Applied Mathematics-Computer Science

The Sc.B. concentration in Applied Math-Computer Science provides a foundation of basic concepts and methodology of mathematical analysis and computation and prepares students for advanced work in computer science, applied mathematics, and scientific computation. Concentrators must complete courses in mathematics, applied math, computer science, and an approved English writing course. While the concentration in Applied Math-Computer Science allows students to develop the use of quantitative methods in thinking about and solving problems, knowledge that is valuable in all walks of life, students who have completed the concentration have pursued graduate study, computer consulting and quantitative methods in thinking about and solving problems, knowledge

Applied Math-Computer Science allows students to develop the use of

The requirements for the standard track of the Sc.B. degree.

Prerequisites - two semesters of Calculus, for example

MATH 0090 & MATH 0100
MATH 0170

Concentration Requirements (17 courses)

Core-Math:

MATH 0180
or MATH 0350
MATH 0520
or MATH 0540
or CSCI 0530

Core-APPLIED Mathematics:

APMA 0350
APMA 0360
APMA 1170
or APMA 1180

Core-Computer Science:

Select one of the following Series:

Series A

CSCI 0150 & CSCI 0160

Series B

CSCI 0170 & CSCI 0180

Series C

CSCI 0190

Select three of the following intermediate-level courses, one of which must be math-oriented and one systems-oriented.

CSCI 0220 Introduction to Discrete Structures and Probability (math)
CSCI 0320 Introduction to Software Engineering (systems)
CSCI 0330 Introduction to Computer Systems (systems)
CSCI 1010 Theory of Computation (math)
CSCI 1450 Probability for Computing and Data Analysis (math)
(APMA 1650 Statistical Inference I)

Three 1000-level Computer Science courses. Two of these courses and the intermediate courses must satisfy one of the CS pathways.

Three 1000-level Applied Mathematics courses approved by the concentration advisor, of which two should constitute a standard sequence or address a common theme. Typical sequences include: APMA 1200/1210 and APMA 1650 or 1655/1660. APMA 1910 cannot be used as an elective.

A capstone course: a one-semester course, taken in the student's last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth, to produce a culminating artifact such as a paper or software project. The title and abstract of the artifact, along with the student's and faculty-sponsor's names, will be placed in the CS website. The inclusion of a relevant image or system diagram is strongly encouraged. The complete text of the best artifacts of each class will be featured on the CS website. A senior thesis, which involves two semesters of work, may count as a capstone.

Requirements for the Professional Track of the Sc.B. degree.

The requirements for the professional track include all those of the standard track, as well as the following:

Students must complete two two-to-four-month full-time professional experiences, doing work that is related to their concentration pathways. Typical pathways include: APMA 1200/1210 and APMA 1650 or 1655/1660. APMA 1910 cannot be used as an elective.

A capstone course: a one-semester course, taken in the student's last undergraduate year, in which the student (or group of students) use a significant portion of their undergraduate education, broadly interpreted, in studying some current topic in depth, to produce a culminating artifact such as a paper or software project. The title and abstract of the artifact, along with the student's and faculty-sponsor's names, will be placed in the CS website. The inclusion of a relevant image or system diagram is strongly encouraged. The complete text of the best artifacts of each class will be featured on the CS website. A senior thesis, which involves two semesters of work, may count as a capstone.

Note: CSCI 1010 and 1450 may be used either as a math-oriented intermediate courses or as advanced courses. CSCI 1010 was formerly known as CSCI 510: they are the same course and hence only one may be taken for credit. CSCI 1450 was formerly known as CSCI 450: they are the same course and hence only one may be taken for credit. Applied Math 1650 or 1655 may be used in place of CSCI 1450. However, concentration credit will be given for only one of Applied Math 1650, 1655, and CSCI 1450.

Total Credits

1 APMA 1650 may only be used if not being used as an Applied Math course.
2 Pathways may be viewed here: https://cs.brown.edu/degrees/undergrad/new-concentration-requirements/pathways-scbe-and-ab-concentrations/3 Capstone Options may be found here: http://cs.brown.edu/degrees/undergrad/concentrations/capstone/
• Are there topics you should have been familiar with in preparation for your summer experience, but are not taught at Brown? What are these topics?
• What did you learn from the experience that probably could not have been picked up from course work?
• Is the sort of work you did over the summer something you would like to continue doing once you graduate? Explain.
• Would you recommend your summer experience to other Brown students? Explain.
