established deadlines.
- Successfully defended the thesis during a half hour public presentation held during the final exam period of the eighth semester.

Students who submit theses that are deemed to fall short of the expectations will graduate without honors. In that case, the theses will count as a capstone project.

4. Expectations for honors theses:

Originality:

An honors thesis in Egyptology or Assyriology is expected to add to existing scholarship. The thesis must be based on close work with primary sources (usually in publication rather than in person), supplemented by critical engagement with a substantial amount of relevant secondary literature. While the resulting study is not necessarily expected to be ground-breaking original, and may engage with a well-studied topic, it will usually include a new insight into or interpretation of the material considered.

Scope:

An honors thesis is not a book or dissertation. It is, however, a very serious piece of research and writing for which two dedicated study courses have provided substantial time to the honors student. The question upon which the honors thesis is based should be focused enough to allow an in-depth treatment, generally in under 100 pages or 30,000 words (exclusive of bibliography and illustrations). Appropriate length will vary considerably depending on the topic itself and the nature of the primary sources being considered, particularly if substantial translation of ancient textual sources is required.

Argument:

The thesis should present a sustained analytic argument in answer to its structuring question. A thesis should not be primarily descriptive or narrative in nature. Each chapter should contain a sub-argument that is clearly related to the overall argument of the thesis. The significance of the argument and its relationship to prior scholarship should be clearly articulated. Honors theses are not expected to demonstrate comprehensive familiarity with the secondary literature, but they are expected to engage critically and maturely with important works on the defined topic.

Methodology:

Egyptology and Assyriology are very broad fields, and the appropriate methods will be determined in conjunction with the thesis advisor on the basis of the questions and types of evidence - textual, archaeological, art historical - under consideration. With very few exceptions the methodology of the thesis is expected to be conventional rather than innovative, rooted in the accepted practices of the field in question.

Organization and writing:

An honors thesis must be well organized and written. It should include an introduction and conclusion as well as well-considered chapters that allow the reader to follow the line of reasoning easily. The relationship of any section to the larger whole should be clear, and segues should help the reader move between sections. Writing should be grammatically correct, well copy-edited, professional, and consistent. Citations and bibliography must be in an accepted style as determined in consultation with the advisor.

Egyptology and Assyriology Graduate Program

PhD Program in Egyptology and Assyriology

Brown is one of the premier institutions for the study of Egyptology, Assyriology, and the history of ancient science, and our PhD students train in the foundational areas of our disciplines: the languages, literatures, history, and material culture of Egypt and Mesopotamia in their wider environment. The department offers instruction in the core ancient languages that are essential for research in our fields: Akkadian (Babylonian and Assyrian, all stages), Egyptian (all stages), Hittite, and Sumerian; instruction in Arabic, Aramaic, Greek, Hebrew, Latin, Sanskrit, Syriac, and Ugaric is available to our students at Brown as
well. In addition to training in philology and critical research methods, our students also become conversant in the archaeological sequence, art and architecture, and repertoires of material culture found across the ancient Near East.

Brown’s doctoral program in Egyptology and Assyriology has a number of distinguishing features:

# We offer in-depth disciplinary training that allows our students to pursue focused research in any one of our core fields: Assyriology, Egyptology, the history of ancient science, and the archaeology of Egypt and the Near East.

# We encourage creative interdisciplinary work, including but not limited to research that bridges Egyptology, Assyriology, and the history of ancient science in innovative ways. Our doctoral students have the opportunity to do coursework in and cultivate stimulating intellectual relationships with faculty from Anthropology, Classics, History, the Joukowsky Institute for Archaeology and the Ancient World, and Religious Studies. In addition Brown’s Graduate School has an Open Graduate Program that allows interested doctoral students at Brown to pursue a concurrent master’s degree in a secondary field that is outside the scope of their doctoral program.

# We provide significant funding both in the department and across the university to support graduate students’ original research. Our doctoral students have recently used support from the department and university to carry out research in museum collections in the US, Europe, and Africa; to participate in archaeological fieldwork (survey and excavation) in Egypt, Sudan, and Turkey; and to present the results of their research at international conferences and symposia.

# We emphasize developing our students professionally and encourage students to reach important early career milestones during their time in the program, such as giving conference papers and submitting academic publications; to that end we have incorporated valuable professional academic skills into our curriculum and assessment.

# We provide a variety of opportunities for our PhD students to train as teachers and develop valuable teaching skills that will be useful in a wide variety of educational settings, including research universities, museums, or teaching colleges focused on the liberal arts.

A few areas of particular interest to the department’s faculty include: ancient science (astronomy and astrology, timekeeping and calendrics, divination and medicine); cultural interactions throughout the Mediterranean, Near East, and Africa in the second and first millennia BC; religion and ritual in the ancient Near East, from Egypt and Sudan to Anatolia and Mesopotamia; the history of the Egyptian language and its grammar; the origins and development of writing and the diffusion and reception of cuneiform, hieroglyphic, and alphabetic scripts in the ancient world; kingship and monumentality in ancient Egypt and Sudan; the integration of textual and archaeological methodologies; Coptic manuscripts; the ancient Near East in classical periods and Greek and Roman cultures’ perceptions of the more ancient past; Mesopotamian and Egyptian literature; ancient empires of the Near East in context; and the origins of Egyptian civilization.

PhD Tracks

The department currently offers three tracks to the PhD: (1) Assyriology (2) Egyptology, and (3) History of the Exact Sciences in Antiquity. Each track has different course requirements, details of which may be found in the program’s Graduate Student Handbook. Students who enter the program in one track may switch to another track providing they are still able to complete the coursework requirements by the end of their third year.

Further details about our graduate program may be found at http://www.brown.edu/academics/gradschool/programs/egyptology-and-assyriology (http://www.brown.edu/academics/gradschool/programs/egyptology-and-assyriology/)

Courses

Assyriology

From the Hanging Gardens of Babylon to the Tower of Babel to Babylon 5, the city of Babylon in ancient Iraq holds an important place in contemporary culture. But how much of what is commonly known of Babylon is true? In this course we will explore the ancient city of Babylon through its texts and archaeological remains and investigate the ways Babylon has been viewed over the past two thousand years. Enrollment limited to 19 first year students. Instructor permission required.

ASYR 0310. Thunder-gods and Dragon-slayers: Mythology + Cultural Contact - Ancient Mediterranean and Near East.
This course is an exploration of the mythological imagination in the ancient Mediterranean and Near East. From cosmic origins to epic battles, mighty queens to baneful monsters, mythological motives and narratives crisscrossed the ancient world, bypassing seemingly rigid geographic and cultural boundaries. Particular attention will be devoted to the study of the dynamic reinterpretation of myths in situations of cultural contact. Primary evidence will include material from Mesopotamia, Egypt, Anatolia, the Levant, Greece and Rome. The course will span several millennia, from the earliest attestations of the Epic of Gilgamesh to the Christian and Muslim reinterpretation of so-called pagan myths.

This seminar explores the relationship between monsters and civilization, considering what exactly it is that monsters do for us; why we create, deploy, and ultimately destroy them; and what they tell us about the peoples among whom they sprang up and roamed. Emphasized is the developing civilization in Mesopotamia, and the place and functioning of monsters and demons in the visual arts and literary contexts, as well as in the worldview, of the early cities of that region. Enrollment limited to 19 first year students.

Images tell stories that carry us to imaginary worlds. A story in pictures engages us deeply, opening the doors of fantastic places and times. In antiquity public monuments displayed visual narratives that animated public spaces, enthralled audiences and delivered state ideologies. This course involves reading narrative imagery from the Middle East and East Mediterranean including magical hunt scenes in prehistoric caves, political tales on Mesopotamian relief sculpture, visions of paradise in Egyptian tombs, Aegean frescoes and Assyrian reliefs of exotic landscapes. Using contemporary perspectives on art, we will explore the material power and everyday significance of pictorial representations as intimate spectacles. Enrollment limited to 19 first year students.

ASYR 0500. Mathematics in the Ancient World.
Mathematics is often touted as a “universal language,” but despite this supposed universality, mathematics takes different forms in different cultures and times. This class will look at mathematics in the ancient world, with a focus on how mathematical knowledge has been studied in and understood by modern scholars and how they can and do talk about it today. It will also dive into different applications of mathematics, including astronomy, statecraft, poetry, and more in order to better understand the wide impact of mathematical understanding on these disparate fields.

This course explores the cultures of ancient Mesopotamia and the Near East (present-day Iraq, Syria, Turkey, and Iran) from prehistory until the end of the first millennium BC. We will investigate the rich history and archaeology of this region through literary and historical texts (in translation) and archaeological evidence, including visual culture and architecture. Central to our discussion will be questions about how and why scholars study the Middle East in this early period. Topics include: early complex societies, state formation, the origins and development of writing, ancient empires, religion, culture and ethnicity, trade, diplomacy, warfare, agriculture, and craft production.
ASYR 1000. Introduction to Akkadian.
An intensive introduction to the cuneiform writing system and the basic grammar and vocabulary of Akkadian, a language first attested over four thousand years ago in Mesopotamia (modern Iraq). The earliest known member of the Semitic family of languages (like Arabic and Hebrew), Akkadian was in use for over two thousand years across a wide expanse of the ancient Near East. Students will learn the classical Old Babylonian dialect of Akkadian (ca. 1800 BCE) and read Mesopotamian texts in the original, including selections from the Laws of Hammurabi, as well as excerpts from myths, hymns, prayers, historical documents, and letters.

ASYR 1010. Intermediate Akkadian.
This course is the second semester of an intensive, yearlong introduction to the Akkadian (Babylonian/Assyrian) language. Students will deepen their knowledge of the cuneiform writing system and continue to develop their grasp of Akkadian grammar. Readings from Mesopotamian texts in the original language and script will include, among others, selections from the Laws of Hammurapi, Assyrian historical texts (such as the accounts of Sennacherib's siege of Jerusalem), and the story of the Flood from the Standard Babylonian Epic of Gilgamesh. Prerequisite: Introduction to Akkadian (ASYR 0200 or ASYR 1000) or permission of the instructor.

ASYR 1100. Imagining the Gods: Myths and Myth-making in Ancient Mesopotamia.
Creation, the Flood, the Tower of Babel–well-known myths such as these have their origins in ancient Mesopotamia, the land between the Tigris and Euphrates Rivers. Using both ancient texts in translation and archaeology, this course will explore categories of Mesopotamian culture labeled "myth" and "religion" (roughly 3300-300 BCE), critically examining the ancient evidence as well as various modern interpretations. Topics will include myths of creation and the flood, prophecy and divination, death and the afterlife, ritual, kingship, combat myths and apocalypses, the nature and expression of ancient religious experience, and representations of the divine. There are no prerequisites.

ASYR 1110. Literature of Ancient Iraq.
Introduction to rich and varied compositions surviving from ancient Mesopotamia (Iraq) and beyond, including selected myths, epics, hymns, prayers, rituals, oracles, elegiac poetry, fables, proverbs, riddles, debates and more. We will consider what they can tell us about people's lives and values in ancient times and the processes by which written knowledge was preserved and passed on, where the texts were collected and how they came to be scattered in museums. The definition of "literature" adopted in this course considers aesthetic intent but also the subjects (e.g. love, death, heroism, gods) and forms of writing meaningful to an ancient audience.

This course examines various facets of the relationship between art and developing social/political complexity in the ancient world, with case studies drawn primarily from the ancient Near East and Egypt between the rise of the first cities in the late fourth millennium BCE through to the fall of the Achaemenid "world empire" in the mid-fourth century BCE.

ASYR 1160. Color and Culture in the Ancient Near East.
This seminar investigates the meaning of color as a culturally mediated and culturally embedded phenomenon using case studies drawn from the civilizations of the ancient Near East and Aegean. Employing contemporary critical theories from cognition, phenomenology, linguistics and material culture studies, we will explore how human beings perceived, categorized and valued color in ways that vary cross-culturally.

The course will focus on the cultural and religious-historical interpretation of physical displacements among sacred places, including urban processions, visits to temples and journeys to sacred places within the context of the Ancient Near Eastern religions. We will attempt to sketch a map of the holy centers and cultic itineraries, focusing on case studies from Babylonia, Assyria and Syria from the third to the first millennium BC as well as comparative case studies from surrounding cultures. These topics will be explored with an emphasis on how written and archaeological sources can be interpreted with the help of theoretical literature.

ASYR 1300. The Age of Empires: The Ancient Near East in the First Millennium BC.
The first millennium BC saw a series of empires vying for control of the Near East: the Assyrians, the Babylonians, the Persians, and the Greeks of Alexander the Great and his successors. The course will explore the political, social and cultural history of Mesopotamia and the Ancient Near East under these empires, using evidence drawn from archaeology and ancient texts (in translation).

ASYR 1400. Introduction to Sumerian.
Over five thousand years ago the first cities emerged in southern Iraq, and around that same time writing was invented, most likely to record the language we now call Sumerian. Even after it was no longer spoken, Sumerian became a powerful conduit for the region's cultural heritage, preserving its literature and religious traditions for millennia. In this course students will learn the fundamentals of Sumerian grammar, develop a basic working vocabulary, and explore the cuneiform script through weekly readings in original texts. Selections will come from royal inscriptions, court cases, myths, magical incantations, and even ancient schoolwork. No prerequisites.

ASYR 1500. Ancient Babylonian Magic and Medicine.
A survey of ancient magic and medicine focusing on Mesopotamia (present-day Iraq, ca. 2500-300 BCE), with an emphasis on beliefs about the body, health, illness, and the causes of disease, such as witchcraft or angry gods. Topics will include the training of healers, exorcists, and herbalists; concepts of contagion and plague, modalities of treatment, incantations, prayers, and empirical remedies like prescriptions; ancient perceptions of problems like sexual dysfunction, the perils of pregnancy, tooth decay, epilepsy, and mental illness. Readings will be drawn from ancient texts (in translation), archaeology, and parallels with ancient Egypt, Greece, Rome, and the Bible. No prerequisites. Not open to first year students.

ASYR 1600. Astronomy Before the Telescope.
This course provides an introduction to the history of astronomy from ancient times down to the invention of the telescope, focusing on the development of astronomy in Babylon, Greece, China, the medieval Islamic world, and Europe. The course will cover topics such as the invention of the zodiac, cosmological models, early astronomical instruments, and the development of astronomical theories. We will also explore the reasons people practiced astronomy in the past. No prior knowledge of astronomy is necessary for this course.

ASYR 1650. Time in the Ancient World.
Time plays many roles in civic and everyday life: calendars provide a way of regulating activities ranging from gathering taxes to knowing when to perform religious rituals. This course will provide an introduction to the way time was measured, used, regulated and conceived in the ancient world. We will cover topics such as the calendars used in Mesopotamia, Egypt, Greece and China, sundials and other instruments used for measuring time in the ancient world, and the way time is used in scientific and non-scientific texts.
ASyr 1700. Astronomy, Divination and Politics in the Ancient World. This course will explore the relationship between astronomy, divination and politics in the ancient world. The sky provided ancient cultures with many possibilities for observing occurrences that could be interpreted as omens. In many cultures, celestial omens were directed towards the king and his government. As a result, interpreting and controlling celestial omens became an important political activity. In this course, we will explore how and why astronomical events were used politically in ancient Mesopotamia, the Greco-Roman world, and ancient and medieval China. No prior knowledge of astronomy is necessary for this course.

ASyr 1725. Scientific Thought in Ancient Iraq. This course will investigate a variety of ancient scientific disciplines using primary sources from ancient Mesopotamia (modern Iraq). By reading the original texts and studying the secondary literature we will explore the notion of scientific thought in the ancient world and critique our own modern interpretation of what “science” is and how different traditions have practiced scientific methods towards a variety of aims. Looking at a range of disciplines will allow us to compare and contrast the different ways in which scientific thinking is transmitted in the historical record.

ASyr 1750. Divination in Ancient Mesopotamia. The interpretation of natural events as portents of good or bad outcomes played an important role in religious, political, scholarly and everyday life in ancient Mesopotamia. In this course we will study Mesopotamian omen literature from textual, scientific, philosophical and cultural viewpoints in order to understand how divination operated and what it was used for.

ASyr 1800. Scribes and Scholarship in the Ancient Near East. This course will explore the development of written traditions among the scribes of the Ancient Near East. Topics covered include the mechanics of writing on clay tablets, the training of scribes and the school curriculum, the status of scribes in society, the development of literary and scholarly traditions, the creation of tablet archives, and the range of scholarship (e.g. science, medicine, ritual, literature) found in the ancient near east.

ASyr 1900. Introduction to Hittite Language and Literature. This course is an introduction to Hittite language, literature, and culture. Hittite, the earliest attested Indo-European language (thus related to Greek, Latin, and Sanskrit) was used in Anatolia during the second millennium BCE. It survives in tens of thousands of tablets written in cuneiform script. Students will learn the basic grammar of the language and read in the original or in translation specimens from the fascinating textual legacy of the Hittites, which includes myths, prayers, laws, diplomatic texts as well as formal and informal letters. They will also become familiar with the cultural environment in which those texts were composed.

ASyr 2120. Historiography of Exact Sciences. Introduces graduate students to the sources, problems, and methodologies of the history of astronomy and mathematics from Babylon to Kepler. Prerequisite: AWAS 0200. Open to graduate students only.

ASyr 2130. Historiography of Exact Sciences. Introduces graduate students to the sources, problems, and methodologies of the history of astronomy and mathematics from Babylon to Kepler.

ASyr 2310A. Ancient Scientific Texts: Akkadian. Readings and analysis of a major scientific text in Akkadian. Prerequisite: AWAS 0200 or 0210. Open to graduate students only.

ASyr 2310B. Assyriology I. The kings of Babylonia and Assyria took every opportunity to boast about their military victories, successful hunts, the completion of new cities, and the building and decoration of temples and palaces. But is theirs the only possible version of Mesopotamian history? This course examines episodes in the history of Babylonia and Assyria (ca. 2400-500BCE) by looking at the political and social relationships among kings, political elites, entrepreneurs, and commoners; emphasis is placed on reading Akkadian texts both in the original and in translation, with a focus on letters, royal inscriptions, and astrological reports. Prerequisite: AWAS0210 or instructor's permission.

ASyr 2310C. Assyriology II. This seminar will focus on selected topics of Neo-Assyrian history (1000-612 BC), including: the royal family; the queen and her influence; celebrating New Year's festivals; hunting lions; conquering a city; constructing and decorating palaces and temples; urban renewal and the founding of new cities; the substitute king ritual; and scholarly life. Assyria in the first millennium BC will be examined principally from Assyrian texts in translation.

ASyr 2310D. Ancient Scientific Texts: Cuneiform Literature.

ASyr 2400. Akkadian Literary and Religious Texts. Readings in Akkadian literary and religious texts in the original language and script. Possible genres include myths, proverbs, and literary miscellanea as well as prayers, hymns, incantations, rituals, prophecies, and divinatory texts. This course is intended primarily for graduate students and may be repeated for credit. A reading knowledge of Akkadian cuneiform is required. A reading knowledge of both German and French is recommended but not required.

ASyr 2420. Akkadian Divinatory Texts. This course offers focused study of the most significant Akkadian divinatory texts from the second and first millennia BCE. Readings will come for the major genres of Mesopotamian divination found at sites throughout the ancient Near East. Emphasis will be placed on matters of textual transmission, reconstruction, and interpretation. We will read texts in the cuneiform script (copies, photographs, and, when possible, actual tablets) and work to place the material in meaningful historical, social, and cultural contexts. Knowledge of Akkadian cuneiform is required.

ASyr 2430. Akkadian Historical Texts. This course offers focused study of the most significant Akkadian historical and chronographic texts from the second and first millennia BCE. Readings in cuneiform will come for the major genres of Mesopotamian history-writing found at sites throughout the ancient Near East, including commemorative inscriptions, annals, chronicles, literary historical texts, and historical miscellanea. We will contend with the disjunctions between ancient and modern modes of historical thinking and work to contextualize the ancient texts. Knowledge of Akkadian cuneiform is required. Reading knowledge of German and French will be useful but is not required. Intended primarily for graduate students.

ASyr 2500. Readings in Sumerian. Advanced readings in Sumerian cuneiform texts in the original script and language. Readings will be selected from a particular genre, historical period, or site. This course is intended primarily for graduate students and may be repeated for credit. A reading knowledge of Sumerian cuneiform is required. A reading knowledge of both German and French is strongly recommended but not required.

ASyr 2600. Topics in Cuneiform Studies. Advanced readings in Akkadian and Sumerian cuneiform texts in the original script and language(s). The focus of this course will be on the close reading of a specific genre, period, and/or dialect. A rotating cycle of topics to be covered may include the following with a synchronic and/or diachronic approach: historical texts and royal inscriptions, legal and administrative texts, letters, literary and religious texts, medical texts, or scholastic texts. May be repeated for credit. Prerequisite: AWAS 0210 or instructor permission. Open to juniors, seniors, and graduate students.

ASyr 2700. Special Topics in Ancient Sciences. This course will be a topics course containing a detailed technical and cultural study of an area of science in a culture of the ancient world. Although intended for graduate students, undergraduate students who have taken EGyT 1600 or AWAS 1600 or a similar course may be admitted at the instructor's discretion.

ASyr 2710. Babylonian Astronomy. An advanced seminar on Babylonian astronomy, taking both a technical and a cultural perspective on the history of this ancient science.
ASYR 2750. Art and Visual Culture in the Ancient Near East
Peoples of the Ancient Near East from prehistory to the Hellenistic period produced a unique corpus of production technologies and visual culture. Cultures from Anatolia to the Iraqi southern alluvium, from the Levant to Iran and the Caucasus shared this common pictorial language in a variety of ways. In this seminar, we will investigate bodies of archaeological, architectural and pictorial evidence from the Near East while also debating relevant art and architecture historical methodologies and discourses in direct relationship to that material. Conceptual issues such as narrative, representation, perspective, agency, technology, style, symbolism, landscape, space, and power will be explored. Enrollment limited to 15.

ASYR 2800. Archaeologies of Text.
An interdisciplinary seminar that examines the interplay between ancient texts and archaeology in the study of the ancient world. Emphasis will be placed on articulating and analyzing the research methods and assumptions found in case studies set in the ancient Near East, Mediterranean, East Asia, and the Americas. Topics will include: canons of literature as/versus ancient inscriptions; materiality of text; texts on display, in deposits, in archives, in libraries, as refuse; literacy and education; practices of documentation and analysis; writing, language, and ethnicity; historical geography; fakes and forgeries; ancient texts and archaeological ethics. No prerequisites. Intended primarily for graduate students.

Interested students must register for RELS 2100F.

This seminar will explore the development of written traditions among the cuneiform scribes of ancient Babylonia and Assyria. Topics covered include the mechanics of writing on clay tablets, the training of scribes and the school curriculum, the status of scribes in society, the development of literary and scholarly traditions, the creation of tablet archives, the circulation of scholarly knowledge, and the range of scholarship (e.g. science, medicine, ritual, literature) found in Babylonia and Assyria.

ASYR 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and ORN to use when registering for this course.

ASYR 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

ASYR XLIST. Courses of Interest to Concentrators in Egyptology and Assyriology.

Egyptology

EGYT 0300. In the Beginning: Cosmos and Creation in the Ancient World.
As in every human society, the people of ancient Mesopotamia (Iraq) and Egypt wondered about the universe, their world, and how it came about in the first place. Preserved for us in ancient texts and images, their ideas share some things in common with more familiar ancient traditions, such as the creation account in the Bible. In this course, you will look at these ancient texts and images and learn how to dissect them to find what their authors were thinking. In the process, you will discover some surprisingly sophisticated concepts that are still present in our own culture.

EGYT 0310. Intro Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian I).
This course will give you the basic tools you need to understand Middle Egyptian texts. You will learn both the language and the writing system of Middle Egyptian at the same time. This is the first half of a two-semester course, dealing with everything except verbs, which are covered in semester two (like many languages, Egyptian could make sentences without verbs). For students who choose to complete the two-semester course, you will be able to read inscriptions you see in museums (or Egypt) and you will know one of the two oldest written languages in the world. Because ancient Egyptian texts reflect the society they were written in, you will also learn a lot about ancient Egypt itself.

EGYT 0500. The Pyramids in Context: Archaeology of Life and Religion of Death in Old Kingdom Egypt.
No ancient world monument is more iconic than the Egyptian pyramids of Giza. This ONLINE course sets out to be a comprehensive analysis of the Old Kingdom (2575-2150 BCE) pyramids and the material, historical and symbolic context that produced them. How and why were the pyramids built? What was inside them? How was everyday life in the pyramid towns? What kind of rituals were performed in their multiple chambers? This course wants to show the real face of the pyramids and the people who worked on and lived by them.

EGYT 0550. Black Pharaohs: Nubian Kings and Queens of Ancient Egypt.
This course explores the history of northeastern Africa at a time when ancient Egypt was ruled by its neighbor to the south, Nubia. The Nubian pharaohs from the Kingdom of Kush (present-day Sudan) adopted many Egyptian customs, including hieroglyphic writing, in a period referred to as ancient Egypt's 25th Dynasty (747–656 BC). Study of this period has suffered from racist and colonialist attitudes towards the Black inhabitants of northeast Africa, ancient and modern, feeding into a racialized modern discourse around the identity and origins of the ancient Egyptians as well. In this course students will: examine recent interpretations of the Nubian dynasty using ancient texts in translation, art, architecture, and artifacts; look critically at modern historians' blind spots and prejudices; and evaluate the social constructs of race and ethnicity in the study of the great African civilizations of antiquity.

EGYT 1030. Collapse! Ancient Egypt after the Pyramid Age.
How does a civilization or a kingdom collapse after building some of the most enduring monuments from the ancient world? What happens in Egypt after the Pyramid Age? This course uses texts, objects, and monuments to delve into the history and archaeology of the Late Old Kingdom up to the beginning of the Middle Kingdom in Egypt (c. 2160–2055 BCE), often described as a Dark Age characterized by chaos, decline, and natural disasters. We will discuss how ancient history is written with a particular focus on the narrative of collapse in ancient cultures. The class will be based on presentations and discussions focused on controversies linked to the following topics: politics; kings, kinglets, and rulers; monuments and funerary architecture; climate change; religion and beliefs; (auto-)biographies; literature; and art. There are no prerequisites.

EGYT 1100. Ancient Voices: The Literature of Ancient Egypt.
In 1800 BCE, the ancient Egyptian writer Khakheperresepeneb declared that he could not write anything new because everything had already been said. By then, ancient Egypt had already established a complex body of literature that continued to develop over the next several millennia. This course examines literary, religious, historical, and philosophical writings from ancient Egypt, ranging in date from 2400 to 250 BCE, in order to investigate how those texts can enrich our understanding of Egyptian culture and how they relate to broader literary traditions from the ancient world. Selected texts include adventure tales, love poetry, myths, and autobiographies. No prerequisites.

EGYT 1200. Archaeology of Ancient Egypt.
A general survey of the archaeology of ancient Egypt in prehistoric and Pharaonic times. Covers such areas as the development of private and royal funerary monuments, private and royal dwellings, and temples. Attention is also paid to the principles of Egyptian art and architecture and, where appropriate, to archaeological connections with the surrounding cultures. Offered in alternate years.

EGYT 1210. Archaeology of Ancient Egypt.
See Archaeology of Ancient Egypt (EG0120) for description.
EGYT 1310. Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian I)
Learn how to read ancient Egyptian hieroglyphs! The classical language of ancient Egypt, Middle Egyptian was spoken ca. 2000–1600 BCE and remained an important written language for the rest of ancient Egyptian history. Students will learn the hieroglyphic writing system, vocabulary, and grammar of one of the oldest known languages and read excerpts from stories, royal monuments, tomb inscriptions, and amulets. By the end of this course, students will be able to decipher textual portions of many monuments and objects in museums. This course may also be taken on its own, and it also serves as the first of a two-semester sequence. No prerequisites.

EGYT 1320. Introduction to Classical Hieroglyphic Egyptian Writing and Language (Middle Egyptian II)
Continuation of a two-semester sequence spent learning the signs, vocabulary, and grammar of one of the oldest languages known. By the end of this introductory year, students read authentic texts of biographical, historical, and literary significance. The cornerstone course in the Department of Egyptology - essential for any serious work in this field and particularly recommended for students in archaeology, history, classics, and religious studies. Prerequisite: EGYT 1310.

EGYT 1330. Selections from Middle Egyptian Hieroglyphic Texts
Readings from the various genres of classical Egyptian literature, including stories and other literary texts, historical inscriptions, and religious compositions. Students will be expected to translate and discuss assigned texts. Prerequisite: EGYT 1310, 1320.

EGYT 1340. Selections from Middle Egyptian Hieratic Texts
Introduction to the hieratic script and readings from a variety of hieratic documents, including literary compositions, letters, and religious texts. Students will be expected to translate and discuss assigned texts. Prerequisite: EG 131, 132 (EGYT 1310, 1320).

EGYT 1410. Ancient Egyptian Literature
A survey of one of the most intriguing aspects of ancient Egyptian culture. Readings (in translation) of many of the most significant literary documents that survive from Egypt. Presentation of a reasonable amount of historical perspective. Class discussions concerning the nature, purpose, quality, and effectiveness of the works read. Two term papers. No prerequisites. Offered in alternate years.

EGYT 1420. Ancient Egyptian Religion and Magic
An overview of ancient Egyptian religion from both a synchronic and diachronic perspective. Examines such topics as the Egyptian pantheon, cosmology, cosmogony, religious anthropology, personal religion, magic, and funerary beliefs. Introduces the different genres of Egyptian religious texts in translation. Also treats the archaeological evidence which contributes to our understanding of Egyptian religion, including temple and tomb architecture and decoration. Midterm and final exams; one research paper.

EGYT 1430. History of Egypt I
A survey of the history and society of ancient Egypt from prehistoric times to the end of the Eighteenth Dynasty (ca. 5000-1300 BC). Readings include translations from the original documents that serve as primary sources for the reconstruction of ancient Egyptian history.

EGYT 1440. History of Egypt II
As a continuation of EGYT 1430, this course will examine the political and social history of ancient Egypt since the Ramesside Period (ca. 1292-1069 BC) until the Roman conquest in 30 BC. The topics that we will discuss in this course will include, among others, the military and building achievements of such great warrior kings like Ramesses II, the famous Battle of Kadesh against the Hittites and the world’s first peace treaty, the harem conspiracy under Ramesses III, the Nubian pharaohs from the Kingdom of Kush, the conquest of Egypt by Alexander the Great, and the subsequent Hellenistic rule under the Ptolemies and Cleopatra. The second half of Egyptian history is closely linked with those of her nearest as well as more distant neighbors and the rapidly changing political situation in the ancient Near Eastern, Mediterranean, and African regions. We will thus learn how we, as historians, should approach the study of this dynamic period and how to critically analyze various textual and archaeological sources in order to reconstruct the historical reality of the ancient world.

EGYT 1450. History of Egypt III, Libyans, Nubians, and Persians in Egypt
Continuation of EGYT 1430, 1440 (not prerequisites). Covers the Third Intermediate and Late Periods (ca. 1000-332 B.C.E.), from the end of the New Kingdom to Alexander's conquest. Characterized by internal conflict and long intervals of foreign domination, this era, is often described as a period of decline, but closer study shows it to be eventful and rich in documentation. Offered in alternate years.

EGYT 1455. Black Pharaohs: Nubian Rule over Egypt in the 25th Dynasty
The course will cover Egypt's 25th Dynasty (728-657 BC), when rulers of Nubia, located in the region of modern Sudan, added Egypt to their territories. Using a wide range of textual and archaeological evidence, students will learn about the history of famous 'black pharaohs' such as Taharqa and study some of Africa's most impressive archaeological remains. This fascinating period is not well understood and has often been afflicted in the past by racist, colonialist scholarship; using primary sources and recent theory on ethnic identity, this class will re-examine the complex and changing relationship between Egypt and Nubia.

EGYT 1460. History of Egypt IV. The Age of Cleopatra
Continuation of EGYT 1430, 1440, and 1450 (not prerequisites). A survey of the history and society of ancient Egypt from Alexander's conquest to the Arab Conquest, ca. 322 B.C.E.-A.D. 600. Covers the Ptolemaic (323-30), Roman (30 B.C.E.-ca. A.D. 300), and Byzantine (ca. A.D. 300-640) periods. Focal point and pivot is the Ptolemaic period, from Alexander the Great to Cleopatra (323-30 B.C.E.). Offered in alternate years.

EGYT 1465. Life on the Nile: Ancient Egypt beyond the Pharaohs
The history of ancient Egypt is marked by the names of its great pharaohs and monumental buildings. But what about ordinary people who made up the majority of this fascinating culture, yet are not well represented in historical narratives? This course will explore what we know about the daily life of non-royal Egyptians by looking at the primary texts (in translation), art, and material culture of ancient Egypt. We will look at various categories of population, such as children, craftsmen, women, soldiers; and discuss such issues and topics as households, growing up, family, education, love, clothing, medicine, magic, and leisure.

EGYT 1470. Egypt After the Pharaohs: Archaeology and Society in the Coptic and Early Islamic Periods
The history of Egypt may be famous for the tombs, pyramids and mummies of the Pharaonic domination. This course, however, offers a vision of a different Egypt, a later Egypt: one that evolved from the traditions of the past but was infused by Christianity, Islam, Arabic, and the emergence of one of the world's great cities: Cairo. Students will experience the heritage of Egypt that is contained in the mosque of al-Azhar, the monasteries of the Egyptian desert, and the pageantry and ritual of a new set of ruling elites. At the same time they will understand the continuities of this land which Egyptians refer to as Umm al-Duniya 'Mother of the World'.
EGYT 1480. Egypt in the Global World.
From the 4th to the 2nd millennium BC we see Ancient Egypt as part of a wider world in the Eastern Mediterranean. Egypt had diplomatic and trade contacts with the major powers and smaller political entities of this period as well as armed conflicts. These contacts left an abundance of material evidence in Egypt in the archaeological and epigraphical records such as foreign luxury items and pottery, and depictions of foreigners in Egyptian tombs and temples. The course will shed light on the varying intensity and character of the relationship between Egypt and her neighbors in the Levant, Nubia and Libya and wider Eastern Mediterranean world.

The course explores medical practices and beliefs, including healing magic, in ancient Egypt, from the beginning of the Old Kingdom to the end of the Roman period, drawing evidence from both ancient texts (in translation) and archaeological sources. In addition to surveying ancient Egyptian medical practices, the course investigates the social world of the physicians and their patients, and their views on their bodies and illnesses. Topics surveyed include medical handbooks and recipes, physicians’ equipment and training, gods, demons and disease, pregnancy and childbirth, veterinary medicine, the health effects of the ancient Egyptian diet, and later myths about Egyptian medical knowledge.

EGYT 1490. Calendars and Chronology in Ancient Egypt and the Ancient World.
Time is the dimension of history. Chronology studies how we know when events happened. Chronology is much more important to “BC history” than to “AD history.” History books state that the great Ramses II ruled around the thirteenth century B.C.E. But how do we know this? The focus of this class is on the answers to such questions through the study of the foundations of the history of Egypt specifically and of the ancient world in general. Some prior knowledge of Egyptian language or civilization might be handy but is by no means required.

EGYT 1500. Ancient Egyptian Art and Architecture.
Ancient Egyptian art and architecture had a remarkably long history, and much that was produced is amazingly well preserved. This course will focus on the inception and development of these material expressions of high culture through detailed studies of monumental buildings and decorated private tombs, as well as the sculpture, painting, and minor arts from the Predynastic period through the end of the Middle Kingdom (c. 3700-1790 BC). Enrollment limited to 20.

EGYT 1510. Ancient Egyptian Art II.
Considers the art of ancient Egypt’s New Kingdom or Empire Period (1500-1100 B.C.). The relief carving and painting of Theban temples and tombs are studied in detail, and the developments leading to the revolutionary Amarna style of art is carefully analyzed. Decorative arts, Tutankhamun’s treasures, and recent exciting discoveries are all surveyed.

EGYT 1520. The Archaeology of Ancient Egyptian Household and Settlement.
Survey of the primary settlement remains from the Pharaonic Period of ancient Egypt, addressing the practices and problems in settlement and household archaeology. Not open to first year students.

EGYT 1525. Living, Creating, Believing and Dying in the Village of the Royal Tomb Builders.
The site of Deir el-Medina was home to a community of skilled workmen in charge of digging and decorating the tombs of both the Valley of the Kings and Valley of the Queens during the New Kingdom (ca. 1550-1069 B.C.). Deir el-Medina is usually considered the paradigmatic site-witness for studies of Egyptian daily life and benefits from a substantial material record. Through a multi-perspective analysis drawing on both tangible (archaeological structures) and intangible (textual/iconographical) sources, ancient and modern (excavation diaries and new discoveries recently made on the spot!), this course aims at discovering the lifestyle, practices and culture of this community.

EGYT 1550. Ethnic Identity in Graeco-Roman Egypt.
Egypt under Greek and Roman rule (from c. 332 BC) was a diverse place, its population including Egyptians, Greeks, Jews, Romans, Nubians, Arabs, and even Indians. This course will explore the sometimes controversial subject of ethnic identity and its manifestations in the material and textual record from Graeco-Roman Egypt, through a series of case studies involving individual people and communities. Topics will include multilingualism, ethnic conflict and discrimination, legal systems, and gender, using evidence from contemporary texts on papyrus as well as recent archaeological excavations and field survey projects.

EGYT 1910. Senior Seminar.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EGYT 1920. Senior Seminar.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EGYT 2210. Introduction to Coptic.
Coptic, the last stage of the ancient Egyptian language, was written with essentially Greek alphabetic characters. An introduction to Sahidic, which is perhaps the best represented of the Coptic dialects. Sahidic grammar is explained, and some texts, mainly of a biblical and patriotic nature, are read. Open to undergraduates with the consent of the instructor. No prerequisites, but a knowledge of Middle Egyptian or Greek would be helpful.

EGYT 2300. Readings in Ancient Egyptian.
Advanced readings in ancient Egyptian texts in the original script and language. Readings will be selected from a particular genre, historical period, or site. This course is intended primarily for graduate students and may be repeated for credit. A reading knowledge of ancient Egyptian is required. A reading knowledge of both German and French is strongly recommended but not required.

EGYT 2310. History of the Ancient Egyptian Language.
Diachronic survey of ancient Egyptian from Old Egyptian through Coptic, covering changes in phonology and grammar and analyzing the processes through which these changes took place. Course requirements are short research papers to be presented in class and a final examination. Previous course work in at least one stage of the Egyptian language required; knowledge of Late Egyptian, Demotic (grammar) or Coptic preferable. Prerequisites: EGYT 1310 and EGYT 1320, plus either EGYT 2210, EGYT 2410 or EGYT 2610.

EGYT 2410. Late Egyptian.
Introduction to the grammar of the third historical phase of ancient Egyptian and readings from its various genres, including literary texts, letters, historical inscriptions, and tomb-robbing papyri. Students will be expected to translate and discuss assigned texts. Prerequisites: EGYT 1310, 1320.

EGYT 2450. Exchange Scholar Program.

EGYT 2510. Social Life in Ancient Egypt.
This course will provide a valuable opportunity to link theory and data innovatively. Taking the lifecycle as its structure, it covers Egyptian life from conception to death and the afterlife, drawing together a range of data sources, such as material culture, iconography, textual data, and human remains.

EGYT 2521. Problems in Amarna History.
The Amarna Period of ancient Egypt (ca. 1350-1300 BC) is one of the most debated, and variously interpreted, in ancient Egyptian history, in terms of people, events, and intellectual movements. In this course, students will research both the evidence and interpretations, and discuss their findings in class, to try to reach a consensus about the most likely scenarios. The instructor will act as a resource for the problems and sources of evidence, and as moderator in class discussions. Grades will be based on the depth of a student’s research and on a student’s contribution to class discussions.
EGYT 2530. The Perception of Time and Space in Ancient Egypt.
This seminar aims to explore how ancient Egyptian perceived time and space, how they described them, and how they experienced them. Topics covered will include, inter alia, the notion of eternity, the mechanisms of time counting and space organization, the issue of awareness of history, the question of gender-differentiation in the domestic sphere, and the creation of a place.

EGYT 2610. Introduction to Demotic.
 Begins with discussions and exercises in the grammar and peculiar script of this late stage of the Egyptian language, followed by readings of actual ancient texts, including The Instructions of Onkhsashonkhy, The Petition of Petiese, and The Story of Setne Khaemwas. Knowledge of Demotic remains essential for a proper understanding of Egypt during the Saite, Persian, Ptolemaic, and Roman periods. Open to undergraduates with consent of instructor. Prerequisites: EGY 2410 or 2210.

EGYT 2800. Ancient Egyptian Phonology.
Introduction into the phonology of the ancient Egyptian language, from its hypothetical proto-Semitic cognates to its final stage, the six major dialects of Coptic. The course will concentrate not only on phonology but also on how the principles of Egyptian phonology can be used in understanding and interpreting written forms.

EGYT 2810. Old Egyptian.
Introduction to the grammar of the first historical phase of ancient Egyptian and readings from its two primary genres, the Pyramid Texts and autobiographical inscriptions. Students will be expected to translate and discuss assigned texts. Prerequisites: EG 131, 132 (EGYT 1310, 1320).

EGYT 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

EGYT 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

EGYT 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

EGYT XLIST. Courses of Interest to Concentrators in Egyptology and Assyriology.

English

Chair
Richard Rambuss

The English Department fosters the study of British, American, and Anglophone literature—old and new—in ways that are both intensive and open. We offer a wide array of courses in poetry, drama, fiction, creative nonfiction, film, digital media, and theory. All of our courses emphasize the development of student skills in writing, textual analysis, and argument. You will find considerable diversity in our critical methods, including cross-disciplinary approaches that relate the study of literature to history, politics, science, as well as to other art forms. We encourage students in our classes likewise to forge their own new ways of understanding literature and culture.

In addition to the standard English concentration, we offer an English concentration track in the practice of Nonfiction Writing. The concentration in English and the English/Nonfiction track follow the same core requirements, and students in the English concentration may elect Nonfiction Writing courses as electives. We invite applications from qualified juniors to the honors programs in both English and Nonfiction.

One of the largest humanities concentrations at Brown, English provides a strong foundation for a liberal education and for employment in many sectors, especially those that centrally involve writing and working with texts (in any form). In addition to authorship, scholarship, and teaching, these include: journalism, publishing, advertising, visual media, consulting, public relations, public service, finance, government, corporate research, and administration. Our English concentrators routinely go on to law, medical, and professional schools as well as to graduate education in literature and the arts.

About the Concentration

We encourage students interested in concentrating in English to come into the department offices at 70 Brown Street and speak with a concentration advisor. Students in English courses who are considering an English concentration are welcome to make an appointment to speak with their instructor. Concentration programs must be approved by a concentration advisor. To declare a concentration, students must fill out an online Concentration form via ASK and enter their plan of study indicating the requirements that each course fulfills.

Concentration Requirements (10 courses):

1. ONE course in "How Literature Matters" (ENGL0100, 0101):
Addressing topics about which professors are especially passionate, these introductory courses aim to deepen and refine students' understanding of how literature matters: aesthetically, ethically, historically and politically. Students not only engage with larger questions about literature’s significance, exploring the particular kinds of insights and thinking it is especially suited for conveying, they also gain a deeper awareness of the critical methods we use to understand and analyze it, engaging with matters of form, genre and media. Finally, these courses help students develop their skills as close, careful readers of literary form and language.

- ENGL 0100A How To Read A Poem
- ENGL 0100C Altered States
- ENGL 0100D Matters of Romance
- ENGL 0100F Devils, Demons, Do-Gooders
- ENGL 0100G The Literature of Identity
- ENGL 0100H Cultures and Countercultures: The American Novel after World War II
- ENGL 0100M Writing War
- ENGL 0100N City Novels
- ENGL 0100P Love Stories
- ENGL 0100Q How Poems See
- ENGL 0100R American Histories, American Novels
- ENGL 0100S Being Romantic
- ENGL 0100T The Simple Art of Murder
- ENGL 0100U Serial Fictions
- ENGL 0100V Inventing Asian American Literature
- ENGL 0100W Literature Reformatted
- ENGL 0100Y Do the Right Thing
- ENGL 0101A Independence and Modern Literature Nonfiction Writing

2. ONE course in Medieval and Renaissance Literatures
(Pre-1700):

These courses, which center on Medieval and Renaissance literary works, cast light on periods that can come across to us as both familiar and strange. They focus our attention on how literatures from these periods depict concepts such as aesthetics, romance, gender, sexuality, race, power and politics in ways that are like and unlike how we tend to think of them today—on how pre-modern or early modern works can both defamiliarize the categories of experience and identity we tend to take for granted and also suggest something of their origins. Several courses under this rubric will also engage with recent literary and filmic adaptations of works from these eras, exploring how many such works continue to function as vibrant and at times ambivalent inspirations for the literary imaginings of later periods.

3. ONE course in Literatures of Modernity (Post-1700):

These courses explore the many strands of writing in English that have emerged from the eighteenth century through the present, shaping the contemporary world. These literatures reflect on political, economic, and intellectual history, from the idea of the nation and the structures of capital through the rise and dissolution of empire and the emergence of postcolonial states, including the forms of race, gender and sexuality that cut across them. Courses also examine how aesthetic works can shape and critique their moment: they look at genres like the novel and short story, poetry, drama, essays, and new, hybrid forms that have arisen with expanding digital media; they also take up a multitude of literary movements whose influences remain with us today, including Romanticism, realism, naturalism, modernism, and post-modernism.

4. ONE course in Literatures of the Color Line:

In 1903, W. E. B. Du Bois famously proclaimed in "The Souls of Black Folk" that "The problem of the twentieth century is the problem of the color-line,—the relation of the darker to the lighter races of men in Asia and Africa, in America and the islands of the sea." Courses in this category explore the complex ways in which literary texts have addressed American histories of race, ethnicity, and empire. They may do so from the vantage point of ideas about difference and hierarchy that predate the modern conception of race and by engaging with earlier histories of conflict and contact. These courses explore issues of intersectionality as well, highlighting how race operates in relation to other structures of difference such as gender, sexuality and class.

5. ONE course in Literary Theory and Cultural Critique:

The late-twentieth century saw a revolution in the field of literary studies in the United States, as critics turned their attention to the contextual and historical nature of our categories of knowledge. This turn to theory was influenced by developments in psychoanalysis, linguistics, philosophy, political theory and sociology and by the emergence of social movements that challenged such structures as patriarchy, homophobia, racism, imperialism, economic inequality, and environmental violence. The avenues of inquiry opened up brought an increased awareness of the implication of literature in the operations of power and ideology; a sense of the potential for literary modes of presentation to challenge and displace such operations; and a new attention to the role of gender, race, empire, class, and sexuality in the formation of the literary work. Courses that satisfy the Literary Theory and Cultural Critique requirement explore some dimension of these issues—either directly, taking as their primary focus a set of theoretical questions or debates, or indirectly, by examining a compelling topical question of social and political significance through works of literature and literary theory.

6. FIVE electives ²

Total Credits 10

1 Each course may fulfill ONE requirement. Five courses must be 1000-level courses. With advisor approval, two of the ten required courses may be taken in departments other than English.

2 Only TWO courses dealing primarily with the practice of writing at the 1000-level may be counted as electives. ENGL0900 and ENGL0930 do not count toward the concentration, however they do fulfill prerequisites for upper-level Nonfiction courses. One ENGL0200 may be counted toward the 10-course requirement only as an elective.
All substitutions and/or exceptions must be approved by the concentration advisor in consultation with the Director of Undergraduate Studies. A substitution or exception is not approved until specified in writing in the student’s concentration file housed in the English Department.

**English Concentration -- Nonfiction Writing Track (10 courses)**

The English concentration also includes a Nonfiction Writing Track. The requirements are the same as through 6 above, but three of the five electives must be 1000-level Nonfiction Writing courses (only ONE of which may be intermediate: ENGL1030, ENGL1050). Only THREE Nonfiction courses may count toward the track.

**Honors in English**

The English Honors program is intended for students who have been highly successful in their English concentration coursework and who want the opportunity to pursue a research project in more depth than is possible in an undergraduate seminar. The program is intended for those students with a strong desire to conduct independent research under the supervision of a thesis advisor and culminates in the writing of a thesis during the senior year.

**Admission**

Students apply to the Honors Program early in the second semester of their junior year. December or mid-year graduates may apply in their 6th semester, but are encouraged to apply during their 5th semester and write their theses alongside May graduates. Interested concentrators should speak to the Honors Advisor early in their junior year to discuss their plans. Specific deadlines for admission are announced annually and are available on the department website. Students who are studying off campus are expected to meet the application submission deadline. Admission to the English Honors Program depends on evidence of ability and promise in the study of literature. To be eligible for admission, students must have received more As than Bs (and no Cs or below) in their level seminars or comparable small courses in which students have the opportunity to do independent research, take significant responsibility for discussion, and do extensive scholarly and critical writing. Students are encouraged to include at least one advanced writing course in their program. (Permission to take a graduate course must be obtained from the instructor.) Honors candidates should discuss their proposed course of study with the Honors Advisor.

During the Fall and Spring of the senior year, honors candidates must complete two additional courses beyond the ten courses required by the regular concentration: ENGL 1991 and ENGL 1992. ENGL 1991 is the Senior Honors Seminar, in which students begin to research and write their theses, as well as meet to discuss their work. This is a mandatory S/NC course. ENGL 1992, the Senior Honors Thesis is an independent research course that must be taken for a grade. Honors candidates must continue to receive more As than Bs in courses taken as part of the concentration. Courses completed with a grade of C will not count toward an Honors concentration. A student who receives such a grade and wishes to continue in the program must complete a comparable course with a grade higher than C.

**The Honors Thesis**

The Honors thesis is an extended essay, usually between 50 and 80 pages, written under the supervision of a department faculty advisor and second reader. (Where appropriate, the advisor or the reader, but not both, may be in another department.) The thesis may be interdisciplinary or creative project, but it is usually an essay on a scholarly or critical problem dealing with works of literature in English. The specific topic and approach of the thesis are worked out between the student and the thesis advisor, with assistance from the student’s second reader. This process should begin in the latter part of the student’s junior year. A good way to get an idea of what sorts of projects are possible is to visit the Hay Library, which stores theses from previous years, or to meet with the Honors Advisor.

A prospectus describing the project and endorsed by the faculty advisor must be submitted to the Honors Advisor at the beginning of the senior year. At the end of the senior year fall term, a student must submit approximately 25 pages of draft material toward the thesis. Full thesis drafts are due by mid-March; final bound copies of the thesis are due in mid-April. Late theses will not be accepted for honors after the April deadline; students who hand in theses after the deadline but before the end of the term will receive a grade for the thesis course, but they will not be eligible for departmental honors. The completed thesis will be evaluated by the student’s advisor and a second reader, each of whom provides written commentary and suggests a grade for ENGL 1992.

**Evaluation**

The English Department reviews the academic record as well as the thesis evaluations for each senior completing the Honors Program. Following a successful review, the student will be eligible to graduate with Honors in English.

**Honors in Nonfiction Writing**

The Nonfiction Writing Honors Program is intended for students who have been highly successful in their English concentration work. Specifically, it allows those who have an expressed and proven interest in nonfiction writing to pursue more completely a single project under the supervision of a first reader. The intention is to help students to complete work worthy of publication. The program culminates in the writing of a thesis during the senior year.

**Admission**

Students apply to the Nonfiction Writing Honors Program in the second semester of their junior year. December or mid-year graduates may apply in their 6th semester, but are encouraged to apply during their 5th semester and write their theses alongside May graduates. Interested concentrators should have already made contact with at least one member of the Nonfiction Writing faculty and should meet with the Honors Advisor early in their junior year to discuss their plans. Specific deadlines for admission are announced annually and are available on the department website. Students who are studying off campus are expected to meet the application submission deadline.

Admission to the Honors Program in Nonfiction Writing depends upon the student’s demonstrated superior ability in nonfiction writing. Students must have taken either one intermediate and one advanced writing course,
or two advanced writing courses by the end of their sixth semester and completed each of them with an S. To be eligible for admission, students must have earned more As than Bs (and no Cs or below) in other courses in the concentration plan. Students must submit an application, two letters of recommendation, a writing sample from an advanced writing course, and a project proposal.

See procedures and application (http://brown.edu/a...nonfiction-honors-procedures/) for more details.

December or mid-year graduates who wish to apply for nonfiction honors have two options, but the first is highly encouraged:

Option 1:
In their 5th semester (Spring), students can apply to the nonfiction honors program along with the other juniors. Accepted students will be incorporated into the regular nonfiction honors cohort and must meet the same deadlines: i.e. they must complete their theses at the same time as the other honors students (though for mid-years this will be at the end of their 7th semester). They register for ENGL 1993 Nonfiction Honors Seminar in the Fall and ENGL 1994 Senior Honors Thesis in Nonfiction in the Spring.

Option 2:
In their 7th semester (the Spring of their final year) students take ENGL 1200 and in their 8th semester (the Fall of their final year) they take ENGL 1994. (Students choosing this option must consult with the Honors Advisor for information on deadlines.)

Requirements
Students in the Nonfiction Writing Honors Program take two additional courses beyond the ten courses required by the Nonfiction Writing Track -- ENGL 1993 Honors Seminar in Nonfiction Writing (with the Honors Advisor) and ENGL 1994 Senior Honors Thesis in Nonfiction Writing; the Honors track will bring to twelve the total number of required courses. The ENGL 1993 grade option must be S/NC; ENGL 1994 must be taken for a grade. Honors candidates should discuss their proposed course of study with the faculty member they choose to direct their thesis.

Honors candidates must continue to receive more As than Bs in courses taken as part of the concentration. Courses completed with a grade of C will not count toward an Honors concentration. A student who receives a "C" after admission to Nonfiction Honors and wishes to continue in the program must complete an additional course in a comparable subject area, with a grade higher than C.

The Honors Thesis
The Nonfiction Writing Honors thesis is an extended project, usually of between 50 and 80 pages, written under the supervision of one of the Nonfiction Writing faculty and a second reader (who can be from literature or another department). The specific topic and approach of the thesis are worked out between the student and the first reader, with assistance from the student's second reader. A good way to get an idea of what sorts of projects are possible is to visit the Hay Library, which stores theses from previous years, or to meet with the Honors Advisor. The work typically is in a genre chosen from Nonfiction Writing's spectrum: critical analysis, literary journalism, memoir, lyric essay, or narrative based on travel, science, history, or cultural critique.

Full thesis drafts are due by mid-March; final bound copies of the thesis are due in mid-April. Late theses will not be accepted for honors after the April deadline; students who hand in theses after the deadline and before the end of the term will receive a grade for the thesis course, but they will not be eligible for departmental honors. The completed thesis will be evaluated by its first reader and second reader, each of whom provides written commentary and suggests a grade for ENGL 1994.

Evaluation
The English Department reviews the academic record as well as the thesis evaluations for each senior completing the Nonfiction Writing Honors Program. Following a successful review, the student will be eligible to graduate with Honors in Nonfiction Writing.

English Graduate Program
The Department of English offers a graduate program leading to the Doctor of Philosophy (Ph.D.) degree.

For more information on admission and program requirements, please visit the following website:

http://www.brown.edu/academics/gradschool/programs/english (http://www.brown.edu/academics/gradschool/programs/english/)

Courses

ENGL 0100A. How To Read A Poem. It is difficult to get the news from poems/ yet men die miserably every day/ for lack/ of what is found there. Poet William Carlos Williams captures this course's focus on the special ways that poetic language represents and gives shape to human experience. Organized around concepts and practical skills, the readings cross historical and geographical boundaries.

ENGL 0100B. Literature, Trauma, and War. This course surveys many genres and periods in order to consider and think about two traditional kinds of literary responses to war--glorifying it, and representing its horrors. We'll examine texts by Homer, Shakespeare, Milton, Wordsworth, Byron, Whitman, Hardy, Crane, Freud, Levi, Pynchon, and Sebald, among others; we may also screen one or two films. Limited to undergraduates. Students should register for ENGL 0100B S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100C. Altered States. A course about ecstasy, rapture, transport, travel, mysticism, metamorphosis, and magic in pre- and early modern verse, drama, and prose, including: Ovid (Metamorphoses), Shakespeare (A Midsummer Night's Dream; Othello), Marlowe (Dr. Faustus), Mandeville's Travels; the writings of the medieval female mystics Julian of Norwich and Margery Kempe; the ecstatic verse of Crashaw, and the erotic, at times pornographic, verse of Donne, Herrick, Carew, Rochester, and Behn.

ENGL 0100D. Matters of Romance. Narratives (1100-1500) of men, women, and elves seeking identity on the road, in bed, and at court. Readings (in modern English) include Arthurian romances, Havelok, lais by Marie de France, and Chaucer's "Wife of Bath's Tale." Primarily for freshmen and sophomores. Students should register for ENGL 0100D S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100E. Catastrophic Communities. What becomes of communities and individuals in a catastrophe? This course considers the different literary, social and ethical formations that arise or are destroyed in disaster, and examines what it means to be both an individual and part of a collective in times of unprecedented upheaval. Readings by Blanchot, Camus, Sebald, Duras, Freud, Arendt, Jaspers, Orwell, and Eggers.

ENGL 0100F. Devils, Demons, Do-Gooders. Who hasn't struggled with the problem of good and evil? We will investigate how various writers grapple with these fundamental questions of judgment. What constitutes good and evil in the first place, and who gets to make such judgments? Works may include John Milton, Mary Shelley, Jhumpa Lahiri, Frederick Douglass, Toni Morrison, and Herman Melville. Students should register for ENGL 0100F S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0100G. The Literature of Identity. This course will explore various conceptions of personal identity, with an emphasis on Romanticism. We'll read Anglo-American philosophical and literary texts (mostly poetry) from the Renaissance through the 19th century, taking some excursions into contemporary theory (queer, feminist, post-structuralist). Writers may include Shakespeare, Montaigne, Locke, Hume, Rousseau, Wordsworth, Keats, Emerson, Browning, and Wilde.
ENGL 0100H. Fictions and Frauds: Literature and the Historical Imagination.
How does fiction reinvent history? What makes autobiography "true"?
Readings focus on the slave narrative, Hawthorne, historical novels, and
Jack Kerouac’s "On the Road." Limited to undergraduates.

ENGL 0100I. American Fiction and the Sea.
This class examines one of the most distinctive of literary genres: the sea
tale. These narratives are interested not only in how we know what we
know, but in the ways we imagine what we don’t know. Novels and films
to be discussed will include Moby-Dick; Lord Jim; Aiguebe, the Wrath of God;
Apocalypse Now; The Witness.

ENGL 0100J. Cultures and Countercultures: The American Novel after World War II.
A study of the postwar American novel in the context of the intellectual
history of the 1950s, 1960s, and 1970s. We will read the postwar novel
in relation to the affluent society, the vital center, the lonely crowd, the
power elite, the one-dimensional man, the post-industrial society. Authors
to be considered include Baldwin, Bellow, Ellison, Highsmith, McCarthy,
O’Connor, Pynchon, and Roth. Two lectures and one discussion
meeting weekly. Students should register for ENGL 0100J S01 and may
be assigned to conference sections by the instructor during the first week
of class.

ENGL 0100K. The Dead and the Living.
Explores ethical, historical, and personal dilemmas in modernism through
the relation between the dead and the living. What claims do the dead
have on the living? How do the living shape the lives of the dead?
Readings in literature, psychoanalysis, and philosophy, including Henry
James, Virginia Woolf, Walter Benjamin, Sigmund Freud, James Joyce,
W. G. Sebald, and Julian Barnes. Students should register for ENGL
0100K S01 and may be assigned to a conference section by the instructor
during the first week of class.

ENGL 0100L. What Was Postmodern Literature?.
How compatible is the idea of the postmodern with the idea of a historical
period? This course looks at recent British and American literature
through the optic of postmodern theory, discussing how the theoretical
problematization of both history and politics has an impact upon the
very possibility of fiction. Readings include Doctorow, Pynchon, Amis,
Jameson, Lyotard, Baudrillard. Students may be assigned to conference
sections by the instructor during the first week of class.

ENGL 0100M. Writing War.
Examines the challenges that war poses to representation, and
particularly to language and literary expression in the modern era. We
will focus primarily on the First and Second World Wars, exploring the
specific pressures war puts on novels and poetry, as well as on history,
psychology, and ethics. Works by Sassoon, Owen, Hemingway, Woolf,
Rebecca West, Graham Greene, Pat Barker, Tim O’Brien, Georges Perec.
Students should register for ENGL 0100M S01 and may be assigned to
conference sections by the instructor during the first week of class.

ENGL 0100N. City Novels.
This course examines 20th and 21st century novels to consider how these
narratives envision the city, its possibilities and limits. How does the city
shape how we think, wander, grow up, see and know each other? How
does the city divide people? How does the novel imagine ways to bridge
those divisions? Readings by Woolf, Chandler, Wright, Cisneros, Smith,
Calvino, Adiga, Whitehead.

ENGL 0100P. Love Stories.
What do we talk about when we talk about love? We will see how writers
have addressed this question from Shakespeare’s day to the present.
Writers may include Shakespeare, Austen, Eliot, Flaubert, Graham
Greene, Marilynne Robinson, and/or others. Students should register for
ENGL 0100P S01 and may be assigned to conference sections by the
instructor during the first week of class.

ENGL 0100Q. How Poems See.
What makes poems and pictures such powerful forms of life? Why do
drawings have so much to tell us? How do we see things in words? How
do graphic images, optical images, verbal images, and mental images
together constitute ways of understanding the world? Looking at poems
and images from Giotto and Shakespeare, Wordsworth and Dickinson and
Turner through such modern poets and painters as Stevens, Ashberry,
Warhol and Hejinian, we will study sensory and symbolic images, the
uses and dangers of likeness, and the baffling confluence of concrete and
abstract, literal and figurative, body and mind, and matter and spirit.

ENGL 0100R. American Histories, American Novels.
How do novels make readers experience such traumatic historical events
as war, slavery, genocide, the interment, and civil conflict? What kind of
political or ethical perspective on such events do literary narratives
encourage? How do novels construct cultural memory? This course
explores important post-1945 novels that make us readers and feel in
particularly resonant ways about American histories of race.

ENGL 0100S. Being Romantic.
"Romantic literature" and "Romantic art" are familiar concepts in the
history of culture. But what does "Romantic" actually mean? Were
Coleridge and Keats especially dedicated to writing about erotic love?
Why would "Romantic" literature emerge during the period of the French
Revolution and Industrial Revolution? What does early 19th-century
"Romanticism" have to do with the meaning and status of the "Romantic"
in our culture today? Readings in British and American writing from Blake
and Mary Shelley to An DiFranco and Rage Against the Machine.

ENGL 0100T. The Simple Art of Murder.
A survey of the history of criminal enterprise in American literature.
Authors to be considered include Poe, Melville, Hawthorne, Twain,
Chandler, Wright, Petry, Highsmith, Miller, Harris, and Mosley.

ENGL 0100U. Serial Fictions.
A study of serial and serialized fictional narratives from the nineteenth
century the present-- dime novels, serial genre fictions, literary novels
comprised of chapters initially published as short stories, radio and film
serials, television programs old (The Naked City, Hawaii-Five 0), newer
(The Wire, Sex in the City), and new (Americans), podcasts, and video
games (Legend of Zelda).

ENGL 0100V. Inventing Asian American Literature.
What insights can literature provide into the complicated workings of
race in America? What role can the invention of a literary tradition play
in illuminating and rectifying past and present injustices? We explore
these questions by examining how the idea of an Asian American literary
tradition came into being and by reading influential works that have
become part of its canon. Students should register for ENGL 0100V S01
and may be assigned to conference sections by the instructor during the
first week of class.

ENGL 0100W. Literature Reformatted.
We’ll use literary works produced for digital environments (novels on
Twitter, cominary poetry, collaborative fiction on chat forums) in
conversation with works of literature produced in traditional forms. Do
these new forms offer empowering extensions of the literary, or do they
threaten the very forms of literature from which we can profit the most?

ENGL 0100X. Literature and Social Justice.
What role does literature play (if any) in understanding/revealing injustice,
oppression, or inequity, or even helping create a more just world? What
role might literary play in helping produce the very definitions of sociality
and justice through which we see the world? Readings may be drawn
from the writings of Mark Twain, Ralph Ellison, Toni Morrison, and Leslie
Marmen Silko.

ENGL 0100Y. Do the Right Thing.
An examination of literary works as developing our modern framework of
moral values, along the way taking up questions of temptation, corruption,
punishment, redemption, and responsibility. We will start with Christian
allegorical texts (Dr. Faustus and Pilgrim's Progress), complicate the
picture with 19th century psychological fiction, and conclude with some
masterpieces of art cinema.
ENGL 0150A. Elizabeth I: The Queen and the Poets
Queen Elizabeth I, a poet herself, adorned her aging body as the symbolic object of desire for a circle of ambitious male poets. Considers the poetic means by which Sidney, Spenser, and Shakespeare overcome the obvious obstacles to desire presented by her uncertain health and imperious temperament and court their Virgin Queen.

ENGL 0150B. Objects of Beauty in Renaissance Culture
What made a poem or a play as beautiful in 16th-century England as a hat or the right pair of shoes? Literary history and aesthetics from Wyatt, Surrey, and More, through Sidney, Shakespeare, Jonson, and Donne.

ENGL 0150C. The Medieval King Arthur
Where did stories of King Arthur come from and how did they develop in the Middle Ages? We will read the earliest narratives of King Arthur and his companions, in histories and romances from Celtic, Anglo-Norman, and Middle English sources, to examine Arthur's varying personas of warrior, king, lover, thief. Enrollment limited to 19 first-year students.

ENGL 0150D. Shakespeare's Present Tense
Shakespeare in Love suggests how Shakespeare was clued in to elite and popular cultures. Current adaptations like O and 10 THINGS I HATE ABOUT YOU demonstrate how Shakespeare provides anachronistic clues to issues of the present. This course will trace such clues by examining the cultural origins and ongoing adaptations of Romeo and Juliet, Hamlet, Othello, Twelfth Night, Henry V, and the sonnets. Enrollment limited to 19 first-year students.

ENGL 0150E. Love and Friendship
What do we talk about when we talk about love? This course poses this question in various ways. How, for instance, can we tell the difference between love's various forms—between love that is friendly and love that is romantic? How do the different forms of love differently shape people? How does love work when it involves sex, or marriage, or children, or divinity? And what must love involve to be called "good"? Why? Materials will range from Plato and St. Augustine to Leo Bersani and Allen Bloom and will also include popular filmic representations of love. Limited to 19.

ENGL 0150F. Hawthorne and James
An introduction to a pair of writers whose work continues to shape our understanding of American literature and American identity. Focusing on much of their most important work, our aim will be to understand how their conceptions of the relationship between writing and history both complicate and complement each other. Limited to 19 first-year students.

ENGL 0150G. Lincoln, Whitman, and The Civil War
An introduction to the literature of the American Civil War: Whitman, Lincoln, Melville, Stowe, and other autobiographical and military narratives.

ENGL 0150H. Literature of The American South
The South is as much a state of mind as a place on the map, and some of the major figures in American literature have contributed to the making of what we think of when we think of "the South." Explores the sometimes contradictory but always important meanings of the American South. Authors include Poe, Douglass, and Faulkner.

ENGL 0150I. The Simple Art of Murder
This course surveys the history of criminal enterprise in twentieth-century America. Drawing from a broad range of sources ("literary" novels and pulp fiction, B-movies and auteurist features), we will assess the role of crime as object of aesthetic attention and attend to the questions that can arise about the idea of the criminal when one takes it up outside of its usual home in courts. Authors: Poe, Hampnett, Fitzgerald, Chandler, Wright, Petry, Hughes, Butler. Directors: Hitchcock, Wilder, Huston, Travolta, Pakula, Lupino. Limited to 19 first-year students.

ENGL 0150J. Inventing America
One of the distinguishing features of American literature may be its seemingly constant struggle with the idea of America itself. For what, these authors wonder, does/should America stand? We will examine the rhetorical battles waged in some major works over the meaning and/or meanings of America's national identity. Authors may include Franklin, Hawthorne, and Fitzgerald. Limited to 19 first-year students. Instructor permission required.

ENGL 0150K. The Transatlantic American Novel
This course reads American literature across national boundaries, focusing on the novel genre and the question of "American" identity as a problem in itself. The course takes up this problem in a wide array of novels spanning the period between the late eighteenth and twentieth centuries. Writers include Crevecoeur, Susanna Rowson, Poe, Melville, Twain, and Nella Larsen. Limited to 19 first-year students.

ENGL 0150L. The Sensational and the Real in Victorian Fiction
This course will explore two modes through which Victorian novels engaged the turbulent experience of their time: realism and sensation. We will examine how these different genres tackled issues of gender, sexuality, class, and personal and community identity. Enrollment limited to 19 first-year students.

ENGL 0150M. "Model Minority” Writers: Cold War Fictions of Race and Ethnicity
Explores the construction of race and ethnicity in U.S. writings of the 50s, paying particular attention to how literary texts negotiate the ideological demands of Cold War anti-communism. Writers studied may include Saul Bellow, Carlos Bulosan, Ralph Ellison, Jack Kerouac, Norman Mailer, John Okada, and Jade Snow Wong.

ENGL 0150N. Black Atlantic Narratives of Africa
We will study fiction, drama, and autobiography by black writers who have used the motif of a literal or symbolic journey to Africa to explore in powerful ways issues of the trans-Atlantic slave trade, Africa as land and concept, individual and collective memory. Writers will include Maryse Condé, Charles Johnson, George Lamming, Paule Marshall, Toni Morrison, and Derek Walcott.

ENGL 0150O. Englishness and Britishness in Contemporary Fiction
How have writers of fiction responded to recent developments in British political culture? How has the category of Englishness changed during that period? This course offers an overview of some of the most important British writers of the last twenty years and an introduction to theories of culture and ideology. Readings include Ishiguro, Kelman, Caryl Phillips, Zadie Smith.

ENGL 0150P. Is There a Theory of the Short Story?
This course considers the question in the title by looking at works of short fiction by Melville, Conrad, Bierce, Joyce, Lawrence, Kafka, Wicomb, Paley, O’Connor, Beckett, White, and literary theories by figures such as Lukács, Bakhtin and Deleuze. Enrollment limited to 19 first-year students. Banner registrations after classes begin require instructor approval.

ENGL 0150Q. Realism and Modernism
The novel as a genre has been closely identified with the act of representation. What it means to represent "reality," however, has varied widely. This seminar will explore how the representation of reality changes as modern fiction questions the assumptions about knowing, language, and society that defined the great tradition of realism. English and American novels will be the primary focus of our attention, but influential French, German, and Russian works will be studied as well. Limited to 19 first-year students. Banner registration after classes begin requires instructor approval.
ENGL 0150R. The Problem of Women's Writing.
Combines a survey of British and American women writers with an interrogation of the concept of women's writing. Authors will include Austen and Bronte, Walker and Viramontes; theoretical topics will include the figure of the author, subjectivity and ideology, the concept of a separate women's canon or tradition, and the complex differences within "feminine" writing and "feminist" reading.

ENGL 0150S. The Roaring Twenties.
This course examines U.S. culture of the 1920s, with particular attention to phenomena that came to be mythologized as the "roaring twenties"—flappers, movie culture, literary and cultural innovation, primitivism and exoticism. We will read fiction and some poetry in the context of movies, publicity, and advertising. Class discussion will focus on analyzing texts with an attention to language and form, as well as connecting these texts to their cultural contexts. Enrollment limited to 19 first-year students.

ENGL 0150T. Arms and the Man.
"Mother Green and her killing machine!" So enthuses a grunt in Full Metal Jacket about the Marine Corps. This seminar explores the romance of man and machine: the individual man's body as a machine and group relations with each man as a cog in a larger body/machine. We'll also consider other sites—including the gym—infilitrated, at least figuratively, by militarism. Texts: Crane, The Red Badge; Herr, Dispatches; Swofford, Jarhead; Paul Fussell, The Great War and Modern Memory; Samuel Fussell, Muscle. Films: Full Metal Jacket; The Hurt Locker; GI Jane; Three Kings; Pumping Iron. Enrollment limited to 19. Instructor permission required.

ENGL 0150U. The Terrible Century.
Although the contemporary term "terrorism" was coined in the 18th century, and although its contemporary resonance has reached an unprecedented pitch, the truly terrible century was arguably the 20th. This course introduces 20th century literature in English through a historical and philosophical examination of terror and terrorism. We will focus on several historical contexts, including: British colonialism in Ireland and Africa, South African apartheid, and the post 9/11 world. Readings include Conrad, Bowen, Gordimer, Coetzee, Fouds, Walters, Hamid. Enrollment limited to 19 first-year students.

ENGL 0150V. James and Wharton.
Friends, rivals, fellow ex-pats, and close correspondents for 15 years, Henry James and Edith Wharton had much in common. Their names are often coupled together in much the manner as Hemingway and Fitzgerald, since their fiction has often thought to deal with the same set of concerns: the societal and emotional ups and downs of well-to-do people in London, Paris, and New York. This class will read James and Wharton side by side in order not only to see in what ways they shed light on each other, but in what ways they differ. Limited to 19 first-year students.

ENGL 0150W. Literature and the Visual Arts.
How do words and images represent? Are the processes by which literature and the visual arts render the world similar or different? Is reading a novel or a poem more like or unlike viewing a painting, a sculpture, or a film? This seminar will analyze important theoretical statements about these questions as well as selected literary and visual examples. Limited to 19 first-year students.

ENGL 0150X. The Claims of Fiction.
This course explores the interplay of tropes of strangeness, contamination, and crisis in a range of novels and shorter fiction, in English or in translation. We will ask why social misfits and outsiders somehow become such fascinating figures in fictional narratives. How do these fictions entice and equip readers to reflect on collective assumptions, values, and practices? Writers will include Baldwin, Brontë, Coetzee, Conrad, Faulkner, Ishiguro, Morrison, Naipaul, Rushdie, Salih, Shelley. Limited to 19 first-year students.

ENGL 0150Y. Brontës and Brontëism.
The novels of Anne, Charlotte, and Emily Brontë alongside works (fiction and film) influenced by or continuing their powerful (and compelling) authorial visions: Wide Sargasso Sea (Rhys), Rebecca (Hitchcock), The Piano (Campion), and Suspiria (Argento). Among other questions, we will discuss the role of Romanticism, feminism, the bodily imaginary, colonialism, and genre. Enrollment limited to 19 first-year students.

ENGL 0150Z. Hamlet/Post-Hamlet.
Shakespeare's Hamlet is perhaps the most widely read, performed, adapted, parodied and imitated literary text of the western tradition. In this seminar we will begin by reading/re-reading the play before turning to a number of appropriations of Shakespeare, both in the west and non-west, in order to address social and aesthetic issues including questions of meaning and interpretation, intertextuality and cultural translation. Enrollment limited to 19 first-year students.

ENGL 0151A. Hitchcock!
An exploration of the work of one of the most famous directors of the twentieth century. We will watch many of Alfred Hitchcock's best-loved films, including The Birds, North by Northwest, Vertigo, Psycho, Rear Window, and Rope. In addition, we will read some of the most important criticism of these films. No knowledge of film theory required. Enrollment limited to 19 first-year students.

ENGL 0151B. How to Do Things with Books.
What can one do with a book? Read a novel, sure, but also cook a fabulous meal, join a movement, or reimagine ways of being. Each class will focus on old or rare materials in the John Hay Library and throughout Providence. We'll explore the nature of the book through discussion and hands-on activities such as letterpress printing and zine-making. Enrollment limited to 19 first-year students.

ENGL 0151C. Midsummers.
A traditional occasion for festivity and misrule, midsummer has been important to writers since medieval times. Spanning Shakespeare to Aster, Midsummer to Midsommar, the course includes Ovid's Metamorphoses and Korne's Spring Breakers. How are midsummers represented? What's the difference between country and city, nighttime and daytime? Do things ever go back to normal, or can a party last forever? Enrollment limited to 19 first-year students.

ENGL 0151D. Men's Films.

ENGL 0151E. Genres of American Comedy.
A survey of a number of American comic traditions, with a special emphasis on the ways in which these traditions elaborate, challenge, and/or promulgate middle-class social norms in the US. Enrollment limited to 19 first-year students.

ENGL 0200A. Risk/Rupture/Remains: Contemporary Queer Media and Poetics.
How can we imagine life in a world preoccupied with queer and trans loss? This course introduces contemporary experiments in queer and trans survival across poetry, film, theory, and video games. We will read, watch, and play with particular attention to Black and Indigenous art in the ongoing HIV/AIDS epidemic. Artists may include Dionne Brand, David Wojnarowicz, CAConrad, and Porpentine. Enrollment limited to 17.

ENGL 0200B. Studying at the End of the World.
This course will consider the enduring power of study, as it has been conceptualized in Renaissance European thought as studia humanitatis, and more recently in calls for the end of the university as we know it. Through a range of texts, essays, and visual media, we will consider what studying otherwise might mean here at the end of the world. Authors include: William Shakespeare, George Jackson, Octavia Butler, Ia Paperson, Kamau Brathwaite, etc. Enrollment limited to 17.

ENGL 0200C. Stories of Speculation: Fabulism and Narrative Realism.
What do moments of upended reality and temporality in literary fiction offer us about the human condition and built environment? From contemporary fairy tale retellings to canonical modernist literature, we will examine novels' engagement with temporality, speculative/magical realism, and fabulism. Texts include Djuna Barnes, Toni Morrison, Nella Larsen, and Han Yujoo. Enrollment limited to 17.
ENGL 0200D. Literature and the Social Contract
This course considers imaginative works (short stories, novelas, films) through the prism of moral and political philosophy. We will focus on how representations of right and obligation inform notions of self, other, and the il/legitimacy of authority. Readings include: Hobbes, Rousseau, Kafka, Adichie, Mann, Melville, Orwell, Octavia Butler, Rawls, Le Guin, Yuri Herrera, Murayama, and Agamben. Enrollment limited to 17.

ENGL 0200E. Giving way: Poetry, Performance, Film.
This course will engage with artistic forms that creatively respond to the present by both heeding its demands while also expressing alternatives to its norms. They map out, figure, and perform various (im)possibilities of existence. Our archive, informed by artists such as Adrian Piper and Lyn Heijnian, will consist of apparitional experience, ecstatic dance, magical sentences, etc. Enrollment limited to 17.

ENGL 0200F. Wild and Unruly: Black Women’s Belonging, Place, and Self in Storytelling.
How are belonging, place (or geography), and self expressed by women of African descent across the Black Atlantic? How do literature and other cultural productions help black women creatively navigate senses of self and place? Through the lens of the wild and unruly, this class asks how black women find new ways of expressing the human existence. Enrollment limited to 17.

ENGL 0200J. Stuck in the Suburbs: A Poetics of Everyday Life.
Suburbia is where nothing happens: a landscape that cultivates boredom and indulges angst. But it is also a site of repressed horrors, where our deepest anxieties come home to roost. This course examines architecture, tone, temporality, race, and gender in the literature and films of the suburbs. Texts include Eugenides, Perrotta, Lahiri; Blue Velvet, The Stepford Wives, American Beauty. Enrollment limited to 17.

ENGL 0200K. Trans--: Transformation, Translation, Transgression in Literature.
From transgression to transformation to trans rights, why does the prefix “trans” appear inescapable whenever one is discussing radical change? Centering on this mercurial prefix, this course examines the possibilities and limits of change from ancient anxieties about transgression to contemporary discussions of transnationalism and transgender identities. Authors include: Wordsworth, Woolf, Ginsberg, Plath, Morrison, Imogen Binnie, hooks, Dylan, Against Mel. Enrollment limited to 17.

ENGL 0200L. Between Home and Haven: Contemporary Narratives of Revolt and Refuge.
What forces dictate our perception of “home”? Is it where we come from? Somewhere we must find? Or is home what persecutes us - a place from which we must escape or rebel? This course will contemplate sanctuary, family, authoritarianism, and resistance across fiction, graphic memoir, and film. Writers may include Marjane Satrapi, Julia Alvarez, and Viet Thanh Nguyen. Enrollment limited to 17.

ENGL 0200M. One True Pairing (“OTP”): The Courtship Plot from Jane Austen to Jane the Virgin
What’s love got to do with it? This course examines how the courtship plot, from meet-cute to marriage, shapes our understanding, not only of romance and seduction, but also of gender, race, social class, sexual orientation, empire, and literary genre. Texts include fiction by Jane Austen, Nella Larsen, Jenny Han, and Henry James, alongside Clueless, Moonlight, and Jane the Virgin. Enrollment limited to 17.

ENGL 0200N. Godforsaken Spaces: Literatures of the Demonic.
Has fear of the Devil outlived the fear of God? While the demonic rationalizes unfathomable violence and renders forms of otherness intolerable, it may also allow us to imagine social alternatives. This course will explore demonic figures in contemporary literature/film: the scapegoats, witches, and misfits that occupy the margins of society. Authors include: McCarthy, O’Connor, Morrison, Gyasi, Erdrich. Enrollment limited to 17.

ENGL 0200P. Literatures of Anxiety.
From Xanax to safe spaces to #MAGA, our age is notoriously characterized as an unduly anxious one. But anxious by what measures? Tracking expressions of anxiety through a range of literary works, we’ll explore how the so-called “anxious” subject may yet signal a crucial, generative political position. Works by: Atwood, Dostoevsky, Abdellah Taïa, Dionne Brand, Hieu Nguyen, Lacan and LaWhore Vagistan. Enrollment limited to 17.

ENGL 0200Q. “Strangeness” at The Margins: Black and Queer Narratives.
Anchored in black and queer studies, this course will think within “weird” and unusual narratives. How do sexual, gender, and racial identities work together in ways that produce “strange” literature? What might we gain through careful attention to the techniques used in reading/writing marginal selves through oddness? Figures will include Janelle Monae, Toni Morrison, Prince, Sigmund Freud, and Ralph Ellison. Enrollment limited to 17.

ENGL 0200R. American Misfits: Short Story Collections of Marginalized U.S. Subjects.
What does it mean to not “fit in” in the U.S.? How does crossing international borders and waters reshape perceptions of home? This course investigates how short story collections, in form and content, depict experiences of fragmented memory and bifurcated national identity among marginalized peoples. Authors include: Chimamanda Adichie, Jhumpa Lahiri, Sandra Cisneros, Leslie M. Silko, Junot Diaz, Galang, Viet Nguyen. Enrollment limited to 17.

ENGL 0200S. Killing Shakespeare: Three Plays and their Afterlives.
Do adaptations of Shakespeare “kill” his texts? In this course, we will explore three plays—Othello, The Tempest, and Hamlet—with some of their most prominent adaptations. We will focus on how these adaptations consider important political questions of their times in relation to Shakespeare. Authors/directors include: Lawrence Olivier, Aime Cesaire, Jawad Al-Asadi, Vishal Bharadwaj, and Julie Taymor. Enrollment limited to 17.

What are the political effects of representing a person, thing, or event? Is representation itself a useful political goal? With an emphasis on racial politics, this class examines how poetry plays with representability and irrepressibility to call attention to and perhaps change how we see each other and the world. Readings include works by Gertrude Stein, Claudia Rankine, Mercedes Eng, and Layli Long Soldier. Works may also include popular music by artists like Bob Dylan and Solange. Enrollment limited to 17.

ENGL 0200U. After the Human?: Literature at the End of the World.
What does it mean to be human? From zombies to aliens, cyborgs to talking bears, contemporary fiction is rewriting our most fundamental categories of identity. This course explores what’s at stake in how we define ourselves, and the challenge ‘nonhumans’ pose to our beliefs about right and wrong, good and evil. Authors include: Ishiguro, Jemisin, Tawada, Vandermeer, Whitehead, and Miéville. Enrollment limited to 17.

ENGL 0200V. Graphic Novels and the Politics of Memoir.
Are comics literature? Can images help us bear witness? How do text and illustration work with or against one another? Paying special attention to the memoir form, this course explores the contemporary graphic novel (together with film and other visual narratives) as a transformative medium for political and aesthetic expression. Works by Spiegelman, Bechdel, Satrapi, Sacco, Richard Linklater, and others. Enrollment limited to 17.

ENGL 0200W. Comedy and Cruelty.
Modernity is often conceived as a tragedy—this course imagines otherwise. We will explore the usefulness of the comic frame in the wake of (economic, political, environmental) disaster through 20th-21st century novels/films by Joseph Conrad, Frank Capra, Ralph Ellison, Samuel Selvon, Paul Beatty, Jordan Peele, Anna Burns, Bong Joon-Ho. This class investigates the possibility of joy in an age of disappointment. Enrollment limited to 17.
ENGL 0200X. Necromancy for Beginners.
Have you ever wanted to speak to the dead? Or bring something dead back to life? This course examines the fantasies, historical practices, and political forces shaping reanimation and otherworldly communication in literature from medieval grimoires to contemporary American film. Authors/directors include: Shakespeare, Marlowe, Milton, Cavendish, Shelley, Lovecraft, Ryder (AHS), Bayona (Penny Dreadful), Sackheim (Lovecraft Country), and Fell/Butler (ParaNorman). Enrollment limited to 17.

ENGL 0200Y. Show Me the Money: Advertising and Capitalism in American Literature.
This course examines the intersections of capitalism and advertising in 19th and 20th century American Literature. Central to this investigation will be questions of identity and representation. Each class begins with a discussion around a print, digital, or video advertisement, and engages a variety of works and authors including Harriet Jacobs, Henry James, Herman Melville, Mad Men, amongst others. Enrollment limited to 17.

ENGL 0200Z. Black (W)holes, Black Feminism(s), and Black Feeling.
The seminar takes up black women's "self-defined sexualities." What is a black feminist arrangement of erotic feeling, pleasure, and sexuality? What are its coordinates? Conditions? How might it change? We ground our exploration in close study of black feminist poetics—the specific formal and creative choices that poets, fiction writers, visual artists, and others use to critically examine life in art. Enrollment limited to 17.

ENGL 0300B. The Romance of Travel.
Considers the role of the strange, new, and fantastic in travel accounts of the Medieval period and Renaissance. If travel writers offered their stories as "windows to the world," we will treat them as representations that expose, reinforce, and subvert the author's cultural, political, and social attitudes. Works by Marco Polo, Chaucer, Columbus, Raleigh, Shakespeare, Defoe, and Swift. Enrollment limited to 30.

ENGL 0300C. English Drama 1350-1700.
This course presents great plays not written by Shakespeare, from the mystery plays of the late Middle Ages through Restoration drama. We will address these questions: What kinds of plays spoke to what kinds of audiences? How do changes in theatrical style relate to social change? How do genre, convention, staging, and acting style shape a dramatic text? Enrollment limited to 30.

ENGL 0300E. Three Great Poets: Shakespeare, Donne, Milton.
We will study these premier Renaissance poets from all angles possible, to understand the historical situations and political issues that shaped their writing, the authors and ideas that influenced them, the traditional forms they appropriated for new purposes. Most of all, we will study them to appreciate the power of poetry as a source of knowledge and inspiration. Enrollment limited to 30.

ENGL 0300F. Beowulf to Apha Behn: The Earliest British Literatures.
Major texts and a few surprises from literatures composed in Old English, Old Irish, Anglo-Norman, Middle English, and Early Modern English. We will read texts in their historical and cultural contexts. Texts include anonymously authored narratives like Beowulf and Sir Gawain and the Green Knight, selected Canterbury Tales by Chaucer, and texts by Sir Thomas Malory, Spenser, Shakespeare, and Aphra Behn. Enrollment limited to 30.

ENGL 0300G. Angels and Demons, Heavens and Hells: The Otherworld from the Middle Ages to the Early Modern Era.
Wonder about what happens after death is among the most fascinating and gripping sacred imagination. We will explore concepts of heaven, hell, purgatory, Satan, angels, ghosts, the soul, virtue and vice, the poetry of salvation, and the power of melancholy. Texts will include Old and Middle English Otherworld narratives, and writings by Dante, Milton, Browne, Marlowe, and others. Enrollment limited to 30.

ENGL 0300H. New Selves, New Worlds.
How did pre-modern and early modern writers imagine the self? How were these notions of the self transformed when individuals traveled to unfamiliar places? How do these new selves imagine certain fundamental questions, such as the power one has to control one's emotions, social environment, and ultimate fate. Authors may include Chaucer, Shakespeare, and Milton. Enrollment limited to 30.

ENGL 0300I. The Arrival of English: Medieval, Renaissance, Early Modern.
In these literary periods, something arrives in England, whether it is the Anglo Saxon invaders, Christianity, French medieval romance, or the continental example of renaissance. Readings include Beowulf, Wanderer, Dream of the Rood, Chaucer's Canterbury Tales, Spenser's Shepherds Calendar and Faerie Queene, and Milton's Paradise Lost. Enrollment limited to 30.

ENGL 0300L. The Global Middle Ages.
This course offers students an introduction to the medieval period as a time of active cultural exchange, racial imaginaries, and decentralized globality. We will explore what it means to think about history on a global scale, how to broaden our understanding of the Middle Ages without replicating Eurocentric perspectives, and how literary texts work to mediate history.

ENGL 0310A. Shakespeare.
We will read a representative selection of Shakespeare's comedies, tragedies, histories, and romances, considering their historical contexts and their cultural afterlife in terms of belief, doubt, language, feeling, politics, and form. Students should register for ENGL 0310A S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0310B. Violence, Sacrifice, and Medieval Narrative.
This course will introduce students to medieval prose and poetry that centralize the problematic nature of violent conflict and its attendant horrors. We will study literature from medieval England, Wales, Ireland, and Iceland, including Beowulf, two Old Icelandic sagas and Edda poetry, Irish and Welsh texts, and part of Malory's Morte Darthur. Topics will include sacrifice, religion, chivalry, horror, and contemporary critical approaches. Open to undergraduates only.

ENGL 0310E. Shakespeare: The Screenplays.
It's been said that if Shakespeare were alive today he'd be working in Hollywood. We will read five or six plays (including at least one representative of each of Shakespeare's genres: comedy, history, tragedy, romance) and then study film adaptations of them. The course is especially concerned with various approaches to the Shakespeare film: not just the straightforward adaptation, but also the Shakespeare spinoff ("10 Things;" "My Own Private Idaho"), the Shakespeare film as a star-turn (Helen Mirren as "Prospera" in Taymor's "Tempest"), and the Shakespeare film as an auteur-turn (Orson Welles's "Chimes at Midnight"; Polanski's "Macbeth").

ENGL 0310F. Prose Sagas of the Medieval North.
In this course, we will read long prose fiction from medieval Iceland, Ireland, and Wales, considering how it is similar to and different from the modern novel. We will consider plot, characterization, and style in each linguistic tradition. Texts may include The Cattle Raid of Cooley, The Mabinogi, Njáls's Saga, Egil's Saga, Grettir's Saga, and Gísli's Saga.

ENGL 0310G. Gender and Genre in Medieval Celtic Literatures.
This course traces images of masculinity and femininity in Welsh, Cornish, Breton, and Irish narratives within and around early medieval Britain. You will be introduced to the genres of saga, romance, and the short poetic lays as you consider how the nature and gender of the hero changes in specific cultural and linguistic moments.

ENGL 0500A. Literature and the Fantastic.
Considers the changing ways Renaissance, Romantic, Victorian, and late-nineteenth-century authors incorporate non-realistic and fantastic themes and elements in literature. Special attention to the relationship between realism and fantasy in different genres. Readings include stories (gothic, ghost, and adventure), fairy tales, short novels, plays, and poems. Shakespeare, Swift, Brothers Grimm, Blake, Wordsworth, Coleridge, Keats, Tennyson, Robert Browning, Christina Rossetti, Stoker, Lewis Carroll, Dickens, Henry James. Enrollment limited to 30.

ENGL 0500B. Introduction to British and American Romanticism.
An exploration of "Romanticism" in literature written and read on both sides of the Atlantic between 1775 and 1865. Poetry, fiction, and essays by writers such as Blake, Wollstonecraft, Wordsworth, Coleridge, Byron, Percy Shelley, Mary Shelley, Keats, Thoreau, Emerson, Fuller, Hawthorne. Enrollment limited to 30.
ENGL 0500C. Inventing America.
Even before there was a United States, American authors argued over just what distinguished “America” from other communities. For what, they wondered, did or should America stand? Examines the rhetorical battles waged in some key pre-Civil War American literary texts over the meaning and/or meanings of America. Authors studied may include Bradstreet, Franklin, Douglass, and Melville. Enrollment limited to 30.

ENGL 0500E. Foundations of the Novel.
Introduces students to the first stages of novel writing in England and to historical and theoretical issues relating to the novel’s “rise” to the dominant genre of the modern era. Eighteenth-century works of fiction are long; however, texts selected for this course are less long. They include Defoe’s Moll Flanders, Richardson’s Pamela and Fielding’s Joseph Andrews. Enrollment limited to 30.

ENGL 0500G. Literature and Revolutions, 1640-1840.
Key developments in British and American literature understood in relation to the historical and cultural forces that produced the English Revolution, the American Revolution, the French Revolution, and the Industrial Revolution. Readings in major writers such as Milton, Paine, Blake, Wollstonecraft, Emerson, Barrett Browning, and Dickens, and in some of their non-canonical contemporaries. Focus on the emergence of a transatlantic literary culture. Enrollment limited to 30.

ENGL 0500H. Mariners, Renegades, and Castaways: American Fiction and the Romance of the Sea.
Examines one of the most distinctive of literary genres: the sea novel. Ostensibly stories of mystery and adventure, these texts are also meticulous accounts of working life at sea. Reads a number of well-known and lesser known American tales of the sea, including Poe’s The Adventures of A. Gordon Pym, Melville’s Moby-Dick, London’s The Sea-Wolf, and Crane’s “The Open Boat.” Enrollment limited to 30.

ENGL 0501I. The Literature and Politics of Friendship.
Considers changing concepts of friendship as a key to major developments in British and American literature from the Renaissance through the 19th century. Special attention given to the ways the literary history of friendship intersects with leading political questions of the day. Shakespeare, Donne, Milton, Defoe, Wordsworth, Keats, Percy and Mary Shelley, Dickens, Poe, Melville, and Henry James. Enrollment limited to 30.

ENGL 0501K. The Transatlantic Novel: Robinson Crusoe to Connecticut Yankee.
How does the “American” novel change if we read it across national borders? This course reads novels written in/about America with this question in mind, focusing on such topics as slavery, exploration, seduction, and cosmopolitan ideals. Readings range from Aphra Behn to Mark Twain. Enrollment limited to 30. Students should register for ENGL0500K S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0505L. Literature, Trauma, and War.
This course surveys many genres and periods in order to consider and think about two traditional kinds of literary responses to war—glorifying it, and representing its horrors. We’ll examine texts by Homer, Shakespeare, Milton, Wordsworth, Byron, Whitman, Hardy, Crane, Freud, Levi, Pynchon, and Sebald, among others; we may also screen one or two films. Enrollment limited to 30. Open to undergraduates only.

ENGL 0503P. The Examinable Self: Lives of the Soul.
This course examines a crucial tradition in American letters and culture: the literature of self-examination and the spiritual quest. Each work focuses in some way on questions of identity and identification: We will be reading a wide range of authors and genres—spiritual autobiography, short fiction, the novel, conversion narratives, confessions, and lyric and epic poetry. Limited to 30 students.

ENGL 0510A. Literature and Print Culture.
The cultural impact of widely circulating printed material—books of poetry, essays, and fiction but also newspapers, stock certificates, and advertisements—makes the period 1660-1740 the first technologically enabled information age. The production and consumption of published texts changed the world for the restored monarch and his licentious court, for the rising bourgeoisie, and for the newly literate classes. We will follow several controversies, experiments, and innovations of the print revolution in works as apparently diverse as Milton’s epic poetry, Manley’s erotic secret histories, and the ads in The Spectator. Other canonical and non-canonical writers include Rochester, Behn, Dryden, Swift, Manley, Haywood, and Defoe.

ENGL 0510B. The Gothic.
The course will investigate the origins and development of Gothic literature from its invention during the eighteenth century to its postmodern forms. We will consider conventional figures (monsters, distressed heroines, moldering castles), common themes (fear, horror, the supernatural, the irrational, the transgressive), and the cultural work they do. Readings include Walpole, Lewis, Radcliffe, Shelley, James, and King.

ENGL 0510C. The Victorian Novel.
Considers the Victorian novel with an emphasis on its many forms, including the social-problem novel, bildungsroman, sensation novel, detective novel, and multiplot novel. Topics covered include the nature of realism, serial publication, empire, the “new woman,” industrialization, the “condition of England,” science and technology, and the role of the artist. Novels by Charlotte Brontë, Charles Dickens, Elizabeth Gaskell, George Eliot, Wilkie Collins, Thomas Hardy, Anthony Trollope. Students should register for ENGL 0510C S01 and may be assigned to conference sections by the instructor during the first week of class. Banner registrations after classes begin require instructor approval.

ENGL 0510D. Mark Twain’s America.
A course for all kinds of readers of Twain and his contemporaries. Close readings of fiction and essays that focus on race, slavery, capitalism, and the development of “modern” literature. Works include Puddinhead Wilson, Huck Finn, and Connecticut Yankee.

ENGL 0510G. New Worlds, New Subjects: American Fiction at the Dawn of the Twentieth Century.
In 1900, the historian Henry Adams declared, Americans lived in a world so radically transformed that “the new American … must be a sort of God compared with any former creation of nature.” This new world had many progenitors: Darwin’s theory of evolution; Nietzsche’s theory of the will; Freud’s theory of the unconscious; the rise of the mass media; the industrial production line; the triumph of consumerism; mass immigration; Jim Crow; the New Woman. This class reads works of fiction from the turn-of-the-century in the context of these transformations. Writers include Freud, Nietzsche, Stephen Crane, Henry James, and Edith Wharton.

ENGL 0510H. Victorian Self and Society.
This multi-genre course is an introduction to literature and culture of the Victorian period, looking at the changing ideas of society and the individual’s place within that larger community in an age of empire, industrialization, urbanization, class conflict, and religious crisis. Topics include conceptions of the role of art and culture in society, the railway mania of the 1840s, the “great sink” of London, women’s suffrage and the condition of women, and the Great Exhibition of 1851. Readings will include Carlyle, Charlotte Brontë, Ruskin, Robert Browning, Dickens, Tennyson, Christina Rossetti, George Eliot, and Lewis Carroll.

ENGL 0510K. Fictions and Frauds.
Truth and fiction? Fake news, fake history, fictionalized autobiography: where and why do we draw the boundaries of the “real”?

ENGL 0510M. Madness and Enlightenment: Literature 1660-1800.
The term “enlightenment” has been used to emphasize the power of reason in the development of intellectual freedom, democracy, capitalism, class mobility, and other aspects of 18th-century experience. However, the period’s major writers were fascinated by reason, by aberrant states of mind from love melancholy to outright madness. Readings include Swift’s Tale of a Tub, Pope’s Dunciad, Johnson’s Rasselas, Sterne’s Tristram Shandy, Boswell’s Hypochondriack, and Godwin’s Caleb Williams.
ENGL 0510N. Victorian Modernity: Literature 1880-1900.
"Modernity" in the fin-de-siècle period meant progress, the "march of the intellect," technological innovation, urban growth, female emancipation, but it also meant fears of degeneration, moral decline, the rise of the crowd, and the degradation of the individual. This course considers how these contradictions come to a climax in the literature, art, and culture of the 1880s and 1890s. Authors include G. B. Shaw, Oscar Wilde, Thomas Hardy, Charles Algarmon Swinburne, H. G. Wells, Olive Schreiner, George Egerton.

ENGL 0510P. Fiction from Dickens to James.
An introduction to nineteenth-century fiction in English by eight major authors--four British and four American. Emphasis will be placed on the careful reading and interpretation of the novels and short stories in historical context. Issues to be addressed include the rise of the mass media, transatlantic literary relations, literature and ethics, and aestheticism. Works by Dickens, Poe, Eliot, Melville, Stevenson, Twain, Wilde, and James. Students should register for ENGL 0510P S01 and may be assigned to conference sections by the instructor during the first week of class.

What are the stakes involved in defining (African) American literature through a racialized authorial framework? Should we adhere to this prescribed and contentious categorization when considering writers who only incidentally identify as "black," and whose works challenge any critical or aesthetic alignment based upon racial affiliation? More broadly, this course seeks to question the lingering persistence of race as an ontological marker within the literary arts. Writers include but are not limited to Fran Ross, Darryl Pinckney, Andrea Lee, David Henry Hwang, Maurice Manning, and Colson Whitehead.

ENGL 0510R. American Renaissance.
This course examines major and lesser known writers of nineteenth-century America, emphasizing the works of Emerson, Melville, and Catharine Sedgwick. The focus is on Romantic literature and culture, with particular emphasis on the following subjects: Nature and transcendence; capitalism and its discontents; utopianism and reform; slavery and antislavery; the problem of history and national culture; and transatlantic relations. Readings include Transcendentalist essays, slave narratives, romance novels, autobiography, fiction, and lyric and epic poetry. Improved student writing is a main goal of the course.

ENGL 0510S. Good, Evil, and Inbetween.
Are humans born naturally good, evil, neither, or all of the above? Does evil lurk deep within the heart of all that is good, or can the forces of good eradicate those of evil? Is evil an inextricable part of what it means to be human in the first place? We'll examine these and related questions by reading some especially provocative literature, including Frankenstein, Jekyll and Hyde, and works by Hawthorne, Poe, and Fitzgerald. We'll also view several relevant movies, including Young Frankenstein.

ENGL 0510W. Coupling: The Literature of Courtship.
This course examines the courtship plot in the Anglo-American literary tradition, concentrating on novels of the eighteenth and nineteenth centuries but extending forward to twentieth-century and contemporary novels, and explores how these fictions have constructed and challenged normative narratives of gender and sexuality.

ENGL 0510Y. Nineteenth-Century British Fiction.
This course focuses on the fiction of nineteenth-century Britain, with particular attention to its exploration of gender and sexuality, class, national and imperial cultures, the familiar and the strange. Readings will include novels and short stories by Jane Austen, Mary Shelley, Emily Brontë, Elizabeth Gaskell, Charles Dickens, Robert Louis Stevenson, Rudyard Kipling, and Thomas Hardy.

ENGL 0510Z. Worldly Victorians: Victorian Literature at Home and Abroad.
This course explores how Victorian literature engaged questions animated by Britain's experience of conflict and triumphalism at home, and imperial power and anxiety on the global stage. Authors we read will include Alfred, Lord Tennyson; Charlotte Brontë; Elizabeth Gaskell; Rider Haggard; Olive Schreiner; and Bram Stoker.

ENGL 0511A. Dickens: The Novel and Society.
This course rehabilitates Charles Dickens from his reputation as a mainstream writer paid by the word, most famous as the author of sentimental, implausible works for children, such as A Christmas Carol. We will be looking at Dickens's social novels as a formally innovative response to the urban and industrial capitalism of his time. Issues will include: realism, the relation of his fiction to his journalism, serial form, and representations of work, the city, and bureaucracy.

A study of major novelists of the period, the question: How did the novel develop as a form of social understanding? We will be looking at novels as bearers of social values, especially around questions of property, class, marriage, work, bureaucracy and the state, and selfishness. Authors Studied may include: Austen, Brontë, Dickens, Trollope, Eliot, and Hardy.

ENGL 0511C. Fantastic Places, Unhuman Humans.
This is an online course during Wintersession 2022 (December 22, 2021 - January 21, 2022). What can the grotesque, monstrous, and even alien creatures found lurking in an extraordinary range of literature across many centuries reveal about the different ways humans have imagined what it means to be human in the first place? Is the human a unified, single category of being at all? Authors may include Shakespeare, Mary Shelley, and Poe. This course is offered fully online. Students do not need to be on Brown's campus to participate in this course. Students should expect to spend 45 hours per week (or 6-8 hours per day) on coursework.

ENGL 0511E. Melville, Conrad, and the Sea.
Stories begin with the sea: Jason and the Argonauts, Sinbad and the Seven Seas. Odysseus trying to sail home. The sea is the place of 'tall tales,' of adventure, and of terror, but also of industrial labor and modern commerce. This class reads the sea narratives of Herman Melville and Joseph Conrad within this larger narrative and historical context.

ENGL 0511G. Introduction to Native and Indigenous Literatures.
This course will familiarize students with the study of Native and Indigenous literatures in North America. Focusing on a range of genres, geographic locations, and historical moments, students can expect to acquire both a working knowledge of the history of Native literatures in English and a critical methodological approach to the study of American literature.

ENGL 0511H. Late Romantics.
An introduction to the varied work of canonical and non-canonical writers often described as British second-generation or late Romantics: Keats, the Shelleys, Byron, Clare, de Quincey, Hemans, Austen. We will explore what lateness constitutes for these authors as a political, aesthetic, and ethical category, and consider how it informs the kind of distinctly "Romantic" work that characterizes their writings. Particular emphasis on close readings of poetry and theoretical texts, as well as excursions into late nineteenth-century authors.

ENGL 0511J. Renegades, Reprobates, and Castaways.
In this ONLINE course, we’ll look at a range of literary works—including short stories, novels, graphic novels, films, and electronic literature—populated by characters cast as pirates, degenerates, depraved, and miscreants. We’ll examine how the seemingly discrepant characters, settings, and/or forms offer alternative visions of a just society by challenging powerful institutions, conventional moral principles, and/or dominant conceptions of the “normal” and “natural.”

ENGL 0511L. Stories of the Future Past.
What does the future hold? What might tales of the past tell us about what’s to come? Readings will transport us into the past, future, or both to explore, challenge, or re-enforce many cultural norms. Possible readings: Butler, Kindred, Erdrich, Future Home of the Living God, Dick, Do Androids Dream of Electric Sheep?, St. Mandel, Station Eleven, Shelley, Frankenstein. This course is offered fully online. Students do not need to be on Brown's campus to participate in this course. Learn what it is like to take an online course at Brown and view technical requirements at: http://brown.edu/go/whatisonlinelike.
ENGL 0700A. Introduction to African American Literature, 1742-1920.
Surveys African American writing from the beginnings to the Harlem
Renaissance, reading both poetry and prose (primarily slave narratives,
speeches, essays, and fiction). Attention to how African American authors
have shaped a literature out of available cultural and aesthetic resources.
Enrollment limited to 30.

ENGL 0700B. Introduction to African American Literature, 1920-
Present.
All genres of literature from the Harlem Renaissance to the present,
tracing the development of an African American literary tradition.
Enrollment limited to 30.

ENGL 0700C. Twentieth-Century American Fiction.
Through detailed readings of a variety of novels from almost every
decade, this class explores the various ways fiction responded to what
has been called the American century. Our main emphasis will be on
the relationship between aesthetic and national representation. Writers
to include Wharton, Fitzgerald, Faulkner, Ellison, Kingston, and DeLillo.
Enrollment limited to 30. Students will be assigned to conference sections
by the instructor during the first week of class.

ENGL 0700D. Inventing Asian American Literature.
Examines fiction, drama, poetry, travel writing, and cultural criticism by
contemporary writers from former colonies of the British Empire. We study
works by Anglophone writers from African, Caribbean, and South Asian
backgrounds. Issues that will concern us include: cultural-nationalism,
diaspora, and globalization; histories, identities, and generational shifts;
literary form and the idea of “postcolonial literature.” Authors include
Coetzee, Ghosh, Hartman, Naipaul, Ondaatje, Kincaid, Soyinka, Walcott,
and Wicomb. Enrollment limited to 30.

ENGL 0700E. Postcolonial Literature.
Examines fiction, drama, poetry, travel writing, and cultural criticism by
contemporary writers from former colonies of the British Empire. We study
works by Anglophone writers from African, Caribbean, and South Asian
backgrounds. Issues that will concern us include: cultural-nationalism,
diaspora, and globalization; histories, identities, and generational shifts;
literary form and the idea of “postcolonial literature.” Authors include
Coetzee, Ghosh, Hartman, Naipaul, Ondaatje, Kincaid, Soyinka, Walcott,
and Wicomb. Enrollment limited to 30.

An introduction to European Modernism with an emphasis on British
Literature. We will address ideas of personal and national history through
literary and aesthetic innovations of the first half of the 20th century, as
well as the relationship—literary, cultural, historical and psychological—
between constructions of home and abroad. Texts include James, Conrad,
Forster, Joyce, Proust, Woolf, Faulkner, Waugh, and Freud, as well as
films by Sergei Eisenstein and Fritz Lang. Enrollment limited to 30.

ENGL 0700G. American Fiction and Mass Culture.
How have American fiction writers responded to the growing national
influence of mass culture industries such as recorded music, film, and
Television? This course will consider this question by assessing both how
writers have imagined the impact of mass culture on American life and
how the style of literary writing has evolved in relation to popular media.
Authors include F. Scott Fitzgerald, Nathanael West, Toni Morrison,
Colson Whitehead, and Don Delillo. Enrollment limited to 30.

ENGL 0700J. Contemporary British Fiction.
This course is an introduction to the study of 20th century literature in
English. We consider central terms of and approaches to literary criticism
by reading some of the most important British writers of the last fifty years.
We will also take into account theories of culture, ideology and nationhood,
and attempt to bring into focus a British defined as much by its ways
of looking as by historical and geopolitical situation. Readings include
Kingsley Amis, Greene, McEwan, Zadie Smith, Spark, Kelman, Banville,
Naipaul and Sebald. Enrollment limited to 30.

ENGL 0700K. 20th-Century Literatures in English.
This course offers a broad introduction to a range of literatures written in
English, tracing shifts in the formal conventions of fiction and poetry. We
examine ongoing debates about what literature is and what social role
it plays. We consider how these debates respond to historical changes
such as industrialization, the collapse of global empires, and movements
for social equality. Writers include Dreiser, Woolf, Eliot, Hughes, Toomer,
Cather, Morrison, Hwang, Rushdie. Enrollment limited to 30. Students
should register for ENGL 0700K S01 and will be assigned to conference
sections by the instructors during the first week of class.

ENGL 0700L. Make It New: American Literature 1900-1945.
Introductory survey of a major—perhaps the major—period of American
literature. Genres include poems, plays, short stories, and novels, as
well as film. Writers include Willa Cather, Raymond Chandler, T. S. Eliot,
William Faulkner, F. Scott Fitzgerald, Robert Frost, Ernest Hemingway,
Eugene O'Neill, Gertrude Stein, and Wallace Stevens; filmmakers include
Charlie Chaplin and Orson Welles. Enrollment limited to 30.

ENGL 0700P. Reading Practices: An Introduction to Literary Theory.
What is it to read? This course is an introduction to theories of reading
that have shaped literary interpretation and definitions of literature from
the early twentieth century to the present, with particular attention to the
relation between “literary theory” as a discipline and the broader reading
practices it engenders and from which it emerges. We will read the New
Criticism, structuralism, post-structuralism, and new historicism, critical
race theory and feminist critiques, and recent work in aesthetics. Topics
include literacy, textuality, the reader and subjectivity, narrative, rhetoric,
and the problem of representation, and “new formalism.”
Enrollment limited to thirty.

ENGL 0700Q. Poetic Cosmologies.
This course will examine how various traditions within modern and
contemporary poetry have addressed the question of materiality. Readings
will range from poetic explorations of the archaeologies of place by William
Carlos Williams and Charles Olson, to the investigations of non-human
materialities of crystals, clouds and bacteria by writers such as Clark
Coolidge, Christian Bök and Lisa Robertson. Enrollment limited to 30.

ENGL 0700R. Modernist Cities.
In the early twentieth century, modernist writers headed for New York,
Paris, London and other cities, and based their literary experiments
on forms of metropolitan life. We will discuss chance encounters,
cosmopolitan and underground nightlife, solitary wandering, and bohemian
communities. Writers may include Barnes, Dos Passos, Eliot, Hemingway,
Hughes, Larsen, Joyce, McKay, Rhys, Woolf. Enrollment limited to 30.

ENGL 0700U. Modernism and Race.
An exploration of the ways in which assumptions about racial difference
are perpetuated or challenged by modernist experiments in form.
Readings include W. E. B. DuBois, Joseph Conrad, Langston Hughes,
Gertrude Stein, Nella Larsen, William Faulkner, and Richard Wright.

ENGL 0710B. African American Literature and the Legacy of Slavery.
Traces the relationship between the African American literary tradition and
slavery from the antebellum slave narrative to the flowering of historical
novels about slavery at the end of the twentieth century. Positions these
texts within specific literary, historical, and political frameworks. Authors
may include Frederick Douglass, Harriet Jacobs, Charles Chesnutt,
Octavia Butler, and Toni Morrison.

ENGL 0710E. Postcolonial Tales of Transition.
This course focuses on postcolonial British, Caribbean, and Southern-
African works that exemplify, complicate, or refashion the category of
the bildungsroman, the “novel of education.” Issues to be considered
include the ways the texts work archetypal tropes of initiation, rebellion,
development, and the interplay of contradictory passions. We will also
think about ways in which issues of race, gender, and sexuality emerge in
the texts, and the connections or disjunctions between literature and “the
real world.” Writers will likely include Dangarembga, CLR James, Ghosh,
Ishiguro, Joyce, Kincaid, Lamming, Naipaul, Rhys, Wicomb.
ENGL 0710F. Being There: Bearing Witness in Modern Times. What is the significance of one who says, “I was there”? This course explores the ethical, literary and historical dimensions of witnessing in an era when traumatic events are increasingly relayed secondhand or recorded in sound and image. Texts include Forster, Woolf, Camus, Freud, Celan, Coetzee; films by Hitchcock and Kurosawa; and readings in law and psychology.

ENGL 0710I. Global South Asia. This course provides an introduction to contemporary fiction by South Asia and its diaspora. We will read novels written in North America, the Caribbean, Australia, Africa, the United Kingdom, and of course South Asia, paying particular attention to issues of identity, ethnicity, and transnational circulation. Authors include Adiga, Hanif, Lahiri, Meeran, Mistry, Naipaul, Roy, Rushdie, Selvadurai, and Sinha.

ENGL 0710J. Introduction to Asian American Literature. This course is intended to familiarize students with key issues that have shaped the study of Asian American writings and to provide a sense of the historical conditions out of which those works have emerged. As a literature course, it will focus on textual analysis—on how particular texts give representational shape to the social, historical and psychological experiences they depict. Readings consist primarily of works that have a canonical status within Asian American literary studies but also include newer works that suggest new directions in the field. It also strives to provide some coverage of the major ethnic groups.

ENGL 0710L. Ishiguro, Amongst Others. Kazuo Ishiguro is one of the most distinctive and enigmatic voices in contemporary fiction. He has few obvious precursors, and there is little consensus among literary critics about the meanings of his works. This course will try to establish principles for reading Ishiguro’s works by seeking alliances for his writing in works of philosophy, literature and cinema. Such interlocutors will include Ozu, Kiarostami, Kierkegaard, Sartre, Hadžihalilović, Dostoevsky, Pasolini.

ENGL 0710M. Impressionism, Consciousness, and Modernism. This course explores the role of the “literary impressionists” (Crane, James, Conrad, and Ford) in the transformation of the novel from realism to modernism (especially the “post-impressionists” Stein, Joyce, and Woolf). “Impressionism” is defined by its focus on consciousness, the inner life, and the ambiguities of perception. What happens to the novel when writers worry about whether the way they tell their stories is an accurate reflection of how we know the world? Attention will also be paid to how the literary experiments of impressionist and post-impressionist writers relate to simultaneously occurring innovations in the visual arts.

ENGL 0710N. Fitzgerald, Hemingway, and the Lost Generation. An introduction to two of the most popular and influential American novelists of the twentieth century, Scott Fitzgerald and Ernest Hemingway. We will read many of their most important novels and stories, including The Great Gatsby, Tender is the Night, In Our Time, The Sun Also Rises, and A Farewell to Arms. In addition we will examine the work of the contemporary American writers who most influenced them: Gertrude Stein, Willa Cather, Sherwood Anderson, and T. S. Eliot.

ENGL 0710Q. American Literature in the Era of Segregation. This course examines how American literature intersects with the legal, ethical, and racial discourses that defined the system of racial segregation. In doing so, the course will assess the ways that literary style and genre became inseparable from the culture of segregation. Authors include Mark Twain, Nella Larsen, William Faulkner, and Richard Wright.

ENGL 0710R. Poetry and Science. This course will explore the relationship between the observational procedures and modes of composition employed by twentieth and twenty-first century poets who have worked in more conceptual or avant-garde traditions and the practices of description and experimentation that have emerged out of history of science. Readings will range from Gertrude Stein’s poetic taxonomies to recent work in critical science studies.

ENGL 0710S. The Eighties: Earnestness to Irony. From “White Noise” to “Working Girl,” Duran Duran to Public Enemy, this course explores the culture, rhetoric, and politics of the 1980s through literature, film, music, and television. What kind of counterculture, if any, emerges from a decade of conservatism, greed and the AIDS epidemic? What, in short, made the 80s unique—and what is the decade’s afterimage? Students should register for ENG 0710S S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 0710V. Death and Dying in Black Literature. How is death represented in black literature as a topic and as a figure of genre? Which theoretical ideas help us think about the intertwining of blackness and death? How do notions of gender and sexuality inform this thinking? This course will explore works from the twentieth and twenty-first centuries to consider the scope of black literary imaginings of death.

ENGL 0710W. Readings in Black and Queer. This course will survey works that engage the intersection of black and queer, especially from 1970 onward. We will use the central idioms of queer of color critique to think about performativity, homophobia, the erotic, and gender normativity; and will use this thinking to read literary representations in various novels, poems, nonfiction essays, plays, and films.

ENGL 0710X. Black Poetics. This course is interested in poetic thinking: how a poem inclines toward a certain kind of knowing; how a poem’s imagining invites philosophical considerations (as in, what is being, and how to be); how a poem’s language and its formal qualities sustain such thinking. We are interested, also, in how poetic thinking reckons (with) blackness.

ENGL 0710Y. Literature of US Inequality, 1945-2020. Study of the way inequality has been represented in US literature from 1945 to the present. Authors to be considered include Morrison, Updike, Wright, Highsmith, Lee, Adichie, Leavitt.

ENGL 0711A. Americans in Paris. For many American artists, particularly in the years following the first world war, Paris promised artistic freedom; for others, particularly in the years following the second world war, it promised something closer to actual freedom. This class explores the relationship between these two conceptions of liberty, ranging widely over fiction, poetry, autobiography, essays, dance, music, painting, and photography.

ENGL 0711B. Trans Cultural Production and Trans Studies. What animates the fields of transgender studies and trans cultural criticism in a moment of assimilation, heightened visibility, and violence? By reflecting on contemporary examples of trans cultural production, including literature, film, and new media, this course explores a wide range of art-making and activism working against state violence. Readings and works by Kai Cheng Thom, Tourmaline, and Leslie Feinberg.

ENGL 0711C. Bad Blood: Conflict and the Family in Literature and Cinema. The family home, often thought of as a refuge from the outside world, can also be a site of tension, competition, violence and horror. Why does dysfunction in the domestic sphere shock and fascinate us, and why is the gothic so intimately tied to the domestic? Readings and viewings from: Shakespeare, Shelley, Brontë, Wilde, Nabokov, Salinger, Hitchcock, Kubrick, Park Chan-wook.

ENGL 0900. Critical Reading and Writing I: The Academic Essay. An introduction to university-level writing. Students produce and revise multiple drafts of essays, practice essential skills of paragraph organization, and develop techniques of critical analysis and research. Readings from a wide range of texts in literature, the media, and academic disciplines. Assignments move from personal response papers to formal academic essays. Enrollment limited to 17. Banner registrations after classes begin require instructor approval. S/NC.
ENGL 0930. Introduction to Creative Nonfiction: Writing the World.
Designed to familiarize students with the techniques and narrative structures of creative nonfiction. Reading and writing focus on personal essays, memoir, science writing, travel writing, and other related subgenres. May serve as preparation for any 1000-level nonfiction writing course. Writing sample may be required. Enrollment limited. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030A. The Thoughtful Generalist.
This "ONLINE" section of "ENGL1030: Critical Reading and Writing II: Research" will prepare you for academic and real-world discourse. In Canvas, you will discuss essays demonstrating deep research distilled into engaging intellectual journeys. You will research and revise four explanatory, analytical, persuasive essays, using varied sources to explore subjects or issues of your choice. Mandatory peer reviews and conferences ONLINE. Enrollment limited to 17. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030C. Writing Science.
This course explores how science, as an academic way of thinking and a method, affects our critical thinking and expression of culture. Readings examine the various dialects of scientific discourse. Students write three major research essays on self-selected scientific topics from both within and outside their fields of study. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030D. Myth + Modern Essay.
A writing and research focused course, in which students read a small selection of ancient texts (including The Epic of Gilgamesh and Ovid’s Metamorphoses) and use the myths retold to illuminate the contemporary world and to inform the essays they write. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030E. Testaments of War.
Discovery is at the heart of research. In this course, we will discover how and why literary texts reflect and illuminate the intellectual and social worlds around them. We will use a variety of primary and theoretical sources and research tools, identify powerful research problems, and craft questions and sophisticated thesis statements. The course will also enable you to refine a critically sensitive, informed, and persuasive writing style that will be key to the success of your scholarly work. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030F. The Artist in the Archives.
While artists can benefit greatly from archival work, they are not typically given the tools to make use of these institutions. This writing intensive course takes a two pronged approach to the problem: embedding students in archives both at Brown and RISD to produce creative, lyrical, and multimedia essays; and exploring how artists have used these institutions for information and inspiration. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030G. Backstory.
Everything has a backstory—every object, event or idea. In this workshop-based course we will explore the archives at Brown, RISD and the Rhode Island Historical Society and write about what we find. Expect field trips, time travel, encounters with interesting objects, readings from David Foster Wallace, John McPhee and Katherine Schultz, and in-class prompts to get you going. Enrollment limited to 17. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1030H. Black Popular Culture and Social Movements.
As a site of critical inquiry, Black popular culture provides valuable insight into the ways oppressed people (and allies) identify and mobilize against unjust power structures in society. We will begin with immersion experiences with primary and secondary resources that reveal how “voices on the margins” assert agency, identity, and community. Enrollment limited to 17. No pre-requisites. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050A. Narrative.
This course offers a broad exploration of the many kinds of essays you can write in creative nonfiction. We will be looking at how authors structure their pieces and the range of narrative techniques they often use. You can expect workshops, in-class prompts and readings by Jamaica Kincaid, John McPhee, David Foster Wallace, Annie Dillard, David Sedaris and others. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050B. True Stories.
This class will allow confident writers to explore and develop their creative nonfiction writing. We’ll focus on two structures—nonfiction narratives and essays—with occasional forays into other forms. Students will work simultaneously on several small assignments and two larger, self-directed pieces. Readings will include cultural reportage, lyric memoir, science and nature writing, standard and hybrid essays. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050C. Creative Nonfiction: Practice and Criticism.
What is Creative Nonfiction? It has a long history and recently writers have flocked to it: scholars have questioned if Academic enough? Harm the truth? Narrative with too much “I” and too little “Eye”? Literary? Significant? By reading historical and contemporary examples along with critics, we will explore persistent questions about form, method, ethics, and significance. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050D. Lifewriting.
We explore writing's various forms—memoir, diary, essay, graphic narrative, film, and autobiography—while crafting personal narrative. Students read sample texts, view films, and keep an electronic diary. Projects include a memoir, personal critical essay, and final autobiography, as well as shorter assignments. This is a writing workshop, so students read & critique each others work. Individual conferences with the instructor also provide feedback. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050E. Sportswriting.
This course introduces students to the practice of sportswriting, including writing sports news, features, and columns. Readings will include works by Rick Reilly, Bill Simmons, Frank Deford, Karen Russell, Allison Glock, Tom Wolfe, Hunter S. Thompson, W.C. Heinz, and others. Students will develop skills in analyzing, researching, writing, revising, and workshopping in the genre. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050F. Line Work: Experiments in Short-Form Writing.
This course is based on the premise that to improve your writing, you need to write often. By responding to almost daily drills, you will develop a regular writing habit and explore a range of styles. We will take your most successful pieces through a series of workshops, helping you refine your work and ultimately build a writing portfolio. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050G. Journalistic Writing.
This course, taught by a Pulitzer Prize-winning reporter, teaches students how to report and write hard news and feature stories. Students learn to gather and organize material, develop in-depth interviewing techniques, use public records to report stories and become better observers of everyday life. The first half of the semester focuses on hard news and investigative reporting -- crime, government and court news. The second half is devoted to feature writing -- profiles and the art of narrative storytelling. Class list will be reduced to 17 after writing samples are reviewed. Banner registrations after classes begin require instructor approval. S/NC.
ENGL 1050H. Journalistic Writing
This course teaches students how to report and write hard news and feature stories for newspapers and online. Students learn to gather and organize material, develop interviewing techniques, and hone their writing skills—while facing the deadlines of journalism. The first half of the semester focuses on “hard” news: issues, crime, government, and courts. The second half is devoted to features, profiles, and narrative story telling. Writing sample required. Class list will be reduced to 17 after writing samples are reviewed in first week of classes. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050J. Multimedia Storytelling
Through a series of short assignments, we will explore how the stories we tell are affected by the use of audio, visual, and performative tools. The course cumulates in a final project where each student will pursue a long-form story of their choice of subject and medium. Enrollment limited to 12. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050L. Writing in Place: Travel, Ecology, Locality
To explore the relationships among people, places and language, this course will incorporate science and nature writing, environmental/ecological writing, travel writing, psychogeography and architectural writing. Assignments and practices will include diaries, observational writing, reporting, criticism and more lyrical forms. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050M. Music Writing
Music writing asks that we take readers across a space not entirely tangible. To listen—with care—and then articulate, with words written, what was heard and what was experienced. Music writing is a big genre, encompassing journalism (especially criticism), memoir (by listeners and by direct participants), long-form essay, and lyric forms. This course will touch upon these categories. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050N. Writing for Today’s Electronic Media
This course introduces students to the practice of reporting for television news, radio, and their online equivalents—online news and podcasts. Exploring the world of communications for contemporary media, the course features hands-on work in writing news, features, and opinion pieces for television, radio, online news, and podcasts. Students will develop skills in analyzing, writing, revising, and workshopping in these media. Enrollment limited to 17. Writing sample required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1050P. Reframing Race in Art Writing
This seminar will consider how contemporary writers and critics respond to art that directly addresses race and challenges institutional power. We will discuss past and recent controversies involving race and representation in exhibitions and examine the relationships between artists, museums and other art institutions, and public audiences. We will consider how writing about arts and culture can advance public discourse about race, equity, and justice. Enrollment limited to 17. No pre-requisites. Writing sample required. Instructor permission required.

ENGL 1050Q. Writing the Family
“You must not tell anyone” writes Hong Kingston’s auto-fictional narrator—and then a book of family secrets follows. This class examines how authors (authorized or not) use their families as subject matter, storytelling family and family life. Over the term, we’ll work on developing a practical and theoretical ethics of family-writing while contextualizing and practicing writing nonfiction about the family. Enrollment limited to 17. No prerequisites. Writing sample required. Instructor permission required.

ENGL 1140A. Intellectual Pleasures: Reading/Writing the Literary Text
Riffing on the generative tensions between intellectual rigor and aesthetic pleasure, this seminar will examine (through the theoretical framework of cognitive poetics) a richly diverse range of literary texts, from Susan Howe to Beowulf. Our objective: to develop an awareness of language that will reshape how we read and how we write literary texts in various genres. Writing centered. Enrollment limited to 12. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. S/NC.

ENGL 1140B. The Public Intellectual
This course offers advanced writers an opportunity to practice sophisticated, engaged critical writing in academic, personal, and civic modes. Emphasis will be on writing “public” essays (general audience essays that do intellectual work or academic essays that address public topics), ideally in fluid, “hybrid,” audience-appropriate forms. Areas of investigation will include (but are not limited to) the review essay, the cultural analysis essay, literary documentary, and the extended persuasive/analytic essay. It will include some brief “touchstone” investigations into rhetorical theory, with the aim of helping to broaden our concepts of audience, analyze the constitutive and imaginative effects of language, increase the real-world effectiveness of our own language practices, and situate our writing within current political, cultural, aesthetic and intellectual debates. Students must have sophomore standing or higher in order to be admitted to the class. A writing sample will be administered on the first day of class. Prerequisite: ENGL 0930, 1030, or 1050. Class list will be reduced to 12 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1140D. Writing Diversity: A Workshop
This course explores various forms of writing that address the broad spectrum of human experience, including issues of race, gender, varying physical and mental ability, social class, and inequities resulting from colonization, among others. Students will attempt to understand the issues and each other through class readings and articulating personal responses in writing. Writing sample required. Pre-requisite: ENGL 0900, ENGL 0930, or any 1000-level nonfiction writing course. Class list reduced to 12 after writing samples are reviewed during the first week of classes. S/NC.

ENGL 1140E. Writing for Activists
How can writing support and further social change? In this course students will practice grant applications, budget narratives, mission and strategy statements, press releases, position papers, op-eds, and other writing strategies with practical application in activist work. We’ll read examples and theoretical grounding, and guest speakers will introduce us to writings and needs specific to a range of fields. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Instructor permission required. S/NC.

ENGL 1160A. Advanced Feature Writing
For the advanced writer. Nothing provides people with more pleasure than a “good read.” This journalism seminar helps students develop the skills to spin feature stories that newspaper and magazine readers will stay with from beginning to end, both for print and on-line publications. Students will spend substantial time off-campus conducting in-depth interviews and sharpening their investigative reporting skills. The art of narrative storytelling will be emphasized. Prerequisite: ENGL1050G or 1050H, or published clips submitted before the first week of classes. Class list reduced to 17 after writing samples are reviewed. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160B. Editors/Producers
On-site workshop for editors/producers of campus or local journalism that aspires to professional standards. Students must be chosen by peers to edit a campus publication such as the BDH, or to produce a radio show at WBSR or WBRU; or they must have an internship at a local newspaper, radio or TV station. Required: Minimum 20 hours a week editing/producing; participation in skill-building workshops for staff. All issues/shows evaluated. Enrollment limited to 17. Instructor permission required. S/NC.
ENGL 1160C. Radio Nonfiction.
For advanced writers only. Introduction to radio writing and producing. Students will learn the craft of radio production, including writing, editing, and producing. Class list will be reduced to 10 after writing samples are reviewed during the first week of classes. Prerequisites: ENGL0930 or any 1000-level nonfiction writing course. Instructor permission required. S/NC.

ENGL 1160D. The Common Critic.
For the advanced writer. Aimed at the cultivated consumer of books, magazines, and newspapers--what has traditionally been called the common reader. Students will attend films, plays, art shows, concerts, and cabaret performances and write reviews and critique these experiences. Readings include Orwell, Woolf, Shaw, Tynan, Clive James, Zbigniew Herbert, and current reviews. Writing sample submitted at first class; also a previous sample, if possible, submitted at the same time. Class list will be reduced to 12 after writing samples are reviewed during the first week of classes. Prerequisites: ENGL0930 or any 1000-level nonfiction writing course. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160E. Advanced Journalism: Investigative and Online Reporting.
The goal of this class is to rigorously test and improve the reporting and nonfiction writing abilities of students seriously considering a career in journalism. By reading award-winning articles; reporting and writing five nonfiction pieces on campus or in Providence; and rigorously critiquing each other's writing, students will gain a sense of the promise and perils of journalism. Prerequisite: ENGL 0160. Enrollment limited to 12.

ENGL 1160F. Reporting Crime and Justice.
Crime and justice stories are people stories. The drama of everyday life is played out every day in courtrooms. This advanced journalism course will get students into the courtrooms, case files, and archives of Rhode Island's judicial system and into committee hearings at the State House where they will report on stories that incorporate drama, tension, and narrative storytelling. Prerequisite: ENGL1050G, ENGL1050H or ENGL1160A (Advanced Feature Writing). Enrollment limited to 17. Instructor permission required. Preference will be given to English concentrators. S/NC.

ENGL 1160G. Literary Journalism: Writing about Politics and Culture.
Students are introduced to procedures and techniques of cultural journalism through reading and discussing work of notable practitioners and writing their own reviews, profiles, and reportage. Enrollment limited to 12. Prerequisites: ENGL0900, ENGL0930, or any intermediate or advanced nonfiction course. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160H. Social Justice Journalism.
Students will investigate perceived injustices and write carefully crafted nonfiction pieces that present complex stories in a fair, balanced, and accurate way. Students will complete several short pieces and a full-length article suitable for publication. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisites: ENGL0930 or any 1000-level nonfiction writing course. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160J. Advanced Journalistic Nonfiction.
For experienced writers. We will study and emulate the works of journalists who write across genres. We will focus on observational skills, narrative arc, the capturing of critical detail, scene setting, character, anecdote, thematic development, precision with words, and voice. Because all such writing is dependent upon quality reporting, we will explore the relationship between fidelity to fact and creativity. Class list will be reduced to 12 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisites: ENGL0900 or any 1000-level nonfiction writing course. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160K. Literary Reporting: Writing Literature on Deadline.
How does a writer go into the world, observe closely, and turn those observations into something artful? Students will read and discuss works in the genre, and produce their own. Enrollment limited to 12. Prerequisites: ENGL0900, ENGL0930, or any intermediate or advanced nonfiction course. Preference will be given to English concentrators. Writing sample may be required. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1160L. In Order to Write About the Twenty-First-Century City, We First Have to Imagine It.
The city is changing. In the Internet age, the physical city is written over with data, like everything else. The new city, moreover, is not Western, which transforms our notions of urbanity. Students will work towards their own piece of writing about the twenty-first-century city: its new landscapes and characters, its new feelings and intensities. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Not open to first-year or sophomore students. Instructor permission required. Pre-requisites ENGL0900, 0930 or any 1050. S/NC.

ENGL 1160M. Social Justice Journalism in the Digital Age.
This writing class will teach you how to report and craft socially-conscious journalism that is neither dull nor righteous. You will learn about news hooks and angles, compelling central characters, and clever story structures, and how to attract audiences in a distracted visual digital age. Along with long-form narrative we will work multimedia forms: audio, photography, Twitter journalism, and comics. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisite: ENGL 1050G or ENGL 1050H. Instructor permission required. S/NC.

ENGL 1160N. Investigative Reporting: The Opioid Crisis in Rhode Island.
This advanced reporting class will bring journalism students together with computer science concentrators who together will spend the semester investigating and writing about the opioid epidemic in Rhode Island, a public health crisis that has taken thousands of lives. We will produce a series of eye-opening stories -- to be published in a newspaper of general circulation -- based on data gathering, interviews, and in-depth reporting. Prerequisite ENGL 1160F. Not open to first-year students. Enrollment limited to 12. Instructor permission required.

ENGL 1180A. Crime Writing.
This course offers students the opportunity to study crime reportage. We will read and analyze excerpts from classics in the genre, magazine articles, and newspaper accounts. Students will develop semester-long individual writing projects covering a particular crime, and can work either with Providence and Brown University police on a local incident, or research a case through secondary source material.

ENGL 1180B. Digital Nonfiction.
In this class, we will join the host of other artists, activists, and writers that have used Twitter bots, iPhone apps, virtual reality experiences, and more to tell compelling stories. No previous digital writing experience is necessary, however, as an advanced creative nonfiction class, Digital Nonfiction requires students to have completed ENGL 0930 or any 1000-level nonfiction writing course. Enrollment is limited to 17. Instructor permission required. S/NC.

ENGL 1180C. Advanced Creative Nonfiction: Writing with Food.
This course examines writing about food and how writing affects food and food culture. We shall explore the relationship of food to the pen through reading classic texts, writing in and out of class, guest lectures, and touring culinary archives. The goal is to polish personal voice in menus, recipes, memoir, history, reportage, and the lyric essay. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.
ENGL 1180D. Concealing and Revealing: Writing the Unsaid.
We'll read and write works that voice what often goes unvoiced, challenge taboos or build silence into their structures. Creative and critical writing assignments, class discussions reading responses and in-class writing will allow us to enter and question these texts, their motives, and their methods. Prerequisite: ENGL 0130, 0160, 0180, or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180E. Lifewriting.
Features theoretical and practical study of lifewriting's various forms--memoir, diary, essay, and autobiography-- and the crafting of personal narrative. Students read books, view films, and keep an electronic diary and paper notebook. Requirements include a personal critical essay and autobiography.
Writing sample required. Prerequisite: ENGL 0130, 0160, 0180, 1140, 1160, 1180, or 1190. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180F. Literary Journalism.
Focusing on the craft of literary techniques in a range of journalistic modes, we will read John McPhee, Diane Ackerman, Ian Frazier, Susan Orlean and Tracy Kidder, among others. Workshops and conferences on student work, which can include personal essays, immersion journalism, researched argumentative essays and magazine-style feature articles. Complete and polish several shorter pieces and one longer feature-length article.

ENGL 1180G. Lyricism and Lucidity.
For the advanced writer. This course will explore two subsets of the personal essay that blur or cross boundary lines--the lyric essay and the photographic essay-- in both traditional and experimental formats. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Not open to first year students. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180H. Satire and Humor Writing.
For the advanced writer. This course will introduce students to the practice of writing satire and humorous essays. Readings will include works by Jonathan Swift, Mark Twain, Garrison Keillor, Bill Bryson, David Foster Wallace, David Sedaris, and others, and students will develop skills in analyzing, writing, and workshopping in the genre. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180I. Writing Medical Narrative.
This class will examine the recent turn toward the use of narrative in medicine and the recent trend of published medical narrative. We'll look at literary and cultural narratives of sickness and health and how they shape perceptions and treatments, while keeping the science and politics of health care—and its public discourse—in view. Writing sample required. Prerequisite: ENGL0900, ENGL0930, or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1180J. Tales of the Real World.
For the advanced writer, this section offers a chance to practice the pleasures and challenges of nonfiction story-telling in the forms of literary journalism, personal essay, and audio narrative. Inspirations include Gay Talese, James Baldwin, Joan Didion, David Foster Wallace, and This American Life. Intensive practice in researching, interviewing, revising, and audio editing. Writing sample required. Prerequisite: ENGL 0130, 0160, 0180, 1050, 1140, 1160, 1180, or 1190. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180K. The Art of Literary Nonfiction.
For the advanced writer. Based on Roland Barthes' notion of the fragment, this workshop features an incremental, literary approach to writing nonfiction, in both traditional and experimental formats. In response to daily assignments, students will produce numerous short pieces and three extended "essays," to be gathered into a chapbook at the end of the course. Writing sample required. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Not open to first year students. Class list will be reduced to 17 after writing samples are reviewed during first week of classes. Preference given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180L. Travel Writing: In the Domain of the Other.
For the advanced writer. Will concentrate on contemporary travel writers (Heat-Moon, Didion, Chatwin, numerous others) and experiment with various types of narrative structures. Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1180M. Special Delivery: Letters and Diaries.
For the advanced writer. Workshops and conferences on student work, which can include personal essays, immersion journalism, researched argumentative essays and magazine-style feature articles. Writing sample required. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1180N. The Longer Literary Essay.
We will focus on reflective essays and researched investigations for the non-scholarly reader, like those in The New Yorker, ScienceTimes, and Harper's. Students learn to develop lengthier pieces, translate technical information, and sustain reader interest. Class consists of discussion of readings, workshops, and occasional visits by professional writers. Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor permission. S/NC.

ENGL 1180P. Further Adventures in Creative Nonfiction.
For the advanced writer. A workshop course for students who have taken ENGL 0930 or the equivalent and are looking for further explorations of voice and form. Work can include personal essays, literary journalism and travel writing. Readings from Ian Frazier, Joan Didion, David Sedaris, John McPhee and others. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.
ENGL 1180Q. Narrating History.
For the advanced writer: the protocols of historical narrative and essay for a general audience. Using the archives of Brown, the Rhode Island Historical Society, and the student's family (if feasible), each writer will research primary and secondary sources, use interviews and oral histories, to help shape three engaging, instructive true stories of the past. Intensive library work, revisions, and peer editing. Writing sample required. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Class list reduced to 17 after writing samples are reviewed during first week of classes. Preference given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180R. Travel Writing: Personal and Cultural Narratives.
For the advanced writer. Helps students build skills in the growing genre of travel writing, including techniques for reading, composing, and revising travel pieces. Students will read the best contemporary travel writing in order to develop their own writing in areas like narrative, setting, characters, and voice. The course will feature interactive discussions, instructor conferences, and workshops. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180S. Memoir, the Modern Novel.
Memoir is an ancient form (Augustine, Rousseau) and an American literary standby (Thoreau, Henry Adams) which has exploded in popularity in the past twenty years. We will study its political implications and experiment with this controversial form whose dimensions have barely been explored. We will write new kinds of memoir, stretching our stories towards biography, fiction and historical narrative. Prerequisite: ENGL 0130, 0160, or 0180. Writing sample required. Enrollment limited to 12. Instructor permission required. S/NC.

ENGL 1180T. A Slice of Life: Writing the Full Length Memoir.
This course, intended for advanced nonfiction writers, will focus on reading and writing successful book-length memoirs. By studying masters of the form, students will develop a sense of what makes a compelling memoir work and how to approach their own. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180U. Testimony.
How does the creative nonfiction writer bear witness to profound political, social, and environmental change? In this course students engage with the world as writers. They will conduct extensive interviews within the Brown community and beyond and will turn those first hand testimonials into a suite of creative nonfiction pieces in various genres including the lyric, personal, “found,” and multi-media essay. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1180V. Contemporary Asian American Writers.
In this advanced writing workshop, we will explore the work of Asian American writers who are engaging with questions of race and ethnicity; self-invention and identity; visibility and representation. We'll consider how authors use writing to give voice to marginalized experiences, preserve cultural memory, and redress injustice. Guest writers will read from and discuss their own work. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Writing sample required. Class list will be reduced to 17 after writings samples are reviewed during the first week of classes. Preference given to English concentrators. Instructor permission required. S/NC.

ENGL 1180X. Anne Carson, Maggie Nelson, Claudia Rankine.
This advanced writing workshop will consider hybridity and formal experimentation through the work of three prominent contemporary practitioners. We'll examine how the range of formal strategies these authors employ resist the limitations of genre and category, invent new ways of reading and writing nonfiction, and create space for a broader, more inclusive, more expansive possibilities for representing lived experience. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Writing sample will be administered on the first day of class. Not open to first-year students. Instructor permission required. S/NC.

ENGL 1190A. "The Arrangement of Words": Liberating Fiction(s).
We read fiction because we enjoy stories. As critical or astute readers, we are often drawn into something more than the story itself: into the way it is told, into the inflections and constructions of language. Concentrating on American fiction writers 1918-1945 (Hemingway, Faulkner, Welty, O'Connor, others), we will examine their fiction and non-fictional prose to see what they do and how and why. Writing will range from critical exposition to annotated fictional experiments. Prerequisite: ENGL 0130, 0160, 0180, 1140, 1160, 1180, or 1190. S/NC.

ENGL 1190B. Real Language: Poetics, Romantics, Writing.
For the advanced writer. Concentrates on the first generation Romantics (Wordsworth and Coleridge) and their poetic/aesthetic experiments to correlate "the real language of men" with poetic perception. Along with primary sources (prose and poetry), we read scholarly, critical, and theoretical texts to construct ways of reading English Romantic poetry and then work on different kinds of writing that derive from those readings. Writing sample required. Prerequisite: ENGL 0130, 0160, or 0180, or instructor permission. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor permission. S/NC.

ENGL 1190C. Advanced Creative Nonfiction: Biography.
Biography, one of the oldest forms of creative nonfiction, tells the life story of a person, idea, place, or thing. We consider old and new forms of biography, experiment with those forms, and practice them as a method of inquiry as well as presentation of self. We also explore biography’s connection to journalism, autobiography, memoir, and history. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190D. Writing About Sports in America.
For the advanced writer. Writing about any sport involves one in complex cultural issues that transcend the sport itself. We'll examine work by such authors as Bissinger, Halberstam and Maraniss for voice, craft, and research methods. Students will be required to produce their own pieces of sports writing that explore, through critical research and analysis, the place of sports within the larger culture. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). S/NC.

ENGL 1190F. My So-Called Life: The Art of the Literary Memoir.
The literary memoir offers students inspiration and warning as to the possibilities and limits of using their own experience as text. We study personal essays, narratives, and prose poems by a variety of writers. Advanced writers only. Writing sample required on first day of class. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Instructor permission required. S/NC.
ENGL 1190G. Science as Writing, Scientists as Writers.
For the advanced writer. Investigates the ways science, scientists, and science-related issues have been represented in fiction and nonfiction written for general audiences. Writing assignments include an informal online journal, literary/cultural analyses, fiction or personal essay, and scientific journalism. Readings from literary, journalistic, and scientific writers. A background in science is useful but not required. Science and humanities students welcome. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Prerequisite: ENGL 0130, 0160, or 0180. Banner registrations after classes begin require instructor permission. S/NC.

ENGL 1190H. Writing Science, Writing the Sacred.
Explores the relationships between two dominant intellectual paradigms—science and religion—and asks students to respond by writing their own “sacred” and science-related texts. Genres to read and write will be poetry and critical/literary nonfiction. Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190I. Writing the Southeast Asian War.
It was the Vietnam War, the American War, the Southeast Asian diaspora. By reading varied genres responding to the experience of the war in Southeast Asia and its aftermath, we will study how any experience is multitudinous and how genres manipulate experience in different ways. Analysis and practice of memoir, fiction, poetry, and oral history. Writing sample required. Prerequisite: EL 13, 16, 18, 114, 116, 118, or 119 (ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190). Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190J. African American Language, Literacy, and Culture.
In this course, we will explore the social, educational, and political implications of AAL in the 21st century. Our task is threefold: we will 1) examine AAL semantics, syntax, phonology, and morphology, 2) identify underlying historical and socio-economic forces responsible for shaping AAL, and 3) explore the impact of AAL within Black speech communities and U.S. and global popular culture. Writing sample required. Prerequisite: ENGL0980 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190K. Literary Biography.
For the advanced writer. How does one narrate the twists and turns of a life while simultaneously doing justice to whatever literature the subject managed to produce as he or she plodded through each day? We will examine examples of literary biographies for, among other things, voice, form, and research methods. Students will be required to produce their own pieces of literary biography. Prerequisite: ENGL 0130, 0160, or 0180. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor permission. Enrollment limited. S/NC.

ENGL 1190L. Creative Nonfiction: Practice and Criticism.
For advanced writers. What is Creative Nonfiction? Writers have flocked to it; scholars have questioned it. Does it harm the truth? Is it narrative with too much "I" and too little "Eye"? What makes it significant? To help us explore persistent questions about form, point of view, method, and ethics, readings will include historical examples, recent practitioners, editors, and critics. Intensive reading responses, research, drafting, and revision. Two critical essays; one piece of creative nonfiction. Prerequisite: ENGL0130, 0160, 0180, 1140, 1160, 1180, or 1190. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190M. The Teaching and Practice of Writing: Writing Fellows Program.
This course prepares students for their work as Writing Fellows. Course readings, activities, and assignments introduce students to: post-process writing theory and pedagogy; data-based investigations of the revision habits of experienced and inexperienced writers; and effective methods for responding to student writing and conferencing with student writers. Enrollment is restricted to undergraduates who have been accepted into the Writing Fellows Program in the preceding July. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190N. Brown: Writing the Archive.
The archives at and around Brown are primary sources for discovering stories—institutional, historical, personal—of our life across time through local history, personal memory, biography, and cultural critique, combining scholarship, media, and the arts. What opportunities for new writing lie behind doors to be opened across the street? Writing sample required. Prerequisite: ENGL0130, 0180, or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190Q. The Essay.
This course offers a feel for the essay and its versatile range, from the informative to the personal to the philosophical. We will study tone and style, meaning, beginnings and endings, and use of historical and personal information. Our focus will be on the craft of writing rather than on literary criticism. Readings include essays by two dozen accomplished writers. Writing sample required. Prerequisite: ENGL 0110, 0130, 0160, 0180, or any 1000-level nonfiction writing course. Class list will be reduced to 12 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190S. Poetics of Narrative.
Narratives are everywhere, simply there, like life itself, Roland Barthes says; we structure our experiences with narratives that we either infer or create. We will read different literary genres to see how narratives work and what makes them poetic and read theoretical texts to understand narrative function and performance. We will write experimentally to experience how stories are constructed. Pre-requisites: ENGL 0990, 0930, or any 1000-level nonfiction writing course. S/NC.

ENGL 1190T. Writing the Mythic Life: The Use of Traditional Narrative.
This course explores the theory and practice of traditional narrative structures such as fairy-tale, myth, and legend in creating stories about ourselves. We will read fiction and nonfiction by Tolkien, C.S. Lewis, A.S. Byatt, and others, engaging critically with the texts as well as creating new ones modeled on them. Writing assignments will include several short papers and a longer end-of-term project. Writing sample required. Prerequisite: ENGL 0980, 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.
ENGL 1190U. Nature Writing.  
This course seeks to develop your skills as a sensitive reader and writer of the natural world. You will build a portfolio of revised work through a process of workshops, tutorials, and conferences, and engage in discussion of a range of written and visual narratives with reference to their personal, political, and ecological contexts. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. S/NC.

ENGL 1190W. The Fiction of Nonfiction.  
Nonfiction texts are fictions in that they deploy the devices of fiction (pacing, voice, etc.), but even more so in that they are constructs (they’re in-formed and made up). In this seminar we will revel in the architec tonic of good nonfiction writing. Upending the myth of “objectivity,” we will read as if writing mattered, and write as if reading did. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list reduced to 17 after writing samples are reviewed during first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190X. Nonfiction Now.  
Nonfiction Now introduces students to contemporary nonfiction writing through in-person exposure to professional writers, who will visit the course to deliver a craft lecture, read from their latest work and discuss the labor that goes into maintaining a professional writing life. Students will be expected to read the work of the visitor and produce creative work in response. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 30 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. S/NC.

ENGL 1190Y. Editing as Revision.  
This fully gamified course, organized by historically-based writing guilds and their competitors in bookselling, introduces students to content, copy, and proofs editing as revision praxis. Students will edit publishable texts inside an imaginative game-world, learning editing strategies that help expert authors revise scholarly nonfiction—strategies students will find useful in working with their own writing as well. Class will be capped at 17. Prerequisite: ENGL0930 or any 1000-level nonfiction writing course. Preference will be given to English concentrators. Banner registrations after classes begin require instructor approval. Open to juniors and seniors only. Instructor permission required. S/NC.

ENGL 1190Z. The Art of Craft.  
What can traditional crafts teach us about our writing? How does building a house or stitching a quilt help us appreciate the ways we can build creative texts? We will consider such questions to help us reflect on our writing as a craft, to invest the key tenets of craft in our writing process, style, and form, and to forge an innovative portfolio of work of which we can feel justly proud. Writing sample required. Prerequisite: ENGL 0930 or any 1000-level nonfiction writing course. Class list will be reduced to 17 after writing samples are reviewed during the first week of classes. Preference will be given to English concentrators. Instructor permission required. S/NC.

ENGL 1200. Independent Study in Nonfiction Writing.  
Tutorial instruction oriented toward some work in progress by the student. Requires submission of a written proposal to a faculty supervisor. Section numbers vary by instructor. Instructor permission required. S/NC.

ENGL 1310A. Firing the Canon: Early Modern Women’s Writing.  
Rediscovery and reconsideration of works by early modern women have changed the literary canon; these once-neglected works are becoming mainstream, and they are changing the way we read “traditional” texts. The reading in this course includes poetry, letters, drama, essays, fiction, and life-writing by authors including Lanier, Wroth, Cavendish, Bihan, Manley, Haywood, Scott, and Montagu.

ENGL 1310B. American Degenerates.  
Colonial British-Americans were called, among other names, monstrous, wild, impotent, and grotesque. They could not, it was said, produce writing worth reading. We will explore the ways in which American writers embraced and/or challenged these charges of cultural and bodily degeneracy. In the process, we will examine the development of modern notions of literature and identity. Students should register for ENGL 1310B S01 and may be assigned to conference sections by the instructor during the first week of classes.

ENGL 1310C. Arguments Form in Renaissance Poetry.  
In the literatures of the European Renaissance, stylistic innovation is a marker of cultural change. The production of sonnets, of neoclassical epigrams, and of poems aspiring to be Ovidian or Vergilian opens up a theoretical space for arguments about faith, thought, words, the self, and society. Readings from Wyatt, Surrey, Gascoigne, Spenser, Sidney, Shakespeare, Donne, Jonson, Milton, and others.

ENGL 1310D. Between Gods and Beasts: The Renaissance Ovid.  
Ovid’s Metamorphoses, an epic compendium of classical myths, narrates with wit and pathos the transformations of body and mind wrought by sexual passion. Central to Renaissance conceptions of the human, it inspired drama, poetry, and narrative. Readings: Shakespeare, Marlowe, Donne, Spenser, Milton.

ENGL 1310E. Border Crossings in Renaissance Drama.  
Investigates how distant peoples and places, from Ireland to the West Indies, from East to West, are constructed for the English stage. We will read Marlowe’s Tamburlaine, Fletcher’s Island Princess, Heywood’s Fair Maid of the West, the anonymous Stukeley play, Shakespeare’s Othello, and Daborne’s A Christian Turned Turk to observe what dangers and freedoms these plays ascribe to specific geographies.

ENGL 1310F. Early Modern Utopias.  
Why does the early modern period witness a flourishing of utopias from More to Milton? We will explore this question, in reading a range of utopias by writers such as Montaigne, More, Raleigh, Bacon, Hall, and Cavendish, engaging them not just as visions of ideal societies, but as efforts at reform of England and Englishness.

ENGL 1310H. The Origins of American Literature.  
Where does American literature begin? Can it be said to have a single point of origin? Can writings by people who did not consider themselves American be the source of our national literary tradition? Does such a tradition even exist and, if so, what are its main characteristics? How does one understand the various diverse traditions that constitute American literature, including African-American, Native American, and many others, into a single object of study—or does one even need to? Authors may include de Vaca, Anne Bradstreet, Benjamin Franklin, and Phillis Wheatley.

ENGL 1310J. Imagining the Individual in Renaissance England.  

ENGL 1310N. Renaissance Drama.  
An introduction to the great classics and some less-known gems of a stellar period in English drama. Plays by Marlowe, Jonson, Webster, Middleton, and Ford, in the context of urban culture, English nationhood, gender and sexuality, playhouses and playing companies, and forms of theatricality.

ENGL 1310O. Restoration and Early Eighteenth-Century Literature.  
A survey of writing and cultural history in England between 1660 and 1750, emphasizing innovation and experimentation in drama, satire, poetry, and fiction. Readings include work by Behn, Rochester, Swift, and Defoe.

Brown University Bulletin 489
ENGL 1310S. Women and the Book in the Middle Ages.
We will read texts authored by medieval women such as Marie de France, Marjorie Kempe, Julian of Norwich, and Christine de Pizan, and we will explore other textual roles of women, including book ownership and patronage, translation and scribal transmission. The result? A complex picture of mediated and mediating female participants in manuscript culture. Some readings in Middle English.

ENGL 1310T. Chaucer.
Texts in Middle English by Geoffrey Chaucer including the romance Troilus and Criseyde; dream vision poems Book of the Duchess, House of Fame, and Parliament of Fowls; Chaucer's translation of Boethius's Consolation of Philosophy; his shorter poems; and two Canterbury Tales. Prior knowledge of Middle English not required. Not open to first-year students.

ENGL 1310U. Monsters, Giants, and Fantastic Landscapes in Early American Literature.
Monsters, giants, "exotic natives," and unknown continents fill the pages of early American writing. Examines how the well-known and obscure writers of early America used the strange and the fabulous to suggest new ways of being normal.

ENGL 1310V. Chaucer: The Canterbury Tales.
Middle English narratives by Geoffrey Chaucer's band of fictional pilgrims, read in their 14th-century historical and literary contexts. Prior knowledge of Middle English not required. Not open to first-year students.

ENGL 1310W. English Poetry and the Renaissance.
The names of Spenser, Sidney, Shakespeare, Donne, Jonson, Milton, and other poets inscribe a golden age of poetry in the cultural mythography of English-language literature. Who are these poets and what stories are told about them? In their time? During the long eighteenth century? By Wordsworth and Browning? By Eliot, the high modernists, and postmodernists?

ENGL 1310Y. Besides Paradise Lost: Milton's Other Poems.
A study of Milton's lyric and dramatic poetry, including the sonnets, Latin poems, L'Allegro, II Penseroso, the Nativity Ode, Lycidas, Comus, the verse epistles and Samson Agonistes.

ENGL 1310Z. Three Great Poets: Shakespeare, Donne, Milton.
We will study these premier Renaissance poets from all angles possible, to understand the historical situations and political issues that shaped their writing, the authors and ideas that influenced them, the traditional forms they appropriated for new purposes. Most of all, we will study them to appreciate the power of poetry as a source of knowledge and inspiration. It is recommended that students should have already taken a course in reading poetry, such as ENGL0910A How to Read a Poem or ENGL0400A Introduction to Shakespeare. Students who have taken ENGL0210E may not register for this course.

ENGL 1311A. Milton's Paradise Lost: Poetry and Belief.
Milton, Blake wrote, was of the devil's party without knowing it, and this course offers close reading of the language of Paradise Lost as poetry of belief: how does the poetry of Milton's major poem embody belief and doubt for him, in history, and for his readers?

ENGL 1311B. Medieval Zoographies and the Origins of the Human.
This course engages with medieval texts and contemporary theory to attempt to understand the shifting boundaries between humans and animals, as we examine the premodern roots of the discussion over what it has historically meant to be human, and what might come next. Topics will include beast fables and epics, nature and artifice, emotions, the soul, simulacra, sacrifice, and hunting.

ENGL 1311C. Milton.
A close examination of the poetry and prose of John Milton, from the early lyrics to the polemical prose writings of the 1640s and 50s, to the masterpieces Paradise Lost, Paradise Regained, and Samson Agonistes. Not open to first-year students.

ENGL 1311E. History of the English Language.
Provides an introduction to the study of the English language from a historical, linguistic, and philological perspective, and an overview of the study of the "Englishes" that populate our globe. While providing students with the ability to identify and explain language change through historical periods, also examines language as a social and political phenomenon.

ENGL 1311G. Shakespeare, Love and Friendship.
Shakespeare portrays friends who are compared to a "double cherry": a lover who wants to cut her beloved out in little stars; and subjects who sweat with desire to see their kings. How does Shakespeare imagine the possibilities and pitfalls of affection, whether personal or political? What happens to that affection when Shakespeare is adapted into film?

This course traces evolutions of the hero in Old English, Norse, Welsh, and Irish narratives within and around early medieval England. Introduction to genres of saga, romance, and the short poetic lai, as students consider how the nature of the hero changes in specific cultural and linguistic moments. Texts in modern English translation. Essays will focus on close textual readings. Not open to first-year students.

ENGL 1311L. From Mead-Hall to Mordor: The Celtic and Germanic Roots of Tolkien's Fiction.
This course traces the sources used by J.R.R. Tolkien in writing The Hobbit and The Lord of the Rings, including tales drawn from Old English, Norse, Welsh, and Irish literatures. You will be introduced to different medieval genres as you consider how the nature and gender of the hero change in specific cultural and linguistic moments.

ENGL 1311M. Renaissance Poetry and Its Kinds.
English poetry from 1500-1650 traces a revolutionary arc of poetic invention remarkable for diverse individual voices and literary kinds. Forms such as lyric, heroic, pastoral, satiric, epistle, and epigram embraced concerns that were at once affective, political, and religious. How does this variety constitute literature? Wyatt, Surrey, Spenser, Sidney, Marlowe, Donne, Jonson, Herrick, Herbert, Crashaw, Milton.

ENGL 1311N. England and the Renaissance.
New approaches to Latin and Greek letters—the studia humanitatis—that flourished in 14th century Italy rapidly emerged in England in the early 16th century. What does it mean to claim that England had a renaissance? Texts include More's Utopia and Richard III, Erasmus's Praise of Folly, Ascham's Scholemaster, poetry from Wyatt and Surrey through Jonson, Donne, Herrick, and Milton.

ENGL 1360A. The Stage as Globe in Renaissance Drama.
Investigates how distant peoples and places, from Ireland to the West Indies, from East to West, are constructed for the English stage. We will read Marlowe's Tamburlaine, Fletcher's Island Princess, Heywood's Fair Maid of the West, the anonymous Stukely play, Shakespeare's Othello, and Daborne's A Christian Turned Turk to observe what dangers and freedoms these plays ascribe to specific geographies. Enrollment limited.

ENGL 1360B. Inventing Britain.
Focuses on the internal colonization of the British Isles as represented by chronicle histories, drama, masques, and epic and lyric poetry: How do the English define themselves as a center striving to incorporate the British periphery? Authors may include Spenser, Shakespeare, King James I, Bacon, Jonson, Milton, and Marvel.

ENGL 1360C. Language and Form in Shakespearean Studies.
Shakespeare's poems and plays are a working dictionary of early modern English and an inventory of the possibilities of formal invention in early modern culture. How can we reach a historically informed awareness of form and formality in Shakespeare? What is the history of formalism in Shakespearean studies? What new modes of inquiry issue from questions of form?
ENGL 1360D. Medieval Manuscript Studies: Paleography, Codicology, and Interpretation. How to read a medieval manuscript. Students will learn to transcribe and date 5th- through 16th-century scripts in Old and Middle English and some Latin texts, and will learn about interpretive methods. Prior course work in Middle English recommended, and acquaintance with Latin and/or Old French and/or medieval Spanish helpful.

ENGL 1360F. Quest, Vision, Diaspora: Medieval Journey Narratives. Medieval texts explored ideas of self, love, rite-of-passage, spirituality, and group identity through narratives of travel, both imagined and real. We will read romance quests that foray to fairylands and wastelands, visionary journeys to hell, pilgrimages of self discovery, an epic exodus that founds King Arthur's nation, and a 14th-century round-the-world travelogue. Chaucer, Malory, Kempe, Mandeville, Layamon, Anonymous. Middle English readings. Not open to first-year students. Enrollment limited.

ENGL 1360H. Introduction to the Old English Language. This course offers a thorough introduction to the earliest period of English language and literature. We begin with an extensive coverage of grammar and syntax before reading short texts and a few Old English poems, including The Battle of Brunanburh and Judith. Enrollment limited to 20.

ENGL 1360J. Middle English Literature. In the age of Chaucer, literature in Middle English ranged from lyrics to romance narratives to mystery plays and medieval genres like dream visions and debate poems. This course will introduce students to reading texts like Sir Gawain and the Green Knight and The Owl and the Nightingale in their original Middle English. No prerequisites. Not open to first-year students. Enrollment limited to 20.

ENGL 1360K. Shakespeare and Company. Shakespeare belonged to a community of actors and playwrights who competed for audiences in a fledgling entertainment industry. How do his plays compare to those of Marlowe or Jonson, Middleton or Webster? Reading Shakespeare in tandem with his contemporaries, we will consider the genres, sources, styles and conventions they shared, the issues that concerned them, and their differing artistic perspectives. Prerequisite: ENGL 0310A or equivalent. Enrollment limited to 20 juniors and seniors.

ENGL 1360M. Spenser, Milton, and the Politics of the English Epic. We will read the literary and political writings of England's two major authors of epic -- Spenser and Milton -- assessing their investment in modern people just think so? This course will study style, science, politics and cultural transactions in this period of revolution and restoration, examining such texts as Donne's satires and epistles and Eliot's high modernist essays on the division of human nature in this period. Enrollment limited to 20.

ENGL 1360S. Between Gods and Beasts: The Renaissance Ovid. Ovid's Metamorphoses, an epic compendium of classical myths, narrates with wit and pathos the transformations of body and mind wrought by sexual passion. Central to Renaissance conceptions of the human, it inspired drama, poetry, and narrative. Readings: Shakespeare, Marlowe, Donne, Spenser, Milton. Students who have taken ENGL 1310D may not register for this course. Enrollment limited to 20.

ENGL 1360T. Eco-Shakespeare. Do Shakespeare's plays register and respond to the ecological crises of his day, including deforestation, land enclosure, climate change, and animal exploitation? Or, are they complicit in the ideologies that instated these practices? What kind of relation do Shakespeare's plays envision as underpinning the natural and the cultural realms and how does this differ from modern conceptions? We will seek answers to such questions by considering the plays' use of pastoral tropes and green worlds, but also by analyzing the inter-animating dynamics they stage between subject and environment. Enrollment limited to 23. Not open to first-year students.

ENGL 1360U. Europe in the Vernacular. Why did a few early medieval European authors write not in Latin or Arabic but in vernacular languages like Castilian, Early Middle English, Old Icelandic, or Old French? We will read primary texts by Layamon, Alfonso X, Dante, troubadours and anonymous others, and assess previous claims about the "rise of the individual" and various proto-nationalisms as we rewrite the story of how, why, and for whom multilingual vernacular writings came to be. Readings in modern English supplemented by medieval languages. Enrollment limited to 20 students. Not open to first-year students. Sophomores require instructor permission to register.

ENGL 1360Z. Shakespeare and Embodiment. Consideration of a number of Shakespearean texts including the erotic narrative poem "Venus and Adonis," the early revenge drama Titus Andronicus, the history Henry IV, pt. 1, the tragedy of Othello, among others, and their various representations of the body: as subject to violence, gender and desire, sovereignty and history. Attention to Shakespeare's rewriting of Ovid, novelie, and chronicle history. Enrollment limited to 20. Not open to first-year students.

ENGL 1361A. Fantasies of Milton. Paradise Lost has served as the basis for numerous fantasy novels. Even Comus has become a (supposedly inappropriate) children's story. How can a seventeenth-century poet's treatment of temptation, disobedience, reason and self-regard come to seem relevant in the present? What do contemporary writers feel compelled to preserve and to change? How might we reimagine Milton? Enrollment limited to 20.

ENGL 1361D. Women's Voices in Medieval Literature. This course explores literary works from the early medieval period, both literature by women and literature that represents women's voices and desires. Traditions examined will include Old and Middle English, Norse, Welsh, and Irish. The course provides insight into the construction of premodern sexualities as well as into the cultural and social histories of multiple national traditions.

ENGL 1361F. Spenser and Shakespeare. A comparative study of theme, form, and genre based upon paired works: Shakespeare's Sonnets/Amoretti; Faerie Queene I/King Lear; Faerie Queene I/II/Twelfth Night, Midsummer Night's Dream, Winter's Tale, Tempest, Venus and Adonis; Shepheardes Calendar/As You Like It. Weekly short interpretative exercises (250-500 words) submitted as CANVAS discussions; draft (1250 words) and final essay (3000 words). Enrollment limited to 20.

ENGL 1361G. Tolkien and the Renaissance. This course explores the work of J.R.R. Tolkien alongside Renaissance forbears such as Shakespeare, Spenser, Milton and others. Topics to include love and friendship, good and evil, violence and nonviolence, and how literature offers distinctive forms of life. Enrollment limited to 20.
ENGL 1361J. Seminar in Old Norse-Icelandic Language and Literature.
This course offers a thorough introduction to a language both closely related to Old English and in which survives one of the richest medieval literatures. We will start with an extensive coverage of grammar and syntax before reading short excerpts from sagas including Egil's Saga and Grettir's Saga. Enrollment limited to 20; knowledge of Old English, Latin, or German advised.

ENGL 1361K. Seminar in the Old English Language II.
This course continues the work of Introduction to the Old English Language, which is a prerequisite. We will translate short poems including The Wanderer and The Wife's Lament and possibly make inroads on Beowulf, while exploring history, cultural context, and changes in Old English studies. Projects include a midterm examination, research presentation, and final paper, as well as daily translations. Enrollment limited to 20.

ENGL 1361L. Milton.
A recent book provocatively asked: “Is Milton better than Shakespeare?” Whatever one makes of that question, Milton wrote extraordinary poems in the principal modes of Renaissance verse. This course studies in detail many of those works, including the culturally monumental Paradise Lost. We’ll also take into account the shape of Milton’s authorial career and his always interesting ways with genre. Enrollment limited to 20 juniors and seniors.

ENGL 1361Q. Medieval Race.
In this course, we will explore the historically specific contours of race in England and interrelated cultural regions during the High and Late Middle Ages, as well as learn and practice how to read Middle English. No previous knowledge of medieval literature or Middle English necessary. Not open to first-year students. Enrollment limited to 20.

ENGL 1360. Undergraduate Independent Study in Medieval and Early Modern Literatures.
Tutorial instruction oriented toward a literary research topic. Section numbers vary by instructor. Instructor permission required.

ENGL 1510A. Jane Austen and Her Predecessors: The Other History of the Novel.
This course focuses on the novels of Jane Austen — from Sense and Sensibility to Persuasion. The course first establishes some familiarity with the earlier women writers of narrative fiction, in order to gain a deeper understanding of the development of the novel and of Austen’s place in that rich tradition. Additional readings include work by Aphra Behn, Eliza Haywood, Charlotte Lennox, Elizabeth Inchbald, and Mary Wollstonecraft.

ENGL 1510B. Liberalism and American Culture.
A course in the relationship between the rise of liberalism and American literary history. Writings from Franklin, Jefferson, Emerson, Fuller, Rowson, Twain, and Charlotte Perkins Gilman.

ENGL 1510D. The Literature of the American South.
The South is as much a state of mind as a place on the map, and some of the major figures in American literature have contributed to the making of what we think of when we think of "the South." Explores sometimes contradictory but always important meanings of the American South. Authors include Poe, Douglass, and Twain.

ENGL 1510E. American Renaissance.
An intensive reading in American literature between 1820 and 1860, with special attention to Romanticism, race and slavery, and the historical novel.

ENGL 1510H. Why the Novel Happened.
Readings in "early " novels of 18th-century England and in more recent explanations of the novel's rise to dominance as a popular modern genre. How have changing ideas of truth, virtue, gender, money, politics, history, or the human subject interacted with the practices of narrative fiction? Writers to be considered include Behn, Haywood, Defoe, Richardson, Fielding, Sterne, Lewis, Watt, Lukacs, McKeon, and Bakhtin.

ENGL 1510I. The Novel from Defoe to Austen.
How and why did the novel become the dominant literary mode? This course considers the "rise" of the novel during the "long" eighteenth century. Beginning with Behn and Defoe, readings include works by Richardson, Fielding, Sterne, Smollett, Lewis, and Godwin.

ENGL 1510J. Eighteenth-Century Women Writers.
Rediscovery and reconsideration of works by women during the eighteenth century are changing the literary canon: works by women are becoming mainstream, and they are changing the way we read "traditional" texts. This course includes poetry, drama, fiction, letters, diaries, and essays by writers including Manley, Haywood, Contilivre, Scott, Fielding, Montagu, Sheridan, Burney, Radcliffe, and Wollstonecraft.

ENGL 1510L. Fiction and Mass Media in Nineteenth-Century England and America.
Explores critiques of the mass media from Carlyle and Arnold to Benjamin and McLuhan by way of a reading of important works of popular Anglo-American fiction of the 19th century. Criticism includes essays by Carlyle, Arnold, Benjamin, and McLuhan; literature includes fiction by Poe, Dickens, Melville, Stevenson, and James.

A survey of American fiction in the latter half of the nineteenth century. We will examine the ways narrative form helped shape modern America's increasingly fractured sense of identity, focusing specifically on questions of imitation and authenticity, race and nationalism. Writers will include Twain, Stein, Wharton, Crane, Chopin, and Chesnutt.

ENGL 1510N. Inventing Race in America.
What is "race"? Where does it come from? This course argues that categories of racial difference-far from being fixed or natural-have emerged from within writing. We trace the emergence of "race" in America from the late 16th century to the present day by reading 17th-century British colonial writing, 18th-century racial scientists, Jefferson, Crevecoeur, Melville, Faulkner, Mukherjee, and Silko.

ENGL 1510R. Location and Dislocation in the Late Nineteenth-Century American Novel.
Focuses on the two dominant literary modes of the late 19th century: realism and naturalism. We try to generate working definitions of these two methods in order to understand the ways narrative form shaped Americans’ increasingly fractured sense of identity. Writers include Twain, James, Crane, Cahan, Jewett, Chopin, and Chesnutt.

ENGL 1510S. Pre-Raphaelites, Aesthetes, and Decadents.
Looks at both Pre-Raphaelite literature and painting, and the reading includes Browning, the Rossettis, Morris, and Swinburne. The painters include both early hard-edge photographic Pre-Raphaelites and the erotic medievalism of Rossetti, Burne-Jones, and the followers. The course will focus on the tensions in Pre-Raphaelitism between realism and fantasy, fact and symbol, body and spirit.

ENGL 1510T. Swift and His Contemporaries.
Swift's works are central to this course's investigation of literature, politics, and society, Anglo-Irish relations, and the great outpouring of satire in English in the early 18th century. Irony, parody, and mock-heroes inventively transform genres while challenging "abuses" of learning, government, religion, colonialism, and even love. Other writers include Congreve, Manley, Addison, Steele, Montagu, Pope, and Gay.

ENGL 1510V. Civil Rights and American Literature.
An examination of the relations between legal theory and practice and literature, with a particular emphasis on the nature and significance of those relations in the historical development of American discourses of civil rights. Readings include Thoreau, Douglass, Wright, and Perry, and legal theorists such as Dworkin, Unger, Cardozo, and Fish.
ENGL 1510W. George Eliot. The course will study George Eliot's major works, including Adam Bede, Middlemarch, and Daniel Deronda, as well as examples of her essays and criticism. We will consider her experiments with literary realism, which helped secure for the novel form a position as high art. Giving attention to George Eliot's emphasis on conflicting ethical systems, from sympathy, utilitarian economics, and theology, to theories of physiological necessity, we will also examine the question of choice—including personal, women's social, professional, and marriage choices—that lies at the heart of many of her novels.

ENGL 1510X. The Early American Novel. A reading of diverse genres of the early American novel, between 1790 and 1860, including the seduction novel, frontier romance, historical fiction, and the antislavery novel. What was the novel's cultural role? Writers include Susanna Rowson, Brockden Brown, Hawthorne, Stowe, and William Wells Brown.

ENGL 1510Z. The Realist Age: American Literature at the Turn of the Century. What do we mean when we call a novel realistic? When did the term first start being used, and why? This class attempts to answer these questions by studying the emergence of realism as the dominant American literary form at the turn of the century. Writers will include Mark Twain, Henry James, Stephen Crane, Edith Wharton, and Charles Chesnutt.

ENGL 1511A. American Literature and the Civil War. An examination of the way the Civil War is represented in American literature from Reconstruction to the present. Authors to be considered include Grant, Twain, Dixon, Chesnutt, DuBois, Faulkner, Morrison, Ellison.

ENGL 1511B. The Victorian Novel. Challenging the notion of a Great Tradition or mainstream Victorian novel by looking at the proliferation of subgenres—e.g., sensation fiction, crime fiction, thug fiction, colonial adventures stories—for which the period is known. Includes novels by Mary Shelley, the Brontës, Dickens, Mrs. Henry Wood, Eliot, Hardy, Stevenson, Haggard, Stoker, and Wilde.

ENGL 1511C. Lincoln, Whitman, and The Civil War. A literary and cultural history of the Civil War with special emphasis on Whitman's poetry and Lincoln's addresses and letters. It focuses on issues of race, democracy, and modernity.

ENGL 1511E. Monsters, Giants, and Fantastic Landscapes. Monsters, giants, and exotic landscapes fill the pages of much writing in English before 1800. We will examine the ways in which a number of writers before 1800 use the strange and the fabulous to suggest new ways of understanding what it means to be normal. Authors may include Columbus, Shakespeare, Mary Shelley, and Poe.

ENGL 1511F. Wordsworth and Coleridge: Lyrical Ballads. An introduction to and close reading of the Lyrical Ballads, one of the most radical and innovative volumes in British Romantic literature. We will pay special attention to the aesthetic, historical, ethical, and political dimensions of the text, patiently working through the poems and prefaces, as well as reading antecedent texts, in order to understand why the book was an experiment for its authors, and why these enduring effects on our contemporary moment.

ENGL 1511G. Dickens and Others. An introduction to the novels of Charles Dickens (1812-1870) that considers these works in relation to other important intellectual, historical, and literary developments of mid-19th-century England. Special attention given to the political, social, and philosophical significance of "others" in Dickens's writing and in related works from the period. In addition to a set of Dickens's novels, readings include selections from Mill, Arnold, Marx, Tennyson, Eliot, and others.

ENGL 1511H. Literature of the American Renaissance. A survey of the major figures of mid-19th-century American literature, with a particular emphasis on how the writers of the period engaged the political and legal issues informing the sectional conflict on the eve of the Civil War. Authors to be considered include Poe, Hawthorne, Melville, Dickinson, Stowe, Douglass, Brown, Jacobs, and Whitman. Students who have taken ENGL 0600F may not register for this course.

ENGL 1511I. Culture and Anarchy. This course will trace the development of the concept of culture from its origin in conflict generated by the universalizing mission of the Enlightenment into a variety of literary and philosophical writings in 19th-century British literature. Readings from Rousseau, Kant, Herder, Burke, Wordsworth, Percy Shelley, Carlyle, Thoreau, Emerson, Tennyson, Arnold, and George Eliot.

ENGL 1511J. The Rise of American Realism. Realist fiction is traditionally associated with France (Honoré Balzac, Émile Zola) and England (Jane Austen, Charles Dickens, George Eliot). We will read a number of important American realist writers (including Stephen Crane, Edith Wharton, Henry James, and Theodore Dreiser) in order to understand what might be distinctive about American realism and what it might owe to its European forerunner.

ENGL 1511K. Gothic Novels and Romantic Poems. The difference between "high Romantic" poetry and Gothic popular fiction blurs when we look closely at these haunted and haunting texts. This seminar will examine some major Romantic poems by Wordsworth, Coleridge, Keats, Shelley, and Byron in tandem with Gothic novels by Ann Radcliffe, Matthew Lewis, Jane Austen, and Mary Shelley.

ENGL 1511L. On Being Bored. This course explores texts/films that represent and formally express states of non-productivity or non-desire. Beginning with the Enlightenment and romantic periods, we will reflect on narratives with neither progress nor plot, characters that resist characterization, and poems that deny assertion and revelation. Authors include: Kleist, Kant, Rousseau, Coleridge, de Quincey, Keats, Blanchot, Levinas, Beckett, Ashbery, Schuyler.

ENGL 1511M. Victorian Self and Society. This multi-genre course studies literature and culture of the Victorian period, looking at the changing ideas of society and the individual's place within that larger community in an age of empire, industrialization, urbanization, class conflict, and religious crisis. Topics include conceptions of the role of art and culture in society, the railway mania of the 1840s, women's suffrage and the condition of women, and the Great Exhibition of 1851. Readings (essays, poems, stories, plays, and novels) by Carlyle, Charlotte Brontë, Ruskin, Robert Browning, Dickens, Tennyson, Christina Rossetti, George Eliot, and Lewis Carroll.

ENGL 1511N. Liberalism, Empire, and the American Novel. An historical consideration of how the novel in the United States addresses the relations between American liberalism and the projection of US sovereignty into international contexts. Topics to be considered include: Manifest Destiny and the frontier; Reconstruction and the rise of imperial America; World War II and the Cold War; and the United States at the end of History.

ENGL 1511P. Realism, Modernism, Postmodernism: The American Novel and Its Traditions. This course charts the course of American novel from the Civil War to the present. We will attend to the development of a distinctly novelistic literary tradition in American writing over the period and to the interactions between this tradition of literary novel writing and the emergence commercial novelistic generic forms (i.e., the detective novel, science fiction). We will also consider the novel's relations to alternative literary modes (narrative history, the sketch, the short story, the occasional essay) and to alternative media (film, television, music). Melville, Twain, DuBois, James, Fitzgerald, Hammett, Hurston, Wright, Nabokov, Butler, Morrison, Dick, Didion.
ENGL 1511Q. Melville, Conrad, and the Sea.
This class reads a number of the major works of Melville and Conrad in order to ask a number of questions crucial to understanding modern narrative: the relationship between realism and the romance (the sea being both the setting for adventure and a place of work); how, why, and by whom stories are told and passed on (the sea being both the place where "tall tales" are told and where they are set); the role of the eyewitness (how do you prove you saw what no else has seen). Texts include "Moby Dick," "Billy Budd," "Lord Jim," and "Heart of Darkness."

ENGL 1511R. Scandalous Victorians.
This course examines the literature and culture of Victorian Britain through the lens of scandal. Particular attention will be paid to questions of gender, sexuality, class and social mobility, and national and imperial identity, as well as to the dynamics of scandal and the processes of social change.

ENGL 1511S. The Victorian Novel and/as the History of Sexuality.
Might the modern hetero- and homosexual be Victorian constructions that have really "stuck"? We will explore how the Victorian novel contributed to the cultural labor of joining sexuality to a sense of the self, and then pitched in on the effort to meld romance, love, and sexuality into marital relationships. Domestically, obsession, heterophobia, the Malthusian unconsciousness, and erotic versus romantic friendship will be some of the issues discussed. We will also branch out into issues of pleasure and desire more broadly in Victorian culture. Authors will include Brontë, Dickens, Eliot, Hardy, Charlotte Yonge, and Wilde.

ENGL 1511T. Victorian Inequality.
From "Dickensian" workhouses to shady financiers, Victorian literature has provided touchstones for discussions of inequality today. This course will investigate how writers responded to the experience of inequality in Victorian Britain. Considering multiple axes of inequality, we will explore topics such as poverty and class conflict, social mobility, urbanization, gender, education, Empire, and labor.

ENGL 1511U. Melville, Poe, and American Modernity.
The class will be guided by the premise that the writings of Poe and Melville reflect mid-19th century modernity. To support this claim we will look into their experimentation with narrative structure and ask whether they have really "stuck". We will explore how the Victorian novel contributed to the cultural labor of joining sexuality to a sense of the self, and then pitched in on the effort to meld romance, love, and sexuality into marital relationships. Domestically, obsession, heterophobia, the Malthusian unconsciousness, and erotic versus romantic friendship will be some of the issues discussed. We will also branch out into issues of pleasure and desire more broadly in Victorian culture. Authors will include Brontë, Dickens, Eliot, Hardy, Charlotte Yonge, and Wilde.

The major works of Victorian poetry, spanning from the end of the Romantic period to the beginnings of Modernist poetry: roughly 1840 to 1890. We will be reading Matthew Arnold, Robert Browning, Thomas Hardy, Gerard Manley Hopkins, and Alfred Tennyson in detail, as well as critical writing and political poetry from the period.

ENGL 1511Y. Emily Dickinson and the Theory of Lyric Form.
This class examines the extraordinary work of Emily Dickinson in an attempt to understand what lyric poetry is and how it works. We will read a generous sampling of Dickinson's poetry as well as a number of the major theoretical accounts of the lyric. Enrollment limited to juniors and seniors.

ENGL 1550A. Jane Austen and George Eliot.
A survey of the major novels of Austen and Eliot. Readings will also include contemporary reviews and responses, letters, and Eliot's critical prose, as well as literary theory and criticism addressing questions such as novelistic form, realism and narrativity, the problem of the subject, the politics of aesthetics, and the changing status of the woman writer in the 19th century. Enrollment limited to 20 seniors and juniors. Instructor permission required.

ENGL 1550B. Melville.
A seminar looking closely at the relation between the life and literary work of Herman Melville, with an extended reading of his masterpiece, Moby-Dick. The course will look at the history of writing and publishing during Melville's era and consider some of his contemporaries like Hawthorne and Harriet Beecher Stowe. Enrollment limited to 20.

ENGL 1550E. The Modern Self and Its Others.
How do eighteenth-century representations of personal and public identity mark the emergence of the modern "subject" as defined by gender, race, nation, language, and the body? Readings will include selections by Swift, Pope, Montague, Stern, Johnson, and Berney.

ENGL 1550F. Nineteenth-Century American Imperialism.
Examines a number of different types of texts-novels, essays, journalism, oral narratives-in order to trace the connections between the internal colonialism of America in the nineteenth century and U.S. colonial ventures in the Caribbean, Asia, and Latin America. Writers to include Melville, Twain, Marti, Black Elk, Crane, Du Bois, and Roosevelt.

ENGL 1550G. Romantic Orientalism.
Representations of "the East" in British writing and visual art from 1775 to 1825. Historical and theoretical accounts of "orientalism" and analysis of the political and ideological sources and consequences of "orientalist" representation. Readings in Wordsworth, Coleridge, Owenson, DeQuincey, Byron, Percy Shelley, and Mary Shelley.

ENGL 1550H. The Victorian Novel.
What specific historical conditions can be seen to have led to the emergence of the novel as a leading literary form in the Victorian era? What cultural work was it called upon to perform? How does it address broader philosophical, economic, political and social questions of the Victorian era? Authors include Dickens, Eliot, Hardy, Stevenson, and Conrad.

ENGL 1550M. Eighteenth-Century Novel.
The 18th century marks the beginning of the novel as we know it. This course considers the "rise" of fiction during the "long" eighteenth century. Beginning with Behn, Haywood and Defoe, readings include works by Richardson, Fielding, Sterne, Smollett, Lewis, and Godwin.

ENGL 1560Q. From Frankenstein to Einstein: Literature and Science from 1800 to 1950.
Science and literature as interrelated ways of knowing and learning, focusing on questions of language, observation, interpretation, and value. Themes include utopias and dystopias, evolution and degeneration, man and machine, entropy and chaos, and the relationship between literary imagination and scientific creativity. Readings include poems, plays, novels, and essays (Shelley, Arnold, Doyle, Poe, Wells, Kafka, Stoppard) alongside a range of scientific writing (Darwin, Huxley, Freud, Gould, James Watson) and philosophy of science (Popper, Feyrerabend, Kuhn). Enrollment limited to 20 juniors and seniors. Banner registrations after classes begin require instructor approval.
ENGL 1560S. Forms of American Realism, 1865-1945.
An inquiry into the nature of realism and an examination of its various
historical manifestations-literary, legal, political, and aesthetic-between the
Civil War and World War II. Authors to be considered include DeForest,
Chesnutt, Twain, Howells, Norris, Gilman, Wharton, Hemingway,
Steinbeck, Hurston, and Wright. Enrollment limited.

ENGL 1560T. Literature, Religion, and "Culture Wars" in America.
This course examines important moments where religious and literary
histories converge. It reads "classic" American literary works in context of
ongoing conflicts between evangelical and secular forces in American
life, and it thinks about literature as an arena where these very categories
are contested and revised. Major readings will include works by John
Winthrop, Benjamin Franklin, Harriet Beecher Stowe, African American
women preachers, Emerson, Mark Twain, and Flannery O'Connor.
Enrollment restricted.

ENGL 1560U. Radicals and Conservatives: the later 18th Century.
The relationship between literature and society is demonstrated by
conservatives like "Dictionary" Johnson as well as by radicals like
visionary Blake. Readings include works by Johnson, Boswell, Burke,
Gibbon, Sterne, Burney, Wollstonecraft, Godwin, and Blake. Enrollment
limited to 20.

ENGL 1560V. The Lives of a Text.
Books are composed not merely of concepts. They are material objects
whose forms, functions, and value can vary widely. We will make use of
rare editions at the John Hay Library to help us explore both the literary
content of works and their production and dissemination in various formats
and for various audiences. Authors may include Shakespeare, Poe, and
Fitzgerald. Enrollment limited to 15. Not open to first-year students.

ENGL 1560W. Getting Emotional: Passionate Theories.
This course examines connections between emotion, feeling, and affect
in several key texts from 18th-, 19th-, and 20th-century literatures. We will
ask how and why affect becomes a central concept for writers and thinkers
in the Enlightenment, and chart the ways in which affect productively
opens up onto contemporary theorizations of identity, gender, sexuality,
and race. Possible authors include: Wordsworth, Austen, Blake, Equiano,
Coleridge, Keats, Shelley, Wilde, Pater, Kant, Melville, Hofmansthal,
Hume. Films by Todd Haynes, McQueen, Campion, Frampton. Theoretical
readings by Berlant, Ellison, Terada, Deleuze, Stewart. Enrollment limited
to 20 juniors and seniors.

ENGL 1560X. Transatlantic America.
What was "transatlantic" culture in colonial and 19th-century America?
How did American writers continue to engage and respond to English
culture? Franklin, Emerson, Sedgwick, Paine, Addison and Steele, Carlyle,
and others. Enrollment limited.

ENGL 1560Y. The Ethics of Romanticism.
An exploration of the intersections of moral philosophy and Romantic
literature and culture. Writers studied may include Smith, Hume, Bentham,
Hazlitt, Hegel, Wordsworth, Coleridge, Keats, Shelley, Byron, Godwin,
Equiano, Austen. We will consider how writings of the Enlightenment
and Romantic period differently reflect upon problems of knowledge,
otherness, identity, community, and aesthetics, and how these reflections
are related to the ethical imagination. We will also juxtapose our selections
with several recent theoretical debates. Enrollment limited to 20.

ENGL 1560Z. Time and Narrative.
This course studies fiction that experiments with the representation of
time alongside philosophical and critical texts on the theory of time. We
will consider how engagements with the question of time shape the
structures, language, characters, plots, themes, and goals of narrative,
looking at topics such as time and language, story and narration, memory
and history. We will also consider the impact of technological and social
developments on the sense of time (the wristwatch, the telegraph, railway
timetables). Authors include St. Augustine, Laurence Sterne, John Locke,
David Hume, Ambrose Bierce, Charles Dickens, H.G. Wells, Thomas
Hardy, Henry James, Virginia Woolf. Enrollment limited.

ENGL 1561C. Swift and His Contemporaries.
Jonathan Swift's works are central to this course's investigation of early
18th-century literature and culture. The reading focuses on the period as an "information age" energized by issues not unlike those of our own
time: partisan politics, money, proliferation of new forms of textuality,
globalization, changing views on gender and sexuality, love, religion,
and war. The emphasis will be on irony, parody, and satire. Other writers
include Congreve, Defoe, Manley, Pope, Gay, Montagu, Addison, and
Steele. Students who have taken ENGL 1510T may not register for
this course. Not open to first-year students or students who have taken
ENGL1510T. Enrollment limited.

ENGL 1561D. Writing and the Ruins of Empire.
An exploration of literary representations of "empire" and "imperialism"
from the 18th century to the present. Readings in Gibbon's Decline and
Fall of the Roman Empire, Volney's Ruins of Empire, and a wide
range of 19th- and 20th-century texts. Some consideration of theories of
imperialism and of visual representations of cultures of empire. Enrollment
limited to 20. Prior coursework in 18th- and 19th-century literature advised.

ENGL 1561E. The Western.
An examination of the formula Western in American fiction, art, and
cinema, with a view toward situating the genre within urban middle-class
culture in the late 19th- and 20th-century United States. Authors to be
considered include Twain, Harte, Crane, Austin, Cather, Doctorow, Reed,
Leonard, and L'Amour. Films: Destry Rides Again, Stagecoach, Rio Bravo,
The Seven Samurai, Fistful of Dollars, Dirty Harry, The Man from Laramie,
Paint your Wagon, Act of Violence, among others. Enrollment limited to
20.

ENGL 1561F. Sacred Readings: The Bible, Biblical Interpretation,
and Victorian Literature.
Bible reading in terms of apocalyptic and other prophesies permeates
Victorian literature, coloring ideas of politics, gender, character, and
the arts in ways that seem a secret code. The course therefore reads
works by Charlotte Brontë, the Brownings, Carlyle, Hopkins, Newman,
the Rossettis, Ruskin, and Swinburne in light of once common ideas of
typology, prophecy, and apocalypses. Enrollment limited to 20.

ENGL 1561G. Swift, Pope, Johnson.
The course provides in-depth study of three major writers of the eighteenth
century and will include cultural contexts. Readings include Gulliver's
Travels, The Rape of the Lock, and Rasselas. Enrollment limited to 20.

ENGL 1561H. The Brain and the Book: Thinking and Reading in the
Victorian Novel.
Considers two nineteenth-century novels in light of theories of cognition,
both nineteenth-century and contemporary. This course proposes to study
how some of the foundational questions of literary study—the nature of
language, the location of meaning, the experience of reading, the power of
metaphor, and the sources of creative thought—can also be studied from
the perspective of mental science. We will read two Victorian novels in
serial installments simultaneously, alongside shorter readings. Limited to
juniors and seniors only. Banner registrations after classes begin require
instructor approval. Enrollment limited to 20.

ENGL 1561I. The Nineteenth-Century Novel.
This seminar examines how British and French nineteenth-century novels
thematize history, memory, representation and desire. Authors to be
studied include Austen, Stendhal, Balzac, Dickens, Flaubert, Eliot, and, if
time allows, James and/or Proust. Enrollment limited to 20.

ENGL 1561J. The Poetics of Confession.
This course explores the theoretical structures and models of confession
in various literary and cinematic sources, with a special emphasis on work
from the nineteenth and twentieth centuries. Authors might include: St.
Augustine, Rousseau, De Quincey, Foucault, Wordsworth, Bronte, Wilde.

ENGL 1561K. Restoration and Eighteenth-Century Drama.
After almost two decades of closure, public theaters re-opened in 1660.
This new beginning occasioned new plays, new kinds of performance and
production, and new intersections between the stage and society. We will
study works by Etheridge, Wycherly, Congreve, Dryden, Behn, Gay, Lillo,
Sheridan, and others. Not open to first-year students.

Brown University Bulletin 495
ENGL 1561L. Revolution, War, Poetry: Wordsworth in the 1790s. William Wordsworth's poetic experiments during the 1790s are often said to have invented modern poetry as the poetry of consciousness; they are also efforts to find language adequate to a time of revolution, war, and modernity. This seminar examines texts by various writers of the revolutionary era, but focuses on Wordsworth's poetry from the early 1790s to the 1805 Prelude. Enrollment limited to 20. Not open to first-year students.

ENGL 1561M. American Literature and the Corporation. A study of the development of the American novel from the Civil War to the present in light of the emergence of the corporation as the principal unit of economic enterprise in the United States. We will survey corporate theory from Lippmann to Collins, and use it to frame the novel's development from realism through modernism to postmodernism. Corporate theorists to be considered: Lippmann, Dewey, Berle, Drucker, Mayo, Demming, Friedman, Coase. Novelists to be considered: Twain, Dreiser, Wharton, Stein, Faulkner, Steinbeck, Wright, Ellison, McCullers, Reed, Gaddis, Morrison. Enrollment limited to 20.

ENGL 1561N. What is an Author?: Poe, Hawthorne, Dickinson. What does it mean to be identified as an "author"? How did the practices of writing and reading change in 19th-century America? This course addresses such questions by reconsidering the literary careers of Hawthorn, Poe, and Emily Dickinson. Our work will investigate literary culture and book history, focusing on 19th-century authors, readers, magazines, publishing, criticism, and popular media. Enrollment limited to 20.

ENGL 1561S. Gender and Sexuality in Victorian Literature. This seminar explores the constructions and the highly charged cultural significance of gender and sexuality in the literature of Victorian Britain. Readings include a selection of fiction, poetry, and prose writing by authors such as Alfred, Lord Tennyson; Emily Brontë; Elizabeth Barrett Browning; Mary Elizabeth Braddon; Dante Gabriel Rossetti; Christina Rossetti; Robert Louis Stevenson; and Thomas Hardy. Enrollment limited to 20.

ENGL 1561T. The Sensational and the Real In Victorian Fiction. This course will focus on the Victorian novel, which has been called the period's greatest artistic achievement. In particular we will explore two modes through which novels engaged the turbulent experience of their time: realism and sensation. We will examine how these different novelistic modes tackled the issues of gender, sexuality, class, and personal and community identity. Enrollment limited to 20.

ENGL 1561U. Oedipus in Myth, Tragedy, and Theory. This course is an intensive study of Oedipus Rex, as well as an introduction to the debates and responses it has occasioned. It spans several disciplines, from the classics to philosophy to psychoanalysis to literary theory, following the trajectory of this single figure. Readings: Sophocles, Aristotle, Hegel, Rancière, Girard, Foucault, Freud, and Bernard Williams. Enrollment limited to 20.

ENGL 1561W. On Being Bored. This course will explore how and why certain texts and films represent states of non-productivity or non-desire. Beginning with writings from the Enlightenment and Romantic periods, we will move into contemporary theoretical and aesthetic reflections on the links between art and worklessness: narratives with neither progress nor plot, characters that resist characterization, as well as poems and films that resist emphatic assertion and revelation. Enrollment limited to 20.

ENGL 1561Y. In Excess: Rossetti, Hopkins, Wilde. This seminar will be a focused close reading of three late Victorian writers whose works might be described as radically excessive insofar as they transgress and push beyond the limits of social, ethical, aesthetic, sexual, and political conventions. What does it mean to describe a text as excessive, and how can excess be considered as a constitutive part of its form? We will concentrate on poetry, plays, and theoretical texts, putting our authors into conversation with contemporary thinkers of excess. Enrollment limited to 20.

ENGL 1562B. Som ebodies, Nobod ies, and Other Others: 18th-Century Women’s Writing. Women wrote and published in unprecedented numbers for the first time during the eighteenth century. Recovery of their important work is ongoing. Revolution, globalization, and other changes in private and public life prompted writers like Elizabeth Haywood, Mary Montagu, Ann Finch, Charlotte Lennox, Frances Sheridan, Mary Wollstonecraft, Frances Burney to redefine gender roles and challenge cultural prohibitions against female authorship. Enrollment limited to 20.

ENGL 1580. Undergraduate Independent Study in the Enlightenment and the Rise of National Literatures. Tutorial instruction oriented toward a literary research topic. Section numbers vary by instructor. Instructor's permission required.

ENGL 1710A. "Extravagant" Texts: Advanced Studies in Asian American Literatures. Examines Asian American writings that are difficult, complex, and/or experimental-that are, in Kingston's phrase, "extravagant." Explores the issue of what is at stake-politically and aesthetically-in writing that explicitly challenges the generic conventions with which much Asian American literature is linked: autobiography, the Bildungsroman, ethnography, realism, and sentimentalism.

ENGL 1710B. American Vertigo: How the World Sees the U.S. Why does America exercise such an extraordinary attraction for foreign writers? And why, moreover, is the America that appears in those writings so often unrecognized? This class examines the representation of American life from DeTocqueville to Henry-Levy, looking at work by Amis, Antonioni, Adorno, Nabokov, Kincaid, and others. Two lectures and one discussion meeting weekly. Students will be assigned to conference sections by the instructor during the first week of class.

ENGL 1710C. Race and Nation in American Literature. From the heyday of literary realism through the rise of modernism, race definitively shaped the national literature of the U.S. This course will consider representations of racial identities in relation to key historical and aesthetic developments within these two periods. Authors include Mark Twain, Frances Harper, Charles Chesnutt, Stephen Crane, William Faulkner, and John Fante.

ENGL 1710D. Anglo-American Nonfiction: Sages, Satirists, and New Journalists. After examining the relations between fiction and nonfiction, the class will consider the work of Tom Wolfe, Joan Didion, Annie Dillard, and others within contexts created by essayists (Montaigne), satirists (Swift), and Nineteenth-century sages ( Carlyle, Thoreau, Nightingale, and Ruskin). The class will become acquainted with various nonfictional forms including prose satire, the meditative essay, sage-writing, autobiography, and travel literature.

ENGL 1710E. Reading Race in Black + Yellow: Comparative Studies in 20th-C African American + Asian American Ficti.on. This course will introduce students to key themes and contexts of African literature in English. We will read the work of the writers for the historical sources and conceptual implications of these categories in modern Africa. Writers include Achebe, Emecheta, Farah, Ngugi, and Vera.
ENGL 1710G. Faulkner.  
In examining Faulkner's major works from the early stream-of-consciousness novels through the history-driven and race-inflected texts of the 30s and 40s, this course will evaluate Faulkner's practice as a writer working both in and against Southern culture, and as Modernist writing within an international context. Issues include narrative experimentation, race, class, gender, and the evolution of Faulkner's work. Students should register for ENGL 1710G S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 1710H. Black Internationalism and African American Literature.  
The notion that African Americans are an extension of a global racial community has been a fixture of black politics and culture for more than a century. In this course, we will consider how the concept of global racial alliance has shaped black political resistance, literary practice, and critical theory. Likely writers include DuBois, Hughes, McKay, and Wideman.

ENGL 1710I. Harlem Renaissance: The Politics of Culture.  
The Harlem Renaissance was a remarkable flowering of culture in post-war New York as well as a social movement that advanced political agendas for the nation. This course takes up the relationship between literature and politics by exploring such matters as the urbanization of black America, the representation of the black poor, the influence of conference sections by the instructor during the first week of class.

ENGL 1710J. Modern African Literature.  
This course considers themes, antecedents, and contexts of modern African literature and related forms. Our readings will include fiction in English or in translation, traditional oral forms like panegyric and festival poetry, and some films. We will examine how these diverse materials explore the interplay of ethnicity, nationality, and race. We will also address the issue of "tradition" in contexts where nationalisms of various stripes are becoming stronger, even as the world becomes more interconnected through trade, immigration, and digital technology. Authors will include Achebe, Adichie, Dangarembga, Kourouma, Ngugi, Salih, Soyinka, Winkom. Films by Koyutay, Loreau, Sembène.

ENGL 1710K. Literature and the Problem of Poverty.  
This course explores poverty as a political and aesthetic problem for American writers. Examines the ways that writers have imagined the poor as dangerous others, agents of urban decay, bearers of folk culture, and engines of class revolt. Authors include Stephen Crane, William Faulkner, Zora Neale Hurston, and Richard Wright.

ENGL 1710L. Modernism and Everyday Life.  
We will examine modernist literature in the context of contemporary art, psychology, and theories of everyday life to ask how this period understood ordinary objects and events. Could they be the proper subject matter of art? In the right circumstances, might they actually be art? Writers may include Woolf, Joyce, Williams, Eliot, Stein, James, Freud, deCerteau. One previous literature class required.

While American novels can imagine the nation as a multicultural unity, they also provide potent critiques of white supremacy, giving literary form to the cultural expressions of communities of color. We examine novelistic visions of the nation by writers like Ralph Ellison, Toni Morrison, and Viet Nguyen along with critical analyses of nationalism by theorists like Benedict Anderson and Etienne Balibar. Not open to first year students.

ENGL 1710N. Photography and the American Novel.  
Traces the impact made by the emerging medium of photography on American fiction from its very beginnings until the present. Our focus will be on the varying strategies adopted by novelists in response to the representational challenges posed by photography. Writers include Hawthorne, Nabokov, Faulkner, Hurston, Citron, Eugenides, and Barthes. Students should register for ENGL 1710N S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 1710O. The Dead and the Living.  
Readings in literature, theory, psychoanalysis, philosophy and law examine how the relation between the dead and the living shapes the concerns of modernist narrative and thought. Topics include "Living with the Dead," "Haunting and Knowing," "Writing Lives," "Dreaming and Waking," and "Picturing the Dead." Readings include Joyce, Conrad, Woolf, Forster, and Greene as well as Freud, Lacan, Benjamin, and Barthes.

ENGL 1710P. The Literature and Culture of Black Power Reconsidered.  
This course reexamines the Black Power movement as a signal development in American literature and culture. We will read classics from the period with a view toward reassessing the nuances and complexities of their form and politics. At the same time, we will recover less familiar texts that complicate conventional understandings of what defines this movement. Authors include Malcolm X, Huey P. Newton, Angela Davis, Eldridge Cleaver, John Edgar Wideman, Ernest Gaines, and Amiri Baraka.

ENGL 1710Q. Bloomsbury and Modernism.  
The contribution of the avant-garde "Bloomsbury Group" to the development of literary modernism. The focus will be on the central literary figures (Virginia Woolf, E. M. Forster, and T. S. Eliot), but attention will also be paid to the visual arts (Roger Fry, Vanessa Bell, and Post-Impressionism) and to social criticism (Lytton Strachey, Leonard Woolf, and John Maynard Keynes).

ENGL 1710R. Writing War.  
Examines the challenges that war poses to representation, and particularly to language and literary expression in the modern era. We will focus primarily on the First and Second World Wars, exploring the specific pressures war puts on novels and poetry, as well as on history, psychology, and ethics. Works by Sassoon, Owen, Barbusse, Brittain, Woolf, Rebecca West, Graham Greene, Pat Barker, Marc Bloch.

ENGL 1710T. Literary Impressionism.  
An examination of the role of "literary impressionism" in the transformation of the novel from realism to modernism. Writers studied include Henry James, Joseph Conrad, Stephen Crane, Ford Madox Ford, and Virginia Woolf. Close analysis of their narrative methods for dramatizing consciousness, with attention to the political and ethical implications of impressionism's focus on the inner life.

ENGL 1710U. American Literature and the Cold War.  
A study of American literature in the context of the broad intellectual culture--strategic, ideological, philosophical, aesthetic, and economic--engendered by the conflict between the United States and the Soviet Union from 1945 to 1991. We will assess the role of the bomb, McCarthyism, game theory, the military industrial complex, and strategic doctrines of containment and deterrence in the rise of postmodernism in American literature. Authors to be considered include Bellow, Highsmith, Millar, Ellison, McCarthy, Mailer, Pynchon, Wideman, Coover, Delillo. Students should register for ENGL 1710Y S01 and may be assigned to conference sections by the instructor during the first week of class.

ENGL 1711A. American Poetry II: Modernism.  
Study of modernist American poetry. Readings include Pound, Eliot, Stevens, Williams, H.D., Moore, Hughes, and others.

ENGL 1711B. Modernist Fiction.  
Readings in British and American fiction and culture in the early 20th century, with particular attention to the relationships between modernist literary experiment and contemporary questions about empire, race, the changing status of women, and the grounds of literary authority. Writers may include Conrad, H.D., Joyce, Larsen, Lawrence, Rhys, Toomer, Woolf. Two lectures and one discussion meeting weekly. Students will be assigned to conference sections by the instructor during the first week of class.

ENGL 1711C. Modernist Henry James.  
How consciousness knew the world was a topic of endless fascination to Henry James. By dramatizing the workings of consciousness, James transformed the novel and led the way to modernism. In addition to the aesthetic significance of his experiments with point of view, the course will also analyze the ethical consequences of his insistence on life's ambiguities.
ENGL 1711D. Reading New York.
This course explores narratives of New York City in a variety of genres, from the early 20th century to the present. Topics include immigration, mobility, cosmopolitanism and the neighborhood, cruising, gentrification, and post-9/11. Work by John Dos Passos, Nella Larsen, E.B. White, Jane Jacobs, Frank O'Hara, Samuel Delany, Patti Smith, Nan Goldin, Ernesto Quiones, Teju Cole. Prerequisite: one previous literature course.

ENGL 1711E. African American Literature After 1975.
This course examines major authors and currents in African American literary writing from 1975 through the present. The class positions these works in relation to historical developments such as the rise of black nationalism, the evolution of a distinctive black feminist tradition, and the growing social divisions within the African American community. Authors include Toni Morrison, Jamaica Kincaid, Colson Whitehead, and John Wideman.

The lyric within contemporary poetry has often been associated with a desire to express a subjective relation to interior experience while experimental traditions have often imagined the poem as a site of formal or conceptual play devoid of specific concerns of identity. This course draws on poets such as Rankine, Moten, Robertson, Hejinian and the critical tools of affect theory to trouble these distinctions.

ENGL 1711J. Art for an Undivided Earth / Transnational Approaches to Indigenous Art and Activism.
The tension between indigenous literary nationalism and methodologies of cosmopolitanism and transnationalism have animated contemporary Native literary studies. At stake is the very meaning of indigeneity itself—how does indigeneity function on a global scale? How do hemispheric approaches to indigeneity transform our understanding of histories of colonialism? How have artists made connections across space without flattening the specificity of their locations?

ENGL 1711K. The Politics of Perspective: Post-war British Fiction.
Offers an overview of British fiction from the last 50 years in order to consider how Englishness, as (i) a set of images and (ii) a mode of looking, has changed. The course covers 3 distinct periods (post-War period, Thatcherism, the New Labour epoch and beyond) and, is intended as an introduction to theories of culture, ideology and literary analysis and to some of the most important British writers of the last fifty years.

ENGL 1711L. Contemporary Black Women’s Literature.
Examination of black women’s literature in the post-Civil Rights period. Foregrounding complexities of black womanhood, course investigates how black women have used writing to revise history, assert agency, manufacture beauty, and redress personal and group injury. Emphasis on the intersections of precarity and power, race and rebellion, pastness and black feminist futures within the context of African women’s literary legacies. Specific attention paid to the aesthetics of form and the interrelations of race, class, sexuality, generation and nation. Not open to first-year students.

ENGL 1711N. Monsters in our Midst: The Plantation and the Woods in Trans-American Literature.
This course focuses on how literary and visual culture grappled with land as a topographic entity in relation to race, gender, and time. Students read literature about the Caribbean and parts of the U.S., produced from the 19th century to the present. Readings include Marlon James’s The Book of Night Women and Jean Rhys’s Wide Saragasso Sea.

ENGL 1711O. Radical Past, Radical Futures: Literature and the Left.
This course examines American literary representations of leftist social movements in the late 20th century, including the antiwar movement, anticolonialism, and Black Power nationalism. The class explores autobiographical and journalistic accounts published during the U.S. counterculture as well as novels that present this radicalism after its decline. Authors include Norman Mailer, Angela Davis, Joan Didion, E.L. Doctorow, and John Wideman.

ENGL 1711Q. Poetic Modernisms: Now!
This course is a survey of modernist poetry that explores how key works by figures such as Langston Hughes, Gertrude Stein, Ezra Pound, William Carlos Williams, and Marianne Moore have continued to shape poetic forms and possibilities throughout the twentieth century and into the contemporary moment.

ENGL 1760A. Joyce and Woolf.
Intensive study of two of the most innovative and influential modern British novelist, with an emphasis on the relation between their formal experiments and their political engagements. Enrollment limited to 20.

ENGL 1760B. Contemporary African American Literature and the End(s) of Identity.
African American writers and intellectuals have begun to question the wisdom of defining black identity in terms that overemphasize the shared racial and cultural heritage of black people. Course assesses a range of literary and scholarly writing that engages these concerns. Explores such topics as the growing class division among African Americans, the effects of integration, the decline of nationalism, and the visibility of sexual minorities. Likely authors include Johnson, Morrison, Wideman, Beatty, and Senna. Enrollment limited.

ENGL 1760C. Body and Event in Contemporary Fiction.
Discusses the recent turn to the body and mortality in contemporary fiction, and considers the proposition that episodes of dismemberment in contemporary fiction stand in for the dismantlement of the literary text itself. Readings include Selby, Ellis, Cooper, Acker, Frame, Deleuze, Butler, Blanchot. Enrollment limited to seniors, juniors, and sophomores. Banner registrations after classes begin require instructor approval.

ENGL 1760D. Race and Detection: American Crime Narratives.
We examine American crime narratives, focusing on their representations of race, class, gender, and sexuality. Writers studied may include James M. Cain, Raymond Chandler, William Faulkner, Sue Grafton, Chester Himes, Walter Mosley, and Mark Twain.

ENGL 1760E. Who’s Afraid of Virginia Woolf?
We will read novels, essays, diaries, and letters by Woolf in order to ask how and why Virginia Woolf haunts our culture and to consider her status as a cultural icon. The seminar will explore her work in the contexts of history, modernism, and literary influences, and it will examine the dimensions of Woolf’s afterlife—a posthumous dynamic that shapes issues in art, politics, and gender. Enrollment limited to 20 seniors and juniors.

ENGL 1760F. City, Culture, and Literature in the Early Twentieth Century.
How did changes in the city shape early 20th-century literature? How does the literature of this period—whether avant-garde or documentary, progressive or conservative—shape the way we imagine the city? Topics may include urban spectacle, mobility and segregation, the neighborhood and the crowd. Authors include Dos Passos, Eliot, Larsen, Orwell, Woolf, Wright. Prerequisite: two previous literature courses. Priority to English and Urban Studies concentrators.

ENGL 1760G. American and British Poetry Since 1945.

ENGL 1760L. “Terrible Beauty”: Literature and the Terrorist Imaginary.
Why does terrorism fascinate literary writers in the modern period? Is terrorism the figure of something that is unrepresentable in fiction, or is it a type of direct political action that fiction writers aspire to? Can literature’s humanistic role of allaying terror survive an age of spectacular politics? How susceptible is terrorism to “aestheticization”? Texts will include works by Conrad, Flannery O’Connor, Naipaul, Dennis Cooper, Frantz Fanon, and Ngugiwa Thiong’o. Enrollment limited to 20 seniors, juniors, and sophomores. Banner registrations after classes begin require instructor approval.
ENGL 1760J. Reading Gravity's Rainbow.
An in-depth study of perhaps the most important American novel of the twentieth century. Reading will include Pynchon's early novel The Crying of Lot 49, stories by Borges, Kafka, and Nabokov, and a range of historical, texts and films alluded to in Gravity's Rainbow, from the sermons of Jonathan Edwards to the poetry of Rilke to The Wizard of Oz. Enrollment limited to 20 seniors.

ENGL 1760K. Reading New York.
We will explore narratives of New York City, both fictional and nonfictional, from the early 20th century to the present. Topics to be addressed include immigration, segregation and mobility, cosmopolitanism and the neighborhood, celebrity and postmodernism. Authors may include John Dos Passos, Ann Petry, E.B. White, Jane Jacobs, Rem Koolhaas. Registration limited to English and Urban Studies concentrators. Students from other concentrations should attend class on the first day and will be admitted if space is available. Enrollment limited to 20. Not open to first-year students. Prerequisite: two previous literature classes.

ENGL 1760L. Bloomsbury and Modernism.
This course will explore the contributions of the so-called "Bloomsbury Group" to the development of modernism in Britain. The focus will be on the central literary figures (Virginia Woolf, E. M. Forster, T. S. Eliot), but attention will also be paid to the visual arts (especially Roger Fry and Post-Impressionism) and social criticism (Lytton Strachey, Leonard Woolf, and John Maynard Keynes). A major question will be how the controversies swirling around Bloomsbury exemplify important debates about modernism. Enrollment limited. Not open to first-year students. Banner registrations after classes begin require instructor approval.

ENGL 1760N. Henry James.
James is a pivotal figure in the history of the novel. His explorations of the workings of consciousness and conventions in representation transformed realism and announced the preoccupation of modernism with interpretation, signs, and narrative experimentation. An intensive study of his most important novels from Daisy Miller to The Golden Bowl.

ENGL 1760O. American Orientalism.
Examines Orientalism as central motif and thematic concern for American writers from Emerson to DuBois to Kingston. Issues to be addressed include the distinctions between U.S., European, and Afro-Orientalisms; how intra-Asian differences (i.e., China-Japan, East/South Asia) shape conceptions of the Orient; how whiteness and blackness are constructed via a vis whiteness; the relationship between Orientalism and racism; how "nativist" Asian American literary texts, on the one hand; and diasporic texts, on the other, negotiate the legacy of Orientalism. Enrollment limited.

ENGL 1760P. "Extravagant!" Texts: Experiments in Asian American Writing.
We examine Asian American writings that are difficult, complex, and/ or experimental: texts that are, in Maxine Hong Kingston's phrase, "extravagant." By looking at works that explicitly challenge the generic conventions with which much Asian American literature is usually linked--autobiography, the Bildungsroman, ethnography, realism, and sentimentalism--we try to arrive at a more expansive sense of what the ends of Asian American cultural politics might be. Enrollment limited to 20. Not open to first-year students.

ENGL 1760Q. James Joyce and the Modern Novel.
One measure of James Joyce's achievement as a writer is his influence (as an inspiration, an antagonist, or a competitor) on novelists who came after him. Our primary concern will be with Joyce's formal innovations: How did his audacious narrative experiments transform the novel as a genre? Do his stylistic games break with the realistic tradition or expose its linguistic and epistemological workings? In addition to Dubliners, Portrait of the Artist, and Ulysses, we will read novels by Woolf, Faulkner, Beckett, and Nabokov. Enrollment limited to 20. Not open to first-year students. Instructor permission required.

ENGL 1760R. The Roaring Twenties.
The 1920s crystallized much of what we consider modern in 20th-century U.S. culture. This course reads literature of the decade in the context of a broader culture, including film and advertising, to analyze the period's central features: the rise of mass culture and of public relations, changes in women's position, consumerism, car culture, nativism and race relations. Writers include Fitzgerald, Hemingway, Larsen, Toomer, Parker. First-year students and students who have taken ENGL 0650K may not register for this course. Enrollment limited.

ENGL 1760S. Law and Literature: From Response to Responsibility.
Explores modernism as it is shaped by the normative and ethical concerns of a rapidly changing world through literary works, legal writing, and legal opinions. Examines the conceptual, psychological and rhetorical connections between literature and law, and considers how both disciplines shape the imagination but also aim to elicit response and responsibility. Authors include Walter Benjamin, Joseph Conrad, Virginia Woolf, Rebecca West, Chinua Achebe; legal texts include Blackstone, Holmes, Bentham, Cover and a number of legal opinions. Enrollment limited to 20 juniors and seniors.

ENGL 1760T. The Texts of Africa.
This seminar considers the various ways in which "Africa" has been depicted in fictional and non-fictional writing from the nineteenth-century on. We begin with classic travel writing by European missionaries (Park, Livingstone, Moffat), and their African and black diasporic counterparts (Crowther, Freeman, Sims, Soga). We then turn to twentieth-century literature and non-fiction (Abrahams, Conrad, Dinesen, Greene, Ndebele, Wright), closely following the rhetorical devices used to evoke the continent as geographical or subjective reality. We will pay particular attention to questions of history, linguistic representation, and the vagaries of intercultural encounter.

ENGL 1760U. American Modernism and its Aftermaths.
An interdisciplinary study of the rise of modernist aesthetic theory in the United States, its dissemination across various aesthetic (poetry, fiction, various plastic arts) and intellectual (economics, sociology, political theory) fields, and its persistence in United States intellectual life in the various permutations of postmodernism that have succeeded it. Authors to be considered include: poets such as Eliot, Williams, Bishop, Brooks, and Ashbery; novelists such as Faulkner, Hurston, O'Connor, and Didion; aesthetic theorists such as Greenberg, Rosenberg, Fried, Baraka and Kraus; and social theorists such as von Neuman, Rawls, Cavell, Kuhn, Samuelsohn, Drucker, and Friedman. Enrollment limited to 20.

ENGL 1760V. Lying, Cheating, and Stealing.
Explores literature's treatment of transgressions large and small, with particular attention to the way in which modernist narratives expose, obstruct, condone, or condemn acts of wrongdoing. What is the relationship between a misdeed and its retelling? Does writing right the story of a wrong? Readings from Rousseau, Graham Greene, Oscar Wilde, Lauren Slater, Nietzsche, Freud, as well as film, television, and select readings from law. Enrollment limited to 20 seniors and juniors.

ENGL 1760Y. Toni Morrison.
This course will consider Toni Morrison's novels and essays through four prisms: her interest in the anxieties of Americanness; her attention to language, which includes a consideration of form and of literary theory; her study of love; and her figuring humanity through the experiences of people who are racially black and (often) gendered female. Not open to first-year students. Enrollment limited to 20.

ENGL 1760Z. Law and Literature.
What is the relationship between law and literature? How do these supposedly separate disciplines contribute to our sense of justice and our understanding of injustice? We examine these questions through novels, legal writings, legal opinions, and film, in order to discover how law and literature create interrelated narratives that shed light on issues like identity, sexuality, injury, policing, speech, and silence. We read literary and legal narratives to see to how they inform each other, but also illuminate each other's blind spots. Writers include Robert Louis Stevenson, Virginia Woolf, James Weldon Johnson, and Claudia Rankine. Enrollment limited to 18.
Focuses on the complex relationship between the genre of the novel and nationalist rhetorics in the modern U.S. Gives particular attention to how literary discourses of nationalism articulate with those of race, gender, and sexuality.

ENGL 1761B. Narratives of Blackness in Latinx and Latin America.
We analyze literary, visual, and performative narratives of blackness in the Spanish- and Portuguese-speaking Americas in relation to whiteness, indigeneity, class, and gender. Primary texts include Carlos Fuentes’ *Death of Artemio Cruz*, Loida Maritza Pérez’s *Geographies of Home*, and Herman Melville’s *Benito Cereno*. Films include *Xica* (dir. Carlos Diegues) and *Bad Hair* (dir. Mariana Rondón). Enrollment limited to 20. Instructor permission required.

ENGL 1761C. Race, Writing, Manhood: Rhetorics of the "Authentic" in 20th-Cent African + Asian American Literature.
Explores the interrelatedness of racial, sexual, and literary identity in works by U.S. black and Asian male writers. Particular interest given to how the issue of homosocial desire frames literary accounts of racial authenticity. Writers and theorists studied may include James Baldwin, Frank Chin, Ralph Ellison, Frantz Fanon, David Henry Hwang.

ENGL 1761D. Hollywood and American Modernism from FDR to JFK.
Study of the interactions among Hollywood and modernism from the beginning of the sound era through the early 1960s. Authors and directors to be considered includeinclude Loos, Fitzgerald, Faulkner, West, Ferber, Hawks, Wilder, Hitchcock, Mann, and Ford. Enrollment limited to 20.

ENGL 1761E. Blackness and Being.
Through reading criticism, theory, literature, we will think about the representational, aesthetic, and, philosophical (ontological, epistemological, ethical) questions that shape blackness as a conceptual notion. Our study will think through feminist and queer studies, as well as through diaspora and American and ethnic studies, and will consider the historical trajectory of various critical turns in theorizing (literary) blackness. Enrollment limited to 20 juniors and seniors. Instructor permission required. Class list will be finalized after the first day of classes. Please email the professor to add your name to the potential roster.

ENGL 1761F. Toni Morrison.
This course is an advanced introduction to the oeuvre of Nobel Laureate Toni Morrison. Reading her novels and nonfiction, we investigate concerns that shaped our world in the last century and haunt the current one, foregrounding Morrison’s writing as a key site of trouble and of transformation.

ENGL 1761L. Reading the Black Masses in Literature and Critical Practice.
African American literary and critical practice in the twentieth century was definitively shaped by claims about the linkages between literature and mass politics. We will unpack the continuities and divides that constituted such assertions. Historical nodal points in our investigations will include racial uplift, the Harlem Renaissance, the Black Power Movement, and the post-identity debates.

ENGL 1761M. Asian American Travel Narratives.
Examines mobility and movement as key motifs in Asian American fiction. The course will focus on Asian American literary texts that are structured around travel, both in relation to the United States and to Asia. Our approach will draw from Americanist and Asian Americanist cultural theories about narrativity of mobility and from postcolonial theories about travel writing. Enrollment limited.

ENGL 1761N. Natural and Supernatural: Issues in the Study of Science and Religion.
Religion has been studied in a number of fields (anthropology, classics, history, philosophy, psychology, sociology) as a complex of human/cultural phenomena to be examined and explained naturalistically or, as it is said, “scientifically.” The course focuses on a set of key classic and contemporary texts in this tradition and on the issues they raise for current understandings of science, religion and the relations—historical, intellectual, cultural and political—between them. Enrollment limited to 20 juniors, seniors, and graduate students.

ENGL 1761Q. W. G. Sebald and Some Interlocutors.
The works of W. G. Sebald have received a huge amount of critical attention since his death in 2001, particularly from critics interested in the question of the ethics of literature after Auschwitz. But what is Sebald’s literary heritage, and who are his interlocutors? What internal and external connections does his works establish? Besides Sebald’s works, readings will include Stendhal, Kafka, Walser, Borges, Bergson, Resnais, Lanzmann. Banner registrations after classes begin require instructor approval. Enrollment limited to 20. Not open to first-year students.

This course examines influential autobiographies and other non-fictional literary works about the meaning of race in America across the 20th century. Writers we examine may include W.E.B. DuBois, Sui Sin Far, Maxine Hong Kingston, N. Scott Momaday, Richard Rodriguez, Maxine Hong Kingston, Richard Rodriguez, and Malcolm X. Enrollment limited to 20 juniors and seniors.

ENGL 1761S. The Fifties in Color: Race, Empire, and the U.S. Cold War Culture.
In this seminar, we examine a range of cultural texts of the 1950s that provide some productive points of entry into the study of U.S. culture in the early part of the Cold War. We give particular attention to issues of race and ethnicity as they were shaped both by domestic and foreign policy concerns. Enrollment limited to 20.

ENGL 1761T. Conrad and Naipaul: The Supremacy of the Visible?.
The reception of Conrad’s works turns on a critical quandary: are his commitments primarily sensory, celebratory and imperialist, or conceptual, subdued and self-critical? This course will examine Conrad’s works in detail, and the critical and literary responses to them: most notably, the work of his most direct successor, the British-Caribbean novelist V. S. Naipaul. Other readings include Said, Achebe, Jameson, Badiou, Rancière, Deleuze. Enrollment limited. Not open to first-year students. Banner registrations after classes begin require instructor approval.

ENGL 1761V. The Korean War in Color.
We examine US and South Korean representations of the Korean War. We look at how this event was depicted in US films of the 1950s with a focus on how it occasioned a transformation of American understandings of race, both domestically and transnationally. We then look at how this event has been memorialized by contemporary American authors as well as in South Korean literature and film. Authors we read include: Susan Choi, Ha Jin, Chang-rae Lee, Toni Morrison, Jayne Anne Phillips and Hong Sok-Yong. Enrollment limited to 20. Not open to first-year students.

ENGL 1761W. Modern South Asia: Literature and Theory.
This seminar provides an overview of 20th and 21st century writing from and about South Asia. It will serve, in addition, as an introduction to postcolonial studies. Theoretical readings will focus on issues of diaspora; transnational cultural circulation; and subaltern historiography. Fiction will be primarily Anglophone (Anand, Du Bois, Forster, Naipaul, Rushdie, etc.), with some vernacular texts in translation (Chughtai, Limbale, Premchand, Tagore). Enrollment limited to 20.
ENGL 1761Y. Issues in World Literature
What is world literature? How does it relate to fields like comparative literature and postcolonial studies? We will read fiction and drama usually featured in this canon, including works by Achebe, Coetzee, Homer, Kafka, Rushdie, Shikibu, and Walcott. We will also attend to the critical paradigms that constitute the field, from Goethe’s Weltliteratur to more recent theorizations by Casanova, Damrosch, Deleuze, Moretti, Spivak, etc. Enrollment limited to 20. Not open to first-year students.

ENGL 1762A. A seminar on movies that pursue and spectacularize the perverse, as well as on how viewing movies is itself a perverse pleasure. We will study film genres that traffic in what’s sensational, excessive, uncanny, and transgressive, such as the detective film, thriller, melodrama, sex film, horror, and sci-fi. Special emphasis on the movies of Hitchcock, Kubrick, Lynch, and Cronenberg. Enrollment limited to 20 concentrators in English, Comparative Literature, MCM, Gender and Sexuality Studies, and Theatre and Performance Studies. Not open to first-year students.

ENGL 1762B. The Ekphrastic Mode in Contemporary Literature
Ekphrasis – the extended description of a visual work of art in a work of literature – is as old as Homer and as modern as McEwan; however, in contemporary literary criticism the concept has been eclipsed by terms such as “self-reflexivity” and “metafiction.” This course proposes a rediscovery of ekphrasis as a key feature of contemporary works of literature and film. Includes texts by Sebald, Alan Bennett, Godard, Antonioni, Godard, Visconti, and Coppola; critics will include Barthes, Deleuze, and Ranciere. Limited to 20 junior and senior concentrators in English, Comparative Literature, MCM, Hispanic Studies, Italian Studies, French Studies, German Studies, Literary Arts.

ENGL 1762C. Image, Music, Text
This course examines a number of novels and short stories alongside their various cinematic, theatrical, or musical adaptations in order to ask what a medium is and what distinctive formal features might define literature, cinema, theater, and music. Writers will include Melville, Conrad, Maupassant, Mann, and Cortazar; filmmakers will include Hitchcock, Antonioni, Godard, Visconti, and Coppola; critics will include Barthes, Deleuze, and Ranciere. Limited to 20 junior and senior concentrators in English, Comparative Literature, MCM, Hispanic Studies, Italian Studies, French Studies, German Studies, Literary Arts.

ENGL 1762D. Kubrick.
On Kubrick’s feature films, documentaries, and photography, starting with his sci-fi masterpiece 2001, followed by his early noirs (Killer’s Kiss; The Killing); sex films (Lolita; A Clockwork Orange; Eyes Wide Shut); and war films (Paths of Glory; Dr. Strangelove; Full Metal Jacket). Topics include: adaptation; genre; masculinity in extremes; technophilia and technophobia; the aesthetics of violence; and sex on film. Limited to 20 junior and senior concentrators in English and MCM. Instructor permission required.

ENGL 1762H. "The Wire"
Over sixty episodes, David Simon’s acclaimed television series explores a range of social and political issues, but it does so with unusual literary ambition and success. In this course we’ll ask how "The Wire" generates interest, engagement, and debate in part by appropriating and adapting generic strategies and aesthetic devices deployed by such "classic" authors as Shakespeare and Dickens. Enrollment limited to 20.

ENGL 1762L. City Spaces, City Memories
How do cities, whose built environment constantly changes, preserve and remember their pasts? We focus on 20th and 21st century New York City to investigate the way both personal and communal pasts are located in the city’s fabric. Course material includes novels, journalism, memoirs, and photography, along with memoirs and tourist attractions. Prerequisite: one previous literature class. Enrollment limited to 20.

ENGL 1762M. Caribbean Literature.
Focusing mostly on prose narrative from the nineteenth-century to the present day, this seminar is an overview of various important texts from the Anglophone, Hispanophone, and Francophone or Kreyol Caribbean texts. As crucial themes in the literary culture of the Caribbean, class discussion will be framed around questions of colonialism, slavery, blackness, whiteness, indigeneity, class as well as literary and aesthetic innovations such as surrealism, realism, and other important formalist trends and interventions. Texts originally written in Spanish and French will be read in translation, but students have the option of reading them in the original if they prefer as long as they are able to engage the class through the translation as well. Instructor permission required. Enrollment limited to 20.

ENGL 1780. Undergraduate Independent Study in Modern and Contemporary Literatures.
Tutorial instruction oriented toward a literary research topic. Section numbers vary by instructor. Instructor’s permission required.

ENGL 1900A. "Literature" and the Ideology of the Aesthetic.
Theoretical and historical analysis of the idea of “literature” as writing that has the status of art, in relation to the emergence and elaboration of discourses of the "aesthetic." Readings in 18th- and 19th-century German and British sources (Kant, Schiller, Hegel, Nietzsche; Coleridge, Shelley, Arnold, Wilde) and in 20th-century literary and aesthetic theory (Benjamin, Adorno, Barthes, Foucault, Derrida, Williams, Eagleton). Enrollment limited to 20. Priority given to English concentrators. All other students must obtain instructor’s permission.

ENGL 1900D. Literature and Politics
Literature as a changing historical formation that often represents and is always shaped by the practices of organizing, asserting, and controlling power in society. Sustained focus on writings by Raymond Williams, Leon Trotsky, Michel Foucault, Edward Said, Gayatri Spivak, and Terry Eagleton, and on literary texts read from the perspectives of these six theorists (possibly Shakespeare, Milton, Marvell, Swift, Dickens, Gaskell, the Brontës, Victor Serge, Anna Akhmatova). Enrollment limited to 20.

ENGL 1900E. Aesthetics and Politics.
Considers the shifting relationship between art and politics beginning with the formation of aesthetics in the Enlightenment and continuing through such 20th-century historical moments as Nazism, modernism, impressionism, socialist realism, postmodernism, and such thinkers as Kant, Hegel, Marx, Adorno, Lyotard, Cixous, Deleuze.

ENGL 1900F. Interpretation.
This course will introduce students to the central issues in the theory of interpretation and their implications for critical practice. Topics will include the causes and consequences of interpretive conflict, the availability of tests for validity, the roles of the author and the reader, and the historical, social, and political dimensions of understanding. Readings will include major theoretical statements as well as critical essays and background materials related to three controversial novels.

ENGL 1900I. Critical Methodologies: Contemporary Literary Theory.
A survey of theories of literature from the early 20th century to the present, with particular attention to relations between “literary theory” and the broader phenomena of cultural studies and Critical Theory writ large. We will examine the New Critics; structuralism, post-structuralism and new historicism; cultural theory, including psychoanalysis, Marxism, and aesthetic theory. Topics will include literariness and textuality, the reader and subjectivity, narrative and mimesis, and the emergence of form in contemporary literary studies. Enrollment limited to 20. Not open to first-year or graduate students.

ENGL 1900J. Zoopoetics.
This course will explore the intersections between the depictions of plants and animals in twelfth and twenty-first century poetry and the theoretical conversations about non-human worlds unfolding in emerging fields, such as animal studies and the environmental humanities. Readings will range from poetic texts by Francis Ponge and Marianne Moore to theoretical texts by figures such as Donna Haraway.
ENGL 1900K. Reading Sex
How do we interpret "sex," as a concept, as a thing, as a phenomenon? What kinds of ethical, political, historical, and aesthetic contexts are informed by—and, in turn, form—our sense of "sex" itself? This course will focus on intensive close readings of various queer theoretical texts, novels, and films that variously try to think through the multiple ways we try to represent and render sex legible, while at the same time calling into question our sense of what, ultimately, sex can be as something that both binds and unbinds the human. Enrollment limited to 20.

ENGL 1900L. The Problem of American Literature
Considers questions such as: what are the distinctive qualities (if any) of American literature, and how do the various writers from diverse cultural settings fit into a single literary tradition called "American" (or do they fit in)? In order to examine the assumptions and implications of studying literature as a national phenomenon, focuses reading on various critical and theoretical texts.

ENGL 1900M. Twentieth-Century Reconstructions of Knowledge and Science
Significant critiques of classic and prevailing (rationalist, realist, positivist) ideas of scientific truth, method, objectivity, and progress and the development of alternative (constructivist, pragmatist, historicist, sociological) accounts; the dynamics of knowledge; the relation between scientific and other cultural practices. Readings include works by Fleck, Popper, Kuhn, Foucault, Rorty, and Latour. Prerequisite: UC 49 (An Introduction to Science Studies) or college-level work in critical theory, science, or philosophy.

ENGL 1900O. Contemporary Feminist Literary Theory
An advanced survey of 20th-century feminist literary theory with an emphasis on U.S., British, and French traditions. Topics include canon formation, "resisting readers," and the category of "women's writing," as well as the relation of feminist criticism to problems such as critical race theory, poststructuralism, psychoanalysis, and postcolonialism.

ENGL 1900P. History of Criticism from Plato to Postmodernism
A survey of the major theorists of literature in the western tradition, from the Greeks to the contemporary period. Recurrent issues will include the definition of literary value, the distinctiveness of the aesthetic experience, and the moral and social uses of literature. Enrollment limited. Banner registrations after classes begin require instructor approval.

ENGL 1900Q. Women In/And the Novel
An introduction to the novel through feminist theory, considering social and historical reasons why women read, wrote, and figured in novels, from the 18th century to the 20th. Novels by Defoe, Austen, George Eliot, Rhys, Woolf; readings in feminist theory and criticism. Priority will be given to concentrators in English and Gender Studies. Others will be admitted only with permission of the instructor.

ENGL 1900R. Queer Relations: Aesthetics and Sexuality
A study of the relationship between aesthetic thought and sexuality in a variety of literary and cinematic works. We will supplement our readings with ventures into queer theory, emphasizing how art is related to identity, community, race, gender, and ethics. Authors include Wilde, Pater, James, Winterson, Cole, Guibert, Foucault, Bersani, Edelman. Films by Julien and Jarman.

ENGL 1900T. The Postcolonial and the Postmodern
Explores the contexts and conceptual implications of theories of postmodernism and postcolonialism. Particular attention to intersections and disjunctions between both concepts as attempts to grapple with the challenges of modernity from the vantage point of the late-20th century. Course will end with two novels that address related issues with the tools of fictional narrative: Coetzee's *Foe* and Rushdie's *Midnight's Children*. Readings include: Butler, Hall, Jameson, Laclau, Lyotard, Spivak. Not open to first-year students. Enrollment limited to 20.

ENGL 1900U. Word and Image.
How do words and images represent? This course will examine major statements about the relation between verbal and visual representation from Lessing's classic study *Lacocoon* to contemporary theories of the semiotic and social construction of images. Theoretical readings will be accompanied by analyses of examples from literature and the visual arts, ranging from painting to film and graphic novels. Not open to first-year students. Banner registration after classes begin requires instructor approval.

ENGL 1900V. Camera Works: The Theory and Fiction of Photography.

ENGL 1900Y. Medieval Manuscript Studies: Paleography, Codicology, and Interpretation.
How do you read a medieval manuscript? This course teaches hands-on methodologies for deciphering the material text, including palaeography (history of scripts) and codicology (archeology of the book); contemporary models of interpreting scribal texts, including editorial theory and analysis of readers' reception; and medieval concepts of textuality and interpretation, including medieval theories of authorship and the arts of memory. Prior course work in Middle English or Latin or other medieval language recommended. Not open to first-year students. Enrollment limited to 20. Instructor permission required.

ENGL 1901A. Politics and the Novel
This course will explore how various realist and modernist novels represent political life, both in its practical dimensions and as forms of consciousness (ideologies, world views, attitudes). We will also explore theoretical and critical writings on the topic of literature and politics. Authors will include Elizabeth Gaskell, E.M. Forster, Lionel Trilling, Ralph Ellison, Doris Lessing, and Viet Thanh Nguyen. Enrollment limited to 20.

ENGL 1901B. Politics and the Novel
This course will explore how various realist and modernist novels represent political life, both in its practical dimensions and as forms of consciousness (ideologies, world views, attitudes). We will also explore theoretical and critical writings on the topic of literature and politics. Authors will include Elizabeth Gaskell, E.M. Forster, Lionel Trilling, Ralph Ellison, Doris Lessing, and Viet Thanh Nguyen. Enrollment limited to 20.

ENGL 1901C. Politics and the Novel
This course will explore how various realist and modernist novels represent political life, both in its practical dimensions and as forms of consciousness (ideologies, world views, attitudes). We will also explore theoretical and critical writings on the topic of literature and politics. Authors will include Elizabeth Gaskell, E.M. Forster, Lionel Trilling, Ralph Ellison, Doris Lessing, and Viet Thanh Nguyen. Enrollment limited to 20.

ENGL 1901D. Politics and the Novel
This course will explore how various realist and modernist novels represent political life, both in its practical dimensions and as forms of consciousness (ideologies, world views, attitudes). We will also explore theoretical and critical writings on the topic of literature and politics. Authors will include Elizabeth Gaskell, E.M. Forster, Lionel Trilling, Ralph Ellison, Doris Lessing, and Viet Thanh Nguyen. Enrollment limited to 20.

ENGL 1901E. Reading Literature in a Digital World
We will explore the implications of using digital technologies to study literature. How does our understanding of literature and literary study change—if it does—in light of recently developed digital methods for studying such works? How do such methods compare with traditional ways of studying literature? How might literary studies be reconceived in relation to new media studies? Enrollment limited to 20.

ENGL 1901F. Art of Criticism
This course explores the art of literary criticism through analysis of individual critics as well as larger schools of criticism. Focusing on the twentieth century, we will read works by those affiliated with high theory as well as those who stood outside that influential development. The goal will be to understand literary criticism as a form of thinking, and an art, in its own right, one with philosophical, social, and literary dimensions. Authors include: Oscar Wilde, Kenneth Burke, Mary McCarthy, Lionel Trilling, Raymond Williams, Paul de Man, Eve Sedgwick, D. A. Miller, John Guillory. Enrollment limited to 20.
ENGL 1901H. The Late 60s: Film Countercultures.
On representative late-60s counterculture movies concerned with anti-authoritarianism; hippy Bohemianism; social and sexual experimentation; dropping out; and psychedelia. Bookended by rock music festival documentaries (Monterey Pop; Gimme Shelter; Woodstock), the seminar is mostly concerned with feature films (The Graduate; Bonnie and Clyde; 2001; Midnight Cowboy; Easy Rider; Medium Cool). It will also consider some underground art cinema of Kenneth Anger and Andy Warhol. Enrollment limited to 20 juniors and seniors in English and MCM. Instructor permission required.

ENGL 1901J. Fanon and Spillers.
This course will consider the conceptual/theoretical contributions of Frantz Fanon and Hortense Spillers, as frames for reading some iconic texts in the black literary canon. Central to our study will be an exploration of blackness, subjection, and gendering—as well as thinking about how these idioms relate to the genre conventions of our course’s literary works. Enrollment limited to 20 juniors and seniors. Instructor permission required.

ENGL 1901L. Cronenberg/Lynch.

ENGL 1901M. Reading Literature in an Information Age.
Is there something distinctive about reading, studying, and/or producing literature in an information age? Is literature’s status as a form of deep social engagement and a way to produce broad social changes in jeopardy given the way STEM and the social sciences are represented in U.S. culture at large? Has the literary become obsolete in a video-driven media environment? And what place does the literary occupy in an information world? Enrollment limited to 20.

ENGL 1901N. The Sublime.
This course tracks the notion of the sublime from its classical sources through eighteenth-century British and German poetry and philosophy, to twentieth-century theory, with some consideration of the visual arts and other media. Authors to be studied include Longinus, Milton, Burke, Wordsworth, Kant, Hegel, Derrida, Lyotard, Jameson, among others. Enrollment limited to 20 juniors and seniors.

ENGL 1901P. Waves and Edges: Poetry and the Sea.
In her poem “The Map” Elizabeth Bishop writes: “Land lies in water; it is shadowed green. / Shadows, or are they shallows, at its edges / showing the line of long sea-weeded ledges...” This class will examine how such edges between sea and land can be thought and represented in poetic texts, while also considering environmental effects of climate change.

ENGL 1910A. Dreamworlds: Utopia from Plato to the Present.
Can acts of writing change the world? This course looks at a number of famous utopias and dystopias from classical time to the modern period and analyzes how the genre’s literary experiments transform reading into a political act. Works by Plato, More, Montaigne, Shakespeare, Swift, H.G. Wells, and Le Guin. Films will include Blade Runner and Pleasantville.

ENGL 1910B. Great Books and Good Movies.
Since the first silent pictures, the film industry has turned to “great books.” This course uses films based on “great books” to examine differences between the genres. Frequent screenings; reading and screen journals; critical essays and screenplays. Films/texts include Sense and Sensibility, Great Expectations, Beloved, and The English Patient.

ENGL 1910E. Lyric Language: Renaissance Forms and Modern Poetry.
Tracing poetic forms from renaissance to modern--stubborn models like the sonnet (Shakespeare/Berryman), the ode (Jonson/ Creely), and the sestina (Sidney/Bishop); soft forms like blank/free verse (Milton/ Wordsworth/Eliot); generic containers like elegy, epigram, and satire (Herrick/Donne/Keats/Auden); low and nonsense verse (Skelton/Caroll/ hip-hop); and the functions of repeatable forms like line and stanza (Spenser/Tennyson/Dr. Suss/Hejinian).

ENGL 1950A. Form and Feeling in Renaissance Poetry.
Pending Approval. Renaissance poets laid claim to the ethical power of poetry to move people through imagination. How does formal imitation and innovation create fields of feeling in the poetry of Spenser, Sidney, Shakespeare, Donne, Jonson, and Milton? Enrollment limited to 20 seniors.

ENGL 1950B. Literature and the Ideology of the Aesthetic.
Pending Approval. Theoretical and historical exploration of the idea of literature understood as writing that has the status of art—and of the relation of this idea to the emergence and elaboration of discourses of the aesthetic. First six weeks: decisive eighteenth- and nineteenth-century developments in the meaning of literature as it relates to the aesthetic. Second six weeks: recent positions (especially poststructuralist and Marxist) that figure prominently in current debates. Enrollment limited to 20 seniors.

ENGL 1950F. Law and Literature.
This seminar explores the conceptual, psychological and rhetorical connections between literature and law, examining how both disciplines shape the imagination but also aim to elicit response and responsibility. We will consider how literary works, legal writings, and legal opinions inform each other, but also illuminate each other’s blind spots. Looking beyond trial scenes, the course invites students to think about how principles and notions in law structure, and are structured by, literature and language. Authors include Walter Benjamin, Joseph Conrad, Albert Camus, Rebecca West, and Chinua Achebe; legal texts by Holmes, Bentham, Cover and a number of judicial opinions. Limited to 20 senior English concentrators.

ENGL 1950G. Reading Narrative Theory.
Narrative is a powerful category of analysis spanning genres, historical periods, media forms, and the distinction between the “fictional” and the “real.” This course examines major narrative theorists of the twentieth and twenty-first centuries. We will focus on literary examples, such as theories of the folk tale and novel, and scholarship that interrogates the work of narrative in historiography, in cinema and television, and in extra-literary contexts (in the struggle of political campaigners to “control the narrative” or debates on narrative in gaming, medical research, law, and theory itself). Limited to 20 senior English concentrators. Others admitted by instructor permission only.

ENGL 1950H. The Recent Novel and its Cultural Rivals.
A careful consideration of several major late twentieth- and early twenty-first century Anglophone novels in terms of their relationship to rival aesthetic forms and media—film, television, radio, video games, and the like. Writers to be considered included: Morrison, Lee, Rushdie, Smith, Didion, Diaz, Pynchon, and Egan. Enrollment limited to 20 senior English concentrators. Others admitted by instructor permission only.

ENGL 1990. Senior Honors Thesis in Nonfiction Writing.
Independent writing project under the direction of a faculty member. Permission should be obtained from the Honors Director for Nonfiction Writing. Enrollment limited to English concentrators whose application to the Honors in Nonfiction Writing program have been accepted.

ENGL 1991. Senior Honors Seminar in English.
Weekly seminar led by the Advisor of Honors in English. Introduces students to sustained literary-critical research and writing skills necessary to successful completion of the senior thesis. Particular attention to efficient ways of developing literary-critical projects, as well as evaluating, incorporating, and documenting secondary sources. Enrollment limited to English concentrators whose applications to the Honors in English program have been accepted. Permission should be obtained from the Honors Advisor in English. S/NC

Independent research and writing under the direction of a faculty member. Permission should be obtained from the Honors Advisor in English. Open to senior English concentrators pursuing Honors in English. Instructor permission required.
ENGL 1993. Senior Honors Seminar in Nonfiction Writing.
This course is designed for students accepted into the Nonfiction Honors Program. It will be run in workshop format, and will focus on research skills and generative and developmental writing strategies for students embarking on their thesis projects. Weekly assignments will be directed toward helping students work through various stages in their writing processes. Students will be expected to respond thoughtfully and constructively in peer reviewing one another's work. Open to seniors who have been admitted to the Honors Program in Nonfiction Writing. Instructor permission required. S/NC

Independent research and writing under the direction of the student's Nonfiction Writing honors supervisor. Permission should be obtained from the Honors Advisor for Nonfiction Writing. Open to senior English concentrators pursuing Honors in Nonfiction Writing. Instructor permission required.

ENGL 2210. Proseminar.
This seminar, required for first-year graduate students in English, considers the state and stakes of literary studies today. The course aims to familiarize students with contemporary critical debates and stances in the wider discipline, and to engage with current methodologies, theories, and analytical tensions. We also address issues of professionalization as they relate to the first years of graduate work. Enrollment limited to 10. S/NC

ENGL 2360A. Renaissance Drama.
This course explores Early Modern drama: its styles of representation, material conditions, and political engagements, in Marlowe, Jonson, Middleton, Webster, Ford, Beaumont and Fletcher, and others. Drawing on current scholarship, it posits the stage as the site of contests over national identity, royal power, gender ideology, social mobility, nascent capitalism, religious and ethnic differences. Enrollment limited to 15 graduate students. Undergraduate English concentrators may request permission of the instructor.

ENGL 2360B. Before Holinshed: The English Brut Chronicle Tradition.
Holinshed's 16th-century history drew from 400 years of manuscript chronicles, most in verse, which founded the "modern" history of England on a Trojan/Celtic ancient Britain. We will read the medieval versions of these historical narratives from Geoffrey of Monmouth, Wace, and Layamon to the popular 15th-century Middle English prose Brut. Critical engagements with manuscript/print cultures and the "Brut" narrative as a vocabulary for nationalism. Enrollment limited to 15.

ENGL 2360C. Beowulf.
This course will consist of a careful reading and analysis of Beowulf in its original language. In addition to developing language competence, we will also discuss the poem through comparison to other Old English poems and Scandinavian analogues. Themes will include the manuscript context, heroism, gender, sacrifice, lamentation and elegy, the monstrous, material culture, and contemporary theoretical approaches to the poem. Prerequisite: 2000-level Introduction to Old English or its equivalent. Enrollment limited to 15.

ENGL 2360D. Early Modern Drama.
An intensive introduction, for specialists and others, to the great classics and some less-known gems of a stellar period in English drama. Plays by Marlowe, Middleton, Webster, Jonson, and Ford, among others. Topics: the popular theatre and its audience; urban culture; English nationhood; boy actors and the representation of gender and sexuality; play texts in print culture. Enrollment limited to 15.

ENGL 2360F. Introduction to Medieval Studies.
Equips students with critical, linguistic, and historical knowledge to interpret Middle English texts (1066-1500). Primary texts by Chaucer and others, to be read in contexts of current critical debates (on topics including textuality, sexuality, and political formations) and medieval conceptual systems (including dream theory, alchemy, arts of memory). Priority to graduate students; no prior Middle English required. Enrollment limited to 15.

ENGL 2360G. Medieval Manuscript Studies: Paleography and Interpretation.
How to read and understand a medieval manuscript text. Methodologies include paleography, codicology, editorial theory. Hands-on analysis and interpretation of specific Middle English texts in their manuscript medium (in microfilm, facsimile, digital representation, and when accessible, actual manuscripts). For students already acquainted with Old English and/or Middle English; Latin helpful. Textual projects in other medieval languages possible with instructor's consent. Enrollment limited to 15.

ENGL 2360H. Race and Place in Renaissance Literature.
Reads early modern English drama, poetry, and prose depicting the migration of groups to foreign places (England, the Indies, the Americas) to consider how such writing defines the connection between space and identity. We will consider how this literature values environment as against blood, soil against seed, as determinants of identity capable of marking people as "strange," "alien," or "natural." Authors will include Marlowe, Shakespeare, Fletcher, Massinger, Drayton, Jonson, and Bacon. Enrollment limited to 15 graduate students. All others will be admitted only with permission of the instructor.

ENGL 2360I. Renaissance Embodiments.
Considers Renaissance representations of self in pre-modern terms—that is, inseparable from the physical conditions of climate and region. How did early modern culture draw the line between culture and nature? Where do these theories connect with or depart from modern paradigms of self in such authors as Elyot, Shakespeare, Calvin, Luther, Burton, Donne, Montaigne, Jonson, and Browne? Enrollment limited to 15.

ENGL 2360K. The Renaissance and Modernity.
Modernism restages 17th-century cultural and political revolution and restoration. An examination of the problem of style and modernity, looking at practices in poetic and prose style and at the emergence of the term "modernity" at the moment of high modernism and after. Enrollment limited to 15.

ENGL 2360L. The Pearl Manuscript in Context.
Close translation of the Middle English alliterative poems in British Library Manuscript Cotton Nero A.x, Pearl, Cleanliness, Patience, and Sir Gawain and the Green Knight, with attention to their medieval theological, generic, and codicological contexts. Enrollment limited to 15.

ENGL 2360O. Irony and Satire.
Works of irony and satire (from the Civil Wars to the death of Swift) allow an investigation of current issues in the study of Civil War, Restoration, and Early 18th-C. texts, including revisionist history, the public sphere, Anglo-Irish relations, print culture, mercantilism, and gender construction. Enrollment limited to 15.

ENGL 2360P. Thinking with Romance in the Renaissance.
Modernity defines romance as escapist, a mode that flies from the "real." Yet Renaissance writers placed it at the center of debates about politics, ethics, and knowledge. Tracking its generic fingerprint in Spenser's romance-epic, we will consider its adaptation for the stage as tragicomedy and its relation to epistemological shifts dividing science from fiction, knowledge from pleasure. Authors include Ralegh, Spenser, Shakespeare, Fletcher, Massinger, Bacon, Cavendish. Open to graduate students only.

ENGL 2360Q. Manuscript, Image, and the Middle English Text.
This seminar will engage with the interpretive issues raised by considering manuscript images in relation to manuscript text. Selected Middle English texts will include Pearl, works by Chaucer, and the popular Middle English prose Brut, in the context of twelve illustrated manuscripts of the fourteenth and fifteenth centuries. Enrollment limited to 15 graduate students.

ENGL 2360R. Civil Wars, Restoration, and Early Georgian Literature.
The seminar will consider major works from the English Civil Wars to the first years of the eighteenth-century, with attention to cultural and theoretical contexts for understanding important developments such as print culture, war, nation-formation, the marketplace, and public/private spheres. Writers will include Milton, Rochester, Behn, Restoration playwrights, Dryden, Swift, and others. Additional readings will include selections from Adorno, Pocock, Anderson, Zizek, Brown, Johns, and others. Enrollment limited to 15 graduate students.
ENGL 2360S. Alternative Miltons.
This seminar undertakes a close reading of Milton's monumentally significant epic "Paradise Lost." We will also consider the current state of Milton criticism. What's new in Milton criticism? What approaches have been holding fort? Has Milton criticism been slower to take to critical and theoretical innovation than Shakespeare criticism? If so, why, and what might we do about it? On that account, the seminar will engage a range of newer approaches—disability studies, queer theory, trauma theory, eco-criticism, animal studies, technoculture studies, and popular culture studies—to consider what they have to offer by way of new perspectives on Milton. Enrollment limited to 15 graduate students.

ENGL 2360Y. Lyric and Ecstasy.
This seminar principally focuses on ecstatic states in the lyric verse of three extraordinary eighteenth-century English poets—John Donne, Richard Crashaw, and John Milton—who are rarely read together. We will consider lyric poetry—both erotic and religious—not only as an appositive medium for rendering ecstatic experience, but also how lyric poetry itself might function as a stimulus for ecstasy. We might also venture into some consideration of music along similar lines. Limited to 15 graduate students.

ENGL 2360Z. Shakespeare: a Politics of Love.
This seminar will explore certain of Shakespeare's plays—mainstays such as Romeo and Juliet and Othello but also more marginal texts, such as All's Well and As You Like It—in order to discern a politics of love. Enrollment limited to 15.

What was legal personhood in early modern England and who did it include? Was it always bad to be treated like a thing? What did legal and literary fictions have in common? We will examine the interplay between early modern persons and things, considering literary examples of subjectification, objectification, and anthropomorphism as they relate to questions of pleasure and value. Enrollment limited to 15.

ENGL 2380. Graduate Independent Study in Medieval and Early Modern Literatures.
Section numbers vary by instructor. May be repeated for credit. Instructor's permission required.

ENGL 2450. Exchange Scholar Program.

ENGL 2560A. American Exotics.
From the beginning of colonization all the way up to the American Revolution, America is consistently figured as a remote and alien place. We will explore the figurative transformation of "America" by examining the use of images of the "remote" and "exotic" in British American colonial writing, including poems, plays, maps, travel narratives and natural histories. Enrollment limited to 15.

ENGL 2560C. Early American Studies.
A critical introduction for graduate students to the scholarly field of early American studies, from the colonial era to the late 19th century. Enrollment limited to 15.

ENGL 2560E. Liberalism.
An interdisciplinary approach to American culture and literary history through the lens of liberal ideologies. Readings include Franklin, Thoreau, sentimental novel, and Ellison's Invisible Man. Enrollment limited to 15 graduate students. Exceptions with permission by instructor.

ENGL 2560F. Realism.
Begins with European theories of realism, including Lukacs, Watt, Jameson, and others, who define realism by linking it to some aspect of modernization. Moves to theories that expose the limits of classical realism in the name of someone as some aspect of history it systematically subordinates or excludes, e.g., women, colonial subjects, minority cultures. Enrollment limited to 15.

ENGL 2560G. Romantic Orientalism.
Representations of the "Orient" in British and transatlantic literary culture during the "Romantic" period (c. 1770-c. 1830). Connections between cultural representation and both assertions of and challenges to British colonial and imperial power. Theoretical, historical and political analysis by Said, Barrell, and others; poetry by Coleridge, Southey, Byron, P.B.Shelley; prose by Sydney Owenson, Charlotte Dacre, Thomas DeQuincey. Enrollment limited to 15.

ENGL 2560H. Romanticism and the Ideology of the Aesthetic.
Historical development of discourses of the "aesthetic" as they relate to the problem of "romanticism" as the name of a distinctive era in British and European literature and culture. Ideas about the autonomy of art in the period of the French and the Industrial Revolutions. Readings in Baumgarten, Kant, and Hegel; in Coleridge, W. Wordsworth, P. B. Shelley, and Keats. Enrollment limited to 15.

ENGL 2560K. The Transatlantic Enlightenment.
A graduate seminar in literatures and cultures of the long 18th century in transatlantic context. Emphasis on print culture, the Black Atlantic, colonialism and slavery, as well as the American Revolution. Enrollment limited to 15.

ENGL 2560L. The Victorian Novel.
An intensive seminar on the Victorian novel. The aim will be historically contextualized, theoretically informed interpretations of some leading examples of this complex literary form. Will focus on the role of the (British) novel, as distinct from the (American) short story, in rise of mass culture, and on recent formalist, stylistic, and historical approaches to the Victorian novel as a literary form. Enrollment limited to 15.

ENGL 2560N. American Literature and the Corporation.
An examination of 19th-century American literature in the context of the rapid growth of corporate forms in American economic, political, and social life from the mid-1830s through the turn of the century. How does literature participate in the debate this process of incorporation occasioned, and in what ways was it shaped by the process of incorporation occasioned, and in what ways was it shaped by the process? Readings include Hawthorne, Melville, Harper, Grant, Alcott, Crane, and Chestnutt. Enrollment limited to 15.

ENGL 2560Q. Victorian Fictions of Consciousness.
Victorian novels, Bronte through James, with an emphasis on the ways in which novels engage 19th-century theories of mind and psychology, looking at such central concepts as memory, will, sensation, and perception. Examines the importance of form and the subgenres of Victorian fiction (Bildungsroman, sensation novel, multiplot novel) in the construction of concepts of selfhood and consciousness. Attention also to the place of consciousness in Victorian and 20th-century theories of the novel. This course will also serve as an introduction to working on topics in science and literature. Enrollment limited to 15.

ENGL 2560R. Romantic Dispossession: Subjectivity and Agency.
This course examines the diverse arguments made by writers of the Romantic era concerning nonidentity, and focuses on the kinds of ethical, political, and aesthetic considerations that arise once identity is forfeited and dispossession is perceived as either a matter of self-discipline, the negative result of sympathy, a characteristic of literary culture, or a sign of melancholic loss. Enrollment limited to 15 graduate students. Undergraduate seniors will be admitted only with the permission of the instructor.

ENGL 2560T. The Realist Imagination.
A study of American literary realism. We will situate realism in the context of the realist turn in American artistic, political, legal, and economic enterprise from the Civil War to World War II, and measure the realist novel's relations to alternative aesthetic ideologies such as transcendentalism, regionalism, naturalism, and modernism. Authors to be considered include Emerson, DeForest, Grant, Twain, Cable, Chesnutt, Dreiser, Wharton, Cather, Anderson, Dos Passos, Faulkner, and Hurston. Enrollment limited to 15.

ENGL 2560U. Romanticism and the Ruins of Empire.
Representations of the ruins of ancient empires (Babylonian, Assyrian, Roman) in relation to British and French imperialism during the period we call "Romanticism." Enrollment limited to 15.

ENGL 2560V. Transatlantic Studies.
This course offers a theoretical and historical examination of "transatlantic" models of literary analysis as an alternative to traditionally national ones. It will look at a recent criticism theorizing the field, including both literary and historical scholarship. Primary readings will be from Rowson, Equiano, Franklin, Emerson, and Twain, among others. Enrollment limited to 15.
ENGL 2560W. The Figure of the Artist in the Nineteenth Century.
This course considers the changing representations of the artist in the 19th century, as prophet, intellectual, professional, critic, genius, madman, aesthete, and social celebrity. Readings will focus on 19th-century novels, with select essays, reviews, and other nonfiction prose. Authors include George Eliot, Charles Dickens, Arnold Trollope, Sarah Bennett, George Gissing, H. G. Wells, George Bernard Shaw, Oscar Wilde. Enrollment limited to 15.

ENGL 2560X. The Rise of the Novel.
The seminar would combine the study of eighteenth-century novels [some canonical, like Robinson Crusoe, Clarissa, Tom Jones, and Tristram Shandy; some less so, like amatory fiction and revolutionary fiction of the 1790's] with important theories of and debates about the novel — its origins, rise, and discourses. Enrollment limited to 15.

ENGL 2560Y. Writing the Ruins of Empire: Romantic Cultural Property.
British literary responses to the shifting significance and value status of ancient artifacts and works of art in the period of the French Revolution and Napoleonic Wars. Ruins as "cultural property," "cultural capital," and "aesthetic object"—then and now. Effects of colonial expansion and imperialist rivalry on collecting, connoisseurship, the advent of public museums, the marketing of antiquities, the marketing of literature. Primary readings in Gibbon, Volney, Byron, P.B. Shelley, Mary Shelley, Anna Barbauld, Felicia Hemans, Hazlitt, Keats.

ENGL 2560Z. Global Early American Literature.
What does American literature before 1860 look like viewed from a global perspective? Our goal will be to see what specifically literary problems and questions came into focus when we read American literature in terms of economic, social, philosophic, and ideological issues that extend across the globe. Authors may include John Smith, Anne Bradstreet, Charles Brockden Brown, and Herman Melville. Enrollment limited to 15 graduate students.

ENGL 2561A. Manifest Destinies: Liberalism and Expansion in American Literature, 1820-1920.
An investigation of the relations between American literature and the territorial expansion of the United States from the early 19th century through World War I. Topics include the role of liberalism in the rise and operation of American expansion, the relationship between colonialist and imperialist visions of America's manifest destiny, the ideological implications of literary genres of open space (the western, the sea narrative), race and the patterns of internal migration in the United States, and the connection between the Turner thesis and literary form (Howellsian realism, Whitman's poetics and Dickinson's anti-poetics, Jewett's regionalism). Authors include Cooper, Poe, Melville, Douglass, Craft, Whitman, Dickinson, James, Jewett, and Twain. Enrollment limited to 15 graduate students.

ENGL 2561B. Things Not Entirely Possessed: Romanticism and History.
This course explores how Romanticism thinks through the historical, and in particular, it engages Romantic mediations of historical knowledge through aesthetic form. What is the relationship of the aesthetic to the historical? How is subjectivity an effect of a poem's negotiation of the past? And what role does the "future" play in Romanticism? Authors will include Liu, Pfau, Levinson, McGann, Goodman, Chandler, Ferris, Pyle.

ENGL 2561C. Intellectuals and the Public Sphere.
Considers the relationship of the artist to the public sphere, focusing on the late nineteenth century. We will look back from debates today over the "public intellectual" to Victorian debates over the "intellectual." Attention to how narratives of intellectual decline in the late nineteenth and twentieth centuries portray the figure of the artist as prophet, intellectual, professional, critic, genius, woman, madman, aesthete, scientist, and social celebrity. Readings will include literary writers and essayists (such as Dickens, Trollope, James, Pater, Shaw, Wilde, Wells), alongside theorists (Humboldt, Weber, Brecht, Benjamin, Habermas, Bourdieu, Latour, Kittler). Enrollment limited to 15 graduate students.

ENGL 2561H. American Literature Without Borders.
Recent theoretical and critical approaches to colonial and 19th-c. American literature; transatlantic, Caribbean, hemispheric; borderlands; imperial, colonial and postcolonial cultural formations; the Black Atlantic; diasporic and migration studies. Enrollment limited to 15 graduate students.

ENGL 2561J. Satire and Irony.
Satire is not so much a genre as it is a mode of discourse, like irony, that resists formal constraints and can function in almost any kind of text. Satire's dynamic contradictions (reform and frustration; laughter and anger; topicality and generality; purposefulness and pointlessness; public and private) enliven early modern texts, and complicate the relationship between language and meaning. Theories of satire provide a framework for the study of its history and practice. Emphasis falls on the great age of satire (especially the works of Jonathan Swift and his contemporaries) but some attention will be given to earlier and later examples.

ENGL 2561L. Nature and Law in American Literature.
This course will explore how American authors registered the transformation of natural history into the sciences of life. It will pay special attention to how new sciences of life influenced the legal and political practices that constitute our understanding of personhood. It will explore how sciences and emerging experimental medicine competed with discourses of the supernatural in deciding who has the right to live and die.

ENGL 2561V. The Pursuit of Happiness: Transatlantic Literary Culture in the Long Eighteenth Century.
English and American literature of the long eighteenth century with a focus on emerging concepts of happiness. Reading includes poetry, novels, satire, travel, moral philosophy, and other genres. The right to pursue happiness placed in the context of new forms of social mobility such as education, class, and affectionate marriage, but also in the context of war, empire, slavery, and other metropolitan and colonial cultural formations and exchanges. Enrollment limited to 15.

ENGL 2560E. Law and Literature: From Response to Responsibility.
Explores modernism as it is shaped by the normative and ethical concerns of topics that include the relation between the city, consciousness, and ideology; the effects of changing urban immigration; and the effects of mobility. Authors include Simmel, Benjamin, Harvey, Williams, Rotella, James, Woolf, Wright, and Eliot. Enrollment limited to 15 graduate students.

ENGL 2760A. American Modernist Poetry and Poetics.
Study of the poetry and prose of Eliot, Pound, Stevens, Williams, H.D., Moore, and Hughes, with additional readings in criticism and theories of modernism. Enrollment limited to 15 graduate students.

ENGL 2760B. City, Culture, and Literature in the Early Twentieth Century.
Examines the way the city structures early 20th-century culture and history. Through novels, poetry, and cultural criticism, considers a range of topics that include the relation between the city, consciousness, and ideology; the effects of changing urban immigration; and the effects of mobility. Authors include Simmel, Benjamin, Harvey, Williams, Rotella, James, Woolf, Wright, and Eliot. Enrollment limited to 15 graduate students.

ENGL 2760D. Contemporary African American Literature and the End(s) of Identity.
Investigates the controversies surrounding the claim that the late 20th century marks the end of nationalist and essentialist paradigms in the scripting of black identity. Readings from a range of literary and theoretical works dealing with this intricate problem, including Stuart Hall, Hortense Spillers, Reginald McKnight, Trey Ellis, Octavia Butler, and Paul Beatty. Enrollment limited to 15.

ENGL 2760E. Law and Literature: From Response to Responsibility.
Explores modernism as it is shaped by the normative and ethical concerns of a rapidly changing world through literary works, legal writings, and legal opinions. Examines the conceptual, psychological and rhetorical connections between literature and law, and considers how both disciplines shape the imagination but also aim to elicit response and responsibility. Authors include Walter Benjamin, Joseph Conrad, Virginia Woolf, Rebecca West, Chinua Achebe, and others; legal texts include Holmes, Bentham, Cover and a number of legal opinions. Enrollment limited to 15.
ENGL 2760F. Metaphoric Expression: Emerson, James, Stein. According to William Carlos Williams, metaphoric vision continually blinds Americans to the actual conditions of their world. In an attempt to answer this charge, we will read these three densely metaphorical writers against their varied historical backgrounds, hoping in the process to better understand the role played by figurative language in the shaping of American society, culture, and identity. Enrollment limited to 15.

ENGL 2760G. Modernist Fiction and Theories of Modernism. Examines a range of modernist fiction--including work by Conrad, Dos Passos, H.D., Joyce, Larsen, Rhys, Toomer, Woolf--alongside selected theories of modernism. Considers approaches ranging from theories of reification and the aesthetic to more recent considerations of modernism's relation to gender, nation, race, empire, and professionalism. Enrollment limited to 15 graduate students.

ENGL 2760H. Nationalizing Narratives: Studies in the Twentieth-Century U.S. Novel. In this seminar, we will examine a number of important 20th-century U.S. novels for the ways in which they conjure the nation both as "imagined community" and "fictive ethnicity." Particular focus will be given to how the category of national identity becomes intertwined issues of race, gender, sexuality, and region as well as with ideologies of the aesthetic. Enrollment limited to 15.

ENGL 2760I. Possession and Dispossession in the Modern Novel. Examines modernist sentimentality as it is figured in notions of property. By exploring the legal and literary relationship between owning and being, we will consider how writers such as Forster, Woolf, Joyce, and Lawrence use property to conceive of human relationships--and by extension, social justice--in dramatically new ways. Enrollment limited to 15.

ENGL 2760K. Postcolonial Theory and Africain Discourse. Explores central questions in current Anglo-American postcolonial theory, and examines how related questions emerge with specific inflections in writings by Africanist philosophers, historians, and creative writers. Issues include: varied connotations of the very idea of "Africa"; ideology and subjectivity; constructivism and essentialism; nationalism and globalization; aesthetics and politics. Texts by Amilcar Cabral, Frantz Fanon, Stuart Hall, Paulin Hountondji, Fredric Jameson, Ernesto Laclau, Ngugi wa Thiong'o, Wole Soyinka, Gayatri Spivak, Yvonne Vera. Enrollment limited to 15 graduate students. Undergraduate seniors may be admitted with instructor's permission.

ENGL 2760L. Literature and Photography. Since the invention of photography in 1839, novelists have often claimed the camera as an important model for their work. We will endeavor to investigate this claim, asking in the process what the links between modernism and the visual arts have to tell us about the nature of fictional representation. Readings to include a number of theoretical discussions of photography. Enrollment limited to 15.

ENGL 2760M. Postcoloniality and Globalism. Seminar addresses intersections and disjunctions between two currents in contemporary literary and cultural criticism: "postcolonial theory" and "world literature theory." We read "theory" alongside imaginative literature by writers and critics associated with concepts of postcoloniality, globalization, and diaspora. Themes include: race, identity and subject-position, and the problem of "literature" itself, understood as mode of thought and act of will. Readings will include: Césaire, Damrosch, Fanon, Hall, Jameson, Naipaul, Said, Soyinka, Spivak, Walcott, Wright, Wynter. Enrollment limited to 15.

ENGL 2760N. The Politics of Modernism. An exploration of the controversies that have surrounded the political implications of modernist form. Topics will include the Brecht-Lukács debate, surrealism and the politics of the avant-garde, the so-called "great divide" between innovative and popular art, and the relation of modernism to postmodernism. In addition to examining important theoretical statements, we will test their arguments against selected literary examples. Enrollment limited to 15.

ENGL 2760O. Shame, Colonialism, Ethics. This course constructs a dialogue between debates on post-Holocaust aesthetics ("Is poetry possible after Auschwitz?") and the central questions of postcolonial theory ("Can the Subaltern Speak?") and considers the ethical and aesthetic salience of shame. It is organized around three writers whose work suggests that the novel form itself might require decolonization: Naipaul, Coetzee and Caryl Phillips. Enrollment limited to 15.

ENGL 2760P. The Fifties in Color: Race, Empire, and U.S. Cold War Culture. Examines U.S. cultural texts of the '50s in relation to both domestic race politics and foreign policy concerns. Explores issues of assimilation, conflict, containment, development, and integration in a transnational as well as a national framework. Writers we study may include Ralph Ellison, Jack Kerouac, Phillip Roth, John Okada and Jade Snow Wong. This course is limited to 15 graduate students.

ENGL 2760Q. Ways of Seeing: Modern American Fiction and Photography. Reads a number of important modernist novels alongside the work of early 20th-century American photographers, focusing on what this fiction's engagement with photography has to teach us about the reproduction and circulation of American identity and history. Writers include James, Dos Passos, Hurston, Agee, Welty, and Ellison; photographers include Stieglitz, Strand, and Weston. Enrollment limited to 15.

ENGL 2760R. Realism and the American Novel. An inquiry into the form, purpose, longevity, and afterlife of American realism. In what way did it differ from its British counterpart? In what ways was it different from naturalism, modernism, and romanticism? What was its aesthetic and political legacy? How has it been read by critics? Writers to include Melville, Dreiser, Norris, James, Chestnut, Wharton, Jewett, and Wright. Enrollment limited to 15.

ENGL 2760T. Postmodernism and Literary Form. Intended for graduate students interested in the relationship between socio-historical conditions and literary form, and for those interested in thinking beyond a narrowly periodized notion of the postmodern. Beginning with Lukács's The Theory of the Novel, considers the problematic of literary representation as it emerges in the modern age. Readings include Beckett, Nabokov, Burroughs, Amis, Rushdie, McEwan, Lyotard, and Moretti. Enrollment limited to 15.

ENGL 2760U. Reading the Black Masses in Literature and Critical Practice. For more than a century, African American literature and criticism have been definitively shaped by claims about the linked fate of the black masses and the world of letters. These contested assertions provide occasions for rethinking the traditional ends of black literary production. Class conflict, the waning of black nationalism, and diasporic identity politics, are among the topics examined under this rubric. Likely literary writers include Washington, Larsen, Ellison, Brooks, and Wideman. Enrollment limited to 15 graduate students.

ENGL 2760V. Neo-Victorianism: Rewriting the Long Nineteenth Century. This seminar examines recent novelists rewriting canonical 19th-century texts by Dickens and others, playing with matters of postcoloniality and gender, Jack Maggs, for example, answers the questions, "Can the subaltern speak?" and "Does the empire write back?" while Fingersmith offers a lesbian version of the Victorian sensation novel. Patchwork Girl rewrites Frankenstein, stitching together fiction, gender, and identity. Enrollment limited to 15.

ENGL 2760W. American Literature and the Visual Arts. With the publication of several recent studies of cinema and modernism, interest in the relation between literature and the visual arts has never been higher. We will chart the forms this relation takes in the modern era by reading both theoretical attempts to diagnose it (Benjamin, Barthes, Derrida, Rancière) and literary attempts to enact it (James, Stein, Ellison, Williams, Agee). Enrollment limited to 15 graduate students.
ENGL 2760X. After Postmodernism: New Fictional Modes.
What happens when the "postmodern," the period that did away with periodization, is over? This class will discuss issues such as contemporaneity, materiality, subtraction, subjectivity, the event, and the frame in approaching British and American literature at the turn of the 21st century. Readings include Ishiguro, Cooper, Toussaint, Seth, Coetzee, Chatwin, Danielewski, Deleuze, Bergson, Badiou, Lukács, Voloshinov, Adorno, Pasolini, Nancy. Enrollment limited to 15 graduate students. Banner registrations after classes begin require instructor approval.

ENGL 2760Y. American Orientalism and Asian American Literary Criticism.
We examine critical studies of American Orientalism, influential works of Asian Americanist cultural criticism, American Orientalist texts by white and black authors, and literary texts by Asian American authors. Critics, cultural historians and writers we read may include: Christina Klein, Vijay Prashad, Elaine Kim, Frank Chin, Lisa Lowe, W.E.B. DuBois, Susan Choi, Nam Le, Karen Tei Yamashita. Enrollment limited to 15 graduate students.

ENGL 2760Z. African American Literature After 1965: Nationalism and Dissent.
Since the late 1960s, major theoretical and literary currents in African American letters have been profoundly influenced by black nationalism. This seminar examines the persistence of nationalist thought in ongoing debates about racial authenticity, gender inequality, black aesthetics, and diasporic politics. In so doing we will attend to both the complexity of nationalist ideology and the dissent generated by it. Authors include Baraka, Cruse, Giovanni, Morrison, Senna, Whitehead, and Gilroy. Open to graduate students only.

ENGL 2761B. Temporalities.
Centered on modernism and the early 20th century, this course will investigate the varied models of time pulsing through literary and theoretical texts, and consider a range of issues, including memory and forgetting, historical progress and decay, utopian futurity, and queer temporalities. Readings include work by Freud, Bergson, Nietzsche, Benjamin, Joyce, Woolf, Barnes, Stein, Faulkner. Enrollment limited to 15.

ENGL 2761C. Black Internationalism and Its Discontents.
This seminar reassesses the broad influence of internationalism in African American letters from the age of abolition to the present. We will be concerned with literary writings that foreground the global struggle of black subjects to assert political agency in relation to Western imperialism and transatlantic slavery. Equally crucial will be a reconsideration of an established body of theoretical writings that conceive of diasporic modes of solidarity and cultural expression as alternatives to the black nationalist intellectual tradition. Authors include Martin Delany, W.E.B Du Bois, Richard Wright, Angela Davis, Brent Edwards, and Paul Gilroy.

ENGL 2761F. The Racial Lives of Affect.
This course explores both dominant and emergent theoretical paradigms that anatomize the affective dimensions of racialized subjectivity in the US with a particular emphasis on recent scholarship that is linked with the field of affect theory. Rather than attempting an exhaustive or definitive mapping of that field, this seminar focuses on those thinkers whose works enhance our understandings of race. Enrollment limited to 15.

ENGL 2761J. Identity and Agency.
Any consideration of identity is bound to run up against the concept of agency. Considering identity and agency as mutually constitutive, this course looks at identity's formation and reformation as a narrative experience and effect, examining its emergence on historical and affective terrains. Approaching identity from a range of vantages (psychoanalysis, gender, history, law), we trace the ways that identities might be consolidated into (or, alternatively, unravel) cultural, political, national, or social arrangements. Works by Woolf, Selvon, James Weldon Johnson, Christopher Isherwood, Proust, Fanon, Arendt, Freud, Winnicott, Butler. Enrollment limited to 15.

ENGL 2761S. Naturalism and the Anthropocene.
The world of naturalist fiction is strange and terrifying: monstrous new forms of life; speaking animals; suicide; madness; financial ruin; ecological disaster. We will study this world in light of our catastrophic present, reading recent work in new materialism, neuroscience, animal studies, science studies, and environmentalism. Authors include Zola, Stein, Wharton, Chesnutt, Conrad, Hardy, Nietzsche, Bergson, Freud, Du Bois, James. Enrollment limited to 15 graduate students.

ENGL 2780. Graduate Independent Study in Modern and Contemporary Literatures.
Section numbers vary by instructor. May be repeated for credit. Instructor's permission required.

ENGL 2900A. Contemporary Feminist Theory: Feminist Address.
Recent feminist theory addresses identity politics and the critique of the subject: problems of race, class and gender, the challenge of queer theory; the demand for materialist analysis. We consider these topics in light of the problematic of address. What are the forms of feminist address? How are they received or refused? Who are the subjects of contemporary feminisms? Enrollment limited to 15.

ENGL 2900C. Theories of Literature: From Classical Antiquity to Postmodernity.
Investigates theories of literature in two self-conscious historical epochs: classical antiquity, represented by figures such as Plato, Aristotle, and Horace, and by practices such as marginal notation of texts, literary commentaries, and performance techniques; and the 20th century, represented by figures such as Adorno, Barthes, and Bakhtin, with special attention to the intersections between philosophy and literature and poststructuralist conceptions of textuality. Enrollment limited to 15.

ENGL 2900D. Walter Benjamin and Modern Theory.
Intensive study of Walter Benjamin's essays on modern culture and literature (in particular Goethe, Baudelaire, Proust, and Kafka). Explores the consequences of his thinking for problems in contemporary literary and cultural theory. German and/or French helpful but not required. Enrollment limited to 15.

ENGL 2900E. Deleuze: Literature and Aesthetics.
How does Deleuze help us read modern culture? This course will focus on Deleuze's writings on literature, painting and cinema as a point of entry to the work of one of the most original and intriguing thinkers of the late 20th century. We will look at the reasons for Deleuze's fascination with Anglo-American literature, and discuss the extent to which Deleuze's model of literary analysis breaks with -- while remaining fundamentally indebted to -- Marxism and psychoanalysis. Other readers include Melville, Kafka, T. E. Lawrence, as well as films by Antonioni, Godard and Sembene. Enrollment limited to 15.

ENGL 2900F. Form and Content.
Readings in aesthetics, literary theory, structuralism-poststructuralism, and cultural studies that address the form/content distinction in one of its many avatars. Topics will include the sign, thematics, formlessness, formalism and historicism, tenors and vehicles, structure, and defamiliarization, among others. Previous work in literary or cultural theory strongly recommended. Enrollment limited to 15.

ENGL 2900G. History and Form.
An exploration of the relation between historical and formalist approaches to literary interpretation, from the New Critics to the so-called "New Formalism." What is the role of form in historically and politically oriented criticism (examples will be taken from Marxism, the New Historicism, feminism, cultural studies, and post-colonial theory)? What happens to history when form takes center stage (for example, in structuralism and deconstruction)? Is it possible (and desirable) to avoid a pendulum swing between the poles of historicism and formalism and to mediate the conflicting claims of history and form? Or is a focus on one at the expense of the other the necessary cost of an inclusive interpretive strategy? In addition to theoretical readings that exemplify the conflict between history and form, attention will be paid to the history of reception of one or more literary works in order to articulate the practical implications of their opposition and interdependence. Enrollment limited to 15.
ENGL 2900H. Queer Passivity
A study of the concept of passivity in queer theory, literature, and film. Subjects will include AIDS and temporality; the senses and dissolution; ascensis and chastity; pornography and sovereignty. We will explore poststructuralist theories and continental philosophies (Agamben, Cavarero, Deleuze, Derrida, Marion, Nancy) that resonate with the kind of queer receptivity that will be the object of study. Enrollment limited to 15.

ENGL 2900K. Nietzsche, Foucault, Latour
The seminar will trace a line of radical thought about truth, language, knowledge and power—and their interrelations—in the writings of Friedrich Nietzsche, Michel Foucault and Bruno Latour. Particular attention will be given to the significance of their work for poststructuralist language theory, constructivist epistemology and science studies, and current issues involving the relations between science and religion. Enrollment limited to 15 graduate students.

ENGL 2900M. The Reading Effect and the Persistence of Form
This course examines the "reading effect" as it emerges in work on the question of form and contemporaneous scholarship on the problematics of reading. We will trace the ways in which these related but distinct critical idioms negotiate concepts of mutual concern (interpretation, representation, the reading subject/reading brain). Topics include "new formalism," cognitive studies, symptomatic reading. Theorists from Althusser and deMan to Marcus, Wolfson and Zunshine. Enrollment limited to 15 graduate students; undergraduate seniors may enroll with instructor permission.

ENGL 2900N. Ethical Turns in Psychoanalysis and Literature
This course examines ethics, broadly conceived, as the place where literature and psychoanalysis intersect or coexist in tense or collaborative relation. We will consider ethics at sites or moments of transition—as turns, upheavals, or ordinary acts that bring into view notions of responsibility, conviction, obligation, knowledge, ignorance, and complicity. Readings by Barthes, Benjamin, Fanon, Arendt, Freud, Lacan, Winnicott, Klein, Butler. Enrollment limited to 15 graduate students.

ENGL 2900X. Postcolonial Theory
In this introduction to postcolonial theory we will consider key Western sources (Hegel, Marx, Lacan, Levi Strauss, Emmanuel Levinas); anticolonial manifestos (Gandhi, Fanon, Césaire, Memmi); political and ethical practices (civil disobedience, armed struggle, friendship). In addition to canonical critics (Said, Bhabha, Spivak), the course will review new interests in the field (transnationalism, non-western imperialisms, the environmental turn). Offered as a collaborative humanities seminar in Spring 2022. Postcolonial Theory will host and think with a series of guest scholars.

ENGL 2901D. War and the Politics of Cultural Memory
The past several decades have seen the rise of a veritable memory industry devoted to the memorializing of wars. This seminar focuses on a selection of British, European, and American novels, memoirs, and films that self-consciously engage in remembering a range of conflicts, from the First World War to the “War on Terror,” alongside a relevant body of theoretical writings. Our aim is to think in detail, and collectively, about the political stakes of such literary remembrances and to develop together a “contrapuntal” approach that engages with the collaborative tensions between Anglo-European, postcolonial, and US minority modes of memory.

ENGL 2901K. Theory, Technics, Religion
Critical theory has a rich history of engagement with fundamental and overlapping questions of technics, media and religion. This seminar focuses mainly on important texts from the last century (Benjamin, Heidegger, Levinas, Derrida, Agamben), but also reads more broadly in the post-Enlightenment critical and speculative tradition (Kant, Hegel, Marx, Freud, Weber). Selections from the Bible and readings from a few literary texts from various eras will also be assigned. Enrollment limited to 15 graduate students.

ENGL 2901R. Technologies of Memory
From archives to monuments, photographs to films, sound recordings to selfies to Twitter feeds, modern life has reached a saturation point of object-driven memory. This course examines modes of capturing memory in the 20th and 21st centuries, and asks what replaces the medieval memory palace as an imaginary habitat for recollection. Enrollment limited to 15.

ENGL 2940. Scholarly Writing for Journal Publication
Writing and professionalization workshop intended for graduate students in literary studies. Topics covered include selection of journal; framing, structuring and composition of the article; the logistics of peer review; sharing and workshopping drafts; working with academic mentors and advisors. Every passing student will have a publishable article under consideration by the end of the semester. Enrollment limited to 12 English Ph.D. students. Instructor permission required. S/NC.

ENGL 2950. Seminar in Pedagogy and Composition Theory
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

ENGL 2990. Thesis Preparation
For graduate students who have met the residency requirement and are continuing research on a full time basis.

ENGL XLIST. Courses of Interest to Students Concentrating in English
For graduate students who have met the residency requirement and are continuing research on a full time basis.

Director of Undergraduate Studies
Dawn King

The Institute at Brown for Environment & Society supports research to understand the interactions between natural, human and social systems. Our teaching programs prepare future leaders to envision and build a just and sustainable world. Our engagement programs take research from the lab to the statehouse, the hospital and the public sphere.
Environmental Studies Concentration Requirements

Many of the most pressing challenges of the 21st Century are environmental ones. We must find ways to feed a growing human population while maintaining the natural life support system provided by the Earth's ecosystems; to make built environments more efficient as urban areas continue to grow dramatically in size; and to meet the challenges posed by rising sea-level and increasing global temperatures. These challenges are complex, multifaceted and can best be solved with expertise from multiple, relevant disciplines. To prepare students to meet these challenges, the Institute at Brown for Environment and Society (IBES) offers two undergraduate degrees: an A.B. in Environmental Studies and a Sc.B. in Environmental Science. The two degrees vary primarily in the number of course requirements; the Sc.B. is a more in-depth treatment of a single field. Both degrees provide interdisciplinary exposure to the natural and social sciences, as well as public policy. Both degrees also develop depth in a primary field by requiring students to select one of five tracks of study. Concentrators might also consider pursuing the Engaged Scholars Program, which allows them to connect theory and practice and gain hands-on experience working with community partners.

Through a rigorous set of core courses, track requirements, and a course or project-based capstone experience, our students are primed to make meaningful contributions to environmental scholarship and outreach at local, national and global scales.

If you have administrative questions regarding theses concentrations or wish to be added to the email directory listing upcoming events, then please contact Jeanne Loewenstein (jeanne_loewenstein@brown.edu), the academic program manager.

Standard program in Environmental Studies and Environmental Science:

The Institute at Brown for Environment and Society administers two concentrations, one offering an A.B. degree in Environmental Studies (requires 14-15 courses) and the other a Sc.B. degree in Environmental Science (requires 19-20 courses). Below are a set of course offerings arranged into four tracks:

1. Air, Climate & Energy
2. Conservation Science & Policy
3. Environment & Inequality
4. Land, Water & Food Security
5. Sustainability in Development

Requirements for the A.B. Degree

Electives - three courses

Electives provide increased environmental expertise and further enhance a student's ability to customize a course of study. Acceptable electives include any ENVS courses, classes with significant environmental content, and prerequisites for classes students take to fulfill requirements within their declared track.

Capstone - one or two courses

This requirement can be met with a two-semester thesis (ENVS 1970 & ENVS 1971), one-semester research project (ENVS 1970 or ENVS 1971), or an approved capstone course.

Track Specific Requirements

Track 1 - Air, Climate, and Energy

Foundation courses (choose two):

- CHEM 0330 Equilibrium, Rate, and Structure
- EEPS 0220 Earth Processes
- ENGN 0030 Introduction to Engineering
- ENGN 0490 Fundamentals of Environmental Engineering
- PHYS 0030 Basic Physics A
- PHYS 0050 Foundations of Mechanics

Climate (choose one):

- EEPS 0850 Weather and Climate
- EEPS 1430 Principles of Planetary Climate
- ENGN 1931R The Chemistry of Environmental Pollution
- ENVS 1245 Air Pollution & Chemistry

Policy (choose one):

- ANTH 1601 Reimagining Climate Change
- ENVS 0710 Powering the Past: Environmental Histories of Energy Use and Social Change
- ENVS 1415 Power, Justice, and Climate Change
- ENVS 1615 Making Connections: The Environmental Policy Process
- ENVS 1925 Energy Policy and Politics
- POLS 1435 Politics of Climate Change
- POLS 1822I Geopolitics of Oil and Energy

Energy Technology and Infrastructure (choose one):

- ENGN 0490 Fundamentals of Environmental Engineering
- ENGN 0720 Thermodynamics
- ENGN 1930U Renewable Energy Technologies
- ENGN 1931P Energy and the Environment
- ENVS 1400 Sustainable Design in the Built Environment
- ENVS 1580 Environmental Stewardship and Resilience in Urban Systems

Track 2 - Conservation Science and Policy

Ecology:

- BIOL 0420 Principles of Ecology

Conservation:

- BIOL 1470 Conservation Biology

Ecology & Conservation Topics: Select One

- BIOL 1155 Hormones and Behavior
- BIOL 1450 Community Ecology
- BIOL 1480 Terrestrial Biogeochemistry and the Functioning of Ecosystems
- BIOL 1515 Conservation in the Genomics Age

Policy: Select One

- ANTH 1601 Reimagining Climate Change
- ENVS 1415 Power, Justice, and Climate Change

- PHP 1101  World of Food: Personal to Global Perspectives on Nutrition, Agriculture and Policy
- PHP 1700  Current Topics in Environmental Health
- PHP 1710  Climate Change and Human Health
- PHP 1920  Social Determinants of Health

**FOCUS THREE - Environmental Inequalities in Food, Water, and Energy: Select Three**

- ENVS 0710  Powering the Past: Environmental Histories of Energy Use and Social Change
- ENVS 1415  Power, Justice, and Climate Change
- ENVS 1555  Urban Agriculture: The Importance of Localized Food Systems
- ENVS 1580  Environmental Stewardship and Resilience in Urban Systems
- ENVS 1915  Histories of Global Wetlands
- ENVS 1925  Energy Policy and Politics
- ETHN 1750B  Treaty Rights and Food Fights: Eating Local in Indian Country

**Track 4 - Land, Water & Food Security**

**Math: Select One**

- MATH 0090  Introductory Calculus, Part I

**Chemistry: Select One**

- CHEM 0330  Equilibrium, Rate, and Structure

**Earth/Life Systems: Select Three**

- BIOL 1470  Conservation Biology
- BIOL 1480  Terrestrial Biogeochemistry and the Functioning of Ecosystems
- EEPS 0240  Earth: Evolution of a Habitable Planet
- EEPS 0830  Water In Our World
- EEPS 1120  Paleoeceanography
- EEPS 1130  Ocean Biogeochemical Cycles
- EEPS 1310  Global Water Cycle
- EEPS 1370  Environmental Geochemistry
- EEPS 1510  Introduction to Atmospheric Dynamics
- ENGN 1340  Water Supply and Treatment Systems - Technology and Sustainability

**Track 5 - Sustainability in Development**

**Sociology and Politics: Select One**

- ENVS 0150  Climate Futures and a Sociology of Just Transitions
- ENVS 1755  Globalization and the Environment
- POLS 0400  Introduction to International Politics
- SOC 0150  Economic Development and Social Change

**Critical Perspectives on Development: Select One**

- ANTH 0110  Anthropology and Global Social Problems: Environment, Development, and Governance
- ECON 1370  Race and Inequality in the United States
- IAPA 1802C  Infrastructure!
- POLS 1200  Reimagining Capitalism
- SOC 0150  Economic Development and Social Change
- SOC 1620  Globalization and Social Conflict

**Economic Perspectives: Select Two**
ENVS 0150. Climate Futures and a Sociology of Just Transitions
This course, team-taught with Professor Damian White of RISD, seeks to build a reconstructive environmental sociology of the sustainable transition, incorporating debates from political ecology, critical design studies and energy/technology studies. It debates the merits of green capitalist and post-capitalist, socio-centric and technocratic visions of the transition away from fossil fuels. Class will be meet on the RISD campus.

ENVS 0160. Migration and Borders in a Time of Climate Crisis
This course foregrounds the political implications of migration and border regimes in the context of environmental change, historically, today, and in the future. It examines in what sense environmental and climate factors might be causally related to human movement. We will seek to understand the fears of a future "climate refugee crisis," and how states and security regimes are already preparing for climate displacement. Furthermore, we will ask how migrant justice groups are challenging the closed-border policies of many states in ‘the Global North’ as well as the global structural inequalities that create the vulnerabilities that drive movement and migration.

ENVS 0220. Physical Processes in Geology (GEOL 0220).
Interested students must register for GEOL 0220.

ENVS 0240. Earth: Evolution of a Habitable Planet (GEOL 0240).
Interested students must register for GEOL 0240.

ENVS 0241. Climate and Climate Change (GEOL 0030).
Interested students must register for GEOL 0030.

Interested students must register for RELS 0260.

ENVS 0300. Environment and Society in Africa (SOC 0300L).
Interested students must register for SOC 0300L.

ENVS 0410. Environmental Stewardship.
Challenges students to address the economics and logistics of implementing strategies to conserve resources and reduce the negative impacts of the built environment. The goal is to learn the rationale, process and technical aspects of the practice of environmental stewardship. Topics include sustainable design, institutional change, and corporate environmental responsibility. Students collaborate in interdisciplinary teams on applied projects. Permission by instructor by application process prior to enrollment in the class.

Interested students must register for BIOL 0420.

ENVS 0465. Climate Solutions - A multidisciplinary perspective.
This course will explore solutions to the climate crises through the lens of multiple disciplines. Lectures will cover topics in physical science, economics, political science, persuasive communication, social science, and equity. Online lectures by disciplinary experts from around the country, but developed specifically for this class, will be the basis for the in class discussions and activities led by Brown Faculty.
ENVS 0490. Environmental Science in a Changing World
Introduces students to environmental science and the challenges we face in studying human impacts on an ever-changing earth system. We will explore what is known, and not known, about how ecosystems respond to perturbations. This understanding is crucial, because natural systems provide vital services (water and air filtration, climate stabilization, food supply, erosion and flood control) that can not be easily or inexpensively replicated. Special emphasis will be placed on climate, food and water supply, population growth, and energy.

ENVS 0495. Introduction to Environmental Social Science
This course introduces students to core areas of theory and research in the environmental social sciences. It also challenges students to think carefully about what we learn and don’t learn when we apply different disciplinary lenses to interdisciplinary environmental challenges.

ENVS 0510. International Environmental Law and Policy
Introduces students to principles of international environmental law and examines how international organizations, national governments and non-state actors interact to address human impacts on the global environment. Considers effects of treaties, trade agreements and foreign aid on resolution of trans-boundary environmental problems including climate change, marine governance, biodiversity loss and trade in endangered species and hazardous waste. Students negotiate a mock treaty (NEWORLD) to mitigate some aspect of human impact on global change from the perspective of different state and non-state actors. Introductory coursework that addresses some aspects of environmental studies or environmental science is recommended.

ENVS 0520. Wild Literature in the Urban Landscape
Combines deep study of ecological poetry, fiction, essays and other writing with service to schools in the community through exploration of local ecological challenges through both creative and more discursive expressions. The field-work or community component to this course will involve students in conducting workshops that combine literature and ecology in order to better elucidate and understand local issues related to, for one example, eco-industrial histories associated with Gorham Silver in Providence and the current state of Mashpaug Pond on the Reservoir Triangle, where a public high school, Alvarez, now sits on contaminated soil. Enrollment limited to 22 undergraduates. S/NC.

ENVS 0580. Foundations of Physical Hydrology (GEOL 0580)
Interested students must register for GEOL 0580.

ENVS 0700A. New England Environmental History
Explores the environmental history of New England from the arrival of people circa 10,000 years ago to the present day. Topics include Native American and colonial environmental interactions and 20th century environmental transformations. From abandoned textile mills to Northern forests, understanding the history of a place can help us plan for its future.

ENVS 0700C. Extinction: A Global History
In the past five centuries, about 800 species of animals and plants have gone extinct, the majority of them in the past one hundred years. Recent estimates suggest that 41 percent of described amphibians, 26 percent of mammals, and 13 percent of birds currently face the threat of extinction. We will examine the current global extinction crisis as a biological, historical, cultural, economic, and political phenomenon. This course adopts an interdisciplinary approach by examining the issue of extinctions from the perspectives of the humanities and environmental sciences.

ENVS 0700D. Food for Thought: Food and Agriculture in the History of the Americas
This course is an introduction to the history of food and agriculture in the Americas. We will examine key topics such as the domestication of plants and animals several thousand years ago, food production + consumption in pre-Columbian societies, the impact of European colonialism + colonial systems of food production across the Americas farming in the 19th century, the industrialization of agriculture in the 19th and early 20th centuries in the US and Latin America, the Green Revolution, organic agriculture and alternatives to industrial agriculture in the Americas in the past few decades, and the future of food + agriculture.

ENVS 0705. Equity and the Environment: Movements, Scholarship, Solutions
The environmental justice movement emerged in the U.S. South from the observation that African-Americans were more exposed to toxics than whites. It spurred decades of academic and activist efforts to understand and address the relationship between inequality and environment. The issue has expanded around the world, and beyond unequal exposures to “bad”, to unequal access to “goods,” along lines of equity by race, class, gender, ethnicity, indigenous identity, and position in the global economy. Issues of assigning responsibility and applying theories of justice with legal instruments have made environmental justice policy difficult. This course seeks to serve first-years and sophomores.

ENVS 0707. Understanding and Overcoming Climate Obstruction
This course is intended to provide a survey of climate denial and obstruction in the USA, and how the landscape is shifting. We’ll have a top expert or activist as our speaker every other week, with the other week dedicated to reading, writing and discussing key social science works in this emerging field. The course time (3:00-5:30pm Fridays) will incorporate the public lecture of the speakers, which will be held from 3:30-4:30pm. Students will have opportunities to meet speakers and ask questions before and after the public talk.

ENVS 0710. Powering the Past: Environmental Histories of Energy Use and Social Change
From wood, water, and muscles, to coal, oil, and nuclear power, humans have a long history of reshaping their environments to access energy. The nature of these energy sources also influences the form and distribution of political and economic power. Using environmental history methods, this course examines the ties between energy, power, environmental change, and inequality, from before the agricultural revolution to the present. Readings and lectures link the United States and Europe to the rest of the globe, with particular emphasis on the nineteenth and twentieth centuries. Each class combines lecture and discussion. No prerequisites.

ENVS 0715. Political Ecology: Power, Difference and Knowledge
This course introduces students to political ecology — an approach to environmental issues that emphasizes power relations, inequalities, and difference. After surveying the genealogy, diversity and theoretical basis of political ecology, we will examine case studies that draw on the approach. By focusing on the relationship between nature, power, economics and the making of environmental knowledge, this course will illustrate how environmental questions are always deeply political. We will discuss new analytical directions political ecologists have developed in recent decades and assess what we gain as environmental researchers when we actively interrogate power.

ENVS 0720. Ecological Imperialism
Empires have played important roles in transforming the earth’s environments for over two millennia, conquering land and transforming its ecosystems and societies to make them more profitable. This course will examine how empires have reorganized the landscapes of conquered regions from the ancient empires of Rome and China to the informal American empire, focusing in particular on Asia, Africa and Latin America.

ENVS 0900. Quantitative Methods in Psychology (CLPS 0900)
Interested students must register for CLPS 0900.

ENVS 0930A. Appropriate Technology (ENGN 0930A)
Interested students must register for ENGN 0930A.

ENVS 1000. Fieldwork in the Urban Community (URBN 1000)
Interested students must register for URBN 1000.

ENVS 1070. The Burden of Disease in Developing Countries (PHP 1070)
Interested students must register for PHP 1070.
ENVS 1105. Introduction to Environmental GIS. This course introduces the tools, techniques, and fundamentals of Geographic Information Systems (GIS) using the ArcGIS software package. GIS has broad applications in environmental, natural, and social sciences. Examples include disaster management, transportation planning, and environmental quality assessment. By the end of this course, students will understand the processes of spatial data analysis, geographic databases, visualization and cartography, and uncertainty quantification. Students will produce an independent final research project in Story Maps and present their results in a highly-visual flash talk. Tuesday 4:00-6:30 PM seminar will be held online. However, students will have the option to attend lab group meetings either virtually or in person. Course override required. Contact the instructor (samiah_moustafa@brown.edu) with year, concentration, and statement of interest.

ENVS 1110. Estuarine Oceanography (GEOL 1110). Interested students must register for GEOL 1110.

ENVS 1180. Feminist Thoughts for a Heated Climate (POLS 1180). Interested students must register for POLS 1180.

ENVS 1225. Arctic Climate and Policy: Winter Session in Bodø. The Arctic is a region where rapid climate and social changes will have important and far-reaching consequences. Current issues include access to mineral and hydrocarbon resources, possibilities for new maritime routes, cross-border cooperation, governance and self-determination, sustainability of fisheries, opportunities for Arctic tourism, and support of indigenous communities. Students will travel to Bodø, Norway, to participate in this class together with undergraduates from Babson College and Nord University Business School. Students will work together across disciplines and cultures to learn how to apply knowledge to map relevant policy issues more creatively, effectively, and responsibly.

ENVS 1230. Forest History of Colonial New England: Combining Evidence from Documents and Pollen. Bringing metal tools and animals with them from Europe, settlers set out to transform the Northeastern American landscape shortly after founding Plymouth Colony in 1620. Historical accounts describe an abundance of tree cover, which, environmental historians argue, provided the frame and fuel for American nationhood. But what do we really know about the pre-colonial canopy of the Northeast and its transformation under colonialism? To find out, we have to go back into the woods and understand how forests age. Using ecology and pollen records, we can learn about Abenaki and early settlers’ interactions with the treed landscape.

ENVS 1245. Air Pollution & Chemistry. Air pollution is a major concern across the globe, impacting human health, ecosystems, and climate. This course will provide students with an understanding of the chemical and physical processes that determine the composition of the atmosphere, with an emphasis on the dispersion of pollutants responsible for urban smog, acid rain, climate change, and the ozone hole. Topics to be covered also include health and environmental impacts of air pollutants, potential technological solutions, air pollution monitoring, and international policy regulations. Prerequisites: CHEM 0330, CHEM 0500, ENGN 0720 or similar.

ENVS 1270. From Magic Mushrooms to Big Pharma: Anthropology of Drugs (ANTH 1880). Interested students must register for ANTH 1880.

ENVS 1330. Weather and Climate (GEOL 1350). Interested students must register for GEOL 1350.

ENVS 1350. Environmental Economics and Policy. This course equips students with theoretical and empirical tools to analyze environmental issues from the perspective of economics. First, we review when and why the markets fail, competing policy solutions (e.g., cap-and-trade), and cost-benefit analysis. Second, we survey methods to quantify the benefits of environmental regulations, including revealed and stated preference methods, a primer on climate-economy modeling, and a real-world application in a class research project. Third, we study the costs of environmental regulations. We conclude with advanced policy considerations (e.g., trans-boundary pollutants), private market solutions/corporate social responsibility, and select special topics (e.g., resources and economic development).

ENVS 1355. Environmental Issues in Development Economics (ECON 1355). Interested students must register for ECON 1355.

ENVS 1356. Health, Hunger and the Household in Developing Countries (ECON 1530). Interested students must register for ECON 1530.

ENVS 1370. Environmental Geochemistry (GEOL 1370). Interested students must register for GEOL 1370.

ENVS 1400. Sustainable Design in the Built Environment. Course develops students’ analytical abilities to apply fundamental concepts of environmental issues, building systems analysis, and architectural and engineering design. Students learn how to reduce the negative environmental impacts, and maximize positive social and economic impacts, of the built environment. Students cultivate applied skills in sustainable design; including fundamental energy calculations, heat flow analysis, schematic design analysis, and building operating impacts assessment. Course emphasis is on building energy flows. Students conduct group and independent research projects, providing the opportunity to study broader impacts of the built environment and propose solutions. Class meetings combine lectures, student presentations, and group workshops.

ENVS 1410. Environmental Law and Policy. Introduces students to environmental law in the United States. Uses legal decisions and policy frameworks to consider the roles of non-governmental actors in formation and implementation of environmental policy. Students will become familiar with major federal environmental laws and regulatory databases and see how legal precedent, differing understandings of risk and alternative regulatory and market-enlisting strategies have shaped solutions to environmental problems. Provides opportunity to apply legal skills to local environmental legislation or legal problem. Intermediate coursework in Environmental Studies, Political Science, Community Health, Urban Studies or other environmentally-related coursework is recommended. First year students need instructor permission.

ENVS 1415. Power, Justice, and Climate Change. Climate change creates injustices in who caused the problem, who is suffering worst and first, and who is taking action. Power differences between nations and social groups drives unequal disaster risks and “compounded vulnerabilities” for poor peoples and nations, and has led to gridlock in United Nations negotiations. The course reviews social and political dimensions of climate change, including local and national adaptation and mitigation efforts, media dynamics, collective and individual denial, negotiations, and the rise of climate social movements. Enrollment limited to 40.
ENVS 1421. Podcasting For the Common Good: Storytelling with Science.
How can we use podcasts to spread compelling information about the future of our planet? In this hands-on, interactive course, we bring new perspective to environmental topics by integrating scientific research with audio story telling techniques. Students will learn how to find answers to environmental questions, use recording equipment, conduct interviews, write scripts, and make a finished product. Students will produce several audio projects for the course including an episode for Possibly—a podcast produced through a partnership between IBES and The Public's Radio. Students who want to enroll should write a one page (max) statement about how skills related to explaining environmental and health issues will help them in their educational trajectory. Statements can be emailed to Megan_Hall@Brown.edu.

ENVS 1440. Conservation Biology (BIOL 1470).
Interested students must register for BIOL 1470.

ENVS 1450. Ecosystem Analysis.
Develops ability to measure and characterize important biological and physical parameters of terrestrial ecosystems. Weekly field trips to explore measurement techniques and develop testable questions and hypotheses about different forested ecosystems. Qualitative and quantitative writing exercises explore how to describe the patterns and processes associated with the ecosystems visited. One Saturday field trip to central Massachusetts and one weekend field trip to New Hampshire are required. A background in environmental issues, as evidenced by taking BIOL 0420, is strongly recommended.

Students will develop an interdisciplinary understanding of ocean ecosystems and how humans are connected to them socially, economically, and ecologically. Integration of the scientific and human dimensions of marine conservation will be achieved through analysis of the current status, trends, and threats to ocean ecosystems, and the range of solutions to mediate these threats. This course is designed for advanced juniors, seniors and graduate students; participating students are expected to have background in at least one related field (e.g., biology, geosciences, sociology, economics, or political science) beyond the intermediate level. Suggested prerequisites include ENVS 0490, BIOL 0420 or 1470.

This is a lecture and discussion based course that focuses on the role of microbes in biological, geological, and environmental processes. This includes: introductory concepts, origins of life, bacterial evolution, role in climate change, metabolic diversity of biogeochemical cycles, microbial communities and interactions, habitat specific examples, and applications in the environment and human health. Recommended background courses: BIOL 0200, CHEM 0330 and an intermediate science course (e.g., BIOL 0280, GEOL 0240, or ENVS 0490).

ENVS 1490. SES-Independent Study/Science Writing.
The culmination of the Semester in Environmental Sciences at the Marine Biological Laboratory is an independent research project that builds on the topics covered in the aquatic and terrestrial ecosystem analysis core courses. In addition students participate in a seminar designed to help improve their ability to tell a lay reader about science. Enrollment is limited to students in this program. Instructor permission required.

ENVS 1491. SES-Terrestrial Ecosystem Analysis.
Team-taught course examining the structure of terrestrial ecosystems fundamental biogeochemical processes, physiological ecology, impacts of environmental change on the landscape; the application of basic principles of ecosystem ecology to investigating contemporary environmental problems. Part of the Semester in Environmental Science at the Marine Biological Laboratory; enrollment is limited to students in this program. Instructor permission required.

ENVS 1492. SES-Aquatic Ecosystem Analysis.
Team-taught course examining the structure of freshwater, estuarine and marine ecosystems; impacts of environmental change on the landscape at local regional and global scales; the application of basic principles of ecosystem ecology to investigating contemporary environmental problems such as coastal eutrophication, fisheries exploitation. Part of the Semester in Environmental Science at the Marine Biological Laboratory; enrollment is limited to students in this program. Instructor permission required.

ENVS 1493. SES-Environmental Science Elective.
Two environmental science electives are offered each fall semester as part of the Semester in Environmental Science at the Marine Biological Laboratory, including: aquatic chemistry, mathematical modeling of ecological systems and microbial ecology. Enrollment is limited to students in this program. Instructor permission required.

ENVS 1500. Environmental Justice and Climate Change in Rhode Island TRI-Lab Engaged Research.
The TRI- Lab (Teaching, Research, Impact) on Climate Change and Environmental Justice in Rhode Island will be taught by a team including two experts from the RI state Department of Health. It will investigate ways to reduce the climate change-related public health risks to vulnerable individuals in three targeted neighborhoods in Providence, and increase the capacities of these neighborhoods to respond to climate change threats. Content topics to be covered include: projected climate change impacts in RI; public health risk assessment; risk outreach and communications strategies; state and federal policies, design and evaluation of adaptive responses; community-based research methods.

ENVS 1510. Environmental Theory and Philosophy.
Each student develops his or her own concept of "socially better." The task is to understand conceptions of "socially better" belonging to various authors and others in the class, to put one's own concept in context with the readings and class discussion, and explain why that concept is sensible and should be taken seriously by others. Prerequisite: ENVS 1350 or permission of the instructor.

ENVS 1530. From Locke to Deep Ecology: Property Rights and Environmental Policy.
Examines the evolution of property law and tenure in land, water, the atmosphere and natural resources, and the consequences of these property rights regimes for environmental protection. Readings drawn from the scientific, legal, public policy and popular literature are used to consider the development of American attitudes about the relationship between people and nature; the relationship between public and private rights in the land, sea, freshwater, atmosphere and wildlife; and the use of innovative property rights regimes in environmental policy. Intermediate coursework in Environmental Studies, Urban Studies, American Civilizations or other environmentally-related coursework is recommended.

ENVS 1535. Environmental (In)justice and Island Societies: Towards Equitable, Sustainable Solutions.
The island nations of the world are among the most vulnerable to the economic and social strains of globalization, and the impacts of climate change. This course will take a case-based approach to deconstructing and proposing equitable and sustainable solutions for various environmental justice challenges faced by islands across the Caribbean, Atlantic and Indian Oceans, and Pacific. Cases will include: (a) Puerto Rico and self-determination in the post-Hurricane Maria period; (b) military occupation in the South China Sea; (c) ocean grabbing, territoriality and small-scale fishers in Kiribati; (d) nuclear testing in the Marshall Islands; and (e) climate-induced relocation in Fiji.

ENVS 1540. Technology and Material Culture in America: The Urban Built Environment (AMST 1520).
Interested students must register for AMST 1520.
ENVS 1545. The Theory and Practice of Sustainable Investing. 21st century businesses and investors face a broadening and deepening array of Environmental, Social, and Governance (ESG) risks and opportunities. Climate change, water scarcity, community conflicts, resource depletion, supply chain breakdowns, worker well-being and economic inequality pose present material challenges that make sustainability an imperative for successful corporations and investors. We will examine current ESG strategy, trends, future scenarios, players, and frameworks and integrate that theory with practical investment performance analysis, metrics, and study of screens, asset classes, and diversification.

ENVS 1547. Finance and the Environment. This course inspects the power and the pitfalls of finance/capitalism, seeking to provide students with a rudimentary understanding of finance and the flow of capital as well as a deeper understanding of how the global financial system can be adjusted to solve social and environmental problems. The class begins with an overview of the global financial system, including instruments like stocks, bonds, currencies, mutual funds, banks, pension funds, and insurance companies. This financial architecture will then be used to examine what impact investing is and how it can be used to address social and environmental issues. To encourage discussion and participation, to ensure that students are eager to learn about the issues, and to try to accommodate a wealth of ideas, backgrounds and perspectives, the class will be limited to 20 students by application only.

ENVS 1552. Science and Power: The Corruption of Environmental Health. Students will engage in a semester-long discussion about environment, health, science, ethics, and power. How do public health and the environment relate to each other, and how is each shaped by shared and/or contested cultural values? How do deeply-held but historically-specific ideas about the family, nation, gender, money, race, the market, etc. affect how we conceptualize and attempt to solve health problems? What are the most effective ways to improve environmental health on the local, national, and/or global level? Readings, movies and YouTube presentations in epidemiology, bioethics, cultural theory, public health and history will be used to address such questions.

ENVS 1555. Urban Agriculture: The Importance of Localized Food Systems. This is an engaged scholar course. Urban agriculture has a critical function in a small but increasing movement toward more localized and sustainable food systems. This course focuses on research and readings from multiple disciplines addressing urban agriculture and local food systems’ role in shaping food policies, labor practices, sustainable agricultural practices, and human health (to name a few). More importantly, students will work with community partners to actively engage in a local food system project. Enrollment limited to 40.

ENVS 1557. Birding Communities. This seminar explores and builds communities around a charismatic and conspicuous class of animals: birds. The irony is that birds are marvelously diverse and abundant, but birding is associated with a narrow and privileged sector of society. Birding provides an excellent case to explore the politics of inclusion and exclusion around race, economic status, gender, dis/ability, citizenship, sexuality in relations with nature. While studying these politics of access and authority worldwide and historically, we create our own community of knowledge and practice by going birding with adults or schoolchildren. Participants in this seminar will learn from interdisciplinary scholarship, school children, and not least, the birds. History matters. Be woke. Think globally. Bird locally.

ENVS 1570. Guts of the City: Perspectives on Urban Infrastructure and Environmental Planning (URBN 1570). Interested students must register for URBN 1570.

ENVS 1574. Engaged Climate Policy in the U.S.: Rhode Island and Washington, DC. Sufficient and equitable policies addressing the crisis of climate change have been elusive, and United States leadership is crucial for an adequate global response. After several weeks of readings and lectures on climate policy, the course shifts to team-based research to produce strategic, policy-relevant briefings and scholarly outputs with partner organizations in Rhode Island, Washington, and internationally. Students will travel to D.C. for three days to attend meetings and a mini-conference with experts and staff from government agencies, industry organizations, think tanks, and environmental NGOs, and to hold a briefing on our joint research.

ENVS 1575. Engaged Climate Policy at the UN Climate Change Talks. Twelve undergraduate students will study a group of core readings, conduct independent and group projects, and attend the United Nations Framework Convention on Climate Change’s (UNFCCC) 23rd Conference of the Parties (COP23) and related climate change events in Bonn, Germany in November 2017. Students will critically analyze contemporary political events; develop and addresses pertinent research questions; engage with and interview experts in the field; craft policy-relevant and empirically grounded publications; and develop experience in using social media. Team-based research may be shared at the climate negotiations in Bonn. Contact J. Timmons Roberts for an application - j.timmons_roberts@brown.edu.

ENVS 1580. Environmental Stewardship and Resilience in Urban Systems. This course investigates current environmental impacts and risks related to urban infrastructure systems. Students analyze efforts to minimize negative environmental, health and economic impacts of the built environment. The course explores urban initiatives to increase sustainability and resiliency of infrastructure systems in anticipation of increased risks related to climate change. The goal is to learn the rationale, process and technical aspects of the practice of environmental stewardship and resilience planning in an urban context. Students will develop competence in technical analysis, policy analysis, and program implementation through case studies and systems analyses.

ENVS 1605. Glaciers and Climate Change. What is the fate of glaciers in a warming world? Where, how much, and how rapidly will glaciers melt? This course investigates how Earth’s glaciers are responding to climate change. This class will provide a comprehensive overview of changes to Earth’s glaciers, ice caps, and ice sheets, synthesize the latest scientific information, find gaps in our current knowledge, and identify what questions should be explored in future research. And, students will work with glacier-based observations and interpret trends using remote sensing, GIS, and/or other visualization techniques. Topics will also include impacts to sea level rise, ocean circulation, and water resources.

ENVS 1615. Making Connections: The Environmental Policy Process. The diminishing quality of Earth’s systems and resources carries profound implications for the fulfillment of human rights and aspirations. But even as Western knowledge systems understand better the intrinsic interdependencies between humans and the non-human, policy gridlock persists. Indeed, scientific findings are regularly contested on political grounds. The purpose of this course is to learn how to apply diverse knowledges from Indigenous to Modern to map the relevant policy in problems at the intersection of human rights and environmental integrity, and to develop approaches to address them in ways that are creative, effective, responsible and just. Enrollment limited to 10.

ENVS 1650. Statistical Inference I (APMA 1650). Interested students must register for APMA 1650.

ENVS 1660. Instrumental Analysis with Environmental Applications (GEOL 1660). Interested students must register for GEOL 1660.
ENVS 1700B. Watershed Policy + Management: Governance Beyond Borders
Changes in land use at parcel and landscape scales have altered water cycles, water quality and water-dependent ecosystems. Governance Beyond Borders examines the management of water, land use and aquatic life in coastal watersheds. We will consider the accomplishments of the top-down, expert-driven federal laws of the 1960s and 1970s. However we will focus on integrated, trans-boundary approaches to governance of land, water, pollutants and aquatic life and become immersed in thinking like a watershed.
ENVS1410 is desirable but not required. Other relevant courses could include BIOI1470, ENVS1350, ENVS1530, ENVS1615. Enrollment is limited to 18 students. Instructor’s approval is required.

ENVS 1710. Environmental Health and Policy
Provides an overview of environmental health methods and their application to policy and regulation. Students will learn the basic tools of environmental health sciences, including toxicology, epidemiology, and risk assessment, as well as the scientific basis for regulation. Traditional environmental health concerns will be discussed, as well as emerging discourses on environmental health issues, including urban pollution and its concomitant health concerns, climate change, issues of health disparities and environmental injustice, and the interrelationship between humanitarian crises and environmental degradation. Open to both undergraduate and graduate students of all fields, space permitting.
Prerequisite: ENVS 0110 or instructor permission.

ENVS 1711. Current Topics in Environmental Health (PHP 1700)
Interested students must register for PHP 1700.

Provides an overview of environmental justice history, theory and definitions. Students will review quantitative, qualitative, and theoretical approaches for understanding the origins and persistence of environmental discrimination. Examines the regulatory, institutional, structural, political, and economic forces that underlie patterns of race and class-based discrimination and their implications for environmental health among diverse communities. Case examples of environmental justice organizing will inform students of positive efforts by people of color in protecting their communities. Not open to first year students. Prerequisite: ENVS 0110.

ENVS 1725. Political Economy of the Environment in Latin America (INTL 1450).
Interested students must register for INTL 1450.

ENVS 1755. Globalization and the Environment
What are the effects of globalization on the environment? Can globalization be greened? Corporations, civil society, international organizations and states are in a race to globalize their rules, sometimes working together, and others times in bitter conflict. This course seeks to understand this set of issues through a mix of examining concrete social/environmental problems and studying theories of globalization and social change. While addressing global issues and the impacts of wealthy nations, this course focuses most on the developing countries, where the impacts of these global issues appear to be worst, and where resources are fewest to address them. Enrollment limited to 20 juniors and seniors.

Interested students must register for HIST 1790.

Interested students must register for HIST 1977T.

ENVS 1820. Environmental Health and Disease (BIOL 1820).
Interested students must register for BIOL 1820.

ENVS 1824. Environmental Political Thought (POLS 1824L).
Interested students must register for POLS 1824L.

ENVS 1890. Native American Environmental Health Movements (ETHN 1890J)
Interested students must register for ETHN 1890J.

ENVS 1900. Introduction to Geographic Information Systems for Environmental Applications (GEOL 1320).
Interested students must register for GEOL 1320.

ENVS 1910. The Anthropocene: The Past and Present of Environmental Change
Scholars in many disciplines have begun using the term the Anthropocene to signal a geological epoch defined by human activity. This seminar examines the Anthropocene idea from the perspective of environmental history. What activities might have changed the planet – the use of fire thousands of years ago, or agriculture, or fossil fuels? Is the Anthropocene another term for climate change, or does it include pollution and extinction? Is it a useful concept? Drawing on anthropology and the sciences as well as history, we will use the Anthropocene to think through environmental change and the human relationship with the non-human world.

ENVS 1913. China’s Environment: Power, Pollution and Hope.
This course focuses on key environmental issues transforming Chinese landscapes and society. It introduces students to China’s geography and identifies contemporary environmental problems (including air, water and soil pollution, biodiversity loss, etc.) as well as their proposed solutions. Considering China’s recent history of rapid economic growth and stark socio-economic inequalities, a central objective of the course is to develop tools to effectively locate environmental issues within a broader political, social and economic context — a skill transposable to other geographical and environmental contexts. We will draw on scholarship from geography, anthropology, political science, and environmental science.

ENVS 1914. Colonization and Environmental Change in Chinese History.
This course explores how the wide diversity of cultures and ecosystems that existed across the East Asian mainland 3,000 years ago came to be replaced with the language, culture and agricultural practices of North and Central China. It aims to teach students to think comparatively about processes of colonialism, especially the environmental aspects of the gradual colonization of non-Chinese ethnic groups in what is now South China.

Wetlands are increasingly recognized as dynamic ecosystems, but for much of human history were valued only after being drained to make farmland. This course explores how humans have used, transformed and destroyed wetlands around the world over the past two millennia. In some cases people have entirely rebuilt hydrological systems with dikes, sluices and dams, creating landscapes that require constant management and investment to remain livable. Studying the environmental history of wetlands can help with conservation, managing cities built upon them, and recognizing how coastal peoples can adapt to rising sea levels.

Plants and animals are the basis of human civilization, providing us with shelter, clothing, medicine and, especially, food. While historians have traditionally put humans at the center of history, this course shifts the focus to species that have shaped Chinese society from prehistoric farming to global agribusiness. We will study wild animals, farmed fish, silk worms, crops like rice and soybeans, livestock like pigs and cattle, fruit like oranges and peaches, drugs like tea and opium, and building materials like wood and bamboo. We will examine the roles these species have played from Chinese villages to Brown’s campus, which is home to dozens of Chinese ornamental plants and was built in part from the profits of the tea and silk trades. Studying the histories of specific species will help students appreciate the central roles that plants and animals have played in Chinese civilization, and still play in our daily lives.
ENVS 1920. Methods for Interdisciplinary Environmental Research. This course provides an introduction to a wide range of research approaches in the social and environmental sciences. We will cover the epistemological and theoretical foundations of various research approaches and discuss implications of these foundations for what research questions are answerable and what evidence one can bring to bear to answer such questions. By the end of the semester, students will be able to write a clear and answerable research question, and know what methods are appropriate to use to answer such a question. Enrollment limited to ENVS Juniors. ENVS seniors must receive instructor override from Professor Wetts, rachel_wetts@brown.edu.

ENVS 1925. Energy Policy and Politics. From coal power to solar power, energy drives economies and increases quality of life world-wide. However, this same energy use can, and often does, lead to severe environmental destruction/pollution and global warming. This course serves as an introduction to energy policy in the United States and also explores global attempts to solve energy problems. This course examines different types of energy sources and uses, different ideological paths driving energy policy, the environmental impacts of energy use, current global and domestic attempts to solve energy problems, and the role of renewable and alternative forms of energy in future energy policy.

ENVS 1926. Wasted: Rethinking Chemical Environments. This senior seminar investigates chemical and other forms of industrially produced waste and its impacts on environment and society. We will take an interdisciplinary approach, drawing on scholarship from anthropology, geography, history, sociology, science studies, and discard studies. We will follow chemicals around the world, from their inception in Western laboratories to their disposal in landfills and waste pits of the global South. Along the way, we will consider how corporations engineer chemicals' manufacture, governments regulate their use, sciences measure their human and ecological effects, and communities contend with the lived realities of chemical exposure and toxic suffering.

ENVS 1927. Nature, Society and Culture. This senior seminar provides a selective overview of major approaches, debates, and interdisciplinary cross-currents shaping environmental sociology. It's designed to provide a substantive background to undergraduates interested in pursuing a specialization in environmental sociology or related fields. The general goal is to deepen collective understanding of the dynamic interrelationships shaping human societies and the natural environment. We will pursue this goal by considering how sociologists and others have conceptualized society-environment relations and by critically assessing the various approaches developed to examine those relations, their causes, and outcomes.

ENVS 1928. Race and the Politics of Nature: Intersecting Histories and Political Ecologies. This senior seminar examines the ongoing perpetuation of race and racism as fundamentally related to concepts of “nature” and “the natural.” We examine scientific and pseudoscientific concepts about population, biology, and resource scarcity, western environmentalism's origins and history, and relations with projects of incarceration, border violence, triage, environmental determinism, dehumanization, and the maintenance of essentialist understandings of ‘race.’ This course centralizes a critical race studies lens towards the history of environmental injustices, while also querying in what way nature, ecology, or environmentalism might be liberatory projects for racial justice.

ENVS 1929. The Fate of the Coast: Land Use and Public Policy in an Era of Rising Seas. For the last few decades, there has been a land-rush on the ocean coasts of the United States. Unfortunately, this swamps the coast at a time when sea levels are on the rise. In some places the rise is natural, in some places the rise is exacerbated by human activities and everywhere it is fueled by climate change. This course will examine the causes of sea level rise, the effects it produces on land, the steps people have taken to deal with these effects and their consequences, and possible remedies. Enrollment limited to 20. Preference given to juniors and seniors.

ENVS 1930. Land Use and Built Environment: An entrepreneurial view (ENGN 1930U). Interested students must register for ENGN 1930U.

ENVS 1931E. Writing the Environment. Few issues are more important than restoring and preserving our environment, but also few are more complex and politicized. Researchers must know how to convey the substance and importance of their work, not just in the language of scholarly journals, but also in ways that engage a lay audience while maintaining scientific accuracy. This seminar focuses on writing about subjects including new findings, the people who make them, scientific disputes, calls to action and policy debates. Participants will produce news and feature articles, profiles, op-ed pieces, essays, policy papers, web pages and the like. Enrollment limit 15.

ENVS 1965. Engaged Environmental Scholarship and Communication. This upper level seminar will enable to students to place their research in the context of environmentally relevant policy and practice. Development of an environmentally-focused thesis or independent research project is a prerequisite. Students will hone practical professional skills, e.g. how to communicate scientific findings to the media and policy audiences; oral presentation skills, and tips on professional interactions. Required of all Brown Environmental Fellows (http://blogs.brown.edu/bef/), and open to others engaged in environmentally relevant projects from the natural and social sciences and humanities. Enrollment is limited to 15 seniors and graduate students, by application only (available Fall 2011). Instructor permission required. Contact Heather_Leslie@brown.edu for more information.

ENVS 1970. Independent Study. First semester of individual analysis of environmental issues, required for all environmental studies concentrators. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.

ENVS 1971. Independent Study. Second semester of individual analysis of environmental issues, required for all environmental studies concentrators. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.

ENVS 2010. Special Topics in Environmental Studies. A mandatory seminar for graduate students in environmental studies. This course develops group problem-solving skills by addressing a current local, national or global environmental issue. We will work on problem definition, identifying options for addressing the problems, and crafting potential solutions. In all stages we work closely with non-profit groups, government agencies, or firms, who have the capacity to implement solutions. Students learn basic research design and begin the process of developing a research question and possible methods for conducting their Master's thesis research.

ENVS 2110B. Radical American Romanticism:Democratic, Environmental, + Religious Traditions in America(RELS 2110B). Interested students must register for RELS 2110B.

ENVS 2420. The Structure of Cities (ECON 2420). Interested students must register for ECON 2420.

ENVS 2450. Exchange Scholar Program.

ENVS 2980. Reading and Research. First semester of thesis research during which a thesis proposal is prepared. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.

ENVS 2981. Reading and Research. Second semester of thesis research. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course. Instructor override required prior to registration.
The concentration in French and Francophone Studies is committed to the pursuit of an interdisciplinary, linguistically rigorous, and textually informed understanding of French and Francophone literatures and cultures. Concentrators engage actively through their coursework with a wide range of texts and critical perspectives, pertaining to multiple literary genres, media, and contexts. They have opportunities to study different periods of French history as well as Francophone cultures beyond France. By the time they graduate, concentrators will have learned to read with knowledge and nuance and produced a varied body of critical work in French.

The concentration in French and Francophone Studies is committed to the study of the language, literature, and cultural and critical traditions of the French-speaking world. Concentrators engage actively through their coursework with a wide range of texts and critical perspectives, and multiple literary genres and media (the novel; theater; poetry; cinema; critical theory; special topics in contemporary politics and culture). They have opportunities to study different periods of French literature and intellectual history (from the Renaissance to the present) as well as Francophone cultures beyond France (West Africa, the Maghreb and the Caribbean). Courses cover a wide diversity of topics, while placing a shared emphasis on language-specific study, critical writing skills, and the vital place of literature and art for intellectual inquiry.

The concentration program is designed to encourage and support language-specific study. Literary texts and cultural documents are read principally in the original. Likewise, in most courses, French is the language of class discussions, presentations and research/critical papers. Concentrators in French and Francophone Studies are strongly encouraged to spend one or two semesters (usually in their junior year) in France or in a Francophone country to derive the richest benefits of linguistic and cultural immersion. Information on Brown in France and approved alternative programs in French-speaking countries is available from the Office of International Programs (http://www.brown.edu/Administration/OIP/) office and the OIP website. Other summer programs can be found on the French Embassy website.

Students who have an outstanding record in their concentration courses, have completed at least six concentration courses by the first semester of their senior year, and are highly recommended by two professors, are eligible to apply for admission to the Honors program (http://www.brown.edu/academics/french-studies/undergraduate/honors-program/).

Concentration Requirements

A minimum of ten courses is required for the concentration in French and Francophone Studies. Concentrators must observe the following guidelines when planning their concentration. It is recommended that course choices for each semester be discussed with the department’s concentration advisor.

At least four 1000-level courses offered in the Department of French and Francophone Studies

At least one course covering a pre-Revolutionary period (i.e., medieval, Renaissance, 17th or 18th century France) such as:

FREN 1000A Littérature et intertextualité: du Moyen-Age jusqu’à la fin du XVIIème s
FREN 1000B Littérature et culture: Chevaliers, sorcières, philosophes, et poètes
FREN 1030A L’univers de la Renaissance: XVe et XVIe siècles
FREN 1030B The French Renaissance: The Birth of Modernity?
FREN 1040A Civilite et littérature
FREN 1040B Pouvoirs de la scène: le théâtre du XVIIIème siècle
FREN 1040C Le Grand Siècle à l’écran
FREN 1040D Molière et son monde
FREN 1050A "Family Values": Réprésentations littéraires de la famille au 19ème siècle
FREN 1050B Fictions de l’individu
FREN 1050D The Age of Voltaire: Culture, Pensée, Société
FREN 1050E French Lovers: Séduction et libertinage sous l’Ancien Régime
FREN 1050F Espace public; espace privé
FREN 1050G Le corps des Lumières
FREN 1050H The Age of Voltaire: Lumières et modernité
FREN 1100F Contes et nouvelles du Moyen Age
FREN 1410I Sorcellerie et Renaissance: le sort de la sorcière

At least one course focusing primarily on a Francophone literature/cultural context other than French

Four additional electives, of which one may be FREN 0600

A senior capstone project

Additional Guidelines:
Up to four courses (taken in French) from a semester’s study abroad (and up to five courses from a full year abroad) may count towards the concentration. A year or semester of study abroad in France or a Francophone country is considered an integral part of the concentration and is therefore highly recommended. Students should consult the concentration advisor prior to going abroad to find out which types of courses will count for the concentration.

Up to two 1000-level courses taught in English with a meaningful engagement with French/ Francophone texts and/or contexts may be accepted for concentration credit. These may be courses offered within the Department of French and Francophone Studies or other departments at Brown. (Appropriate courses on French or Francophone topics from other departments must be approved by the concentration advisor.)

Total Credits 10

The Senior Capstone

The senior capstone is a research project, a translation or a piece of creative work undertaken by all concentrators of French and Francophone Studies in their final year. As a culminating piece of work for their concentration, it is a conceptually rigorous, in-depth treatment of a subject (or a body of work) within French and Francophone Studies, and an opportunity for concentrators to take furthest their scholarly engagement with particular materials or questions within this field. It is a chance to demonstrate the specific strengths and forms of competence—linguistic, analytic, interpretive, critical, theoretical, cultural—developed in the course of the concentration.

The senior capstone experience is generally fulfilled by a research essay completed for a 1000-level (or a 2000-level) course taken in the department. In some cases, where appropriate to the course materials and focus, the capstone project may take the form of a work of translation or a piece of creative writing. The length and scope of the project are determined in consultation with the faculty instructor of that course. The capstone project may be discussed with the course instructor ahead of time, or it may emerge from a final assignment submitted for the course, to be later expanded on or (if deemed already satisfactory in its length, scope and quality) retroactively validated with approval from the course instructor as meeting the capstone requirement.

In the case of students pursuing Honors, the senior thesis fulfills the role of the senior capstone.

The senior capstone is intended as a meaningful scholarly experience where concentrators may follow their intellectual passions and best express their growth as students of French and Francophone Studies. Concentrators are advised to discuss their plans for the senior capstone with the Concentration Advisor at the end of their junior year or the beginning of their senior year.

Honors

The Honors Program welcomes applications from students who wish to deepen their study of French and Francophone literature and culture by pursuing during their senior year an independent research-based inquiry into a particular set of texts or questions (literary, historical, cultural, theoretical or linguistic), a translation project or a creative work under the supervision of a thesis advisor. Students may earn honors in the concentration by successfully presenting a thesis, for the preparation of which they will normally enroll in FREN 1990 in either or both semesters of their senior year.

Eligibility and Application Procedure

Candidates for honors in French Studies are expected to have a strong track record in courses taken for their concentration, and will have completed at least two-thirds of the courses required for the concentration (6 courses) by the application deadline.

Applications for admission to the Honors Program are submitted by the end of September in the student’s seventh semester. This means that the candidate should ideally begin to think of their thesis project, and establish contact with a potential thesis advisor by the end of the spring semester of their junior year or in the first weeks of the fall semester of their senior year. Students generally choose as thesis advisor a faculty member with whom they have taken a class, but they are also encouraged to contact others whose specialization aligns with their interests. If in doubt, the concentration advisor can be consulted for suggestions of an appropriate advisor. (Note that faculty may not be easy to contact over the summer. Students are thus advised to seek contact during the academic year.)

For the application (form available below), the student will provide a brief thesis proposal (1 or 2 paragraphs in French presenting the object of study and intended approach). The application must also feature a thesis title, the name and signature of the thesis advisor, and two recommendations from French and Francophone Studies faculty. Upon admission, the student will also choose a second reader.

Students applying for admission to the Honors Program must submit a completed application (https://www.brown.edu/academics/french-studies/sites/brown.edu.academics.french-studies/files/uploads/French%20Studies%20Honors%20Application_0_3.pdf) to the French Studies Honors/Concentration Advisor by September 26 (or the weekday closest to that date). Recommendations should be from department faculty who have knowledge of the student's work, preferably through a course taken by the student during their sophomore or junior year. Please submit these forms to your faculty recommenders no later than September 18 (or the weekday closest to that date). They will then be forwarded to the Honors Advisor who, after reviewing the complete application along with the student's transcript(s), will make a determination about admission to the Honors Program.

A successful application allows the student to pursue the Honors Thesis Project. Honors is officially granted only when the student's two readers approve the completed thesis.

French Studies Graduate Program

The department of French Studies offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) Degree. Under most circumstances, the A.M. degree is only awarded as part of the Ph.D. track.

For more information on admission and program requirements, please visit the following website: http://www.brown.edu/academics/gradschool/programs/french-studies (http://www.brown.edu/academics/gradschool/programs/french-studies/)

Center for Geometric Computing

The Center for Geometric Computing, founded in the summer of 1995, consists of members of the faculty of the Department of Computer Science and their students. The Center was initially established to enhance the visibility of a major research effort funded by the Army Research Office and the National Science Foundation. The main objective of the Center is to facilitate the transfer from basic research in computational geometry to several applied areas.

Over the years, the Center has expanded its core geometric computing research focus into new strategic directions with significant potential for technological and economic impact, including applied cryptography, computer security, cloud computing, data security, graph drawing, information visualization, and metrology. Funding for research in the above areas is currently provided by NSF and NetApp. Members of the Center are Professors Roberto Tamassia (Director), Franco P. Preparata (past Director), and Bernado Palazzi. The Center frequently hosts internationally known visitors participating in joint projects.

German Studies

Chair

Zachary Sng

The Department of German Studies is a vibrant intellectual community with strong ties to the full range of critical inquiry that characterizes the humanities at Brown. It focuses its research and teaching on German literature, culture, and critical thought (from German Idealism and Romanticism to the Frankfurt School and beyond), with a comparative...
and transdisciplinary orientation. It offers both the B.A. and the Ph.D. in German Studies, affording its students – from beginning language learner to advanced doctoral researcher – the opportunity to combine their interests in the literary, cultural, and intellectual production of the German-speaking countries with a wide variety of complementary pursuits, including philosophy, aesthetics, history, music, cultural theory, psychoanalysis, and film, among others. The Department encourages this approach through its flexible yet rigorous curriculum; intense research and teaching collaboration with faculty in related Brown departments and from partner institutions in Europe; rich and varied course offerings in both German and English; as well as attractive study abroad opportunities in Berlin and Tübingen.

For additional information, please visit the department's website: https://www.brown.edu/academics/german-studies/.

**German Studies Concentration Requirements**

German Studies exposes students to the language, literature, and culture of the German speaking areas of Central Europe. Concentrators combine intensive study of the German language with interdisciplinary studies by complementing courses from the German Studies core program with courses from other departments that deal with topics from the German cultural tradition. The quest for national identity that dominated German history in the nineteenth and twentieth centuries has been augmented by contemporary Germany's efforts to come to terms with its past and create new ways of dealing with diversity. Our curriculum therefore looks back at the German literary, cultural, and historical tradition, examining figures from Goethe or Christa Wolf to Marx, Freud, Nietzsche, and Heidegger, alongside the "texts" of contemporary German media, including television, film, and music. Most concentrators study abroad for one or two semesters.

*In spring 2017, Professor Jane Sokolosky will serve as concentration advisor. Professor Kristina Mendicino will return as concentration advisor in fall 2017.

**Standard program for the A.B. degree**

Many students elect to complete a double concentration, combining German Studies with one of the above areas, or with fields such as International Relations or Economics, Comparative Literature or History of Art and Architecture.

Knowledge of the German language is not required for declaring a concentration in German Studies. However, since language fluency is the basis for sophisticated understanding of German culture, students must meet a language requirement by the time they graduate.

**Concentration Requirements**

- Nine courses beyond GRMN 0400 or GRMN 0450;
- At least six of the nine courses must be at the 1000-level (or higher);
- Two of the 1000-level courses must involve writing assignments in German, and students must obtain at least a grade of B in these courses;
- At least five of the nine courses must be taken in the Department of German Studies (or four if a student spends a whole year in Germany on Study Abroad);
- Completion of a Senior Seminar (i.e. a course from the German Studies 1900 series) as part of the five courses within the Department of German Studies; and
- If a student studies abroad for one semester, as many as four courses, in the case of two semesters, as many as five courses, from study abroad may count toward the concentration.

**Honors**

Candidates for honors will be expected to have a superior record in departmental courses and will have to be approved by the Department of German Studies. Honors candidates must take one additional course at the 1000-level from the German studies offerings and present an acceptable Senior Honors Thesis. The additional course may be used for preparation of the honors thesis. Students are encouraged to discuss their thesis topics with the concentration advisor no later than the third week of classes in Fall of their Senior year.

**German Studies Graduate Program**

The department of German Studies offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) degree. The A.M. degree is only awarded as a transitional degree for Ph.D. candidates and is not open for admission for non-Ph.D. applicants.

For more information on admission and program requirements, please visit the following website:

http://www.brown.edu/academics/gradschool/programs/german-studies/ (http://www.brown.edu/academics/gradschool/programs/german-studies/)

**Courses**

**German Studies**

**GRMN 0100. Beginning German.**
A course to learn the German language and about the culture of German-speaking countries. For students interested in gaining a deeper understanding of German history, philosophy, literature, art, music and business through knowledge of the German language. Helps prepare for internships and study abroad, may introduce you to the language of your heritage or to a totally new language, positions you well for further language study, research or other opportunities. 4 hours per week. No previous knowledge of German required.

**GRMN 0110. Intensive Beginning German.**
An intensive, double-credit language course that meets three days a week and focuses on speaking, listening, reading and writing skills and the cultures of the German-speaking countries. At the end of the semester, students will be able to communicate successfully about everyday topics relating to the university, jobs, daily life and traveling. Ideal for undergraduate students interested in learning German for study abroad or for concentration requirements and for graduate students interested in starting their foreign language requirements. The course is designed for new students of German, regardless of any previous experience with German.
GRMN 0120. German for Reading
This course prepares students to read and understand German texts from a variety of disciplines and genres. This intensive introduction to German grammar and syntax is for students without prior knowledge of German, but also for those students with some background in German who wish to review and master German grammar. The student who successfully completes this course will have the necessary foundation for reading and translating texts from German into English.

GRMN 0121. German for Reading
This online course prepares students to read and understand German texts from a variety of disciplines and genres. This intensive study of German grammar and syntax is for students without prior knowledge of German and for students with some background in German who want to review and gain better mastery of grammar. Students who successfully complete this course have the necessary foundation for reading and translating texts from German into English.

Course is open to undergraduates. Graduate students must email Jane_Sokolosky@brown.edu to enroll. May be taken for a grade or S/NC

GRMN 0200. Beginning German
A course in the language and cultures of German-speaking countries. Four hours per week plus regular computer and listening comprehension work. At the end of the year, students will be able to communicate about everyday topics and participate in the annual film festival. This is the second half of a year-long course. Students must have taken GRMN 0100 to receive credit for this course. The final grade for this course will become the final grade for GRMN 0100.

GRMN 0300. Intermediate German I
Focuses on deepening students’ understanding of modern German culture by reading texts and viewing films pertinent to Germany today. Intended to provide a thorough review of German grammar and help students develop their writing, reading, listening, and speaking skills. Recommended prerequisite: GRMN 0200.

GRMN 0400. Intermediate German II
An intermediate German course that stresses improvement of the four language skills. Students read short stories and a novel; screen one film; maintain a blog in German. Topics include German art, history, and literature. Frequent writing assignments. Grammar review as needed. Four hours per week. Recommended prerequisite: GRMN 0300.

GRMN 0450. Intensive Intermediate German
Open to students participating in Brown in Berlin or Tübingen, this is an intensive intermediate course which meets 20 hours per week for one month in Berlin. Students work on all four language skills through daily reading, writing and speaking assignments. The course introduces students to contemporary German literature, culture and politics. Prerequisite: GRMN 0300 or equivalent. May not be taken for credit by students who have completed GRMN 0400.

GRMN 0500A. Cold War Germanys and the Aftermath.
The year 1990 unifies Germany and divides two decades in German history. The course investigates how self identification and the experience of present time were depicted in German literature and film in East and West in the 80s and 90s. Oral and written skills in German are furthered while deepening participants’ understanding of Germany’s cultural and social situation. In German. Prerequisite: GRMN 0400 or permission.

GRMN 0500B. From Zero Hour to the Wende.
An exploration of postwar German culture through the study of literary and film texts. Oral and written skills in German are furthered while deepening participants’ understanding of the prehistory of contemporary Germany. In German. Prerequisite: GRMN 0400 or permission.

GRMN 0500E. The Presence of the Past: German Literature and Film (1945-present day).
Exploration of ways in which the German past, through cultural materials, including literature and film, played a role in the construction and deconstruction of the Berlin Wall, the two Germanys, and contemporary Germany. German oral/written skills are furthered while deepening participants’ understanding of present-day Germany. In German. Prerequisite: GRMN 0400 or permission.

GRMN 0500F. Twentieth-Century German Culture.
A broad exploration of twentieth-century German culture using many kinds of written and visual texts (e.g. literature, journalism, film, art). While continuing to work on all four language skills (speaking, listening, reading, writing) students will gain more intensive knowledge about German culture, society, and history. In German. Recommended prerequisite: GRMN 0400.

GRMN 0600B. Was ist Deutsch?
In this course we will examine some of the ideas and myths that became entangled with the emerging notion of a "German" identity in the eighteenth and nineteenth centuries. Some of the terms that we will discuss include 'Kultur,' 'Bildung,' 'Freiheit' and 'Gesellschaft,' all of which have rich semantic histories. Conducted in German. Recommended prerequisite: one course in the GRMN 0500 series.

GRMN 0600C. From Faust to Freud: Germany’s Long 19th Century.
In the 19th century, a fundamental renegotiation took place about what it means to be German. Literary, aesthetic, and philosophical discourses played a decisive role in these deliberations on German identity. We will study seminal texts from these fields and discuss how they shaped German self-understanding in the 20th century and beyond. Readings by Goethe, Büchner, Stifter, Wagner, Nietzsche, Raabe, Fontane, George, Freud, among others. In German. Prerequisite: GRMN 0500.

GRMN 0750A. Faust and the Faust Legend.
Variations on the Faust theme focus on the role of knowledge in modern society. How do we define what we know? How do we accommodate knowledge with belief? What are the limits of human knowledge and can they satisfy us? Texts from the Reformation to the present: Marlowe, Calderon, Goethe, Turgenev, Mann, Bulgakov, Keroauc, Havel. In English. Enrollment limited to 19 first year students.

GRMN 0750B. Tales of Vampirism and the Uncanny.
This course compares literary texts of horror and haunting in English and German Romanticism. The psychoanalytic foundations of vampirism are discussed to enable students to boldly go beyond mere fandom and engage these texts on a more sophisticated level. Readings by Walpole, Coleridge, Poe, Tieck, E.T.A. Hoffmann and others. In English. Enrollment limited to 19 first year students.

Twenty-five percent of all new literary books worldwide are crime fiction. As a means of a society to reflect upon itself, crime fiction reflects how certain cultures deal with the dialectics of threatening and securing civic order, how they depict mentalities, traditions, topographies, or cultural chance. In English.

GRMN 0750D. The Poetics of Murder: Crime Fiction from Poe to the Present.
What is it that fascinates us about cinema? What desires and drives have held us in thrall to the moving image? This seminar introduces you to writing about film, not just within the specific field of media studies but within the humanities as a whole. We will examine 12 filmic examples (ranging from early silent film to contemporary popular cinema) alongside a selection of theoretical and historical readings. The course will impart the basic skills needed to write in a critical, reflective, and rigorous way about film. For those interested in film in the context of any humanities field. Enrollment limited to 19 first year students.

GRMN 0750E. Reading Film: An Introduction to German Cinema.
In this course, we will trace the literary and cinematic depiction of mystery and mayhem from the earliest manifestations of the genre to the present. Texts will include examples from the "Golden Age," the hard-boiled mode, the police procedural, and historical crime fiction. Enrollment limited to 19 first year students.

GRMN 0750F. Historical Crime Fiction.
There is almost no time period that has not been covered by historical crime fiction. From ancient Egypt and Rome to 18th century China, historical crime fiction has complemented and contested our knowledge of history. In this seminar, we will do some extensive time travel and explore how crime fiction explores the past and challenges our understanding of bygone times. Readings of texts by Ellis Peters, Umberto Eco, Peter Tremayne, Lindsey Davis, Alan Gordon, Robert van Gulik, Laura Rowland, among others.
GRMN 0900B. Great Works from Germany.
A cultural and historical analysis of some of the most significant German texts from the past two centuries. Writers: Lessing, Thomas Mann, Günter Grass, Christa Wolf. Philosophers: Kant, Marx, Nietzsche, Freud.
Sections: Enlightenment and its limits, liberation and oppression, and love and death. Students will give one presentation in class and write a final essay. In English.

GRMN 0900C. Introduction to German Literature.
This survey course will give a historical overview of the main periods and genres of literature in German from the eighteenth to the early twentieth century. We will also consider how literature relates and contributes to the cultural, intellectual, and political history of Germany. In English.

GRMN 0900D. History of the Holocaust (JUDS 0902).
Interested students must register for JUDS 0902.

GRMN 0990B. The German Novel in the 19th and 20th Century.
The modern and postmodern German novel provides some of the most intriguing reading in the history of Western culture. From 19th century realism to 20th century postmodernism, these authors have commented on political events, provided historical hindsight, analyzed the German psyche, and initiated literary innovations that would have a profound impact on world literature and captivate readers worldwide. Works by Fontane, Kafka, Hesse, Mann, Grass, and Sebald, among others. In English.

GRMN 0990C. Introduction to Scandinavian Literature.
An introduction to major works of Scandinavian writers, painters and filmmakers over the past 150 years. Figures include Kierkegaard, Ibsen, Strindberg, Munch, Hamsun, Josephson, Sodergran, Lagerkvist, Vesaas, Cronqvist, August and Vinterberg, as well as children's books by Astrid Lindgren and Tove Jansson. In English.

GRMN 0990D. The German Novel From Classicism to Realism.
What is a novel, and how did it emerge as such a dominant genre in the course of the 18th and 19th centuries? This course introduces some of the most important German prose works prior to the 20th century, including texts by Goethe, Novalis, Hoffmann, Droste-Hülshoff, and Stifter. We will begin with the novel's earliest classical forms, follow its development in tandem with genres such as the fantastic tale and the novella, and end with a discussion of realism. All readings and discussions in English; no German language proficiency required.

GRMN 0990E. The Rhine River: An Aesthetic, Environmental, and Political History.
From Hölderlin to Hugo, cannonballs to canalization, this course examines representations of Europe's most important waterway in the modern period. Although it has long been seen as a "natural" border between France and Germany, the Rhine River has been anything but undisputed. Both the French and German nationalist movements claimed the river as their own, spawning a bi-lingual catalogue of songs, poems, and historical legends. We will approach the Rhine from an interdisciplinary perspective, with readings from economists, environmentalists, historians, and cultural studies scholars. We will be aided by a vast array of primary source material. Taught in English.

GRMN 0999M. Marx and Money in Modern Germany.
No critique of capitalism has been more enduring than Karl Marx's nineteenth-century account of European finance and industry. We will engage Marx's work alongside a close reading of the societies Marx sought to critique. We will also contextualize the work of Marx's contemporaries and successors, including Engels, Simmel, Sombart, as well as look at the continuation of the "capitalism debate" in Weimar and Nazi Germany. Our focus on the societies in which these writings emerged, allows for a less obstructed view onto these economic and social ideas. Issues of religion, gender, politics, militarism, and globalism will be considered. In English.

GRMN 1000A. Introduction to German Critical Thought (Kant to Freud).
One of the great intellectual pleasures in our short lives is to engage with the tradition of modern German critical thought. This course introduces all Brown students who do not wish to deprive themselves of this complex pleasure to some of the giants who have prompted us to reconceptualize the way we think about the world and our tenuous place within it, from questions of what we can know to a critique of political economy and the dark side of our sexuality. Authors to be studied include Kant, Hegel, Marx, Nietzsche, and Freud. Undergraduates from diverse fields welcome. In English.

GRMN 1090. Advanced Written and Spoken German.
Designed to increase the range, fluency, and accuracy of idiomatic expression through written and oral practice, and to improve students' reading skills of progressively more difficult authentic texts from a variety of subject areas. Discussions, group projects, and oral reports. Review of selected grammar topics, systematic vocabulary building. Not to forget: "Deutsch macht Spass!" In German. Recommended prerequisite: one course in the GRMN 0600 series.

GRMN 1200C. Nietzsche - The Good European.
Nietzsche prided himself on his transnational identity. He loved German literature and was himself a writer of the first rank. Yet he was critical of the culture and the politics of his nation and he loved the literatures and cultures of many other nations. We will study his philosophical works with a view to his criticisms of Deutschtum and his affirmation of other traditions —starting with the Greeks, for by profession he was a classicist. We will also study Nietzsche's journeys—for he was convinced that the places in which he thought and wrote were essential to his thinking and writing. Enrollment limited to 40.

GRMN 1200D. Repetition: Kierkegaard, Nietzsche and Freud.
A study of the concept and the textual practices of repetition. We will consider the relation between repetition and transcendence, history, memory, and art. The course will focus on how the category and the event of repetition problematize identity, interpretation, and expression. Issues include religion and aesthetics of repetition (Kierkegaard); history and the eternal return (Nietzsche); repetition compulsion and the death drive (Freud). We will especially be interested in how the theme of repetition informs the way these thinkers write and what problems this poses to interpretation and understanding. In English.

GRMN 1200I. Show Trials: The Aesthetics of Law in Literature and Film.
J’accuse! Zola’s public denunciation of the French President, accusing him of anti-Semitism and unlawful imprisonment, has become emblematic for theatrical politics and dramatized trials. Even though their outcomes were decided in advance, the performance of show trials—from the Dreyfus affair to the Auschwitz trials and the prosecution of Saddam Hussein—have been indispensable for the political formation of society. In this course, we will analyze the literary, cinematic, and philosophical reception of such performative trials, ranging from Kafka’s Trial and Arendt’s Eichmann in Jerusalem to Dreyer’s The Passion of Joan of Arc and Kramer’s Judgment at Nuremberg.

GRMN 1320A. German Aesthetics from Lessing to Heidegger.
A survey of some of the most important German-language contributions to theories of art. Authors include Lessing, Kant, Schiller, Hegel, Nietzsche, Benjamin, Adorno, and Heidegger. Emphasis will be on how aesthetics intersects with literary theory and the idea of critique, and also how it contributes to discussions about knowledge, subjectivity, and power. All readings in English translation.
GRMN 1320C. Goethe's Children.
The name "Goethe" looms large over modern German literature, but what are the founding figures without the daughters and sons that question and challenge their authority? This course offers a broad introduction to Goethe's life and works, focusing on themes and questions of youth and childhood in his writings. Readings include canonical works such as The Sorrows of Young Werther, Iphigenia in Tauris, Wilhelm Meister's Apprenticeship, Faust, and Elective Affinities. We will also examine Goethe's legacy by looking at musical, theatrical, and philosophical responses to images of youth and childhood in his works. [Taught in German; all students welcome.]

GRMN 1320D. Goethe.
Selected readings of Goethe's theater plays, novels, and poetry. Explores the meaning of reading Goethe today, at the 250th anniversary of his year of birth, and investigates the activities around the celebration of this anniversary. Time permitting, we consider versions of Goethe's texts in film and other media. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1320E. Classical German Literature: Goethe und die Klassik.
The anthology and aesthetics of Weimar Classicism. Readings of major works by Johann Wolfgang Goethe and Friedrich Schiller, with discussion of selected texts by Herder, Humboldt, and Kant. In German. Pre-requisite: GRMN0600 or placement. Prerequisite: GRMN 0600 or permission.

GRMN 1320F. Eighteenth-Century German Aesthetics.
A survey of important aesthetic writings from the period, including some texts of Winckelmann, Lessing, Schiller, Goethe, and Hamann. Major questions to be treated include the role of imitation, the concept of form, the relationship between the beautiful and the good, and formation of aesthetic judgments. Course will conclude with selections from Kant's Critique of Judgment. In English.

GRMN 1320G. Drama and Religion.
Lessing used the stage as his "pulpit" when forbidden to publish in religious disputes. Some dramatists addressed particular religious views in tragedies or satiric comedies; others staged religious themes more generally or in metaphysical imagery. We examine the variety, nature and context of these stagings in texts by major German authors: L. Gottsched, Gellert, Lessing, Schiller, Goethe, Kleist, and Hölдерlin. In English, with a German section (TBA) for those able and interested.

GRMN 1320I. What is an Image? German Aesthetics and Art from Lessing to Heidegger.
A survey of some of the most important German-language contributions to theories of art, alongside a discussion of some major art-works from the German tradition. Authors include Lessing, Kant, Schiller, Hegel, Nietzsche, Benjamin, Adorno, and Heidegger. Emphasis will be on how aesthetics intersects with literary theory and the idea of critique, and also how it contributes to discussions about knowledge, subjectivity, and power. All readings in English translation. In English.

GRMN 1320O. Freudian Inspirations: Psychoanalysis and the Arts.
This course engages with the central concepts and motifs of Freud's psychoanalytic theory and how they relate to works of literature, art, and film. What do Sophocles, Ovid, and Hoffmann tell us when we read Oedipus Rex, The Metamorphoses, and The Sandman today? How does our understanding of these texts differ from or resemble Freud's reading of them? And when we engage art that cites psychoanalytic concepts—such as Hitchcock's Marnie or Lars von Trier's Melancholia—do we recognize the Freud we encounter in our readings of his own texts? (In English; all students welcome)

GRMN 1320P. Friends and Adjuncts: J. P. Hebel, Kafka, Benjamin, Sebald.
He was a favorite among seminal German writers and thinkers such as Goethe, Kafka, and Walter Benjamin. Nonetheless, Johann Peter Hebel's work remains largely unknown outside of German-speaking countries and is generally ignored by the academy. In this seminar we will read Hebel's poetry and prose alongside some of the seminal works of those who wrote and thought with him as unexpected friends or adjuncts. In English.

GRMN 1320S. Reading Friedrich Hölderlin: An Introduction.
The course is intended as an introduction to the reading of Hölderlin as a poet, so the focus will be on close reading and on intense and detailed discussions of the texts in class. To that end it is indispensable to study the texts in the original German. Available English translations will be used in addition. Of course, linguistic difficulties in understanding the texts (which are, by the way, by no means restricted to non-German speakers) will themselves form an integral part of the seminar discussions. Critical texts will be read in English.

GRMN 1320T. Race in the Age of Reason.
What does it mean to say that "race" was invented in the European Enlightenment? How might studying this historical emergence help us to understand race and racism today? We will examine some of the writings that contributed to the construction of race as a philosophical, anthropological, and biological category in the 18th century (including Kant, Herder, Blumenbach, Hume, and the French Encyclopédistes). We will also consider, alongside this primary material, how literature of the period recapitulated but also challenged concepts of race (Mary Shelley's Frankenstein, Kleist's "Betrothal in Santo Domingo"). Taught in English, with all texts available in translation.

GRMN 1330A. Crime and Punishment- Introduction to German Mystery Texts and Films.
This course provides an exploration of German crime, detective and mystery texts and films ranging from the early 19th century to contemporary fiction. In addition to exercising hermeneutic skills, this course aims at improving proficiency in oral and reading comprehension, as well as speaking and writing skills, with an emphasis on vocabulary expansion, advanced Grammar review and stylistic development. This course is recommended for students interested in a combined introduction to literature and high-level language learning. Prerequisite: GRMN 0600 or permission.

GRMN 1330B. Guilt Management: Postwar German Culture.
The central theme of postwar German Culture, from the so-called "Zero-Hour" in 1945 to postunification, was dealing with the Nazi past. We discuss how writers, filmmakers, and critics tried to establish a public discourse on guilt. Films and readings by Mitscherlich, Syberberg, Reitz, Müller, Grass, Christa Wolf, Sichrovsky, Biller, Chaim Noll, and others. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1330C. German Romanticism: Texts, Contexts, Legacies.
An Introduction to the period of literary, artistic, and philosophical production known as German Romanticism. We will read some major texts of German Romanticism, but also discuss artistic, cultural, and political developments in the period. The goal is to understand why this particular moment in literary history has become such a pivotal one and why contemporary writers continue to draw on it. All texts read in translations. No German required.

GRMN 1340A. Crime and Punishment- Introduction to German Mystery Texts and Films.
This course provides an exploration of German crime, detective and mystery texts and films ranging from the early 19th century to contemporary fiction. In addition to exercising hermeneutic skills, this course aims at improving proficiency in oral and reading comprehension, as well as speaking and writing skills, with an emphasis on vocabulary expansion, advanced Grammar review and stylistic development. This course is recommended for students interested in a combined introduction to literature and high-level language learning. Prerequisite: GRMN 0600 or permission.

GRMN 1340B. Guilt Management: Postwar German Culture.
The central theme of postwar German Culture, from the so-called "Zero-Hour" in 1945 to postunification, was dealing with the Nazi past. We discuss how writers, filmmakers, and critics tried to establish a public discourse on guilt. Films and readings by Mitscherlich, Syberberg, Reitz, Müller, Grass, Christa Wolf, Sichrovsky, Biller, Chaim Noll, and others. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340C. Jahrhundertwende 1900.
Modernism and its discontent in German literature around 1900. Examines naturalism, Jugendstil, Dada, and early expressionism. Poetry, fiction, and drama by Nietzsche, Th. Mann, Stefan George, Rilke, Kafka, Wedekind, Hofmannsthal, Schnitzler, Hauptmann, and others. Operas by Wagner and R. Strauss. In German. Prerequisite: GRMN 0600 or permission.
Since the end of the 1970s, East and West German prose has tended to concentrate more on everyday life than on the overbearing questions of memory that were so central to immediate postwar authors. The changing function of literature in Germany is explored by reading representative prose fiction by major authors such as Becker, Delius, Hein, Strauss, and Walser. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340I. Turn of the Century.
The most important issues in literature around 1900 will be discussed: the critique of language, media, psychoanalysis, urbanization, technical progress, the construction of the subject and a growing sense of isolation. Texts by Hofmannsthal, Rike, Schnitzler, Robert Walser, Georg Simmel, Freud, Nietzsche, Hermann Bahr and others. In German. Prerequisite: GRMN 0600 or permission.

We will read a selection of texts by Kafka (including short stories, a novel, and journal entries) in order to explore his importance for the aesthetics of modernity. Topics include: representation of the law, literature and religion, the role of the paternal, and guilt. Frequent short papers based on close reading of texts, and a longer final paper. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340K. Unmittelbar nach 1945: Literatur und Film in Deutschland.
Often called "Zero Hour," the period immediately following the end of the Second World War was one of turmoil and uncertainty in Germany. An enormous cultural production sprang up under extremely difficult conditions. Texts and films by Heinrich Böll, Wolfgang Borchert, Alfred Andersch, Wolfgang Staudte, Helmut Käutner, and others. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1340L. The Modern Period.
Explores the fascinating flowering of modernity in Germany, including the period around 1900 (adolescent Angst and the new Broadway version), Weimar culture (revolution, women's emancipation), Nazi culture, and exile literature in socio-historical context; including examples from film, art, and popular culture. Authors may include: Wedekind, Brecht, Kafka, T. Mann, Toller, Keun. In German. Recommended prerequisite: GRMN 0600 or equivalent.

GRMN 1340M. Kafka's Writing.
Writing—vocation or duty, gift or curse, poison or antidote? This course provides an introduction to Kafka's stories, novels, journal entries, and letters, with a focus on his complicated, tortured relationship to the idea and practice of writing. We will explore how the difficulties of this relationship generate an enigmatic, tragi-comic oscillation between hope and despair that continues to fascinate readers today. This is a writing-intensive course, and the frequent short assignments will involve drafts, revisions, and individual consultations, with the aim of getting you to think critically about your own relationship to writing about literature. In English. Enrollment limited to 40. First year students require instructor permission.

GRMN 1340Q. Vergangenheitsbewältigung: German Literature of Memory.
This course will examine one of the most loaded terms in German Studies, "the coming to terms with the past" or rather "the mastering of the past," which concerns German strategies of dealing with the atrocities of World War II and the Holocaust. Thus, this course will focus on the literary engagements with issues of trauma, memory, and remembrance. Authors include Adorno, Celan, Klüger, Grass, Weiss, Wolf, Müller, Timm, Kluge, and Sebald. The course will also have a closer look at contemporary debates regarding "Vergangenheitsbewältigung" and the culture of memory in Germany itself. In German. Prerequisite GRMN 0600.

GRMN 1340V. Mis(s)Education: Feminist Undoings of the Bildungsroman.
Declared central to Western history and culture by Freud, the Oedipal complex survived in manifold literary reiterations—particularly the Bildungsroman, which privileges the father as primary educator and eventual adversary. This course challenges the genre’s patriarchal premise by shifting focus to female representations, in order to reconsider the traditionally ‘masculine’ discourse on Bildung. As a dynamic construct, femininity allows to dispute the historically patriarchal paradigm of knowledge acquisition and the precarious position of woman beyond psychoanalysis. Departing from Goethe’s Wilhelm Meister’s Apprenticeship, we will open the genre’s paternal margins toward works such as Arendt’s Eichmann in Jerusalem and Satrapi’s Persepolis.

GRMN 1341A. Kafka (Im)paired.
Kafka’s writing might be profoundly singular, but it also challenges us to think about dualities. His texts teem with thematic dyads and character pairs that are as memorable and genial as they are incommensurable, uncanny, absurd, and disastrous. Our seminar takes on these unlikely couplings alongside the question of what it means to ‘pair’ Kafka with philosophy, film, history, post-modernity, etc. Readings and discussions in English, with German originals available to students with the necessary proficiency.

GRMN 1341D. Philosophierende Hunde – Philosophizing Dogs.
In Plato’s Republic the guardians, situated at its border, responsible for protecting its inside, and defending the Polis against threats from outside, are not only compared to dogs, embodying peacefulness and aggression, but also have to love to learn, in other words to be philosophers. This seminar will follow traces in both philosophical and literary texts, of the figure of philosophizing dogs (and their relation to language). Texts to be discussed include Homer, Odyssee (on Ulysses’ dog Argos); Sextus Empiricus, Cervantes, E.T.A. Hoffmann, Franz Kafka, and Francis Ponge. Texts in English and German, class taught in German.

GRMN 1341E. Prague Circles.
During the early twentieth century, Prague marked one of the most diverse places for scientific, philosophical, and literary production, where both tensions and exchanges spanned disciplines, as well as linguistic and cultural traditions. This course will address the implications of this heterogeneous environment for modern thought through readings in literary writers (Kafka), female intellectuals (Fanta), philosophers, Zionists, and scientists (Einstein). Emphasis will be placed upon German-Jewish thinkers, so as to approach "the possibility of intervention" that arose from the specific "situation of the German language in Czechoslovakia" that Deleuze and Guattari had explored as the situation of a "minor literature."

GRMN 1440A. Dada-Performance and Digital-Interactivity.
This course investigates the invention of performance art in German Dada and its legacy and further development in contemporary interactive art in digital media. Both phenomena are discussed with respect to their aesthetic, philosophical, and social roots and intentions. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440C. Poetry and the Sublime.
We will examine some theories of the sublime, and read them alongside selected poets who take up certain related questions about representation, perception, and power. The goal will be to come to a better understanding of why the sublime is important as a category in thinking about the relationship between literature, philosophy, and history. Texts may include: Longinus, Schiller, Kant, and Paul de Man on the theory of the sublime, and poetry by Hölderlin, Wordsworth, Rilke, and Celan. In English; reading knowledge of German helpful but not required.

After the failed revolution of 1848, the German bourgeoisie had to curb its desire to control the sphere of politics. At the same time, the effects of modernization started to manifest themselves in full force. We will discuss how the revolutionary changes of the second half of the 19th century in Germany were worked through in literature, and specifically in the realist novella. Readings by C.F. Meyer, Keller, Stifter, Storm, Raabe, Fontane, Mörke, and Heyse. In German. Recommended prerequisite: one course in the GRMN 0600 series.
GRMN 1440E. Märchen.
Fairy tales in German are usually associated with the Grimm brothers, but there is a rich tradition of popular (Volksmärchen) and literary (Kunstmärchen) fairy tales going back further and continuing into the present. We read a representative sample, consider typical features of the genre, and discuss the role of Märchen in shaping identity. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440F. Lyric Poetry From the Middle Ages to the Present.
Broad exploration of German poetry, including intersections between poetry/music/art: spiritual/worldly (medieval troubadours, Baroque); classical Greece/modern Germany (Goethe, Schiller, romantics, art songs); poetry/politics (Heine, Brecht), expressions/symbols (Rilke, expressionism), poetry after Auschwitz (Celan, Bachmann), contemporary reflections on history (V. Braun), poetry between cultures (Turkish-German poets, hip-hop). Intensive reading, discussions and vocabulary building. In German. Recommended prerequisite: one course in the GRMN 0600 series.

GRMN 1440G. Talking Animals and the Politics of World Literature.
We have encountered talking animals within literature for over four thousand years. Alongside the Fables of Aesop, there are comparable animal stories from Ancient Babylon, Egypt, and from the Indian-Arabian-Persian cultural space, whose distribution was just as far-reaching. Animal fables appear easy to understand and universally valid. But do we really understand what it means when animals talk in texts? This course will employ current approaches to human-animal-studies alongside concepts of world literature to examine why animals are made to talk, what functions animal stories have, and what the conditions for their dissemination are. [In English; all Brown students welcome.]

GRMN 1440H. Projections of America.
Since its discovery, ‘America’ has served as a projection screen for a variety of images of the ‘New World’: as utopia, as harbinger of modernity, and as the origin of political, economic, and cultural imperialism. Readings of the changing and shifting image of America in German literary and journalistic texts from the 18th century to the present (Lenau, Goethe, Heine, Sealsfield, May, Frisch, and others). In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440L. German Lyric Poetry: From Goethe to Heine.
A survey of German lyric poetry during what Heine calls “die Kunsthälfte.” Focus on rhetoric of the lyric: apostrophe, prosopopeia, metaphor, metonymy and allegory. Close reading, frequent writing assignments. Reading in German, class discussion in English.

GRMN 1440N. Kunstmärchen: the Literary Fairytale in the Nineteenth Century.
“Das Kunstmärchen” or literary fairy-tale occupies a central place in the literature of late romanticism. Focusing on major examples from writers such as Tieck, Eichendorff, and Brentano, we will examine how the content and the representational structure of these texts contribute to debates on categories like the “natural,” the “fantastic,” and the “moral.” In German. Prerequisite: GRMN 0600 or permission.

GRMN 1440O. Modern German Drama.
Explores the fascinating modern German dramatic tradition from the 19th century to the present, emphasizing plays that are still a part of the stage repertory today and authors that have exerted a strong international influence. Authors may include: Büchner, Wedekind, Brecht, Toller, Dürenmatt, Frisch, Weiss, Heiner Müller. In German. Recommended prerequisite: GRMN 0600 or permission.

GRMN 1440P. Heroes, Failures and Other Peculiar Characters-The German Novel from Goethe to Kafka.
Readings in the tradition of the German novel, including the Bildungsroman, Realism and modernist fiction. Consideration especially of failed heroes and the failure of the novel genre. Authors include Goethe, Hoelderlin, Novalis, Stifter, Fontane, Musil and Kafka. Readings and class discussions in English.

GRMN 1440S. Grimm’s Fairy Tales.
"One doesn't know the sorts of things one has in one's house," says the servant girl in Kafka's "A Country Doctor," as a stranger, who will soon act violently towards her, emerges on all fours from an unused sty. The precarious moment of finding more than one seeks in one's midst is among the key motifs of Grimm's "Household Tales" that we will trace, following the way they move writers of literature, psychoanalysis, and critical theory. Reading the Grmmes among others, we will find: what was "once upon a time" is not finished, nor can these uncanny tales be domesticated.

GRMN 1440W. The European Novel from Goethe to Proust (COLT 1420).
Interested students must register for COLT 1420.

GRMN 1440X. "Stranger Things: The German Novella".
Goethe’s famous description of the novella as an “unheard-of event” holds true to this day: scandals, murder, and the supernatural abound in this seminal German genre. Both meticulously structured and notoriously difficult to define, the novella as a form mirrors the paradoxes of its narratives. In this course, we will ask how form and content come together in the novella to engender strange occurrences that vacillate between everyday experiences and fever dreams. What is it about the German novella that creates such a particular sense of unease, and how does this genre mediate modern experience? [In English. All students welcome.]

This seminar investigates the relays between the postal system (18th – 20th century) and German literature, philosophy, as well as love. We will read selected correspondence and literary prose emulating or reflecting the epistolary form. Writers include Goethe, Kafka, Bachmann, and Celan. In English.

GRMN 1441A. Theater and Revolution (COLT 1411B).
Interested students must register for COLT 1411B.

GRMN 1441C. Introduction to German Romantic Poetry.
German Romanticism reflects a field of writing in which poetry was as powerful and seductive as it was riven by conscious conflict. Through numerous experiments with open forms, Romanticism counteracts classical unities and closure. In this course we will closely read and discuss – with occasional turns towards music and the visual arts – a representative selection of poems by Brentano, Eichendorff, Günderode, Heine, Novalis, among others. In English.

GRMN 1441F. On Gifts and Givens.
What could it mean, "to give"? From the outset of “The Gift: Forms and Functions of Exchange in Archaic Societies,” Marcel Mauss underscores the value of the gift in economic terms that the notion of giving, taken apart, would have to exceed. Any given phenomenon that happens to appear, for example, no longer belongs to a scheme of reciprocity and surpasses what anyone can grasp: otherwise, there could be no different takes on it. Throughout this course, literary, anthropological, and theoretical texts will be examined to address the problems that present themselves when giving is at stake.

GRMN 1441H. Goethe Amongst Others.
In the first book of Goethe’s epistolary novel The Sorrows of Young Werther, the protagonist describes his state of mind as follows: “All my heart was swelling at that moment; the memories of many a past thing came rushing to my soul [drängte sich an meine Seele], and tears came to my eyes.” In this class, we will keep one eye on categories of German literary history: Sturm und Drang, Weimarer Klassik and Romantik, but ultimately let both our eyes be closely guided by the language of these texts. Students will deepen their knowledge of the German language and gain familiarity with key texts and authors of the so-called “Age of Goethe” (1770-1830). Texts by Goethe, Schiller, Lenz, Wieland, Tieck, Karoline von Günderode, Bettina von Arnim and others. Taught in German; GRMN0500 or equivalent required as pre-requisite.
GRMN 1441I. Insects in Literature
Insects abound in literature; not the least since the comparison of poets with bees in Plato’s Ion. This seminar will discuss the Praying Mantis in French entomologist’s Jean-Henri Fabre’s writings, in a novel by Maurice Blanchot, and in poems by Paul Celan; bees in Jakob von Uexküll and Martin Heidegger, as well as the discovery of a “language” of bees by Karl von Frisch (in 1923); and flies in a novella by Gottfried Keller, in a short prose piece by Musil, and in a poem by Heiner Müller. Taught in English.

GRMN 1450A. German-Jewish Literature.
From emancipation to anti-Semitism and from the “Golden Age” to the Shoah, Jewish life in Germany has experienced extremes comparable to no other cultural exchange. In this class, we will explore the German-Jewish encounter by reading literary texts written by German-Jewish authors. Readings by Lessing, Mendelssohn, Heine, Kafka, Jurek Becker, and others. In English.

GRMN 1450B. Die Berliner Republik und die Vergangenheit.
The opening of the Berlin Wall and the reunification of Germany brought with them a dramatic rethinking of both the past and the present of the German nation. Literature, film, architecture, visual art, and music have played important parts in this process. This course will consider a range of documents from the contemporary Berlin Republic and the way they negotiate the Cold War and Nazi pasts. All readings and class discussion in German. Prerequisite: GRMN 0600 or equivalent. Enrollment limited to 20.

GRMN 1450C. National Socialism and the Shoah in Recent German Prose.
Since Germany’s reunification in 1990, German discourse on National Socialism and the Shoah has changed significantly. With the generation of the eye-witnesses disappearing, the third generation after World War II renegotiated issues such as perpetratorship, guilt, and responsibility on the one hand, wartime-suffering on the other. During the last decade, German literature represented voices from different generations/groups. This seminar will examine literature by Grass (b. 1927), Klüger (b. 1931), Timm (b. 1940), Schlink (b. 1944), Biller (b. 1960) and Erpenbeck (b. 1967) to situate these literary interventions within the framework of characteristic debates of the last few years. Enrollment limited to 40.

GRMN 1450F. 20 Years After: The End of GDR and German Reunification.
The fall of the Berlin Wall heralded the German reunification rather than the reformation of the GDR as an example of “democratic socialism.” The 20th anniversary gives reason to discuss the development of Germany since 1990. Readings of Volker Braun, Christa Wolf, Thomas Brussig, Ingo Schulze, Clemens Meyer, Yadé Kara. Films: Goodbye Lenin, Das Leben der anderen, Willenbrock. Issues discussed: Cold War, Perestroika, Reunification, East-/West-German identity, Migration and Globalization. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1450G. Love and Death.
The course will examine the theme of love and death in four texts from around 1800: Lessing’s Emilia Galotti, Goethe’s Werther, Kleist’s Penthesilea and Büchner’s Woyzeck. We will focus on historical changes in the understanding and theory of emotions. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1450H. Images of America in German Literature.
What was, has been, and is America to Germans? Some believe America to be moving in the right direction, and others imagine America as thoroughly evil from the very beginning. Literature, however, does not say this or that. It displays complex images, plays with prejudices, idols, ideals, and stereotypes to show their inner mechanisms and conceptual limits. And, of course, it generates images and counter-images. By examining some canonical texts on this topic, the seminar reconstructs the major perceptions, attributions and ascriptions with which German authors over times have envisioned the United States – even without travelling there.

GRMN 1460C. German National Cinema from 1917 to 1989, and Cold War Germany in Film.
Examines three phases of German national cinema in competition with Hollywood’s early dominance of film production, from the founding of the UFA in 1917 through National Socialist Cinema, the “New German Cinema,” and the cinema of East Germany. Explores representations of Germans during the Cold War, 1949-1989, a mythical Germany cast as the locus of “world evil.” Weekly screenings. In English.

GRMN 1660B. Berlin: A City Strives to Reinvent Itself.
Contemporary Berlin buzzes with energy, yet this metropolis is characterized by the legacy of fascism and divided government. The city as cultural space will be interrogated in interdisciplinary ways. Topics range from Weimar culture and Nazi architecture to the Cold War and German reunification. In English with possible extra session for students who have completed GRMN 0400 or higher.

GRMN 1660C. German Culture in the Nazi Era.
Explores the variety and the contexts of German cultural production during the Nazi era. We will examine party sanctioned mass-mediated culture in the Third Reich including literature, film, theater, and public spectacle; as well as “unofficial” cultural productions including exile literature, literature of “inner emigration,” “degenerate” art, and concentration camp poetry. We’ll inquire into the effects of the political ministration of culture in the Nazi era, asking to what degree continuities in cultural production were sustained after 1933, and investigating the hallmarks and the legacies of a distinctive “Nazi culture.” Previous course work in German history and/or the Holocaust recommended but not required. In English.

GRMN 1660F. After Hitler: German Culture and Politics, 1945 to Present.
From the country that produced Hitler and the Holocaust to today’s democratic, peaceful Germany, this course explores the enormous cultural and political transformations since 1945 in both German states and reunified Germany. Topics include: responses to the Nazi past, Germany and Europe, protest movements, migration patterns, women, popular culture, socialism in East Germany, political and intellectual debates, recent assertions that Germany is now a “normal” country. In English.

GRMN 1660G. Kafka.
This course will analyze both the uncanny and comical aspects of Kafka’s writings. It offers an exercise in literary analysis discussing methodological approaches as diverse as literary theory, media studies, and cultural studies. It also presents an overview of one of the twentieth century’s most haunting writers who in many ways determined for our postmodern mind what we call “literature”. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1660H. Literary Discourse of Minority Cultures in Germany.
During the last thirty years or so, strong minority cultures have emerged in Germany. Writers from diverse cultural backgrounds have given voice to the problems and challenges of living among a dominant German culture that only reluctantly started to listen to their concerns. Authors discussed include Schami, Oren, Atabay, Discherit, Monikova, Müller, and others. Focuses on questions of cultural and ethnic identity as expressed in and through literary texts. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1661I. Literature and Other Media.
When looking at literature and other media, the question is not, whether one will be replaced by the other, but rather, what one medium can do that the other cannot do so well or at all. Study of twentieth-century Media Theory Made in Germany with special emphasis on the relationships of literature to audio-visual media. Readings by Brecht, Benjamin, Adorno, Enzensberger, Kittler, Hörsch and others. In English.

GRMN 1660K. Thinking After Philosophy.
What does it mean when, after Nietzsche, we speak of the “end of philosophy”? Contemporary critical discourse in many fields of the Humanities and social sciences is profoundly impacted by a skeptical break with philosophical traditions that can be traced back to 18th- and 19th-century Germany. This course will follow the development of this break through a range of major paradigms, schools, and critical methods from the time of Goethe to the twentieth century. All readings and class discussion in English. First year students require instructor permission to enroll.
GRMN 1660L. German Jews and Capitalist Markets in the Long Nineteenth Century
This course focuses on the commercial lives of German Jews, 1789-1918. While the classic historiographical debates surrounding assimilation, emancipation, and anti-Semitism will not be ignored, our spotlight will remain on capitalist markets, where Germans and Jews most often encountered one another. Our study will begin and end in the Franco-German borderlands, with revolution and warfare. In between, we will traverse the German landscape, meeting, among others, bankers in Frankfurt, wine merchants in the Rhineland, and department store magnates in Berlin, in all an attempt to understand the complexities of cross-cultural (dis)integration. Readings and instruction in English.

GRMN 1660P. Having Beethoven Over in 1970.
In 1970, Beethoven arrives in Bonn to visit his birthplace. A tour guide shows him around. It is a journey that begins with the museum one knows, but which gets weirder with each subsequent room. There is a jukebox in the basement. A gully is burning. There are strange utensils on display in the kitchen. As the demarcation between documentary and fiction become blurry, we realize that somebody must have added more rooms to the original floorplan. Our course will analyze TV crime series, Hollywood feature films, the Peanuts, radio pieces, and artworks surrounding Beethoven's bicentennial. Taught in English.

GRMN 1660Q. Film and the Third Reich.
This course explores the cinema of the Third Reich as well as filmic responses to World War II and the Holocaust. Sections will be dedicated to propaganda films by Leni Riefenstahl and others; to the relationship between Third Reich cinema and Hollywood; to propaganda films produced by the Allied forces, and to movies about the Holocaust such as Shoah and Schindler's List. We will discuss key concepts of film theory, cinema's political efficacy, Holocaust representation in film, music, and language, and questions of trauma, commemoration, and victimhood. [Taught in English; students from diverse fields welcome.]

GRMN 1660R. Freud.
Introduction to Freud's theories of the unconscious and its manifestations, Freud's thinking on culture and aesthetics, his theory of sexuality, his view of religion, and of fascism. In English.

GRMN 1660S. Mord und Medien. Krimis im intermedialen Vergleich.
The genre of the mystery novel has proven exceedingly productive in German speaking countries. At the same time, the new and the newest media have discovered the mystery genre as one of the most appealing narrative structures in contemporary culture. Readings of mystery narratives in book form, on television, on CD-ROM, and on the Internet. In German. Prerequisite: GRMN 0600 or permission.

From emancipation to anti-Semitism and from the 'Golden Age' to the Shoah, Jewish life in Germany has experienced extremes comparable to no other cultural exchange. Widespread philo-Semitism and the official taboo on anti-Jewish sentiments indicate that the relationship between Jewish and non-Jewish Germans today remains one of mutual nonunderstanding and distrust. Texts by Lessing, Mendelssohn, Heine, Kafka, and others. In English

GRMN 1660U. What was Socialism? From Marx to "Goodbye Lenin".
The international socialist movement was born in Germany, and many of Germany's most important cultural figures were attracted to its striving for social justice. But socialism seems to have come to a tragic end. Course includes theoreticians such as Marx and Luxemburg, writers such as Heine and Brecht, and a focus on East German culture (film, art, literature) and its aftermath since the fall of the Berlin Wall. In English.

GRMN 1660V. Nietzsche.
This course will provide an introduction into Nietzsche's thinking. Discussion of the major works from The Birth of Tragedy and Beyond Good and Evil to Thus Spoke Zarathustra. No pre-requisites. In English.

GRMN 1660W. Early German Film and Film Theory.
We will study the interference/interface of cinema and theory in the 20th century. Includes an introduction to classical German cinema and films by critics such as Eisenstein, Balazs, Vertov, Arnheim, Kracauer, Benjamin. In English.

GRMN 1661A. Race and Classical German Thought.
Thought about race has a complex history in modern intellectual culture; crucial paradigms regarding culture, identity, and biology have roots in the philosophy, science, and arts of eighteenth-century Germany. This course will give in-depth consideration to ideas and paradigms from classical German intellectual culture, and will trace their resonances within African, Francophone, French, and North American race theory in the twentieth century. All readings in English. Not open to first year students.

GRMN 1661E. Germany, Alcohol, and the Global Nineteenth Century.
This course examines the German "long nineteenth century" through the lens of the production, sale, and consumption of alcohol. The cultural resonance of alcohol allows us to better situate Germany in an increasingly global context, where its exchange reflected broader patterns of modernization, social transformation, and nationalism. Whether brewing beer in Chinese Tsingtao, harvesting grapes in California's Napa Valley, or celebrating Purim with wine in Palestine, Germans engaged the nineteenth-century world through their own historical traditions and trades. Our endeavors will be aided by the remarkable "Alcohol and Addiction Studies" special collections at the John Hay Library.

GRMN 1661F. Music, Religion, Politics (MUSC 1675).
Interested students must register for MUSC 1675.

GRMN 1661G. The Case of Wagner (MUSC 1640G).
Interested students must register for MUSC 1640G.

GRMN 1661L. The Promise of Being: Heidegger for Beginners (COLT 1610V).
Interested students must register for COLT 1610V.

GRMN 1700A. Introduction to Yiddish Culture and Language (JUDS 1713).
Interested students must register for JUDS 1713.

GRMN 1770. Introduction to Yiddish Culture and Language (JUDS 1713).
Interested students must register for JUDS 1713.

GRMN 1800. Posthumanism and the Ends of Man (COLT 1814Y).
Interested students must register for COLT 1814Y.

GRMN 1800A. Berlin: Dissonance, Division, Revision (COLT 1813J).
Interested students must register for COLT 1813J.

GRMN 1900A. The Weimar Republic (1918-1933).
Advanced students of German culture will pursue their own interests in researching this fascinating period in German culture and political history. Common readings, general discussions, and individual class presentations will facilitate the development of individual projects. Covered areas include literature, art, music, film, politics, etc. Required for concentrators, written permission required for others. Prerequisite: at least 3 100-level GRMN courses or equivalent. In German and English.

GRMN 1900B. Sites of Memory.
The seminar explores the connection between representation and management of space and memory in the German context. Readings drawn from literary works, philosophy, public discourse about monuments and memorials, and so on. Assignments include individual presentations and final research project. Required for concentrators, open to others with instructor's permission. In English and German.

GRMN 1900C. Cultural Industry and the Aesthetics of the Spectacle.
This course explores mass culture and distraction as conceptualized by the Frankfurt School. Readings and discussions will engage with the emergence of distraction as a specific category of experience: the function of entertainment in the culture industries of Nazi Germany; the critique of mass culture in post-war Germany, and the reformulation of spectacle and distraction in Culture Studies and postmodern discourse. Readings: Schilber, Adorno, Benjamin, Kracauer, Debord, Baudrillard, Postman, Virilio, Norbert Bolz. In German.
GRMN 1900D. Fleeing the Nazis: German Culture in Exile, 1933-1945.
When the Nazis came to power in Germany in 1933 this caused one of the biggest brain drains in history. We will trace the lives of leading experts in a variety of fields such as literature, music, philosophy, and the sciences and ask questions such as: Why did they leave? Where did they go? How did they do in their new environment? What did they say about their exile afterwards? Specific persons and places of exile will be studied according to the interests of the seminar participants. In German. Recommended prerequisite: one course in the GRMN 0600 series. Open to seniors only.

GRMN 1900E. Made in Germany - A Cultural History of Science, Technology, and Engineering.
In this seminar, we will examine the German technological imagination in literature and film. The material to be studied reaches from nineteenth and early twentieth century German Science Fiction to the history of engineering giants such as Volkswagen or BMW and will also include philosophical reflections of technology, the role of the German engineer as hero, and the image of the mad scientist. A field trip to Germany during spring break is planned. In German. Prerequisite: GRMN 0600. Enrollment limited to 20; first year students require an instructor override prior to registering.

GRMN 1900M. Weimarer Klassik.
“Weimarer Klassik” as an aesthetic project was developed by a group of writers as a response to the revolutionary events at the end of the 18th century. Key questions that were addressed in this project were the role and function of art, the positioning of the subject in modernizing societies, and the resulting challenges and opportunities for literary genres and media. Readings of major works by Johann Wolfgang Goethe and Friedrich Schiller, with discussion of selected texts by Hebel, Herder, Hölderlin, Kleist, Moritz, and Wieland. In German. Prerequisite: GRMN 0600 or permission.

GRMN 1910A. From Freud to QAnon: History, Politics, Psychoanalysis (HIST 1957J).
Interested students must register for HIST 1957J.

Independent study on a particular topic related to German culture. In German or English. At the discretion of the instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

GRMN 1981A. Introduction to Yiddish Culture and Language (JUDS 1713).
Interested students must register for JUDS 1713.

GRMN 1990. Senior Conference.
Special work or preparation of an honors thesis under the direction of a faculty member. Please check Banner for the correct section number and CRN to use when registering for this course.

GRMN 2081A. Realism, Idealism, and Modernity (II) (PHIL 2080D).
Interested students must register for PHIL 2080D.

GRMN 2320A. 1700.
Comparing language (rhetoric, style), literature (poetry, drama, novel), and other cultural phenomena (theater, dictionaries, emblem books, professionalization), we will consider shifts in cultural paradigms from the early modern to the modern period. Grimmelshausen and Gellert; Gryphius and Gottsched; Opitz and Haller. Readings in German. Discussion in German or English.

Kleist’s writings continue to pose interpretive and theoretical riddles for the modern reader nearly 200 years after their composition. We will read a selection of his major texts (dramatic, narrative, and journalistic) alongside some modern American and German criticism, covering methodological approaches such as deconstruction, psychoanalysis, and discourse analysis. Readings in German, with discussion in English.

GRMN 2320C. Enlightened Laughter.
We follow the development of German comedy and theory of comedy and laughter from the late Baroque to the Enlightenment, comparing comedies and theoretical texts with foreign examples. What kind of laughter is appropriate for a bourgeois stage? A German stage? Why is laughing important? What kind? Texts by Weise, Prehauser, the Gottschilds, Gellert, J. A. Schlegel, Lessing, also Molierë, Destouches, Farquahar, Grafïgny. German texts read in German. Prerequisite: Graduate standing or permission.

GRMN 2320D. Kafka in English.
No description available.

GRMN 2320E. Political Romanticism.
What, if anything, is political about Romanticism? We will read the literary and non-literary writings of British and German romantic authors, with a focus on their complex relationship to political ideas, political practice, and the very concept of “the political.” We will also consider why the question of Romanticism’s relationship to politics has been re-visited with such inconsistency in the 20th century. Authors include W. Wordsworth, P. B. Shelley, Coleridge, Friedrich Schlegel, Novalis, and Kleist. All readings and discussions in English.

GRMN 2320A. Vision and Narration in the 19th Century.
Explores the relationship between vision and techniques of linguistic representation in selected literary texts from late romanticism to the fin-de-siècle. Special attention will be paid to the idea of “realistic” representation and to problems that afflict both seeing and speaking in the texts. Authors include Kleist, Stifter, Storm, Keller, Hofmannsthal, Rilke, and Musil. Readings in German, discussions in English. Open to seniors with instructor’s permission.

GRMN 2340A. German Literature 1968-1989.
Discussion of major trends in literature in German: New Subjectivity, postmodernism, feminist literature, the role of mythology, post-histoire. Authors to be discussed include Botho Strauss, Elfriede Jelinek, Thomas Bernhard, W.G. Sebald, among others. In German.

GRMN 2340B. Poetik der AutorInnen.
This course will examine postwar literary aesthetics as put forth in the so-called “Poetikvorlesungen” which several universities in German-speaking countries have instituted since 1959. These lectures have featured important contemporary authors thinking about their work - from poetic practices and aesthetic theories to biographic considerations and the technicalities of writing literature in today’s world. In German.

GRMN 2340C. German Modernism.
This seminar will explore German literary modernism from around 1880 to the 1930s. Schools and authors to be studied will include Naturalism (Hauptmann, Holz, Schlaf), Neo-Romanticism and Symbolism (Hofmannsthal, Rilke, George), Expressionism (Toller, Benn, Kaiser, Brecht), and New Objectivity (Kästner, Döblin, Fallada). In German. Required proficiency: GRMN 0600.

GRMN 2450. Exchange Scholar Program.

GRMN 2460A. German Literature 1945-1967.
Examines the literature and the literary debates in postwar Germany, East and West. Authors to be discussed include those of the Gruppe 47 and those excluded from the group in the West; Brecht, Seghers, Becher and the new generation in the East. Emphasis on cultural politics and the role of literature in postwar German society (the work of the mourning, political restauration).

GRMN 2460C. Literature of the German Democratic Republic.
Against the background of the history of socialism in Germany, an extensive study of GDR authors and East German authors since reunification, with opportunities to explore other areas such as film and art. Authors may include: Brecht, Müller, C. Wolf, Reimann, Hein, Braun, Tellkamp. Readings in German, discussion in English or German.

GRMN 2460D. Thomas Mann: Die Romane.
In this course, we will read and discuss Thomas Mann’s novels, from Buddenbrooks (1900) to Bekenntnisse des Hochstaplers Felix Krull (1954). Emphasis on narratological analysis and historical contextualization. In German.
GRMN 2500A. Rethinking the Bildungsroman (COLT 2520G).
Interested students must register for COLT 2520G.

GRMN 2660A. On the Sublime.
Survey of major theories of the sublime from antiquity to modern times, with emphasis on German, British, and French texts from the 18th to 20th centuries. Authors to be read include Longinus, Immanuel Kant, Edmund Burke, Jean-Francois Lyotard, and Neil Hertz. Readings and discussions in English, with optional readings in original languages provided. Open to seniors with instructor’s permission.

GRMN 2660C. Socialism and the Intellectuals.
The international socialist movement was born in Germany, and many of Germany’s most important intellectuals were attracted to its striving for social justice. Against the background of 19th century politics and theory, the course focuses on the Weimar Republic, the cultural politics of the German Democratic Republic and the New Left in the Federal Republic, and developments since reunification. Authors may include Heine, Marx, Hauptmann, Brecht, Müller, C. Wolf. Readings in German, discussions in English and/or German.

GRMN 2660G. Reading (in) German Literature.
What is reading? We will discuss theories of reading from reader-response-theory to performativity and its history. Beginning with Goethe’s novel “Werther,” we will read German literature since the 18th century. We will focus on the emerging conditions and techniques of reading (extensity, accessibility, popularity) which still shape text-reader-relationships and on the double-bind of reading as a bourgeois model for subject-formation alongside profound ambivalence towards its pleasures. Finally: How is our own experience and performance of reading German literature? In German.

GRMN 2660H. Historicism, Photography, Film. How does the emergence of photographic media and film—affect concepts of historicity and historical experience? And how do philosophical concepts of history and historicity inform the aesthetics of film and of documentary film in particular? Taking Kracauer’s critique of photography and Benjamin’s work on film, photography and the philosophy of history as its point of departure and focusing on longitudinal documentaries from the former GDR, West Germany and Switzerland, this course proposes an inquiry into the relationship of photographic media and philosophical concepts of historicity. Readings and discussions in English. Open to graduate students. Juniors and seniors may enroll with instructor’s permission.

GRMN 2660I. Torture in European Literature and Aesthetic Theory. Alongside the history of actual torture runs the history of representations of torture. Throughout the centuries, literature has worked through many of torture’s manifestations. Texts range from the biblical scenes of crucifixion and punishment to modern forms of torture. Writers like E.T.A. Hoffmann, Mirbeau, Kafka, Améry and Sarthe have reflected on torture. And aesthetic theory has taken various stances towards the depiction of torture in the arts, ranging from Winckelmann and Lessing to Adorno and Elaine Scarry. Our graduate seminar will read and discuss a selection of literary and theoretical texts covering the period from the mid-18th century until today.

GRMN 2660O. From Hegel to Nietzsche: Literature as and Philosophy.
This seminar has two aims. It will scrutinize Hegel’s and Nietzsche’s respective conceptions of literature, and it will analyze the particular use of literary texts in their writings. The choice of these two authors is based not only on the fact that they qualify as representatives of the trajectory of German philosophy in the 19th century. They also act as antagonists on systematic grounds: While Hegel seeks to outperform literature with philosophy, Nietzsche depicts human life as an “aesthetic phenomenon,” arguably creating a “literary” mode of philosophy. Enrollment limited to 30.

GRMN 2660P. The Essay: Theory and Praxis. An essay, Lukács once said, is not yet form, but form on the way to becoming form. It is something in between: between art, science, and philosophy, between reason and intuition, between “precision and soul” (Musil). We will begin with the idea of the essay in Montaigne and Francis Bacon, and trace its development in Germany’s intellectual and literary history from around 1870 till 1960. We will try to understand why, during this period, the essay became the preferred medium of thought and one of the dominant forms of reflecting on great Westerns narratives as well as important contemporary discourses.

GRMN 2660Q. Freud and Lacan (ENGL 2900T). Interested students must register for ENGL 2900T.

GRMN 2661A. “Other Worlds”.
This seminar explores the notion of “other worlds” in philosophy and art. The starting point for this exploration is a personal feeling. One day I realize that I exist in a world no longer there, although it had never crossed my mind that “my” world, as strange and inhospitable as it might have been, could come to an end. I have turned into a ghost without noticing. What shall I do? Adapt to the new world? Pretend nothing has happened? Resist the disintegration of the old world? Readings by Leibniz, Nietzsche, Bloch, Benjamin, Deleuze, Meillassoux. Films by Visconti and Godard.

GRMN 2661F. Textual Border Crossings: Translational Literature. We will first attempt to discover what happens to a translation, as well as to the translator, when a text asks for asylum in the guest house of another language: “domestication” or “foreignization,” as Lawrence Venuti puts it? Or is it appropriation, acculturation, adoption? Or rather estrangement, alienation, defamiliarization? Next we will investigate different models of derivative, parasitic, and translational writing by authors as diverse as J. Franzen, E. Fried, Ch. Hawkey, E. Jelinek, Y. Tabawa, P. Waterhouse, and others. Finally, we will examine translational writing as a means of decolonizing world literature.

GRMN 2661J. Art, Philosophy, and Truth: A Close Reading of Benjamin’s Essay on Goethe’s Elective Affinities. This course will be devoted to a close reading of one of the most rewarding, and also most intricate, essays about aesthetics written in the first half of the twentieth century, Benjamin’s 1924 essay on Goethe. Rather than discuss the pertinence of the interpretation Benjamin proposes of Goethe’s famous novel, we will focus on the ideas he develops in relation to art and philosophy, and the conceptual distinctions he introduces, such as the distinction between commentary and criticism, or the distinction between an artwork’s material content and its truth content.

GRMN 2661Q. Goethe’s Faust. Faust is one of the most inspiring and complex dramas written in German, with immense influence on later literary texts. Its form is stunningly experimental and plays out all metric forms that were known in the age of Goethe in German literature. The two-part drama takes place in a time that measures from antiquity to the early nineteenth century, but it is, throughout, a representation of existence within a modern socio-economic dynamic. In this course, we will closely read and discuss selected scenes. Taught in German.

GRMN 2662A. Theories of Poetry and the Poetic. Poetry, poésie, poesìa carries a double meaning in many Western languages, since it can refer to a foundational principle of literary art in general as well as to a specific literary genre. Accordingly, the accent may be on poetic activity, derived from one or several meanings of the Greek poiein, or on the textual product, the poem. The course is interested in the problems and perspectives of this double meaning in a series of texts by poets and literary theorists from different periods, mainly Romanticism and 20th century modernism. Taught in English.
GRMN 2970. Preliminary Examination Preparation
“Toward a Critique of Violence” (1921) is one of the young Benjamin’s most enigmatic, provocative, and enduring achievements. On the occasion of its 100th anniversary, this seminar will revisit the text, paying particular attention to its intricate arguments concerning the relations among violence, law, the police, justice, religion, the death penalty, critique, and the philosophy of history. Inquiring into the conceptual and political work that Benjamin’s text performs in its own historical time as well as in ours, we will examine interpretations of it by Marcuse, Derrida, Agamben, Hamacher, Gasché, and others. In English. Graduate students from diverse fields welcome.

GRMN 2662F. Police, Strike, Justice: Revisiting Walter Benjamin’s “Critique of Violence”
“Toward a Critique of Violence” (1921) is one of the young Benjamin’s most enigmatic, provocative, and enduring achievements. On the occasion of its 100th anniversary, this seminar will revisit the text, paying particular attention to its intricate arguments concerning the relations among violence, law, the police, justice, religion, the death penalty, critique, and the philosophy of history. Inquiring into the conceptual and political work that Benjamin’s text performs in its own historical time as well as in ours, we will examine interpretations of it by Marcuse, Derrida, Agamben, Hamacher, Gasché, and others. In English. Graduate students from diverse fields welcome.

GRMN 2662G. On Interpretation.
“Understanding is in want of understanding.” This opening premise of Werner Hamacher’s Premises will be probed, initially, through readings in Aristotle’s De interpretatone, as well as selections from his medieval interpreters. These readings will prepare for an approach to the emergence of “secular” hermeneutics from Biblical exegesis in the late eighteenth and early nineteenth century (Schleiermacher). Further critical readings will follow the turns that interpretation would take in twentieth-century philosophical thought (Martin Heidegger, Hans-Georg Gadamer), psychoanalysis (Sigmund Freud), as well as philological studies which expose the limits of the hermeneutic enterprise (Paul de Man, Jacques Derrida, Werner Hamacher).

GRMN 2662H. Intellectual History of Exile (HIST 2970S).
Interested students must register for HIST 2970S.

GRMN 2662I. Metaphor – Anagram.
Words are porous things. Among the most prominent efforts to come to terms with their irritating instability are metaphor and anagram. The seminar will focus on Aristotle’s enigmatic definition of metaphora in his Poetics (including more recent discussions by Sigmund Freud, Roman Jakobson, and Jacques Derrida); and on Ferdinand de Saussure’s anagram studies as presented by Jean Starobinski (in 1971 under the title Les mots sous les mots [Words Upon Words]), including anagram studies by Tristan Tzara, and anagram poems by Unica Zürn and Oskar Pastior. Taught in English. Participants from different fields of interest are welcome.

GRMN 2900. Theory and Methods of Foreign Language Teaching.
No description available.

GRMN 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the Registration Fee to continue active enrollment while preparing for a preliminary examination.

GRMN 2980. Reading and Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

GRMN 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

GRMN XLIST. Courses of Interest to Students Concentrating in German Studies.

**Swedish**

**SWED 0100A. Beginning Swedish.**
Swedish 0100 is an introduction to both Sweden and Swedish, covering various aspects of Swedish history, art and society, as well as screening at least three Swedish films per semester. The course packet contains the text/workbook, Mål 1, with additional materials. We will cover one chapter of Mål per week, with quizzes every three weeks. There will be a midterm and a final exam. along with a short take-home project.

This is a small class, so your presence is absolutely required. Emphasis will be placed on speaking and understanding Swedish. Good will and good humor are required.

This is the first half of a year-long course (SWED 0100A and SWED 0200A) whose first semester grade is temporary. Neither semester may be elected independently without special written permission. The final grade at the end of the course work in SWED 0200A covers the entire year and is recorded as the final grade for both semesters.

**SWED 0200A. Beginning Swedish.**
Swedish 200 is a continuation of Swedish 100, with the same goals, materials and methods. It may also be suited to students with some prior background in Swedish.

This is the second half of a year-long course (SWED 0100A and SWED 0200A) whose first semester grade is temporary. Neither semester may be elected independently without special written permission. The final grade at the end of the course work in SWED 0200A covers the entire year and is recorded as the final grade for both semesters.

**SWED 0300. Intermediate Swedish I.**
SWED 0300 is an Intermediate language course designed for students with some prior exposure to Swedish, either through study abroad or their own background. The course will be small and informal, tailored to the needs of the specific students, with joint emphasis on speaking, reading and writing. We will see several Swedish films, as well as read some fiction and poetry.

**SWED 0400. Intermediate Swedish II.**
Swedish 0400 is the most advanced Swedish language offered at Brown. Students are expected to be able to participate in everyday conversations, having mastered the basics of grammar and vocabulary, in addition to understanding basic spoken and written Swedish. Materials used in the course will include newspapers, poetry, short fiction, film, and music. Students will also be expected to access existing Swedish websites, to broaden their knowledge of Swedish history and culture. Course meets on Tuesdays and Thursdays from 4:00 to 5:20.

**Harriet W. Sheridan Center for Teaching and Learning**

The Sheridan Center seeks to provide a place where all learners can grow, interdisciplinary collaborations can form, and educators can experiment with different modalities of teaching and learning. At the core of our work is a commitment to educational excellence, equity and access through evidence-based, reflective practices. Through educational partnerships at Brown and globally, we advance the university’s mission (https://www.brown.edu/about/brown-glance/#:~:text=The%20mission%20of%20Brown%20University%2C%20life%20with%20usefulness%20and%20reputation) and create teaching and learning communities dedicated to improving learner success and supporting educators’ professional growth. To learn more about the Center, please see our website: brown.edu/sheridan. To subscribe to our bi-weekly newsletter, please see: brown.edu/sheridan/newsletter

**Major initiatives of the Sheridan Center include:**
- The Brown Learning Collaborative, offering rigorous academic courses for undergraduate teaching fellows and evidence-based course design institutes for faculty and TAs, to enhance student learning in key liberal arts areas, such as writing, problem solving, and data science.
Support for inclusive and anti-racist teaching, embedded in Sheridan programs and offered as focused initiatives for departmental change teams.

• Writing, STEM, academic tutoring, and English language expertise to offer direct support to students; develop peer fellows, mentors and tutors; and promote faculty and department practices to help all students succeed as learners and communicators.

• Interdisciplinary learning communities, such as certificates on reflective teaching and course design, a Junior Faculty Fellows program, dissertation writing groups, and course design institutes.

• Assessment and research support for program review, cross-institutional grants supporting educational innovation, and initiatives to enhance teaching and learning at Brown.

• Partnerships with instructional designers, technologists and media professionals to help instructors foster innovative teaching and design online, residential, & blended courses as engaging learning experiences.

• Flexible digital solutions and classroom spaces to inspire instructors to try new things: experiment, take risks, explore, build and pilot solutions.

We also offer:

• Confidential consultations – classroom observations; early student feedback; consultations on course design, writing pedagogy, assessment, student evaluations, and graduate and undergraduate TA professional development.

• Services to enhance student learning - pre-orientation programs on writing and STEM, peer mentoring programs, conversation partners program, and classroom-based writing workshops on topics such as peer review.

• Programs on teaching – orientations for instructors and students, certificate programs, institutes, disciplinary and interdisciplinary workshops.

• Educational research and assessment – collaboration on course and curricular assessment, consultations on the scholarship of teaching and learning, assistance with evaluation sections of postsecondary educational grants.

• Community - programs and projects that bring together faculty, graduate students, postdocs, and undergraduates from across the disciplines.

• Teaching and learning resources - online resources addressing a wide range of topics; newsletters to summarize research and practice on key teaching topics.

Hispanic Studies

Chair
Laura R. Bass

The Department of Hispanic Studies at Brown University takes a distinctly Trans-Atlantic, interdisciplinary approach to the literatures and cultures of Spain and Latin America. Our undergraduate program offers basic through advanced language classes and a wide selection of literature and culture courses, many of them cross-listed. Our graduate program balances generalist training with individually tailored specialization and keeps a firm commitment to professional development and mentoring. All students, both undergraduate and graduate, work closely with faculty members, and peer collaboration is encouraged to further intellectual, creative, and academic growth.

For additional information, please visit the department's website: http://www.brown.edu/academics/hispanic-studies/

Hispanic Literatures and Cultures Concentration Requirements

Spanish is the second most widely spoken language in the world and the second language of the United States. In our society, knowing Spanish is not just an asset; it is increasingly a necessity. The Spanish language program offers a sequence of courses ranging from basic to advanced. Students at all levels develop proficiency in speaking, listening, reading, and writing while also studying the cultures and societies of the contemporary Spanish-speaking world. The Hispanic Literatures and Cultures concentration enables students to develop advanced Spanish skills while acquiring a solid background in the complex history, literature, cultures, and intellectual traditions of Spain, Latin America, and the Latinx U.S. The department offers a variety of courses on topics related to literary history and theory; multicultural contact; linguistics and the history of the language; visual culture, film, and performance studies. Interdisciplinarity is a hallmark of the department, and students in this concentration are encouraged to broaden their perspectives by taking relevant courses in other departments. Most choose to strengthen their academic preparation by participating in a study abroad program in Spain or Latin America and by engaging with Latin American and Latinx communities in the United States.

Concentration Requirements and Overview of the Curriculum

The concentration requires a minimum of ten courses: one required course, HISP 0650 Advanced Spanish through Literature and Film (unless waived); up to six courses at the 700 level, and at least three courses at the 1000 level. HISP 0650 gives students fundamental tools for critical analysis while also specifically targeting the development of advanced grammar and writing skills. The 700 level encompasses panoramic courses in the literary and cultural histories of Spain, Latin America, and the Latinx USA, as well as introductory courses on professional and literary translation and Spanish linguistics, all of which place emphasis on continued refinement of written and oral expression in Spanish. Courses at the 1000 level focus on particular authors, genres, periods, or special topics and introduce students to major critical voices and scholarly perspectives on the materials studied. Concentrators must take at least one Hispanic Studies course with the WRIT designation.

Students can waive this course with an AP of 5 in Spanish Literature; or an SAT II of 750 or above; or a Brown Placement Score in Spanish of 651 or above. For more information on placements go to: https://www.brown.edu/academics/hispanic-studies/language-placement

Students may apply up to four related courses from outside the department toward the concentration, with prior approval from the Director of Undergraduate Studies (DUS). These courses may come from study abroad, transfer credit, and other departments and programs at Brown (e.g., Latin American and Caribbean Studies, Comparative Literature, History, Ethnic Studies, Anthropology), as long as they deal with themes related to the literatures, histories, languages*, and/or cultures of Spain, Latin America, or the Latinx USA.

The Hispanic Studies Literatures and Cultures concentration is designed to encourage and support language-specific study, for we believe that the linguistic cultural products of the Spanish-speaking world are most deeply appreciated in the original language. Hispanic Studies courses are therefore generally taught in Spanish, unless otherwise specified in the course description. Up to two courses taken in English or another language, whether in the department or outside, can count toward the concentration.

For additional information, please visit the department's website: http://www.brown.edu/academics/hispanic-studies/

</table>

Total Credits = 10

---

**Honors Thesis or Project**

Students with an excellent record in their Hispanic Studies courses will be eligible to write an Honors Thesis or write and produce an Honors Project. Students pursuing honors must have a record of all A's or a final grade of S with distinction in courses they have as S/NC. Typically, the Honors Thesis is a major research paper of approximately 40 to 80 pages in Spanish, depending on the topic and treatment necessary. Alternatively, a student may, with prior permission of the Director of Undergraduate Studies, present a film, gallery exhibition, or other appropriate project, together with a paper that clearly demonstrates the academic foundations and relevance of the project. For additional details regarding the Honors Thesis in Hispanic Studies, please refer to our website (https://www.brown.edu/academics/hispanic-studies/honors-program/).

**Capstone colloquium:** Giving students an opportunity to reflect upon and celebrate their achievements in the Hispanic Literatures and Cultures concentration, there is an annual colloquium with graduating seniors, faculty and friends. Each graduating senior shares a piece of work or a text, whether studied in class or produced as an assignment, that stands out as particularly significant to their time in Hispanic Studies. This can take several forms: it can be an extract from a poem, novel, play, or critical essay; it can also be a film or music clip or piece of art; or, a translation done by the student, or an original creative text.

**Director of Undergraduate Studies:**

Silvia Sobral

**Hispanic Studies Graduate Program**

The department of Hispanic Studies offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) degree. The A.M. is ordinarily received as a part of the Ph.D. program.

For more information on admission and program requirements, please visit the following website:

http://www.brown.edu/academics/gradschool/programs/hispanic-studies (http://www.brown.edu/academics/gradschool/programs/hispanic-studies/)

**Courses**

**HISP 0100. Basic Spanish.**

This fast-paced beginning course provides a solid foundation in the development of communicative skills in Spanish (speaking, listening comprehension, reading and writing) as well as some insight on the cultures of the Spanish-speaking world. Individual work outside of class prepares students for in-class activities focused on authentic communication. Placement: students who have never taken Spanish before, or have scored below 390 in SAT II, or below 240 in the Brown Placement Exam. Students who have taken Spanish before and those with an AP score of 3 or below must take the Brown Placement Exam. Students should check Placement and Course Description in the Undergraduate Program section of the Hispanic Studies Website. Enrollment limited to 18; 15 spaces are available for students during pre-registration. 3 spaces will be available at the start of the semester for incoming or re-admitted students who should attend the first class. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.
HISP 0110. Intensive Basic Spanish.
This course is a highly intensive, two-semester sequence in one that carries double credit. Primarily for students with some knowledge of Spanish who have scored below 450 in SAT II or below 340 in Brown Placement Exam. Students with little or no preparation in Spanish should consult with the Course Supervisor. The course seeks to engage students with a contemporary view of Hispanic cultures through a variety of texts, topics, and themes; it seeks to integrate grammar, vocabulary, and discourse work to support the development of communication in all the modalities. It offers an inclusive perspective on learning and embraces diversity of identities and communities in the Hispanic world. Students learn to use language in interdisciplinary scenarios that help them connect to their academic and life experiences, thus gradually developing their linguistic, communicative, academic, and multicultural competencies as well as professional skills. Ideal for students interested in fast-tracking their language learning to meet study abroad requirements. Enrollment limited to 15. Pre-registered students must attend the first two days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 2nd class when the composition of the course section is finalized.

HISP 0200. Basic Spanish.
A continuation of HISP 0100. This course continues to focus on acquisition of communicative skills (speaking, listening comprehension, reading and writing) as well as cultural awareness. With successful completion of the course students will be able to understand simple texts, carry on short spontaneous conversations involving everyday topics (such as modern day life and its pressures, health, art and culture, nature and the environment, relationships) and write simple texts with good command of grammar and sentence structure. Prerequisite: HISP 0100 or placement: SAT II scores between 400 and 450; Brown Placement Exam scores between 241 and 340. Students with an AP score of 3 or below must take the Brown Placement Exam. Students should check Placement and Course Description in the Undergraduate Program section of the Hispanic Studies Website. Enrollment limited to 18; 15 spaces are available for students during pre-registration. 3 spaces will be available at the start of the semester for incoming or re-admitted students who should attend the first class. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.

HISP 0300. Intermediate Spanish I.
This course involves about 14-15 hours of work/week). It carries on the work initiated in HISP0110-100-200 to develop and strengthen students' linguistic, communicative, academic, and multicultural competencies. It continues to focus on the integration of grammar, vocabulary, and discourse work to advance competence and proficiency in Spanish and to support further development of communication in all the modalities. This course is framed by an inclusive perspective on learning and embraces diverse identities and communities in the Hispanic World. It fosters a community of learning among students and offers a variety of texts, themes, and topics related to students’ academic and life experiences that also help them develop professional skills. Enrollment is limited to 15. Pre-requisite: either HISP 0200, HISP 0110, or placement: SAT II scores between 460 and 510, or Brown Placement Exam scores between 341 and 410. Students with an AP score of 3 or below must take the Brown Placement Exam. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.

HISP 0400. Intermediate Spanish II.
A continuation of HISP 0300. This course continues to develop and strengthen students’ linguistic, communicative, academic, and multicultural competencies. It focuses on content and language integration and creates opportunities to use the language in interdisciplinary scenarios related to diverse academic experiences. Through engaging texts, themes, and topics students will interact with a contemporary view of Hispanic cultures from an inclusive perspective. Enrollment is limited to 15. Prerequisite: HISP 0300 or placement: SAT II scores between 520 and 590 or Brown Placement Exam scores between 411 and 490. Students with an AP score of 3 or below must take the Brown Placement Exam. Students should check Placement and Course Description in the Undergraduate Program section of the Hispanic Studies Website. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.

HISP 0490A. Spanish for Health Care Workers.
This course is designed to provide students with the linguistic and cultural competencies necessary to communicate with and help treat Spanish speaking patients with limited English. The course includes a general review of pertinent grammar and vocabulary relating to the health care professions, assessment, and vocabulary useful for establishing patient rapport. Students develop skills in communicating in common medical situations, conducting patient interviews, and increase their understanding of possible responses from patients. We will broaden knowledge of different cultures, explore health care systems/professions in a variety of settings, and have pertinent speakers invited to class. Please note this course does not qualify as a pre-requisite for study abroad or for HISP 0600. Students who complete 0490A successfully can continue in our program with HISP 0500 as the next level. This is an intermediate level language course so if you have taken a 600 course or above, you will be too advanced for this 400 level class.

HISP 0500. Advanced Spanish I.
Offers comprehensive work in listening, speaking, reading, and writing, with targeted grammar review. Students work with a variety of readings (literature, newspaper articles, etc.) and with art forms such as music and film, in order to develop oral and written expression and to explore issues relevant to the Hispanic world. Students explore topics of their own interest through student-led activities and presentations, Prerequisite: HISP0400 or placement: SAT II scores between 600 and 660, Brown Placement Exam scores between 491 and 570, or AP score of 4 in language or SAT II scores between 600 and 660, Brown Placement Exam scores between 491 and 570, or AP score of 4 in language or literature. Please check Hispanic Studies website (Undergraduate Programs) for course descriptions and placement information. Enrollment limited to 18; 15 spaces are available for students during pre-registration. 3 spaces will be available at the start of the semester for incoming or re-admitted students who should attend the first class. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized.

HISP 0550. Intermediate Spanish for Heritage Speakers.
Heritage speakers of Spanish are students who understand and speak Spanish to some degree but have not yet had formal education in Spanish. This course is specifically for students who already possess intermediate communicative skills and can communicate effectively in their home and community. This course is designed to validate, strengthen and expand the previous linguistic and cultural knowledge students bring to the classroom. Through a variety of authentic materials, students will explore issues of identity, linguistic rights, equality, and social justice, while developing their Spanish range to include formal registers, and honoring their oral communication, reading and writing skills.
HISP 0600. Advanced Spanish II.
Offers continued, advanced-level work in speaking, listening, reading, and writing skills, with focused review of challenging aspects of Spanish grammar. Course materials include films, music, art works, and a variety of written texts (articles, stories, plays, a novella, etc.) chosen to promote class discussion and in-depth written analysis. There will be individual and group activities, including in-class presentations and creative writing projects. Prerequisite: HISP0500 or placement: SAT II scores between 670 and 740, Brown Placement Exam scores between 571 and 650, or AP score of 5 in language. Please check Hispanic Studies website (Undergraduate Programs) for course descriptions and placement information. Enrollment limited to 18. Pre-enrolled students must attend the first four days of class to maintain their pre-registered status and notify the instructor in advance if they must miss any day before the 4th class when the composition of the course section is finalized. Students with scores of 750 and above on the SAT II, 551 on the Brown Placement Exam, or 5 in AP Literature should consider offerings in the HISP 0730-0740-0750 range.

HISP 0650. Advanced Spanish Through Literature & Film.
Este curso sirve como una introducción a la literatura y la cultura del mundo hispanohablante, y a las prácticas de la lectura crítica y la escritura análtica. HISP 0650 no sólo provee un panorama histórico y contextualizado de la literatura en español, sino que también aporta estrategias de leer, pensar, y escribir sobre textos literarios y cine, preparando el/la estudiante para cursos más avanzados de literatura y cultura. A lo largo del semestre, se realiza un repaso de gramática a nivel avanzado para aclarar dudas y fortalecer el español hablado y escrito de cada estudiante.

HISP 0710A. Cultura gastronómica de España.
Spain has a rich and varied culinary culture — both steeped in its multicultural history and at the cutting edge of new culinary movements. In this course, you will learn about la cocina española in all its dimensions and at the same time develop your linguistic skill in written and oral Spanish. Topics include: the Mediterranean diet (and its threat from fast food), the culture of tapas, the wine regions of Spain, Spain’s new star chefs, the olive oil industry, Spanish food products abroad. We will explore these topics through documentaries, recipes, interviews, films, music, short stories, and hands-on cooking.

HISP 0710B. Hispanic Culture Through Cinema.
This course will examine eleven cinematic works of the contemporary Hispanic world (Argentina, Chile, Mexico, Spain, and the USA) from 1999 until 2012. We will focus on the cultural, thematic, technical and aesthetic aspects of the films, as well as on their socio-historical and political context. Every movie will be discussed in class integrating sociological, historical, political and aesthetic contexts, as well as a critical analysis of the film as artistic expression. This is a course also designed to improve students’ speaking abilities while learning about Hispanic cultures and cinema. FYS

HISP 0710C. Introducción a la lingüística hispánica.
This course introduces students to the study of language and deepens their knowledge of Spanish in its main linguistic components. After briefly considering the nature of language, we will study the sounds of Spanish (phonology and phonetics), word and sentence structure (morphology and syntax), and the elements and mechanisms to express and interpret meaning (semantics and pragmatics). We will then turn our focus to linguistic phenomena such as changes in Spanish over time (historical linguistics), variations in the language according to region and social group (sociolinguistics), and bilingualism, with special attention to Spanish in the U.S.

HISP 0710D. History of the Spanish Language.
We will study the development of Spanish from the first manifestations to the present, and the development of the language beyond the Iberian Peninsula (in the Sephardic diaspora and in the Americas). Includes the historical and cultural events that deeply influenced the shaping of Castilian language. We will examine the most relevant contributions as well as other languages (Arabic in particular) in shaping the Spanish language. Taught in Spanish.

HISP 0710E. Introduction to Professional Translation and Interpretation.
What is translation? Interpretation? What roles do the translator and interpreter play in communication? What skills and kinds of knowledge are needed to develop competency in translation and interpretation as professional/community services? What factors shape how a text is translated (e.g., purpose, intended audience, type and genre, intercultural differences)? What is the role of translation in advancing language competence and proficiency? Through a functionalist approach, students advance their mastery of Spanish and develop translation competence. In addition to academic work (readings, translation assignments, and in-class exercises), students will also gain practical experience working with Spanish-speaking clinics and community organizations.

HISP 0730. Encounters: Latin America in Its Literature and Culture.
An introduction to major authors, movements, and themes of Spanish American literature from the Discovery to the present. This course also aims to develop students’ oral and written expression in Spanish. Students are expected to engage in close reading and discussion of texts, as well as to revise their papers. Prerequisite: HISP 0600, or AP score =5, or SAT II (Literature) score of 750 or above, or Brown placement score of 651 or above.

HISP 0740. Intensive Survey of Spanish Literature.
This course provides students an overview of the major authors and movements in Spain’s literature from the Middle Ages to the twentieth century. It teaches students to close-read and engage critically with individual texts and their literary, historical, and social conditions of production. Throughout, we will interrogate canion formation, examine the literary construction of the self and the nation, and analyze the reflection — and creation — of culture in literature. Conducted in Spanish. Prerequisite: HISP 0600, or AP score =5, or SAT II (Literature) score of 750 or above, or Brown placement score of 651 or above.

HISP 0750B. The Latin American Diaspora in the U.S.
This engaged course is designed to bridge academic learning about Latin American diasporic history and culture and volunteer work in agencies serving Latinx communities in Providence. Readings, films, and guest presentations examine the ways in which the Latinx community has imagined itself and has been imagined by others. Spanish language learning occurs in the classroom and the community, where students have the opportunity to enrich and test course content. Conducted in Spanish, Spanglish welcome. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 651 and over in the Brown Placement Exam.

HISP 0750C. Love and War in Medieval and Contemporary Spanish Fiction.
Examines presentations of Medieval Iberian culture in literature and film. This subject interrogates the persistent popularity of medieval themes and stories in contemporary film and fiction. It will consider some medieval narratives, such as El Cid, medieval chronicles and ballads, and La Celestina, which inspire a tradition of revisionist re-writing, as well as modern “inventions” of the medieval in a range of cultural forms. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.

HISP 0750E. Topics in Hispanic Culture and Civilization.
This course provides an overview of the culture and history of Spain from medieval times to the present, drawing from literature, art, music, and film. We will study Islamic al-Andalus, Judeo-Spanish culture (including the Sephardic diaspora), Christian Spain, the conquest and colonization of the “New World,” the decline of empire, the Civil War and its aftermath. Historical and cultural connections between Spain and Europe, and Spain and America will also be examined. Taught in Spanish. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.
HISP 0750G. Wildeyed Stories.
Students will study a wide-range of stories from cultures of the Spanish speaking world in literature and film: tales, fables, and humorous stories of heroism, deception and revenge. Class discussions will seek to situate the works examined within the political and cultural currents and debates of their times. Emphasis will be placed on both the historical context and on the development of close reading skills. Conducted in Spanish.
Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.

Spanish film has experienced a total renewal after Franco's death. In this course we will analyze recent developments in Spanish film paying special attention to the way film directors have exploited a very rich and well established literary tradition from Luis G. Berlanga, and Carlos Saura, to Victor Erice and Pedro Almodóvar. Prerequisite: HISP 0600 or placement: SAT II scores of over 750, 5 in AP Literature or 551 and over in the Brown Placement Exam.

HISP 0750M. The Spanish Civil War: Image, Text, and Memory.
The Spanish Civil War (1936-1939) has inspired a vast trove of scholarly and artistic production. In this course, we will analyze documentary and feature-length Spanish films in order to understand the social and political causes of the war and its central players. We will complement our film discussions with relevant poetry, novels, and art works to expand our critical perspectives on ways of representing and remembering the Civil War. In Spanish for first-year students with SAT II of 750 or above, a 5 on the AP Literature exam, or a Brown Placement Test score of 651 or above. Enrollment limited to 19 first year students.

HISP 0750N. Muslims, Jews, and Christians in Medieval Iberia.
The cultural diversity of medieval Spain and Portugal is proclaimed by their Christian cathedrals, Islamic palaces, and Jewish synagogues. The three distinct cultures that produced these buildings lived together for centuries in medieval Iberia, sometimes in peace, sometimes not. This convivencia of Jews, Muslims, and Christians will be examined from the perspectives of literature, art, architecture, archaeology and history.

HISP 0750O. Cultural Studies in Spanish America.
This course engages students with social justice issues in the Spanish-speaking world (the US, Latin America, and Spain), analyzing recent films addressing topics such as: racial, gender, and sexual identities; socioeconomic inequality; immigration, the border, and displacement; civil conflict, dictatorship, and their aftermath; the environment and climate change; postcolonial legacies and the impact of neoliberalism and globalization. We will analyze the stories these films tell and how they tell them, asking whether film can be considered an activist project, and what effect it might have on legal, political, and social debates outside the walls of the cinema. Conducted in English.

HISP 0750Q. Health, Illness and Medicine in Spanish and Spanish American Literature and Film.
This course will take an interdisciplinary approach to studying the rich history of Mexico and its diverse populations. We will examine both how Mexico has constructed its own identity from within (for example, the 20th century explorations of "lo mexicano"). In addition, we will study how Mexico has been constructed from without, especially from the English-speaking world (for instance, American diplomat Joel Poinsett's 19th century views). Course materials will range from both Mexican and European chronicles of conquest to modern reflections and representations by historians, philosophers, filmmakers, musicians, writers, and artists, among others. In English.

HISP 0750S. The Art of Revolution in Latin America (COLT 0711J).
Interested students must register for COLT 0711J.

HISP 0750T. Around Latin America in 80 Days: An Historical and Cultural Journey (LACA 0500).
Interested students must register for LACA 0500.

HISP 0750U. Re-writing Realities: A Non-Fiction Creative Writing Workshop.
This course focuses on the basic elements of creative non-fiction writing in Spanish. By writing our own pieces, we will discover how artistic uses of Spanish language can help us view our 'reality' under a new light. We will be reading texts from the Spanish language tradition of non-fiction produced through hybrid texts—that is, narrative and essayistic pieces that are not investigative journalism. Our readings will range from influential writers such as Rubén Darío, Jorge Luis Borges, and Alfonso Reyes to contemporary authors including Javier Cercas, Juan Villoro, and Eduardo Halfon.

HISP 0760. Transatlantic Crossings: Readings in Hispanic Literatures.
This course provides students a comprehensive introduction to literature and culture of the Spanish-speaking world, through exploration of a wide range of genres (short story, poetry, theater, novel, and film) and periods of production. The course not only gives students a contextualized historical panorama of literature in Spanish, it also equips them with strategies for reading, thinking, and writing about texts and films in Spanish, preparing them for more advanced literature and culture courses in Hispanic Studies. The course is conducted entirely in Spanish.

HISP 1020A. Spanish Civil War in Literature, Art, and the Visual Arts.
The Spanish Civil War (1936-39) would culminate with the military overthrow of the Republican government and the beginning of Francisco Franco’s long dictatorship. This course examines artistic representations of the war, from film (documentary and fictional), through painting (Picasso), to the written works of both Spanish and foreign authors including Orwell, Hemingway, Neruda, Cela, Sender, Rodoreda. Readings and discussion in English.

HISP 1210A. Judeo-Spanish Language and Culture.
Focuses on Judeo-Spanish literature from the 10th century to the first years of the Spanish Jewish diaspora (end of the 15th century). Poetry and narrative are read as works of moral instruction rooted in traditional modes of art and thought. Considers also the preservation of Judeo-Spanish culture in the Sephardic diaspora through ballads and songs recorded from oral traditions.

In the early modern period, clothing and fabrics were meant to provide visible markers of social status, gender, religion, race, and nationality. Yet dress did not just so much reflect identity as construct it. It could blur differences even as it supposedly marked them. In other words, clothes often created fictions, and fiction itself frequently focused on clothing. Drawing on literary and historical texts as well as paintings, prints, and maps, this course traces the connections between fashion and fiction in a period of unprecedented change in Spain and the wider Hispanic world. In Spanish.

HISP 1240C. Golden Age Short Stories.
We will examine the spatial itinerary of main literary figures (the picaro or rogue, the morisco, the soldier, the courtesan, the witch, the indiano). In other words, the areas and the spaces they inhabited in Spain's short stories throughout the 16th and 17th centuries. Violence, sexual transgression, and social conflicts are themes of inquiry. Emphasis on Cervantes' Novelas ejemplares.
HISP 1240L. Don Quijote de la Mancha.
This course will study Miguel de Cervantes’s El ingenioso hidalgo don Quijote de la Mancha in its literary and historical contexts. We will read Cervantes's masterpiece as a book about books and about the pleasures and dangers of reading; as a story of the Spanish empire and its discontents; as a palimpsest of Christian, Muslim, and Jewish meetings in Spain; and as a reflection on the nature of language, desire, and madness. All the while, we will read Don Quijote as an eminently entertaining and endlessly engaging work of the human imagination. In Spanish.

HISP 1250A. Madrid: History, Literature, and Culture.
This course explores cultural production in and about Madrid during key moments of the city’s history from its establishment as the capital of imperial Spain in the 16th century through its reinvigoration as a major international tourist destination in the late 20th. Multimedia in orientation, the course draws on representations of the Spanish capital in literature, painting, photography, maps, music, and film. Topics include: self-invention in the court city, modernization and its discontents, Madrid and Spanishness, provincialism versus internationalism. In Spanish.

HISP 1250B. Hispanic Culture Through Film.
This course examines major trends of Hispanic cinema through a representative selection of culturally diverse films from Spain, Latin America and the USA. Among the course objectives are: to learn about Hispanic history and culture through film, to understand cinema’s strengths and limitation for representing culture and history, to gain an understanding of Hispanic cinema in a broader context of globalization, and to learn to write film analyses in Spanish.

The end of the Spanish Civil War inaugurated one of the longest dictatorships of the twentieth century. This course will examine the literature and popular culture produced in the peninsula during that period—the so-called “official” culture allowed and sponsored by the Franco regime, and the voices of resistance that attempted to present alternative political views against a background of repression and censorship.

HISP 1290G. Generación del ’98.
To what extent does a national crisis, the Spanish defeat of 1898 by the United States, provoke a movement of patriotic revaluation, the so-called “Generation of ’98”? Or are the symptoms of crisis more in accord with fin de siècle aesthetics, which incites literary experimentation in all the traditional genres? These crucial questions will be studied in such typical authors as Unamuno, Baroja, Azorín, Antonio Machado, and Ramón del Valle-Inclán.

HISP 1290J. Spain on Screen: 80 Years of Spanish Cinema.
Spain’s one is one of the most dynamic and at the same time overlooked of European cinemas. In recent years, Spain has become more internationally visible on screen, especially thanks to filmmakers like del Toro, Almodóvar, and Bayona, or actors Penélope Cruz and Javier Bardem. But where does Spanish cinema come from? And what can it tell us about the nation and its history? Focusing on issues such as landscape, memory, violence, gender, sexuality, and national identity, this course provides students with a solid training in film analysis and a wide-ranging introduction to Spanish culture through its cinema. In Spanish.

HISP 1290K. The Spanish Novel since 1975.
In 1975, the death of General Francisco Franco opened the door to a new democratic Spain. In the novel, the social and political novelties generated a change both thematic and formal. This course pays attention to issues such as the diverse genres that have gained strength, such as the groups that have acquired a literary voice, and the portrayal of current preoccupations. Prerequisite: HISP 0730 or 0740.

HISP 1290P. Federico García Lorca, 1898-1936.
Federico García Lorca (1898-1936) embodies Spanish Modernity. While his innovative poetry and drama established him as a crucial figure in the 20th Century Spanish cultural landscape, his brutal murder by Fascist supporters at the beginning of the Civil War made of him a symbol of the lost freedom. This class will study his artistic evolution: from his youth in Granada, and his studies in Madrid—where he met and befriended filmmaker Luis Buñuel and painter Salvador Dalí—to his trip to New York and Latin America. The focus of the class will be the study of his poetry, theatre, and essays, but will also explore both the construction of the Lorca myth, and the period of cultural splendor that is encapsulated in his biographical dates: from the loss of the empire in 1898, to the beginning of the Civil War in the summer of 1936.

HISP 1330C. Indigenous Literatures of Latin America.
This course explores the presence of indigenous cultures in Latin American literature over the last five centuries. Blending historical and literary analysis, we will delve into foundational indigenous narratives (with a stress on Nahuatl, Mayan and Quechua variants); the vision of Colonial mestizo and bilingual go-betweens; othering discourses in antiquarian, archeological and travel narratives; and the indigenous imprint in contemporary novels, short stories and poetry, including indigenous, women and transnational authors. Through this journey, marginalized cultures throughout the continent show their resilience as the multicultural plot of Latin American history comes to the fore. In Spanish.

HISP 1330D. Patriots, Rogues, and Lovers.
Nineteenth-century Spanish American writers were committed to educating their readers, yet they delighted in entertaining them with melodrama. We critically examine patriotic novels and stories with a focus on tales of love and/or adventure. We consider the breakdown of this trend in the first quarter of the 20th century as well as feminist critiques of it.

HISP 1330K. Contemporary Poetry of Latin America.
An exploration of some representative poets and movements in modern Latin American poetry, with special emphasis on the Latin American Modernists, the Avant-Garde and contemporary trends. Topics include: analytical techniques, historicity, poetry and translation, and a creative writing workshop. For advanced students only. Prerequisites: HISP 0740, or HISP 0600 and HISP 0730. Previous experience in 1000-level Spanish courses desirable.

HISP 1330P. The Philosophy of Borges.
Jorge Luis Borges devoted several essays during his youth to developing his philosophical understanding of concepts like “personality,” “memory,” “reality,” “narrative” and “style.” At some point later in his literary career, he attempted to erase the memory of those years from his public existence, to the extent that most of the books published during the 1920s were never reprinted during Borges’ lifetime. Nevertheless, it was in those years that he developed the entire philosophical grounding of his future literary work. We will work to decipher Borges’ philosophy through the reading and interpretation of his essays, narratives and poems, including several key texts from his first three suppressed prose volumes (Inquisiciones, El tamaño de mi esperanza, and El idioma de los argentinos). In English, with some Spanish readings. Prerequisite: HISP 0730 or 0740.
HISP 1330Q. Short Forms: Major Works in a Minor Key.
This course focuses on two outstanding practitioners of the short story in twentieth century Latin American literature—the Argentineans Jorge Luis Borges and Julio Cortázar—paying close attention to each one’s most famous collection of stories (Borges’ Ficciones [1944], Cortázar’s Final del juego [1956]). We’ll map the ways in which their writing connects to different genres (detective fiction, science fiction, poetry), media (photography, painting, film), and practices of adaptation (especially translation), and explore their legacy for more recent writers (Ricardo Piglia, Edmundo Paz Soldán, Roberto Bolaño, Samanta Schweblin).

HISP 1330T. El amor en español.
This course will visit a series of famous, colorful and controversial couples (novios, esposos y amantes) from the literature and history of Spain and Latin America. We will consider such themes as courtly love, erotic love, commonplace about love and distortions of them, the degradation of idealized love, and the renunciation of human love in favor of divine love in the medieval and Renaissance periods. We will also address contemporary rites of passage in the formation of couples, traditional and modern views of love and marriage, as well as the “death of the couple,” love and melancholy, melodrama and hysteria.

HISP 1330U. Hauntings: Gothic Fictions, Banditry and the Supernatural in Latin America.
A specter haunts Latin America. The constitution of the nation-state in the region after the Wars of Independence (1810-1830) entailed creating fictions to include (and, naturally, exclude) those who belonged to the community of the nation. Usually the left-outs were the ones who did not comply with the profile of the desired citizen:lettered, male, white and urban. This course will focus on narrations about those ‘left-outs’ after the constitution of the Nation-States in the region. We will read fictions about mad monster women, spectral slaves, bloodthirsty bandits, priests-turned-sorcerers, dwarfs, animal rebellions, and many other “exceptions to the norm.” In Spanish.

HISP 1330V. Gender Trouble in Spanish America.
This course will explore the construction of gendered identities in Spanish American literature and film after 1960. Questioning normative constructions of gender roles, we will see how masculinities and femininities are represented and respond to changing politics and power, often redefining earlier “gender contracts.” Works studied will include novels by Anglo Mastretta, José Donoso, Mario Bellatin and Diarmela Elitt, short stories, theater, poetry, and 2-3 films, as well as pertinent theoretical and critical approaches to the study of gender in Latin America. In Spanish.

HISP 1330W. War, Revolution and the Cult of the Hero in Latin American Culture.
This course will tackle the literary underpinning of war and revolution in order to scrutinize its powers. The discourse on war does not originate ex nihilo but recycles and appropriates narratives of the nation, the State or a given region depending on the specificities of each given war. Starting with Bolívar’s “Decreto de Guerra a Muerte”, passing through literary renditions of civil wars, continuing with guerrilla warfare texts, all the way to narratives on the War on Drugs, this course will question the ways in which war and revolution are made through language and staged in literature. Taught in Spanish.

Throughout history, conquest and colonization have implied different kinds of appropriations: control over new lands, new bodies, new languages. With the appropriation of new languages came the confrontation between different ways of organizing the world and, in particular, alternative ways of understanding humankind’s relationship to nature. This course explores the scientific literatures that emerged in the wake of Spanish conquest and colonization of the Americas (1500-1800). These hybrid scientific literatures, written in Spanish but also in Nahua, Maya, Quechua and graphic forms, illustrate the lasting cross-pollination between Old and New World notions about American nature.

HISP 1330Y. “Us” and “Them”: Cross-Cultural Representations in Spanish American Literature and Film.
This class will study the construction of self and other in Latin American cultural production. By examining examples from colonial times to today in a variety of literary genres and in three particular countries - Mexico, Argentina and Peru - we will examine ethnic, racial, and national identities (primarily). Our study will include some of the theoretical ideas associated with the confrontation between “them” and “us” and changes in these positions: the concept of the contact zone, of acculturation, and cultural hybridity, among others.

HISP 1330Z. Tropical Fictions: Geography and Literature in Latin American Culture.
Tropical nature in Latin America has been represented in conflicting ways: a place of leisure and sensuality, but also of depravity and sloth; a place of infinite riches but also a space where disease and racial degeneration thrive. Tracing the variations and endurance of these tropes in 18th- to 21st-century Western consciousness, this course aims to re-think the tropics in literature, film and the arts from a vantage point different to that of temperate-climate European civilization. Readings include canonical fictions such as La vorágine (1924), 19th-century European travelogues from the region, as well as contemporary indigenous art.

HISP 1331A. Writing Animals in the Iberian Atlantic.
Animals are our mirrors, our doubles; creatures onto which we project our notions about humanity and its limits. From Aristotle’s ladder to Mesoamerican nahualism, animals have been at the center of how we understand the world and our place in it. This course looks at Animal Studies in dialogue with Hispanic, Latin American and Indigenous Studies to explore how intersectionality illuminates discourses about the human-nonhuman divide. Drawing on studies from both sides of the Atlantic, we will analyze the main genres that have focused on the nonhuman and recent studies on sheep, pigs, the rhinoceros, llamas, and perhaps even hummingbirds.

HISP 1331D. Latin America and the Caribbean: Challenges of the Global South (LACA 1620B).
Interested students must register for LACA 1620B.

HISP 1331E. Visions and Voices of Indigenous Mexico.
“In Mexico we are all mixed” goes a popular dictum, placing mestizaje at the core of what it means to be Mexican. One fifth of the population, however, self identifies as indigenous (pueblos originarios), and keeps experiencing various forms of discrimination for not abiding by the dominant national discourse. HISP 1331E explores three pillars of indigenous identity—land’s gifts, material culture and language—to inquire how indigeneity has been deployed and reclaimed by indigenous groups through time. Materials include pre-Hispanic and Colonial codices, murals and objects, and present day literary works, music and cinema, with one hour of Nahua, basics per week.

HISP 1331G. Latin American Horror (GNSS 1520).
Interested students must register for GNSS 1520.

HISP 1331H. Latin American Environmental Humanities (LACA 1504G).
Interested students must register for LACA 1504G.

HISP 1331I. Inframundos: Mexican/American Underworlds.
From pre-Columbian times to the diasporic present in the United States, Mexican history and culture are filled with references to underworlds as sites of transgression. The Christian hell and Colonial mine became default spots for native bodies, while prison cells, tunnels and subterranean trains lodge today’s poor and disenfranchised. This seminar will visit these sites through literature, film, music and journalism to question which subjects have been read as transgressors through time and why. Authors discussed will include Juan Rulfo, Carlos Fuentes, Verónica Gerber, Yuri Herrera, Valeria Luiselli, and Myriam Gurba. Taught in Spanish; Spanglish welcome.
HISP 1331K. Borges y la Literatura Fantástica. 
La literatura fantástica explora las dimensiones de lo extraño, lo maravilloso y lo raro. Borges introdujo, en español, la tradición de lo fantástico, que se remonta a Poe, Lovecraft y Kafka, y que después de Borges, prosigue en los cuentos de Cortázar, García Márquez y Carlos Fuentes. Paralelamente al canon fantástico, su poética del lenguaje como matriz de la mera realidad, emparenta con la suficiencia de la poesía en la ensayística de María Zambrano; y con la poética de José María Eguren, Jorge E. Eliason y Xavier Villarrutia. Su noción del relato fantástico dialoga con las prosas de Luís Loayza, Juan José Arreola y César Aira.

HISP 1331L. Peasant-Boom-Slum: The Latin American Novel (COLT 1422N).
Interested students must register for COLT 1422N.

HISP 1370A. “One Hundred Years of Solitude”: Culture and Politics in Garcia Marquez’s Work.
This course will focus on García Márquez's masterpiece in order to analyze its modes of representation, discursive strategies, and fictional construction as well as its interactions with history, politics, and literary and popular traditions. Other related work by the Colombian Nobel Prize winner will be discussed, as will his journalistic pieces and movies. The novel may be read in Spanish or English; discussion will be mainly in Spanish.

HISP 1370B. Gaborium: Memory, Fiction, and Reading in Gabriel García Márquez.
Departing from some formats of writing and reading (myth, history, legend, journalism, memoirs) in García Márquez writings, we plan to study the representation (magical, carnivalesque, political) unfolding in his novels, stories, and essays. From this processing of information and exchange, we plan to study the rewriting and transformation of history in texts that illustrate issues of tradition/modernity, countryside/culture, center/margins, migration/exile, feminine/masculine, and popular culture/media culture.

HISP 1370E. La creatividad en América Latina.
Variables teorías actuales sobre la creatividad se ilustran muy bien con relatos, poemas, películas, música y arte de América Latina gracias a su adaptación de materiales, diversidad de formas, y gusto por la mezcla. Revisaremos las poéticas del dadaísmo, el surrealismo, la literatura fantástica, el realismo mágico, la biografía imaginaria, el utopismo, y el juego verbal. La clase será visitada por algunos autores para discutir sus procesos creativos.

HISP 1370F. Modernity and Memory in Latin America.
Contemporary cultural history proposes that memory is not an archive or a museum of history but a past evoked to amplify the present. We examine the rewriting and transformation of history in texts that illustrate issues of tradition/modernity, countryside/culture, center/margins, migration/exile, feminine/masculine, and popular culture/media culture.

HISP 1370I. The End of the Century and the Idea of the New.
This course will explore the narrative of the end, the culture of crisis, and the literary sceneries of the new aesthetics. Departing from a comparison between the “fin de siècle” and the current “end of the century,” we will pass to the apocalyptic views of the millenium and focus on current essays on the topic (Calvino, Baudrillard) as well as on new trends, ideas, and narratives related to this subject in the Americas. This could be the first course on the literature of the 21st century.

HISP 1370K. Literatura latinoamericana del siglo XXI.
Estudiaremos las tendencias innovadoras de la narrativa latinoamericana reciente. Veremos la literatura como un trabajo sobre la resignificación de lo nuevo. Nuevas voces, nuevos textos y géneros, y nuevas ideas proponen una visión del futuro que buscaremos documentar. Los libros y textos que leeremos son un mapa del futuro. Algunos temas: el picnicdrama familiar, violencia y crisis del proyecto moderno, la saga de la migración, la conciencia transatlántica, el mundo emotivo y los afectos, la ética de la solidaridad.

HISP 1370L. Gabriel García Marquez and the Politics of Magic Realism.
Estudiaremos las principales novelas del autor, desde El coronel no tiene quien le escriba hasta Cien años de soledad, con especial atención al realismo mágico y las ideas sobre la novela que cultivó el autor. Nuestra discusión se situará en el proceso social y político latinoamericano así como en las mitologías de la cultura popular. Prerequisite: HISP 0730 or 0740.

HISP 1370N. Carlos Fuentes and the New Mexican Narrative.
This seminar will focus on close-readings and conceptualization of Fuentes’ innovative works of fiction and main ideas on Mexico and its cultural history. We will discuss a selection of his short-stories, novels and essays, moving from the political to the Gothic, from history to the Baroque. We will follow with new Mexican fiction writers who renew and debate Fuentes practices and ideas. Among them, Carmen Boulosa, Jorge Volpi, Pedro Ángel Palou, Cristina Rivera Garza and Yuri Herrera. The seminar will be in Spanish, and is limited to 40 students.

This course will explore new trends and authors from the Hispanicophonic world: Spanish, Latin American and Latino narratives of migration, bilingualism, globalization and innovative forms and techniques. This course will be dedicated to Borges global. We will follow his imprint on the international literature and literary ideas. We will read, in Spanish and English, Borges’ stories and essays.

HISP 1370V. Mujeres Malas.
This seminar will analyze the notion of “bad women” in Pre-modern and Latin American Literature and visual texts. Perception, representation, and stereotyping of these women, both historical and fictional, as Mad, Witch, Femme fatal, Hysterical, and Crazy, will allow us to follow the ideological narrative that produced these characters. Some of them are based on medical, primitive, political, and even psychoanalytic conceptions. We will discuss the primitive Castilian epic cycle, Celestina, Carmen, the novel and the opera; Malinche, Cortéz’ translator in the conquest of Mexico; and novels and short stories from contemporary authors as well as Luis Buñuel’ films. Prerequisite: HISP 0730 or 0740.

HISP 1370W. La Cultura Política de la Transición y DDHH en el mundo Hispánico.
This course will discuss literary representations of “transitions” as the social and cultural mechanisms by which a country or region (Spain, Argentina, Chile, Peru, Cuba) moves form tradition to modernity, from the rural to urban, and from authoritarian regimes to democracy. We will also analyze the role of borders, social spaces, political negotiation, mapping and networks in the sargas of migration. Prerequisite: HISP 0730 or 0740.
HISP 1370Y. Literature and Film of the Cuban Revolution.
Cuba’s revolution of 1959 gained extraordinary visibility internationally, motivating images of bearded rebels, jubilant crowds and middle-class flight. Yet even as the Cuban Revolution became an object of representation abroad, it guided the domestic production of new forms of literature and cinema. Over the course of the semester, we will trace the relationship between fiction and film, and between art and the revolutionary project, from 1959 to the present day.

HISP 1371B. Sports and Culture in Latin America.
Sports in Latin America are big, and in some cases huge, and their significance goes way beyond pure entertainment. They are a contemporary theater of sorts where underlying social tensions are relieved and sometimes exacerbated. This course studies soccer, boxing, baseball and lesser-known sports (e.g., ultramarathons and women’s wrestling) in relation to Latin American national narratives, politics, race, and gender. Using tools of sociology and anthropology, among others disciplines, we will study the representation of and discourse about sports in cinema, literature, television, and other media. IN ENGLISH.

HISP 1371C. “El gran zoo”: Animals in Latin American Culture.
From César Vallejo’s dismembered spider, to Julio Cortázar’s house tiger, to Nicolás Guillén’s satirical zoo, this course traces the varied ways in which animals appear in 20th and 21st century Latin American culture. We will pay particular attention to the zones of entanglement between the human and non-human, in order to analyze how a number of Latin American writers and filmmakers tackle oppositions between nature and culture, civilization y barbarie, city and countryside, self and other. In unsettling the human-animal divide, Latin American cultures respond to some of the most pressing—perhaps dehumanizing—issues of the century.

HISP 1371D. Latin American Authors Encounter the Sciences (LACA 1504F).
Interested students must register for LACA 1504F.

HISP 1371F. Narrating the Borderlands: Literature, Legality, and Solidarity.
This course explores multiple issues concerning crossing, living, and narrating the United States-Mexico border. We will focus on the border as a legal space bound to interpretations about what it means to migrate legally or illegally across that territory. We will explore the border as a vast and uneven expanse that entails diverse and often contradictory narrations and imaginaries that range from idealized landscapes to apocalyptic wastelands. Finally, we will discuss how border-crossing is a theme for artists and writers working on the solidarity networks from those who have dealt with the journey and its perils.

HISP 1371H. Storytelling in the Americas (LACA 1630).
Interested students must register for LACA 1630.

HISP 1371I. From Pancho Villa to Netflix: An Introduction to Mexican Cinema.
This course is an introductory overview to Mexican cinema, its prominent themes, and its historical eras. We will begin with the silent films of the national period in the 1930s and conclude with the transition to streaming platforms in the 2010s. We will pay attention to three interrelated questions: 1) What is the relation between cinema and political projects? 2) How does national cinema approach gender? 3) What is the role of neoliberal market in reshaping Mexican films? This approach will be useful to see how the production of cinema is related to major political and social processes in Mexico.

HISP 1371L. Take My Breath Away: A Cultural History of Air in Modern Latin America’s Imagination and Literature.
Latin America has been conjured up from opposing aerial images. On the one hand, Amazonia has been represented as the “lungs of the earth”; on the other, its megapolises as polluted places where breathing is hazardous. From Neruda’s poetic journey to Machu Picchu, passing through eco-feminist gothic fictions, all the way through accordan, flute and Caribbean music, flight narratives and space films, this course explores what “aire” allows us to recount—or choke—to, to scent—or to smell—about being in place or traveling. The languages of instruction will be Spanish and English.

HISP 1371P. On Both Sides of the Lens: Latin American Women Filmmakers (GNSS 1070).
Interested students must register for GNSS 1070.

HISP 1500L. Theory and Practice of Translation.
The objectives of the course are to give students a firm grounding in the theory of translation studies as well as extensive experience in the practice of literary translation, working closely with several canonical Spanish texts as well as texts of the student’s choice. Throughout the course of the semester, students will also be called upon to reflect actively on their experience as translators, and dialogue on this experience with their peers. This course is structured as a workshop, with students sharing their work – both translations and reading reflections – and collaborating with their peers.

HISP 1500M. Queer Aesthetics and Intimacies en español.
This course asks what connections can be drawn among ‘queer’ texts across time, place, and different genres of writing and forms of artistic expression in Spanish, Latin American, and US Latinx cultures. By looking to literary texts and cultural objects from the 20th to 21st centuries, this course considers how non-normative sex and gender function within spaces beset by colonial, racist, and nationalist legacies and how queerness imaginates being within and without these structures. Readings and discussion will be in Spanish with an option to write papers in English for non-concentrators or concentrators fulfilling one of their English-language courses.

HISP 1500S. An Introduction to Translation Studies.
Interested students must register for GNSS 1070.

HISP 1700A. Dismantling the Clockwork: Creative Writing and Narrative Techniques.
This class focuses on creating literary texts in Spanish, which involves the development of a sensibility to appreciate narrative texts and the skills to employ writing techniques, e.g., use of the first person, free indirect speech or the stream of consciousness. Drawing from theoretical reflections on writing produced by Latin American and Spanish canonical writers as well as examples of its use, we’ll explore the creative possibilities of narrative forms: aphorisms, prose poetry and short stories. Our objective is to strengthen students’ skills as individual and collaborative authors through exercises in literary production and techniques, strategies, and habits of good writing. In Spanish.

HISP 1700B. Rhythm and Silence: A Creative Writing Workshop.
The course focuses on learning the craft of creative writing in Spanish across genres. We will study underlying principles of writing through lectures, readings, discussions, and exercises. As we reflect upon the creative process, we will examine the relationship between author and text and explore narrative techniques used to construct complex characters, dialogue, and imagery. The objective will be to expand our creative writing skills and discuss the works of influential contemporary Latin American authors such as Juan José Arreola, Eduardo Hallon, Juan Carlos Onetti, Juan José Saer and Mario Vargas Llosa.

HISP 1750P. TAship/fellow for First Year Seminar HISP 0750P.
This course provides a senior concentrator the opportunity to work as a TA and fellow for the First Year Seminar HISP 750P. Contemporary Social Justice Cinema of the Spanish Speaking World. The TA/fellow completes more advanced versions of the two short semester papers and for a final project compiles a course development proposal for improvement to the class, along with an annotated bibliography. The student holds weekly discussion sections with first years and also provides developmental writing support throughout the semester.
HISP 2030A. History and Fiction: The Literature of the 15th Century. The goal of this course is to familiarize students with major literary works of the Fifteenth Century, and their socio-cultural background. Major works of three outstanding poets of this period (Juan de Mena, Inigo Lopez de Mendoza, and Jorge Manrique), satirical and historical writings, romances, (ballads sung with instrumental accompaniment), Alfonso Martinez de Toledo’s Corbacho and Fernando de Rojas’ Celestina will be presented in the context of the distinct cultural traditions that coexisted in Spain.

HISP 2030B. History and Fiction: Literature of the 15th Century. This is intended for advanced graduate students in Hispanic Studies at the prospectus or dissertation stages. Its main purpose is to help students conceptualize or refine projects (including corpus of investigation, scholarly approaches, and principal guiding questions) and develop strategies for research and writing. Conducted as a workshop, the seminar provides ample opportunities for participants to give and receive feedback on each other’s work and thus acquire important skills in peer review. While focused primarily on the dissertation (prospectus), the seminar also offers guidance on various aspects of professional development such as preparation for the job market and article publication.

HISP 2030C. Medieval Masterpieces. Examines three medieval Spanish masterpieces: Cantar de mio Cid, Libro de buen amor, and Celestina. Other works are read to explore lines of continuity and discontinuity in these three works and their respective genres.

HISP 2030D. Fifteenth-Century Sentimental Romances and Celestina. The fifteenth-century sentimental romances establish narrative innovations and a literary climate that lead inevitably to the creation of the “novel”. With their insistent portrayal of the sufferings of love, romances by Padron, Flores, San Pedro, and Rojas represent an essential step in the evolution of the modern novel.

HISP 2030E. Medieval Spanish Epic. A study of the medieval Spanish epic poems and narratives. This seminar will move through a series of topics or events and texts from the 10th to the 15th centuries, exploring the relation between heroic narratives and history. Four medieval cycles (Castilian Counts, Cid, Carolingian, and anti-Carolingian) based on oral traditions will be studied and compared with their ballad congener printed in the 16th century. We will examine the different contexts and channels in which historical epic narratives were produced, consumed and transmitted.

HISP 2030F. Mester de clerecia. This course will focus on different works of “mester de clerecia” from the 13th and 14th centuries, and provide an overview of current thinking regarding their nature and origin, while at the same time seeking to interrogate many of the prevailing assumptions and received ideas of Spanish literary historiography. Works and topics will include: Libro de Alexandre (ideologies of power), Libro de Apolonio (the intellectual hero), Berceo’s works (hagiography, clerical poetry, the rise of literacy), Poema/ Libro de Fernán González (epic hero), and Libro de buen amor (seduction manual/spiritual guide).

HISP 2030H. Latin in America (LATN 2080F). Interested students must register for LATN 2080F.

HISP 2160F. Questioning the Canon: Golden Age Theatre. The canonical dramatic texts of the Spanish Golden Age - from Lope de Vega’s El caballero de Olmedo and El castigo sin venganza to Tirso de Molina’s El burlador de Sevilla and Calderón’s La vida es sueno will be opened to new critical inquiry. Dramatic discourse, construction of characters, social and moral issues such as justice versus revenge, reality versus dream, courtly love versus erotic love, chastity versus incest, will be at issue. Each play will also be studied in relation to its social background and as metaphors of power and political crisis.

HISP 2160G. Don Quixote: Contexts and Constructions. This seminar offers an in-depth study of El ingenioso hidalgo Don Quijote de la Mancha in its “own right” and through an exploration of its afterlives (editions, translations, interpretations, imitations). On the one hand, we will examine the novel in its narrative complexity and engagement with early modern Spanish literature and history. On the other, we will trace its modern critical reception, with particular focus on its paradoxical canonization both as a “universal” masterpiece and a cornerstone of constructions of Spain and the study of Spanish and the Hispanic world.

HISP 2160J. The Poetics and Practice of Space in the Theater of the Spanish Baroque. This seminar will explore the real and virtual spaces of seventeenth-century Spanish drama. We will examine the diverse spaces in which theatrical performances took place (public playhouses, city streets, court theaters, convents), as well as the various types of spaces represented on the stage (domestic and public, urban and rural, worldly and supernatural, familiar and distant). How did dramatic space articulate the boundaries of the public and private in the Spanish baroque? How did it function in the configuration of social hierarchies, subjectivities, and marginal as well as normative identities? In the theatrical world of seventeenth-century Spain, how did spatial practices on stage shape the experience of space off stage?

HISP 2160N. Antiquity and Innovation in the Hispanic Renaissance. The artistic and literary florescence of the Siglo de Oro paralleled a broader current of cultural innovation, which extended beyond peninsular Spain to other parts of Europe and the Americas – a movement which can be conceived as a Hispanic Renaissance. After an introductory overview, the seminar will highlight four major tendencies, through close examination of some foundational authors and texts. The course will be organised thematically, but texts will generally be approached in chronological sequence, beginning with Antonio de Nebrija’s investigations in the 1490s and ending with Carlos de Sigüenza y Góngora’s showcasing of New Spain’s complex legacies.

HISP 2160P. The Invention of the Novel: Fiction and Society in Renaissance Spain. In the space of ten years, at the mid-sixteenth century, four genres made their first appearance in Spain: the picaresque, pastoral and Moorish (or captivity) novels, and the novel of foreign customs and adventures. This seminar examines how and why these novels, and the more complex novels that followed, became key instruments for commentary and dissent in a society with little tolerance for both pursuits. Working individually and in groups, we will also undertake a series of exercises in close and critical reading to hone analytical skills. All readings, discussions and assignments will be done in Spanish.

HISP 2160Q. Stage and Page in Early Modern Spain: A Seminar on the Comedia Nueva. This seminar studies the development and florescence of early modern Spain’s most popular form of entertainment, the comedia nueva, from both literary and performance perspectives. We will read works by the principal playwrights of the period (Lope de Vega, Tirso de Molina, Calderón de la Barca, and others); examine the comedia’s main sub-genres (honor plays, comedias de capa y espada, and autos sacramentales, etc.); and consider the institutional regulation and social and material dimensions of theatrical activity (including the configuration of playhouses and composition of acting companies). Key critical approaches to the comedia, past and present, will also be explored.

HISP 2250N. Madrid’s Modern Landscapes (1780-1900). A seminar to study the changing relationship between landscape, architecture, and society during Madrid’s modernization, from the late eighteenth century to the early twentieth. Considers representations of gardens, parks, and “natural” landscapes around the Spanish capital as expressions of how writers, planners, and intellectuals envisioned changes in ideas of national identity, gender relationships, class consciousness, and artistic perception. Readings, presentations, and group discussions are designed to promote a sustained analysis of such concepts as modernization, nature, the city and the country, with an eye not only to Madrid’s past but also to our own relationship to landscape in the present.
HISP 2350C. La nueva novela de América Latina.
Este curso está dedicado a algunos textos fundadores: Rayuela de Julio Cortázar, Pedro Páramo de Juan Rulfo, La muerte de Artemio Cruz de Carlos Fuentes, Los ríos profundos de José María Arguedas, Cien años de Soledad de Gabriel García Márquez; pero también a otros que literaria inician nuevas rutas: La guaracha del macho Camacho de Luis Rafael Sánchez, Un mundo para Julius de Alfredo Bryce Echenique, Los vigilantes de Diemela Eltit, y La ingratitud de Matilde Sánchez.

HISP 2350E. Novela latinamerica contemporánea: Crítica Textual y Ediciones Críticas.
Estudiaremos la constelación de novelas fundamentales (Pedro Páramo, Los ríos profundos, Rayuela, La muerte de Artemio Cruz, Cien Años de soledad entre otras) que configuran un sistema literario hecho de innovación formal, ampliación de la lectura, y puesta en crisis de la representación.

HISP 2350G. Teoría y Práctica Poética en Cesar Vallejo.
Seminario dedicado a estudiar en profundidad la poesía hermética de Vallejo. Analizaremos su práctica poética así como su teoría del poema a través de la evolución de su obra y pensamiento.

HISP 2350H. The History of Wonder in Colonial Spanish American Lettres.
The notion of wonder (asombro, maravilla) played a determining role in the Spanish and Creole writings of the Spanish American colonial period. The volatile aesthetic of wonder raises and implicates such important issues as otherness, exoticism, category crisis, and identity formation. A studies course examining the role of wonder in New World historiographic and literary writings of the 16th and 17th centuries.

HISP 2350I. Vallejo y sus contemporáneos.
Este seminario monográfico tiene como finalidad explorar la obra poética de César Vallejo en relación a los contextos del modernismo, la vanguardia, y la poesía contemporánea. Partiremos de un análisis formal del lenguaje poético y su organización semántica, de modo de ejercitarlos en el análisis textual de la poesía.

HISP 2350M. Poetics of the Avant-Garde in Latin America.
This course traces the shocks and flows of avant-garde activities through Latin America, beginning in the first decades of the twentieth century and weaving our way to the present. We will explore manifestoes, poetry, artworks, and films from Argentina, the Caribbean, Chile, Brazil, Mexico, and Peru, from creacionismo through Brazilian modernismo, ultrairomanismo and estridentismo, poesía afroantillana y tecnoidigenismo, with occasional detours into Iberian experiments, culminating with studies of the neo-avant-gardes of the 1960s and of the nostalgia for the avant-gardes which characterize the early twenty-first century.

HISP 2350P. Teoría Literaria: la literatura Transatlántica.
Dedicado a la teoría del texto transatlántico, en este seminario trabajaremos sobre la historia intelectual de la interculturalidad Atlántica. A partir de los modelos, contactos, apropiación, debate y dialogismo que entre Europa y América Latina configuran un sistema literario, nos detendremos en la construcción del Sujeto, la Representación y la Lectura. Estudiaremos a Guzmán Poma de Ayala y Garcíaico de la Vega, la saga de Calibán, los modelos de la formación nacional en Martí y Sarmiento, y la genealogía de la mezcla como la diferencia moderna de la producción cultural latinoamericana. En español.

HISP 2350V. The Politics of Romanticism in Spanish American Literature.
This course postulates Romanticism as a regime of representation employed by second-generation citizens of the new Latin American republics to organize time-space in post-Independence Spanish America. Through readings of national romances, periodicals, poetry, cuadros de costumbres and travelogues, we will discuss what Romanticism and being Romantic meant for mid-19th-century writers and readers in Spanish America. Weekly readings will be organized around a word from a glossary of Romantic keywords: lengua, pueblo, índio, España, amor, others. Finally, the course will examine connections between 19th-century Romanticism, 20th century criollismo and Populism.

HISP 2450. Exchange Scholar Program.

HISP 2520I. Sor Juana Inés de la Cruz in Her Literary Context.
Intensive study of Sor Juana’s major writings in a variety of genres; comparisons with other writers of her extended literary milieu.

HISP 2520J. Teoría y practica del texto transatlántico.
Este curso propone varios escenarios teóricos sobre el texto transatlántico. Partiendo de modelos de teoría literaria formal trabajaremos sobre un conjunto de textos de ambas orillas del idioma. Revisaremos las cuestiones del genero, representación, lectura y recepción, mezcla y heterogeneidad archivo y cambio.

HISP 2520L. Latin American Existential Literature.
European existentialism had a strong impact on Latin American literature, though that impact remains under-explored. The course begins with European existentialism and Latin American identity politics. It then explores the particular constructions of European existentialism affected by Argentine, Uruguayan, Mexican, and Brazilian writers of prose fiction in the mid-twentieth century. Readings in Spanish and English. Instructor override needed for registration.

HISP 2520M. The Poetry and Discursive Strategies of Spanish American Modernismo.
The development of Modernismo was a turning point in the elaboration of the continental self-image. Modernista poets like Rubén Darío, Leopoldo Lugones, Julio Herrera y Reissig, Julián del Casal, Manuel Gutiérrez Nájera and José Asunción Silva were among the first original Hispanic American creators of literature, but they did not share a common view on continental problems and solutions. The relevance of Modernismo for the shaping of Latin American self image cannot be overstated. Modernista’s concepciones on new intellectuals, aestheticism, l’art pour l’art, racism, immigrants, science and the occult, modernization, decadence, dandyismo, the body, sex, feminism, anarchism, cosmopolitism, pan-Latinism, universalism and nationalism will be discussed.

HISP 2520Q. Critical Readings in Cuban, Puerto Rican and Dominican Literature.

Studies how Spain’s exploration and conquest of the Americas tested Europe’s rights to the Americas and its peoples. Readings: Aristotle, Strabo, Pliny, Ptolemy, Columbus, Vespucci, Óviedo, Las Casas, and Acosta. Students will be able to read primary texts in either Spanish or English. Discussion in English. Undergraduates welcome.

HISP 2520P. Narrativa latinoamericana contemporánea (De Juan Rulfo a Diemela Eltit).
Estudiaremos los modos de representación, prácticas de escritura y lectura, redes culturales, tramas sociales y políticas de los relatos de la modernidad crítica y diferencia latinoamericana. Autores: Cortázar, García Márquez, Fuentes, Bryce, Rodríguez, Juliá.

HISP 2520Q. Critical Readings in Cuban, Puerto Rican and Dominican Literature.
This course traces the emergence and evolution of nationalist expression in literary and political texts from Cuba, Puerto Rico and the Dominican Republic. Beginning with early anti-colonial and nation-building writing, we focus particularly on the idea of the island in articulations of national culture. We address key figures in the intellectual history of the Caribbean; essays, novels and poetry from the nineteenth-century to the twenty-first; and recent critical and theoretical work on the Spanish Caribbean. Weekly topics include the intersection of race and nationalism; exile and migration; and transnational ties to the broader Caribbean, the U.S. and Latin America. This course is for graduate students only.
HISP 2520R. Radical Borders.
This course considers Mexico from a transnational perspective in order to explore the aesthetic and political dimensions of its northern and southern borders. We will examine the question of migration from and to Mexico in novels, poems, and theoretical materials from countries such as El Salvador, Honduras, and the United States. The objective is to conceptualize the notion of border not only as a space of surveillance and law enforcement but also as an arena for radical politics and revolutionary ideals. We will read texts by Horacio Castellanos Moya, Alí Quej, Yuri Herrera, Subcomandante Marcos, and Sayak Valencia among others.

HISP 2620A. Entre nosotros: Representing the Family in Modern and Contemporary Spain.
This course reflects on the representation of the family in Spanish literature and film since the Civil War, spanning texts and films from the period 1942-2009. Some of the themes we will explore over the course of the semester include: the family as a space for the formation of identities and subjectivities; the symbolic relationship between family and nation; religion; gender roles and the concepts of maternity, fatherhood, and childhood; monstrous families and the specter of incest; modern “found” families constructed outside biological bonds. Texts and films by Sender, Buero Vallejo, Delibes, Cela, Laforet, Buñuel, Borau, Almodóvar, Saura, among others.

HISP 2620O. Authorship and Authoritarianism in Spain and Latin America.
This course examines responses to authoritarianism in contemporary Spanish and Latin American literature, using the particular cases of recent dictatorships in Spain (Francisco Franco, 1939-1975) and Chile (Augusto Pinochet, 1973-1990) as a focus. Alongside novels and a play dealing with dictatorship and its aftermath, we will read theoretical texts that offer varied approaches to history, literature, aesthetics, and politics. Throughout, we will examine the complex relationship between authority, authoritarianism, and authorship in the twentieth and twenty-first centuries, asking how dictatorship is (not) narrated and how we can read narratives emerging from contexts of repression and state terror. In Spanish.

HISP 2620P. The Urbanization of Culture: BCN-MAD from Modernity to Postmodernity.
The way you live is the way you represent reality, David Harvey argued in The Urban Experience (1989). Any change in aesthetics, he continued, should therefore imply a change in the perception of space leading to what Harvey described as the urbanization of consciousness. Playing out of this concept, this class will examine the ways by which two Iberian cities (Barcelona and Madrid) have been both represented and re-imagined in contemporary culture through novels, film, painting and photography.

HISP 2900. Theory and Methods of Foreign Language Teaching.
How are second languages acquired? How can instruction optimize acquisition? How do we evaluate, improve or create effective teaching materials? This course introduces the theory of foreign language learning and teaching and seeks to help language teachers implement communicative language teaching through reflective practice. Written permission required for undergraduates.

HISP 2970. Preliminary Examination Preparation.
For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

HISP 2980. Research in Spanish and Latin American Literature.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HISP 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full time basis.

HISP 2990A. Learning & Teaching Spanish as a Foreign Language.
This course provides practicing and prospective teachers of Spanish as a second language (L2) with an introduction to the field of second language acquisition (SLA) and its application to language teaching methodology and pedagogy, with a specific focus on the teaching of Spanish. In addition to the theoretical discussion, there is a significant practical component to the course so you can start (or continue) to develop skills and materials for your own work as an instructor at Brown University and beyond.

HISP 2991. Thesis Preparation.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HISP XLIST. Courses of Interest to Concentrators in Hispanic Studies.

History
Chair
Ethan M. Pollock
As one of the first institutions in the United States to provide for historical studies, Brown University has long valued and nurtured research in the Department of History. The faculty’s high standard of scholarship and excellence in teaching are well known, and members of the department are committed to the value a rigorous education in the humanities confers upon students. The department trains students in the fundamentals of historical thinking; skills and attitudes that will provide a foundation for excellence in a wide range of careers and professions, including teaching, law, medicine, business, public service, and advanced historical research. For additional information, please visit the department’s website: https://www.brown.edu/academics/history/

History Concentration Requirements

Basic requirement: A minimum of 10 courses, at least 8 of which must be courses taught by a Brown University History Department faculty member ([https://www.brown.edu/academics/history/undergraduate/history-concentration)] and visit the office hours of their prospective concentration advisor ([https://www.brown.edu/academics/history/undergraduate/history-concentration-concentration-advisor/) assigned according to student surname).

Concentration Requirements

Basic requirement: A minimum of 10 courses, at least 8 of which must be courses taught by a Brown University History Department faculty member ([https://www.brown.edu/academics/history/undergraduate/history-concentration)] and visit the office hours of their prospective concentration advisor ([https://www.brown.edu/academics/history/undergraduate/history-concentration-concentration-advisor/) assigned according to student surname).

Summary
Courses in the "Premodern" era (P) 2
2 Courses in 3 different geographic regions 6
Field of focus 4
Capstone Seminar 1
Any combination of courses that fulfill the four requirements above for a total number of 10 courses* Honors (optional) 3 additional courses related to writing a thesis (one of which, HIST 1992, can count towards your 10 concentration requirements)

Courses below 1000: Students may count no more than four courses numbered below 1000 toward the concentration requirements. Students considering a concentration in History are encouraged to take First Year and Sophomore seminars, as well as courses in the HIST 0150 and 0200 series, for an introduction to historical reasoning, discussion, and writing.
Field of focus: In History, concentrators choose or create their own “track,” rather than having to select an existing track. The field of focus must include a minimum of four courses, and it may be: geographical (such as Latin America); geographical and chronological (such as Modern North America); or transnational (such as ancient world); or thematic (such as urban history). Students who choose North America or Europe must also choose a chronological focus (i.e. Early Modern Europe. Fields in Latin America, Africa, East Asia, or Middle East/South Asia do not require a chronological definition. All students should consult a concentration advisor early in the process about their potential field of focus. All fields are subject to approval by the concentration advisor.

Thematic fields of focus include but are not restricted to:

- Comparative Colonialism
- Gender and Sexuality
- Law and Society
- Race and Ethnicity
- Science, Technology, Environment and Medicine (STEAM)
- Urban History

Examples of transnational foci include:

- The Ancient World
- The Early Modern Atlantic World
- Africa and the Diaspora
- The Mediterranean World from Antiquity to the Middle Ages
- The Pacific World

Geographic Distribution: Concentrators must take at least two courses in three of the following geographic areas:

- Africa
- East Asia
- Europe
- Global
- Latin America and the Caribbean
- Middle East and South Asia
- North America

“Global” courses are defined as those that deal with at least three different regions of the world.

For details on which courses count toward which geographical distribution requirement click here (https://docs.google.com/spreadsheets/d/1NT5I7zAqXDGzVZcTdsdceSnMD5v28ke6550tnBrnE/edit?gid=21387711521).

Chronological Distribution: All concentrators must complete at least two courses designated as “P” (for pre-modern).

For a listing of which courses count as “P” courses click here

Capstone Seminar: All concentrators must complete at least one capstone seminar (HIST 1960s and HIST 1970s series and select HIST 1980s courses). These seminars are designed to serve as an intellectual culmination of the concentration. They provide students with an opportunity to delve deeply into a historical problem and to write a major research and/or analytical paper which serves as a capstone experience. Ideally, they will be taken in the field of focus and during the student’s junior or senior year. Students considering writing a senior honors thesis are advised to take an advanced seminar in their junior year.

Transferring Courses: The History Department encourages students to take history courses at other institutions, either in the United States or abroad, as well as history-oriented courses in other departments and programs at Brown. Students may apply two courses taken in other departments/programs at Brown to the ten-course minimum for the History concentration. Students who spend one semester at another institution may apply to their concentration a maximum of two courses from other departments or institutions, and those who spend more than one semester at another institution may apply to their concentration a third course transferred from another institution.

Students wishing to apply such courses must present to their concentration advisor justification that those courses complement some aspect of their concentration. Courses from other Brown departments may not be applied toward the chronological distribution requirement.

History courses taught by trained historians from other institutions (e.g., from study abroad or a previous institution) may be applied toward the chronological distribution requirement so long as at least 2/3 of the course content examine the “premodern” or “early modern” periods.

It is normally expected that students will have declared their intention to concentrate in History and have their concentration programs approved before undertaking study elsewhere. Students taking courses in Brown-run programs abroad automatically receive University transfer credit, but concentration credit is granted only with the approval of a concentration advisor. Students taking courses in other foreign-study programs or at other universities in the United States must apply to the Transfer Credit Advisor and then get approval from a concentration advisor.

Regular Consultation: Students are strongly urged to consult regularly with their concentration advisor or a department advisor about their program. During the seventh semester, all students must meet with their concentration advisor for review and approval of their program.

COURSES BELOW 1000

LECTURE COURSES

150’s: Thematic Courses that Cut Across Time and Place

HIST 0150A History of Capitalism
HIST 0150B The Philosophers’ Stone: Alchemy From Antiquity to Harry Potter
HIST 0150C Locked Up: A Global History of Prison and Captivity
HIST 0150D Refugees: A Twentieth-Century History

Honors (OPTIONAL):

History concentrators in the 5th or 6th semester may apply for honors. To be admitted, students must have achieved two-thirds “quality grades” in History department courses. A “quality grade” is defined as a grade of “A” or a grade of “S” accompanied by a course performance report indicating a performance at the “A” standard.

Students who wish to enroll in honors are recommended to take HIST 1992, “History Honors Workshop for Prospective Students.” HIST 1992 can count as one of the 10 courses required for graduation in history. HIST 1992 students who prepare a prospectus that receives a grade of A- or above will be admitted to the honors program. Students in their 7th semester who have not taken HIST 1992 (including
but not limited to those who are away from Brown during that semester) may apply to the program by submitting a prospectus no later than the first day of that semester. All honors students must complete one semester of HIST 1993 “History Honors Workshop for Thesis Writers, Part I” and one semester of HIST 1994 “History Workshop for Thesis Writers, Part II.” HIST 1993 and HIST 1994 do not count towards the 10 courses required for graduation in history; they are an additional two courses to the minimum of 10 required history courses. Students who contemplate enrolling in the honors program in History should consult the honors section of the department website. They are also encouraged to meet with the Director of Undergraduate Studies, who serves as the honors advisor.

History Graduate Program

The department of History offers graduate programs leading to the Master of Arts (A.M.) degree and Doctor of Philosophy (Ph.D.) degree. The A.M. degree is only awarded to students in the Fifth Year M.A. and Open Graduate Education Programs, and as a transitional degree for Ph.D. students. It is not open for admission to terminal M.A. applicants not currently enrolled at Brown.

For more information about the Ph.D. program please visit the following website:
https://www.brown.edu/academics/history/graduate-program (http://www.brown.edu/academics/gradschool/programs/history/)

For more information about the A.M. program please visit the following website:
https://www.brown.edu/academics/history/graduate/ma-program (https://www.brown.edu/academics/history/graduate/ma-program/)

Courses

HIST 0150A. History of Capitalism.
Capitalism didn’t just spring from the brain of Adam Smith. Its logic is not encoded on human DNA, and its practices are not the inevitable outcome of supply and demand. So how did capitalism become the dominant economic system of the modern world? History can provide an answer by exploring the interaction of culture and politics, technology and enterprise, and opportunity and exploitation from the era of the Atlantic Slave Trade to the 2008 Financial Crisis. HIST 0150 courses introduce students to methods of historical analysis, interpretation, and argument. This class presumes no economics background, nor previous history courses.

Alchemy today conjures Harry Potter or Full Metal Alchemist, not the serious scholarly tradition that captivated Isaac Newton and Carl Jung. We will explore alchemy’s long history, examining how it has endured and adapted to different cultural, social, intellectual, economic, and religious contexts. What did alchemists do? How did they explain their art? And why has alchemy come to represent fraud and folly in some circles and wisdom in others? Students will answer these questions by conducting research in the Hay. HIST 0150 courses introduce students to methods of historical analysis, interpretation, and argument. Presumes no previous history courses.

A long history lies behind the millions of men and women locked up today as prisoners, captives and hostages. Beginning in antiquity and ending in the present, this course draws on materials from a variety of cultures across the world to explore incarceration’s centuries-old past. In examining the experience and meaning of imprisonment, whether as judicial punishment, political repression, or the fallout of war, the class will ask fundamental questions about liberty as well. History 150 courses introduce students to methods of historical analysis, interpretation and argumentation. This course presumes no previous history courses.

HIST 0150D. Refugees: A Twentieth-Century History.
Refugees are arguably the most important social, political and legal category of the twentieth century. This introductory lecture course locates the emergence of the figure of the refugee in histories of border-making, nation-state formation and political conflicts across the twentieth century to understand how displacement and humanitarianism came to be organized as international responses to forms of exclusion, war, disaster and inequality.

HIST 0150F. Pirates.
As long as ships have sailed, pirates have preyed upon them. This course examines piracy from ancient times to present, from the Mediterranean Sea to the Indian Ocean and the Caribbean. We will explore questions: How did piracy evolve over time? Where, why, and how did people become pirates, and what (if anything) made them different from other seafarers? How is piracy related to other historical processes, notably imperialism and nation-building? What explains the resurgence of piracy in the twenty-first century? Why have pirates become the stuff of legend, and how accurately are they portrayed in books and films?

HIST 0150G. History of Law: Great Trials.
Through discussion of a variety of precedent-setting trials throughout history, this course will probe the nature of demonstrative justice, the relationship between ideology and law in different societies, the politics of trials, and the relationship of trials to terror(ism) and social marginalization. Cases to be covered include: Socrates, Jesus Christ, the mythical Japanese Okuninushi, witch trials, the French Revolutionary Terror, the Dreyfus Affair, the Scopes (monkey) trial, the Stalinist show trials, the war crimes trials at Nuremberg, the Chinese Gang of Four, and the trials of Nelson Mandela and Saddam Hussein.

HIST 0150H. Foods and Drugs in History.
What we consume connects us to the worlds of both nature and culture. Bodily and socially, “you are what you eat,” but if your well-being suffers, you often seek out other ingestible substances. In many times and places, changing what you eat is thought to be healing, while in other times and places drugs – either remedial or recreational – are thought to be distinct and more immediately restorative. Few human interactions with the larger world are more important or interesting than how comestibles and medicines have been discovered, mixed, transformed, distributed, and how those processes have changed us.

The modern world is often seen as a triumph of liberal enlightenment thought, scientific discovery, and economic progress. But it is also a product of settler colonialism, imperial expansion, and massive waves of population displacement that reorganized human societies along racialized and capitalist modes of inclusion and exclusion. This course seeks to understand the making of our current world from the conquest of the “Americas” and the slave trade to industrialization and climate change. It also considers lessons from the struggles by native, enslaved, colonized, and displaced populations for a more just, peaceful, and greener future.

HIST 0150J. The Ocean in Global History.
This course plunges the depths of the ocean’s past to investigate how the planetary hydrosphere and its creatures have imprinted themselves upon the social, political, and cultural character of diverse human communities as sources of sustenance and power, cosmology and knowledge, conveyance and death. Topics to be considered include Austronesian seafaring traditions in the ancient Indo-Pacific; maritime empires, piracy and human trafficking in the age of sail; industrial fisheries and the establishment of oceanography as a scholarly discipline; and the political ecology of a warming ocean in the era of climate crisis.
HIST 0202. African Experiences of Empire
This is a "flipped" course on sub-Saharan Africa from the mid-nineteenth through the mid-twentieth centuries. It presupposes no knowledge of Africa and serves as an introduction to the continent. It focuses on daily life, families, and popular culture. Students will analyze change, question perspectives, and imagine life, and question what "Africa" was during the period of European imperialism. Most readings are primary sources, which include photographs, songs, and oral histories. The course is "flipped"; students' first introduction to the content comes before class meetings through the text and multi-media sources. Class meetings are dedicated to discussion and exercises, including role-playing.

HIST 0203. Modern Africa: From Empire to Nation-State.
This course examines the major historical developments in Africa from 1945 to the present and pays special attention to the diversity of experiences within the vast continent. The first part focuses on Africans' varied responses to the waning European imperial project and explores different ways in which African nationalist leaders and everyday people challenged colonial administrations to ultimately achieve their independence. The second part of the course investigates the consequences and opportunities of decolonization, including questions of political legitimacy, state-building, structural adjustment programs and international aid, human rights, and civil conflicts.

HIST 0212. Histories of East Asia: China.
China's ascendency as a global economic power in recent decades has been regarded by many as a claiming of its former glory. In introducing the history of China from earliest times to the present, this course aims to provide an understanding of the making and remaking over millennia of what we call Chinese civilization, with its changes, contingencies, and continuities, its various claims to greatness, and its many recurring challenges. This course is open to all students and assumes no prior knowledge of Chinese culture, history, or language. Readings consist of both a textbook and relevant primary sources.

HIST 0214. Histories of East Asia: Japan.
This is a course for students who have always been curious about Japan but haven't had an opportunity to explore that interest fully, for anyone in search of a better understanding of the historical contexts that shaped Japan's complex relationships with China, Korea and the West, and for all those who wish to broaden their exposure to the histories of East Asia. Open to all students, this course assumes no prior knowledge of Japanese culture, history, or language.

HIST 0215. Modern Korea: Contending with Modernity.
This course examines the extraordinarily rapid revolution of Korea from isolated, agrarian society into a culturally modern, industrialized, and democratic nation that is an important actor on the world stage. It also will investigate how a non-Western society generates its own inspiration for human relations, social structure, political and cultural values. Includes coverage of North Korea.

HIST 0218. The Making of Modern East Asia.
This course examines Asia in the shaping of the modern world, from competing definitions of empires circa 1800 to the rise of the notion of the twenty-first as a "Pacific Century." It investigates the definition(s) of Asia as a world region, explores transnational interactions and emphasizes Asians as historical actors via written, visual and aural sources. Events are placed in the context of key historical paradigms, including varying definitions of modernity, the rise of the nation-state, birth of mass politics, new mechanisms of war, the language of self-determination, changing views of gender, shifting types of media and consumption, etc.

HIST 0228A. War, Tyranny, and Peace in Modern Europe.
This course explores the relationship between war, culture, and society in modern Europe. The two world wars changed the political, social, and cultural landscape of Europe, and by extension, of the rest of the world, not least the United States. We will not delve into the military history of these vast conflicts; instead, we will examine how the experience of total war remolded European understanding and practices of memory and commemoration, culture and representation, humanity and civilization, utopia and revolution, catastrophe and identity. We will read influential scholarly texts and literary works, and watch important contemporary films.

HIST 0232. Clash of Empires in Latin America.
Examines Latin America as the scene of international rivalry from the 16th to the 19th century. Topics include comparative colonization, the transatlantic slave trade, privateering and piracy in the Caribbean, and the creation of an "Atlantic world." P

HIST 0233. Colonial Latin America.
Colonial Latin America, from Columbus's voyage in 1492 to Independence in the nineteenth century, was the creation of three peoples: Europeans, Native Americans, and Africans. Spanish and Portuguese conquerors brought with them the world of the Crusades, the Inquisition, and the Renaissance. Native Americans lived there already, in rich empires and hunter-gatherer bands. Africans came as slaves from Senegal, Nigeria, Congo and Angola, bringing old traditions and creating new ones. These diverse peoples blended together to form a new people. This was a place of violence, slavery and oppression -- but also of art, faith, new societies, new ideas. P

HIST 0234. Modern Latin America.
This course is an introduction to the history of modern Latin America. Through lectures, discussions, shared readings, and class activities, we will explore major themes in the past two hundred years of Latin American history, from the early nineteenth-century independence movements to the recent “Left Turn” in Latin American politics. Some of the topics we will examine include the racial politics of state-formation; the fraught history of U.S.-Latin American relations; the cultural politics of nationalism; how modernity was defined in relation to gender and sexuality; and the emergence of authoritarian regimes and revolutionary mobilizations, and the role of religion in shaping these processes.

HIST 0243. Modern Middle East Roots: 1492 to the Present.
A robust introduction to Middle East history from early-modern to contemporary times. We begin in Reconquista Spain with the expulsion of Iberia's longstanding Muslim and Jewish populations, before journeying to the eastern Mediterranean at the Ottoman Empire’s zenith. In the "long" 19th-20th centuries, we explore modern tensions shaping this amorphous but pivotal region, including: colonialism, nationalism, and Islamism; water, fossil fuels, and information infrastructures; constitutionalism, authoritarianism, and “street” politics; and interventions by the US, USSR/Russia, and local powers. Emphasizing socioeconomic, legal, and environmental history perspectives, our goal is to unearth the roots of conflict and other conditions shaping today’s "Mideast."

HIST 0244. Understanding the Middle East: 1800s to the Present.
This course is an introduction to the history of the modern Middle East from the mid-19th C to the present. Readings and topics are structured chronologically, and emphasize the key events and turning points in the political and economic history of the region. The goal of the course is to understand how the Middle East, as it is today, has been shaped by the events of the past.

HIST 0245. Middle Earth: A Global History of the Modern Middle East?
The Middle East is the only terrestrial region to connect three continents; it is also the most contentious to define. One thing scholars agree on is its centrality to the making of the modern world. From the Ottoman conquest of Constantinople in 1453 to the 2011-and-on uprisings, this course explores the region's pivotal role in global politics and economics, but also artistic cultures. Emphasizing social, legal, and environmental history perspectives, we'll unearth legacies shaping today’s "Mideast": imperial rivalries, colonialism, migration; water, fossil fuels, and information infrastructures; constitutionalism, authoritarianism, and “street” politics; and interventions by the US, USSR/Russia, and local actors.
HIST 0247. Civilization, Empire, Nation: Competing Histories of the Middle East.
The "Middle East" is a recent invention. 100 years ago, virtually none of the states currently populating the region’s map existed. This course considers how historians (and others) have used the concepts of civilization, empire, and nation to construct competing narratives about this pivotal region’s past from the rise of Islam to the present. Since facts acquire meanings through interpretative frameworks, we ask: What is privileged and what is hidden in these narratives? And what would the history of this region look like if we could see it through the eyes of the peoples who have long lived there?

For four centuries, the theme of America having a special place in the world has dominated American politics and culture, though many have questioned or challenged American distinctiveness. This course examines articulations and critiques of American exceptionalism, using sources from American history and literature, from comparative history and literature, and from modern U.S. culture and politics. Although it offers an introduction to American history, it is different from a traditional high school or introductory college course because of its thematic focus and its emphasis on U.S. history in a global context. Intended for students in any discipline and in any year at Brown.

This course uses the American Civil War of 1861-1865 to investigate certain issues relevant to current domestic and global affairs: the use of history in popular memory and popular culture (focusing on the Civil War in public art and film); the role of law in the prosecution and resolution of war; international law, especially as it applies to war and human rights. The course is aimed at students interested in history, law, and international relations. There are no prerequisites—the course is accessible to students at all levels—but some knowledge of U.S. history might be useful.

HIST 0253. Religion, Politics, and Culture in America, 1865 - Present.
Religion has played an undeniable role in the contemporary American cultural landscape. This course lends some perspective on the present by investigating the various and, at times, surprising role religion has played in history in the shaping of American culture from 1865 to the present.

HIST 0256. Introduction to Latinx History.
This course provides a comprehensive historical examination of Latinx people in the United States. Students will explore major questions, theory, and research methods pertinent to the historical narratives of Mexican Americans, Puerto Ricans, Dominican Americans, Cuban Americans, and Central Americans. Major topics of study include immigration, ethnic identity formation, social and political activism, labor, and articulations of race, gender, and culture in urban and rural settings. This course ultimately demonstrates how the Latinx experience is vital to our understanding of the social, economic, and cultural history of the United States.

HIST 0257. Modern American History: New and Different Perspectives.
Rather than a survey, this course uses specific episodes and events to reveal different modes of analysis. Examples of questions are: What do gender perspectives tell us about men on the frontier and women in dance halls? What is the importance of baseball to American culture? How do a historian and a lawyer differ in their analysis of a sensational crime case? How can we understand why the U.S. dropped two atomic bombs on Japan? How did scandals in television and popular music signal an end to American innocence? How has the Baby Boom generation altered American society? And more.

HIST 0259. Labor, Land and Culture: A History of Immigration in the U.S.
Current debates surrounding immigration and immigrants in U.S. society focus largely on the recent past, while simultaneously reiterating long-standing ideas and narratives. This course will equip students to better understand the genesis of such debates, including ideological, economic, and social factors, by exploring the history of immigration to what is now the United States. Sources from popular culture will aid students’ insight into the ways in which American Exceptionalism, national identity, and constructions of “otherness” are woven into discourses regarding immigration, and further considers the ways in which “immigrant” is constructed as distinct from histories of colonialism, enslavement, and refuge.

HIST 0270A. From Fire Wielders to Empire Builders: Human Impact on the Global Environment before 1492.
This is a new lecture course intended to introduce the field of environmental history to students with no previous experience in it. The study of prehistoric, ancient and medieval environments is a heavily interdisciplinary research field, and the course will emphasize the variety of sources available for studying it. We will combine textbook readings with primary source readings from scientific and archaeological reports and, especially, contemporary texts.

HIST 0270B. From the Columbian Exchange to Climate Change: Modern Global Environmental History.
Environmental stories are constantly in the news, from weird weather to viral outbreaks to concerns about extinction and fracking. In this course, we put current events in the context of the past 500 years, exploring how climate, plants, animals, and microbiota – not just humans – acted as agents in history. From imperialism to the industrial revolution and from global capitalism to environmental activism, we will examine how nature and culture intermingled to create the modern world. This is an introduction to environmental history and assumes no prior courses.

This class surveys history of Portuguese empire in Asia, Africa, and Brazil from fifteenth to early nineteenth centuries. Portugal pioneered the European expansion in the fourteenth century, laying the groundwork for several historical phenomena that defined modernity – the formation of colonial coastal enclaves in Africa and Asia, the colonization of the Americas, and the beginning of large-scale trade across the Atlantic and Indian oceans. The class analyzes the economic, religious and technological factors behind Portugal's pioneering role in European expansion. We focus on patterns of socio-cultural and religious interaction between Portuguese and native peoples in Asia, Africa, Brazil.

We live in the atomic age. From 1945 to the foreseeable future, atomic weapons and nuclear energy have had (and will continue to have) a tremendous effect on global politics, the environment, and everyday life around the world. This course introduces students to three themes in this broader history: first, we examine the origins of nuclear proliferation and the global arms race; second, we explore cultural responses to the atomic age; third, we juxtapose the excitement over the unlimited promise of nuclear energy with the slow catastrophes that accompanied weapons development, the nuclear industry, and waste storage.

HIST 0276B. Science and Capitalism.
We will explore the longstanding relationship between science and commerce from the 17th century to our own asking when the modern notion of science as a disinterested pursuit of objective truth took root. We will also explore how knowledge of the natural world has been shaped by personal, financial, and other kinds of self-interest in a number of diverse contexts ranging from Galileo's invention of the telescope in Renaissance Italy to the patenting of genetically engineered organisms in today's world, paying special attention to the diverse mechanisms that have been devised to guard against fraud and disinformation.
HIST 0285A. Modern Genocide and Other Crimes against Humanity. This lecture course explores genocide and other crimes against humanity across the world during the 20th century. We will discuss the origins of modern genocide in the transition to modernity and subsequent conceptualizations of this phenomenon; review examples of colonial, imperial, racial, communist, anti-communist, and post-colonial genocides; discuss war crimes and other mass crimes perpetrated by authoritarian regimes; and consider policies of mass deportation and ethnic cleansing. This course will conclude with a discussion of attempts by the international community to prevent and punish genocide along with various ways in which genocide has been commemorated or denied. 

HIST 0286A. History of Medicine I: Medical Traditions in the Old World Before 1700. People have always attempted to promote health and prolong life, and to ameliorate bodily suffering. Those living in parts of Eurasia also developed textual traditions that, together with material remains, allow historians to explore their medical practices and explanations, including changes in their traditions, sometimes caused by interactions with other peoples of Europe, Asia, and Africa. We'll introduce students to major medical traditions of the Old World to 1700, with emphasis on Europe, and explore some reasons for change. A knowledge of languages and the social and natural sciences is welcome but not required. P

HIST 0286B. History of Medicine II: The Development of Scientific Medicine in Europe and the World. From the 16th century onward, Western medicine has claimed universal validity due to its scientific foundations, relegating other kinds of medicine to the status of "alternative" practices. The course therefore examines the development of scientific medicine in Europe and elsewhere up to the late 20th century, and its relationships with other medical ideas, practices, and traditions. Students with a knowledge of languages and the social and natural sciences are welcome but no prerequisites are required. P

HIST 0505. Africa and the Transatlantic Slave Trade. This class deals with the History of transatlantic slave trade by emphasizing how Africa affected and was affected by the largest forced migration in the History of humankind. The class will engage key debates in the historiography of the slave trade, such as whether the trade underdeveloped Africa, the connection between the trade and the rise of coastal kingdoms in West Africa, and African resistance/cooperation with the slave trade. P

HIST 0510A. Shanghai in Myth and History. “Fishing village”, “Paris of the East”, or “a waking dream where everything I could already imagine had been taken to its extreme”? In an iconic role, Marlene Dietrich bragged that “it took more than one man to change my name to Shanghai Lily,” but the local song “Shanghai by Night” retorted, “To look at her/Smiling face/Who would know that she’s troubled inside?” We will examine why Shanghai has gripped the imaginations of so many, placing the material history of the city alongside dream and image, focusing on the four topics of colonialism, race and ethnicity, gender and sexuality, and class. P

HIST 0520A. Athens, Jerusalem, and Baghdad: Three Civilizations, One Tradition. We examine core beliefs of early Greek, Jewish, Christian, and Islamic civilizations that form the basis of Western thought. Serving similar ideological purpose in the pre-modern world as have political and economic theories for the modern world, religion and philosophy defined individual lives and collective identities. We focus on the manner of appropriation and modification of thought from one culture to another in order to appreciate that there is far more similarity than difference in belief systems among what are today viewed as separate, even contesting, cultures. Enrollment limited to 20 first year students. Instructor permission required. P

HIST 0521A. Christianity in Conflict in the Medieval Mediterranean. Students in this class will learn about medieval history by taking on roles, informed by classic texts, in elaborate games set in the past. Drawing on the innovative “Reacting to the Past” curriculum, this class explores two dramatic moments in medieval history: the debate about Christian belief held at Nicaea in 325 and the deliberations about crusading held at Acre in 1148. Students will adhere to the intellectual beliefs of the medieval figures they have been assigned to play, and will learn skills—speaking, writing, critical thinking, leadership, and teamwork—in order to prevail in difficult and complicated situations. P

HIST 0521M. The Holy Grail and the Historian’s Quest for the Truth. Dan Brown’s wildly successful novel The Da Vinci Code has recently given a feminist twist to an enduringly popular medieval legend also captured in big-screen antics of Monty Python and Indiana Jones: the quest for the Holy Grail. Beginning with Brown’s novel and other modern representations of the search for the Grail then turning back to texts from the Middle Ages, this seminar will unravel the truth - or truths - behind the legend. One central question will be how historians can use legends to understand the cultures they study. Instructor permission required. P

HIST 0522G. An Empire and Republic: The Dutch Golden Age. Between about 1580 and 1690, a new nation emerged in Europe that became a bastion of liberty, ideas in ferment, fine art, military power, science and technology, and global economic reach: the Dutch Republic. A nation that thought of itself as peaceful, yet was constantly at war; as Protestant, yet was composed of people of many faiths; as personally aspirational, yet derived much wealth from the conquest and slavery of others. Its people and institutional arrangements greatly influenced Britain and America on their paths to power, too. Its rise and eclipse may be instructive. Enrollment limited to 19 first-year students. P

HIST 0522N. Reason, Revolution and Reaction in Europe. First year seminar designed to introduce students to the study of history through a focused look at the French Revolution. It will be divided into two very different parts. The first part will be organized as a traditional history seminar in which we explore together the eighteenth-century developments that preceded the outbreak of the French Revolution. In the second half of the class, students will be assigned different roles in order to re-enact the discussions in the National Assembly that, from 1791 to its collapse in 1792, tried to create a constitution for the new French Nation. P

HIST 0522O. The Enlightenment. The Enlightenment: Introduction to the Enlightenment as a fragmented series of projects that aimed at human liberation and the understanding of the social and natural worlds, with massive implications for the way that we conceive of ourselves today. Readings explore philosophy, science, slavery, economics, gender relations, and politics in the 18th century.

HIST 0523A. The Holocaust in Historical Perspective. The course will examine the history and historiography of the Holocaust from early accounts to recent reconstructions of the origins, implementation, and aftermath of the “Final Solution.” We will also analyze documents, testimonies, memoirs, trial records, and various forms of representations and commemorations of the Shoah. Enrollment limited to 19 first year students.

HIST 0523B. State Surveillance in History. How and why do states watch their citizens? This course explores historical practices of state surveillance from the perspective of both the “watchers” and the “watched.” Special emphasis will be given to twentieth-century Europe, but examples from other parts of the world and the US will also be featured in the readings. Some of the readings will be primary sources: memoirs, diaries, surveillance files. Other sources will include films and short fiction and some scholarly pieces on the workings of state security and secret police organizations.
HIST 0523M. History of Fascism
What is fascism—both in theory and in practice—and what remains of it a century after the establishment of the first fascist regime in Italy? This course will explore the social, cultural, and intellectual origins of fascism, the rise of fascist movements in Europe in the early to mid-20th century, the politics and policies of fascist parties and regimes—including Germany, Italy, Iberia, in the Balkans, and in the Baltic States—and transnational links to the Americas, Asia, and Africa. This course will conclude with considerations of anti-fascism in the postwar world as well as the legacies of fascism in contemporary far right politics.

HIST 0523O. The Academic as Activist
Since the late nineteenth century, the modern research university has struggled with questions about When is the researcher participating in engaged scholarship? When does engagement suggest, instead, a lack of objectivity? How have economists, anthropologists, biological, and historians tried to contribute to the common good, and where have their efforts broken barriers of privilege, and when have their efforts contributed to further oppression? This seminar will look at debates over the role of academics in political life. Topics may include: Fabian socialism, libertarianism and development economics, pan-African movements, and the Green Revolution.

HIST 0523P. The First World War
On the eve of the First World War, many Europeans cheered for a “war to end all wars.” It achieved nothing of the like, instead inaugurating a century of war and unthinkable destruction. This seminar explores the history of the first truly global conflict, examining its origins, its course, its aftermath, and how it might help us better understand our own world today. A broad set of primary sources, from soldiers’ diaries to rationing cards, artwork, and diplomatic cables, forms the basis for discussion. Designed as an introduction to historical inquiry and writing.

HIST 0525A. Atlantic Pirates
This seminar explores piracy in the Atlantic from the sixteenth to the early nineteenth centuries. We will examine everyday life on pirate vessels; the pirates’ role in emerging colonial societies and economies; the complex links between piracy, imperialism, and nation-building; and the image of pirates as both villains and figures of legend. Enrollment limited to 19 first year students. P

HIST 0525B. Conquests
What does “conquest” mean? How does it take place, and how is it experienced by both the invaders and the invaded? Drawing upon both primary and secondary sources, this seminar explores how conquest shaped the region we now know as Spanish America. We will begin with the great pre-Columbian empires of the Aztecs and Incas, and then turn to Spanish expeditions in the sixteenth century. The course will encompass specific moments of encounter (such as the Spanish capture of the Inca emperor Atahualpa at Cajamarca), as well as the broader implications of forging a new political and social order. P

HIST 0527A. Popular Culture in Latin America and the Caribbean
From tango to plastic surgery, Donald Duck to reggaeton, this course places popular culture at the center of modern Latin American and Caribbean history. How, we will ask, did popular culture reflect and shape struggles over national belonging? How did foreign cultural products come to bear on international relations and transnational flows? In what contexts has culture served as a vehicle of resistance to dominant ideologies and systems of power? Far from a mere “diversion,” popular culture instead offers a compelling lens onto the relationship between state and society in Latin America and beyond.

HIST 0527B. Tropical Delights: Imagining Brazil in History and Culture
Examines the many ways that Brazilians and foreigners have understood this vast continent-size country, ranging from early European explorers’ anxieties about Cannibalism to modern images of the Amazonian rainforest, Rio De Janeiro’s freewheeling Carnival celebrations, and the array of social movements mobilizing for social justice. Through an examination of historical sources, literature, movies, and popular culture, this seminar will consider how multiple images and projections of Brazil have shaped national and international notions about the country. Reserved for First Year students. Enrollment limited to 19.

HIST 0540F. Women in the Middle East, 7th-20th C.: Patriarchal Visions, Revolutionary Voices
This course provides an historical approach to women’s lives, status, and perceptions. It focuses on women in the Middle East, from the seventh century emergence of Islam to the twentieth century revolutions and struggle for new identities. It examines the contested roles of women in society and the ways women were culturally crafted. In particular, we will discuss the modes by which women’s lives were narrated (by themselves and others); women’s use of the “patriarchal bargain” to deal with the shift from so-called “traditional” to so-called “modern” culture; and the encounter between “Eastern” and “Western” societies.

HIST 0550A. Object Histories: The Material Culture of Early America
History is not just about people; it is also about things! Come explore the world of early America through the lens of objects—boats, dresses, plows, houses, wagons, dolls, silver cups, wigs, blankets, land, gardens, hammers, desks—and the cultures that produced and consumed them. As a first year seminar, this course is designed to engagingly introduce students to the basic concepts of historical study. We will take several field trips to local historical sites, both on and off campus. Our primary focus will be specific objects and their contexts and histories. Enrollment limited to 19 first year students. P

HIST 0551A. Abraham Lincoln: Historical and Cultural Perspectives
This seminar explores life, legacy, myth of Abraham Lincoln to explore central themes such as frontier in early republic, nature of political leadership, law/legal culture, and emergence of sectionalism, slavery, antislavery, Civil War. Frequent short writing assignments and research investigations allow students in-depth explorations of Lincoln’s works, the writings of his contemporaries, and modern non-fiction, fiction, and film. The course enables us to consider two larger themes: 1) the relationship between memory and history; and 2) the function of history in modern society. The course has no prerequisites and does not presuppose special knowledge of American history.

HIST 0552A. A Textile History of Atlantic Slavery
This class explores the experiences, politics, and cultures of enslaved African and African-descended people through clothing and fashion. As a historical source, textiles reveal things that might otherwise remain obscure in the documentary record. Students will engage material culture methodologies to consider the multiple stories that might be told through a particular fabric or garment. The course will explore recent scholarship about slavery in the Caribbean, South America, and particularly the United States to recognize the role of clothing and textiles in enslaved people’s concurrent struggles for self-liberation and self-fashioning in the face of horrific violence. This course presumes no background knowledge in African American history or material culture studies. And while students are not expected to have crafting expertise, such knowledge (e.g., weaving, sewing, knitting, dyeing) is certainly welcome as we undertake experiential research into various fiber arts.

HIST 0555B. Robber Barons
Today, the United States looks a lot like it did at the turn of the 20th century. Much like it is now, America’s economy at that time saw tremendous growth interrupted by periodic financial crises. Moreover, both are periods of immense inequality. Whereas we have the one per cent, the late 19th century witnessed a small group of capitalists amass unprecedented fortunes, which provided immense political power. In this class, we will explore what the lives of these “robber barons” can tell us about the role of economic privilege in shaping America’s social, cultural, and political history.

HIST 0556A. Sport in American History
This course covers the relationship of sports to aspects of American culture since 1900. Topics include gender, race, amateurism, professionalism, intercollegiate athletics, and sports heroes. Enrollment limited to 19 first year students.
HIST 0556B. Inequality and American Capitalism in the Twentieth Century

“Inequality in America rose, fell, and rose sharply again over the 20th century. Why were the early decades of the century so unequal? How did working and middle-class Americans gain a greater share of wealth and why did it these gains later slip away? How truly egalitarian were the mid-century decades? We will examine the rise of corporations, the New Deal, deindustrialization, labor, housing, and the economics of race and gender that weave through them all. Students will come away from the class able to link global economic trends with the intimate everyday experiences of inequality in America.

HIST 0557A. Slavery and Historical Memory in the United States

How has America chosen to remember and forget the enslavement of millions of its own people? What are appropriate ways to acknowledge slavery in monuments, museum exhibitions, film, literature, and public policy? By approaching these questions through a wide range of visual and textual sources, we will explore the indeterminate space between history and memory. Enrollment limited to 19 first year students.

HIST 0557B. Slavery, Race, and Racism

This seminar will address the history of race and racism as it relates to the history of slavery in America. We will trace the emergence of slavery in the New World, with a heavy emphasis on slavery in the U.S. South. The course is broad in scope, beginning with the emergence of the slave trade and concluding with a look forward to the ways that the history of slavery continues to impact the way race structures our lives today. In short, this course provides an introduction to slavery studies and to the history of race in America.

HIST 0557C. Narratives of Slavery

This course will uncover the history of the slave trade, the labor regimes of slavery in the Caribbean and North America, and the rise of the Cotton Kingdom through the voices of the very people who lived through it: enslaved people themselves. We will read slave narratives, court documents, abolitionist treaties, oral histories of formerly enslaved people, and fictional accounts produced in the period. We will give special attention the ways that different kinds of historical sources-different types of narratives-shape what we know and how we know it in the history of slavery.

HIST 0557D. World of Walden Pond: Transcendentalism in the Age of Reform

World of Walden Pond examines the 19th century phenomenon of Transcendentalism: America’s most romanticized social, religious, philosophical, and literary movement. Focusing especially on Ralph Waldo Emerson, Henry David Thoreau, and Margaret Fuller, we’ll examine Transcendentalism in the age of reform and evaluate how a small group of individuals responded to and help shape abolition, feminism, and environmentalism. The central problem Transcendentalists wrestled with will be our focus, too: how to reconcile a desire for individualism with the need for collective action.

HIST 0558B. History of American Feminism

This first-year seminar will introduce students to the history of women and gender in the 18th, 19th, and 20th c. United States. Beginning with the question, what is feminism?, we will encounter original sources and scholarship about who women were, what they were up against, and what they wanted. We will thus take “women” as a contingent category that changed over time often in relation to categories such as: race, reproduction, violence, protest, work, and queerness. This course will introduce students to gender history and feminist theory, as well as to the skills and habits of historians across fields.

HIST 0558C. LatinX Social Movement History

This course examines the history of Latinx social movements and politics during the 20th century into the present moment. Students will learn how various Latinx groups have organized around issues of race, ethnicity, labor, class, immigration, sports, gender, sexuality, citizenship, reproductive rights, and education. We will explore how these groups have utilized social and political organizing to make demands for social justice and equality. By utilizing primary and secondary sources, students will explore major questions, theory, and research methods pertinent to the historical narratives of Latinx people. Students will closely examine the legacy of these social movements and their implications for present-day politics and organizing.

HIST 0559A. Culture and U.S. Empire

This seminar examines the relationship of American culture to U.S. imperial project. We will look at how cultural ideologies such as those about race, gender, and American exceptionalism have not only shaped Americans’ interactions with other peoples but also justified the spread of U.S. power. Enrollment limited to 19 first year students.

HIST 0559B. Asian Americans and Third World Solidarity

As historian Vijay Prashad puts it, “The Third World was not a place. It was a project.” During the 20th century struggles against colonialism, the peoples of Africa, Asia, and Latin America believed that another world was possible. Here, too, in the United States, minorities and their allies dreamed of dignity, democracy, and justice. Looking through the experiences of Asian Americans, this course examines the domestic freedom movements in the context of global decolonization. Topics include: campus activism, immigration, capitalist labor regimes, neocolonialism, cultural hegemony, and Afro-Asian connections.

HIST 0574A. The Silk Road, Past and Present

The Silk Road has historically been the crossroad of Eurasia; since the third-century BCE it has linked the societies of Asia—East, Central, and South—and Europe and the Middle East. The exchange of goods, ideas, and peoples that the Silk Road facilitated has significantly shaped the polities, economies, belief systems, and cultures of many modern nations: China, Russia, Afghanistan, Uzbekistan, and India. This course explores the long history (and the mythologies or imaginations) of the Silk Road in order to understand how the long and complex pasts of the regions it touches are important in the age of globalization.

HIST 0576A. The Arctic: Global History from the Dog Sled to the Oil Rig

The Arctic is regularly in the media, thanks to climate change. This course examines the long history of human thinking about and habitation in the far north before and during the era of global warming. Focusing on how people valued, survived, and made the arctic home, topics range from whaling, the importance of dogs, cultural imaginaries and colonialism to capitalist and communist arctics, the meaning of sea ice, indigenous rights, and climate change. The course introduces historical methods and environmental history through reading, writing, discussion, and interpreting artifacts.

HIST 0577A. The Chinese Diaspora: A History of Globalization

Why are there Chinese in the US, Canada, Mexico, Cuba, Peru, Singapore, Indonesia, Thailand, Vietnam, the Philippines? Australia, New Zealand, Fiji, Guam, Samoa? Mozambique, Zimbabwe, Cape Verde, Ghana? Spain, Germany, France, Russia, Czech Republic? Mauritius, Madagascar? India, Sri Lanka, Myanmar? Hong Kong, Macau, Taiwan? How and when did 50 million Chinese find their way around the world during the past 500 years, from the Ming Dynasty to the present moment? We will explore worldwide distribution of ethnic Chinese through Time (history) and Space (culture) in the so-called “Chinese diaspora,” and examine questions of migration, identity, belonging, politics and conflict.
In this First Year seminar, we will examine the historical formation, contemporary reality and popular representation of the U.S.-Mexico border from bilingual (English-Spanish), multicultural (U.S., Mexican, Mexican-American, indigenous and Asian immigrant), and transnational perspectives within the framework of globalization, and pay particular attention to the movement of peoples—workers, families, women and children—in both directions.

HIST 0580M. The Age of Revolutions, 1760-1824.
In the middle of the eighteenth century, the Americas belonged to a handful of European monarchies; within a few decades, most of the Americas was composed of independent republics, some of the European monarchs were either deposed or quaking on their thrones. Usually considered separately, revolutions in British North America, France, Saint-Domingue (Haiti) and Spanish America had diverse local circumstances yet composed a single cycle of intellectual ferment, imperial reform, accelerating violence and, forging of new political communities. We will examine revolutions that helped create the world we live in. Enrollment limited to 19 first year students. P

This seminar will focus on the life and work of one of the most influential thinkers of the twentieth century, examining both his role in the Indian nationalist movement, as well as the global impact of his ideas on leaders such as Martin Luther King Jr. and Nelson Mandela. Enrollment limited to 19 first year students.

HIST 0582A. Animal Histories.
Animals have been people’s energy, food, wealth, gods, hobbies, icons, and companions. Wild and domesticated non-human animals are essential yet often invisible historical subjects. This seminar makes them visible by tracking them through time—ancient, modern, and contemporary—on every continent. They are often symbols, but we look beyond animals as represented by people. We are more interested in them as actors and subjects with agency. By pushing at the boundaries of what constitutes legitimate topics, this seminar serves as a critical introduction to the historical discipline.

HIST 0582B. Science and Society in Darwin’s England.
This course is a first year seminar designed to introduce students to the study of history. It will be divided into two very different parts. The first part will be organized as a traditional history seminar in which we explore together the world in which Darwin developed his theory of the Origin of Species. The second part will be a historical re-enactment of an 1863 discussion in Britain’s Royal Society about whether to award Darwin his highest honor, the Copley Medal. Enrollment limited to 19 first year students.

HIST 0621B. The Search for King Arthur.
The King Arthur legend is one of the most enduring stories to emerge from medieval Britain. Drawing evidence from written and archaeological sources, we’ll delve into shadowy period in which legend is based, between the collapse of Roman imperial power in Britain and establishment of the Anglo-Saxon and Celtic kingdoms that would succeed the empire. We’ll also take students inside the historian’s workshop, exposing them to the tools, texts, and objects from which historians and archaeologists construct their interpretations of how the inhabitants of Arthur’s Britain lived and died. Enrollment limited to 19 first year students.

HIST 0623A. British Social History.
What is the role of history in imagining progress, identity, and political movements? This course begins by reading classic nineteenth-century historians From Trevelyan to E. P. Thompson, asking about the politics implicit in their choice of subject and archive. It then turns to contemporary history, asking, how have debates about race, gender, and the environment in the past thirty years shaped how we look at history? How have different tools like digital history or the analysis of culture changed what we look at or why? How is the study of history changing today?

HIST 0623B. The Russian Revolution.
This sophomore seminar will examine in detail the Russian Revolution that toppled the Tsarist Autocracy in February 1917 and brought to power the Bolshevik party in October 1917. No prior knowledge of Russian history is required, although students should be eager to read extensively (and intensively), to participate in collaborative learning through discussion and the sharing of written work, and to improve their academic writing skills. At the end of the semester, students will work on final projects in which they offer their own interpretations of key events.

HIST 0623M. Becoming French: Minorities and the Challenges of Integration in the French Republic.
Recent controversies around Muslim integration, including debates around the headscarf and uprisings in the working class suburbs of French cities, point to difficulties France has faced in integrating minority populations. We’ll explore the encounter between France and its immigrant, religious, and racial minorities from the Revolution to contemporary times. By comparing paths of integration and debates around minority inclusion and consider how minorities negotiated their identities as they struggled to internalize France’s cultural and historical legacy. We’ll addresses political and historiographical debates over the relationship between political citizenship and religious/cultural identity. Enrollment limited to 20 sophomores.

HIST 0637B. Fractious Friendships: The United States and Latin America in the Twentieth Century.
From the vantage point of ordinary men and women, statesmen, businessmen, and scholars, this course explores how Latin Americans in various countries viewed and engaged with the United States during the twentieth century. We will look at how perceptions of the United States formed across Latin America and how and why they changed over time (or why they did not). The ultimate aim is to uncover the reasons for the sometimes amicable, but often strained, ties between Washington and its hemispheric counterparts. Prominent topics include imperialism, nationalism, war, diplomacy, popular culture, consumerism, and industrialization.

HIST 0637C. Culture and Cold War in Latin America.
How did the Cold War seep into everyday life? This course explores the relationship between culture, cultural production, and Cold War politics in Latin America. Over the course of the semester, we will highlight key themes such as: national identity, morality, modernity, religion, popular culture, authoritarianism, and imperialism. By pairing cultural studies readings and historical monographs, this course will engage cultural analysis in the study of Cold War history.

HIST 0637D. From Saint Domingue to Haiti: The First Black Republic.
On January 1, 1801, Toussaint Louverture declared France’s former colonial jewel free and renamed it Hayti to honor its Indigenous roots. But the road to freedom was not easy, each argument for and against slavery and freedom as varied and complex as the next. This course, examines the making of the first free Black republic in the western hemisphere - from the west African coast to debates in France and the United States that centered on equality, commerce and abolition - debates that continue to reverberate throughout the nation of Haiti and its people today.

HIST 0650B. Women and Power in the American Revolution.
This sophomore seminar explores the role of women in the Revolutionary Era, from the 1760s through the end of the Revolutionary War. Recasting the traditional American founding narrative, this course will highlight women’s daily experiences to address their part in the political origins of the conflict, the resulting tension surrounding hierarchies of patriarchal power, and economic repercussions to ask if women had a concurrent revolution. Students will use primary and secondary sources to look at gendered power dynamics of enslaved, Native American, and poor women throughout the American colonies. P
HIST 0654A. Welfare States and a History of Modern Life.
History of the American welfare state, from its origins in nineteenth-century industrial capitalism to contemporary debates about health care, in comparative perspective. Why did welfare states appear and what form did the U.S. version take? Considerations of social inequality, labor relations, race, gender, family policy, the social wage, and the relationship between markets and the state are all considered. Some comparison with European models.

HIST 0654B. American Patriotism in Black and White.
This course explores the different and sometimes conflicting definitions and meanings of patriotism and citizenship through the lens of African American history and military participation, using primary and secondary sources from the colonial period to the present, including political and legal documents, letters to editors, literary pieces, plays, speeches, and petitions. What are the many definitions of freedom and patriotism, and how have black people understood their realities as they chose to serve militarily? This social and political (not military) history focuses on the political implications of African Americans’ military service for/to the nation over three centuries.

HIST 0654C. The Oldest Profession: Race, Gender, and the Politics of Sex Work.
In America, sex sells. The sex industry has and continues to be a topic of debate surrounding issues of consent, labor, pleasure, and the gendered marketplace. This course examines various facets of the sex industry (i.e., prostitution, exotic dance, film, and internet-based sex work) from the nineteenth century to the present day and examines the industry through the lenses of gendered labor, race and class, and the social, political, and legal controls employed to regulate the industry. The course will examine historical texts on sex work as well as live interviews with retired sex workers to explore the lived experiences of sex work from historical and contemporary perspectives.

HIST 0655A. Culture Wars in American Schools.
This course examines “culture wars” in American public schools over the past century. It will explore how and why school curriculum has become an arena for cultural conflict and how those debates have changed over time. These debates clash in schools over religion, values, politics, and educational aims raise important questions about majority and minority rights, the existence and meaning of a common national culture, and the role of schooling in a democratic nation. Enrollment limited to 20 first year students and sophomores.

HIST 0656A. History of Intercollegiate Athletics.
The United States is the only country in the world in which practically every institution of higher education finances and promotes high-caliber athletics. How did this phenomenon happen? Has there ever been any resistance to its happening? How and when did African Americans integrate college sports? Did Title IX really open up opportunities for women in college sports? Are sports the “front door” of colleges and universities? This course examines these and other questions as it examines the interrelationship between the histories of sports and higher education in the U.S.

HIST 0658D. Walden + Woodstock: The American Lives of Ralph Waldo Emerson and Bob Dylan.
Emerson and Dylan are cultural icons. Emerson has been called “Mr. America” and Dylan has just won the Nobel Prize for Literature. Both had boundless energy for public performance and self-representation; both actively supported turning points in the civil rights struggle; both raged against American military aggression; both were at the epicenter of a wide circle of intellectuals, while denying their own centrality. What is the celebrity intellectual’s responsibility to society while remaining true to oneself? Poems, essays, autobiographies, songs, and movies provide insight into these eternally fascinating geniuses and their times.

HIST 0673A. Colonial Encounters in the Early Atlantic.
This seminar introduces students to the range of primary sources and archival collections used by historians and other scholars to understand the emergence of an integrated Atlantic world in the period between 1400 and 1650. Analyses of source material will be supplemented by secondary scholarship to consider the various approaches by which historians have characterized patterns of trans-regional exchange, dispossession, and colonialism between Atlantic Africa, Brazil, the Greater Caribbean, and Atlantic Europe. Students will have the opportunity to develop paleographic fluency in late medieval and early modern written sources in any relevant language(s) in which they have preexisting knowledge.

To understand globalization is to study linkages and circulation of peoples, goods, cultures and ideas across space (land and sea) and over time. In the absence of better illustrations of globalization than the Chinese diaspora—the worldwide dissemination of Chinese people and their descendants across the world from the Ming Dynasty to present. After sketching the global contour of this phenomenon, students will drill down deeper into specific regions of the world to examine conflicts and integration as immigrants localize; identity, community and social formations as immigrants re-territorialize; as well as transnational relationships with place of origin and co-ethnics in the diaspora.

HIST 0676A. History of the Laboratory.
Few spaces better represent progress and profit than laboratories. Industrial, commercial, public, and private labs are seen as catalysts for moving society forward and inching toward a technopositive future. In the meantime, such spaces produce better medicines, goods, and knowledge. However, these modern laboratories have a history. From their beginnings in the ancient world through medieval, early modern, and finally twenty-first-century forms, these spaces changed in the face of emerging cultural, social, and intellectual forces. This course traces this history while taking into consideration factors such as non-Western influences, colonialism, and history “from below.” From alchemical experiments to Franklin’s electricity to modern medical research, we will trace the development of laboratories through primary and secondary sources including ancient archaeological finds, prison notebooks, and the classic film Frankenstein.

HIST 0685A. The Social Lives of Dead Bodies in China and Beyond.
The dead are all around us, but how do we know it? This course aims to uncover how corpses interact with the living as participants in social relations, especially during times of community upheaval. We'll take China and Taiwan as jumping off points, but also look elsewhere in Africa, the Americas, Asia and Europe since the 19th century, when the broadening scale and nature of warfare; state expansion; rapid development; global circulations of technology; and the interplay of international philanthropies with older forms of charity and ritual pacification significantly affected the treatment, conceptions, and actions of the dead.

HIST 0690A. Empire and Everyday Life in Colonial Latin America.
What was it like to live a “regular” life in the American colonies of Spain and Portugal? How did people eat, dress, have fun, start and sustain families, pursue careers, and think about the world and themselves? Drawing upon a range of sources, this course considers how global and local forces intersected in the individual or community in myriad, yet historically contingent, ways. This micro focus provides another way of considering the broad historical forces at work in the colonies, such as religion, gender, politics, race, technology, and geography, from the “inside-out” perspective of individual and communal accounts and stories.

HIST 0690B. Women's Work: Gender and Capitalism in American History.
This course examines the importance of women and gender to the long economic history of the United States. Whereas the history of American capitalism has often been a primarily male story, this course moves women from the margins of the narrative to the center. It asks how female labor (paid and unpaid), cultural norms around gender and family, and issues of sex and reproduction have fundamentally shaped economic life—not just for women, but for all Americans. Students will gain insight into American women's history, the history of capitalism, and the intersectional history of gender, sexuality, race, and class.
HIST 0720. The Romans.
The Romans established the only successful pan-Mediterranean empire in history, lasting nearly 1,000 years, with a legacy everywhere today, from the U.S. Constitution to the English alphabet. Who were these people? We will study their social-political history from the city’s founding in 753 BCE to its fall in 476 CE, confronting the opinions of ancient authors directly to study historical questions such as: what challenges and problems did empire create? How did gender shape Roman lives? Or what does the decline of Rome’s democracy reveal about the state of American democracy?

This course considers how individuals and societies have constructed the idea of evil. We examine evil’s origins in religious traditions and review how those interpretations have been deployed and how the concept of evil has changed over time. Is it possible to offer a universal definition of evil? Is it true that “When a woman thinks alone, she thinks evil?” Does evil exist in “the Other” or oneself? To answer these questions, we engage in activities and discussion about sin, hell, pacts with the devil, witches, torture, lynching, genocide, psychopaths, empathy, and representations of evil in music, literature, and film.

HIST 0770B. Political Imprisonment and Captivity in the Modern World: from Revolution to Conscience.
This course examines the history of political incarceration and captivity since the French Revolution. What is the relationship between the rise of ideologies such as fascism, communism and nationalism on the one hand, and the use of political imprisonment on the other? How do crimes and the political intersect? We examine several cases to consider how captivity has been used for political purposes in the modern world. In addition to scholarly works, readings will consist of primary source documents and memoirs. Emphasis will be placed on Europe, but the course will also include lectures and readings on other geographic regions.

HIST 0770C. World War II: A Global History from Below.
The largest and deadliest conflict in human history, World War II dramatically transformed the modern world. This course will look at the war from the bottom up, exploring the experiences of ordinary people from across the world. In particular, centering the opportunities and challenges the war presented to members of marginalized groups in uniform, in occupied territory, and returning home after the war. Students will analyze a variety of primary and secondary sources through class discussion and assignments, drawing conclusions about the agency of these individuals as well as the social, cultural, and political legacies of the war.

HIST 0903A. Word, Image and Power in Renaissance Italy (ITAL 0580).
Interested students must register for ITAL 0580.

HIST 0930E. Sacrifice and Suffering: Rhetorics of Martyrdom Compared (RELS 0640).
Interested students must register for RELS 0640.

HIST 0930F. Twentieth-Century Africa (AFRI 0160).
Interested students must register for AFRI 0160.

HIST 0930G. Difficult Relations? Judaism and Christianity from the Middle Ages until the Present (JUDS 0050M).
Interested students must register for JUDS 0050M.

Interested students must register for JUDS 0050L.

HIST 0940G. From Amsterdam to Istanbul: Christians, Moslems, and Jews (JUDS 0050E).
Interested students must register for JUDS 0050E.

HIST 0940K. Israel’s Wars (JUDS 0050H).
Interested students must register for JUDS 0050H.

HIST 0940L. Difficult Relations? Judaism and Christianity from the Middle Ages Until the Present (JUDS 0050M).
Interested students must register for JUDS 0050M.

Interested students must register for ENVS 0700C.

HIST 1030. Entangled South Africa.
Examines the contradiction of twentieth century South Africa as a divided society that nonetheless had dense contact across boundaries. In considering daily life, social interactions, and relations with animals, we find a challenging politics of entanglement within the class, gender, and racial hierarchies of apartheid. We close with a discussion of new divisions and alignments emerging during the transition to democratic rule in the 1990s.
HIST 1050. Africa and the Transatlantic Slave Trade.
This lecture class looks at the relationship between Africa and the Transatlantic slave trade from the late fifteenth century to the nineteenth century. We deal with the main regions of Atlantic Africa affected by the largest forced migration in the history of humankind, focusing on such issues as resistance to the slave trade and the role of slavery in the African continent. The class will reflect on the relationship between the slave trade and African patterns of long-term underdevelopment as well as the relationship between the abolition of the trade and the rise of colonialism in the nineteenth century. P

HIST 1060. Colonial Africa.
From the late 19th century until the mid-20th century, European powers held the African continent as their colonial possession. This course engages recent historical literature to survey the changes wrought through empire. Beginning with Africa international relations before the imperial scramble, we will probe what changed and what endured under this new condition. We also examine hopes for an independent future. We will seek out both the limits of European empire in Africa and the incomplete nature of decolonization.

This course begins with the end of imperialism and ends with a look toward the future. Themes include the pivotal importance of the newly sovereign states, the ongoing engagement with the rest of the world, and shared opinion about the imperative of modern development, even as definitions of modern and development differed. Readings include many primary sources, supplemented by articles on history and social science. Evaluation is based on participation, a map quiz, mid-term and final examinations, and short writing examinations, including article reviews. Students will also discover, analyze, and edit two new primary sources.

HIST 1080. Humanitarianism and Conflict in Africa.
This course focuses on the major issues and debates concerning humanitarianism and international intervention in 20th century Africa. It will explore the history of humanitarianism and the many challenges that arise when governments and institutions intervene in a conflict. Then students will investigate specific sites of conflict in Africa (ranging from Nigeria, Somalia, Rwanda, Sudan, and Western Sahara) and analyze different models of intervention and aid. These case studies will expose students to pivotal events in African history and equip them with a critical vocabulary with which to assess contemporary conflicts.

HIST 1101. Chinese Political Thought from Confucius to Xi Jinping.
Xi Jinping, President of the People’s Republic of China, cites the ancient political thinker Han Feizi (280-233 BCE) as an important influence on his approach to governance. He has also embraced (as have several leaders before him) some of the political and social ideals of Confucianism—ideals first stated in the sixth century BCE. This lecture-and-discussion course traces the history of Chinese political thinking from the first Chinese state to the present, emphasizing first, those ideas that continue to shape Chinese notions of governance, and second, comparisons between these and American political ideals. P

HIST 1110. Imperial China/China: Culture and Legacy.
As the current revival of Confucianism in the People’s Republic of China demonstrates, the past is still very much alive in China today. This lecture-and-discussion course surveys the history of China from the origins of the first state through the twilight of the imperial period in the nineteenth century. Lectures are designed and the reading assignments chosen to emphasize in particular those ideas and beliefs, institutions and government structures, and literary and artistic developments that have shaped (and continue to shape) China today. “Imperial China” provides the knowledge necessary for informed study of modern China. P

HIST 1111. Women and Gender Relations in China.
An overview of the changing roles of women (and men) in Chinese society. We begin with the cosmological views that defined the genders and their separate spheres in early China; and the institutions (the family, the imperial state) that regulated gender roles and factors (class, religious belief) that complicated and at times undermined these regulations. We focus then on how the economic, social, and intellectual changes of the early modern period precipitated a re-examination of women and their roles in the family and society; and trace the impact of the resulting changes on modern and contemporary gender roles and relations. P

HIST 1118. China’s Late Empires.
A post-nationalist perspective on history in China from 1200-1930, with emphasis on empire--formation, gender, and daily life in the Mongol Yuan, Chinese Ming, and Manchu Qing empires, as well as nationalist reconstructions of the Chinese past in the early twentieth century. P

HIST 1120. At China’s Edges.
What does it mean to live on the borders of a rising world power? This course introduces the modern histories of such places as Hong Kong; Macau; Taiwan; Manchuria; Sichuan; Yunnan; and Xinjiang by investigating their commonalities and differences. Themes include: ecology and identity; comparative colonialisms and experiences of decolonization; war and border regions; nation building, citizenship, and the “art of not being governed.” Students will have an opportunity to research additional sites (e.g. Mongolia, Tibet) using frameworks introduced in class discussions.

HIST 1121. The Modern Chinese Nation: An Idea and Its Limits.
How did the Chinese empire become a nation-state? This course introduces the history of Chinese societies from 1850, when a massive civil war destabilized the country and sent a new wave of migrants across the globe. We will explore how local and regional society was affected by the spread of new conceptions of the Chinese nation, new kinds of government, and cultural and technological innovations. Coursework addresses the construction of race, ethnicity, and religion as well as gender and sexuality; the effects of war and catastrophe; different formulations of revolution and self-strengthening; and more. This course is fully online.

An exploration of how the artifacts of visual, material, aural and ritual culture illuminate the construction of and tensions in Chinese society at various levels and localities during the last two centuries. Topics include arrangements of space and time; gender and the body; popular entertainment; religion and performance; the growth of mass media; and the relationship of cultural forms to politics, local identity, and global forces. Class projects will draw on the Haffrenreffer collection and develop multimedia presentations.

HIST 1123. China’s Socialist Dreams.
A history of the People’s Republic of China under Mao in its context. We’ll explore the appeal of anarchism and socialism in the early 20th century and experiments in rural utopianism and worker autonomy. To understand the Chinese Communist Party, we’ll examine it as upstart, revolutionary vanguard, strategic ally, army, and state builder. Using new research on 1950s-70s Chinese society, we’ll ask how the Maoist party-state reached the lives of urbanites and farmers; affected gender relations and constructions of sexuality, age, and family; and shifted formulations of ethnicity, race and China’s place in the world.

This course would stretch from the 19th century to the present day, placing China alongside of its major regional and global interlocutors of each era. Thus, the course would engage with East and South Asian maritime history, Japanese and Korean history, Soviet and Russian history, US history in several time periods, and so on. This course would serve as a launching pad for students to further explore Chinese, Asian and transnational history.
Examines the cultural traditions of the urban samurai, the wealthy merchant, and the plebian artisan that emerged in the great polis of Edo, Osaka, and Kyoto during the early modern period. Focuses on the efforts of the government to mold certain kinds of cultural development for its own purposes and the efforts of various social groups to redirect those efforts to suit their desires and self-interest. P

HIST 1141. Japan in the Age of the Samurai.
This course is for students interested in exploring Japan’s remarkable cultural, political and social transformations during the Age of the Samurai, which began in the late 12th century and came to a close in the mid-19th century. Lectures, readings and films will explore how the emergence of new forms of military expertise and technologies led to the creation of warrior-led “tent governments,” that first co-existed with and eventually supplanted the structures of power centered on Kyoto and the Imperial Court. Open to all students. P

HIST 1149. Imperial Japan.
This course is for students interested in exploring the changing ideas, technologies and practices that shaped Japan’s history from the 1850s, when it confronted the power of an encroaching West, to the 1930s when its choices led the nation to the edge of ruin. Lectures and readings will address the collapse of the Tokugawa regime, the Meiji Restoration, the construction of empire, and the emergence of new forms of cultural and political expression. Students will also learn how ideas about gender, race, and tradition were understood and made use of in Imperial Japan. Open to all students. P

HIST 1150. Modern Japan.
Japan is a rich site for an exploration of many of the key processes and concepts that have shaped, and continue to transform, the modern world. These include the creation of the nation as the fundamental structure for social and political organization, a development that came late to Japan and had profound effects on its relationships with its neighbors, the crafting of its own histories, and with the emergence of debates about what it meant to be “Japanese.” The course also explores how ideas about gender, race, and tradition have been understood and made use of in modern Japan.

Uses film, oral histories, historical fiction, and more traditional forms of historical interpretation to explore the events, ideas, and legacies of Japan’s Pacific War. The armed conflict began in 1937 with the Japanese invasion of China and ended in 1945 with the atomic bombing of Hiroshima and Nagasaki. Some attention is paid to military developments, but the principle concerns fall into the areas of mutual images, mobilization, and memory.

HIST 1156. Postwar Japan.
This course is for students interested in exploring Japan’s remarkable cultural, political and social transformations from the closing days of the Second World War, through its emergence as an apparent exemplar of democratization’s potential and capitalism’s benefits, and on to the contemporary era. Lectures, readings and films will explore the legacies of the war and the Occupation, the so-called “economic miracle” (and its effects on the environment), the protest movements of the 1960s and beyond, and Japan’s complicated relationships with its neighbors, with the U.S., and with its own recent history. Open to all students.

HIST 1200A. Mediterranean Culture Wars: Archaic Greek History, c 1200 to 479 BC.
From the end of the Bronze Age to the end of the Persian Wars is a period of considerable change in the Mediterranean and beyond. The Greek polis challenges the powers of the ancient Near East. Over seven centuries we meet Greek writing, Homeric epic, and the first historian (Herodotus). But the Greek world lay on the edges of the Ancient Near East and this course tries to offer a more balanced approach than the typically Hellenocentric perspective of the standard textbooks. It addresses cultural, political, social, and economic histories. Literary, epigraphical and archaeological cultures provide the evidence. No previous knowledge of the ancient world is required.

HIST 1200B. The Fall of Empires and Rise of Kings: Greek History to 478 to 323 BCE.
The Greek world was transformed in less than 200 years. The rise and fall of Empires (Athens and Persia) and metamorphosis of Macedon into a supreme power under Philip II and Alexander the Great provide the headlines. The course covers an iconic period of history, and explores life-changing events that affected the people of the eastern Mediterranean and the topics that allow us to understand aspects of life and culture of the peoples of the eastern Mediterranean, and through these transformations, offers insights into the common pressures that communities confronted. No prior knowledge of ancient history is required. P

HIST 1200C. History of Greece: From Alexander the Great to the Roman Conquest.
In 334 BCE, the 22-year-old Alexander crossed over to Asia and North Africa, changing the history of the West forever. The invasion by a small, if intensely introspective, Greek peoples led to the spread of a monotheistic idea, belief in individualism, alienation from central power, and, conversely, the creation of natural law and human rights, and a deep desire for universalism. By its silences, the preserved narrative (constructed by European males) minimizes the lives of women, children, slaves, and those not of European origin. But largely because of Alexander’s conquests and the expansion of cosmopolitan thinking, the evidence embedded in Hellenistic history is far more diverse than for most other periods of classical history. This course focuses on inclusive social and intellectual history. Of particular emphasis will be the tension between the individual and the search for universal connection. P

HIST 1201A. Roman History I.
No description available.

HIST 1201B. Roman History II: The Empire.
The social and political history of the Roman Empire (14–565 CE). Focuses on expansion, administration, and Romanization of the empire; crisis of the 3rd century; militarization of society and monarchy; the struggle between paganism and Christianity; the end of the Empire in the West. Special attention given to the role of women, slaves, law, and historiography. Ancient sources in translation.

Explores essential social, cultural, and religious foundation blocks of Western Civilization, 200 BCE to 800 CE. The main theme is the eternal struggle between universalism and particularism, including: Greek elitism vs. humanism; Roman imperialism vs. inclusion; Jewish assimilation vs. orthodoxy; Christian fellowship vs. exclusion, and Islamic transcendence vs. imminence. We will study how ancient Western individuals and societies confronted oppression and/or dramatic change and developed intellectual and spiritual strategies still in use today. Students should be prepared to examine religious thought from a secular point of view. There is no prerequisite or assumed knowledge of the period. P

HIST 1205. The Long Fall of the Roman Empire.
Once thought of as the “Dark Ages,” this period of western European history should instead be seen as a fascinating time in which late Roman culture fused with that of the Germanic tribes, a mixture tempered by a new religion, Christianity. Issues of particular concern include the symbolic construction of political authority, the role of religion, the nature of social loyalties, and gender roles. P

HIST 1210A. The Viking Age.
For two centuries, Viking marauders struck terror into hearts of European Christians. Feared as raiders, Norsemen were also traders and explorers who maintained a network of connections stretching from North America to Baghdad and who developed a complex civilization that was deeply concerned with power and its abuses, the role of law in society, and the corrosive power of violence. This class examines the tensions and transformations within Norse society between AD 750 and 1100 and how people living in the Viking world sought to devise solutions to the challenges that confronted them as their world expanded and changed. P
HIST 1211. Crusaders and Cathedrals, Deviants and Dominance: Europe in the High Middle Ages.

Popes named Joan, Gothic cathedrals, and crusaders—all these were produced by rich world of the western European Middle Ages. The cultural, religious, and social history of this period are explored with special attention to the social construction of power, gender roles, and relations between Christians and non-Christians. P

HIST 1211A. From Imperial Diadem to Papal Tiara: Analyzing the Sources for the History of Europe, 476 to 1215.

How do we know what happened in the past? Sure, you can flip open a book or read a Wikipedia page, but how, in this age of fake news, do you know who to trust? What makes a source of information reliable or unreliable, useless or useful? Looking at the history of western Europe from the aftermath of the fall of Rome, this course tackles these questions head-on through a deep, analytical engagement with a variety of different primary sources. From the spectacular miracles of saints to everyday lists of dry goods and property boundaries, true history resides in the text, if only one is clever enough to see it.

HIST 1213. Memories of the Medieval in the Age of White Supremacy.

This course explores how the idea of a “medieval” period helped to create nationalist and racist identities in Europe and America—and continues to provide the bedrock for white nationalist identities—over the course of the nineteenth and twentieth centuries through an exploration of literature, art, architecture, and film.

HIST 1216. The Paradox of Early Modern Europe.

European social, intellectual, political, and economic history from the 15th to the 18th centuries, with an eye to the paradox embodied in the term “early modern.” On the one hand, this is supposedly the heroic era of Columbus, Machiavelli, Newton, and Montesquieu, when Europeans became increasingly global, urban, and critical. On the other hand, this period also saw the rise of judicial torture, new regimes of discipline, colonialism, and a robust belief in the unseen world of demons, angels, and witches. We will explore the interplay of these paradoxical forces in Europe’s transformation from medieval into modern. P

HIST 1230A. Modern European Intellectual and Cultural History: Revolution and Romanticism, 1760-1860.

A lecture course, primarily for juniors and seniors, that focuses on salient philosophic, artistic, and ideological currents of 19th-century Europe. Beginning with the crisis of political and cultural legitimacy posed by the French Revolution, it concludes with the consolidation of bourgeois culture in the 1860s and 1870s and the two great scientific systematizers of these decades: Darwin and Marx.

HIST 1230B. Modern European Intellectual and Cultural History: The Fin de Siecle, 1880-1914.

A sequel to HIST 1230A focusing on radical intellectual and cultural currents that challenged and destabilized the assumptions of Victorian high culture during the fin de siecle. Through a careful reading of primary texts by Hobhouse, Nietzsche, Weber, and Freud. The course explores issues such as the rise of mass consumer culture, neoliberal and neofascist politics, philosophic irrationalism, psychoanalysis, and the woman question.

HIST 1230C. The Search for Renewal in 20th century Europe.

The overarching theme of the course is the relationship between modernity and the primitive as manifested in major cultural, aesthetic and political movements in the 20th century. Films are an integral part of the course.

HIST 1235A. Making A "Second Sex": Women and Gender in Modern European History.

This course deals with the history of European women and gender from the Enlightenment to the present. It will focus on large historical themes and questions, especially shifting constructions of femininity and masculinity. It will begin with an analysis of eighteenth-century philosophies regarding women and gender, and it will move to examinations of specific topics such as industrialization, Victorian femininity, the suffrage movements, gender and the Great War, interwar sexuality, fascism, gender and the Second World War, and the sexual revolution.

HIST 1240A. Politics of Violence in 20C Europe.

Europe’s 20th century saw the emergence of forms of violence unthinkable in a world without mass politics. To better understand the changes in European states and societies that gave rise to total war and the violence associated with totalizing ideologies such as fascism and communism, we will read Lenin, Mussolini, Hitler, Fanon and others who sought to interpret violence as an extension of ideology. We will also read selections from more recent works by state leaders, historians and cultural figures from Ukraine to France, from Turkey to Great Britain who have reinterpreted past violence for present political ends.

HIST 1241A. Migration in European History.

From the “Germanic” people’s migrations of antiquity to the global refugee crises of today, migration has left an indelible mark on European society. What are the causes and consequences of periods of “mass” migration? Surveying major episodes in recent European migration history, this lecture course explores how human mobility has historically shaped culture, politics, economics, and society on this continent. Special attention will be given to the 19th century, an exceptional chapter in global migration history that saw more than 50 million Europeans departing for the Americas.

HIST 1241B. Understanding the Body in Medieval and Early Modern Europe.

In medieval Europe, the body was both a site of sin and the grounds where sin might find redemption in penance or prayer. The health of the medieval body was implicated by the health of the soul (and vice versa). In early modern Europe, the body shed some of its sacred meanings as it became an object of professionalized medical discourse. We trace this “disenchanted” body by examining concepts of sickness and health, the roles of gender and racial differences in understanding the nature of the body, and the changing social practices regarding human bodies and mortal remains. P

HIST 1260D. Living Together: Muslims, Christians, and Jews in Medieval Iberia.

A pressing issue in today’s pluralistic societies is how people of different identities (religious, ethnic, etc.) can live together. This course explores a slice of history that can help us think through questions of difference in our world: medieval Spain, where for centuries Muslims, Christians, and Jews lived in close proximity. Through explicit juxtaposition with modern debates, this course examines how these people understood and structured their relations with each other in the Iberian Peninsula between 711 and 1492. Themes include: identity and cultural definition; power and religious violence; tolerance and intolerance; acculturation and assimilation; gender and sexuality. P

HIST 1261E. After Empire: Modern Spain in the 20th Century.

This course situates 20th-century Spain at the crossroads of postcolonialism, ideological violence, and contested modernization. Spain entered the century amidst a profound national identity crisis, stirred by its defeat in the Cuban Independence War. Over the next decades, countless attempts among advocates of different visions of Spain, while the rise of mass politics transformed Spain in the first battleground in the global confrontation between fascism, communism, and liberalism. General Franco’s victory in the Spanish Civil War installed an authoritarian regime lasting four decades whose legacies marked Spain’s transition into the current democratic system and its problematic relationship with discontented sectors.

HIST 1262F. Women, Gender, and Feminism in Early Modern Italy.

This course explores the variety of Italian women’s histories, issues of gender and sexuality, and ingenious responses to circumvent the social, economic, religious, and political limitations placed upon them during the early modern period (1400-1800). Italian women produced some of the foundational texts of historical feminism, the intellectual and cultural movement that advanced the idea of equality across genders and the necessity of equal access to opportunity and education. This course surveys the alternatives proposed to the gender hierarchies of Italian society and will include selections from archival documents, letters, literature, treatises, and the visual arts. Taught in English.
HIST 1262M. Truth on Trial: Justice in Italy, 1400-1800.
Why do we think that one human being can judge another? How did this activity, enshrined in legal and political systems, profoundly shape society? This course examines the changing face of justice, from the medieval ordeal to judicial torture; the expansion of inquisitorial and state law courts; and the critical role the judicial system played in shaping Italian society. Using Italy as a focus, the course explores how law courts defined social, political, scientific, and religious truth in the early modern period. P

HIST 1264M. Cultural History of the Netherlands in a Golden Age and a Global Age.
Between 1580 and 1690 two nations emerged in Europe from what had been one unified region. To the north, the Dutch Republic gained its independence from Spain and developed as a bastion of liberty, ideas in ferment, visuals arts, Calvinist faith, science, technology, global economic reach. To the south, the “loyal” Netherlands, now Belgium, returned to the Spanish and Catholic fold, but sustained its leading position in the arts, competed in global trade, and negotiated a new compromise of government. In this course we present an interdisciplinary, comparative view of the "two" Netherlands and their legacy in the world. P

HIST 1266C. English History, 1529-1660.
Examines politics, religion, and society from the Protestant Reformation to the Puritan Revolution - a period of rapid and dramatic change when the world, for most English people, was turned upside down. Considers the experiences and concerns of ordinary men and women, as well as the elite. Takes in Scotland, Ireland, and the great migration to New England. P

HIST 1266D. British History, 1660-1800.
A survey of British history from the restoration of monarchy to the Wilkes affair and the loss of the American colonies. In addition to political developments such as the Glorious Revolution and the rise of party, examines political ideology (including the great political theorist, John Locke) and various themes in social history (such as crime, popular protest, the sexual revolution, and the experiences of women). P

HIST 1268A. The Rise of the Russian Empire.
This course provides a broad survey of Russian history from Kiev to the Crimean War. Topics include the rise of Moscow, the Time of Troubles, the reforms of Peter the Great and Catherine the Great, the Napoleonic Wars, and the conservative reign of Nicholas I. The following themes are emphasized in the lectures and readings: the changing stratification of society; the expansion of the Russian empire; Russia and the West (including diplomatic and cultural relations); economic development; and the origins and growth of the Russian intelligentsia and radical opposition to the autocracy. P

HIST 1268B. Russia in the Era of Reforms, Revolutions, and World Wars.
This course examines the rapid industrialization, modernization, and urbanization of Russia from the era of the “Great Reforms” (1860s) through the Second World War. We will examine both the growing discontentment among the population with autocracy’s efforts to maintain power and the Bolshevik effort to recreate the economy, society, and everyday life. Topics will include Russian Marxism and socialism, terrorism, the Russian revolutions of 1917, the rise and consolidation of Soviet socialism, famine, the red terror, and World War II.

This course examines late Soviet socialism, the collapse of the USSR, and the emergence of the new Russia. The following themes are emphasized in lectures and readings: the major features of de-Stalinization; Soviet and Russian foreign policy during and after the Cold War; the domestic and international causes and consequences of the collapse of the Soviet Union; and the emergence of a new Russian government and national identity during the 1990s and early 2000s.

HIST 1270C. German History, 1806-1945.
This course examines the development of German history from the dissolution of the Holy Roman Empire to the end of World War II. During that time the German states went from being a sleepy backwater to being the conquerors of Europe, finally conquered themselves by the Allied Forces. Through lecture, readings, and discussion we will examine post-Napoleonic Germany, Prussia’s role in uniting Germany, the Wilhelmite Empire, the Weimar Republic, and finally National Socialism. The class will take into account politics, economics, war, and culture in painting a full picture of the development of a distinct German state and society.

This course follows the history of France from the time of Louis XIV to the present, focusing on social and cultural trends, with particular emphasis on the boundaries of French national identity. It asks who belonged to the French nation at key moments in French history, including the Enlightenment, the French Revolution, the Napoleonic era, industrialization, imperialism, and the two world wars, as well as the complex questions presently facing France. We will examine how inclusions and exclusions during these moments reveal larger themes within French history, such as those dealing with race, class, gender, immigration, and anti-Semitism, amongst others.

HIST 1272D. The French Revolution.
This course aims to provide a basic factual knowledge of the French Revolution, an understanding of the major historiographic debates about the revolutionary period, and a sense of the worldwide impact of events occurring in late-eighteenth century France. A strong historiographic focus will direct our attention to the gendered nature of the revolutionary project; the tension between liberty and equality that runs throughout French history; the intersection of race and citizenship in the Revolution; and the plausibility of competing social, political, and cultural interpretations of the Revolution.

HIST 1272E. Paris: Sacred and Profane, Imagined and Real.
Paris has been called the capital of modernity, the capital of the nineteenth century, and the capital of the black Atlantic. This course explores how Paris grew from a small settlement into a vast city with an enormous global impact. Covering the settlement of the Celtic Parisii in the mid-third century BCE through the present, the course investigates the dynamic relationship between urban space, public activism, racism, and colonialism. It also considers who has been excluded from the city’s complex mythology and how these myths impacted experiences of the “other” (including people of color, low-income people, Jewish people, and women).

HIST 1280. Death from Medieval Relics to Forensic Science.
From CSI: Crime Scene Investigation to Ghost Busters to murder mysteries, western society finds death and dead bodies both fascinating and horrifying. This lecture course considers how the western world has dealt with life’s most fundamental truth – all humans die – by looking at the history of death and dead bodies from the Middle Ages up to the early twentieth century. Topics include the worship of Christian relics, Catholic and Protestant conceptions of the “good death,” body snatching and dissection, society’s fascination with murder, execution as legalized death, forensic science and dead bodies, and ghosts.

HIST 1310. History of Brazil.
This course charts the history of Brazil from Portuguese contact with the indigenous population in 1500 to the present. It examines the country’s political, economic, social, intellectual, and cultural development to understand the causes, interactions, and consequences of conflict, change, and continuity within Brazilian society.

HIST 1312. Brazil: From Abolition to Emerging Global Power.
How did Brazil transform itself from a slave society in 1888 to gaining international economic and political force? This course will examine the history of Brazil from the end of slavery to the present. We will analyze the reasons for the fall of the Empire and the establishment of a Republic, the transformations that took place as immigrants arrived from Europe, Japan, and the Middle East in the early twentieth century, and the search for new forms of national identity. We will study the rise of authoritarian regimes and the search for democratic governance in more recent years.
HIST 1313. Brazilian Biographies.  
How do the famous Brazilian singers Carmen Miranda and Caetano Veloso fit into any comprehensive understanding of Brazilian history? Do the life stories of the eighteenth-century freed slave Xica da Silva or the twentieth-century favela dweller and best-selling author Carolina Maria de Jesus represent unique characters or larger social phenomena of different times and places? How have Brazilian and foreign authors written the history of Brazil through portraits of individuals. This course will examine life stories of Brazilians of all races and social classes through texts, documents, and films to see what these biographical portrayals reveal about Brazilian history/culture. P

HIST 1320. Rebel Island: Cuba, 1492-Present.  
Cuba, once the jewel in the Spanish imperial crown, has been home to some of the world's most radical revolutions and violent retributions. For two centuries, its influence has spread well beyond its borders, igniting the passion of nationalists and internationalists as well as the wrath of imperial aggression. This course traces the history of Cuba from its colonial origins through the present, foregrounding the revolutionary imaginary that has sustained popular action-from anti-slavery rebellions through the Cuban Revolution and its discontents-in addition to the historical processes that have forged one of the world's most vibrant socio-cultural traditions.

HIST 1331. The Rise and Fall of the Aztecs: Mexico, 1300-1600.  
This course will chart the evolution of the Mexica (better known as the Azteca) from nomads to the dominant people of central Mexico; examine their political, cultural, and religious practices (including human sacrifice); explore the structure and limitations of their empire; and analyze their defeat by Spanish conquistadors and their response to European colonization. We will draw upon a variety of pre- and post-conquest sources, treating the Aztecs as a case study in the challenges of ethnohistory. P

HIST 1332. Reform and Rebellion: Mexico, 1700-1867.  
This course focuses on Mexico's difficult transition from colony to nation. We will examine the key political, social, economic, and cultural developments during this period. Major topics will include: the paradoxical eighteenth century, which saw Mexico emerge as the most prosperous region of the Spanish empire, even as social and economic tensions deepened; the outbreak of peasant rebellions in the early nineteenth century; the elite-led movement for independence; the economic decline and political turmoil of the early republican; foreign interventions by the United States and France; and the rise of the Liberals as Mexico's dominant political force. P

HIST 1333. The Mexican Revolution.  
To study the Mexican Revolution is to examine the sweeping history of Modern Mexico: from the Liberal reforms of Benito Juárez to the enduring power of the Partido Revolucionario Institucional (PRI); from peasant revolutionary Emiliano Zapata to his namesake Zapastistas of Chiapas; from Pancho Villa's mass revolutionary army to transnational mystic Teresita Urrea; from the landlord Francisco Madero who led the insurgency to Lázaro Cárdenas who enacted land and labor reforms; from the constant flows of migrants crossing the border back and forth to Mexico's defiance against Trump's wall.

HIST 1350. Modern Genocide and Other Crimes against Humanity.  
This course explores the emergence, evolution, varieties, underlying causes, and means of confronting and coming to terms with genocide and other crimes against humanity in the 20th century. We will discuss the origins of genocide and the subsequent conceptualization of this phenomenon; manifestations of colonial, imperial, racial, and communist genocide; war crimes and mass crimes by totalitarian regimes; and policies of mass expulsions and "ethnic cleansing." We will conclude with attempts to curb and punish genocide by means of international justice.

HIST 1370. The United States and Brazil: Tangled Relations.  
This lecture course explores the complex relations between Brazil and the United States from the American Revolution to the present. Through the use of documents, films, literature, and historical monographs, we will examine the diplomatic, political, economic, and cultural interactions between the largest nations in the Americas, paying particular attention to the growing influence of the United States. We will focus on the "Special Relationship" that developed during World War II, the effects of Washington's foreign policy during the Cold War, U.S. involvement over the course of the military dictatorship, and new forms of interactions after the return to democracy.

HIST 1381. Latin American History and Film: Memory, Narrative and Nation.  
This course provides an introduction to cinematic interpretations of Latin American history. Together we will explore how (and why) filmmakers have used motion pictures to tell particular narratives about the Latin American past. We will critically examine a broad range of films dealing with historical questions, and explore what these films have to say about how gender and sexuality, imperialism, slavery, the church, revolution and repression shaped the history of the region. In order to explore these topics we will examine films in relation to academic, autobiographical, and popular texts, all of which provide different ways of representing the past.

HIST 1440. The Ottomans: Faith, Law, Empire.  
This course explores the rise and fall of the longest-lived Muslim dynasty in history, the Ottoman Empire (1299-1923). From Turkish nomads in Asia Minor to multiethnic empire spanning three continents, the Ottomans were the premier power of southern Europe, northern Africa, and the eastern Mediterranean in the early modern world. From medieval "Turko-Persia" to the catastrophes of World War I, we shall engage difficult historical questions surrounding law and empire, religion and secularism, nationalism and statebuilding, and the legacy of Ottoman rule in and outside today's Turkey— from Sarajevo to Baghdad, Crimea to Mecca, and "where East meets West": Constantinople/Istanbul.

This course treats some of the major themes of Ottoman state and society, one of the major empires of the world out of which many new polities in the Balkans, Anatolia, the Middle East and North Africa emerged during the twentieth century. At the center of the course is the transformation of the "classical" Ottoman state to the early modern and modern through the many shapes and forms it has taken. We will be covering the beginnings from the 15th century and end with the analysis of the making of the modern Ottoman society in the early 20th century.

HIST 1455. The Making of the Modern Middle East.  
From North Africa to Afghanistan, Turkey to the Arabian peninsula, the goal of this course is to provide students with a robust background in modern Middle Eastern history, broadly defined. We begin in the long nineteenth century, an era of intense social and economic transformation that led to the collapse of the Ottoman empire and emergence of a new state system, primarily under British and French colonial rule. We then explore forces shaping the contemporary region, including nationalism, oil, regional conflicts and the Cold War, Islamism and mass politics, and military interventions by the US and other world powers.

HIST 1456. Bankrupt: An Economic and Financial History of the Middle East in the 19th and 20th Centuries.  
This course critically examines the economic, and particularly, the financial history of the modern Middle East in the 19th and 20th centuries. It is structured chronologically and thematically. It starts in the mid-19th century by examining the role of European states, as well as private European investment firms and oil companies, in facilitating the colonization of the region via loans, capitulations, and extractive concession agreements. It then shifts to the post-colonial period, studying how western oil companies, banks, investment firms, and multi-national organizations shaped the trajectories of the newly-independent states in the Middle East.
HIST 1457. History of the Palestinians.
Ordinary Palestinians are largely absent in histories of Palestine/Israel. This course introduces new scholarship that draws on local archives, oral history, and ethnohistorical research to decolonize knowledge production about a people who are a household name, but about whom we know little. Engaging the larger themes of capitalist transformation, settler-colonialism, and indigeneity from a bottom-up perspective, this course asks: Who are the Palestinians? What can their history teach us about the making of the modern world? And why has their condition become a global signifier for justice and equality?

HIST 1460. Modern Turkey: Empire, Nation, Republic.
This course will treat some of the major themes of Turkish history and society, one of world’s Muslim majority countries today. Since Turkey unfolded from the Ottoman Empire in the early 20th century, Turkish nationalism and its many shapes and forms has been at the center of the country’s uneasy history of democratization. Mapping the political, socio-economic and cultural landscape, this ventures through Turkish history to study state and society through political thought and economy of democracy, exploring secularism, Islam, feminism, Kurdish question, memory and popular culture.

HIST 1470. Legal History in the Middle East.
This course is devoted to exploring questions of law and legal history in the Middle East/eastern Mediterranean region from late antiquity to the present. Emphasis will be on the Islamic legal tradition from medieval to modern times, including intersection-and-friction points between the shari’a and Roman, Persianate, and Mongol imperial legacies, and fellow Abrahamic faiths. From the earliest schools of Islamic jurisprudence to late Ottoman constitutionalism, and the sociolegal impact of the 1979 Iranian Revolution to the Arab Spring uprisings, our goal is to explore the depth and diversity of legal cultures and institutions across different epochs of Middle East history.

HIST 1501. The American Revolution.
This course will explore the period of the American Revolution from the 1760s through the turn of the nineteenth century. Taking a broad view of the conflict and its consequences, we will situate the American colonies in their North American and Atlantic context, examine the material and ideological concerns that prompted the Revolutionary War, and trace the consequences of the conflict for the nation that followed. Students will be invited to look beyond the Founders to the experiences of women, slaves, Native Americans, common soldiers, and Loyalists.

HIST 1502. The Early Republic.
This course explores the politics and culture of the United States between the ratification of the Constitution in 1789 and the financial crisis of the late 1830s. The establishment of the federal government still left crucial questions unresolved: the characteristics of national identity, the boundaries of citizenship, the legitimacy of slavery, and the tense relationship between capitalism, colonialism, and democracy. Relying on primary sources and secondary scholarship, the course will revisit familiar debates over order and sovereignty, and public policy, while also introducing students to a wide range of critical voices seeking to fulfill the idealistic possibilities of the American Revolution.

HIST 1503. Antebellum America and the Road to Civil War.
Surveys society, culture, and politics between 1800 and 1860. Topics include the social order of slavery, the market revolution and its impact, abolition and other evangelical reform movements, and the development of sectional identities.

HIST 1505. Making America Modern.
This course surveys a crucial period in American history between the end of Reconstruction and the beginning of World War I. During this time, the United States transitioned from a relatively fragmented, traditional, and largely agricultural society into one that was remarkably diverse, increasingly urban, and highly industrialized. In surveying this important transitional period, we will pay particular attention to far-reaching changes in the nation’s business and economic life, its social movements, as well as its cultural developments, all with an eye to understanding how the United States became one of the world’s most commanding economic, political, and cultural powers.

This course explores the history of the United States between the end of World War II and the present. Major themes and topics include WWII; the rise and decline of New Deal liberalism; the Cold War and anti-communism; mass consumption; race, civil rights and liberation movements; women’s rights and feminism; the New Right; Vietnam and foreign policy; the service economy; immigration; and neoliberalism.

HIST 1511. Sinners, Saints, and Heretics: Religion in Early America.
This course considers the major people, events, and issues in the history of religion in North America, from pre-contact Native cosmologies to the tumultuous events of the Civil War. Attention will be given to “religion as lived” by ordinary people, as well as to the ways that religion shaped (or not) larger cultural issues such as immigration, public policy, social reform, warfare, democracy, slavery, and women’s rights. Prior knowledge of religion in North America is not required; there are no prerequisites to this course, and it is open to all students.

This course explores the history of North America through the eyes of the original inhabitants from pre-contact times up through 1800. Far from a simplistic story of European conquest, the histories of Euroamericans and Natives were and continue to be intertwined in surprising ways. Although disease, conquest, and death are all part of this history, this course also tell another story: the big and small ways in which these First Nations shaped their own destiny, controlled resources, utilized local court systems, and drew on millennia-old rituals and practices to sustain their communities despite the crushing weight of colonialism.

HIST 1513. U.S. Cultural History from Revolution to Reconstruction.
What does it mean to survey a country’s history? In this course, it means setting out in several different directions in order to determine the form, extent, and situation of the United States from the 1750s to the 1870s. It means looking carefully at the nation’s past through its cultural productions (ideas, beliefs, and customs expressed in print, material, and visual forms). And it means paying close attention to the details. Each week, students will examine one object, text, or idea in order to track broader developments in American history during this time period.

HIST 1514. Capitalism, Slavery and the Economy of Early America.
The simultaneous expansion of capitalism and slavery witnessed intense struggle over the boundaries of the market, self-interest, and economic justice. This course traces those arguments from Colonization through Reconstruction and asks how common people navigate the shifting terrain of economic life. The approach is one of cultural and social history, rather than the application of economic models to the past.

HIST 1515. American Slavery.
This lecture course will address the history of slavery in America. We will trace the emergence of slavery in the New World, with a heavy emphasis on slavery in the U.S. South, and a focus on the relationship of slavery to the emergence of systems of racial and gendered power. The course is broad in scope, beginning with the emergence of the slave trade and concluding with a look forward to the ways that the history of slavery continues to impact the way race and gender (as well as sexuality and class) structure our lives today.

HIST 1520. Women in Early America.
This course examines the major social and cultural developments of early America through the lens of women’s history. We will explore differences among representations of women, constructions and ideals of womanhood, and lived experiences, as we engage such topics as: cross-cultural exchange and conflict; citizenship and enslavement; work and cultural expression; and women’s varying degrees of access within social, civic and legal arenas. Relying heavily on sources like letters, diaries, legal records, and artifacts, we will work to identify strategies and best practices for recovering the voices and experiences of early American women buried in the archive.
HIST 1530. The Intimate State: The Politics of Gender, Sex, and Family in the U.S., 1873-Present.
Examines the "intimate politics" of gender norms, sex and sexuality, and family structure in American history, from the 1870s to the present, focusing on law and political conflict. Topics include laws regulating sex and marriage; social norms governing gender roles in both private and public spheres; the range of political perspectives (from feminist to conservative) on sex, sexuality, and family, and the relationship of gender to notions of nationhood and the role of the modern state. Some background in history strongly recommended.

HIST 1531. Political Movements in Twentieth-Century America.
Political movements in the United States in the twentieth century. History and theory. Highlights of the course include: populism, progressivism, segregationism, first wave feminism, labor movement, civil rights, new left, second wave feminism, new right. The course focuses on the origins, nature, ideologies, and outcomes of major political movements on both left and right in the twentieth century United States.

Examines the extended history of the Civil Rights Movement in the U.S. with a range of primary sources. Starting at World War II, the course considers the roles of the courts, the government, organizations, local communities, and individuals in the ongoing struggle for African American equality, focusing on African American agency. Sources include photographs, documentaries, movies, letters, speeches, autobiography, and secondary readings. Must have taken at least one post-1865 U.S. history course demonstrating a foundation in this time period.

HIST 1550. American Urban History, 1600-1870.
Both a survey covering urbanization in America from colonial times to the present, and a specialized focus exploring American history from an urban frame of reference. Examines the premodern, "walking" city from 1600-1870. Includes such topics as cities in the Revolution and Civil War, the development of urban services, westward expansion, and social structure.

A survey with a specialized focus exploring American history from an urban frame of reference. Topics include the social consequences of the modern city, politics, reform, and federal-city relations.

HIST 1553. Empires in America to 1890.
In this class, we’ll consider some of the forms of empire-building by various groups of indigenous and colonizing peoples in what is now the United States in order to understand the development of imperial U.S. power in both domestic and international contexts. Rather than resting upon a foregone conclusion of European settler colonial “success,” the course explores the contingent and incomplete nature of empire-building even within unbalanced power relationships.

HIST 1554. American Empire Since 1890.
This survey of twentieth-century US foreign relations will focus on the interplay between the rise of the United States as a superpower and American culture and society. Topics include: ideology and U.S. foreign policy, imperialism and American political culture, U.S. social movements and international affairs, and the relationship between U.S. power abroad and domestic race, gender and class arrangements.

History of American law and constitutions from European settlement to the present, with attention to comparative law and international law. Not a comprehensive survey but a study of specific issues or episodes connecting law and history, including morals and marriage laws, slavery, contests over Native American lands, delineations of race and gender, economic regulation, and the construction of a right to privacy.

HIST 1571. The Intellectual History of Black Women.
This course will introduce students to the intellectual productions and theoretical traditions of African American women. Focused on the canonical texts of African American women, this class gestures toward diaspora as well. Moving chronologically from the history of slavery to the present will require that we simultaneously confront the question of what counts as "intellectual" history. Thus even as we will read the written words of black feminists across time, we will also call into question what Barbara Christian calls "the race for theory," turning also to resistance practices, material culture, and bodily performance as sites of black feminist theorization.

HIST 1620. Resisting Empire: Gandhi and the Making of Modern South Asia.
Gandhi’s India tracks the emergence and transformations of British colonial rule in the Indian subcontinent, the insurgescences and the cultural and economic critiques that shaped anti-colonial nationalism, the conflicts that fueled religious differences and the ideas that shaped non-violent civil disobedience as a unique form of resistance. With readings from Gandhi, Marx and Tagore, amongst others, this course interrogates relationships between power and knowledge, histories from below, as well as violence and political mobilizations that would, by the mid-twentieth century, bring down an empire and create a bloody and enduring divide with the birth of two nation-states.

HIST 1640. Inequality + Change: South Asia after 1947.
With a focus on inequality and change this lecture course will survey South Asia’s history post-1947, with the end of colonial rule and the making of nation-states. With a historical attention to ‘inequality’, we will interrogate the inequalities cast by rural poverty, environment, religion, caste, gender and ethnicity and the remarkable contestations of people in the region that have challenged state power, and have thus shaped South Asia’s postcolonial histories. We will particularly focus on histories from below, and engage historical and literary writings, newspapers as well as documentary films.

HIST 1700. Violence: A Brief History.
Violence has long shaped human societies. This class considers violence as a social phenomenon across the globe from prehistory to today: how it has been conceptualized, practiced, and legitimated; its effects on societies and on individuals; and its role in creating, patterning, and perpetuating relations of power. Class meetings interweave lectures with student analysis of textual, archaeological, and visual evidence. Themes include the origins of violence, gender, warfare, state mobilization, rhetorics of dehumanization, religion, colonialism, imperialism, race and ethnicity, the coercion of labor, crime and punishment, trauma, reliance, and representations and constructions of violence.

This seminar will trace the growth of European images of the “other” in early modern Africa, Europe and the Americas. Using the tropes of “cannibal”, “barbarian” and “noble savage”, it explores evolving theories about human nature, human difference and race. Alongside critical analyses drawn from several disciplines, the main readings will be primary sources. These vivid, enigmatic accounts are both portraits of a world alien to the writer, and also mirror the writer’s own culture.

HIST 1731. Diplomatic History of Abolitionism, 1760-1865.
This course deploys insights and methodologies from “new” diplomatic history to account for a landmark process which shaped the birth of the modern world, the abolition of slavery and the slave trade. We will not only seek to account for how changes in diplomatic practice conditioned the struggle for abolition, but also for how new arguments and strategies for the abolition of slavery transformed the diplomatic world in ways which still reverberate in the actions and institutions of contemporary international bodies, from NGOs to national embassies and the United Nations.
There were multiple forms of slavery in the Early Modern world. We will look at three major systems: Mediterranean slavery and the Barbary Corsairs, Black Sea slavery and slave elites of the Ottoman Empire, and the Atlantic triangular trade. We will examine the religious, political, racial, and economic bases for these slave systems, and compare the experiences of individual slaves and slave societies. Topics discussed include gender and sexuality (e.g. the institution of the Harem and the eunuchs who ran it), the connection between piracy and slavery, and the roles of slavery in shaping the Western world. P

2017 marked the 500th anniversary of the publication of Martin Luther’s “95 Theses,” an event often considered to have caused the Reformation in Europe. This course explores the religious reforms of the sixteenth and seventeenth centuries in a global context, examining how the interaction of peoples from Europe, Asia, Africa, and the Americas shaped both contemporary debates and their enduring legacies. Bound up in Catholic and Protestant controversies about how humanity should interact with the divine were fundamental reappraisals of how to define who counted as human, the desirability/possibility of cultural pluralism, and religion’s place in public life. P

The choice of how we allocate land and water shapes famine, drought, war, homelessness and poverty. Over the centuries, utopians and empires have looked to very different systems of allocation, from village communalism to plantation systems to state provision of infrastructure to free-market systems. This course mixes histories of political economy, theology, literature, and anthropology, asking how imaginary landscapes become the material realities of farm and highway. Themes will include the rise of modern, surveying, engineering, cities, infrastructure systems, and land reform. It will ask about the consequences of history in an era of environmental disaster, famine, mortgages, and evictions.

HIST 1741. Capitalism, Land and Water: A World History: 1848 to the present.
The choice of how we allocate land and water shapes famine, drought, war, homelessness and poverty. Over the centuries, utopians and empires have looked to very different systems of allocation, from village communalism to plantation systems to state provision of infrastructure to free-market systems. While an economist or political scientist might study these regimes through abstraction, the historian dives into the social context of different systems, reading government documents, social protests, as well as architecture, maps, and the landscape itself, as an archive that testifies as to the nature of consent, participation, and resistance in a political system.

HIST 1820A. Environmental History.
Environmental history examines the changing relationship between human beings and their physical surroundings. We will actively question the boundary between nature and culture, showing how social and natural history mutually inform one another. We will do so by asking three interrelated questions. First, how has the material context in which history unfolded impacted the development of our culture, society, and economy? Second, how and why did people’s ideas and representations of the natural world change over time? Finally, in what ways and to what ends have human beings actively though not always intentionally altered their physical surroundings?

HIST 1820B. Environmental History of East Asia.
With a fifth of the world’s population on a twentieth of its land, the ecosystems of China, Japan, Korea and Vietnam have been thoroughly transformed by human activity. This course will explore the human impact on the environment from the first farmers to the industrial present, exploring how wildlife was eliminated by the spread of agriculture, how states colonized the subcontinent, how people rebuilt water systems, and how modern communism and capitalism have accelerated environmental change. Each week we will examine primary sources like paintings, essays, maps and poems. The course assumes no background in Asian or environmental history.

HIST 1820G. Nature on Display.
This course will explore the different ways in which people have represented the natural world in a variety of context and time periods from the 16th to the 21st century. We will look at the depiction of nature in museums, gardens, documentary films, and municipal parks, as well as the science of biology and ecology. As we do so, we will explore our changing attitudes towards nature and the place that we occupy in it, thinking through the complex and philosophically fraught question of what nature is, and what, if anything, distinguishes it from the rest of our world.

This course examines the creation and circulation of scientific knowledge in Renaissance Europe, ca. 1450-1600. We will explore the practices, materials, and ideas not just of astronomers and natural philosophers, but also of healers, botanists, astrologers, alchemists, and artisans. How did social, political, economic, and artistic developments during this period reshape how naturalists proposed to learn about, collect, manipulate, and commercialize nature? We will also consider the ways in which colonial projects forced Europeans to engage with other “ways of knowing” and rethink classical knowledge systems. P

HIST 1825H. Science, Medicine and Technology in the 17th Century.
This course examines the development of science and related fields in the period sometimes called ‘the scientific revolution’. It will both introduce the student to what happened, and ask some questions about causes and effects. The new science is often associated with figures like Harvey, Galileo, Descartes, Boyle, Leeuwenhoek, and Newton. But it is also associated with new ways of assessing nature that are mingled with commerce. The question of the relationship between developments in Europe and elsewhere is therefore also explored. P

HIST 1825J. History of Artificial Intelligence.
The course will trace the origins and trajectory of ideas about artificial intelligence, starting with the “active intellect” of Aristotle, early analog computers and automata, Ada Lovelace’s “calculus of the nervous system,” through the “general intellect” and “machine capital” of Karl Marx, Karel Capek’s “Universal Robots,” the “Turing test,” “cyberpositivity” and Donna Haraway’s “Cyborg Manifesto,” and concepts like “swarm intelligence,” “singularity,” and the “black box” problem. Sources will encompass a range of disciplinary approaches (philosophy, sociology, computer science, etc.), formats (text, film, graphic novel), and genres including Japanese anime and Afrofuturism.

HIST 1825L. The Roots of Modern Science.
This course explores the ways theories of physics, chemistry, biology and mathematics grew in relation to the natural, cultural and social worlds of the 18th and 19th centuries. There are no formal pre-requisites for the course, which is designed to be equally open and accessible to science and humanities students.

HIST 1825M. Science at the Crossroads.
This course will look closely at the dramatic developments that fundamentally challenged Western Science between 1859 and the advent of the Second World War in the 1930s. Its primary focus will be on a variety of texts written in an effort to understand and interpret the meanings of fundamentally new ideas including from the biological side— evolutionary theory, genetic theory, and eugenics; from the physical side— relativity theory, and quantum mechanics. The class should be equally accessible to students whose primary interests lie in the sciences and those who are working in the humanities.

HIST 1825S. Science and Capitalism.
We will explore the longstanding relationship between science and commerce from the 17th century to our own asking when the modern notion of science as a disinterested pursuit of objective truth took root. We will also explore how knowledge of the natural world has been shaped by personal, financial, and other kinds of self-interest in a number of diverse contexts ranging from Galileo’s invention of the telescope in Renaissance Italy to the patenting of genetically engineered organisms in today’s world, paying special attention to the diverse mechanisms that have been devised to guard against fraud and disinformation.
HIST 1830M. From Medieval Bedlam to Prozac Nation: Intimate Histories of Psychiatry and Self. Humankind has long sought out keepers of its secrets and interpreters of its dreams: seers, priests, and, finally, psychiatrists. This lecture course will introduce students to the history of psychiatry in Europe, the United States, and beyond, from its pre-modern antecedents through the present day. Our focus will be on the long age of asylum psychiatry, but we will also consider the medical and social histories that intersect with, but are not contained by, asylum psychiatry: the rise of modern diagnostic systems, psychoanalysis, sexuality and stigma, race, eugenics, and pharmaceutical presents and futures.

HIST 1835A. Unearthing the Body: History, Archaeology, and Biology at the End of Antiquity. How was the physical human body imagined, understood, and treated in life and death in the late ancient Mediterranean world? Drawing on evidence from written sources, artistic representations, and archaeological excavations, this class will explore this question by interweaving thematic lectures and student analysis of topics including disease and medicine, famine, asceticism, personal adornment and ideals of beauty, suffering, slavery, and the boundaries between the visible world and the afterlife, in order to understand and interpret the experiences of women, men, and children who lived as individuals—and not just as abstractions—at the end of antiquity. P

HIST 1930B. Academic Freedom on Trial: A Century of Campus Controversies (EDUC 1740). Interested students must register for EDUC 1740.

HIST 1930C. The Century of Immigration (AMST 1611Z). Interested students must register for AMST 1611Z.

HIST 1930D. Making America: Twentieth-Century U.S. Immigrant/ Ethnic Literature (AMST 1611A). Interested students must register for AMST 1611A.

HIST 1930E. Health and Healing in American History (GNSS 1960B). Interested students must register for GNSS 1960B.

HIST 1930F. Renaissance Italy (ITAL 1360). Interested students must register for ITAL 1360.

HIST 1930I. American Higher Education in Historical Context (EDUC 1730). Interested students must register for EDUC 1730.

HIST 1930J. Word, Image and Power in Renaissance Italy (ITAL 1580). Interested students must register for ITAL 1580.

HIST 1930N. Germany, Alcohol, and the Global Nineteenth Century (GRMN 1661E). Interested students must register for GRMN 1661E.

HIST 1930Q. History of the State of Israel: 1948 to the Present (JUDS 1711). Interested students must register for JUDS 1711.

HIST 1930R. Roman History I: The Rise and Fall of an Imperial Republic (CLAS 1310). Interested students must register for CLAS 1310.

HIST 1930S. Roman History II: The Roman Empire and Its Impact (CLAS 1320). Interested students must register for CLAS 1320.

HIST 1930U. Slavery in the Ancient World (CLAS 1120E). Interested students must register for CLAS 1120E.

HIST 1930V. History of Zionism and the Birth of the State of Israel (JUDS 1712). Interested students must register for JUDS 1712.

HIST 1930W. Introduction to Yiddish Culture (JUDS 1713). Interested students must register for JUDS 1713.

HIST 1930Z. The Lower East Side: Immigration and Memory (JUDS 1730).

HIST 1931C. The End of Modern Jewish History (JUDS 1716). Interested students must register for JUDS 1716.

HIST 1931D. The Fragility of Life in Ancient Greece (CLAS 1130). Interested students must register for CLAS 1130.

HIST 1931E. The Culture of Death in Ancient Rome (CLAS 1420). Interested students must register for CLAS 1420.

HIST 1931F. History of Greece from Archaic Times to the Death of Alexander (CLAS 1210). Interested students must register for CLAS 1210.

HIST 1931G. Roman Religion (CLAS 1410). Interested students must register for CLAS 1410.

HIST 1931L. Women, Gender and Feminism in Early Modern Europe (ITAL 1262). Interested students must register for ITAL 1262.

HIST 1931M. The Persian Empire and Achaemenid Culture (CLAS 1230). Interested students must register for CLAS 1230.

HIST 1941A. Vietnam/American War: Nation, Literature, Memory, and the Cultural History of Conflict. This course examines the cultural history of the “Vietnam War” (also known as the “American War”) from the perspective of Vietnam from 1954 to 1986. What were the political, ideological, civil, international, and colonial roots of conflict? How was war experienced on the ground in the Democratic Republic of Vietnam (North Vietnam) and Republic of Vietnam (South Vietnam)? This class challenges the orthodox and American-centric views of the war by investigating how different actors contested the vision of a post-colonial Vietnamese nation. We will dedicate attention to literature, gender, migration, memory, and debates on historical contingency, agency, and complexity.

HIST 1946H. Amazonia from Deep History to the Present. This seminar will examine the fascinating and contested history of one of the world’s most complex fluvial ecosystems: Amazonia. In equatorial South America, from its pre-human history to the present day. The course will include readings and discussions on: the region’s ecological origins; the history of its diverse Indigenous populations; European exploration myths and colonial projects; and more recent efforts to exploit and protect Amazonia’s extraordinary natural and human resources. The course will use tools and resources from archaeology, anthropology, biology, and history, and will also examine popular representations of the Amazon through novels, newspapers, podcasts, and films. P
HIST 1947Q. History of Jews in Brazil.
This seminar examines the history of Jews in Brazil from early Portuguese colonial rule to the present, first focusing on the role of Jews and New Christians in early economic development. We then examine the Inquisition in Brazil, North African Jewish immigration in the mid-nineteenth century, Eastern European immigration in the twentieth century, and the formation of communities and institutions over the last hundred years. We study Brazil’s foreign policy to Israel and other Middle Eastern countries. Finally, we consider the role of Jews in the opposition to the dictatorship and in the process of democratic consolidation.

Global Palestine: Palestine is often imagined as being locked into a national conflict with Israel over a territory slightly larger than the state of Vermont. This class seeks to break out of this framework, considering Palestine within larger—global, even—structures and processes of colonialism and decolonization; forced displacement and securitization; and shifting modes of temporality and spatialization. The goal is not only to provide useful and nuanced approaches to Palestinian history, but to use the histories of Palestine and Palestinians to examine more closely the workings and effects of global dynamics.

HIST 1952A. World of Walden Pond: Transcendentalism as a Social and Intellectual Movement.
This course examines the 19th century phenomenon of Transcendentalism: this country’s most romanticized religious, philosophical, and literary movement. Focusing especially on Emerson, Thoreau, and Fuller, we’ll examine the ideas of the Transcendentalists in the age of reform and evaluate the application of their principles to abolition, feminism, and nature. The central problem which they wrestled with will be the focus, too, of our investigations: the tension between individualism and conformity.

HIST 1954F. Globalism before Globalization: The Interconnected World of the Early Middle Ages.
Long before the internet or digital technology, the world was a globally interconnected place. This class looks at a period usually considered an age of localization, ca. 400–1000 CE, and considers the contacts and cultural exchanges between societies usually studied in isolation, across Afro-Eurasia, Oceania, and the Americas. Class sessions interweave student analysis of primary sources in translation and assessment of modern scholarship. Themes include art and visual culture, world literature, religion, ritual, courtly society, political and social formation, cultural hybridity, trade, disease, voyages of exploration, race-making, and early medieval understandings of human connectedness on a global scale.

Philosopher George Santayana famously warned that “Those who cannot remember the past are condemned to repeat it.” Ten years later, industrialist Henry Ford perhaps even more famously dismissed that notion: “History is more or less bunk.” What we mean by history and historical knowledge generally focuses on civilizations, societies, systems, and events as they move, evolve, and transform through time. Psychoanalytic knowledge added the inner, mental (psychic) lives of people and cultures. Psychoanalysis redefined the humanities, the social sciences, and their relationships, paving the way as well for new approaches such as gender and sexuality studies. Our seminar will focus on key primary and secondary texts, from Sigmund Freud to QAnon: from Freud’s pathbreaking interpretation of Dreams and some of its predecessors in 19th-century philosophy, political theory, and the arts to recent work in European and global history and theory. Topics will include History and Memory; Origins and Structures of Violence; Trauma and the Event; Subjectivity and identity; Mass Psychosis and Conspiracy Theory.

This course focuses on non-normative genders and sexualities in the Hispanophone world from the pre-colonial to the present period. It pays particular attention to affects, desires, and subjectivities captured in the historical testimonies of gender and sexual non-conformists. From the life of “The Nun Lieutenant” Catalina de Erauso or the 1901 lesbian marriage of Elisa and Marcela, to recent LatinX queer diasporas in the United States, we will discuss the historical tensions among Catholic morality, taxonomic and empiricist projects originated in the early modern era, and the embodied and emotional experiences of gender and sexual non-conformists.

HIST 1960A. African Environmental History (AFRI 1060M).
Interested students must register for AFRI 1060M.

HIST 1960B. Alien-nation: Latina/o Im/migration in Comparative Perspective (AMST 1903B).
Interested students must register for AMST 1903B.

HIST 1960C. End of the West: The Closing of the U.S. Western Frontier in Images and Narrative (AMST 1904D).
Interested students must register for AMST 1904D.

Interested students must register for AFRI 1060N.

Interested students must register for POBS 1600S.

HIST 1960F. The Portuguese Colonial Empire in a Comparative Perspective (XIX-XX Centuries) (POBS 1600Y).
Interested students must register for POBS 1600Y.

This seminar explores Southern Africa before 1860 to explore a global phenomenon: the pernicious emergence of race as the salient marker of human difference. We examine successive frontiers over millennia to track the changing dynamic between indigenes and newcomers. Discussions unpack overarching trends in the ways people negotiated cultural, political and economic difference. Both violence and absorption were always in play, but by the mid-nineteenth century, fluidity and hybridity gave way to assimilation to European norms. In these borderlands at the end of Africa lies the tragic history of our world: inherited race as an overpowering and rigid determinant of status.

HIST 1960I. Portuguese Discoveries and Early Modern Globalization (POBS 1600D).
Interested students must register for POBS 1600D.
This seminar offers a more-than-human consideration of Africa’s past. It
takes physical matter, microbes, plants, animals, the built environment,
and people all as historical actors. Our premise will be that agency is not
a human preserve but is embedded in and shared across heterogenous
assemblages. We sample recent writings in Africa’s environmental history
while considering more-than-human implications of Africa’s position as
the cradle of humanity, the source for the Atlantic slave trade, the imperial
possession of Europe, and an underdeveloped margin of the global
capitalist economy.

HIST 1960K. The End of Empires? A Global History of Decolonization
(POBS 1600I).
Interested students must register for POBS 1600I.

HIST 1960L. Conflicts, Diasporas and Diversities: Religion in the
Early Portuguese Empire (POBS 1600J).
Interested students must register for POBS 1600J.

HIST 1960M. The Birth of the Modern World: A Global History of
Empires (POBS 1601A).
Interested students must register for POBS 1601A.

HIST 1960N. South Africa since 1990 (AFRI 1060T).
Interested students must register for AFRI 1060T.

This course explores the major debates in the history of medicine in Africa
during the nineteenth and twentieth centuries and highlights the
coexistence of a variety of healing traditions and medical understandings
across the continent. It will focus on the following questions: What are
some of the ways Africans practice and understand medicine? How have
these practices interacted with other medical systems? What impact did
colonialism have on the production of medical knowledge? How were
practices and treatments evaluated and deemed effective? By whom and
on what grounds? And how have independent African states addressed
these critical issues?

South Africa transformed after 1990, but the past remains powerful. This
seminar offers a study of this dynamic and complicated country as well
as an exercise in contemporary history. It explores the endurance and
erosion of the apartheid legacy and the emergence of new problems.
A quarter century isn’t enough for a full body of academic historical work
to have developed, so the syllabus features journalism, opinion pieces,
social science, and biographies—works that provide the “first draft” of
history. In addition to the political history, we will focus on the Truth
and Reconciliation Commission and HIV-AIDS.

This course focuses on the francophone Maghrib (Morocco, Algeria,
Tunisia) and offers an introduction to major themes in the history of Africa
and the Arab world in the nineteenth and twentieth centuries. Students will
gain the tools to analyze and historicize the dynamic history of this region.
We will examine a range of topics, including the transformations of pre-
colonial social, economic and cultural patterns, conquest and resistance,
comparative histories of colonialism, nationalism, decolonization and
revolution, the consolidation of postcolonial states, regional cooperation,
the rise of Islamism and civil conflicts, and the Arab Spring.

HIST 1960Z. Zionists Anti Zionists and Post Zionists: Jewish
Controversies in the 20th Century (JUDS 1752).
Interested students must register for JUDS 1752.

HIST 1961A. Memory and Justice in East Asia.
How does history affect the present, the political, the social, and the
personal around East Asia? What are the social mechanisms and
frameworks of affect and knowledge that have shaped historical memories
of humiliation, violence, trauma, and culpability? This seminar focuses
on several key topics to explore modern modes of remembering and
justice seeking including: mapping memory; imperialism and the museum;
wartime conduct and war crimes trials; political violence and transitional
justice; and grassroots organizing, community justice, ritual actions, and
other non-state memory work. Final projects can be web portfolios or
podcasts on an event or phenomenon of your choice.

HIST 1961B. Cities and Urban Culture in China.
Treats the development of cities and urban culture in China from roughly
the sixteenth century (the beginning of a great urban boom) to the present.
We will look at the physical layout of cities, city government and social
structure, and urban economic life, often from a comparative perspective.
The course focuses, however, on the changing culture of city life, tracing
the evolution of a vernacular popular culture from the late imperial period,
through the rise of Shanghai commercial culture in the late nineteenth
and early twentieth centuries, to the diverse regional urban cultures of
contemporary China.

HIST 1961C. Knowledge and Power: China’s Examination Hell.
For centuries a rigorous series of examinations requiring deep knowledge
of the Confucian Classics was the primary tool for the selection of
government officials in imperial China. This system has been variously
celebrated as a tool of meritocracy and excoriated as the intellectual
“straightjacket” that impeded China’s entry into the modern world. This
seminar examines the system and the profound impact it had, for better
or worse, on Chinese society and government in the early modern period,
and the role that its successor “examination hell”—the gaokao or university
entrance examination—plays in society today.

HIST 1961D. Heaven Above, Suzhou and Hangzhou Below: Urban
Culture in Early Modern China.
The commercial boom of sixteenth and seventeenth century China
stimulated the growth of a lively popular culture in the great cities of
the southeast—Nanjing, Suzhou, and Hangzhou. These cities became
crucibles for ambitious scholars, pleasure-loving merchants, courtesans,
artists, and writers and sites for the production of some of the great
masterpieces of Chinese vernacular fiction, drama, book art, and painting.
After some background reading in socioeconomic history, the course
focuses on analysis of the literature and art of the period and what it
reveals about the short-lived “floating world” of late imperial China.

HIST 1961E. Medieval Kyoto - Medieval Japan.
In the Western historical lexicon, the term “medieval” often conjures
up images of backwardness and stagnation. Japan, however, pulsed
with political, economic, and cultural creativity during its middle ages.
This course explores topics central to Japan’s medieval revolution:
- The creation of innovative “Zen arts” such as noh drama and the tea
ceremony, and; - The destruction of Kyoto and its subsequent resurgence
in the sixteenth century as a city shared by aristocrats, merchants, and
artisans.

HIST 1961H. Korea: North and South.
This course offers a systematic investigation of the political, economic,
and social histories of Korea, North and South, from the inception of the two
governments following liberation from Japanese occupation in 1945 to the
present day. Enrollment limited to 20.

 Typically, the Democratic Peoples Republic of Korea (DPRK) is portrayed
as a rogue nation ruled by the Kim family, autocrats who are either
“mad” or “bad” and whose policies have traumatized the country’s
citizens, wrecked the economy, and threatened nuclear disaster on
South Korea, East Asia, even the USA. This course moves beyond such
stereotypes to examine the interconnected political, economic, and cultural
transformations of the DPRK from 1945 to the present. Also included are
the lived experiences of the Korean people, the plight of refugees, and
the question of unification with South Korea.

HIST 1961M. Outside the Mainstream.
When ratifying UN Covenant on Civil Rights in 1979, its representative
reported, “The right of any person to enjoy his own culture... is ensured
under Japanese law. However, minorities... do not exist in Japan.” Nothing
could have been further from the truth. Japan is - and has been - home to
immigrants, indigenous populations forced to accept Japanese citizenship,
outcast communities of Japanese ethnicity, and otherwise ordinary
persons who live outside the mainstream as outlaws and prostitutes.
This course examines how minority communities came into existence,
struggled to maintain distinctive lifestyles in what many view as an
extraordinarily homogenous society.
HIST 1961N. Colonization and Ethnicity in East Asian History.
East Asia is among the most culturally and linguistically homogeneous regions of the earth, the result of over two millennia of conquest and colonization. This course explores how the wide diversity of cultures, languages, and ecosystems that once existed across East Asia were transformed into a few dominant cultural groups. We will cover two main topics. One is the process whereby the people now known as the Chinese (or Han) were formed through imperial conquest and cultural mixing. The second focuses on the Ainu people of Northeast Asia and how they were forcibly incorporated into the Japanese nation. This course will teach students to think comparatively about processes of colonialism and ideas of ethnicity. While the colonial practices of Western Europeans have been studied in great depth, those of other civilizations have not received as much attention. P

HIST 1962B. Life During Wartime: Theory and Sources from the Twentieth Century.
This course asks how we are to understand war as everyday experience, and what separates war from, or connects it to, the other great movements of mass social and political disruption that the twentieth century has seen. The first part of the seminar will examine different frameworks scholars and thinkers have proposed for understanding war as modern experience (militarization, trauma, collective memory, states of exception, etc.) In the second part we will investigate the uses and limitations of specific types of primary sources, drawn from China’s war with Japan. Students will choose their own topics for final projects.

HIST 1962C. State, Religion and the Public Good in Modern China.
In late imperial China, religion formed an intrinsic part of public life, from the cosmological ritual of the state to the constitution of family and communities of various kinds. This arrangement was challenged in the twentieth century by the fall of the dynastic system and the introduction of new definitions of religion, modernity, sovereignty, and secularism. We will explore the ramifications of this change in greater China and its border areas during the past hundred years, looking at how people have sought to create a good public and the public good. Enrollment limited to 20.

HIST 1962D. Japan in the World, from the Age of Empires to 3.11.
This seminar explores the ambitions, anxieties and mutual images that shaped Japan’s relationships with China, Korea, and eventually the West, from the early modern era to the 21st century. We will examine the response to Perry’s arrival in 1853, Japan’s subsequent efforts to join the ranks of the great powers of the day through diplomacy, the pursuit of empire, and military force, and the emergence of radically different ways of being in the world since 1945. Other topics to be covered include the role of race in shaping US-Japan relations, and the legacies of colonialism and war in East Asia.

HIST 1962E. Print and Power in Modern Southeast Asia.
This seminar explores the relationship between print and power in the comparative histories of 20th century colonial era Southeast Asia (focus: Vietnam, Indonesia, Thailand, Burma). What are the mechanics and manifestations of ‘print?’ How does print communicate and symbolize ‘power?’ From governmental paperwork to scriptural authority, mass printed newspapers to writers and publishers, print embodies many forms and functions. We will cover the following topics: print culture and print capitalism, circulations and the publishing economy, colonial archives and mapping, the formation of ‘imagined communities’ and national consciousness, and debates on gender, class, and modernity expressed through popular press and novels.

This class explores the transition from antiquity to the Middle Ages through the lens of western North Africa. Divided internally by theological disputes and inter-communal violence, and subjected to repeated conquests and reconquests from the outside, in this period North Africa witnessed the triumph of Islam over Christianity; the rise and fall of ephemeral kingdoms, empires, and caliphal states; the gradual desertion of once-prosperous cities and rural settlements; the rising strength of Berber confederations; and the continuing ability of trade to transcend political boundaries and to link the southern Mediterranean littoral to the outside world. P

HIST 1963M. Charlemagne: Conquest, Empire, and the Making of the Middle Ages.
The age of Charlemagne sits at the nexus of antiquity and the middle ages. For two hundred years Charlemagne’s family, the Carolingians, welded together fragments of splintered Roman imperial tradition and elements from the Germanic world to forge a new, medieval European civilization. This seminar examines that process by exposing students to the primary sources, archaeological evidence, and modern scholarly debates surrounding the Carolingian age. Topics include the Carolingians’ rise to power; Charlemagne’s imperial coronation; interactions with the Islamic and Byzantine worlds; the revival of classical learning; the Church; warfare; the economy; Vikings; and collapse of the Carolingian Empire. P

Cross-dressing knights, virgin saints, homophobic priests, and mystics who speak in the language of erotic desire are but some of the medieval people considered in this seminar. This course examines how conceptions of sin, sanctity, and sexuality in the High Middle Ages intersected with structures of power in this period. While the seminar primarily focuses on Christian culture, it also considers Muslim and Jewish experience. Enrollment limited to 20. P

HIST 1964A. Age of Impostors: Fraud, Identification, and the Self in Early Modern Europe.
Alchemists claiming to possess the philosophers’ stone; basiliks for sale in the market; Jews pretending to be Catholics; women dressing as men; early modern Europe appeared to be an age of impostors. Officials responded to this perceived threat by hiring experts and creating courts, licenses, passports, and other methods of surveillance in an era before reliable documentation, photography, DNA. And yet one person’s fraud was another’s self-fashioning. We will examine instances of dissimulation, self-fashioning, and purported fraud, efforts to identify and stem deception, and debates about what was at stake when people and things were not what they seemed. P

European fascination with the unseen world reached its highpoint alongside the Renaissance, Reformation, Scientific Revolution, and Enlightenment. Between 1500 and 1800, theologians, natural philosophers, princes, and peasants devoted enormous energy to understanding, communicating with, and eliminating a host of ethereal creatures, including ghosts, angels, demons, vampires, nature spirits, and witches. Some also sought to access the praeternatural powers that these creatures seemed to command. This course explores the intellectual, social, political, and religious origins of the interest in this unseen world, the structures Europeans created to grapple with it, as well as the factors that ultimately led to its demise.

Selected topics in the social history of early modern England (c. 1500-1800), with particular emphasis on the experiences of women. Themes to be addressed will include the family, working life, education, crime, politics, religion, and the early feminists. Not open to freshmen sophomores. P

HIST 1964E. The English Revolution.
Looks at the origins and nature of the English Civil War and Republican experiment in government (1642-1660) through a close examination of primary source materials. Considers not only the constitutional conflict between the crown and parliament, but also the part played by those out-of-doors in the revolutionary upheaval, the rise of popular radicalism, and the impact of events in Scotland and Ireland. P

HIST 1964F. Early Modern Ireland.
This seminar will cover various themes in the political, religious, social and cultural history of Ireland between c. 1500 and the later eighteenth century. Topics to be discussed will include the Reformation, the Irish Rebellion, Cromwell’s rule, the War of the Two Kings, popular protest, the beginnings of the Irish nationalism, and the experiences of women. P
Examines the revolutionary upheavals in England, Scotland and Ireland of the later 17th-century through a close examination of primary source materials. Topics covered include: high and low politics, the rise of the public sphere, the politics of sexual scandal, government spin, persecution and toleration, and the revolutions of 1688-91 and their aftermaths. Enrollment limited to 20. P

HIST 1964K. Descartes’ World.
An exploration of history and historical fiction through examination of the early life of René Descartes, one of the most famous “French” philosophers of the 17th century. Little is known about his personal life, however, especially before he left France for good in 1628, despite many hints about his years as a soldier, his extensive travels in Europe, and his possible political and occult associations. This seminar is designed as a collective exploration into the small pieces of evidence about his early life and the lives of his friends and enemies in order to understand it imaginatively but truthfully. P

There were multiple forms of slavery in the Early Modern world. We will look at three major systems: Mediterranean slavery and the Barbary Corsairs, Black Sea slavery and slave elites of the Ottoman Empire, and the Atlantic triangular trade. We will examine the religious, political, racial, and economic bases for these slave systems, and compare the experiences of individual slaves and slave societies. Topics discussed include gender and sexuality (e.g. the institution of the Harem and the eunuchs who ran it), the connection between piracy and slavery, and the roles of slavery in shaping the Western world. P

Modernity as a distinct kind of cultural experience was first articulated in the Paris of the 1850s. The seminar will explore the meaning of this concept by looking at the theories of Walter Benjamin, as well as historical examples of popular urban culture such as the mass circulation newspaper, the department store, the museum, the café concert and the early cinema. Enrollment limited to 20.

HIST 1965B. Fin-de-Siècle Paris and Vienna.
We will examine two great imperial capitals facing similar set of challenges at the end of a century dominated by Europe. Austria-Hungary and France were forced to reckon with declining status as great powers, made manifest by their defeat at the hands of Prussia in 1867/1870 respectively. Both struggled with place of ethnic and religious minorities in modern states, and both responded with outbursts of political anti-Semitism that emerged. We will not only gain a basic factual knowledge of fin-de-siècle urban life but also explore some of the works and problems animating the intellectual life of the twentieth century.

HIST 1965C. Stalinism.
In this course students will examine in detail one of the most deadly and perplexing phenomena of the twentieth century: Stalinism. Readings will introduce students to major events of Soviet history from the mid-1920s to the mid-1950s as well as debates among historians about how to interpret these events?

HIST 1965D. The USSR and the Cold War.
This seminar will examine in detail the Soviet Union’s involvement in the Cold War, the defining international conflict between the end of the Second World War and the collapse of communism in Europe. Topics include cultural phenomena, economic organizations, and ideology, in addition to diplomatic crises and the indirect military confrontations in Asian, Africa, and the Americas. Enrollment limited to 20.

This course will concentrate on European thinkers’ engagement with the politics of the 20th century. Discussion will cover a range of cultural and intellectual currents and ideologies—modernism, fascism, communism, “dissidence,” “internal” migration, “anti-politics”—as well as genres (essays, letters, fiction, criticism, poetry, film).

HIST 1965H. Europe and the Invention of Race.
This upper-level seminar in European intellectual history will examine key texts from the 16th through the 20th century in which the negotiation of difference and diversity produced and questioned the organization of populations into groups and hierarchies called races. How does “race thinking,” with its spectrum from racism to critical race thinking, channel and direct phenomena such as European global expansions, capitalism and slavery, religious difference and secularization, colonialism, imperialism, and fascism.

HIST 1965L. Industrial Revolution in Europe.
Europe’s industrial revolution is often cited among the key drivers of global inequality between “the West and the Rest.” But industrialization unfolded unevenly everywhere, including within Europe itself. Using a local perspective on a global story, this seminar explores how the industrial revolution unfolded differently and unevenly across the diverse communities, regions, and landscapes of Europe during the long 19th century. Major themes include the urban-rural divide; technology and deindustrialization; the culture of work; faith and politics; socialism, populism, and antisemitism.

HIST 1965M. Double Fault! Race and Gender in Modern Sports History.
From 1936 Berlin Olympics to infamous East German swimmers of the Cold War to 1998 French soccer team, sport culture has consistently helped define overall societal values. We will examine how early modern societies defined the ideal sporting participant, and how shifts over time included and excluded various groups. These shifts, including the promotion of masculinity through duels, the fears of women’s emancipation via cycling, and the exclusion of Jews from competition, were based on perceived national needs. Through the study of sports, we will study who we have been as a community—as well as who we aspire to be.

HIST 1965N. "Furies from Hell" to "Femi-Nazis": A History of Modern Anti-Feminism.
Women have faced a deep antipathy at nearly every turn in their struggles for civic and social inclusion. These denials of women’s rights often take the form of commentaries—sometimes vicious ones—about women’s general natures, bodies, and fitness for public life. Women are consistently tagged with various labels of otherness: opponents of women’s rights denounce them irrational, unnatural, traitors to society, even sexual deviants. This course will examine the dangers that women allegedly represent to social stability from the Enlightenment to today, as well as how women have fought back to assert their rights and independence.

HIST 1965O. ‘Naturally Chic’: Fashion, Gender, and National Identity in French History.
From its beginnings, the fashion industry in France has been synonymous with the international reputation of the nation. Similarly, being “chic,” having an innate sense of discernment and style, became synonymous with French femininity. This seminar will explore the interconnectedness of the history of fashion in France, the requirements it placed on French women, and the pressures the fashion industry has borne since the 1700s. We will look at how fashion reflected and created the moods of various periods, and we will also see how French women’s national belonging has been innately tied to ability to display French fashion.
HIST 1965R. The Crisis of Liberalism in Modern History.
Liberalism has flamed out before. Its collapse in the late 18c left a mark on the psychoanalytic theories of Sigmund Freud, the art of Gustav Klimt, and the fiction of Franz Kafka. Liberalism's second collapse in the 1930s, inspired the founder of neoliberal economics Friedrich Hayek and the philosopher of science Karl Popper. These men were all Austrian, a nationality they shared with the most infamous critic of liberalism, Adolf Hitler. This course wonders why this country in the center of Europe has exercised such an outsized influence on our modern experience.

HIST 1966Q. Colonial Encounters and the Creation of Latin America.
This seminar examines how interactions between Europeans and indigenous peoples shaped the formation of early Latin America. From Florida to Brazil, invasion led to widely varied outcomes, including outright failures. Students will come to see colonization as a difficult, uneven process, as Europeans struggled to comprehend and engage unfamiliar natural and human environments; the new societies that emerged reflected complex transatlantic exchanges. Our readings will consist of primary sources from the sixteenth century, supplemented by academic texts. Students will write a series of three-page response papers, along with a ten to twelve-page essay on major themes from the course. P

In January 1959, the forces of rebel leader Fidel Castro entered Havana and forever altered the destiny of their nation and world. We will examine the question of political hegemony and the many silences built into the achievement of Revolution—from race to sexuality to culture—even as we acknowledge that popular support for that Revolution has often been both genuine and heartfelt. It is this counterpoint between the Revolution's successes in the social, economic, and political spheres and its equally patent exclusions that have shaped Cuba's history in the past and will continue to guide its path to an uncertain future.

HIST 1967E. In the Shadow of Revolution: Mexico Since 1940.
This course traces political, social, and economic developments in Mexico since the consolidation of the revolutionary regime in the 1930s. The topics addressed include: the post World War II economic “miracle”; the rise of new social movements; the Tlatelolco massacre; the deepening crisis of the PRI (the governing party) in the 1980s and 1990s; the Zapatista rebellion; violence and migration on the northern border; and the war against narcotraficantes.

This seminar focuses on the Maya in postcolonial Guatemala. The main theme is the evolving relationship between indigenous peoples and the nation-state. Topics include peasant rebellions in the nineteenth century, the development and redefinition of ethnic identities, the military repression of the 1970s and 1980s, the Rigoberta Menchú controversy, and the Maya diaspora in Mexico and the United States. Enrollment limited to 20.

This course will focus on the political, social, economic, and cultural changes that took place in Brazil during the military dictatorship that ruled the country from 1964-85. We will examine why the generals took power, the role of the U.S. government in backing the new regime, cultural transformations during this period, and the process that led to democratization.

HIST 1967Q. Gender and Sexuality in the Modern History of Latin America.
This seminar explores how gender shaped the political and social history of 19th and 20th century Latin America. Together, we will explore some themes at the center of this growing body of scholarship, such as the role of honor and sexual morality in shaping post-independence Latin American societies, the efforts of states to regulate the family, and the role of gender in the organization of the modern labor force. Throughout the semester, we will discuss the intersections of race, gender and class that are at the heart of changing conceptions of sexual morality and ideals of modern family organization.

From colonial outpost to capital of the Portuguese Empire, from sleepy port to urban megalopolis, this seminar examines the history of Rio de Janeiro from the sixteenth century to the present. Using an interdisciplinary perspective rooted in historical analyses, we will analyze multiple representations of the city, its people, and geography in relationship to Brazilian history, culture, and society.

HIST 1967T. History of the Andes from the Incas to Evo Morales.
In the spring of 1096, more than 40,000 men and women left their homes on an armed pilgrimage from Europe toward Jerusalem. This was the first of many crusading movements, eventually leading to the establishment of crusader states along the Eastern Mediterranean. While these states only lasted two hundred years, the ideological effects of crusading still linger today. This course examines historical evidence from both Christian and Muslim sources to interrogate the cultural, geopolitical, and social forces which combined to ignite crusading fervor. It also seeks to understand how the complicated memory of crusading continues to haunt Muslim-Christian relations today.

HIST 1967X. The Worlds of Crusading.
In January 1959, the forces of rebel leader Fidel Castro entered Havana and forever altered the destiny of their nation and world. We will examine the question of political hegemony and the many silences built into the achievement of Revolution—from race to sexuality to culture—even as we acknowledge that popular support for that Revolution has often been both genuine and heartfelt. It is this counterpoint between the Revolution's successes in the social, economic, and political spheres and its equally patent exclusions that have shaped Cuba's history in the past and will continue to guide its path to an uncertain future.

HIST 1968A. Approaches to the Middle East.
When and why did the Middle East emerge as a field of study? What are the competing approaches to framing our understanding of this pivotal region? How did these approaches change over time? This upper-level seminar explores these questions within the larger context of colonial, national, and other ongoing encounters that have shaped modern regimes of knowledge production. The class features visits by leading scholars from different disciplines who reflect on the questions they ask and how they go about answering them. Readings range from canonical works to innovative new scholarship. No pre-requisites but previous coursework on this region recommended.

This course is an analysis of where the Mediterranean region fits in the evolving capitalist world-economy in the aftermath of the so-called Age of Discovery. The context of the Mediterranean is set in our own age’s “globalization” as histories of capitalism push on the “world” in new ways challenging our mental maps for historical change. The seminar takes on a critical approach to the European historiography on the rise of capitalism and the view that the Mediterranean collapsed with the rise of the Baltic and the Atlantic.

In the spring of 1096, more than 40,000 men and women left their homes on an armed pilgrimage from Europe toward Jerusalem. This was the first of many crusading movements, eventually leading to the establishment of crusader states along the Eastern Mediterranean. While these states only lasted two hundred years, the ideological effects of crusading still linger today. This course examines historical evidence from both Christian and Muslim sources to interrogate the cultural, geopolitical, and social forces which combined to ignite crusading fervor. It also seeks to understand how the complicated memory of crusading continues to haunt Muslim-Christian relations today.

HIST 1968V. America and the Middle East: Histories of Connection and Exchange.
This seminar explores connections and exchanges between the diverse peoples of two constructed regions: the Middle East and North America. The course proceeds chronologically from the global context surrounding Columbus’s 1492 voyage, eventually focusing on US relations with the “Mideast.” But we’ll not stop there. Rather, we’ll read closely for underlying socioeconomic, diplomatic, and cultural processes—including trade, migration, education, and evolving conceptions of race, religion, and citizenship—themes often ignored by conventional histories that dwell on watershed events, personalities, or conflict. Our goal: to recognize how American-Mideast ties are far more complex, rich, and deep-rooted than is generally assumed.
HIST 1969A. Israel-Palestine: Lands and Peoples I. This advanced undergraduate seminar seeks to provide a deeper understanding of the links between the region now known as Israel and Palestine and the peoples that have inhabited it or have made it into part of their mental, mythical, and religious landscape throughout history. The course will be interdisciplinary at its very core, engaging the perspectives of historians, geologists, geographers, sociologists, scholars of religion and the arts, politics and media. At the very heart of the seminar is the question: What makes for the bond between groups and place - real or imagined, tangible or ephemeral? No prerequisites required.

HIST 1969B. Israel-Palestine: Lands and Peoples II. This advanced undergraduate seminar seeks to provide a deeper understanding of the links between the region now known as Israel and Palestine and the peoples that have inhabited it or have made it into part of their mental, mythical, and religious landscape throughout history. The course will be interdisciplinary at its very core, engaging the perspectives of historians, geologists, geographers, sociologists, scholars of religion and the arts, politics and media. At the very heart of the seminar is the question: What makes for the bond between groups and place - real or imagined, tangible or ephemeral? No prerequisites required.

HIST 1969C. Debates in Middle Eastern History. This seminar investigates the historical bases of some of the major debates which continue to dominate contemporary discussions on the Middle East. These include debates on colonialism and its legacies; problems associated with the post-colonial Middle Eastern state (the "democracy deficit": human rights; oil; political Islam); and arguments about the causes and consequences of some of the major events in Middle Eastern history (the Israel-Palestinian conflict; the Iranian revolution; the Lebanese civil war; 9/11 and the Iraq invasion; and the Arab Spring). Priority will be given to seniors, and history and MES concentrators. Previous introductory coursework in ME history is highly recommended (HIST 6244 or equivalent) for all students wishing to enroll in this course.

HIST 1969D. Palestine versus the Palestinians. This course explores alternatives to the common view that the Palestinian-Israeli conflict is a struggle between two nationalistic movements over the same land. Moving away from state-centric political discourse, it engages the questions of imperialism, settler-colonialism, and displacement from a bottom-up perspective of everyday life of Palestinian communities in historic Palestine and the Diaspora. How do these internally divided and spatially fragmented communities negotiate the present and imagine the future? Ultimately, the course asks: What does it mean to be a Palestinian? And what can the Palestinian condition teach us about the modern world?

HIST 1969F. Nothing Pleases Me: Understanding Modern Middle Eastern History Through Literature. This seminar examines the major themes and events in the history of the Middle East in the 20th century through a close reading of literary texts and, in some cases, films. Throughout the course we will try to locate the perspectives of the “ordinary people” of the region, and will pay special attention to the voices of those who are rarely heard from in discourses on the Middle East: religious minorities, sexual minorities, women, children, but also criminals, misfits, misanthropes and others who have been deemed social outcasts.

HIST 1970A. Colonial Encounters: Indians, Europeans, and the Making of Early America. This seminar explores Native American histories and cultures in North America, primarily through the multiple and overlapping points of contact and coexistence with Europeans from the sixteenth through the eighteenth centuries. Although we will be reading widely in the very interesting recent literature in the field, a major component of the class is to investigate in a practical way the problem of sources for understanding and writing about American Indian history. As a senior capstone seminar, the final project is a substantial research paper. Enrollment limited to 20.

HIST 1970B. Enslaved! Indians and Africans in an Unfree Atlantic World. This course examines the varieties of Indian and African enslavement in the Atlantic world, including North America, up through 1800. Reading widely in recent literature in the field as well as in primary sources from the colonial period, we will ponder the origins, practices, meanings, and varieties of enslavement, along with critiques and points of resistance by enslaved peoples and Europeans. Special emphasis will be given to the lived nature of enslavement, and the activity of Indians and Africans to navigate and resist these harsh realities. A final project or paper is required, but there are no prerequisites.

HIST 1970D. Problem of Class in Early America. This seminar considers economic inequality in colonial British North America and the new United States. Studying everyone from sailors, servants, and slaves in the seventeenth century to industrial capitalists and slaveholders in the nineteenth century, this course will look at the changing material structures of economic inequality and the shifting arguments that legitimated or challenged that inequality. Readings will explore how historians have approached the subject of inequality using on class as a mode of analysis. Students will write extended papers that place primary research in conversation with relevant historiography. Enrollment limited to 20. Written permission required.

HIST 1970F. Early American Money. The history of finance has become a crucial site for studying governance and statecraft, for recovering the organizing logic of capitalism, and for recognizing the structures of power in any given society. Topics include the recurring debates over metallic and paper currencies, the emergence of a national banking system, and the technologies of coinage, assaying, and counterfeiting. Particular focus on the relationship of finance and slavery, as well as the many “bank wars” that riled American politics from the seventeenth century through the nineteenth century.

HIST 1970G. Captive Voices: Atlantic Slavery in the Digital Age. The digital revolution is transforming the study of history. But is it allowing us to better recover the voices and lived experiences of people in the past? This course considers the possibilities and pitfalls of using digital tools to understand the lives of enslaved men and women in the Americas between 1500 and 1800. Each session considers a different digital humanities project, supplemented by primary sources and recent books. For their final project, students will contribute to the Database of Indigenous Slavery in the Americas, which is hosted here at Brown. There are no prerequisites for this course.

HIST 1971D. From Emancipation to Obama. This course develops a deep reading knowledge of significant issues and themes that define African American experiences in the 20th century, experiences that begin with the years following Emancipation and culminates with the election of President Obama. Themes include citizenship, gender, labor, politics, and culture. The goal is to develop critical analysis and historiographical depth. Some background in twentieth century United States history is preferred but not required. Assignments include weekly reading responses, class participation and presentation, and two written papers. Enrollment limited to 20.

HIST 1972A. American Legal History, 1760-1920. Undergraduate seminar on the United States and international law. Focuses mainly on the period before the twentieth century. Examines subjects such as the right of revolution; the evolution of U.S. Constitution law; law as an instrument of economic development and exploitation; and the evolution of rights-consciousness—all within the context of international law. Enrollment limited to 18. Students should contact the instructor before the beginning of the semester if they are interested in taking the course. Instructor permission required.

HIST 1972E. Theory and Practice of Local History. Examines the theory and practice of local history, evaluating examples from a variety of genres ranging through micro history to folk music, from genealogy to journalism. Work with primary documents, evidence from the built environment and visits to local historic sites and archives will enable students to evaluate sources and develop their own ideas about writing history and presenting it to a public audience. Enrollment limited to 20. Instructor permission required.
HIST 1972F. Consent: Race, Sex, and the Law.
In the context of recent student organizing on college campuses, the word "consent" has become headline news. But what is "consent" and what does it have to do with the history of race and sexuality in America? In this course, we will use history, law, and feminist theory to understand the origins of consent, to trace its operation as a political category, and to uncover the many cultural meanings of "yes" and "no" across time. Themes addressed include: slavery, marriage, sex work, feminism, and violence, from the founding of American democracy to the present.

HIST 1972G. Lesbian Memoir.
This capstone seminar explores the genre of lesbian memoir through lenses both historical and theoretical. We will think together whether memoir constitutes a primary source for historical study, and its place in lesbian history. We will consider feminist theoretical questions posed by this genre of writing: What (or who, or when) is a lesbian? Is the category of the lesbian rooted in gender essentialism or disruption? How (or when, or if) did the category of lesbian become marked as white?

Examines how the U.S. has shaped or been shaped by global human rights struggles. Topics include: indigenous rights in the U.S. Early Republic; Antislavery in the early Atlantic World; anti-imperialism in U.S. wars with Mexico and Spain; U.S. and human rights conventions; the Cold War and Civil Rights; and recent U.S. policies concerning human migration. No prerequisites. Priority given to seniors and juniors and those who have not taken the related course HIST 1972A (though students may take both courses). Instructor permission required (email professor before end of registration period).

HIST 1972L. Loss, Political Activism and Public Feelings: Between Fact and Affect.
Why do political actors deploy quantitative approaches when dealing with catastrophe, while personal experiences of grief draw heavily on affective resources? Juxtaposing texts from public health, public policy, empirical political science, and law, alongside cultural and artistic responses that focus on public feelings of mourning, rage, and defiance, this co-taught course examines political action between fact and affect. Case studies will include the long afterlife of transatlantic slavery, anti-lynching campaigns, the enshirning of the Civil War and Civil Rights Movement in national memory, and political movements such as ACT UP and the Movement for Black Lives.

This seminar will reflect on terms that seem to trip us up: empire, capitalism, modernity. Many Americans reject the notion that the United States is an empire due to a sense of patriotism and/or an inability to distinguish colonialism from imperialism, let alone recognize settler colonialism. In this course, however, we will examine how U.S. empire and racial capitalism are inseparable and consider how liberal blinders have operated in American popular and academic discourse—and that perhaps “provincializing the United States” might offer some clarity.

HIST 1974A. The Silk Roads, Past and Present.
The Silk Road has historically been the crossroad of Eurasia; since the third-century BCE it has linked the societies of Asia—East, Central, and South—and Europe and the Middle East. The exchange of goods, ideas, and peoples that the Silk Road facilitated has significantly shaped the polities, economies, belief systems, and cultures of many modern nations: China, Russia, Afghanistan, Uzbekistan, and India. This course explores the long history (and the mythologies or imaginations) of the Silk Road in order to understand how the long and complex pasts of the regions it touches are important in the age of globalization.

A seminar examining how the categories of "war" and "peace" have emerged over time and place. How does a society decide that a war exists or has ended, or that there is peace, or that peace has been violated? How has the practice of war and the practice of peace changed over the course of history? We approach these questions by looking at a series of case studies, from Greek-Persian relations of the fifth century BCE to the Mongol imperial system of the thirteenth century to the twentieth-century World Wars and recent efforts (successful and failed) at global governance.

HIST 1974C. Nonviolence in History and Practice.
This advanced history seminar will begin with exploring sources of Mahatma Gandhi’s conception of nonviolent civil disobedience and go on to explore the transformation of those ideas in different contexts of protest and resistance in different parts of colonial India, as well as the US and South Africa. In addition to thinking historically, we will look at the details of strategies and practices that have been developed over the last half century, into the present.

This seminar is an experiment in thinking a global history of the making of the modern world. We read texts that track the movement of ideas, peoples and goods, the formation of political and economic inequalities and the continuous struggles of ordinary people against them. From empires to nation-states, from anti-imperialist nationalist struggles to transnational radical movements, this seminar grapples with the politics of knowledge for drawing out “fugitive” lineages of the past that we need to shape our collective future. No overrides will be given before the semester begins. Interested students must attend first class meeting.

The human fascination with maps is perennial, but it has been transformed in recent decades from a field for antiquarian map-lovers to a bona fide domain of intellectual inquiry. Maps are now understood as instruments of power and domination rather than value-free representations of territory. Using the world-renowned cartographic collection of the John Carter Brown Library, this seminar will examine the role of maps and other graphic representations of space in the consolidation and contestation of imperial dominions, introducing students to the idea of using maps as primary source materials for historical and cultural analysis. Winter session.

This seminar explores a global history perspective to the idea of civilization since the eighteenth century. Starting from the view that the Enlightenment was a specifically European phenomenon, a foundational premise of Western modernity, we explore how the master narrative around “civilization” developed and crystallized through universal history and world history into today’s global history. Analyzing the making of this global idea includes topics like the politics of knowledge production, and transnational exchanges of ideas and practices of progress, nationalism, periodization, and intertextuality in the West, Ottoman Empire and others.

What can the experience of a minority group like the Jews teach us about roots of globalization? What were the economic, political, and cultural conditions that allowed early modern Jewish merchants to create economic networks stretching from India to the New World? We will answer these questions by examining the connections and interactions between four major Jewish centers: Ottoman Jewry in the Eastern Mediterranean, the Port Jews of Amsterdam and London, Polish-Jewish estate managers in Ukraine, and the Court Jews of central Europe. We will see how European expansion exploited - and was exploited by - these Jewish entrepreneurs.

As the modern world developed and grew, the question of the Jews’ place within it became increasingly important for the majority societies and the Jews themselves to deal with. The solutions found have ranged from inclusion on equal terms through exclusion not only from society but from humanity altogether. In many ways, the debates around this issue have touched on the very meaning of modernity itself. In this advanced undergraduate seminar, we will examine the ongoing polemics on the place of the Jews from the perspectives of both the proponents of the different solutions and the Jews themselves.
HIST 1974G. The Nuclear Age.
This is a course for students interested in questions about the development of atomic weapons, their use on Hiroshima and Nagasaki, the Cold War arms race that followed, and debates over the risks associated with other nuclear technologies. We will look carefully at the scientific and military imperatives behind the Manhattan Project, the decisions that led to the use of atomic weapons on Japan, and subsequent efforts to reflect on the consequences of those choices. We will also explore how popular protest and popular culture after 1945 shaped our understanding of the terrors and promise of the nuclear age.

HIST 1974Y. Moral Panic and Politics of Fear.
What are the political uses and content of fear? This course traces the politics of panic as a window onto state, stigma, and society by pairing foundational readings in culture studies with historical monographs grounded in case studies. Over the course of the semester, we will consider such themes as: the mobilization of fear as a strategy of governance; sexuality, sickness, and disgust; the political logic of backlash; racial terror and colonialism; paranoia and conspiracy theories; popular culture and elite repression and appropriation; and the supernatural infection of fear politics.

This seminar introduces students to the study of Portugal and its connections to Africa, Asia and the Americas between the fifteenth and sixteenth centuries. Rather than offering a chronological or geographic overview of the topic, we will consider the shifting meanings of "discovery" as understood by early modern individuals and historians since, and how expressions of "discovery" have reflected tensions and struggles around empire, race, gender, and other social categories of difference.

HIST 1976A. Native Histories in Latin America and North America.
From Alaska to Argentina, Native people have diverse histories. Spain, Portugal, England and France established different colonial societies; indigenous Latin Americans today have a different historical legacy than Native Americans in the United States. But the experiences of conquest, resistance and adaptation also tell a single overarching story. In colonial times, Native Americans and Europeans struggled over and shared the land. After Independence, however, the new American republics tried to destroy American Indians through war and assimilation. But in the last century Native peoples (both North and South) reasserted their identities within modern states: the "vanishing Indian" refused to vanish.

This seminar explores the history of animals and people that are no more or whose existence is threatened. To come to terms with these histories, we will study classification of species and cultures, frontiers of exploitation and appropriation, and violence against lives and ways of life. Extinction itself is also an idea: when is it just an evolutionary phenomenon and when is it a historical moment worth marking? We will consider claims about intervention for the good of humans or others. Finally, we will observe forms of mourning. Course requirements include a major independent research project.

More than other sub-fields of history, environmental history approaches non-human actors as agents in their own right. This forces a radical reconceptualization of the nature of the subject. What happens to our understanding of the past (and the stories we tell about the past) if we posit that mountains think, mosquitoes speak, and dogs dream? Drawing on Science and Technology Studies, Thing Theory, and Animal Studies, this course examines such questions by decentering the human and elevating non-human actors within narratives of interactive networks. Short written assignments build on each other to culminate in a research project in environmental history.

This seminar will explore the role of energy in shaping our past, and uses energy consumption and production as an entry into central questions in environmental history. Beginning with the regimes of wood, water, and muscle in early human history, the course moves on to explore fossil fuels, nuclear power, and alternative energy sources around the world. While attentive to issues of environmental impact, we will also examine the broader implications of energy use for social, economic, and political developments and challenges. Readings are drawn from anthropology, geography, ecology as well as history. This course presumes no previous history courses.

HIST 1976E. The Anthropocene: Climate Change as Social History.
This seminar will explore ramifications of the concept of the Anthropocene. The Anthropocene has been proposed as a new human-driven geologic age that began with the increased exploitation of fossil fuels in the late eighteenth century. Its proponents emphasize transformations through anthropogenic climate change, but we will also consider the effects of population growth, pollution, habitat destruction, and extinction. To assess the historical validity of the concept, we will discuss the impact of humans on the environment before 1800, the extent of transformation since 1800, and whether human-environmental interactions can be usefully generalized to our species as a whole.

The transition from an energy regime based on biomass and animal muscle to another based on fossil fuels is an epochal transformation whose importance is on a par with the Neolithic transition from hunter-gathering to agriculture. For most of their history, human societies relied on the sun's energy locked up in plants and animals for their livelihood. In the late eighteenth century, some societies began to transcend the limits of the established energy regime. This course examines the implications of the modern energy transition from the old energy regime to a new one based on fossil fuels around the world.

Participants in this seminar are invited to explore human and non-human relations in the global past. The history of human-animal relations is huge, so rather than attempt a general survey, we situate our discussion around selected topics. We begin with one animal, the wolf, and move through established and less-familiar historical topics, building toward our final question: how does the inclusion of animals enhance the discipline? The anthropologist Claude Lévi-Strauss said, "animals are good to think with." So is history. In this seminar we think through those things together.

HIST 1976H. Environmental History of Latin America 1492-Present.
From the development of sugar as the major slave commodity of the 18th century Caribbean to the “Water Wars” in the Bolivian highlands at the turn of the 21st century, race, labor, and imperialism in Latin America have been shaped in relation to the natural environment. This course explores the role of the environment in the colonial and modern history of Latin America. Together, we will examine how the environment shaped the processes of conquest, displacement, settlement, and trade, as well as how these processes transformed the natural environment throughout the hemisphere.

HIST 1976I. Imperialism and Environmental Change.
Empires conquer and control territory to enrich their ruling elites, often transforming the environments of these regions to make them more productive and profitable. This course will examine how empires have reorganized the landscapes of the regions they conquered from the ancient empires of Rome and China to the modern overseas empires of Europe and Japan and the informal American empire.

HIST 1976J. Earth Histories: From Creation to Countdown.
This course offers a humanistic perspective on global climate change, arguably the most pressing issue facing our species today. At the heart of this issue lies the idea that human beings have been elevated to the level of a geological force, merging geological and historical time and necessitating a critical conversation between the sciences and the humanities. To that end, we will foster a collaborative dialogue about the different "temporarilities" that inform our thinking about the earth and its history, from creation stories to the modern idea of progress. Students will also curate a group exhibition about earth histories.
HIST 1976N. Topics in the History of Economic Thought.
This reading intensive seminar exposes students to the intellectual history of capitalism via primary texts in the history of economic thought. Each semester that it is offered, we tackle a different theme through a new set of readings. Past topics include ideas about value, property, markets, labor, and inequality. We have also examined how the relationship between capitalism and other forms of production have changed over time. In the Spring of 2020, we will focus on Social Darwinism.

This course is for students interested in how ideas about what the future of human societies would look like have developed over time, and in the impact of those ideas on cultural, social and political norms. We will look carefully at examples of early modern prophecy before turning to the more recent emergence of theories of economic and social progress, plans for utopian communities, and markedly less optimistic and often dark visions of where we’re headed. We will also explore the roles capitalism, popular culture, and science have played in shaping the practices and vocabularies associated with imagining the future.

This course will provide grounding in the emerging field of critical animal studies by surveying how we know and interact with one diverse and charismatic class of animals: the Aves. Inspiring science, art, and conservation, traded as resources, kept as hunters or pets, and eaten as meat, birds provide an excellent avenue into animal studies. The diverse ways people relate to birds provides an innovative avenue into studies of social science and human existence. In addition to reading and discussion, we will also experience the many forms of birds around us through indoor and outdoor “laboratory” sessions.

HIST 1977B. Gender, Race, and Medicine in the Americas.
This seminar explores the understood and racial histories of disease and medicine in the nine and twentieth century Latin America and the United States. From the dark history of obstetrics and slavery in the Antebellum U.S. South to twentieth-century efforts to curb venereal disease in revolutionary Mexico or U.S.-occupied Puerto Rico, to debates over HIV policy in Cuba and Brazil—together we will explore how modern medicine has shaped both race and gender in the Americas. Topics we will explore include environmental health and the body; infant mortality; the medicalization of birth; and the colonial/imperial history of new reproductive technologies.

HIST 1978A. Bearer of Light, Prince of Darkness: The Devil in Premodern Christianity.
Satan. Lucifer. The Prince of this World. The personification of evil in the Abrahamic traditions has gone by many names and titles. To premodern Christians, the devil was not an abstract entity; they felt the real presence of Satan and his demonic army all around them. This course explores the devil as a dynamic concept evolved in accordance with cultural and political priorities. It looks at the relationship between the premodern Christian perceptions of personified evil and the Jewish and Islamic traditions. It will also look at the ways in which misogyny and racism shaped ancient and medieval demonologies.

HIST 1978C. Women Writers in Early European History.
The Middle Ages and Early Modern periods were periods during which writing was a mode for women’s self-fashioning and expression in western Europe. Women’s devotional practices in particular offered a dynamic space for education, the advancement of both Latin and vernacular literacies, and the production of often highly personal texts speaking of divine matters on the level of everyday life. We will study a diverse set of writings by women in the medieval and early modern periods, and women’s texts will be examined as historical evidence for women’s perspectives.

This seminar explores the history of French colonial Indochina (Vietnam, Cambodia, Laos) from 1858 to 1945. Challenging Euro-centric narratives of colonialism, we will critically analyze the colonial encounter as complex exchanges, geographically diverse, and socially uneven. Rather than posit colonialism as an external agent of change, this seminar dedicates attention to local agency, and social and cultural transformations. Key historical and theoretical debates addressed include the mechanisms of the colonial state, production and legacies of colonial knowledge, construction of modernity and civilization, development of civil societies, transformations of religious communities, and articulations of identities around gender, class, revolution, and nation.

HIST 1978E. Nationalism and the Nation in Modern Europe.
In the twenty-first century, it seems like nationalism might be a thing of the past. Yet the resurgence of far-right populist movements in the West and even distinctly national responses to the Covid-19 Pandemic has demonstrated the resilience of nationalism and the nation. Why is the idea of the nation so enduring? This course explores the development of nationalism and the emergence and consolidation of nation-states in modern Europe. Through case studies, scholarly and popular articles, and short works of theory on nationalism, students will gain an understanding of the origins of nationalism and European nation-states and their historical trajectory until the present day.

This course examines the varieties of Indian and African enslavement in the Atlantic world, including North America, up through 1800. Reading widely in the recent literature in the field as well as in primary sources from the colonial period, we will ponder the origins, practices, meanings, and varieties of enslavement, along with critiques and points of resistance by enslaved peoples and Europeans. Special emphasis will be given to the lived nature of enslavement, and the activity of Indians and Africans to navigate and resist these harsh realities. A final project or paper is required. Enrollment limited to 20.

HIST 1979A. Women’s Work: Gender and Capitalism in American History.
This course examines the importance of women and gender to the long economic history of the United States. Whereas the history of American capitalism has often been a primarily male story, this course moves women from the margins of the narrative to the center. It asks how female labor (paid and unpaid), cultural norms around gender and family, and issues of sex and reproduction have fundamentally shaped economic life—not just for women, but for all Americans. Students will gain insight into American women’s history, the history of capitalism, and the intersectional history of gender, sexuality, race, and class.

What was it like to live a “regular” life in the American colonies of Spain and Portugal? How did people eat, dress, have fun, start and sustain families, pursue careers, and think about the world and themselves? Drawing upon a range of sources, this course considers how global and local forces intersected in the individual or community in myriad, yet historically contingent, ways. This micro focus provides another window of considering the broad historical forces at work in the colonies, such as religion, gender, politics, race, technology, and geography, from the “inside-out” perspective of individual and communal accounts and stories.

HIST 1979C. Putin, Stalin and “Friends”: Understanding Eurasia Today through its History and Personalities.
This course uses the past to understand the present in Russia and its neighboring states. Each week we will use a “friend” (a person drawn from current events) as a window into events past and present. We will read a few contemporary articles about these notables alongside historical works that give us the necessary background to explore key aspects of their story. In the middle of the semester, you will choose a topic or theme and execute an independent research project using contemporary and historical sources. Topics explored include gender, political activism, terrorism, immigration and battles to control the past.
HIST 1979D. Ruined History: Visual and Material Culture in South Asia
What does art, architecture and material culture reveal about South Asia’s history? This course explores the significance of images, objects, architecture and other forms of material and visual culture to South Asian societies as well as their transformation during the 19th and 20th centuries under pressure from British colonial rule. We will consider how shifts in the meanings of architectural sites (like temples), images and material objects under colonial rule animated political and religious conflict in South Asia between 1880 and 1947. Topics include nationalist cartography; Hindu-Muslim violence around temples and mosques; public performance and anti-colonial activism.

HIST 1979E. Wise Latinas: Women, Gender, and Biography in Latinx History
Last summer the Brown community reflected on Supreme Court Justice Sonia Sotomayor’s autobiography that documents how her experience as a Bronx-raised Puerto Rican and “wise Latina” shaped her illustrious legal career. This course will provide historical context for reading Latinx biographies and locate them within a broader history of women, gender, and sexuality in Latinx histories of the United States. We will examine life histories, oral histories, and biographies. Units will explore the histories of Mexican Americans, Puerto Ricans, Cubans, Dominicans, and Central Americans, paying close attention to race and gender and highlighting struggles for social justice.

HIST 1979F. Sex, Gender, Empire.
Despite brutal violence at their core, European empires were imagined as families consisting of European colonials and their “native” subjects. We’ll position sex, gender, family at the heart of the imperial enterprise, examining how boundaries of imperial territory were imagined in terms of a shared household. What a family was and who was part of it became a source of imperial debate which intersected with anxieties around racial mixing and sexuality. In turn, diverse formations of imperial families shaped questions of sex and gender in Europe pursuing this global history of inter-cultural relationships that continue to shape our present day.

HIST 1979G. The Unwinding: A History of the 1990s.
This course will carefully consider the history of a recent decade -- the 1990s. We will reflect on grand historical narratives -- the end of the Cold War, the two-term presidency of a centrist Democrat, and the large challenges faced by the United States at home and abroad. But we will also explore less conventional topics, including the effects of new technology, and the ways in which new media and new tactics reshaped a political consensus that had endured for decades. Finally, we will consider the decade’s rich cultural expression, including its music, film, literature and journalism.

HIST 1979H. Prostitutes, Mothers, + Midwives: Women in Pre-modern Europe and North America.
Today’s society often contrasts stay-at-home moms with working women. How did women in Europe and North America navigate the domestic and public sphere from the late medieval period to the start of the twentieth century? How did gender affect occupational identity? Were women excluded from the professional class? This seminar investigates gender in the workplace, looks at gender-specific employment, and considers how families functioned. Readings include passages from classical, religious, and medical texts as an introduction to medieval gender roles. Students will explore texts, images, and film to understand pre-modern work and the women who did it.

This course explores London’s emergence as a major European capital in the eighteenth century, its international pre-eminence in the nineteenth, its experiences of war in the twentieth century and its encounters with immigration, social change and urban discontent in the postwar period. We will focus on themes in the social and cultural life of London, including popular culture, poverty, urban space, crime, and street life. We will discuss how scholars have approached these histories and use contemporary sources—visual and material culture, court records, newspaper accounts, and literature—to explore the lives of Londoners of the past.

HIST 1979K. The Indian Ocean World.
Oceans cover two-thirds of the surface of the earth. They are the world’s great connectors. Rather than political boundaries of empire and nation-state, this course focuses on an enduring geography of water as the central shaper of history. Drawing together the history of three continents this course explores the Indian Ocean world as a major arena of political, economic and cultural contact during the nineteenth and twentieth centuries. As we map the contours of this history we study how race, gender and sexuality were shaped across the Indian Ocean. Major topics include Islam, imperialism, indentured labor migration, liberalism and anti-colonialism. HISTGlobal

HIST 1979L. Urban History of Latin America.
Latin America is the world’s most urbanized region. 80 percent of Latin Americans live in cities, and iconic cities such as São Paulo and Mexico City are among the world’s largest conurbations. The city has long played a key role in the region’s history, serving as nodes of imperial power, as religious centers, and as markets from pre-Columbian to colonial times. The 20th century witnessed both the achievement and failure of modernization, as cities industrialized rapidly but grew haphazardly, struggling with poverty and pollution. Today, Latin American cities are multifaceted spaces where both real advancement and daunting problems coexist.

HIST 1979M. Piracy, Patents and Intellectual Property
Intellectual ownership is one of the most intractable problems in contemporary social and economic life. This course explores the emergence and significance of intellectual ownership in the domains of art, architecture, literature, scientific innovation, media, and law. We are particularly interested in the different social, geographic and national contexts in which regimes of intellectual ownership surfaced, and how different national agencies, individuals, and corporate formations variously construct and enforce understandings of ownership and infringement. We will also canvass contemporary enforcement and implementation mechanisms, global north versus global south wealth disparities, and the fate of intellectual property in the digital world.

HIST 1979N. American Charters.
This seminar will read deeply in thirteen seminal texts from American history. Exploring the context in which each document was written, the intentions of the author(s), the medium of publication, the way audiences experienced the document, and its reception throughout history, arguing that charter documents have assumed high importance in the United States, a nation with little precedent to build upon. From John Winthrop’s “City Upon a Hill” speech, which may never have been given, to Second Inaugural of Barack Obama, we’ll consider the ways in which ambitious writers/speakers have tried to claim authorship for the narrative of American history.

HIST 1979O. Comparative Black Power.
Fifty years ago, in 1966, Stokely Carmichael made his legendary call for “Black Power!” That call was global, marked by its diversity. How did the idea of Black Power travel? Why did it emerge when and where it did, and what were its meanings in different contexts? This course examines the manifestations of black power movements in the Caribbean and in Africa, in the United States and in India. With the 50th anniversary in mind, this course will critically explore the dreams, international dimensions, gender politics, and legacies of Black Power.

In the past several decades consumer discontent with Western medicine has prompted an unprecedented interest in other methods of healing. As the longest continuous literate tradition on the planet Chinese culture has enduring experience in healthcare provision, making it an attractive alternative to biomedicine. In this course we survey the depth and complexity of the Chinese medical tradition through the lens of indigenous techniques and their permutations in diverse locales. Proceeding from the earliest written records on oracle bones to present day ethnographies of clinical practice, we will complement close readings of canonical texts with a focus on lived experience.

HIST 1979Q. Japanese Film and Animation of the 20th Century.

Recent years have seen an explosion of worldwide interest in Japanese popular media, including manga (comics), anime (animation), and films. Yet Japan’s current success in exporting films/anime abroad is by no means just a recent phenomenon. We will explore Japanese live action film/animation from its origins through turn of 21st century. Students will learn to read films as narrative texts, and critiquing them on multiple levels. In the process, we will attempt to seek out what about Japanese cinematic art has caught the attention of Western critics, keeping our eyes on questions of identity and responses to historical events.

HIST 1979R. Scientific Controversies from Creationism to Climate Change.

This course examines scientific controversies from the mid-nineteenth century to the present. Topics will include evolution, telepathy, eugenics, lobotomy, recovered memories, vaccination, cloning, and global warming. We will study what these controversies tell us about the shifting relationship between science and society, how changes in scientific paradigms occur, why some controversies resolve, and why others persist, even in the face of long-standing scientific consensus. Students will learn to see science not as a progressive series of discoveries in the eternal pursuit of truth, but as an often messy historical process fully embedded in the politics and culture of its time.

HIST 1979S. History of Life Itself: Biopolitics in Modern Europe.

Life has long existed, but also has a history of its own. With the development of the natural sciences and state governance of its own populations, human life can be said to have entered into history. Homo Sapiens became the subject of medical science, political philosophy, and state law. In looking at the intersecting histories of science, politics, and theories of life, this seminar will examine the origins and effects of political economy, biology, public health, racism, eugenics, state violence, and ultimately democracy. We will read meta-histories from theorists, case studies from historians, and classic works of political philosophy.

HIST 1979T. Modernism and Its Critics.

This course explores how European writers interpreted modern art and manners between 1850 and 1940. As a crucial figure in emerging modern world, the cultural critic aimed to explain the meaning of style for society. Consequently, cultural critics created rich primary resources for understanding politics, beliefs, and everyday life activities. We will especially focus on anxiety about modern life expressed in controversies over avant garde movements from impressionists to expressionists, realists to the surrealists. We will cover issues like hysteria, men’s fashion, music, vacations, sexuality, and advertising. In addition to lesser known figures, selected readings include Baudelaire, Nietzsche, Benjamin, Kafka.

This course explores the intersections between American business and American Empire during the twentieth century. From the United Fruit Company in Latin America to the arms manufacturers at Lockheed Martin, the interests of capital have shaped U.S. foreign relations. As students race this history across the twentieth century, they will learn how the rise of American business to global preeminence depended upon a supportive, interventionist government. This course will appeal to history, IR, and Economics concentrators among others.

HIST 1979V. Technologies of the Soul: The History of Healing.

Movements that sought to heal society formed a distinct counterpoint to establishment science, religion and culture throughout modernity. In this course, we will examine distinctly modern, non-medical forms of healing from the late 18th until the mid twentieth centuries. This course engages cultural history and theory, science, opera and religion asking whether movements such as Mesmerism, Wagnerism, or Anthroposophy formed a hopeful expansion of the healing role of science art and religion? Or did such developments subvert established norms that provoked anxiety? Ultimately we will probe the limits of the humanities while exploring movements that have challenged such boundaries.

HIST 1979W. Debates on the Holocaust.

Few topics in Modern European History have so heavily engaged historians while producing so little consensus as the Holocaust. Several debates have emerged in scholarship around several major issues such as motivation, collaboration, ideology, as well as larger questions about genocide itself. In this course, we will examine each debate and the links to specific methods within history such as periodization, causality and disciplinary boundaries. This course presents a unique entry to gain exposure to foundational historical categories and methods. Students will gain a knowledge of concepts critical to historical debate and foundation in a variety of approaches to history.

Scholars have long equated modernity with “disenchantment,” the subordination of magic and mysticism to the forces of science and secularization. Recent scholarship, however, has challenged this view, suggesting that the persistence of magical worldviews has been integral to the development of modernity itself. In this course, we will explore the various interactions, both conflicting and complementary, between science, religion, and magic in the nineteenth- and early-twentieth century United States. Topics will include spiritualism, hypnosis, phrenology, optical illusions, alternative medicines, stage magic, and the early psychology of religion. Throughout, we will interrogate the concept of modernity and the narrative of disenchantment.

This course explores the history of the major themes, problems and ideals of global peace, justice and human rights. We investigate the theoretical, social and political elements within these ideals and practices, spanning broad temporal and spatial genealogies of human thought. From biopolitics to geopolitics, we uncover attempts to demand food security, health care, and dignity as universal human rights. We highlight philosophies of peace and ethics, and unpack competing conceptions of “justice.” Among other topics, the political economy of global survival plays an important role in this perspective, especially within bioethics and environmental justice.

We'll explore varied relationships between Americans and Global South during the long 1970s—from the wave of revolutionary movements of the late 1960s to the Reagan “offensive” of 1981. As we trace these relationships across the decade, students will learn how Americans from all walks of life encountered the revolutionary “Third World.” While many on the American Left—from Black Nationalists to feminists such as Bella Abzug—sought cooperation with the revolutionary movements in the Global South, others became determined to reassert U.S. hegemony abroad following the Vietnam War. We will try to understand why this latter group’s antagonistic attitude towards the Global South ultimately came to define U.S. foreign policy.

Interested students must register for ENVS 1916.

Interested students must register for ENVS 1915.

Interested students must register for POBS 1600D.

HIST 1980P. Museum Histories (AMST 1903I).

Interested students must register for AMST 1903I.
HIST 1980R. Urban Schools in Historical Perspective (EDUC 1720). Interested students must register for EDUC 1720.

HIST 1980Y. Jews and Revolutions (JUDS 1701). Interested students must register for JUDS 1701.

HIST 1981B. Birding Communities (ENVS 1557). Interested students must register for ENVS 1557.

HIST 1981G. Intellectual Change: From Ottoman Modernization to the Turkish Republic (MES 1300). Interested students must register for MES 1300.

HIST 1981L. Status, Power and Identity in Mid-Imperial China (EAST 1305). Interested students must register for EAST 1305.

HIST 1981M. A Classical Islamic Education (COLT 1310E). Interested students must register for COLT 1310E.

HIST 1981N. Death in the West (CLAS 1420). Interested students must register for CLAS 1420.

HIST 1990. Undergraduate Reading Courses. Guided reading on selected topics. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIST 1992. History Honors Workshop for Prospective Thesis Writers. Prospective honors students are encouraged to enroll in HIST 1992 during semesters 5 or 6. HIST 1992 offers a consideration of historical methodology and techniques of writing and research with the goal of preparing to write a senior thesis in history. The course helps students refine research skills, define a project, and prepare a thesis prospectus, which is required for admission to honors. Students who complete honors may count HIST 1992 as a concentration requirement. Limited to juniors who qualify for the honors program.

HIST 1993. History Honors Workshop for Thesis Writers, Part I. All students admitted to the History Honors Program must enroll in HIST 1993 for two semesters of thesis research and writing. They may enroll in the course during semesters 6 and 7, or 7 and 8. Course work entails researching, organizing, writing a history honors thesis. Presentation of work and critique of peers' work required. Limited to seniors and juniors who have been admitted to History Honors Program. HIST 1993 is a mandatory S/NC course. See History Concentration Honors Requirements.

HIST 1994. History Honors Workshop for Thesis Writers, Part II. This is the second half of a year-long course, upon completion the grade will revert to HIST 1993. Prerequisite: HIST 1993.

HIST 2050. Proseminar in Late Medieval History. Macrohistory/Microhistory. A comparison of two different approaches to the study of the past, especially of late medieval and early modern Europe, focusing on the works of Fernand Braudel and Carlo Ginzburg.

HIST 2080. Seminar in European Social History in the Eighteenth and Nineteenth Centuries. Methods of analysis for current topics in social, economic, demographic, family, and gender history. Depending on sources available, papers may be on Italian topics of the 16th-19th centuries, or on French or English topics of the 18th-19th centuries. Language requirement depends on area of specialization.

HIST 2090. Proseminar on European Social History in the Eighteenth and Nineteenth Centuries. Selected readings on changes of social life in European cities in the period of transition from the preindustrial to the industrial economy. Primary focus is on developments in France, England, and Italy. Language requirement depends on area of specialization.

HIST 2450. Exchange Scholar Program.

HIST 2890. Preliminary Examination Preparation. For graduate students who have met the tuition requirement and are paying the registration fee to continue active enrollment while preparing for a preliminary examination.

HIST 2910. Reading and Research. Section numbers vary by instructor. Please see check Banner for the correct section number and CRN to use when registering for this course.

HIST 2930. Colloquium. “The Theory and Practice of History” encourages critical thinking about some of the different ways in which historians approach thinking and writing about the past. In particular, we will explore some of the major theoretical stances that have influenced the discipline of history. Our focus throughout will be on Italian topics of the 16th-19th centuries, or on French or English topics of the 18th-19th centuries. Language requirement depends on area of specialization.

HIST 2935. Historical Crossings. “Historical crossings” is a rough translation of histoire croisée, referring to global configurations of events and a shared history, rather than to a traditional comparative history. This Seminar is designed to be the cornerstone of the M.A. program. It will not serve as a traditional historical methods course but instead focus on training students to read and think on various scales of historical analysis—from cross-cultural and trans-geographic to the granularity of social and cultural specificity, requiring students to think both globally and locally and introducing them to an advanced level of historical inquiry, debate, and exploration.

HIST 2940. Writing Workshop. Required of all 3rd semester Ph.D. students.

HIST 2950. Professionalization Seminar. This graduate seminar is about the professional skills, tools, and careers of historians—from hallmark best practices to new directions. We will engage different kinds of careers historians are pursuing today, the practical skills and resources necessary to meet them, and how historians are deploying those skills in multiple professional arenas, both in and beyond the academy. We shall also discuss some of the prevalent (although often unwritten) social and cultural norms of academia and university life to prepare you to navigate your training, career, and various institutional contexts that accompany and follow completion of a Ph.D. in History.

HIST 2960. Prospectus Development Seminar. This collaborative seminar focuses on identifying and contextualizing a dissertation topic; choosing a dissertation committee and a support network; designing and executing plans for research and writing; and articulating a thesis project as a prospectus, grant proposal, and other oral and written forms. This is a required course for and open only to third-year students in the History Ph.D. program.
HIST 2970A. New Perspectives on Medieval History.
Over the past several decades, the field of medieval history has been reshaped radically. New approaches have changed the ways that medievalists think about old subjects. Our understanding of medieval society itself has expanded as previously marginal or unexplored subjects have become central to medievalists’ concern. This seminar explores how the ways in which medieval historians practice their craft have altered in response to these developments. Readings in classic older works are juxtaposed with newer ones on their way to becoming classics themselves.

HIST 2970B. Race, Ethnicity and Identity in the Atlantic World.
Explores question of identity in Atlantic world from sixteenth to nineteenth century, focusing on three types of identity: 1) ethnicity; 2) race; 3) nationality. How are such identities created and maintained? Are they “natural” or “artificial”? How do they change over time, and why? Throughout the seminar, we’ll consider both internal/external boundaries, how social actors - particularly subalterns - see themselves and how they are imagined by outsiders. Finally, we will examine how identity is expressed in a wide variety of media - codices, paintings, maps, oral histories, diaries, etc. - and how scholars make use of such sources.

HIST 2970C. Rethinking the Civil Rights Movement.
This graduate course encourages a rethinking of the complex components, arguments and activities that have characterized what we have come to know as the Civil Rights Movement, concentrating primarily on African American agency, actions and politics, through careful reading of recent scholarship in the field. While knowledge of U.S. history is preferred, this course asks larger thematic questions about protest movements (the role of the state, relationships with and between oppressed groups and organizations, and periodization), that will interest non-Americanists also. Some of the topics covered include: gender, organizing and strategies, the local, global ramifications and interactions, organizational structures and politics, and the recent concept of the Long Civil Rights Movement. M

HIST 2970D. Modernity and Everyday Culture - Reading.
No description available.

HIST 2970E. Early Modern Continental Europe - Reading.
This course is designed to introduce graduate students to some major topics and debates in early modern European history, as well as a range of geographical, methodological, and historiographical perspectives. Readings combine recent works and classics to give a sense both of where the field has been and where it is going. Topics covered include political history, religious interactions (among Christians and between Christians, Jews and Muslims), urban history, the history of the book, Atlantic history, the history of science, and the Enlightenment. The class also provides the opportunity to explore a single topic of choice in greater depth.

HIST 2970F. Problems in Modern Jewish History - Reading.
This course examines significant issues in the history and historiography of modern European Jewry from the mid-18th century to WWII. It is divided into four units each of which considers a thematic question that has been of interest to European Jewish historians, including: emancipation, political history, religious interactions (among Christians and between Christians, Jews and Muslims), urban history, the history of the book, Atlantic history, the history of science, and the Enlightenment. The class also provides the opportunity to explore a single topic of choice in greater depth.

HIST 2970G. Early Modern European Empires.
This course addresses both the history and historiography of the most relevant European imperial experiences in Africa, Asia and America c. 1400-1800. It will focus on the structure and dynamics of the Iberian case(s), as well as in the profile of the so-called Second European expansion led by the Dutch, the English and a number of other (minor) European examples. Particular emphasis will be given to the relations between these imperial bodies and other (non-European) Empires, by focusing on cross-cultural contacts and conflicts, hybrid societies and images. Restricted to juniors, seniors, and graduate students only. P

HIST 2970H. Special Topics Seminar: American Political History.
This graduate seminar will explore a range of approaches to the study of America’s political past from the colonial period to the late twentieth century, including scholarship on electoral politics, the state, political culture, grassroots politics and resistance, the politics of gender and family, and American political development. We will analyze how scholars have defined and redefined the field over time and throughout we will interrogate the question, “what is political history?”

HIST 2970I. Methodologies of the Ancient World.
No description available. Open to graduate students only.

HIST 2970J. Early Modern British History-Reading.
No description available.

HIST 2970K. Race and U.S. Empire.
No description available.

HIST 2970L. Readings in East Asian History.
This seminar reviews recent and classic works in the flourishing historiography of East Asia and related fields, with attention to underlying research methodologies. We will pay attention to developments in transnational and global history as well as to “the local turn”, and explore where methods and questions in the histories of different parts of East Asia and neighboring regions intersect and where they don’t. Graduate students from all backgrounds are welcome; please contact the instructor before registering so that your area of interest can be reflected in the topics on the syllabus.

HIST 2970M. Modern Latin American History - Reading.
No description available.

HIST 2970N. Nineteenth and Twentieth Century American History - Reading.
No description available.

HIST 2970O. Core Readings in 20th Century United States History. Major topics and themes in 20th-century U.S. history. M

HIST 2970P. U.S. Social/Cultural History, 1877-present - Reading.
Case studies of prominent public intellectuals spanning the century from John Reed to George Willis, Mary McCarthy to Frances Fitzgerald.

HIST 2970Q. Intellectual History of Exile.
Exile, displacement, and migration have formed a key element of human experience, culminating in the current estimate of some sixty-five million displaced persons in the world today. This seminar will consider key historical and theoretical work on these issues and their sub themes such as nationality and cosmopolitanism, multilinguality, religion, borders, citizenship, climate change, and cultural identities. We will read widely across European and global literature in genres including literature, music, and philosophy, themes on nation, religion, mobility, language, migration, place, borders, and identity. The seminar will involve dialogues with transcultural scholars and initiatives, including the Exile Museum in Berlin, currently in planning stages.

HIST 2970R. History and Theory of Secularity.
No description available.

HIST 2970S. Topics in the History of Empire and Culture.
Provides an introduction to the central issues of nineteenth-century European history. It has two purposes: first, to help you refine your abilities to think historiographically; second, to assist you in preparing for your comprehensive exams. To that end, we will read both standard interpretations and newer scholarship.
HIST 2971A. Science in a Colonial Context
This graduate seminar will consider the politics of science in colonies. Subjects covered include: the relationship between science and local (indigenous) knowledges, science and the "civilizing" mission, social relations in knowledge production, science and development, racial science and subject bodies, science and nationalism. Assignments will include book review, a research essay and leading discussion.

HIST 2971B. Topics in Twentieth Century Europe.
This course will introduce graduate students to current scholarship on major issues in twentieth century European history. Topics will include (but are not limited to) the causes and consequences of the two world wars; the emergence, workings, and collapse of authoritarian societies; the spread of mass culture and consumerism; Americanization; de-colonization; the European Union, and the collapse of the bi-polar political system. In the interest of introducing students to the significant historiographical debates of the field, they will read both standard historical interpretations and newer scholarship.

HIST 2971C. Readings in American History.
Topics in American social and cultural history in the nineteenth and twentieth centuries.

HIST 2971D. Passion, Dispassion, and the Scholar.
What role should passion and the imagination play in intellectual endeavor? Is the dispassionate, objective, and objectifying voice the only appropriate one in the arena of scholarship? How much can or should the scholar let his or her personality and personal investment in a subject appear on the page? The seminar will explore these and related questions by examining non-traditional modes of scholarly writing (primarily but not exclusively drawing on historians and anthropologists). This is not a seminar about theory and method, although such issues will inevitably be part of our discussions. It is a seminar about writing and scholarly voice.

HIST 2971E. Latin American Historiography.
This course examines the development of historical writings on Latin America produced in the United States from the late nineteenth century until the present. We will focus on themes, such as race, gender, labor, subaltern studies, dependency theory, postcolonial analysis, and post-modernism, to understand the diverse approaches to Latin American history.

HIST 2971F. Gender & Knowledge in Early Modern Europe.

HIST 2971G. Notions of Public & Private in Late Modern Europe.

HIST 2971H. Politics and Society in the 20th Century.

HIST 2971I. New Perspectives on Medieval History.
Over the past several decades, the field of medieval history has been reshaped radically. New approaches have changed the ways in which medievalists think about old subjects. Our understanding of medieval society itself has expanded as previously marginalized or unexplored subjects have become central to medievalists' concerns. This seminar explores the ways in which medievalist historians have altered how they practice their craft in response to these developments. Readings in classic older works are juxtaposed with newer ones on the way to becoming classics themselves.

This state-of-the-field course will introduce students to nineteenth-century U.S. history, with specific attention to how recent transnational, imperial, institutional, and cultural approaches have reframed older debates over the "Age of Jackson," "Manifest Destiny," and the "Market Revolution." This seminar offers core readings for students preparing a comprehensive exam field, while providing others with content knowledge to teach this period of American history.

HIST 2971L. Borderlands: Violence and Coexistence.
Readings of theoretical and empirical studies in interstate and inter-ethnic relations in borderland regions throughout the world, with an emphasis on the modern period in East-Central. Open to graduate students only.

HIST 2971M. History of Medicine.
The history of medicine is a topic that can shed light on any period and place, since all aspects of human life are intertwined parts of the story: ideas, religion, culture, material life, economy, politics, social organization and legal institutions, etc. This reading course is meant to introduce graduate students to the main subjects debated in the field, so that by the end of the semester you will be able to read in the literature and to take up any related archival trail with confidence. Open to graduate students only.

HIST 2971N. Critical Perspectives on Public and Private.
No description available.

HIST 2971O. Graduate Preliminary Readings.
No description available.

HIST 2971P. Diaspora, Displacement, Transnationalism.
This course will introduce graduate students to current scholarship on these three transhistorical terms that capture the global phenomenon of human mobility across time and space, from antiquity to the present day. Related concepts include migration, emigration and immigration; exile, expulsions, repatriation and deteriorialization. The class will examine a few exemplary case studies, and share their findings with each other by circulating papers online followed by discussion and critique in class.

HIST 2971Q. Approaches to Middle East History.
This course is a rare opportunity that brings together graduate students from Harvard University and Brown University who are interested in the historiography of Middle East, Ottoman, and Islamic studies. Co-taught by Cemal Kafadar (Harvard) and Beshara Doumani (Brown), the meetings will alternate between Cambridge and Providence. The course covers the early modern and modern periods and considers a wide range of canonical and recent scholarship. Special attention will be paid to social and cultural histories that draw on materialist and discursive approaches and that engage larger debates in other disciplines.

HIST 2971R. Colonial Latin America.
This seminar focuses on the historiography of colonial Latin America since the 1960s. Topics include the explosive growth of indigenous-language sources for Mesoamerican history, the histories of childhood and sexuality, the spatial turn and GIS, connections between Latin America and Asia, and the impact of anthropology's ontological turn on environmental history and the history of animals. Requirements include short essays and a literature review.

Forced population displacements have long been an engine for the formation of both the modern world and knowledge regimes about that world. Through the frames of racial capitalism, settler colonial and indigenous studies, and environmental justice scholarship, this course explores the histories, ecologies, and subjectivities of displacement from the 15th century to the present. It also interrogates the epistemological erasures that render certain forms of displacement invisible. Students will lead classes on specific themes and case studies that match their interests.

HIST 2971T. Graduate Readings in Atlantic World.
This course is a wide-ranging readings course in the field of Atlantic World History. Readings will consider the full range of empires and peoples of the wider Atlantic basin, including Africans, Native Americans, and Europeans, in the period spanning the fifteenth and nineteenth centuries. Special attention will be given to wider oceanic and global trends in the field, including its relationship to historiographies on Colonial Latin America, the African Diaspora, and Early America. All graduate students welcome.
HIST 2980B. Legal History.
An introduction for graduate students to the significance and methods of legal history, broadly defined. Students will engage with works in legal history from a variety of time periods and geographical areas, and they will be guided to sources related to their specific research interests. A major research essay will be required that draws from the models of legal history given and is based on original research into legal sources. E

HIST 2980C. Race, Ethnicity and Identity in Atlantic World.
This seminar examines the meaning of racial and ethnic identity in colonial Latin America. Our primary approach will be historiographical; we will begin with colonial concepts of racial hierarchy, then move on to national ideologies of mestizaje and indigenismo, the emergence of "race mixture" as a scholarly topic, the "caste vs. class" debate of the 1970s and 1980s, and finally recent works on the African diaspora.

HIST 2980D. Topics in Violence in Modern Europe: Interethnic Relations and Violence in Eastern Europe.
This seminar will examine recent studies on interethnic coexistence, violence, and genocide in East-Central and Eastern Europe in the 20th century. Readings will range from works on definitions of ethnicity and the making of nations to studies of communities and interpersonal relations. We will also read and listen to testimonies and analyze contemporary documents.

HIST 2980E. Social History in Early Modern England - Research.
Readings on select topics in early modern English social history. Topics include: marriage formation, crime, social unrest, gender issues, and popular culture. Open to graduate students and advanced undergraduates.

HIST 2980F. Modern British History - Research.
No description available.

HIST 2980G. Topics in Violence in Modern Europe - Research.
No description available.

HIST 2980H. Early American History - Research.
Research seminar.

HIST 2980I. Problems in American Social History - Research.
An advanced examination of the issues and methodology of American urban and social history plus primary research in specific topics.

HIST 2980J. U.S. Women's/Gender History - Research.
Focus is 20th-century history. Open only to graduate students.

HIST 2980K. Passion, Dispassion, and the Scholar.
What role should passion play in intellectual endeavor? Should the scholar's personal involvement in a subject appear on the page? What is the value of the dispassionate voice as opposed to a narrative voice of immediacy? The seminar explores such issues in modes of scholarly writing (primarily but not exclusively historical and anthropological). Although questions of theory and method inevitably arise, this is a seminar about scholarly voice.

HIST 2980L. Research and Pedagogy.
This research seminar is geared to help graduate students think about the ways in which they can incorporate their own research into the courses they will teach. The final product for the seminar is a primary source unit and an accompanying essay that can conceivably serve as a "teacher's guide." All fields and periods welcome. E

No description available.

HIST 2980N. Gender and Knowledge.
No description available.

HIST 2980P. Theory of Everyday Life.
What do we mean by the "everyday" and how can we study it in the social sciences and represent it in the arts? We will focus on attempts to answer this question both on the theoretical and the empirical levels. Readings will include philosophers of everyday life and examples of recent scholarship in "everyday life studies" that have revolutionized the study of leisure, entertainment, national identity, decolonization and gender.

HIST 2980Q. Seminar in Early Modern British History.
No description available.

HIST 2980R. Cultures of Empire.
The goal of this course is to research and produce a piece of original historical scholarship, drawing on methodologies developed during the cultural turn in the study of empires. Early semester readings approach empires (Marxian, Subaltern Studies, Cultural Studies, etc.) and various locations: British India, Japanese Manchuria, and Netherlands Indies, among others. The course then evolves into a history writing workshop for the rest of the semester, paying attention also to historical writing, including style, form, and narrative strategies. Relevant to historical inquiry into cross-cultural encounters in any time period.

HIST 2980S. Hannah Arendt and Her World.
This seminar will explore key concerns and paradigms in 20th-century intellectual history via a critical consideration of the thinking of Hannah Arendt (1906-75). In recent years, Arendt's work has earned renewed attention for its multidisciplinary, multicontinental importance as well as for its uncanny currency to the present political and academic moment. Her thinking is thus in many ways "migratory thinking." Migratory thinking involves first the diaspora and exchange of thinkers, most specifically through political exile and emigration during the Nazi period and after. It thus involves both the experience and theorization of "worldliness": the Enlightenment value that remains a key principle for Arendt, with special reference to Lessing. Migratory thinking also involves diverse movement among disciplines and cultures, for example from German philosophy to American political theory/science, and the complications of intellectual and cultural subjectivity of émigré as well as German Jewish thinking. Finally, the history and historical contingency that support this style of thinking emphasize the drive to thinking, responsibility, and judgment at a moment of danger. Readings and seminar discussions will focus on Arendt's work, read in dialogue with the work of thinkers with whom she was in dialogue (Benjamin, Broch, Heidegger, Scholem) and with the later work of thinkers whose own subject positions might be considered comparable with the concerns in the paragraph above (G. Rose, S. Neiman, S. Aschheim, J. Derrida et al.). Themes will include cosmopolitanism, nationalism, and totalitarianism, the global politics of race, capitalism, and exchange, religious/secular tensions, and the relations of society and politics to art and the imagination.

HIST 2980T. Minorities, Citizenship and Nation.
No description available.

HIST 2980U. Power, Culture, Knowledge.
"Truth isn't outside power, or lacking in power... [t]ruth is a thing of this world," wrote Michel Foucault in the mid 1970s. In this course we will read and examine Foucault's seminal works on knowledge and power, and the kinds of scholarship it has engendered at the intersections of history, art history, anthropology, political science and social theory. In addition to Foucault's major interlocutor, Edward Said, we will read Antonio Gramsci, Orientalism, and colonialism in the New World, among others. The course then evolves into a history writing workshop for the rest of the semester, paying attention also to historical writing, including style, form, and narrative strategies. Relevant to historical inquiry into cross-cultural encounters in any time period.

HIST 2980V. Early Modern Empires.
This seminar will explore various approaches to understanding the rise, expansion, and contraction of empires in the early modern period (ca. 1500-1800). Students will be required to write a major research essay based on primary sources.

HIST 2980W. First Person History in Times of Crisis: Witnessing, Memory, Fiction.
This seminar examines the relationship between History as a narrative of events and history as individual experience. Postulating that historical events as related by historians were experienced in numerous different ways by their protagonists, the seminar focuses on the complementary and contradictory aspects of this often fraught relationship at times of crisis, especially in war and genocide. While much time will be spent on World War II and the Holocaust, the seminar will engage with other modern wars and genocides across the world. Materials will include eyewitness reports, postwar testimonies and trial records, memoirs and relevant works of fiction. Open to graduate students only. M
HIST 2980X. History of Capitalism, 1500 to the Present.
This seminar seeks the history of capitalism at the intersection of economic history, business history, labor history, political economy, and the history of economic thought. This course does not presume that capitalism is a function of timeless human nature nor the inevitable product of market forces. Instead, the course contends that capitalism is a historically-specific and contingent system of organizing economic life, and must therefore be studied as embedded in politics, culture, and institutions. The course will run from the period of early modern global integration and the Atlantic Slave Trade through the recent era of deindustrialization and finance capitalism. Enrollment limited to 20 graduate students.

HIST 2981C. The Frontiers of Empire.
This class will look at interactions along and across imperial frontier zones throughout the world, with an emphasis on the pre-modern and early modern period. Readings will be both theoretical and empirical in nature, and will focus on themes including the conceptualization of space; practices and consequences of warfare, captive-taking, and slavery; identity- and secondary state-formation; economy and society; diplomacy and the negotiation of claims to authority.

HIST 2981D. Histories of Sexualities.
What does it mean to write a history of sexualities? Examining how scholars have grappled with this question in a broad range of temporal and geographic contexts, we will consider multiple forms of past sexualities, as well as their intersections with the law, race, empire, religion, medicine, and culture; sex work/commerce; pleasure and desire; consent and power; and relationships between histories of sexualities and histories of gender, sex, and the body. Finally, we will reflect on how the changing terrain of gender and sexual identities today (e.g. queer, trans) shapes the questions scholars ask and whose stories get told.

HIST 2981E. Environmental History.
A topical seminar with global and chronologically broad scope, "Environmental History" surveys classic works and recent writing on explicitly environmental themes such as agriculture, conservation, energy, and anthropogenic change. Equally, it considers environmental treatments of major topics in other sub-fields such as war, science, imperialism, the body and senses, and animals. In examining this broad range of topics, we will seek what is distinctive about environmental history and how environmental considerations can enhance the students' own research.

HIST 2981F. The Politics of Knowledge.
The seminar offers an introduction to fundamental theoretical texts and exemplary works in the interdisciplinary field of Science and Technology Studies. Readings will be drawn from a range of time periods and geographical areas, and students will be asked to deploy the theoretical insights of our readings in working with sources in their own fields for a final research paper. Topics include: the gendered dimensions of knowledge, the moral economy of science, claims to expertise, and the stakes of "objectivity."

HIST 2981L. Theory From The South.
The "global south" is a working category today for a diversity of intellectual projects centered on the non-European postcolonial world. While this category is embedded in histories of empire and culture, critical thinking since the 1970s has already done much to "provincialize Europe" and interrogate the ways in which power and knowledge have been imbricated in the making of universal claims, institutional processes and historical self-understanding. This graduate seminar will draw upon lineages of anti-colonial thought and postcolonial critique to relocate and rethink the "south" as a generative source for theory and history.

HIST 2981J. The Body.
This seminar will consider theories of the body as a site of knowledge, politics, culture, gender, and identification in a broad range of temporal and geographic contexts. We will also examine how historians have written the history of the body, and what sources they have used to do so.
fields. We also maintain a longstanding commitment to museum studies and the study of objects through a close working relationship with the Museum of the Rhode Island School of Design. Interested students in this department have the opportunity to hold internships and (in the case of graduate students) proctorships at the museum.

For additional information, please visit the department's website: http://www.brown.edu/academics/art-history/

### Architecture Concentration Requirements

The Architecture concentration introduces students to a broad understanding of concepts and methods for the planning and design of buildings and urban environments. It connects architectural education firmly to the humanities and provides a greater awareness of historical, global, environmental, social and economic issues in the built environment. This approach to the education of architects and urban planners aims to provide them with the tools needed in today’s fractured urban society. Apart from training careful observation, critical analysis and problem solving, students will acquire skills in sketching, drafting, model-making, and digital rendering. By combining a carefully selected range of classes in architectural design, the humanities, engineering and technology, and urban life and theory, students will acquire necessary proficiencies for pursuing a graduate degree in architecture after Brown.

4 History of Art and Architecture lecture courses bearing the A designation are required to engage at least two different geographic regions (Africa, Americas, Asia, Europe) and two different periods (Ancient-Medieval, Early Modern, Modern-Contemporary). Individual courses can be used to fulfill either the geographic or temporal breadth requirement, but not both. Courses tagged as “Multiple Regions” and “Multiple Periods” can be used to fulfill one geographic and one temporal breadth requirement, respectively.

#### Temporal Periods:

**Ancient/Medieval:**
- HIAA 0022 The Art of Enlightenment
- HIAA 0032 Art and Architecture of the Roman Empire
- HIAA 0322 The Arts of Religion and Ritual in the Ancient World

**Early Modern:**
- HIAA 0062 Dutch and Flemish Art: Visual Culture of the Netherlands in the Seventeenth Century
- HIAA 0550 Gold, Wool and Stone: Painters and Bankers in Renaissance Tuscany
- HIAA 0560 Constructing the Eternal City: Popes and Pilgrims in Early Modern Rome

**Modern/Contemporary:**
- HIAA 0070 Introduction to American Art: The 19th Century
- HIAA 0072 Introduction to American Art: The Twentieth Century
- HIAA 0075 Introduction to the History of Art: Modern Photography
- HIAA 0077 Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art
- HIAA 0084 Postwar to Postmodernism: Art Since 1945
- HIAA 0087 Contemporary Art
- HIAA 0089 Contemporary Photography
- HIAA 0090 The Other History of Modern Architecture
- HIAA 0820 Art and Technology from Futurism to Hacktivism
- HIAA 0850 Modern Architecture
- HIAA 0860 Contemporary Architecture
- HIAA 0861 City and Cinema

**Multiple Periods:**
- HIAA 0100 A Global History of Art and Architecture
- HIAA 0023 South Asian Art and Architecture
- HIAA 0041 The Architectures of Islam
- HIAA 0081 Architecture of the House Through Space and Time
- HIAA 0420 Cathedrals and Castles
- HIAA 0770 Architecture and Urbanism of Africa

#### Geographic Regions:

**Africa:**
- HIAA 0070 Architecture and Urbanism of Africa

**Americas:**
- HIAA 0070 Introduction to American Art: The 19th Century

**Europe:**
- HIAA 0075 Introduction to the History of Art: Modern Photography
- HIAA 0077 Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art
- HIAA 0550 Gold, Wool and Stone: Painters and Bankers in Renaissance Tuscany
- HIAA 0560 Constructing the Eternal City: Popes and Pilgrims in Early Modern Rome
- HIAA 0630 Cultural History of the Netherlands in a Golden Age and a Global Age
- HIAA 0660 Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution

**Multiple Regions:**
- HIAA 0010 A Global History of Art and Architecture
- HIAA 0041 The Architectures of Islam

1 Pathway Elective in Sciences 2
1 Pathway Elective in Social Sciences / Humanities 2
1 Capstone course

Self-Assessment

All concentrators are required to write an essay when they file for the concentration that lays out what they expect to gain from the course of study they propose. All second-semester seniors will be required to write a final essay that takes measure of what they have learned from the concentration, including their capstone and other experiences relating to their study of architecture. The self-assessment should be submitted through ASK with a revised list of courses actually taken at least one month prior to graduation.

Honors

During the second semester of the junior year all concentrators will be invited to apply for admission to the Honors Program in Architecture. The honors program is an opportunity for you to mobilize what you have learned to make an original research contribution to the field.

There are two pathways to honors in the Architecture concentration: thesis and project-based.

Those pursuing the thesis option research and write a historical or theoretical essay on a topic of their choice over the course of their senior year. The thesis should be no more than 35 pages in length, plus bibliography and illustrations.

Those pursuing the project option further develop a design project that they initiated in an Advanced Studio either in their junior year or in the first semester of their senior year. They devote a minimum of one additional semester further developing their project in regular consultation with a faculty advisor. (This can mean building an additional, more elaborate model, creating more renderings, refining the concept, and so forth.)

During both fall and spring semesters you will participate in the monthly meetings of the Honors cohort, in which honors students in both HIAA concentrations share their work-in-progress with each other and with the faculty member who supervises the seminar. (These monthly meetings, usually three per semester, are mandatory but do not require a course registration.) You will also enroll in your advisor’s section of HIAA 1990 (Honors Thesis) in both semesters, for thesis students, or at least one semester, for project-based honors.

Theses and projects will be due to the advisor and second reader by March 1 of the Spring semester or by November 1 of the Fall semester if you plan on graduating in December. Comments will be returned to the students for final corrections at that point. There will be a public presentation of Honors work at the end of the Spring semester.

Students wishing to pursue honors should have produced consistently excellent work and maintained a high level of achievement (i.e. a majority of “A” or “S with distinction” grades) in all concentration courses. While acceptance into the Honors program depends on the persuasiveness of the proposal as well as the number of students applying, students may refine their proposals by speaking in advance with potential advisors. No honors student may take more than four courses either semester of their senior year—with the honors seminar being considered one of the four courses. Students interested in honors who are expecting to graduate in the middle of the year should contact the concentration advisor no later than the beginning of their junior year.

History of Art and Architecture Concentration Requirements

The concentration in History of Art and Architecture (HIAA) introduces students to the history of art, architecture, and material culture. Students in HIAA explore a wide range of artistic traditions from around the world, and develop the skills necessary to analyze artworks, artifacts, and the built environment dating from the paleolithic to the contemporary.

Concentrators are encouraged to develop familiarity with the distinctive periods, regions, sub-fields, and theoretical approaches that collectively inform the discipline, while at the same time developing an individualized program. Concentrators will receive essential training in perceptual, historical, and critical analysis.

History of Art and Architecture Requirements

To complete the concentration, you will be expected to take a minimum of ten courses. Our goal in setting out these requirements is to welcome students into a lively and diverse department that also shares a cohesive and strong commitment to the field. We as a faculty want students to cultivate their special interests and also to venture into areas that may not be so familiar but that will open new and exciting possibilities for them.

Ten courses are only the minimum requirement. Beyond that students are encouraged to take courses at RISD, participate in study abroad programs, and take courses in other Brown departments. As we are a truly interdisciplinary department, you will also find that our faculty collaborates with members of other departments to teach courses that bring together the strengths of different disciplines. We encourage both experimentation and concentration.

Our general survey in history of art and architecture (HIAA 0010 (https://bulletin.brown.edu/search/?P=HIAA%200010)) is an excellent foundation for the concentration. It is not a prerequisite for taking other lecture courses but you can count it as one of the five lecture courses required for the concentration.

Since the history of art and architecture addresses issues of practice within specific historical contexts, concentrators are encouraged to take at least one studio art course. Courses in history also train students in methods and approaches that are highly relevant to the history of art and architecture. Study abroad can be a valuable enrichment of the academic work available on campus, in that it offers opportunities for first-hand knowledge of works of art and monuments as well as providing exposure to foreign languages and cultures. Study abroad should be planned in consultation with the concentration advisor in order to make sure that coursework will relate meaningfully to the concentrators program of study.

Summary of Concentration Requirements

5 Lecture Courses, numbered HIAA 0010-HIAA 0999 in at least three different geographic regions and two different periods.
3 Seminars, numbered HIAA 1000–HIAA 1931 3
1 Elective taught in the department, cross-listed courses from other departments, or courses in other departments 1
1 Capstone Course 1
Total Credits 10

5 Lecture Courses, numbered HIAA 0010–HIAA 0999. The courses should engage at least three different geographic regions (Africa, Americas, Asia, Europe) and two different periods (Ancient-Medieval, Early Modern, Modern-Contemporary). Individual courses can be used to fulfill either the geographic or temporal breadth requirement, but not both. Courses tagged as “Multiple Regions” and “Multiple Periods” can be used to fulfill one geographic and one temporal breadth requirement, respectively.

Temporal Periods

**Ancient/Medieval:**
- HIAA 0022 The Art of Enlightenment
- HIAA 0032 Art and Architecture of the Roman Empire
- HIAA 0322 The Arts of Religion and Ritual in the Ancient World

**Early Modern:**
- HIAA 0062 Dutch and Flemish Art: Visual Culture of the Netherlands in the Seventeenth Century
- HIAA 0550 Gold, Wool and Stone: Painters and Bankers in Renaissance Tuscany
- HIAA 0560 Constructing the Eternal City: Popes and Pilgrims in Early Modern Rome
- HIAA 0630 Cultural History of the Netherlands in a Golden Age and a Global Age
- HIAA 0660 Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution

**Modern/Contemporary:**
- HIAA 0070 Introduction to American Art: The 19th Century
- HIAA 0072 Introduction to American Art: The Twentieth Century
- HIAA 0075 Introduction to the History of Art: Modern Photography
- HIAA 0077 Revolutions, Illusions, Impressions: A History of Nineteenth-Century Art
- HIAA 0084 Postwar to Postmodernism: Art Since 1945
- HIAA 0087 Contemporary Art
- HIAA 0089 Contemporary Photography
- HIAA 0090 The Other History of Modern Architecture
- HIAA 0322 The Arts of Religion and Ritual in the Ancient World
- HIAA 0420 Cathedrals and Castles
- HIAA 0820 Art and Technology from Futurism to Hacktivism
- HIAA 0850 Modern Architecture
- HIAA 0860 Contemporary Architecture
- HIAA 0861 City and Cinema

Multiple Regions:
- HIAA 0010 A Global History of Art and Architecture
- HIAA 0041 The Architectures of Islam
- HIAA 0081 Architecture of the House Through Space and Time
- HIAA 0084 Postwar to Postmodernism: Art Since 1945
- HIAA 0087 Contemporary Art
- HIAA 0090 The Other History of Modern Architecture
- HIAA 0322 The Arts of Religion and Ritual in the Ancient World
- HIAA 0420 Cathedrals and Castles
- HIAA 0820 Art and Technology from Futurism to Hacktivism
- HIAA 0850 Modern Architecture
- HIAA 0860 Contemporary Architecture
- HIAA 0861 City and Cinema

Geographic Regions:
The Architecture of Solitude: The Medieval Monastery
HIAA 1440E The Body and the Senses in Medieval Art
HIAA 1440F Architectural Reuse: The Appropriation of the Past
HIAA 1550C Dreaming of Food in the Early Modern World
HIAA 1560A Italy and the Mediterranean
HIAA 1560E The Arts of Renaissance Courts
HIAA 1600A Bosch and Bruegel: Art Turns the World Upside Down
HIAA 1600B Caravaggio
HIAA 1620 Arts Between Europe and the World: 1500-1700
HIAA 1631 Authority, Identity, and Visual Culture in Colonial Latin America
HIAA 1720 The Art of Portraiture: Pre-Histories of the Selfie
HIAA 1771 Eclectic Arts in the Global 19th Century
HIAA 1810 Contemporary Art and Activism
HIAA 1811 Possible Futures: Art and the Social Network before the Internet (1950-1979)
HIAA 1820 Abstraction in Theory and Practice
HIAA 1822 Dada and Surrealism: Anarchy, Exile, Alterity
HIAA 1850G Contemporary American Urbanism: City Design and Planning, 1945-2000
HIAA 1850H Berlin: Architecture, Politics and Memory
HIAA 1850I Architectures of the Sea: Space and Place in the Maritime Cultural Landscape
HIAA 1880 Criticality and Modern Art
HIAA 1881 Architectural Replicas in the Modern and Contemporary Eras
HIAA 1882 Indigenous Art, Issues and Concepts
HIAA 1888 Exhibition as Medium
HIAA 1890G Contemporary Art of Africa and the Diaspora
HIAA 1910A Providence Architecture
HIAA 1910F City Senses: Urbanism Beyond Visual Spectacle
HIAA 1930 The History and Methods of Art Historical Interpretation
HIAA 1931 Museums, Histories, Critiques

1 Elective: This can include courses taught in the department, cross-listed courses from other departments, or courses in other departments approved by the concentration advisor. 

1 Capstone course. The Capstone is intended to challenge you with an opportunity to synthesize at a high level of achievement the knowledge and understanding you have gained by concentrating in the History of Art and Architecture. Capstone projects embrace many possibilities. You can perfect a seminar paper in which you have developed a strong interest. You can participate in a graduate seminar to which the instructor has admitted you. You can develop work that you do as a museum or gallery intern. You might work on an archaeological excavation. You can participate in the Honors Program. Beyond these opportunities, the Department is open to other approaches. You should work with a faculty sponsor and with your concentration advisor to decide what will work best for you.

1 A maximum of four credits may be allowed for courses taken at other universities (transfer credits or from study abroad) or courses on art historical subjects taken in other departments. No concentration credit will be granted for AP/IB/A-level scores.

**Self-Assessment**

All concentrators are required to write an essay when they file for the concentration that lays out what they expect to gain from the course of study they propose. All second-semester seniors will be required to write a final essay that takes measure of what they have learned from the concentration, including the capstone and the year experience relating to their study of the history of art and architecture. The self-assessment should be submitted through ASK with a revised list of courses actually taken at least one month prior to graduation.

**Honors**

During the second semester of the junior year all concentrators will be invited to apply for admission to the Honors Program in History of Art and Architecture. The honors program is an opportunity for concentrators to mobilize what they have learned to make an original research contribution to the field.

Students wishing to write an honors thesis should have produced consistently excellent work and maintained a high level of achievement (i.e. a majority of “A” or “S with distinction” grades) in all concentration courses. It is advisable for them to have taken at least one seminar in the department and written a research paper before choosing to undertake a thesis. While acceptance into the Honors program depends on the persuasiveness of the thesis topic as well as the number of students applying, students may refine their proposals by speaking in advance with potential advisors. No honors student may take more than four courses either semester of their senior year—with the honors seminar being considered one of the four courses. Students interested in honors who are expecting to graduate in the middle of the year should contact the concentration advisor no later than the beginning of their junior year.

During both fall and spring semesters you will participate in the monthly meetings of the Honors cohort, in which honors students in both HIAA concentrations share their work-in-progress with each other and with the faculty member who supervises the seminar. (These monthly meetings, usually three per semester, are mandatory but do not require a course registration.) You will also enroll in your advisor’s section of HIAA 1990 (Honors Thesis) in both semesters.

Finished drafts of the thesis, which will generally be no more than 30–35 pages in length (exceptions to be determined in consultation with the instructor), not counting bibliography and visual materials, will be due to the advisor and second reader by March 1 of the Spring semester or by November 1 of the Fall semester if you plan on graduating in December. Comments will be returned to the students for final corrections at that point. There will be a public presentation of Honors work at the end of the Spring semester.

**History of Art and Architecture Graduate Program**

The department of History of Art and Architecture offers graduate programs leading to the Master of Arts (A.M.) degree and the Doctor of Philosophy (Ph.D.) degree.

For more information on admission and program requirements, please visit the following website:

http://www.brown.edu/academics/gradschool/programs/history-art-and-architecture/
Courses

HIAA 0001. Architectural Design.
Design principles presented in the first semester are further developed through a series of projects involving actual sites with their concomitant physical and historic-cultural conditions. Issues of context, methodology, program and construction are explored for their possible interrelated meanings and influences on the making of architectural form. Location RISD Main Campus BEB 3rd floor
Estimated Cost of Materials: $55.00

HIAA 0002. Advanced Design Studio.
These studios, three of which are required for graduation, are offered by individual instructors to students who have successfully completed the core curriculum. The goal for the studio is to design a more complex, public building in a specific urban context. Working with large-scale physical models, drawings, digital productions, materials and construction details, the students are tasked to finding a rigorous, conceptual clarity in their architectural and urban responses to the design problems at hand. The studios are assigned by lottery on the first day of classes. Once assigned to an advanced studio, a student may not drop studio.

This course introduces the beginning student to the origins, media, geometries and role(s) of projection drawing in the design and construction process. The student will learn systems of projection drawing from direct experience, and be challenged to work both from life and to life. Subjects such as transparency, figure/ground, sciagraphy, oblique projection, surface development, volumetric intersections, spatial manipulation and analytic operations will build on the basics of orthographic and conic projection. The course involves line and tone drawing, hand drafting, computer drawing (AutoCad) and computer modeling (Rhinoceros).

HIAA 0004. Architectural Analysis.
This course will develop one's ability to critically read and understand architecture through formal, geometric, tectonic and spatial analytic processes. Analysis acts as an intermediary between observation, expression, and understanding, offering deep insights into works of architecture. The course builds upon the processes introduced in Architectural Projection. Through various conceptual and representational frameworks, the issues of mapping-layers. Point of view, scale, morphology, topography and tectonics will be explored as part of a larger creative process, embracing visual imagination, communication and critique. RISD Main campus BEB 1st or 3rd floor studio
Estimated Material Cost: $50.00

Introduction to the global history of art, architecture and material culture from cave paintings to installation art. The course is both an historical survey as well as an analysis of case study examples. In addition to examining visual strategies of representation, the course explores the varied ways in which art shapes and reflects cultural, social, religious, and political concerns. Weekly one-hour conference required. Limited to 225.

Western architecture and urbanism from classical antiquity through the eighteenth century: patterns of development; major architects and monuments; methods of interpretation. Does not presume previous knowledge or special skills.

HIAA 0012. Theories of Architecture from Vitruvius to Venturi.
Theories and Design from Classicism to Postmodernism: An inquiry into the ways in which the nature of architecture has been thought, both inside and outside, since Vitruvius first defined its study and practice as an “interdisciplinary discipline.” The seminar will study selected texts and designs in the culture of western architecture from antiquity to the present. Drawn from works in architectural, social, political, and aesthetic theory the seminar will deepen our understanding of historical architecture and open up ways of interpreting contemporary design culture.

HIAA 0013. Introduction to Indian Art.
This course presents aspects of Indian art over a period of 2,000 years, and introduces the art of Buddhism, Jainism, Hinduism, Islam, and colonial and post-colonial India. Emphasis is placed on characteristic features, functions and socio-political contexts of stupas, temples, mosques, churches, and other architectural sites as well as sculptures, painted manuscripts, paintings, and photography.

HIAA 0022. The Art of Enlightenment.
This course surveys the history of Buddhist art-making from the earliest representations of the Buddha to the curatorial practices of modern museums. Ranging from the great mandala of Borobudur in Java to the Zen monasteries of Japan, we will examine the complex ways in which theology and scripture interacted with the particularities of time and place in the long development of Buddhist art. Throughout these inquiries, the sensory qualities of the art will remain at the forefront of our analysis. Together, we will explore the mechanisms by which artists transformed inert matter into powerful impelments of the Buddhist dharma.

HIAA 0023. South Asian Art and Architecture.
This course is an introduction to South Asian Art & Architecture, from 2500 BCE until the present, and to Southeast Asian Arts connected to them through religion, trade, or conquest. We will explore a range of media—including architecture, painting, sculpture, textiles, and photography—to ask critical questions about the nature of images and their relationship to emotions, the environment, devotion, politics, performance, and other art forms, like literature, music, and dance. The course will include regular visits to the RISD museum.

HIAA 0031. Pre-Islamic Empires of Iran.
Introduction to art and architecture of the Ancient Near Eastern empires that flourished between the 6th century BCE and the Islamic conquests of c. 630 CE. We will consider the material culture of the Achaemenids, Seleucids, Parthians, and Sasanians, empires that inhabited primarily the areas of Mesopotamia and the Persian plateau, but spread at times as far afield as the Mediterranean coast, Egypt, the Caucasus, and the Indus Valley. Lectures will prioritize close analysis of the most illuminating art and architecture, so that you leave the course knowing not only the material evidence but also current approaches to interpreting it.

HIAA 0032. Art and Architecture of the Roman Empire.
How did a small city in central Italy grow to become one of the most powerful empires in history? This course explores the art and architecture produced in ancient Rome from its origins in the 6th century BCE to the fourth century CE. It considers a wide variety of media, including reliefs, freestanding sculpture, architectural monuments, mosaics, wall paintings, and daily-life objects. By exploring the role of art and architecture in the formation and expansion of the Empire, considering the experiences of ancient viewers, the course offers a post-colonial reading of ancient Roman history and culture.

HIAA 0040. Introduction to Medieval Art and Architecture.
A comparative examination of the three artistic cultures of the medieval Mediterranean: Islam, the Byzantine empire, and the predominantly Christian regions of western Europe. Medieval Jewish art is also treated. Topics include medieval attitudes toward the use of images, the architecture of worship (churches, synagogues, and mosques), royal and domestic art, and instances of contact among all three cultures. Weekly one-hour conference required.

HIAA 0041. The Architectures of Islam.
Through selected case study examples, the course examines the varied manifestations of Islamic architectures. The course spans fourteen centuries and three continents, and examines religious as well as secular buildings. We will trace the sources and ‘invention’ of Islamic architecture in the Umayyad dynasty of the seventh and eighth centuries, and explore its varied manifestations up to the contemporary period. By exploring cross-cultural and trans-regional interactions, we will also investigate the relationship between Islamic and non-Islamic architectural traditions.

HIAA 0042. Islamic Art and Architecture.
The formation of an Islamic artistic expression in art and architecture and the regional manifestations of that art from central Asia and the Middle East to Sicily and Spain. Weekly one-hour conference required.
HIAA 0050C. Illustrating Knowledge.
This seminar will investigate the history of illustration from the first manuscript maps and printed herbals to the present, including paintings, photographs, and computer imaging. We will investigate the role of pictures in the exchange of scientific ideas, and modes of representation developed in both the arts and the sciences. Enrollment limited to 15 first year students.

HIAA 0061. Baroque.
The course surveys the visual culture of Rome from 1564-1700. During that time Rome became the center of Artistic change in Europe, the seat of the Counter-Reformation Catholic Church and the dominant source of classical learning. All media that participated in these historical developments are included: from papal urban plans to Bernini’s fountains and Caravaggio’s paintings.

Surveys the amazing art in Holland and Flanders that revolutionized all media. We will see how paintings, sculpture, and architecture formed the historical environment of life in the 17th-century Netherlands. The work of such artists as Rubens, Rembrandt, Van Dyck, and Vermeer is presented as part of this history of art in a “golden age.” Weekly one-hour conference required.

This undergraduate lecture course traces the rise of American painting in the period from the Revolution to the dawn of modernism in the 20th century. Major figures, such as Thomas Cole, Frederick Church, Winslow Homer and Albert Pinkham Ryder, will be examined, as will significant movements, such as the Hudson River School and Tonalism. Discussion will help place American art within the context of history, the invention of national identity, and parallel developments in popular visual culture. Enrollment limited to 50.

HIAA 0072. Introduction to American Art: The Twentieth Century.
This course examines fine art in the US from roughly 1900 through the 1970s, with special attention to modernism and the rise of modern art. Through slide presentations and group discussion, most major figures of the period—Georgia O’Keeffe, Edward Hopper, Alexander Calder, Jackson Pollock, and Andy Warhol among them—will be placed in historical and cultural context. Key events, institutions, and critics of these decades will also be considered. We will look at the role of cultural episodes like the Harlem Renaissance, and the increasing prevalence of women in the art world, as markers of increasing diversity and changing values. Readings by leading scholars will allow a wide-ranging introduction to art historical methods of interpretation. Discussion in sections will help place this art within the context of social history, the invention of national identity, and parallel developments in popular visual culture.

HIAA 0075. Introduction to the History of Art: Modern Photography.
This class will survey the history of photography as an art form and means of visual communication in the modern era. The photograph will be considered from both esthetic and social perspectives; photography’s rise as a medium of personal expression will be examined, as will technology’s role in the creation of new regimes of spectatorship, and the mass dissemination of visual information. The class follows the rise of photography’s acceptance as an art form in the twentieth century, and culminates with its prominence within the phenomenon of postmodernism. Prior coursework in modern history or art history is helpful. Enrollment limited 80.

Over the long nineteenth century (1789-1900) revolutions replaced kings with citizens. Capitalist and colonial expansion mobilized armies, goods, and slaves across continents. New class and gender dynamics shaped patterns of sociability. Technological innovations mass produced images and goods. In this course, we will discern such social and historical factors in Europe and across the globe alongside artistic ones to interrogate what makes art in this period irrepressibly modern. We will study the turbulence that has defined the century, including the art historical swings in style from Classicism to Romanticism to Impressionism, with care. Course includes visits and assignments in museums.

This undergraduate lecture course focuses on one building type, the house, through time in Mesopotamia, China, Japan, the Islamic world, the African diaspora, India, Britain, Rhode Island, and Germany and France. Houses can be minute or monumental, vernacular or high art, provide minimal shelter or afford the material and psychic satisfaction of home. By studying houses, we can bypass some of architectural history’s biases, and explore some of the major debates in the discipline: What is architecture? Who determines what is included/excluded in this category? And on what basis do they make these claims? A

HIAA 0084. Postwar to Postmodernism: Art Since 1945.
This lecture course will survey major artistic movements and strategies that developed from the postwar period through the 1980s. Styles and schools discussed will include art informel, Abstract Expressionism, Happenings, expanded cinema, kinetic art, Fluxus, Situationists, Pop, minimalism, conceptual art, performance, Institutional Critique, video art, and appropriation. Taking a globally comparative approach, emphasis will be on the historical conditions that gave rise to such a multiplicity of practices, as well as the theoretical frameworks used to advance and understand them.

HIAA 0087. Contemporary Art.
This lecture course will survey the major movements and artistic strategies of contemporary art since 1989. Topics include installation art, new documentary, performance/re-performance, new genre public art, relational aesthetics, arte útil, critical geography, post-production, para-fiction, research-based art, and post-colonial, post-critical, and post-internet practices. As suggested by the prevalence of “posts,” our discussion will center on the persistence of history in the art of the present.

HIAA 0089. Contemporary Photography.
This course surveys the rise of photography in the art world in the period after 1960. It examines both the development of photography as an independent medium and the appropriation of lens-based imagery by Pop Art, conceptual art, minimalism, and eventually Postmodernism.

HIAA 0090. The Other History of Modern Architecture.
This lecture course presents modern architecture as the product of the cultural, technological, political, and intellectual developments associated with capitalist expansion across the globe. By exploring the trans-Atlantic slave trade and its effects on Western industrialization, European Jesuit gardeners in China, modernization efforts in 19th century Turkey and Japan, and tropical climate and colonial policy in India, Nigeria, and other global sites; the course will expose students to the “99 percent” who are frequently excluded from discussions about modern architecture, but whose labor and cultural traditions were crucial to the heroic modernism of the West.

HIAA 0100. Introduction to Architectural Design Studio.
Introduces students to basic tools and strategies in architectural design. A number of exercises will introduce students to questions about form, function and structure and teach them to learn from close observation of the built environment. The second half of the semester is devoted to the design of a small house by each student, which will be presented in a scale model and a full set of drawings at the end of the semester. A jury of invited architects and professors will conduct a discussion of each project. Enrollment limited to 15. Course is intended for first and second year students.

HIAA 0130. Architectural Projection.
This course introduces the beginning student to the origins, media, geometries and role(s) of projection drawing in the design and construction process. The student will learn systems of projection drawing from direct experience, and be challenged to work both from life and to life. Subjects such as transparency, figure/ground, scialography, oblique projection, surface development, volumetric intersections, spatial manipulation and analytic operations will build on the basics of orthographic and conic projection. The course involves line and tone drawing, hand drafting, computer drawing(Autocad) and computer modeling(Rhino).
HIAA 0140. Architectural Analysis.
This course will develop one’s ability to critically read and understand architecture through formal, geometric, tectonic and spatial analytic processes. Analysis acts as an intermediary between observation, expression, and understanding, offering deep insights into works of architecture. The course builds upon the processes introduced in Architectural Projection. Through various conceptual and representational frameworks, the issues of mapping-layers. Point of view, scale, morphology, topography and tectonics will be explored as part of a larger creative process, embracing visual imagination, communication and critique.

This course will consider issues related to architecture, urban design, and public space. Using the city of Providence as a field of exploration we will examine the cultural, environmental, and political forces which shape the relationships between buildings and urban landscapes. We will utilize various two and three dimensional graphic techniques to analyze and reimagine public spaces, and their constituent sites, buildings, and programs. Our work will help you gain greater fluency with the designer’s "tools", e.g. models and drawings and the iterative processes through which designers represent conditions of site, program, tectonics, and materiality to create architectural form and urban space.

HIAA 0190. Advanced Design Studio.
These studios, three of which are required for graduation, are offered by individual instructors to students who have successfully completed the core curriculum. The goal for the studio is to design a more complex, public building in a specific urban context. Working with large-scale physical models, drawings, digital productions, materials and construction details, the students are tasked to finding a rigorous, conceptual clarity in their architectural and urban responses to the design problems at hand. The studios are assigned by lottery on the first day of classes. Once assigned to an advanced studio, a student may not drop studio.

HIAA 0211. Art of Empire: The Early Modern Hispanic World.
This course juxtaposes artists such as Titian and Velázquez alongside frequently unnamed indigenous craftsmen living under Spanish rule across the Atlantic and Pacific oceans. We will track bi-directional artistic exchange and mobility during imperial expansion to ask: how did navigation, religion, natural resources, and trade shape the art of Spain and its colonies as pre- Colombian visual traditions persisted and were exported to Europe? Considering how the power structures of the world's morphologies, topography and tectonics will be explored as part of a larger global empire continue to shape our understanding of the past, we will propose ways to begin decolonizing the study and display of objects produced under imperial rule.

HIAA 0321. Toward a Global Late Antiquity:200-800 CE.
Competing empires, the division of the eastern and western halves of Roman territory; long distance trade, the rise of monotheism, the spread of Buddhism: how did these factors affect the art and architecture associated with the Roman west, Constantinople, Ctesiphon, Alexandria, the Han Dynasty capitals, and Gandhara? This course takes an expanded view of Late Antiquity, extending beyond typical that associate the period with a specific urban context. Working with large-scale physical models, drawings, digital productions, materials and construction details, the students are tasked to finding a rigorous, conceptual clarity in their architectural and urban responses to the design problems at hand. The studios are assigned by lottery on the first day of classes. Once assigned to an advanced studio, a student may not drop studio.

HIAA 0322. The Arts of Religion and Ritual in the Ancient World.
This course explores how humans have imagined and conceptualized notions of divinity throughout the history of the ancient world (circa 3000 BCE to 1000 CE). We will consider a variety of visual representations, architectural monuments, and urban centers to investigate the types of places, natural phenomena, and individuals that were considered sacred. The class also explores how the art and architecture of temples and sanctuaries informs the nature of ancient ritual in a cross-cultural setting (A).

HIAA 0340. Roman Art and Architecture: From Julius Caesar to Hadrian.
An introduction to the major monuments in Roman art at the point when the Empire emerged up to the time of the creation of the Pantheon. No prior background required.

No description available.

HIAA 0420. Cathedrals and Castles.
The course aims to engage critically with the major architectural features of the medieval world: the cathedral and the castle. In addition to examining specific buildings as case studies, we will also interrogate the cultural context and the material culture associated with the construction, use and meanings of these important spaces. The course is arranged thematically rather than chronologically.

HIAA 0440. Gothic Art and Architecture.
Examines Gothic art and architecture to explore its sources and "invention" in mid-12th-century France and to trace its varied manifestations in European art to the 16th century. Special attention is given to cathedral architecture and decoration. Weekly one-hour conference required.

HIAA 0460. Muslims, Jews and Christians in Medieval Iberia.
The cultural diversity of medieval Spain and Portugal is proclaimed by their Christian churches, Islamic mosques and Jewish synagogues. The three distinct cultures that produced these buildings lived together for centuries in medieval Iberia, sometimes in peace, sometimes not. For almost eight centuries (711-1492) writers, scholars and artists emerged from a cultural environment of intellectual borrowing nurtured by uninterrupted contact through marriage, conversion, commerce and travel. This convivencia of Jews, Muslims and Christians will be examined from the perspectives of literature, music, art, architecture, archaeology, and history.

Examines the paintings, sculpture, graphic art, and architecture of Tuscany in the 15th century, primarily in Florence but also venturing into Siena, Arezzo, Borgo San Sepolcro. Using Renaissance critical terms and analytical tools, we take into account the technical and commercial habits of craftsmen, the economy of the cities and towns, and the forms and functions of art in domestic, civic, and religious spheres. Weekly one-hour conference required.

Examines painting, sculpture, architecture and printing in the context of the unique urban character of Early Modern Rome: site of ancient myth, religious pilgrimage, and a cosmopolitan court with power and influence across both visible and invisible worlds. Beginning with late medieval art, and the artists Filarete and Fra Angelico, we move through the Renaissance (Michelangelo and Raphael), and Counter-Reformation (Fontana, Tempesta, Barocci), tracing the formation of modernity in artists' workshops and academies, and through the streets with expanding papal urbanization programs.

HIAA 0570. The Renaissance Embodied.
Renaissance depictions of the body range from muscular, idealized nudes to decaying, but ambulatory, corpses. Artists dissected human cadavers and, for the first time since antiquity, reflected the use of living models in their workshops and studios. In this course, we examine art that embodied power and sexuality, death and disease, the divine and demonic, the marginalized and the fantastic. We consider a diverse set of bodies as they were represented in paintings, sculpture, drawings, decorative arts and prints in relation to contemporary religious, political and social concerns.

HIAA 0580. Word, Image and Power in Renaissance Italy.
This undergraduate lecture class is designed to introduce cultural and historical perspectives on Italy from Siena in the Middle Ages to Renaissance Florence and the early modern Veneto. Team taught by professors of Italian Art History, History, and Literature, we will move across Italy and the centuries focusing on monuments of literature, art, architecture, and history through different disciplinary lenses. In English.
HIAA 0600. From Van Eyck to Bruegel.
Artists of Flanders and Holland effected a revolution in the techniques and subjects of painting during the 15th and 16th Centuries. This course explores the roots of artistic change in religion, urban history, politics, Italian humanism, economics, and craft traditions. The focus is on the great works of such artists as Jan van Eyck, Hieronymus Bosch, and Pieter Bruegel the Elder.

HIAA 0632. Mural Painting in Mexico.
Before Rivera, Orozco, and Siqueiros were lauded as heroes of the twentieth-century muralismo movement, artists had been painting on walls throughout Mexico for centuries for both public and private audiences. We will consider how murals were sites for elite consumption and religious contemplation, political tools, agents for social change, and nexuses of collective identity. We will examine Mexican wall painting through time from Pre-Columbian dwellings and ceremonial spaces, to the painted interiors of Spanish colonial residences and churches, to public displays uniting post-Revolutionary Mexico, ending with the Chicano mural movement and vibrant community spaces of contemporary Mexico and the U.S.

HIAA 0660. Giotto to Watteau: Introduction to the Art of Europe from Renaissance to French Revolution.
Giotto to Watteau introduces the great works of European art from the Renaissance to French Revolution. What ideas and forces enabled artists such as Leonardo da Vinci, Hieronymus Bosch, El Greco, Caravaggio, and Rembrandt to transform the visual world so profoundly that their innovations still radiate outwards through history into the present? What are the best terms and concepts to describe and understand the new styles that developed between 1300 and 1800? Lectures, discussion, reading, and direct looking consider these questions in a way that works for students at an introductory level.

HIAA 0710. The Other History of Modern Architecture.
This course presents modern architecture as the product of the cultural, technological, political, and intellectual developments associated with capitalist expansion across the globe. By exploring the trans-Atlantic slave trade and its effects on Western industrialization, European Jesuit gardeners in China, modernization efforts in 19th century Turkey and Japan, and tropical climate and colonial policy in India, Nigeria, and other global sites; the course will expose students to the “99 percent” who are frequently excluded from discussions about modern architecture, but whose labor and cultural traditions were crucial to the heroic modernism of the West.

HIAA 0770. Architecture and Urbanism of Africa.
This course introduces African built environments from the earliest known examples to the contemporary moment. Through recent debates about heritage and preservation, we will interrogate “Africa” as both an imagined construct and a concrete geographic entity characterized by diverse cultures, contexts, and histories. We will also explore competing interpretations of Africa’s architectural and urban history and their contemporary relevance. Weekly one-hour section required.

HIAA 0771. African American and Caribbean Architectures: Domestic Space.
This course explores domestic landscapes occupied by African-Americans between the earliest years of slavery and the Second World War. We will examine some of the most common housing forms that diasporic Africans inhabited during those years—plantation slave quarters, tenant shacks, and urban tenements, to name a few. Our premise is that study of domestic life can reveal how political, economic, and social forces inform everyday life. The goals of the class are twofold: to improve our understanding of the social history of diasporic Africans and to develop sensitivity to the study of ordinary, everyday landscapes—or “vernacular architecture.”

HIAA 0801. Art After ’68.
The tumultuous social unrest of the 1960s was concretized in a worldwide succession of civic revolts in 1968. Throughout this period, art was an organizing tool for various political events. In turn, the concept of 1968 generated an aesthetic response that supported, documented and historicized the period. This course will examine the art and new art forms created in the wake of 1968. We will also look closely at the strategies of contemporary art making that are influenced by the spirit of 1968.

HIAA 0810. 20th Century Sculpture.
Writing in 1937, sculptor Naum Gabo posed the question, “What are the characteristics which make a work of art a sculpture?” Gabo’s question has a general resonance for the entirety of the twentieth century, where the medium of sculpture formed many of the significant debates within art. This lecture course is a survey of sculpture in the twentieth century. We will examine the medium through its definitions, material (metal, paper, plastic, stone, wood, etc.), methods (carving, casting, modeling, welding, etc.), practitioners, movements, theories and related practices, like architecture.

HIAA 0820. Art and Technology from Futurism to Hacktivism.
This course will introduce students to the central role of technological media in art of the twentieth and twenty-first centuries. From telephones to computers, the Sony Portapack to the Internet, artists have creatively engaged technology to transform how their art was made, circulated, and received. We will pay equal attention to technology as a medium and the ways artists responded to broader technological change. Looking at works from Europe, the Americas, and Japan, we will interrogate the varying social conditions and political motivations that drove artists to use technology in order to radically change the making and meaning of art.

HIAA 0830. Revolutionary Forms: 100 Years of Art and Politics in Latin America.
This course surveys Latin American art within the context of socio-political and intellectual concerns in the region. We will consider a wide variety of media with an eye to local and global events that prompted their production. We will examine how artworks embodied, challenged, and helped to shape history. We will survey major trends in art production: from photography during the Mexican Revolution to participatory and activist art in the beginning of the 21st century. Students will acquire visual and critical analysis skills in order to actively engage with their visual surroundings. Previous knowledge of art history is not required.

HIAA 0840. History of Rhode Island Architecture.
This course examines the historical development of architecture and building in Rhode Island within the larger context of colonial and national trends and with a focus on important manifestations of a distinct regional identity. Emphasis will be placed on stylistic developments, new building types and technologies, and the social and economic influences on the creation of the built environment.

HIAA 0850. Modern Architecture.
The “classic” period of European and American modern architecture from the turn of the century to the 1950s. Presents both the established canon of masterpieces by among many others, Frank Lloyd Wright, Mies van der Rohe, and LeCorbusier, and counterbalances this approach with information about new building materials, changing conditions of architectural production, and the “mechanisms of fame.”
HIAA 0860. Contemporary Architecture.
Stylistic, technological, and theoretical developments in architecture from the 1960s to the present. Analyzes movements such as "Brutalism," "Postmodernism," and "Deconstruction" and by architects such as Frank Gehry, I. M. Pei, and Zaha Hadid. Emphasizes the complex conditions of architectural production in different parts of the world. Complements HIAA 0850, but may be taken independently.

HIAA 0861. City and Cinema.
An examination of the mutual influence between two of the major art forms of the 20th century: film and architecture. Concentrates on European and American film sets throughout the 20th century and explores their formal and iconographical sources in contemporary architectural discourse. Presentation and examination of sketches, paintings, still photographs, and film clips as well as writings by directors, set designers, critics, and architects (Eisenstein, Reimann, Kracauer, Bunuel and many others).

HIAA 0870. 20th Century British Art: Edwardian to Contemporary.
The field of British art offers a wide view onto the history of art and aesthetics. This survey of British art in the twentieth century will examine the nation's art, artists, and art movements alongside its current events. Readings will be drawn from periodicals, primary documents (artist's letters and manifestos) and secondary texts (Alloway, Hall, Read and others). Architecture, literature (Martin Amis, Joseph Conrad, Lynton Kwesi Johnson and others) and music will be considered throughout the course.

HIAA 0900. City and Cinema.
An examination of the mutual influence between two of the major art forms of the 20th century: film and architecture. Concentrates on European and American film sets throughout the 20th century and explores their formal and iconographical sources in contemporary architectural discourse. Presentation and examination of sketches, paintings, still photographs, and film clips as well as writings by directors, set designers, critics, and architects (Eisenstein, Reimann, Kracauer, Bunuel and many others).

HIAA 0901A. African American Art History at Tougaloo College.
This course covers the history of the contributions of Black artists and artisans to the Art and Architecture of the United States from 1600 to the present. We examine the careers, works, and lifestyles of African-American artists positioning them within the larger canon of American art and artist. The course exposes the student to African American artists beyond the textbook, with studio visits to Clementine Hunter's salad's studio, and museum visits to have firsthand encounters with artworks. The course is project based with no exams and includes a research component that utilizes the Tougaloo Art Collection and the works of Edward Bannister.

HIAA 0931. Eco-aesthetics.
This course examines a movement in contemporary art and visual culture -- termed "eco-aesthetics" -- that works to raise awareness of global climate change and to resist forces of environmental degradation. We will begin by tracing a history of emerging artistic-ecological consciousness in the US and Europe in the 1960s and 70s, and then take a more global, interdisciplinary look at shifting methods of photographic, filmic, and new media documentation and representations of a "post-natural" landscape in the Anthropocene Age. We will analyze collective eco-aesthetic activism in the 21st century, exploring artistic collaborations in various local, regional, and global contexts.

HIAA 1001A. Constructing Memory: The Design of Monuments in the Public Realm.
This is a course about cities, people, and what we chose to recognize and commemorate through the construction of monuments and memorials in the public realm. Cities are distinguished by their public spaces, a complex hybrid of social, cultural, political, and spatial phenomena not easily studied by a single discipline, and it is the urban public realm that provides the greatest insight into the provocative interaction between the cultural values and the built environment.

HIAA 1011. Design and Wellness in the Age of Pandemics.
This is a course about design, public health and the public realm. Over the course of the semester through reading, discussion, and the critical review of building, landscape, and urban planning projects, we will explore topics including, the urban planning strategies proposed to address fears about immigration and urban density, the effect of treatment protocols for infectious diseases like tuberculosis (hygiene, fresh air, sunlight) on the evolution of the work of modernist architects like le Corbusier, Richard Neutra and others, and the design, planning and policy responses to both the 1918 influenza pandemic and the current Covid-19 pandemic.

HIAA 1020. Topics in East Asian Art.
Topics in East Asian Art. Topics will be listed separately.

HIAA 1090. Writing About the Arts.
Writing is a critical skill for those who engage in the practice of art history, art criticism, and art theory. This writing-intensive workshop/seminar will offer students the opportunity to encounter various kinds of art in various real-world settings, then write about them. Different genres of art writing will be explored (reviews, museum wall texts, scholarly analyses, etc.) and, through frequent short assignments, participants will be learn to write with greater clarity, precision, and organization. Readings will explore the problems entailed in art historical description and what happens when visual ideas become texts.

HIAA 1101A. Illustrating Knowledge.
This seminar will investigate the history of illustration from the first manuscript maps and printed herbals to the present, including paintings, photographs, and computer imaging. We will investigate the role of pictures in the exchange of scientific ideas, and modes of representation developed in both the arts and the sciences. Enrollment limited to 19 first year students.

HIAA 1101B. Seeing and Writing on Contemporary Arts.
The purpose of this writing intensive seminar (especially designed for freshmen) is to train the students in both seeing and writing on contemporary art. The class will be based on looking at specific works of art of the twentieth century in museum context (using nearby collections, notably) and on how to translate visual observations into analytical and critical writing.

HIAA 1101C. Water and Architecture.
The seminar explores the varied ways in which water is manipulated in architecture and urban planning. It is organized in 'archaeological' order: from the most recent to the oldest. We will examine case studies, beginning with Tadao Ando's Water Temple and Frank Lloyd Wright's Fallingwater. We will examine the local examples of Slater Mill, the Blackstone River, and Barnaby Evans' Waterfire. We will then look back at historical examples: the Hoover Dam, the creation of Venice and the Grand Canal of China, the fountains at Versailles, the Islamic gardens at Isfahan, the medieval hydraulic plan for Canterbury Cathedral, and the Roman aqueduct bridge of the Pont du Gard. One of the principal aims of the course is to place the discussion of design into historical, technological and environmental contexts, and to provide students with experience in the production of architectural projects.

HIAA 1105. Otherworldly and Other Worlds: Representing the Unseen in Early Modern Europe.
This course will examine European beliefs about vampires, witches, angels, demons, "monstrous races" and other enchanted and unseen beings between 1500-1800—the era of the famous witch hunts and a period of confrontation between belief and disbelief about these figures. Surprised by new instruments like the telescope, new technologies in printing and cartography, and unprecedented travel across the globe, knowledge about the universe increasingly expanded in this period to incorporate new discoveries and observations. Close analysis of several case studies will highlight how dramatic debates about these creatures played out in visual form in early modern Europe.
HIAA 1120B. History of Urbanism, 1300-1700. Examines major themes in the history of urbanism by concentrating on selected towns and cities in order to explore general issues (e.g., the relationship of town and countryside and the emergence of capital cities) and characteristic urban building (e.g., fortifications, designed squares, civic monuments). No prerequisites. A short oral presentation and term paper are required.

HIAA 1120C. History of Western European Urbanism 1200-1600. Examines major themes in the history of urbanism by concentrating on selected towns and cities in order to explore general issues (e.g., the relationship of town and countryside and the emergence of capital cities) and characteristic urban building (e.g., fortifications, designed squares, civic monuments). No prerequisites. A short oral presentation and term paper are required.

HIAA 1150C. El Greco and Velázquez. This course will study the great Spanish artists El Greco and Velázquez in relation to the major developments in 16th- and 17th-century European painting and in the context of the social, political, and intellectual concerns of Habsburg Spain, as well as the particular cultural milieu in which they each worked. We will trace El Greco’s career from his native Crete to Venice and Rome and finally to Toledo, and Velázquez’s from the commercial metropolis of Seville to the court in Madrid. In addition, we will examine their modern reception by art historians, artists, and collectors in Spain and beyond.

HIAA 1150D. El Greco and the Golden Age of Spanish Painting. This seminar examines the career of the Greek painter from Crete known as El Greco in Spain where he worked in the late sixteenth and early seventeenth centuries. Emphasis will be given to the interaction of various European traditions in the culture of Counter Reformation Europe. Weekly readings and discussion and individual projects required. Enrollment limited to 25 students.

HIAA 1151. Painting Indigenous Histories in Colonial Mexico. This seminar considers the ways in which indigenous histories and cultures were represented in manuscripts made by indigenous and missionary artists/authors of colonial Mexico. Part of our corpus will include manuscripts held in the John Carter Brown Library. Of particular importance to our inquiry will be definitions of writing and literacy; representations of indigenous identities; the evolution and invention of pictorial forms; and the role of pictures in juridical contexts. The course will culminate with the creation of an online exhibition featuring books and manuscripts from the JCB’s collection.

HIAA 1170B. Twentieth-Century American Painting. HIAA 0800 is a suggested prerequisite. Weekly one-hour section required.

HIAA 1181. Prefabrication and Architecture. Architects have been captivating prefabrication since the Industrial Revolution revealed the benefits of mechanized human labor. This undergraduate project seminar will examine the provenance and relevance of prefabrication. We will consider the prefabricated traditions of Africa and Asia as the foundation for the discipline of “vernacular architecture”; and conceptualize prefab as a technology of colonial expansion, solution to the postwar housing crisis, expression of 1960s counterculture, and response to climate change. Case studies will be drawn from Africa, Australia, Asia, Europe, and North America.

HIAA 1182. Spaces and Institutions of Modernity. This undergraduate seminar will explore conceptual and emerging theories of modernity as they intersect with our understanding of space and the role of the built environment and designed objects within it. The seminar will be organized as a series of case studies of the iconic sites and institutions of modernity (the metropolis, the world’s fair, the museum, the prison) as well as others that have also come to exemplify it (the ship, the plantation, the railroad, the colony). Class time will include analysis of primary documents and field trips to local sites.

HIAA 1200A. Ancient Art in the RISD Collection. The RISD Museum’s ancient collection will be studied firsthand and in light of recent scholarship in Greek and Roman art and archaeology. Using the collection as a springboard, the course will explore original contexts for museum objects; issues of cultural property and museum ethics; conservation, restoration and display in museums; and notions of historical interpretation in museum display.

HIAA 1200D. Pompeii. Pompeii and its neighboring towns are the best examples for studying the life, art, and architecture of a Roman town. This seminar covers the works of art and the life in the town as reflected in the monuments excavated over the past 250 years. Instructor permission required.

HIAA 1201. Brushwork: Chinese Painting in Time. How did the tenor of the individual brushstroke become the locus of value in traditional Chinese painting? What other possible standards of excellence—such as verisimilitude—were displaced in the process? This course pursues these questions by analyzing the great monuments of Chinese painting from the perspective of the aesthetic debates that defined them over the centuries. Proceeding from the famous Six Laws of Painting down to the aesthetic watershed of the Northern and Southern Schools, the course traces the fraught interplay of artistic practice and critical judgment in China over more than a thousand years. No prior knowledge required.

HIAA 1202. Mountains and Waters: Art and Ecology in East Asia. For more than a millennium, painters and poets across East Asia have acclaimed soaring peaks and expansive rivers as the most sublime of all subjects. Often termed “landscape” in modern English, these images of “mountains and waters” (shanshui) offer fascinating insights into the ways in which we now call “the environment” was conceptualized in premodern East Asia. Drawing upon recent eco-aesthetic perspectives, this seminar examines these celebrated monuments of East Asian painting as ecological entities, investigating their relationships with the human and nonhuman beings that participated in their reproduction, and interrogating the moral implications of their enduring appeal. First year seminar

HIAA 1212. The Pictured Text. Writing makes language visible, and thus concerns images. Language also delimits the legibility of imagery. Turning words into images and images into words occurs at great speed around us. This course explores the relation of text and image across world traditions—Chinese, Mayan, Egyptian, Islamic, Greco-Roman, and others, extending up to the present. Topics include: calligraphy, context, scribal practice, the form and shape of writing, including typography, hidden or pseudo-writing, graffiti, and contemporary art.

HIAA 1301. The Palaces of Ancient Rome. This seminar addresses the palatial art and architecture of the ancient Roman Empire. Key themes include the architectural articulation of political power; the role of international relations in expressing cultural power; the interplay of influence among palaces and villas; the art of adornment, luxury, and collecting; the interaction of architecture and landscape, including interior gardens and urban environments; the critical analysis of archaeological evidence, reconstruction, and legacy.

HIAA 1302. Women and Families in the Ancient Mediterranean. What was life like for the women of the ancient Mediterranean? What roles did they play? How did their experiences define their lives? Why is the examination of art and architecture such an important source for answering these questions? This course will provide a comparative perspective exploring Greek, Etruscan, and Roman case studies.

HIAA 1303. Pompeii: Art, Architecture, and Archaeology in the Lost City. Buried by the eruption of Vesuvius in 79 CE, Pompeii stands as a time capsule of city life in the Roman Empire of the 1st century. Exploring the city’s grand public baths, theaters, and amphitheaters, its seedy bars and businesses, its temples for Roman and foreign gods, and its lavishly decorated townhomes and villas, this seminar will reconstruct a panoramic view of Roman daily life and consider the Vesuvian region’s modern reception since its rediscovery in the 18th century.
HIAA 1304. Spectacle: Games, Gladiators, Performance, and Ceremony in the Roman World.
Theaters, amphitheaters, baths, circuses, and imperial residences pepper the former territory of the Roman Empire. Modern films conjure the fantastic, yet ephemeral, events of days long past, amplifying the fascination of these ubiquitous ruins. For the Romans, however, spectacle was not only about fun and games. What really took place in these spaces, and why? Learn to separate fact from fiction as we consider artistic, architectural, and archaeological evidence to understand how and why spectacles were fundamental to Roman daily life.

HIAA 1305. Pre-Columbian Art + Architecture
Survey of ancient art and building in ancient America, with a focus on Mexico, Central America, and the Andes. Underlying concepts include: meaning and method, cosmos and kingship, narrative and symbol, personality and authorship, empire and royal court. Rich collections of the Haffenreffer museum will form the focus of work in the class.

HIAA 1306. Art and Crime: The History and Hazards of Collecting the Classical.
What if almost everything you thought you knew about Classical art was wrong, or at least highly suspect? This course will introduce and debate the epistemological and ethical problems entangled in the collection, display, and study of ancient art. Topics of discussion, among others, will include: How have decontextualized artifacts shaped narratives of ancient art? How are looting and forgery intertwined? Do museums and collectors unwittingly support the illegal trade of artifacts? What should be done with the thousands of unprovenanced objects in museum collections? What is repatriation and why is it such a complex issue?

HIAA 1307. Politics and Spectacle in the Arts of Ancient Rome.
This seminar investigates the intersection of politics and spectacles in the artistic production of ancient Rome. We will explore a variety of public monuments to reveal how they codify essential aspects of Roman culture. Topics include the architecture of entertainment spaces such as theaters, amphitheaters, and circuses, as well as the social functions of spectacles such as gladiatorial games and triumphal processions. We will look at expressions of imperial propaganda in monuments such as tombs and honorific arches. The class also considers how these ideas entered the private realm in the form of domestic wall paintings, mosaics, and sculpture gardens.

HIAA 1310. Topics in Hellenistic Art.
Topics course. Topics listed separately.

Interested students must register for GNSS 1960X.

HIAA 1400F. Research Seminar Gothic Art.
No description available.

HIAA 1401. Objects of Devotion in the Middle Ages.
How did people in the medieval world ‘do’ devotion? What role did objects and architectural spaces have in engaging with the divine? This seminar explores the liminal role objects and spaces had as mediators, as foci, and even the metaphysical embodiment of saints in the Middle Ages. We will study the legacy of attitudes toward icons, relics, and martyrology in Late Antiquity in the early and high European Middle Ages. We examine the medieval approach to materials and the meditative and performative use of devotional art. Topics to be explored include relics and bodily remains, architecture, pilgrimage, gendered devotion art, iconoclasm, and modern museum practices exhibiting devotional art. Students will have the opportunity to engage in-depth with devotional from the Hay Library and the RISD Museum.

This course focuses on architecture, manuscript paintings, and decorative arts produced under the patronage of Islamic rulers, who dominated the Indian subcontinent between 1192 and 1858. The class will examine works of art as instruments in the process of establishing an empire as well as expressions of political and religious power.

HIAA 1410B. Painting in Mughal India 1550-1650.
The Mughal (Muslim) rulers of north India in the sixteenth and seventeenth centuries presided over what was then the richest, most cosmopolitan culture in the world. The earliest rulers were open-minded and intellectually voracious; they brought together Persian, Turkish, and a variety of indigenous Indian traditions to create a distinctive new way of representing and living in the world. This cultural interaction, and the important role played by Portuguese missionaries and English traders, will be the focus of this seminar.

HIAA 1430A. The Visual Culture of Medieval Women.
Considers women as patrons and producers of medieval art and architecture, and examines the imaging of women in medieval works of art. Topics include: feminist perspectives in medieval history and art history, patronage by royal and aristocratic women, costume and textile production, and the art and architecture of female monastic communities. Optional FLAC French conference offered.

Religious men and women, as well as their patrons, sought to establish places of devotion and learning across the medieval landscape. This course examines the rise and development of the medieval monastery from its late antique beginnings in the deserts of Africa to the rise of the preaching orders in early thirteenth-century Europe. Emphasis will be placed upon the material expressions of western monasticism and upon the notion of the monastery as an architectural, archaeological and historical research problem through examination of individual case study examples. Instructor permission required. Enrollment limited to 12.

HIAA 1440D. The Gothic Cathedral.

HIAA 1440E. The Body and the Senses in Medieval Art.
The seminar considers the contradictory aspects of embodiment in the visual and material culture of the Middle Ages. We will examine the veneration of holy bodies through living holy individuals, and through body parts (relics) and the Eucharist enshrined in sumptuous containers. We will look at the iconography of death and resurrection, the representation of the body in painting and sculpture, attitudes toward sexuality, the performance of identity through clothing, and the sumptuary laws that governed clothing and behavior. We will investigate funerary rituals and burial, and the movement of living bodies in dance and in civic and religious processions.

HIAA 1440F. Architectural Reuse: The Appropriation of the Past.
This seminar will consider the survival, revival and adaptive reuse of older objects, texts and built spaces in the visual and material culture of successor cultures. We will look critically at the literature on the archaeology of memory, "Renaissance and revival" spolia studies and adaptive reuse. The seminar will examine selected case studies, including the reuse of sculptural elements in the Arch of Constantine, the conversion of Pantheon into a church and Hagia Sophia into a mosque, appropriated elements in the Qutb mosque in Delhi and the adaptation of the Bankside Power Station as the Tate Gallery.

HIAA 1460. Topics in Medieval Archaeology.
No description available.

HIAA 1550A. Prints and Everyday Life in Early Modern Europe.
Uses the resources of the RISD Museum in graphics and decorative arts (weaponry, embroidery, textiles, and ceramics) from the early modern period. Examines the use of ornament and mythological and sacred themes as they relate to crafts and the transmission of culture, focusing on the making, distribution, materiality, and histories of objects of everyday life.
HIAA 1560B. Mannerism. 
This course looks at the printed festival books made for recording ideal versions of royal entries, funerals, weddings and other printed expressions of regal celebration, alongside printed, painted and otherwise recorded evidence of popular celebrations such as carnival, and civic and religious festivals such as the Sieneese palio. Although beginning with circulated prints and books, we will also look at the material culture of these events in their widest sense to investigate the advertisement and control of festival cultures. The class will focus on early modern Italy but students are welcome to broaden our geographic horizons. Enrollment limited to 20.

HIAA 1550C. Dreaming of Food in the Early Modern World. 
Floods, wars, trade, climate change, class distinctions, carnivals and public feasts kept food at the forefront of the early modern imagination. Focusing on Italy, but including its global connections, we will look at the cultures of food as the material of art and literature in markets, vineyards, courts, recipe books, medicine, kitchens, and the dreams of the hungry. Investigating the cultivation, presentation and consumption of food through related arts and the evolution of manners allows us to consider the design of tableware, food sculpture, and tapestries alongside more canonical arts. Some previous art history required, languages helpful. Upperclass seminar.

HIAA 1560A. Italy and the Mediterranean. 
Sicily, Venice, and Rome were Medieval and Renaissance international centers whose populations of pilgrims, traders, soldiers, and diplomats occasioned opportunities for cultural cooperation and violence between East and West. We will study mosaics and architecture of the multi-ethnic Norman rule following the Islamic conquest of Sicily; Venetian relations with the Ottoman Empire and its Greek colonies in goods, painting styles, architecture and atlases; and in Rome obsessions with Egyptian engineering, the vitality of Arabic studies, and reports of travelers resulting from papal efforts to incorporate Eastern Christians under the umbrella of the Roman church. Enrollment limited to 20 juniors and seniors.

HIAA 1560B. Mannerism. 
This class provides an opportunity to study courtly painting, sculpture, prints, drawing and architecture of the movement that became known as Mannerism. The material will focus most strongly on the art of Florence and Rome, but we will also be looking at France and Boehemia, and at the history, literature and literature of art of those centers.

HIAA 1560C. Renaissance Venice and the Veneto. 
This course explores the visual culture, theater, ritual, architecture, and urban development of Venice and the Veneto from the late medieval period through the 16th century, tracing the development of painting, sculpture, architecture and a literature of art within the city's unique physical configuration and relationship with the East. For advanced students, written permission required and given at first meeting. A

HIAA 1560D. Siena from Simone Martini to Beccafumi. 
This course will focus on the art and architecture of republican Siena over the 250 year period before its annexation to Tuscany in 1555. We will study the relationships between piety, work, and politics in a rich period of building and decorating that has determined the look and, to an extent, the culture of the city until the present day.

HIAA 1560E. The Arts of Renaissance Courts. 
Courts were active patronage centers in the areas of secular and religious painting, sculpture and architecture, book illumination, rich narrative textiles for interior use and ornamental ones for costume, as well as ephemeral works for theatrical productions, triumphal entries and festivities. Artists working at court were able to ignore guild regulations, and acquired a status for themselves that set them apart from other urban practitioners. Centering our investigation on primary sources as far as possible, we will study a wide range of works, materials, ideologies and practices that contributed to the reputation of the Italian courts as centers of opulence and power. Final project and weekly class meetings required. Enrollment limited to 20. Instructor permission required.

HIAA 1560F. Topics in Italian Visual Culture: The Visible City, 1400-1800. 
We will look at the image of the city in all media, attending to the contexts in which they are illustrated, the technologies of representation and the reasons for imagining cities, taking into account iconic and symbolic representations, personifications, maps and views, and comparing visual and textual descriptions of the places of early modern urban life.

HIAA 1600A. Bosch and Bruegel: Art Turns the World Upside Down. 
An in-depth look at the work of these two enigmatic Netherlandish artists. After seeing how art history uses various methods to establish what they actually painted and drew, we will move outwards to interpretation and historical study of their images of comedy, proverbs, religion, and landscape. Artworks in local museums will be important focuses of discussion. Prerequisite: Any history of art and architecture course numbered below 1000.

HIAA 1600B. Caravaggio. 
Caravaggio is one of the great revolutionary artists and a real cultural phenomenon in his own time and ours. This seminar considers in-depth the nature of his work, the different historical strategies used to explain it, and possible new approaches.

HIAA 1600C. Italian Baroque Painting and Sculpture. 
Examines developments in painting and sculpture in 17th century Italy with focus on the impact of the Catholic church and the rediscovery of antiquity on church and palace decoration, public and private commissions, and the rhetoric of Baroque style and iconography. Study of individual artists, including Caravaggio, Artemisia Gentileschi, and Gianlorenzo Bernini, as well as art academies, the mechanics of patronage and writings about art and artists.

HIAA 1600D. The Art of Peter Paul Rubens. 
The seminar will study the seminal work of Rubens in all its aspects.

HIAA 1600E. The World Turned Upside Down. 
Seminar examining the comic and satirical traditions in Netherlandish art, including works by Hieronymus Bosch, Pieter Bruegel the Elder, Adriaen Brouwer, and Jan Steen. How do visual images connect with writers such as Erasmus and Rabelais, with polemical satires of the Reformation, and with popular literature along the lines Renard the fox. What historical developments were at play in the formation of comic stereotypes and the representation of charged events such as the celebration of carnival?

HIAA 1600F. Antwerp: Art and Urban History. 
No description available.

HIAA 1600G. Art + Religion in Early Modern Europe. 
In this seminar we will reconstruct the various ways in which visual communication participated in the practice and changes of religious life during the early modern period (1400-1800). Topics will range from the role played by prints in the spread of the Reformation to the design of new kinds of architecture for the implementation of the Catholic Counter Reformation. Close attention will be given to the significance of iconoclasm (destruction of images), ideals of visual communication for religious persuasion, the invention of new methods of meditation with visual focus, and the relationship between sacred words and images. Enrollment limited to 20.

HIAA 1600H. Comedy in Netherlandish Art From Hieronymus Bosch to Jan Steen. 
No description available.

HIAA 1600L. Collections and Visual Knowledge in Early Modern Europe: 1400-1800. 
Examines the ways in which collections organized and developed new kinds of knowledge and practices. Collections were decisive in the formation of art, history, science, religion, politics, and international relations. We will discuss the rationales behind these different kinds of collections, the order in which things were placed, the visual organization and architecture that created the first museums, and the economics of collections. Attention to the collections of kings, artists, natural scientists, middle class citizens, humanists, and the devout will provide examples from a wide variety of perspectives. Enrollment limited to 20.
HIAA 1600J. Rembrandt
This seminar will concentrate on art of Rembrandt. We will study his technique, development, and varied subject matter in all media from drawings to etchings and paintings. Rembrandt's work will be related to the historical context in which it was created and displayed. Prerequisite: previous courses in History of Art and Architecture. Enrollment limited to 20.

HIAA 1620. Arts Between Europe and the World: 1500-1700.
How did arts and visual objects of all kinds mediate between Europe and regions of the world opened to contact through trade, conquest, religious conversion, and the exchange of knowledge? This seminar will search for the major contexts of these exchanges and for the best methods to understand their histories. What conditions enabled or prevented mutual reciprocal recognition? How were foreign materials imported and integrated, as with Chinese porcelain in the Netherlands or European glass in China? What balances of power determined exchanges, from the colonial extinction of Pre-Columbian art to the adaptation of western perspective in Japanese prints?

After the Spanish invasion, indigenous cultures of the Americas endured profound changes including the suppression of religious practices and reconfiguration of socio-political systems. During the succeeding centuries of colonial rule, diverse members of a highly stratified society relied upon cultural objects to contend for social, economic, political, and religious authority. This course considers the ways in which objects of visual culture in Mexico and Peru functioned as leveraging tools, means to assert authority and identity, ways to maintain the status quo, and forms of resistance with emphasis on the roles various participants played in artistic production and reception.

About Face: English Portraiture, 1660-1800: This course will consider the function and meaning of portraiture in England from Sir Peter Lely's 'Beauties' of Charles II to James Gillray's social and political satires. We will pay particular attention to the interrelationships between official portraiture and unofficial forms such as caricature.

HIAA 1650B. Visualizing Revolutionary Bodies 1785-1815.
The French Revolution was accompanied by crisis in representation that was both political and cultural. This seminar will examine the problem of how artists and their publics sought to image, or literally to "embody" new forms of individual and communal identity in painting, prints, public festivals, and sculpture. Students will be encouraged to draw on the resources of the John Hay Library, the RISD museum, and other local museums and archives for their research projects.

HIAA 1650C. Visual Culture and the Production of Identity in the Atlantic World, 1700-1815.
This seminar will examine the production, reception and circulation of visual culture within the vortex of the 18th century Atlantic world (including such sites as Britain, France, colonial America, Mexico and the Caribbean). Enrollment limit 20.

HIAA 1650D. Souvenirs: Remembering the Pleasures and Perils of the Grand Tour.
Examines visual image and objects, ranging from portraits, landscape watercolors and graphic satires, to cork models of antiquities, which served to remind and remake travelers' ideas of Italy and other sites on the eighteenth century Grand Tour of the European continent. We will examine the role of anxiety, laughter, pleasure and danger in a rite of passage that was designed to elevate and educate young men, artists, and increasingly, women and men from the middling orders. Enrollment limited to 20.

Examines forms of visual culture—paintings, prints, photographs, sculpture—that participate in the formation of racial, social, and national identity in the U.S. from c. 1776-1930. Focuses on how visual culture figured African and African Americans in their interrelationships with each other and with other social groups in the U.S.

The selfie is ubiquitous today, but posing for a portrait has a history. This seminar examines the art of portraiture—from the celebrity to the beloved pet to its medium in paint, print, and stone—during the period of its modern formation in the eighteenth century. How are new concepts of the self represented through expression, environment, and stuff? How do people fake it in portrayal to redeem or elevate their pasts? How can a portrait serve as a stereotype and how can it visualize a more equitable society? Course includes visits and assignments in museums.

HIAA 1770. Architecture and Visual Culture of Empire.
This combined undergraduate and graduate seminar examines important urban and architectural concepts and practices that accompanied the expansion of colonial rule across much of the world during the 19th and 20th centuries. Topics to be considered include: how early cultural encounters prefigured later representations of colonizing/colonized communities and their corresponding material cultures; colonial spatial orders and their implied relationship to forms of governance; debates on colonial domesticity and the proper arrangement of the home; and post-colonial architectural developments that grew out of the historical experience of de-colonization. We will consider primarily territories formerly under British, French, and German rule.

HIAA 1771. Eclectic Arts in the Global 19th Century.
How does art motivate the economy, participate in political action, develop society, and aspire to beauty? In this introduction to the arts of South Asia, 1650 to the present, we will consider these questions. From the floral designs adorning the Taj Mahal to popular clay figurines, and from the British colonial production of turning raw cotton into patterned cloth to Gandhi's movement for independence based on the hand-spun, we will examine the arts of painting, sculpture, and monumental architecture alongside the decorative arts of textiles, furniture, ceramics, and bronze, and modern artists' contemplation of earlier traditions to create the contemporary.

HIAA 1810. Contemporary Art and Activism.
This seminar will trace the ways that art has been conceived as a form of political activism since 1988. We will analyze strategies such as social practice, relational aesthetics, new genre public art, tactical media, critical geography, useful art, and the interactions among artists and Occupy. Emphasis will be on these recurrent issues: the relationship between aesthetics and politics, conceptions of community and the public, and the practical aims of art, both intended and actual. Close readings, class discussion, and weekly response papers will culminate in a final research paper interrogating the political implications of a single artist or artwork.

Decades before the invention of the Internet, artists used computers, cybernetics, and systems theory to envision and engender social networks in their art. This seminar will examine these creative and conceptual experiments with new media, from programmable objects that invite audience participation, to interactive installations accentuating viewers' connection to the environment, to televisual and video works that illuminate how media structure identity and society alike. We will grapple with the extent to which this period gave birth not only to the technologies of the present but ideas about what society can and should be.

HIAA 1820. Abstraction in Theory and Practice.
This seminar will examine the proliferation of abstraction in the first half of the twentieth century. Looking closely at artworks and primary texts from movements such as Cubism, Futurism, Orphism, Expressionism, Suprematism, Constructivism, the Bauhaus, and De Stijl, our discussion will emphasize the politics of form—that is, how artists understood their artworks to directly engage with and even restructure their audiences and the world. Enrollment limited to 20.
HIAA 1822. Dada and Surrealism: Anarchy, Exile, Alterity. This seminar will examine the experimental practices of Dada and Surrealism with a focus on the historical conditions, theoretical influences, and political ambitions that shaped them: the trauma of war; experiences of exile and displacement; uses and abuses of psychoanalysis, anthropology, and political theory; Communist allegiances; as well as anti-colonial projects and counterparts in the Caribbean, Latin America, and North Africa. We will consider a range of artistic practices (performance, assemblage, the "readymade," photomontage, poetry, painting, sculpture, exhibitions) with the aim of complicating our understanding of these movements and assessing the relevance of their subversive project today.

HIAA 1850A. Frank Lloyd Wright. Seminar concentrating on the architecture of Frank Lloyd Wright-usually considered the most important architect in American history-and the critical discourse surrounding it. Selected scholarship serves as a paradigm for broader discussions about the history, contemporary roles, and shortcomings of architectural criticism and historiography. Examines the Frank Lloyd Wright Foundation's approach to critical scholarship and the commercialization of Wright's oeuvre.

HIAA 1850D. Film Architecture. Since the 1920s, a far-reaching discussion about the mutual influence between the two most important art forms of the 20th century - film and architecture - has engaged set designers, architects, cinematographers and critics. Apart from a fascination with the impact that the techniques of the new medium, such as montage, slow motion, close-ups and camera movements, would have on the perception and presentation of architecture, there continuously has been an enormous interest in the potential of film sets as a realm where visionary, historic, lyrical or psychological space could be developed. This seminar will study selected chapters in the history of cinematic set design through the twentieth century and examine masterpieces, major movements, protagonists, and crucial theoretical debates. In addition, the course looks at the depiction of the city through film and the role of the movies as a reflection, commentary, and experimental laboratory for contemporary architecture.

HIAA 1850E. Architecture, Light and Urban Screens. This seminar explores the history, theory and practice of architectural illumination and the notion of electric light as a "building material." We will also consider the current interest in urban screens and media facades. The course will follow a historic trajectory from ca. 1900 to the present and will introduce the students to the most important techniques, protagonists and critical debates over the past 100 years. We will critically examine the broader implications of lighting design, the tension between luminous advertising and architectural illumination, the relationship to stage lighting, the implications of a "nocturnal modernity" and the use of light for propaganda purposes. Enrollment limited to 20. Instructor permission required.

HIAA 1850G. Contemporary American Urbanism: City Design and Planning, 1945-2000. Examines the history of American urban planning from the canonization of the modernist tradition following WWII to its effect on urbanism over the remainder of the twentieth century. We will examine the influence of the modernist tradition on major urban processes of the period, including urban renewal, sprawl, suburbanization, and downtown revival. The class considers how modernism was received and will include discussion on postmodern urban analysis and contemporary approaches to green planning. No prerequisites, but prior courses in twentieth century architecture, art, or visual culture will be helpful. Enrollment limited to 20. Instructor permission required.

HIAA 1850H. Berlin: Architecture, Politics and Memory. This course deals with the architecture and urbanism of the German capital and the way the city's traditions of commemoration in different phases of its history and under different political regimes. Students will research historic structures and sites of the 19th through 21st Centuries and engage with the intense German debate about historic preservation and commemoration. The course will travel to Berlin during spring break. There we would meet with local architects, politicians and artists to discuss the city's engagement with its dramatic past. Course enrollment by application.

HIAA 1850I. Architectures of the Sea: Space and Place in the Maritime Cultural Landscape. This course charts the spatial histories of maritime architecture, from the 18th century to present. Casting a wide net, we will explore the global network of seaborne vessels and the attendant architectural and urban environments that together produced the modern world. Venturing beyond architectural history, this seminar questions how we conceive of space and place in light of the many disciplines invigorated by the spatial turn, among them: Cultural Geography, Anthropology, Marine Archaeology, History, and Cartography. Themes include: the spaces of the transatlantic slave trade, the ocean liner and mass migration, seaside holidaymaking and postwar leisure, and naval and imperial mobilities.

HIAA 1850J. Mies van der Rohe: An Architect and his Time. This seminar will look at the architecture of Ludwig Mies van der Rohe (1886-1969) and its context. Mies worked in Berlin, Germany for 30 years and for a number of years in Chicago. His buildings will be compared to those of his contemporaries and will be analyzed through the lens of the theoretical discourse at the time and in particular the political climate. This case study will introduce students to methods of close observation, critical thinking, and historical research on modern architecture.

HIAA 1870A. Criticality and Modern Art. This seminar will interrogate a central way of understanding the politics of twentieth-century art: criticality. The notion that art's relationship to society is one of negation, diagnosis, and destabilization pervades modern art history. This seminar will trace the development of criticality as an artistic practice and art-historical methodology. Alongside texts on critique in philosophy and theory, we will examine artists for whom criticality is paramount: Dada's ballistic mission, repetitions of the neo-avant-garde, anti-art, institutional critique, critical postmodernism, art as undercommons. We will end with recent claims of critique's collapse and assess the viability of criticality in art of today.

HIAA 1881. Architectural Replicas in the Modern and Contemporary Eras. From World's Fairs to Disney World, copies of buildings are an important part of the architecture of entertainment in the modern and contemporary eras. But replicas, once valued as part of 'serious' architectural practice, also exist outside of the world of theme parks. This seminar will explore what it means to build an architectural replica in a discipline focused on originality. What forms do these replicas take? What might propel an architect to copy part or all of a building in their own work? What place might these replicas occupy in the canon of architectural history?
This seminar will map out the field of indigenous art with an emphasis on artworks from English-speaking settler colonial countries, concentrating on Native North American and Aboriginal Australian artists. We will approach indigenous art theoretically, outlining major issues and concepts of this global topic. Units will include defining indigeneity and indigenous art terms, anthropology in relation to art, and curatorial practice. We will begin by addressing the concept of indigeneity through legal and sociopolitical frameworks, continuing with museological display of indigenous art across time, and seeing how museums are working to better contextualize their anthropological collections.

HIAA 1888. Exhibition as Medium.
This seminar will examine “the exhibition” as a medium for artists in the modern and contemporary period, with particular focus on developments since the 1960s. We will look at artists who have staged alternative exhibitions in non-traditional spaces, worked within museums and galleries to dismantle curatorial conventions, and, most of all, created exhibitions that stand alone as single works of art. Emphasis will be on the relationship between form and content, the definition of audience and the public, and the intersections and tensions between art and history.

HIAA 1890E. SoCaL: Art in Los Angeles, 1945-Present.
Recent exhibitions, scholarship and media have turned to Los Angeles as a site of exploration of both American art and the larger frameworks of the Americas and International contemporary art. The character of media is directly connected to the circumstances of LA as a creative community built around an industry of visibility (film). This UG seminar will examine postwar architecture, exhibitions installation, land art, painting, performance, photography, public art and sculpture in LA and its impact on art history. This course may be open to a limited number of graduate students.

HIAA 1890G. Contemporary Art of Africa and the Diaspora.
Will explore the art of contemporary Africa and its diaspora with an eye towards understanding the political and economic context in which it is produced and consumed. Our approach will be interdisciplinary, putting key theoretical texts from anthropology on the political economy of Africa in dialog with the works of contemporary artists. However, the intent here is not to reduce creativity to an economic activity alone, though we will be addressing the topic of art markets. Rather, we will explore artistic practices that surmount “the tyranny of the ‘already,’” as Malian writers Konate and Savane have eloquently said. Enrollment limited to 20 juniors, seniors, and graduate students.

Seminar examining selected aspects of the architecture of downtown Providence from the late 19th century to the present. Projects require research at local archives, libraries, and architectural drawings collections. Instructor permission required. A

HIAA 1910B. Project Seminar: The Architecture of Bridges.
No description available.

HIAA 1910D. Water and Architecture.
The seminar explores the varied ways in which water is manipulated in architecture and urban planning. We examine several case studies, including Roman aqueducts such as the Pont du Gard, medieval urban and monastic hydraulic systems, Renaissance and early modern garden (and fountain) design, and the local examples of Slater Mill and the Providence water supply. A

HIAA 1910E. Project Seminar for Architectural Studies Concentrators.

HIAA 1910F. City Senses: Urbanism Beyond Visual Spectacle.
Architecture and urbanism provide synesthetic experiences of space that don’t necessarily privilege visual perception. This project seminar explores alternative approaches to design and an understanding of the city through explorations of all the senses. We will examine case studies of cities through the sounds of church bells, traffic, and water fountains; the smells of foods, plants, and sewers; or even the feelings of light and shade. Students are encouraged to work on projects that map the city through unconventional sensory markers, record sounds, distill scents, or film different corporal means of navigating the urban environment.

Reading and reports on an approved topic, supervised by a member of the staff. Project proposals must be submitted and approved no later than the first week of the semester. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 1930. The History and Methods of Art Historical Interpretation.
This seminar provides an overview of the methods and theories used by art historians and introduction to the history of the discipline. Through readings and discussions, we will examine how art history emerged as an intellectual pursuit and humanistic discipline in the modern era, and review its foundations in the Western philosophical tradition. The transformations wrought by the advent of critical theory and the incorporation of approaches from outside the discipline of art history will receive particular attention in the second half of the course. Open to juniors and seniors concentrating in History of Art and Architecture or Architectural Studies.

HIAA 1931. Museums, Histories, Critiques.
This course offers a historical and theoretical examination of the art museum from its eighteenth century inception to contemporary expectations and institutional critiques. We will explore the philosophical and social implications of collection and classification, architecture and display practice; institutional mission and audience experience; interpretive strategies and educational goals; curatorial practice and the artist as curator. This critical framework will offer a means to examine the museum’s role in structuring knowledge and facilitating experience and its place within intellectual discourse and public life.

The subject of the thesis and program of study will be determined by the needs of the individual student. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2212. The Pictured Text.
Writing makes language visible, and thus concerns images. Language also delimits the legibility of imagery. Turning words into images and images into words occurs at great speed around us. This course explores the relation of text and image across world traditions—Chinese, Mayan, Egyptian, Islamic, Greco-Roman, and others, extending up to the present. Topics include: calligraphy, context, scribal practice, the form and shape of writing, including typography, hidden or pseudo-writing, graffiti, and contemporary art.

HIAA 2300B. Research Seminar in Roman Art and Architecture: Topography of Rome.
Major monuments of the city of Rome from the Republic to the rise of Christianity.

HIAA 2300C. Allegories/Symbols in Roman Art, Origins in Hellenistic Art, Augmentation in Early Christian Art.
Roman historical relief sculpture.

This graduate seminar will explore the role of viewers in the creation of meanings for ancient art and architecture. We will be looking at a wide variety of artistic forms including architecture, sculpture, wall painting, and mosaics, asking, who were the viewers who encountered these works in ancient settings and how did they respond to their messages? In order to contextualize our case studies, we will engage with primary sources, archaeological data, and theories of ancient viewership and reception.

HIAA 2400A. The Visual Culture of Medieval Women.
The course treats the history of women as commissioners, creators and subjects of medieval art. Case studies will be drawn from western Europe, Byzantium and Islam. Weekly seminars consider feminist perspectives in medieval history and art history; imaging of women in medieval art; archaeological approaches to gender and the analysis of gendered spaces; and the art and architecture of female spirituality.
HIAA 2410C. Representing the Past: Archaeology Through Image and Text. The archaeological past exists for us through intermediaries that may be written or visual. Drawings, descriptions, photographs, graphs, charts and computer visualizations all display a considered image of the past. This seminar takes a critical look at the literature on visualization, and at the strategies by which scholars have re-presented the archaeological past of a range of cultures.

HIAA 2430B. The Afterlife of Antiquity. Examines the survival and revival of classical art and architecture in the Middle Ages. Discussion focuses on selected case studies from across Europe and critically engages the secondary literature on classical revival.

HIAA 2440A. Recent Approaches to the Gothic Cathedral. No description available.

HIAA 2440B. Architecture of Solitude: The Medieval Monastery. Religious men and women, as well as their patrons, sought to establish places of devotion and learning across the medieval landscape. This course examines the rise and development of the medieval monastery from its late antique beginnings in the deserts of Africa to the rise of the preaching orders in early thirteenth-century Europe. Emphasis will be placed upon the material expressions of western monasticism and upon the notion of the monastery as an architectural, archaeological and historical research problem through examination of individual case study examples. Instructor permission required. Enrollment limited to 12.

HIAA 2440C. Recent Approaches to the Gothic Cathedral. No description.

HIAA 2440D. Architectural Reuse: The Appropriation of the Past. This seminar will consider the survival, revival and adaptive reuse of older objects, texts and built spaces in the visual and material culture of successor cultures. We will look critically at the literature on the archaeology of memory, “Renaissance and revival, spolia studies and adaptive reuse.” The seminar will examine selected case studies, including the reuse of sculptural elements in the Arch of Constantine, the conversion of Pantheon into a church and Hagia Sophia into a mosque, appropriated elements in the Qubt mosque in Delhi and the adaptation of the Bankside Power Station as the Tate Gallery. Limited to 15.

HIAA 2450. Exchange Scholar Program.

HIAA 2540A. Book Illustration in the Early Modern Period. This course will examine book illustration in the early modern period, seeking to identify the ways visual information is produced and how it relates to information in the text. Relationships between decoration in illustration and in architecture and painting will also be explored with an eye to the roles of pattern and visual convention in overtly didactic visual material.

HIAA 2540B. Print Culture in Early Modern Europe. Examines the uses of prints, book illustration, and other pictorial printed schema in the early modern period, seeking to explain some of the ways visual information was produced and reproduced. Relationships between the prints and other arts are explored, with an eye to the roles of visual convention in overtly didactic materials such as maps and charts.

HIAA 2540C. Illustrating Knowledge in Early Modern Europe. We will look at the history of scientific illustration in the age of the first printed books, using works in special collections libraries to investigate the exchange of ideas and the development of specializations in the arts and sciences from about 1450-1800. Focusing primarily on Italian examples, comparative projects may be chosen from any country in which the student can read the language.

HIAA 2540D. The Theater that was Rome. “The Theater that was Rome” is a digital research site uniting text and images to portray the development of Rome (1500-1800) in the flood of printed information that proceeded from interest in the physical and mythological city. Our goal is to provide historical and critical interpretation of these illustrated books and prints that created Rome as a theater for the most advanced technological and decorative feats of an international group of artists, architects, engineers, authors, and publishers, looking at their productive collaborations, and using original materials, often in languages other than English, at the Hay Library and on the website. For graduate students; qualified upper-level undergraduates should contact the instructor. Enrollment limited to 15.

HIAA 2550A. The Visual Cultures of Southern Italy. A workshop devoted to the visual cultures of Southern Italy, a geographical location with an unstable ruling population and sense of cultural identity from the late medieval through the early modern period. Projects about any aspect of art/architecture of Italy from south of Rome to Sicily are welcome. Research requires reading ability in Italian, Spanish, or French.

HIAA 2550B. Art and Charity in the Renaissance. This seminar looks at the roles of art and architecture in commissioning charitable works in the service of maintaining a healthy civic body, including the design and decoration of hospitals, orphanages, ghettos, homes for women, immigrants and the poor, in the context of institutional structures that provide for marginal people. Examples will be from Italy, but students may work in other areas.

HIAA 2550C. Color. How do we understand color as an integral part of a visual object? How shall we think about the artist's decision and the viewer's responsibility? This seminar will look at color (and its purposeful repression) in painting, sculpture and the decorative arts of the early modern period, also considering the discourses of color in 20th-century painting and other eras, such as antiquity, when color was a profitable topic through which to discuss the senses. We will also look at the economy and science of pigments, and the value of color in different discourses and objects. Graduate students, or by permission.

HIAA 2600B. Flemish Art. No description available.

HIAA 2600C. Rubens. No description available.

HIAA 2600D. The Visual Culture of Religion in Antwerp: 1585-1794. The seminar will study the central role of visual culture in Counter Reformation Antwerp.

HIAA 2600E. Jesuit Global Strategies in Art and Conversion. The purpose of this seminar is to examine the first global strategy to use art for the purpose of persuasion and conversion. In Europe, Asia, and the Americas during the early modern period, the Jesuits adapted their messages of visual communication, in architecture, prints, paintings, maps, dress, and rituals, to meet what they calculated would be the conceptual frameworks and customs of their target audiences, whether Chinese court officials, Flemish peasants. The seminar will search for the deeper historical roots of this strategy which up to now have not been traced. Open to graduate students only.

HIAA 2620. Arts Between Europe and the World: 1500-1700. How did arts and visual objects of all kinds mediate between Europe and regions of the world opened to contact through trade, conquest, religious conversion, and the exchange of knowledge? This seminar will search for the major contexts of these exchanges and for the best methods to understand their histories. What conditions enabled or prevented mutual recognition? How were foreign materials imported and integrated, as with Chinese porcelain in the Netherlands or European glass in China? What balances of power determined exchanges, from possible the colonial extinction of Pre-Columbian art to the adaptation of western perspective in Japanese prints?
This course examines art and other forms of visual representation that imaged the colonial exchange between Europe and the Caribbean from the late 17th through the early 19th centuries. Readings include current scholarship in postcolonial theory devoted to theorizing colonial relationships in terms of transculturation and exchange. Students are encouraged to select research topics that allow them to take advantage of the rich trove of primary resources at the John Carter Brown and John Hay libraries.

HIAA 2721. Real and Unreal Landscapes.
This seminar is about how artists imagine the land, and the relationship between people and the places that they inhabit. We will think broadly about how people have conceptualized “nature,” the “landscape,” and “colonization” from the eighteenth century to today as well as hone in on specific artistic traditions, including those in Africa, Europe, and South Asia and across the Atlantic, Indian, and Pacific oceans. This class will investigate materials that come from the land, such as oil, clay, and pigments; other aspects of the environment, like waterways and clouds; and other art forms, including music, fiction, and dance.

HIAA 2760C. Paris in the 1860s.
No description available.

HIAA 2850A. Architectural Theory in the Nineteenth and Twentieth Centuries.
Examines key texts in the history of architecture since the 1800s. Contrasts texts by architects with their actual work and places them into the social, political, and art historical context of their time. Texts by Schinkel, Semper, Ruskin, Viollet-le-Duc, Louis Sullivan, Frank Lloyd Wright, Otto Wagner, Le Corbusier, Walter Gropius, Mies van der Rohe, Louis Kahn, Robert Venturi, and others.

HIAA 2850B. Architecture of Frank Lloyd Wright.
A seminar concentrating on the architecture of Frank Lloyd Wright and the surrounding critical discourse. Wright is usually considered the most important architect in American history. Selected scholarship serves as a paradigm for broader discussions about the history, contemporary roles, and shortcomings of architectural criticism and historiography. Examines the Frank Lloyd Wright Foundation's approach to critical scholarship and the commercialization of Wright's oeuvre.

HIAA 2850C. Architecture, Urbanism, and Post-Colonial.
This graduate seminar explores the relationship among architecture and urban design, colonial empire, and national development, via a comparative analysis of cultural interactions between Europe and its non-western “others” from ca. 1800 to the present. We will draw upon recent critical debates on orientalism, colonialism and empire, and politics of representation as well as interdisciplinary studies of modernity and identity.

HIAA 2850D. Ludwig Mies van der Rohe.
This seminar will explore the work of Ludwig Mies van der Rohe, one of the most influential architects of the 20th Century. While Mies has been continually discussed and exhibited (the Museum of Modern Art alone held 7 exhibitions about him since 1947, most recently in 2001), to this day, his work has neither been contextualized sufficiently nor has its reception been critically examined. Apart from studying and understanding Mies van der Rohe’s work in its context, this seminar will explore responses by contemporary critics and compare those to later interpretations.

HIAA 2850E. Architectural History's Future.
Through readings of new, cutting edge texts, this graduate seminar will reconsider how we write and teach architectural history. We will explore provocative recent frameworks such as the “global,” the shift from considering objects to thinking about processes, systems, networks, institutions etc. Our goal is to develop a self-reflexive praxis as historians, teachers, designers, and cultural workers.

HIAA 2850A. The Museum and the Photograph.
This graduate seminar examines the relationship between two rapidly evolving modern institutions: the history of photography and the modern art museum. Through readings, discussions, and independent research, we will look at how the history of photography has been affected by its unique association with the museum, and what this means for it as a field of intellectual inquiry. Enrollment limited to 18.

HIAA 2850B. Photographic Origins.
Through a series of directed readings and discussions, this seminar explores the origins and implications of photography's invention in the wake of Enlightenment philosophy, the industrial revolution, and Romanticism in Europe. No prerequisites, but background in the history of photography and/or 19th century Western art is encouraged.

HIAA 2850C. Roland Barthes.
In the past few decades, the ideas of the French philosopher Roland Barthes have been indispensable to our understanding of the photograph as a theoretical object. This graduate seminar will critically examine Barthes' writings on the subject, from Mythologies to Camera Lucida, placing them within the larger context of Barthes' structuralist project as a whole and contemporary analyses of photography and lens-based imagery.

HIAA 2850D. Photography and Objectivity.
From the moment of its arrival in Western culture, the photograph has been characterized as the product of a machine, of optics and chemistry. The mechanical nature of the medium seemed to guarantee it a special relation to its subject: the photograph showed something real, through a non-natural vision. This seminar will discuss each of these questions. This course is open to all undergraduate and graduate students.

HIAA 2850E. Topics in the History of Photography: Photography and Philosophy.
Throughout its history, the photograph has posed a special problem—and special opportunity—for thinkers. As a technology, an artform, and a ubiquitous aspect of modern culture, photography has also been an object of theoretical speculation; as a form of pictorial representation perceived to stand in unique relation to “truth” and “reality,” the photograph has invited the attention of philosophers. This graduate seminar will survey the ways philosophy and critical theory have handled photography, from its origins in Enlightenment thought to the most recent speculations about its essence. Enrollment limited to 15 graduate students.

HIAA 2850G. Photography in Theory and Practice.
Photography's advent in 1839 brought into the world two inventions: a practical, functional means of making images with a camera, and a suggestive idea. This idea took many overlapping forms—the concept of nature automatically reproducing itself, of a picture radically dissimilar from the hand-made art that preceded it, of an analogic trace of the real world. This graduate-level seminar will use selected readings and class discussion to interrogate the relationship of photography as it has been theorized with its actual deployment in society and the world. Issues like medium specificity, ontology, the “index,” and cultural memory will be explored.

HIAA 2870H. What is Contemporary Art History?
Contemporary art history is a field in formation. As such, it is often contested and embraced, misunderstood and championed. Is contemporary art history a radical new field with a discrete set of practices, methodology and historiography? Or is contemporary art history simply a study of the present? Is the study of the contemporary relevant to other areas of art history? Is contemporary art history a model for other disciplinary approaches to the present? Throughout the term, this graduate seminar will discuss each of these questions. This course is open to students of all art historical periods.
HIAA 2880. Race and Architecture.
This graduate seminar will explore race---a concept of human difference that established hierarchies of power and domination between Europe and Europe’s others---and architecture from its earliest appearance to the present. Architecture has long reinforced the hierarchies embedded in western epistemology and present narrow visions of the world, reproducing cultural assumptions about space, place, city, comfort, etc., while assimilating race without acknowledging its impact. For its part, architectural history has largely uncritically conveyed the culture, norms, and values of architecture.

This graduate seminar will examine the history of pattern recognition with a focus on how the idea has been mobilized to understand human creativity and visual perception. Topics will include late 19th-century experimental psychology and theories of perception, formalist methods of art history, early twentieth-century abstraction, psychoanalysis, cybernetic theory, generative art, conspiracy theories, 20th- and 21st-century conceptions of artificial intelligence and machine cognition. Our inquiry will be interdisciplinary and comparative. Weaving our way through contrasting case studies and an array of interdisciplinary fields, we will focus on the historical reasons that pattern recognition came to be such a dominant analogy for conceiving of the human and how and why it has shaped artistic practice, art historical methods, and technological design.

HIAA 2920. Methods of Research and Art Historical Interpretation.
Required of first-year and second-year history of art and architecture A.M./Ph.D. students. Enrollment limited to 20. Instructor permission required.

HIAA 2930. Practicum Working with Wood in the Middle Ages.
The graduate Practicum for 2015 will engage with the significant and understudied collection of medieval and early modern wooden sculpture at the RISD Museum. We will examine the collection from the perspective of its changing contexts: from forest to workshop, to the decorative, devotional and ceremonial roles objects played in medieval and early modern spaces. We will then consider the later contexts of these works: their use and reuse in early modern and modern sites, the circumstances of their transfer to collections of individuals and institutions and finally their installation as single works of art in the RISD museum.

HIAA 2940. Master’s Qualifying Paper Preparation.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2980. Individual Reading (Single Credit).
Single credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2981. Individual Reading (Double Credit).
Double credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2982. Individual Reading for the Doctoral Candidate.
Single Credit. Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2993. Dissertation Research.
Section numbers vary by instructor. Please check Banner for the correct section number and CRN to use when registering for this course.

HIAA 2990. Thesis Preparation.
For graduate students who have met the residency requirement and are continuing research on a full-time basis.

HIAA 2991. Dissertation Preparation.
For graduate students who are preparing a dissertation and who have met the tuition requirement and are paying the registration fee to continue active enrollment.

HIAA 2992. Master’s Thesis Preparation.
For students preparing a terminal MA thesis, may be repeated in the following semester. Sign up for sections according to individual primary advisor.

HIAA XLIST. Courses of Interest to Concentrators.
Spring 2022
The following related courses, offered in other departments, may be of interest to students concentrating in the History of Art and Architecture. Please see the course listing of the sponsoring department for times and locations.

Italian Studies
ITAL 1020 Decameron: Technologies of Representation, Medieval to Modern

Italian Studies
Chair
Massimo Riva

Italian Studies Concentration Requirements
Inherently interdisciplinary, the Italian Studies concentration allows students to strengthen their language skills in Italian and deepen their knowledge of Italian literature, history, art, and culture. Most concentrators have some background in Italian language. However, it is possible to concentrate in Italian studies without having studied the language before coming to Brown, although doing so requires an early start. After fulfilling the language requirement by completing up to ITAL 0600 (or the equivalent), students enroll in a variety of advanced courses, reflecting the interdisciplinary nature of the concentration. Junior concentrators often study abroad in the Brown Program in Bologna. All senior concentrators participate in the “senior conference” by delivering brief presentations on academic topics of their choice in Italian Studies. Concentrators might also pursue capstone research, writing, or multimedia projects.

The concentration requires that students demonstrate proficiency in the Italian language by completing up to ITAL 0600 (or the equivalent in Bologna). ITAL 0400 is the first language course that counts toward the ten required courses for the concentration (except for students who place out of ITAL 0400, who will need to complete a total of nine courses). At least four of the ten courses should be taken in Italian.

ITALIAN STUDIES COURSES

ITAL 0550 Gold, Wool and Stone: Painters and Bankers in Renaissance Tuscany (HIAA 0550)
ITAL 0560 Constructing the Eternal City: Popes and Pilgrims in Renaissance Rome (HIAA 0560)
ITAL 0600 Advanced Italian II
ITAL 0750 Truth on Trial: Justice in Italy
ITAL 0751 When Leaders Lie: Machiavelli in International Context
ITAL 0950 Introduction to Italian Cinema: Italian Film and History
ITAL 0951 The Grand Tour, or a Room with a View: Italy and the Imagination of Others
ITAL 0975 Let’s Eat, Italy: Italian History and Culture through Food
ITAL 0981 When Leaders Lie: Machiavelli in International Context
ITAL 0985 Visions of War: Representing Italian Modern Conflicts
